INTRODUCTION

The geologic map underlies all the other data and serves as the foundation for the entire bedrock report. The map is a detailed and accurate representation of the geology of the county, and it is used to study and interpret the various geological processes that have shaped the area. The map is also a valuable tool for planning and development, as it provides a clear picture of the underlying geology.

The geologic map is a major component of the geologic report, and it is used to identify and describe the various geological features that are present in the county. The map is a valuable tool for understanding the geology of the area, and it is used to study and interpret the various geological processes that have shaped the area.
