FALL LANDSCAPING

Good landscaping begins with a landscape plan which meets the needs of the homeowner, the site and the architecture. The plan serves as a guide for developing a well-landscaped home, gives an analysis of costs and allows for orderly development. Trained landscape architects and landscape nurserymen can help develop your landscape plan.

* * * *

Fall is a good time to plan and develop your landscape. The weather is usually dependable and the pressure of other outdoor activity is usually less. All container-grown nursery stock as well as balled and burlapped stock can be planted in the fall. Trees and shrubs can be transplanted when they become dormant in the fall.

* * * *

Good landscape planning includes providing the setting for the home by helping blend the home into the surrounding area and giving it an appearance of stability. Good landscape planning also provides for the outdoor activities of the family. The swimming pool, tennis and badminton courts, patio barbecuing and sunning all have special requirements.

* * * *

The private garden should also be considered in your landscape plan. You may want to grow a small vegetable garden and flowers for cutting. Fall landscape plantings should include garden bulbs such as tulips, daffodils, hyacinths and crocus.
