First OCLC Global Council Meeting

OCLC; edited

The new OCLC Global Council met at the end of April in Dublin, Ohio, to discuss strategy and focus of the global library cooperative. Delegates from around the world heard reports from senior leadership and participated in discussions about the focus and shared future of the cooperative.

Jan Ison, Global Council President and Executive Director, Lincoln Trail Libraries System, welcomed delegates to the first meeting since OCLC governance changed from a single Members Council to a Global Council and three regional councils—Americas, Asia Pacific, and Europe, the Middle East and Africa (EMEA). Global Council comprises member delegates elected by the Regional Councils and serves as a key strategic discussion forum and communication link between member libraries, Regional Councils, and OCLC management and staff.

Larry Alford, Chair, OCLC Board of Trustees, spoke to Council about shared values of the OCLC cooperative. He noted that OCLC's present governance structure reflects some 40 years of libraries working together. Librarians from 17 countries are now serving on the Global Council, and collectively OCLC represents libraries and librarians in 171 countries.

Alford began his presentation by displaying the OCLC charter that states, in part, that OCLC was formed "to promote the evolution of library use, of libraries themselves, and of librarianship, and to provide processes and products for the benefit of library users and libraries."

"I believe that a common set of broad objectives, as outlined in OCLC's charter, is necessary to our shared future," said Mr. Alford. "I know that the Board of Trustees and management are dedicated to pursuing these purposes. As I have said before, every decision we make is informed by those public purposes and the strengthening of libraries."

Jay Jordan, OCLC President and CEO, provided an update of OCLC's activities in his President's Report. "I can sum up our strategic plan by saying that we are building Web-scale for libraries," he said. "We are building Web-scale services to help move libraries to a new level of automation, computerization and cooperation."

Jordan said that technology is at a point where libraries can seriously consider moving library operations "from the box to the cloud." In this model, libraries would use the same hardware and services, subscribing to network-level integration of a variety of services that go beyond the traditional ILS.

Rick Schwieterman, OCLC Executive Vice President and CFO, provided a financial update to Council. He presented a preliminary look at fiscal year

2010, which ends June 30, with total revenue estimated at \$230 million, which includes revenue of \$25 million from operations that were sold during the year – including NetLibrary, FirstSearch databases and the Preservation Service Center. This compared to total revenue of \$240.5 for fiscal 2009.

He discussed OCLC's recent sale of NetLibrary to EBSCO and the transition of FirstSearch third-party licensed content to EBSCO and H.W. Wilson and the shift in focus these moves represent—hosting and reselling content to building WorldCat as a platform that libraries can use to manage and provide access to their entire collection.

"We are going to use the proceeds of the divestiture of NetLibrary and the Preservation Service Center to pay down debt and accelerate development of our new services," said Mr. Schwieterman. "We are focusing future investments of the cooperative in the most strategic service areas for members, as well as holding the line on pricing."

Schwieterman noted that OCLC will hold prices flat in the United States on all WorldCat and WorldCat platform services for a second consecutive year, through June 2011.

"We are focusing on managing costs for our members in these challenging economic times. The operating loss [reported at 8.8 million for FY10] is the result of holding prices flat and the strategic investment in service areas," he said.

Global Council also participated in a panel discussion on Record Use Policy, Cost Sharing and Pricing Strategies, Membership and Values, and also heard reports from each of the three Regional Council chairs.

Presentations from the OCLC Global Council meeting will be made available in early May here:

<http://www.oclc.org/us/en/councils/global/meetings/default.htm>

There is also a new resource available for libraries that are geographically located in the OCLC Americas region. Check out the OCLC Americas Member-to-Member social networking site at:

<http://arcm2m.ning.com>

For more information about OCLC Americas, visit:

<http://www.oclc.org/us/en/councils/americas/default.htm> ■

General

Metadata Conference Highlights

Sara Ring, Minitex/BATS

I had the opportunity to attend the New England Technical Services Librarians (NETSL) Spring Conference on April 15, in Worcester, MA. The title of the conference was *Crosswalks to the Future: Library Metadata on the Move*. Below is a brief summary of a few of the sessions I attended. Most of the presentation handouts are online at:

<http://www.nelib.org/netsl/conference/2010/index.htm>

Building Blocks for the Future: Making Controlled Vocabularies Available for the Semantic Web

Barbara Tillett, Chief, Policy and Standards Division, Library of Congress

Barbara Tillett remarked in her talk that Google and Yahoo work in a cloud computing environment with linked data and a global perspective, and now libraries are finally getting into the act. Some of the projects that the Library of Congress is working on include:

Virtual International Authority File (VIAF)

VIAF (<http://www.viaf.org>) is a partnership between the Library of Congress, the Deutsche Nationalbibliothek (the national library of Germany), Bibliothèque nationale de France, and OCLC. VIAF was established to provide a free service on the web to help share the authority data created by libraries around the world. Libraries can use it to help reduce the costs of cataloging, because authority control is one of the most expensive aspects of cataloging operations. Catalogers are encouraged to use the VIAF to resolve conflicts. VIAF also was designed to make authority control easier on an international scale, where libraries could help each other maintain the data. And longer term, VIAF data can be used through linked data services to enable displaying our bibliographic data in the form, language, and script that end users want.

The id.loc.gov website

This is the website for posting the Library of Congress own controlled vocabularies, like the Library of Congress Subject Headings (LCSH) in SKOS (Simple Knowledge Organization Schema) format. Why is this project important? Other systems can download entire controlled vocabularies and the values within them, in multiple formats and they are available for free on the web.

RDA Controlled Vocabularies

http://metadatareregistry.org/schemaprop/list/schema_id/1.html

The controlled vocabularies that were prepared for the new cataloging code, RDA: Resource Description and Access, is freely available. It's important that they be accessible on the Web so third party service providers and Web applications can easily access and make use of this data.

Mapping Bibliographic Metadata

Jean Godby, Research Scientist, OCLC

Sometimes records are in one format in a particular database or on the web, but they need to be in a different format to be used effectively by some other system. Imagine a black box that magically transforms data from one format to the other. That's what Jean Godby (and other staff) has been working on in OCLC Research. She discussed the Crosswalk Web Service implemented at OCLC. The user specifies an input and an output, and the system does the rest. She discussed their ONIX (publisher's use this format to display their publisher data on the web and in their systems) to MARC crosswalk, Dublin Core to MARC crosswalk in Connexion Browser, and the WorldCat Digital Collection Gateway Tool. These are all examples of tools currently available that make use of the behind the scenes system architecture that OCLC has developed.

Creating a Trillion-Field Catalog: Metadata in Google Books

Jon Orwant, Google, Engineering Manager of Google Books, Magazines, and Patents.

The final keynote of the day came from Google. Google has a bottom up approach to dealing with the mess (metadata) of online content out there today on the web. He stated that Google's mission is to organize the world's information, which is why Google scans books. He gave a brief overview of the book scanning projects they've been involved in (the University of Minnesota is participating) They have metadata for:

- 174 million books
- 4 billion records
- 1 trillion metadata fields

They collect data from 100 + sources (libraries, commercial aggregators, etc). They parse records that they collect (MARC, ONIX, others) into their own internal format. He also discussed some of the past problems with the metadata in Google Books that they've been dealing with since its launch, which was always a point of criticism in the past. ■

OCLC Research Reports

If you follow Lorcan Dempsey's (Director of OCLC Research Program) blog, he recently posted a useful list of 2010 OCLC Research reports. Most of the reports (unless otherwise noted) can be found by visiting the following url:

<http://www.oclc.org/research/publications>

Mapping ONIX to MARC

Report and crosswalk produced by OCLC Research.

Digital information seekers: How academic libraries can support the use of digital resources.

Report produced for JISC (a UK based collegiate organization).

Research Libraries, Risk and Systemic Change

Report produced by OCLC Research.

http://brtf.sdsc.edu/biblio/BRTF_Final_Report.pdf

Sustainable Economics for a Digital Planet: Ensuring Long-term Access to Digital Information

Blue Ribbon Task Force on Sustainable Digital Preservation and Access

Over, Under, Around, and Through: Getting Around Barriers to EAD Implementation

Report produced by OCLC Research

Research Assessment and the Role of the Library

Report produced by OCLC Research

Implications of MARC Tag Usage on Library Metadata Practices

Report produced by OCLC Research in support of the RLG Partnership

"Capture and Release": Digital Cameras in the Reading Room

Report produced by OCLC Research.

Museum Data Exchange: Learning How to Share

Report produced by OCLC Research.

RDA ToolKit News

Sara Ring, Minitex/BATS

The Co-Publishers for RDA recently announced some pricing changes to the RDA ToolKit (set to be released June 2010). Below is the original message sent out via the RDA listserv (on 4/28), RDA-L.

Thank you for your input. The Co-Publishers for RDA have received considerable feedback about what you need to make implementation of RDA as smooth, rapid, and efficient as possible, whatever your type or size of institution and whatever country you're in. Based on what you've told us, we're introducing some additional options to the previously announced pricing and product.

Solo User License

A solo-user license (one profile, one user) for the RDA Toolkit at \$195 (USD). This solo-user license is in addition to, and differs from, the previously announced site licenses. The solo-user license is for single-user environments where access to the RDA Toolkit is not shared with other individuals in the same institution. By contrast, the previously announced site license base price of \$325 (USD) is designed for multi-user environments where one concurrent user (with the option to add additional concurrent users) is shared with an unlimited number of individuals within the same institution. For more details on pricing, please visit the website www.rdatoolkit.org/pricing.

Double User License

A double-user offer for those who subscribe at any site license level to the RDA Toolkit before August 31, 2011. During the evaluation and initial implementation of RDA, when users are likely to need more frequent concurrent access, subscribers will receive double the purchased number of concurrent users of the RDA Toolkit at no additional charge for their first subscription period. (For example, buy a 2-user site license but get a 4-user license for no additional cost.)

Print Version

Full-text loose-leaf print versions of both Resource Description and Access (RDA) and RDA: Element Set View. While most users agree the preferred way to interact with RDA is online via the RDA Toolkit, the Co-Publishers will offer the full text of RDA in print (including an index) as well as online, to help ensure that RDA reaches the widest possible audience. In addition to these print items in English,

the Co-Publishers will work with publishing partners to distribute translations of them to supplement translations offered in the RDA Toolkit online. Pricing and availability to be announced closer to the June RDA Toolkit launch date.

Have you signed up yet to receive updates? If not, sign up at:

<http://www.rdatoolkit.org/rdalist>

Or send your email address to rdatoolkit@ala.org. We'll send you updates as information becomes available. Updates will include the complimentary open-access period, free trials, pricing, special introductory offers, print versions, product updates, and more-for the U.S.A. and other countries. You can also bookmark our informational website at:

<http://www.rdatoolkit.org>

For general information about the open-access period (June through Aug. 31, 2010), visit:

<http://www.rdatoolkit.org/openaccess>

Resource Description and Access (RDA) and the RDA Toolkit are published by the Co-Publishers for RDA (the American Library Association, the Canadian Library Association, and Facet Publishing, the publishing arm of CILIP: the Chartered Institute of Library and Information Professionals).

New Cataloging Resources on the Minitex Website

Mark Wilhelmi, Minitex/BATS

As announced in last month's *Mailing*, Minitex recently changed our website. While it has same address (<http://www.minitex.unm.edu>), it has a new look and a new structure. Based on feedback from usability studies, we wanted to make the website more user-oriented. You will find three menu options on the main page — Products & Services, Training & Events, and Communications. From there, you can hover over any of these tabs and will discover a drop down menu of quick links to the most frequented parts of our website. If you work in technical services, click "Products & Services" and explore the options under "Cataloging." Below is a brief description of the new content we've added to the Cataloging section of our website.

Once you are on the Cataloging section of our website (<http://www.minitex.umn.edu/Cataloging>), notice the links on the left side of the page. In addition to adding a link all about our Minitex Contract Cataloging program, we've added two new pages:

Cataloging Tools & Interfaces

Among the resources under "Cataloging Tools & Interfaces," you'll find links not only to OCLC's CatExpress and Connexion, but also to the Library of Congress and a selection of other interfaces. One of the latter, for example, is MarcEdit, a freeware program that's useful for editing bibliographic records in large batches. This page also contains a "Tools" section with links to general

cataloging tools, extensive resources on classification, MARC codes, MARC format and subject headings.

Cataloging Rules and Changes

On the "Cataloging Rules & Changes" page, view online guides to AACR2, authorities, Dewey classification, Library of Congress classification, and the MARC format. Also listed on this page are resources about Resource Description and Access (RDA), the new set of cataloging guidelines that will replace AACR2, and Functional Requirements for Bibliographic Records (FRBR), the new framework for accessing and retrieving records from bibliographic databases. ■

Cataloging Support & Services

The Minitex Bibliographic and Technical Services (BATS) unit provides training, consultation, and support in the areas of cataloging and metadata, technical services workflow, and OCLC products and services. In addition, [Minitex Contract Cataloging](#) can assist with eliminating backlogs, ongoing cataloging, and specialized language and format cataloging.

Through our training, communications, and the resources on this site, we strive to strengthen the knowledge, skills, and efficiency of technical services staff in libraries throughout the Minitex region.

New Webinar About Batch Processing

Sara Ring, Minitex/BATS

In addition to a new webinar about searching and performing actions on records in batch, we've scheduled

more Connexion client online training for May. Read on for details.

Connexion Client Module 10: Basic Batch Processing

Instruction on how to use Connexion Client to perform searches and record actions (i.e., setting & deleting holdings, exporting, creating labels) on groups of records using batch processing.

Thursday, June 3, 2:00 p.m. - 4:00 p.m., Central

<http://www.minitex.umn.edu/Training/Details.aspx?SessionID=298>

Connexion Client Module 2: Basic Searching in Connexion Client

Tuesday, May 18, 1:30 p.m. – 2:30 p.m., Central
<http://www.minitex.umn.edu/Training/Details.aspx?SessionID=249>

Connexion Client Modules 3 & 4: Basic Editing, Record Processing, and Save File Maintenance

Tuesday, May 25, 10:00 a.m. – 12:00 p.m., Central
<http://www.minitex.umn.edu/Training/Details.aspx?SessionID=248>

CatExpress

Tuesday, June 8, 10:30 a.m. – 11:30 a.m., Central
<http://www.minitex.umn.edu/Training/Details.aspx?SessionID=244> ■

Local Holdings Maintenance

Reorganization of MULS Web Content

Dave Linton, Minitex/MULS

The launch of the revised Minitex website includes significant changes to the information related to MULS and Local Holdings Records (LHRs).

To begin with, you'll notice that our pages are no longer structured under the MULS group name. Instead, we have organized the information around functional ideas. So if you select "Products and Services" on the Minitex main page, you can start with what you want to do, like "Updating Local Holdings Records" — and not have to re-read the background of the MULS unit to get there. Or, you can start with "Training opportunities" and quickly find the next scheduled Local Holdings Maintenance webinars.

One of our goals with this redesign is to limit the amount of 'drilling down' one has to do to find the topic they want. The heading with the most information for MULS libraries is "OCLC Resources for Local Holdings Records." Under that heading, you can find documentation about Local Holdings Records, online tutorials, information about updating via OCLC's Batch Updating Service, and how to get a snapshot of your library's LHRs with a Local Holdings Offline Product. But, if you are interested in holdings from the National Library of Medicine's SERHOLD database or just want to send us updates through our web form, those links are also easier to find.

We hope these changes will make it easier to find the information you are seeking and to answer your questions about Local Holdings. And, of course, if what you're looking for isn't as easy to find as we'd hoped, you can always contact us. We'll be happy to help. ■

Local Holdings Maintenance

Want Local Holdings Training This Summer?

Dave Linton, Minitex/MULS

The weather is warming up, and whether you're looking forward to a slower period when the semester ends or anticipating the bustle of summer readers, we're all planning what to do in the warmer months. In the MULS office, we are considering whether and when it might be best to offer a set of Local Holdings Maintenance webinars.

We want to make sure that we can make our training sessions as widely available as possible. With staff sometimes on different schedules than usual, and special projects often slated for the summer months, it seems quite possible that our typical once-a-week-for-3-weeks, schedule may not be best for this time of year.

If staff at your library is interested in training on how to create, edit and delete Local Holdings Records in OCLC, please contact Dave Linton in the Minitex/MULS office and let him know what you need (contact information at the end of this *Mailing*). It could be as specific as "We need training sessions on weekday afternoons in July, but not Mondays." We will do our best to set up a schedule that works for as many libraries as possible. ■

Digitization & Preservation

Two Regional Digitization Events

Sara Ring, Minitex/BATS

Check out the program and register for the MN Digital Library Annual Meeting, and mark your calendars for the Fall 2010 Upper Midwest CONTENTdm User Group Meeting!

MN Digital Library Annual Meeting

As a representative to the planning group for this year's Annual Meeting of the MN Digital Library, I may be biased when I say we have a great program! Check out all the details below.

June 10, 10:00 a.m. – 4:15 p.m.
Minneapolis Institute of Arts
2400 3rd Avenue South
Minneapolis, MN

Keynote Speaker: To be announced soon!

Annual Meeting participants will have the opportunity to pick among three tracks (3 sessions within each track).

Track 1: Digitizing for Minnesota Reflections

A three-part session that demonstrates digitizing with a flatbed scanner and with a digital camera. Sessions will include MDL digitization standards and best practices, and working with metadata.

Track 2: Legal & Policy Issues

What rights and responsibilities do cultural institutions have as they digitize their collections? Attendees will have 3 sessions to choose from focusing on copyright and privacy.

Track 3: MDL and Other Projects in Minnesota

The three sessions under this track include: MDL Project Updates, Legacy Funding and MDL, and Large-scale Digitization: The University of Minnesota-Google Experience.

Tours of the MIA will be available after the meeting, but registration is required. Registration is available at:

<https://www.minitex.umn.edu/Events/Conferences/Mdl2010.aspx>

3rd Annual Upper Midwest CONTENTdm User Group Meeting

Based on feedback from CONTENTdm users, we're trying something new this year for our user group meeting. The entire meeting will be online, and you will be able to attend from your desk! The planning group is busy working out the details of the event, and more information will be announced soon! Please mark your calendars for Nov. 8-9, 2010.

Note that though we have two dates reserved, we will not be meeting for the full two days. Most likely we will be splitting the online meeting up over two half days. ■

Cooperative cataloging for the 21st Century

OCLC members' contributions have created the WorldCat network. The more libraries participate, the more valuable the network becomes for everyone.

The goals of cooperative cataloging haven't changed in the 40+ years during which OCLC® members have built WorldCat® into the largest library database in history. By sharing this vital work among member institutions, we distribute costs, improve efficiency and make it easier for information seekers to find what they need in libraries around the world.

New ways to participate

In 2009, OCLC members participated in an experiment to expand participation in the collective maintenance of WorldCat. The Expert Community pilot phase gave members with full-level cataloging authorizations more ability to improve and upgrade WorldCat master records. This change was made based on feedback from the cooperative, and 1,690 members participated in the pilot phase, making improvements to 108,766 records. The new functionality that was implemented for the experiment is now available for continued use by all catalogers in the OCLC cooperative.

Another example of how OCLC members continue to build WorldCat is the astonishing growth of the WorldCat database through batchloaded contributions from libraries and consortia around the world that want their holdings

represented on the WorldCat network. In 2009, 241.8 million items were cataloged by batchloading processes, greatly enriching WorldCat's value for researchers, students and citizens outside North America, and adding significantly to the proportion of WorldCat representing materials in languages other than English.

Depth, flexibility and value

At first, the record for a work held in both WorldCat and the Library of Congress may seem quite similar, but there are often many more versions represented in WorldCat. Specific data for paperback editions, audiobooks, Braille, large print and other media have been added, making cataloging easier and more useful for the other members who can then share those records. Metadata in hundreds of languages and scripts is also available in many cases.

While a single bibliographic record might not directly reflect its point of origin, the diversity of input methods ensures that more types of libraries, publishers and partners can contribute to the cooperative. This, in turn, means more records, less

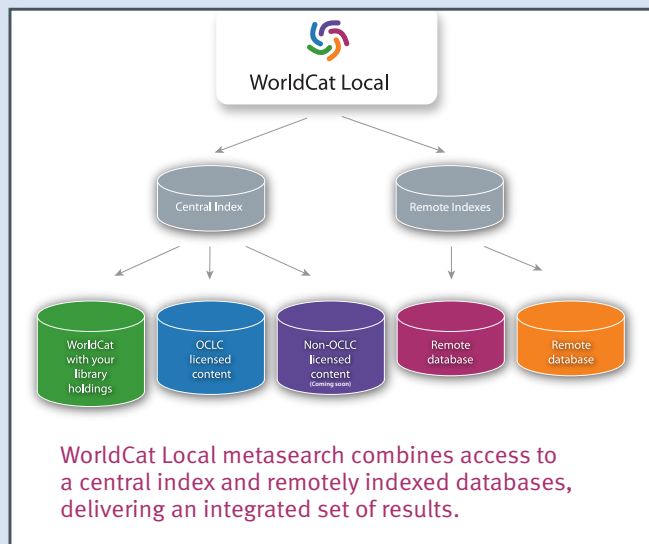

Continued on page 3

WorldCat Local metasearch puts more in your search box

Information seekers no longer need to log in to multiple interfaces or navigate numerous results sets to find and get to the information they need—WorldCat® Local metasearch now provides single-search access to library resources. A single set of search results integrates records from remotely indexed databases and a central index of WorldCat records and content licensed from OCLC. The search results include electronic and digital items, databases, music, video, maps, journals, theses, as well as print. This upgrade is available at no additional charge to WorldCat Local libraries.

“WorldCat Local metasearch represents a new approach for consolidated access to library resources,” says Mela Kircher, Associate Product Manager, WorldCat Local. “Library users can now find items from multiple information providers all

Web-scale Management Services move forward

OCLC staff is working closely with a Library Advisory Council and four pilot library groups to continue development of OCLC Web-scale Management Services, a next-generation Web-based suite of library management services for metadata management, acquisitions, circulation, license management and workflow. Discussions are underway with additional libraries to schedule migrations to the production system later in 2010.

Pilot participants include CPC (Craven, Pamlico, Carteret) Regional Libraries in North Carolina; Idaho Commission for Libraries, including Boundary County Public Library, Payette County Public Libraries and the Cooperative Information Network (CIN); Orbis Cascade Alliance and Linfield College Libraries; and Pepperdine University Libraries. These libraries are already testing circulation and patron management modules, and will continue iterative testing and product feedback as new functionality becomes available.

“Libraries are looking for new ways to address the complexities of managing disparate collections, maintaining multiple workflows, and supporting increasingly complex IT environments,” said Andrew Pace, OCLC Executive Director for Networked Library Services. “This is an ambitious project and it is essential that libraries are fully engaged in its development. Our collaborative effort will continue through general release and beyond because these services are being built to accommodate ongoing enhancements. We are fortunate to be able to work closely with library leaders and leading libraries to help build the first cooperative Web-scale Management Services for libraries.”

Americas Regional Council update

The Americas Regional Council represents the needs and perspectives of all members throughout the Americas. Here are some important activities and meetings to help you connect with members throughout our vibrant community:

The Americas Regional Council's Annual Meeting

June 24, 2010, 1:00 – 6:00 pm and June 25, 2010, 8:30 am – 12:00 pm in Washington, DC, in conjunction with the ALA Annual Conference. More details coming soon to: www.oclc.org/us/en/councils/americas/meetings/.

Visit the Americas Regional Council Member-to-Member Web site; join service groups

Our Member-to-Member site is a social networking site that facilitates ongoing conversations among members. We are adding several service groups to this site, so that you can connect with your colleagues throughout the Americas: <http://arcm2m.ning.com/>.

Keep in touch! Send questions and comments to regionalcouncil.americas@oclc.org or to the Council's Executive Committee via www.oclc.org/us/en/councils/americas/committees/.

The collective vision for Web-scale Management Services is to move services to the network or “cloud” whereby libraries use the same shared hardware, services and data, rather than hosting hardware and software on behalf of individual libraries. The cooperative nature of this project leverages the powerful ethos of library resource sharing—opening up opportunities for cooperative intelligence by making sharable data available to all users—a “network effect” not available when library management systems are simply hosted by another organization.

“Our relationship with the OCLC team has grown in recent years with our adoption of CONTENTdm®, ILLiad™ and now WorldCat Local—innovative, cutting-edge tools which support seamless access to information,” said Mark Roosa, Dean of Libraries, Pepperdine University. “We see this pilot project as a way to bring similar improvements and efficiencies to our circulation and acquisition functions.”

“A Web-based approach, in particular, makes a great deal of sense to us; we want to manage information, not hardware,” said Mr. Roosa.

“The Boundary County Library is participating in OCLC's Web-scale Management pilot because OCLC has proven time and time again that combining forces achieves more—from WorldCat to WebJunction®, and more and more,” said Sandy Ashworth, Director, Boundary Public Library, in Idaho.

WorldCat Local... *Continued from page 1*

in one place. This not only saves time, but helps them make better use of the resources libraries provide for them.”

“The ideal way to offer metasearch is to load databases and index them centrally, and WorldCat Local is on target to making this happen,” says David Wuolu, reference and Systems Librarian, Alcuin Library, College of St. Benedict/St. John's University, Collegeville, Minnesota.

Expansion has already begun. In March, OCLC announced plans to centrally index the metadata of Gale's *Academic OneFile* and *General OneFile* databases, adding some 100 million records of authoritative, full-text articles from peer-reviewed journals, newspapers and magazines.

Over time, the central index will provide access to the majority of available content, and will be complemented by searching remote indexes to incorporate the diverse materials libraries make available to their users.

For more information, visit:

www.oclc.org/worldcatlocal/overview/metasearch

Cataloging... *Continued from page 1*

cost and better data. Records come into WorldCat from original cataloging and batchloading; from the smallest public libraries to the largest national libraries in the world; from publishers and an increasing number of partners who benefit from being able to go to a single, comprehensive source for library data.

Controlling costs

Original cataloging and authority work are among the most labor-intensive processes in which libraries invest. By sharing the effort to build WorldCat, the world's largest cooperative cataloging network, OCLC members drastically reduce the cost of cataloging and authority work for all. Most small and medium-size libraries are able to find cataloging copy for 98 percent or more of the items in their collections, thus minimizing the need for original cataloging and freeing highly trained library staff to focus on other library priorities.

In addition, for those items that do require original cataloging, OCLC provides credits to offset the costs involved with use of

OCLC systems. To support and lower the costs of serials control, and on behalf of the Program for Cooperative Cataloging, OCLC hosts the CONSER database and its cooperative program of serial experts who work together in an atmosphere of collegiality and trust. To support and streamline efforts to build a large, shared name authority file, OCLC provides an infrastructure and services around its copy of the LC/NACO Authority File, enabling OCLC-NACO members to significantly reduce the costs of authority work for the library community while improving the catalog user's discovery experience.

The value of cooperation

The scope and flexibility of OCLC cataloging allows more libraries of more types and sizes to participate. This, in turn, leads to better cost savings and efficiency for all members. Working together, we will continue to expand opportunities for library participation in what is an example of true cooperation.

OCLC announces eContent strategy changes

On March 17, OCLC announced a strategic shift in focus from reselling eContent to strengthening the WorldCat platform. Chip Nilges, OCLC VP for Business Development, told *Library Journal*, "It's a strategic repositioning from hosting and reselling content to building WorldCat out as a platform that libraries can use to manage and provide access to their entire collection, including eBooks and articles." Here is a brief summary of what is changing:

NetLibrary assets sold to EBSCO Publishing. The sale of all NetLibrary assets, including the NetLibrary eBook and eAudiobook platform, service and operations in Boulder, Colorado, was effective March 17. OCLC and EBSCO are working closely together to ensure a smooth transition for libraries, and services will continue without interruption. The NetLibrary eBook and eAudiobook platform will continue to be accessible at www.netlibrary.org. More details are available at www.oclc.org/netlibrary/questions/.

Databases moving to EBSCOhost service. EBSCO Publishing has acquired the rights to license a number of vendor databases currently provided by OCLC through the FirstSearch® service. The list of the databases is available at www.oclc.org/firstsearch/content/questions/.

Databases moving to WilsonWeb service. OCLC and H.W. Wilson will work together to transition library subscriptions for H.W. Wilson databases provided on FirstSearch to the WilsonWeb platform over the next 16 months. Wilson will continue to index many of its databases in WorldCat.org® and WorldCat Local, a program that began in 2008. The list of the databases is available at www.oclc.org/firstsearch/content/questions/.

FirstSearch database content refocused. OCLC will continue to offer content on the FirstSearch platform. Content will be primarily library-owned content databases including WorldCat, the FirstSearch Base Package and other library content databases. The list of databases that OCLC will continue to offer on FirstSearch is available at www.oclc.org/firstsearch/content/questions/.

Stay in touch with your cooperative!

OCLC members—libraries, archives and museums around the world—are all owners of the OCLC cooperative. Delivered monthly to your e-mail in-box, **OCLC Cooperative eNews** will help keep you informed on membership news, views, events, support and training—everything you need to know about what's happening at OCLC.

Visit: www.oclc.org/us/en/email/subscribe.htm to sign up for this and other informative OCLC publications. We also invite you to follow us on Twitter at <http://twitter.com/OCLC> and subscribe to our blogs from www.oclc.org/rss.

Product Updates

Cataloging and Metadata

RDA: Resource Description and Access

OCLC is making preparations to support the RDA testing planned by the three U.S. national libraries (the Library of Congress, the National Agricultural Library and the National Library of Medicine). Preparations include a MARC Update Project that will include MARC 21 changes that support the creation of RDA-based records. OCLC Contract Cataloging services will be participating in the RDA testing efforts, which are expected to begin following the release of RDA Online.

Expert Community Experiment is now the Expert Community

In August 2009, OCLC concluded the Expert Community Experiment that enabled cataloging members to make more changes to almost all WorldCat records. The Experiment was a success, with a total of 1,690 member libraries participating during a six-month period. The functionality of the Experiment continues as a permanent Expert Community. Members with full-level cataloging authorizations have the ability to improve and upgrade master bibliographic records in many ways they previously were unable to do.

See www.oclc.org/us/en/worldcat/catalog/quality/expert/.

Batch Processing Services: easier and more efficient ordering and processing

Batch Services is updating its technical infrastructure to improve the ordering process—from order placement to order processing. Enhancements have been made to bibliographic batchload order processing and Local Holdings Record Updating services. The new automation offers convenience and time savings for libraries maintaining up-to-date holdings in WorldCat. Current and complete holdings enhance implementation and use of many OCLC Products and Services, including WorldCat Local, which uses Local Holdings data to qualify local searching by branch or collection and enrich record displays with item-specific data.

WorldCat Global Metadata Network

OCLC continues to have record high numbers for loading records into WorldCat—many from national libraries and large consortia outside the United States—to extend the global relevance and reach of the WorldCat database. WorldCat now contains 175 million records with 1.55 billion holdings from libraries around the world. More than half of WorldCat represents materials in languages other than English.

OCLC Record Use Policy

In September 2009, the OCLC Board of Trustees convened a Record Use Policy Council, who were charged with drawing

upon the fundamental values of the OCLC cooperative and engaging with the global library community to develop the next generation of the WorldCat Record Use Policy.

In late March 2010, they recommended to the OCLC Board of Trustees a new draft policy that is aligned with the present and future information landscapes. The new policy will replace the “Guidelines for Use and Transfer of OCLC Derived Records” that was developed in 1987. The draft was distributed to Global and Regional Councils in early April 2010. During April and May the Record Policy Council will incorporate member input, and a new proposed policy will be submitted to the Board of Trustees at the end of May 2010.

See www.oclc.org/worldcat/catalog/policy/council/.

OCLC Metadata Services for Publishers

OCLC has launched new OCLC Metadata Services for Publishers, based on the Next Generation Cataloging pilot. The service enriches publisher ONIX title metadata, supports the early addition of new title metadata to WorldCat, and enhances quality and consistency in upstream title metadata.

See <http://publishers.oclc.org>.

Content and Collections

OAIs accessible through WorldCat.org

OAIsTM records are now accessible through WorldCat.org, and will be included in WorldCat.org search results along with records from thousands of libraries worldwide that add their holdings to WorldCat. OCLC has also released a freely accessible, discrete view of the OAIs records available at <http://oai.worldcat.org>. OAIs records will continue to be indexed in WorldCat.org and integrated into WorldCat.org search results, and available through the FirstSearch service to subscribers to the FirstSearch Base Package.

Digital Collection Services

CONTENTdm now offers expanded Microsoft Windows and Linux support

OCLC is pleased to introduce CONTENTdm Digital Collection Management Software version 5.3. It supports additional platforms for the CONTENTdm Project Client and CONTENTdm Server. The Project Client now runs on Microsoft Windows 7 (32- and 64-bit) and Windows Vista (64-bit), and the Server now runs on Linux (64-bit) and Windows Server 2008 R2.

In addition, a new import feature enables institutions with records already in WorldCat to import metadata and OCLC numbers easily into CONTENTdm. Streamlined import of

metadata and OCLC numbers from WorldCat into CONTENTdm will be particularly useful to users who manage the mass digitization of items with existing WorldCat records.

This release also includes improved sorting and editing functionality in the Project Client's project spreadsheet. Users can now sort all metadata fields (columns) displayed in the spreadsheet. And during editing of metadata in the project tab, the thumbnail image and checkbox are now frozen in the far left columns, which helps users keep spreadsheet records in context while editing and viewing metadata. Other enhancements include improvements to Upload Manager error reporting and OCR License resetting. The new release is available to current CONTENTdm licensees at no additional charge.

Management Services and Systems

Hosted EZproxy service coming soon

OCLC plans to launch the Hosted EZproxy® service in the first half of calendar year 2010. The Hosted EZproxy service is designed to help libraries with limited IT resources deliver a quality experience with eContent access for remote users. Having a hosted access-and-authentication service means a library will always have the latest network infrastructure, bandwidth and security, while freeing library IT staff for other tasks. The Hosted EZproxy service will:

- Reduce barriers for small and mid-size libraries, with little or no technical expertise, to remotely access eContent
- Enable access to a wider array of content (both OCLC and external)
- Provide a platform for future Identity Management services
- Enable infrastructure for future collection/usage analysis.

Networked Library Services

WorldCat Collection Analysis enhanced

Recent enhancements to WorldCat® Collection Analysis include:

- **Interdisciplinary Studies:** Libraries can now limit their analysis by category and subject, as well as division, which allows libraries to look at their collections at a more granular level in a way that facilitates analysis based on interdisciplinary studies as defined by the library.
- **Languages:** The following languages have been added: Azerbaijani, Belarusian, Burmese, Estonian, Georgian, Icelandic, Irish, Kannada, Kazakh, Kurdish, Kyrgyz, Lithuanian, Ottoman Turkish and Uzbek.
- **Expiration dates for each secondary comparison** (automatically deleted after 120 days if not accessed), which will remind you to access comparisons prior to the expiration date.

- The Quarterly Update was completed in January 2010 and includes data pulled from WorldCat on December 29, 2009.
- With WorldCat Collection Analysis, each library-created peer comparison result reflects the data with a FRBRized view, which provides results that better reflect library uniqueness and overlap.

Learn more: www.oclc.org/collectionanalysis.

OCLC Research

Webinar series highlights innovation

The TAI CHI (Technical Advances for Innovation in Cultural Heritage Institutions) webinar series highlights specific innovative applications—often locally developed—that libraries, museums and archives may find effective in their own environments; and teaches technical staff new technologies and skills. Learn more:

www.oclc.org/research/events/taichi.htm.

VIAF marches on

The Virtual International Authority File (VIAF), a joint project with the Library of Congress, the Deutsche Nationalbibliothek and the Bibliothèque nationale de France, explores virtually combining the name authority files of the three institutions into a single name authority service. By late 2009 there were 18 personal name authority files from 15 organizations participating in VIAF. NACO catalogers are encouraged to use the VIAF as a tool for resolving conflicts and disambiguation of personal names as needed. A VIAF beta is available online at viaf.org.

Reference and Discovery

Recent enhancements to WorldCat Local

Several important enhancements to WorldCat Local include:

- **WorldCat Local chat:** Institutions that have a QuestionPoint® Qwidget or other chat clients will now be able to provide their users the opportunity to chat directly with a librarian from within WorldCat Local.
- **Use of LHRs for serials information:** OCLC has enhanced the display of serials holdings information in WorldCat Local through the use of Local Holdings Records (LHRs) in WorldCat. When enabled, LHRs are used to display serials data in detailed records instead of pulling this information from local library OPACs.
- **New direct links to library OPACs from WorldCat Local “quick start.”** These links help library users connect more easily to item availability details in local library catalogs. This increases access to materials for any library with an ILS that does not interoperate with WorldCat Local. The new links display in the “Find a copy in the library” section of the detailed record display.

- **More fulfillment options.** WorldCat Local “quick start” libraries may now set up a different fulfillment option at each of *two* levels of relevance in search results. WorldCat Local libraries may set up a different fulfillment option at each of the *four* levels of relevance in search results. This gives you the option to present users with “get it” options that are most appropriate for each level of relevance.
- WorldCat Local now redirects visitors to their local WorldCat Local or WorldCat Local “quick start” site when their IP address is recognized. Library staff can quickly enable this redirect option through the Service Configuration module.

Recent social activity on WorldCat.org

Traffic and social activity on WorldCat.org continues to grow (as of February 1, 2010):

- Click-thoughts to WorldCat.org (total): **619,149,263** (roughly 16 million/month)
- Click-throughs from WorldCat.org to Libraries (total) **33,953,598** (almost 1 million/month)
- Profiles created in WorldCat: **437,607**
- Lists created in WorldCat: **240,287**

See what’s going on with WorldCat.org from an end-user point of view at <http://worldcat.org/blogs>.

Recent enhancements to WorldCat.org

A number of enhancements have been made to WorldCat.org in the past few months. They include:

- Updating the URL to include titles, which makes URLs more intuitive, mashable and search-engine friendly. (All previous URL constructions will continue to work.)
- New colorful, customizable materials to help promote your library’s WorldCat Local instance or inclusion in WorldCat.org. Download at www.oclc.org/worldcat/promote/.
- The WorldCat Mobile pilot now includes cover art when available and can connect users to their local library catalog. (Libraries can set their deep links through the WorldCat Registry to have this link enabled.)

WorldCat page added to Facebook

Now you can become a fan of WorldCat on Facebook. Simply visit www.facebook.com/pages/WorldCatorg/81565002545. You can also follow WorldCat on twitter at: <http://twitter.com/worldcatorg>.

WorldCat Registry data behind many OCLC services

WorldCat® Registry data powers many aspects of OCLC services. The WorldCat® Mobile pilot uses WorldCat Registry data for the “Find a Library” and “WorldCat Libraries Search.” New “Search for a Library” and “library info” pages on WorldCat.org also pull from the Registry.

Recent WorldCat Registry enhancements:

- A new field has been added to the WorldCat Registry to help users sign up for a library card once they find their local library through WorldCat.org. This new field, called a “Library Card Form Page,” lets libraries add the URL for the library card sign-up form to their Registry profiles.
- Authorized users are now able to set a preference for library contacts information. The contacts default can now be changed to make them visible to all who access the Registry.
- A new visualization diagram shows where your Registry data goes—and shows the importance of keeping your profile up-to-date. Learn more: www.oclc.org/registry/where/.
- Incorporation of WorldCat Registry institution data into the OCLC Policies Directory.

See www.oclc.org/us/en/registry/support/registrydata.pdf.

QuestionPoint: Five millionth inquiry answered!

QuestionPoint librarians answered the 5 millionth question in November 2009 (answered by the University of Queensland). More than 2,200 libraries in 30 countries use QuestionPoint for virtual reference.

Recent enhancements. These include integration with Mosio’s Text a Librarian software, a new qwidget for Facebook, a new Mobile Webkit Widget, custom qwidget skins and formatting, and much more.

Volunteers keep Global Knowledge Base current. With over 21,000 active records in nine languages, the Global Knowledge Base provides a shared resource of information for all QuestionPoint subscribers. Fifteen volunteer editors from three countries help keep the Global Knowledge Base current. Both the Global Knowledge Base and a library’s own local knowledge base can be offered on the library’s Web site for users to search.

New QuestionPoint libraries. The National Library of Wales, the National Library of Chile and the University of Botswana have joined the QuestionPoint family of libraries.

Keep up-to-date with QuestionPoint by subscribing to the QuestionPoint blog, available at <http://questionpoint.blogs.com>.

A reference service that never sleeps

With both academic and public library cooperatives, approximately 1,500 libraries participate in the 24/7 Reference Cooperative, including 13 statewide services, the nationwide Enquire service in the United Kingdom, 15 major regional services and numerous special libraries providing expertise in eight major subjects.

Resource Sharing and Delivery

Redesigned Policies Directory released

The OCLC Policies Directory is the repository of interlibrary loan policies for WorldCat® Resource Sharing libraries. A new, redesigned version was released in January 2010. The changes include a new user interface, hardware platform and underlying database. The new interface is based on feedback received during usability testing with existing Policies Directory users. In addition, WorldCat Registry data is now incorporated into the Policies Directory interface.

Direct request for articles in WorldCat Resource Sharing and ILLiad

OCLC is working with staff at IDS Project and Atlas Systems on a pilot project to automate delivery of articles through the cooperative. This pilot program provides unmediated access to electronic journal articles via data from WorldCat knowledge bases and electronic rights management tools. The first phase of this project is expected to release in August 2010.

ILLiad version 8 available

In November 2009, OCLC and Atlas Systems released version 8.0 of the ILLiad Resource Sharing Management software with significant enhancements to staff processing workflows. This new version of ILLiad has been entirely rewritten to allow for a better overall staff user experience. Client layouts allow unlimited customization of forms, while a redesigned home page provides at-a-glance info about the state of ILL operations. The new ribbon user interface makes it easier to train staff on ILLiad processes, while the new tabbed interface cuts down on form clutter and allows multiple requests processing. See: <http://www.oclc.org/us/en/news/announcements/announcement411.htm>.

ILLiad hosted service

OCLC can provide server hosting to ILLiad users and a free migration service to those wishing to move their ILLiad components to the hosting service. This service includes all of the hardware and software components needed, as well as all back-ups, system and software upgrades, firewall and virus scanning, and 24-hour on-site monitoring by operational personnel. For more information: www.oclc.org/illiad/about/.

Resource Sharing Community portal for ILLiad users

Share your experience, find answers or connect with other ILLiad users at the new Resource Sharing Community portal, built using WebJunction platform, at ResourceSharing.WebJunction.org.

Report on 'greening' ILL

OCLC Research and OCLC Delivery Services engaged a consultant to explore ways to provide 'greener' interlibrary loan services. A report is due in April 2010. Learn more:

- http://resourcesharing.webjunction.org/best_practices/resources/bparticles
- <http://hangingtogether.org/?p=767>

Web Services

OCLC Developer Application Gallery

A new Application Gallery is available to showcase the applications and projects that people have created with OCLC Web Services. You can browse by function or by Web service at: www.oclc.org/applicationgallery/.

WorldCat Basic API launched

In December 2009, OCLC launched the new WorldCat® Basic API, a smaller version of the WorldCat® API, for developers to use. Intended to be primarily useful to individual developers, this basic-level API returns keyword search results with authors, titles, ISBNs, OCLC numbers and automatically formatted citations, along with a link to WorldCat.org. The API will use OpenSearch, returning results in RSS and ATOM.

OCLC Membership

Participation

Membership brings together institutions of all sizes with a common goal: to improve access to the world's information. It's a global mission that touches librarians individually.

Real benefits

Libraries that take full advantage of OCLC membership and services receive value, increase efficiency and support the future of librarianship. Among the benefits of membership:

Build and use WorldCat. Share the world's largest union catalog. More than 1.5 billion pieces of information about who holds what and where.

Reduce costs. Receive discounts on OCLC products and services.

Access deeper resources. Gain access to rare and highly valued materials.

Tap 40 years of expertise. Benefit from dedicated research and access best practices.

Influence the future. Shape and guide not just OCLC, but the profession of library and information science.

Maximize your collections. Make your collections available to the world through cataloging, resource sharing, reference and beyond.

An important return from your OCLC membership

With more than 175 million records and 1.5 billion holdings, WorldCat is the world's most comprehensive bibliographic database. WorldCat connects librarians, students, researchers and other library users to 4,000 years of recorded knowledge. It is the foundation for many OCLC services that lets your library process, manage, share and preserve information while reducing costs.

Learn more about WorldCat and watch new records enter the database live at:

www.oclc.org/worldcat/

OCLC helps libraries in more than 100 countries.
Please contact us to learn more about OCLC in your part of the world.
