#### About Dr. Goodall

Jane Goodall began her landmark study of chimpanzees in Tanzania in 1960 under the mentorship of anthropologist and paleontologist Dr. Louis Leakey. Her work, at what was then called the Gombe Stream Chimpanzee Reserve, would become the foundation of future primatological research and redefine the relationship between humans and animals. Dr. Goodall travels an average of 300 days per year, speaking about the threats facing chimpanzees, other environmental crises, and her reasons for hope that humankind will solve the problems it has imposed on the earth. She continually urges her audiences to recognize change through consumer action, lifestyle change, and activism.

#### About the Jane Goodall Institute

Founded in 1977, the Jane Goodall Institute continues Dr. Goodall's pioneering research into chimpanzee behavior – research that transformed scientific perceptions of the relationship between humans and animals. Today, the Institute is widely recognized for establishing innovative, community-centered conservation and development programs in Africa, and the Roots & Shoots education program, which has groups in almost 100 countries.
