

University Farm News
University of Minnesota
University Farm
St. Paul 1 Minnesota

June 14 1951

Appearing in newspapers of the Minnesota Editorial Association through the cooperation of the U.S. Soil Conservation Service and conservation authorities at University Farm.

Prepared and distributed by the Minnesota Agricultural Extension Service.

For use during the week of June 17 1951

Will Nelson, cooperator with Lyon Soil Conservation District, is another farmer who has found trench silos a practical way to use increased forage resulting from his conservation program. Using loader to carry silage from trench to feed box makes feeding easy. Corn goes into one silo, and legumes and grass into the other.

In addition to improving the soil, a good legume pasture will save 20% of the grain and 30% of the protein needed for hog production, says H. G. Zavoral, extension animal husbandman at the University of Minnesota. At the same time, the animals will harvest their own crop, be healthier and add humus and fertility to the soil.
