FALL VEGETABLES

For most people, garden planting time is early spring. Once the early vegetables are in, no more planting is done until the following year. But to get more fun and enjoyment out of gardening, why not plant seed now for a fall garden?

* * * *

Among the cool-season crops which will mature if planted now are radishes, lettuce, spinach, turnips, kohlrabi and Chinese cabbage. Even peas planted now may make a good crop this fall if the weather is right.

* * * *

The fall garden should be planted on freshly prepared soil. Fertilize the soil, using a complete fertilizer at the rate of 3-5 pounds per 100 square feet of area.

* * * *

To insure good germination, it's best to plant the seeds following a good rain. Mulching over the rows with finely chopped straw or ground corncobs will keep the soil moist and prevent baking until the seedlings have emerged.

* * * *

Use the same control for pests as in the spring. Dust or spray with methoxychlor and malathion at weekly intervals.
