INTRODUCTION

The Cavity Lake Fire area (Fig. 1) is located in the Boundary Waters Canoe Area Wilderness, northeastern Minnesota. The area encompasses a number of pre-Mesozoic terranes, including metavolcanic rocks, metasedimentary rocks, and terranes of Anorthositic series.

DESCRIPTION OF MAP UNITS

MESOPROTEROZOIC

Anorthositic series—Medium- to coarse-grained. Magmatic intrusion inferred to be largely of Mesoproterozoic age. The Neoarchean rocks and volcanics are unconformably overlain by the Cavity Lake Fire area (Fig. 1). The sequence is unconformably overlain by the Cavity Lake Fire area (Fig. 1).
