Health Literacy: What It Is And Why It Matters

What Is Literacy?

“Using printed and written information to function in society, to achieve one’s goals, and to develop one’s knowledge and potential.”

This includes a combination of skills:

- Verbal
- Listening
- Writing
- reading

National Assessment of Adult Literacy (NAAL
2003) <https://nces.ed.gov/naal/>

It's More Than Just Reading Grade Level

Prose Literacy:
Written text like
instructions or articles

Requires ability to
search, comprehend,
and use continuous text

**Document Or
Graphical Literacy:**
Short forms or graphically
displayed information

Non-continuous text.
Requires ability to
search, comprehend,
& use information

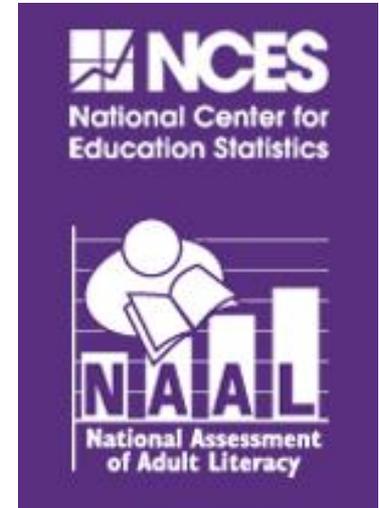

**Quantitative OR
Numerical Literacy:**
Arithmetic using
numbers imbedded in
print

Requires ability to
identify & perform
computations, using
numbers within printed
materials

National Assessment of Adult Literacy (NAAL)

- Conducted in 2003
- More than 19,000 adults
- One-on-one administration
- GOAL: assess literacy in English
- <http://nces.ed.gov/NAAL>

Results of NAAL: Literacy Statistics

- Functionally illiterate = 23% of adults
- Marginal literacy skills = 28% of adults
- Proficient = Only 13% of adults
- 66% of adults over age 60 have inadequate or marginal literacy skills
- Average reading level in the U.S. is 8th grade; 20% read at 5th grade level or below

Overview Of Literacy Levels

Table 1-1. Overview of the literacy levels

| Level and definition | Key abilities associated with level |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><i>Below Basic</i> indicates no more than the most simple and concrete literacy skills.</p> <p>Score ranges for <i>Below Basic</i>:</p> <p>Prose: 0–209</p> <p>Document: 0–204</p> <p>Quantitative: 0–234</p> | <p>Adults at the <i>Below Basic</i> level range from being nonliterate in English to having the abilities listed below:</p> <ul style="list-style-type: none">■ locating easily identifiable information in short, commonplace prose texts■ locating easily identifiable information and following written instructions in simple documents (e.g., charts or forms)■ locating numbers and using them to perform simple quantitative operations (primarily addition) when the mathematical information is very concrete and familiar |
| <p><i>Basic</i> indicates skills necessary to perform simple and everyday literacy activities.</p> <p>Score ranges for <i>Basic</i>:</p> <p>Prose: 210–264</p> <p>Document: 205–249</p> <p>Quantitative: 235–289</p> | <ul style="list-style-type: none">■ reading and understanding information in short, commonplace prose texts■ reading and understanding information in simple documents■ locating easily identifiable quantitative information and using it to solve simple, one-step problems when the arithmetic operation is specified or easily inferred |

Continued

Intermediate indicates skills necessary to perform moderately challenging literacy activities.

Score ranges for *Intermediate*:

Prose: 265–339

Document: 250–334

Quantitative: 290–349

- reading and understanding moderately dense, less commonplace **prose** texts as well as summarizing, making simple inferences, determining cause and effect, and recognizing the author's purpose
- locating information in dense, complex **documents** and making simple inferences about the information
- locating less familiar **quantitative** information and using it to solve problems when the arithmetic operation is not specified or easily inferred

Proficient indicates skills necessary to perform more complex and challenging literacy activities.

Score ranges for *Proficient*:

Prose: 340–500

Document: 335–500

Quantitative: 350–500

- reading lengthy, complex, abstract **prose** texts as well as synthesizing information and making complex inferences
- integrating, synthesizing, and analyzing multiple pieces of information located in complex **documents**
- locating more abstract **quantitative** information and using it to solve multi-step problems when the arithmetic operations are not easily inferred and the problems are more complex

NOTE: Although the literacy levels share common names with the National Assessment of Educational Progress (NAEP) levels, they do not correspond to the NAEP levels.

Differences between good and poor readers

| Skilled Readers | Poor Readers | Managing the Problem |
|----------------------------|----------------------------|------------------------------------------|
| Interpret meaning | Take words literally | Explain the meaning |
| Read with fluency | Read slowly – miss meaning | Use common words give appropriate ex. |
| Get help for uncommon word | Skip over words | Use examples, review |
| Grasp the content | Miss the content | Explain content, use visuals |
| Persistent Reader | Tire quickly | Short segments, easy clear layout |

Teaching Patients with Low Literacy Skills 2nd ed. by Doak, Doak, & Root, 1996

NAAL Health Literacy Assessment

Asked 28 questions specifically related to health:

- 3 clinical
- 14 prevention
- 11 system navigation

Basic & Below Basic Health Literacy Results

- | | |
|---------------------|-----|
| • Entire Population | 36% |
| • White | 28% |
| • Native Americans | 48% |
| • Blacks | 58% |
| • Hispanics | 66% |

Percent of Adults in Below Basic Health Literacy NAAL Populations

| Characteristics | % in Below Basic | % in total population |
|----------------------------------------------|------------------|-----------------------|
| Did not graduate from high school | 51 | 15 |
| Did not speak English before starting school | 39 | 13 |
| Adults reporting poor health | 10 | 4 |
| Hispanic adults | 35 | 12 |
| Age 65+ | 31 | 15 |
| No medical insurance | 36 | 18 |
| Did not obtain information over the Internet | 80 | 43 |
| Black adults | 19 | 12 |
| One or more disabilities | 48 | 30 |

Kutner, M., Greenberg, E., Jin, Y., and Paulsen, C. (2006). [The Health Literacy of America's Adults: Results From the 2003 National Assessment of Adult Literacy](#)

(NCES 2006-483). U.S. Department of Education. Washington, DC: National Center for Education Statistics.

found that 36 percent of adults have only basic or below-basic skills for dealing with health material.

UNIVERSITY OF MINNESOTA

What is Health Literacy?

“The degree to which an individual has the capacity to ***obtain, communicate, process,*** and ***understand*** basic health information and services to make appropriate health decisions.”

Patient Protection and Affordable Care Act of 2010, Title V

Realities of Health Care Today

- Patients are now asked to make decisions about their own disease process
- Most patients do not have the tools to make these kinds of decisions

Can you read this?

You may have heard that you should have a colonoscopy if you are at least 50 years old. It is a flexible viewing scope that goes into your large intestine to clean out your colon.

Weiss, Barry: Health Literacy and Patient Safety: Help Patients Understand; AMA Foundation

Literacy skills are a stronger predictor of health status than:

- Age
- Income
- Employment status
- Education level
- Race or Ethnic group

Weiss, BD. Health Literacy: A Manual for Clinicians. AMA 2003
Health Literacy and Patient Safety: Help Patients Understand,
American Medical Association Foundation, 2007

Prose Literacy Example: Surgical Consent Form

INFORMED CONSENT TO SURGERY OR SPECIAL PROCEDURE

1. This form is called an "Informed Consent Form." It is your doctor's obligation to provide you with the information you need in order to decide whether to consent to the surgery or special procedure that your doctors have recommended. The purpose of this form is to verify that you have received this information and have given your consent to the surgery or special procedure recommended to you. You should read this form carefully and ask questions of your doctors so that you understand the operation or procedure before you decide whether or not to give your consent. If you have questions, you are encouraged and expected to ask them before you sign this form. Your doctors are not employees or agents of the hospital. They are independent medical practitioners.

2. Your doctors have recommended the following operation or procedure: _____
_____ and the following
type of anesthesia: _____

Upon your authorization and consent, this operation or procedure, together with any different or further procedures which, in the opinion of the doctor(s) performing the procedure, may be indicated due to any emergency, will be performed on you. The operations or procedures will be performed by the doctor named below (or, in the event the doctor is unable to perform or complete the procedure, a qualified substitute doctor), together with associates and assistants, including anesthesiologists, pathologists, and radiologists from the medical staff of *(name of hospital)* _____
_____ to whom the doctor(s) performing the procedure may assign designated responsibilities.

3. Name of the practitioner who is performing the procedure or administering the medical treatment¹:

The hospital maintains personnel and facilities to assist your doctors in their performance of various surgical operations and other special diagnostic or therapeutic procedures. However, your doctors, surgeons and the persons in attendance for the purpose of performing specialized medical services such as anesthesia, radiology, or pathology are not employees or agents of the hospital or of doctor(s) performing the procedure. They are independent medical practitioners.

4. All operations and procedures carry the risk of unsuccessful results, complications, injury or even

Prose Literacy Example: Patient Education Handout

THINGS YOU SHOULD KNOW ABOUT OSTEOPOROSIS

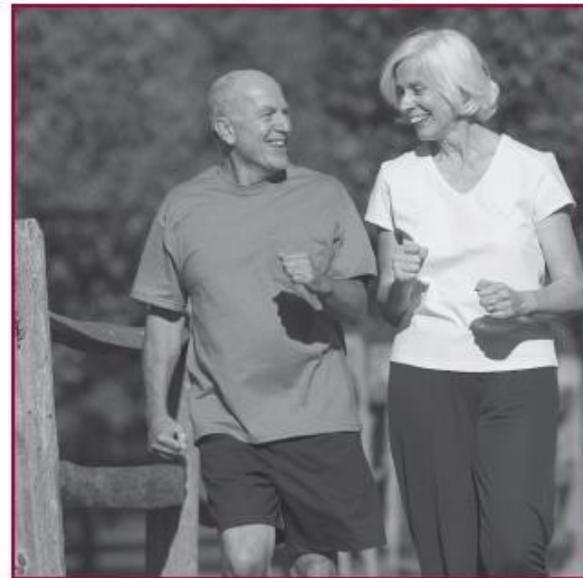

In the Clinic
Annals of Internal Medicine

What is osteoporosis?

- Osteoporosis is a disease that makes bones weak and susceptible to fractures (broken), even when there has been no trauma or only a low level of trauma that would not cause a normal bone to break.
- Osteoporosis can be diagnosed before a fracture occurs with a bone mineral density (BMD) test using dual-energy x-ray absorptiometry (DXA).
- If a low-trauma fracture occurs in a postmenopausal woman or a man aged 50 or older, a presumptive diagnosis of osteoporosis may be made regardless of BMD.

Why is it important?

- About 44 million Americans have osteoporosis or low bone mass (osteopenia) that could lead to low-trauma fractures.
- A 50-year-old white woman has a 50% chance of having an osteoporotic fracture in her remaining lifetime, and a man the same age has about a 20%

How is it treated?

- All adults should take care to be physically active and maintain an adequate amount of calcium and vitamin D.

Drug Facts

Active ingredient (in each tablet) **Purpose**
Chlorpheniramine maleate 2 mg Antihistamine

Uses temporarily relieves these symptoms due to hay fever or other upper respiratory allergies:
 ■ sneezing ■ runny nose ■ itchy, watery eyes
 ■ itchy throat

Warnings
Ask a doctor before use if you have
 ■ glaucoma
 ■ a breathing problem such as emphysema or chronic bronchitis
 ■ trouble urinating due to an enlarged prostate gland

Ask a doctor or pharmacist before use if you are taking tranquilizers or sedatives

When using this product
 ■ You may get drowsy ■ Avoid alcoholic drinks
 ■ Alcohol, sedatives, and tranquilizers may increase drowsiness
 ■ Be careful when driving a motor vehicle or operating machinery
 ■ Excitability may occur, especially in children

If pregnant or breastfeeding, ask a health professional before use.
Keep out of reach of children. In case of overdose, get medical help or contact a Poison Control Center right away.

Directions

| | |
|---------------------------------------|-------------------------------------------------------------------------|
| Adults and children 12 years and over | Take 2 tablets every 4 to 6 hours; not more than 12 tablets in 24 hours |
| Children 6 years to under 12 years | Take 1 tablet every 4 to 6 hours; not more than 6 tablets in 24 hours |
| Children under 6 years | Ask a doctor |

Other information Store at 20-25° C (68-77° F)
 ■ Protect from excessive moisture

Inactive ingredients D&C yellow no. 10, lactose, magnesium stearate, microcrystalline cellulose, pregelatinized starch

Quantitative Literacy Examples

| Nutrition Facts | |

You ate half the container of carrots. How many grams of carbohydrates did you eat?

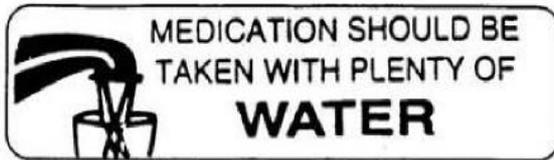

You have a prescription for metformin extended release 500 mg tablets. The label says, “take 1 tablet with supper each night for the first week. Then, increase by 1 tablet each week for a total of 4 tablets daily with supper.” How many tablets should you take with supper each night the **second** week?

Your doctor tells you that you have high cholesterol. He informs you that you have a 10% risk of having a heart attack in the next 5 years. If you start on a cholesterol-lowering drug you can reduce your risk by 10%. What is your 5-year risk if you take the drug?

Medication Safety and Health Literacy

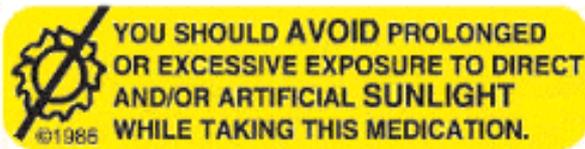

Only about 50% of patients take medications as directed

→ What's "plenty" of water?

→ "Take twice a day"

→ "Don't take medicine if you've been in the sun too long."

Functional Health Literacy

“The ability to read and comprehend prescription bottles, appointment slips, and the other essential health related materials required to successfully function as a patient”

AMA Council of Scientific Affairs

Health Literacy: A National Priority

The Affordable Care Act, the National Action Plan to Improve Health Literacy, and the Plain Writing Act all address health literacy as a systems-level challenge.

New Federal Policy Initiatives To Boost Health Literacy Can Help The Nation Move Beyond The Cycle Of Costly 'Crisis Care'

DOI: 10.1377/hlthaff.2011.869
HEALTH AFFAIRS 31,
NO. 2 (2012) --
©2012 Project HOPE--
The People-to-People Health
Foundation, Inc.

ABSTRACT Health literacy is the capacity to understand basic health information and make appropriate health decisions. Tens of millions of Americans have limited health literacy—a fact that poses major challenges for the delivery of high-quality care. Despite its importance, health literacy has until recently been relegated to the sidelines of health care improvement efforts aimed at increasing access, improving quality, and better managing costs. Recent federal policy initiatives, including the Affordable Care Act of 2010, the Department of Health and Human Services' National Action Plan to Improve Health Literacy, and the Plain

Howard K. Koh, (Howard.Koh@HHS.gov) is assistant secretary for health at the Department of Health and Human Services (HHS), in Washington, D.C.

Donald M. Berwick is the former administrator of the Centers for Medicare and Medicaid Services (CMS), in Washington, D.C.

Carolyn M. Clancy is director

Affordable Care Act <https://www.hhs.gov/healthcare/>

<https://health.gov/communication/initiatives/health-literacy-action-plan.asp>

Plain Writing Act of 2010 <http://www.plainlanguage.gov/plLaw/>

Health Information Literacy

Health information literacy is the set of abilities needed to: recognize a health information need; identify likely information sources and use them to retrieve relevant information; assess the quality of the information and its applicability to a specific situation; and analyze, understand and use the information to make good health decisions.

MLA Task Force on Communicating Health Information Literacy. (2005). *Communicating Health Information Literacy*. Medical Library Association

Why is Health Literacy Important?

Health literacy is considered an essential life skill:

- To fill out a patient information forms
- To understand health-related instructions
- To follow discharge instructions
- To identify signs
- To keep appointments
- To understand insurance
- To sign consent forms

Health Literacy Contributes to the Ability to:

- Responsibility
 - Take responsibility for one's health and healthcare decision-making
- Interaction
 - Locate health information and communicate on health matters with health care providers
 - Calculate dosages and interpret test results
- Confidence
 - Take action to improve personal and community health
- Navigation
 - Navigate in society and health care systems
- Evaluation
 - Filter, interpret, and evaluate or understanding health risks
 - Evaluate information for credibility and quality

Skills Needed for Health Literacy

In order to accomplish these tasks, individuals may need to be:

- Visually literate (able to understand graphs or other visual information)
- Computer literate (able to operate a computer)
- Information literate (able to obtain and apply relevant information)
- Numerically or computationally literate (able to calculate or reason numerically)

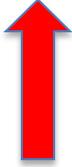

“Costs” of Low Health Literacy

- Low health literacy is a major source of economic inefficiency in the U.S. healthcare system. An initial approximation places the order of magnitude of the cost of low health literacy to the U.S. economy in the range of **\$106 billion** to **\$238 billion** annually. This represents between 7 % and 17 % of all personal healthcare expenditures.
- The savings that could be achieved by improving health literacy – a lower bound of \$106 billion and an upper bound of \$238 billion – translate into enough funds to insure every one of the more than 47 million persons who lacked coverage in the United States in 2006, according to recent Census Bureau estimates.
- When one accounts for the future costs of low health literacy that result from current actions (or lack of action), the real present day cost of low health literacy is closer in range to **\$1.6 trillion** to **\$3.6 trillion**. This measure is relevant to guide choices about where the social investment might go today.

Low Health Literacy: Implications for National Health Policy

http://publichealth.gwu.edu/departments/healthpolicy/CHPR/downloads/LowHealthLiteracyReport10_4_07.pdf

Not having the needed health literacy skills can lead to:

4x  Health care cost = More \$\$\$

6%  More trips to the hospital

2  More days in the hospital

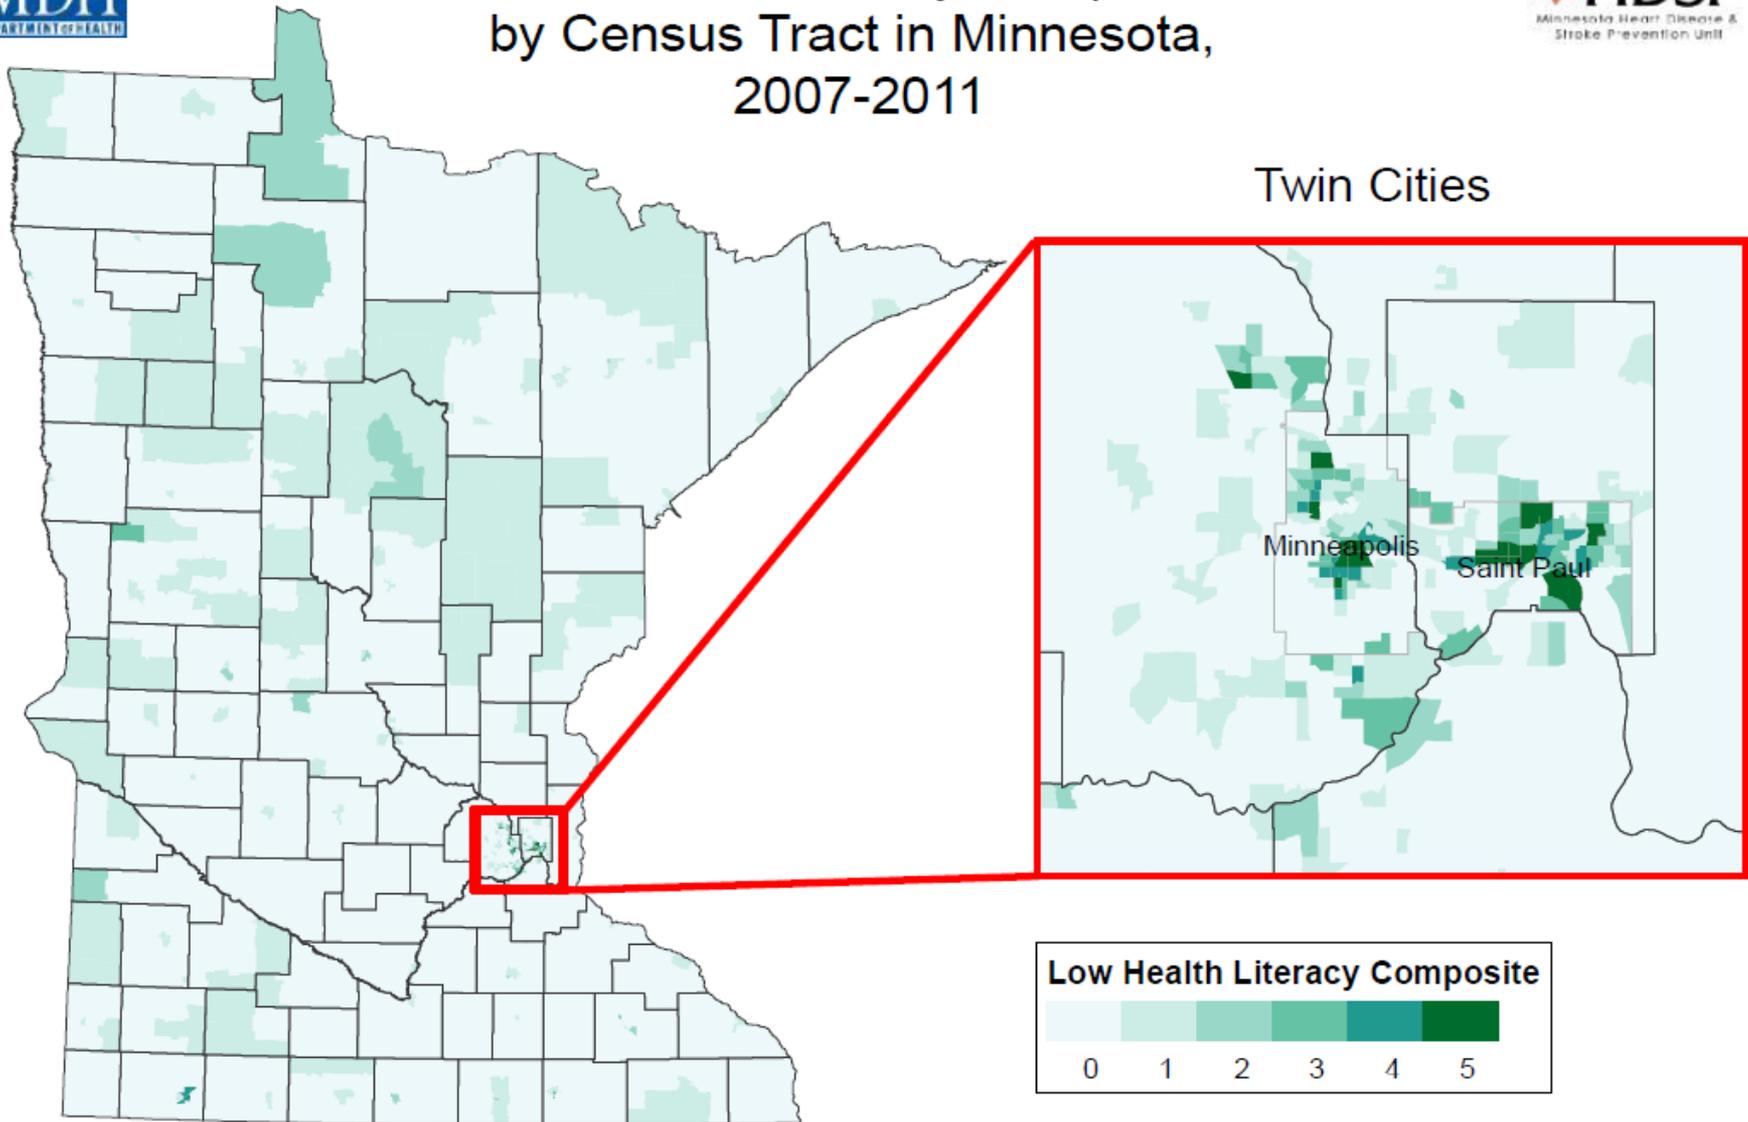

National Assessment of Adult Literacy, U.S. Department of Education, 2003
Partnership for Clear Health Communication at the National Patient Safety
Foundation Not having

Risk Factors for Low Health Literacy

- Older adults (65+ years)
- Limited English Proficiency (LEP)
- Socioeconomically disadvantaged
 - Lower educational attainment
 - Lower income level
 - Higher percent minorities
 - Medicare/Medicaid recipients or uninsured
- Chronic and severe health conditions
- Black or Hispanic

HEALTH LITERACY & YOUR COMMUNITY

Low Health Literacy Composite by Census Tract in Minnesota, 2007-2011

Source: 2007-2011 American Community Survey Minnesota/prepared by the U.S. Census Bureau, 2012.

Composite measure of 0-6 points defined as 1 point for a) Non Hispanic White <25%, b) >15% Speaking English Less than "Very Well"; c) >20% Foreign Born; d) >16% Living in Poverty; e) >23% Age 65 or Over; f) <75% with High School education or more

Map by James Peacock, MDH Heart Disease & Stroke Prevention Unit, June 2013

“Can You Crack The Health Care Code?”

The University of Minnesota Health Sciences Libraries conducted a health literacy study at the Minnesota State Fair in 2015.

Number of surveys completed: 353

Summary of results:

- Graduate or professional degree or being under the age of 21 were associated with increased health literacy scores
- High school diploma or some high school education, being Asian American, or being American Indian/Alaska Native were associated with lower health literacy scores.

Bakker CJ, Koffel JB, Theis-Mahon NR. *Measuring the health literacy of the upper midwest*. Journal of the Medical Library Association. In press, to be published January 2017.

Healthy Minnesota 2020

Healthy Minnesota 2020 is a framework whose emphasis is on creating conditions that allow people to be healthy, conditions that assure a healthy start and that set the stage for healthy choices throughout life.

The framework features three themes that reflect the importance of social and economic determinants for health: capitalize on the opportunity to influence health in early childhood; assure that the opportunity for health is available everywhere and for everyone, and strengthen communities to create their own healthy futures.

<http://www.health.state.mn.us/healthymnpartnership/hm2020/>

Health Literacy: A Priority for Minnesota

The mission of the Minnesota Health Literacy Partnership is to improve the health of all Minnesotans through clear health communication.

We believe:

- Low health literacy affects everyone in Minnesota
- Clear communication increases patient safety
- Helping providers communicate health information in a clear and easy-to-understand manner is key to improving health literacy in Minnesota

Patients need to be empowered to ask questions of health care professionals and systems so they can make informed choices about their health care

Our goals are threefold:

- Train health care providers about health literacy
- Empower patients to ask for clear communication
- Share health literacy resources

<http://www.healthliteracymn.org>

Minnesota Health Literacy Action Plan

- 1. Adopt and use health literacy best practices across all verbal, written and visual communication.** To make it easier for consumers to access and understand health information, the health care community should develop and implement best practices for providing written, verbal and visual health information in jargon-free, understandable language.
- 2. Make information about health relevant and accessible.** Patients and their caregivers should have easy access to usable information presented in a variety of mediums so they can understand diagnoses, make treatment and prevention decisions, and evaluate health risks.
- 3. Increase and improve patient -centered resources.** Health care professionals should provide patients with the necessary resources to understand the health care system and receive the most appropriate care. Whether individual assistance is provided in-person, by phone, or online, health care professionals should help patients coordinate and navigate health care.
- 4. Implement and enhance education opportunities at all levels.** Health literacy concepts should be integrated into primary, secondary and professional education.
- 5. Streamline processes within the health care system.** Productive partnerships within the health care system could identify and implement effective strategies and actions to lessen the burden on patients to navigate the fragmented health care system
- 6. Invest in language and cultural resources.** Because limited English proficiency has a profound impact on health literacy, health care organizations need to take language and cultural differences into account when providing health information

Role of the Librarian

What is the role of the librarian in helping people find the information they need to make good decisions about their health?

Role of the Library/Librarian

Public libraries are in a strong position to advance the following multiple literacies to promote active health literacy through providing reliable and timely information on health topics.

- visual literacy,
- computer literacy,
- information literacy and
- numeric/computational literacy.

Literacy needs related to health that may occur in your community:

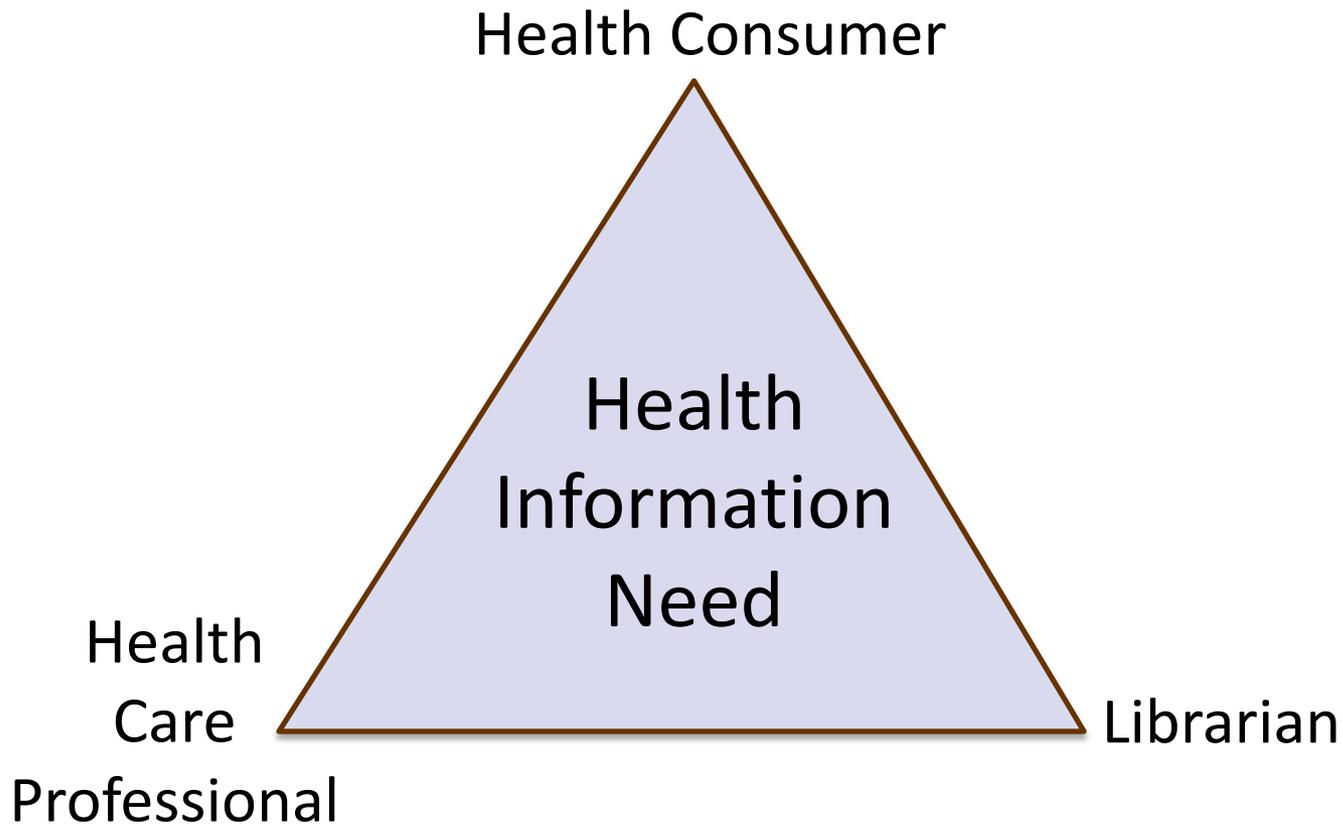

- Adult community members who need assistance building health care budgets or understanding insurance terminology
- Uncertainty about the importance and process of taking medications according to prescribed methods and doses
- Lack of awareness that not all information found online is of equal authority, indicating a literacy shortfall information evaluation skills.

Libraries 2016

(Pew Research Center Survey, 9 Sept 2016)

- Most Americans view public libraries as important parts of their communities, with a majority reporting that libraries have the resources they need and play at least some role in helping them decide *what information they can trust*. (p.3)
- There is also a growing sense that *libraries can help people decide* what information they can trust: 37% of Americans feel that public libraries contribute “a lot” in this regard, a 13-point increase from a survey conducted at a similar point in 2015. (p.4)
- Many Americans are interested in libraries offering a range of services – including those that help people improve their digital skills and learn how to determine *what information is trustworthy*. (p.7)
- Of particular note is the role libraries play in helping people decide what information they can trust. There was a large increase in people saying *libraries help “a lot”* in deciding what information they can trust from 2015, when the figure stood at 24%, to 2016, where it now stands at 37%. (p.8)
- As to attitudes about libraries, the main difference between library users and non-users has to do with trust and information. People who have used libraries in the past year are more likely than others to say that *libraries are a resource that can help them* decide what information to trust. Some 43% of library users say they agree “a lot” that libraries are a place that helps people decide what information to trust, while 29% of those who have never been say this. (p.17)

Triangle Connection

Frequently Asked Questions

- Descriptions of particular procedures
- Latest treatment for ...
- “Everything” about ...
- The best doctor or hospital
- Drug information
- Herbal information

The Reference Interview ... in the context of health information

- What are these patrons really looking for?
 - Sick lick vomiting
 - Cyclic vomiting
 - Dropped Bladder
 - Cystocele
 - Fireballs in the Eucharist
 - Fibroids in the uterus
 - Smiling Mighty Jesus
 - Spinal Meningitis
 - Bavarian Enemy
 - Barium enema
 - Corroded arteries
 - Carotid Artery

The Reference Interview ... in the context of health information: Librarian Challenges

- Not being familiar with the resources
- Medical terminology
- Knowing how much to ask
- Not offering personal experiences
- Language and cultural barriers pose special problems
- Know the limits of your collection
- Avoiding interpreting medical information
- Know where you can refer your patrons

Medical Jargon

Tylenol vs. Tylenol PM

Hypothermia vs. Hyperthermia

prednisolone vs. prednisone

a.c.: Before meals.

b.i.d.: Twice daily.

Vertebrae?

Cervical

Lumbar

Thoracic

Dysphasia vs. dysphagia

Cerebrum vs. cerebellum vs
cerebral cortex

The Reference Interview ... in the context of health information: Tips

- Be empathetic
- Be an active listener
- Use open ended questions
- Respect privacy / confidentiality
- Be prepared for emotions
- Be aware of body language
- Do not be afraid to tell the person “I don’t know” or “I can’t get that information for you”
- Do not be afraid to refer the patron back to his/her health care provider

HEALTH LITERACY TOOLS & RESOURCES

Seeking Health Information Online

- Pew Internet and American Life Project
 - 61% of American adults look online for health information
 - 80% of US Internet users have searched for information on at least one health topic
 - 52% of searchers on the Internet are on behalf of someone else
 - 60% of e-patients say they (or someone they know) has been helped following medical advice or health information from the Internet
 - 66% started at a search engine for their most recent inquiry
- BUT ...
 - Only one quarter of online health seekers said they always or usually check the source and date of health information online!

Health Online (2013)

<http://www.pewinternet.org/2013/01/15/health-online-2013/>

“Can This Website Be Trusted”?

Guidance Questions to Ask:

- Who runs the site? Can they be contacted?
- Does the site have advertisements? Are they labeled?
- Where does the information on the site come from? Is the information reviewed by experts? Is it up-to-date? Does it make unbelievable claims?
 - “breakthrough”
 - “Miracle cure”

“Can This Website Be Trusted”?

Guidance Questions to Ask (cont.):

- Maintaining privacy is important. Do they ask for personal information?
- Do they want to sell something?
- How is the site designed? Is it easy to find your way around?

How to Write Easy-to-Read Health Materials

Medical concepts and language can be complex. People need easily understandable health information regardless of age, background or reading level. MedlinePlus offers guidelines and resources to help you create easy-to-read health materials.

What are easy-to-read (ETR) materials?

ETR materials are written for audiences who have difficulty reading or understanding information. These materials can also benefit people who prefer reading easy-to-read information.

How do you create easy-to-read materials?

Writing ETR materials involves several important steps:

- Plan and Research
- Organize and Write
- Evaluate and Improve
- Inform Us and Stay Informed

Step 1: Plan and Research

Know your target audience. Consider reading level, cultural background, age group and English Language Proficiency (ELP).

- **Determine the target audience.** Who do you expect to read your health materials?
- **Research your target audience.** Use tools such as databases, demographic information, surveys and interviews to learn about the needs of the target group. If extensive research is not possible due to time or budget constraints, try contacting other organizations that have similar

Summary

Diabetes means your blood glucose, or blood sugar, levels are too high. With type 2 diabetes, the more common type, your body does not make or use insulin well. Insulin is a hormone that helps glucose get into your cells to give them energy. Without insulin, too much glucose stays in your blood. Over time, high blood glucose can lead to serious problems with your heart, eyes, kidneys, nerves, and gums and teeth.

Detailed Summary

Genetics Home Reference

<https://ghr.nlm.nih.gov/>

The screenshot shows the homepage of the Genetics Home Reference website. At the top, there is a blue header with the NIH logo and the text "U.S. NATIONAL LIBRARY OF MEDICINE". Below this, the site's logo "Genetics Home Reference" is displayed alongside the tagline "Your Guide to Understanding Genetic Conditions". A search bar is located in the upper right. A navigation menu includes "Health Conditions", "Genes", "Chromosomes & mtDNA", "Resources", and "Help Me Understand Genetics". A large banner features the text: "Genetics Home Reference provides consumer-friendly information about the effects of genetic variation on human health." Below the banner are three main content sections: "Health Conditions" (with a "Browse A-Z" button), "Genes", and "New & Updated Pages". A sidebar on the right titled "Help Me Understand Genetics" contains a list of topics such as "Cells and DNA", "Mutations and Health", "How Genes Work", "Gene Families", and "Inheriting Genetic Conditions". The footer of the page features the University of Minnesota Libraries logo.

About Lab Tests Online

Lab Tests Online is an **award-winning** health information web resource designed to help patients and caregivers understand the many lab tests that are a vital part of medical care. **Laboratory and medical professionals**, who are experts in the field, develop and review all content, including articles on **lab tests, conditions/diseases, screening, clinical laboratory topics, and lab test news**. The site is produced by **AACC**, a global scientific and medical professional organization dedicated to clinical laboratory science and its application to healthcare. [Learn more.](#)

[Index of Tests](#)
[Index of Conditions](#)

The following articles are intended to help patients and providers better understand several areas of laboratory medicine.

Deciphering Your Lab Report

Learn how to read your lab report, including specimen source, specimen collection, laboratory accession number, abnormal test results, interpretation of results, and other important parts of a lab report.

Reference Ranges and What They Mean

Test results are often interpreted in relation to a reference range provided by the laboratory that performed the testing. This article explains what reference ranges are, how they are determined, and some of the common misconceptions about reference ranges.

Making Informed Decisions for Better Health

It's important to make informed decisions about medical tests and lab results for a healthy outcome through patient-centered care. We offer questions to ask your healthcare provider when testing is recommended.

Point-of-Care Testing

Learn about point-of-care testing (POCT), which encompasses any laboratory tests that are performed at or near a patient and at the site where care or treatment is provided. Point-of-care test results are typically available relatively quickly so that they can be acted upon without delay.

With Home Testing, Consumers Take Charge of Their Health

Home medical tests offer many benefits, including convenience and privacy, but it is important to be aware of the possibility of errors and bogus tests.

Health and Well-Being 3 - Smoking

Resource Properties

Abstract:

This one-page handout educates people about the dangers of smoking. It identifies serious illnesses caused by smoking: cancer, lung disease, heart attack, stroke, and high blood pressure. It clarifies that smoking can also cause illnesses in non-smokers who are near the smoker.

Understanding research results

Studies, numbers and health claims—we're flooded with them every day. Don't be misled or confused. Use the lively and interesting books on this page to make sense of it all.

One of these books has even been clinically proven to increase readers' data interpretation skills! See the [Know Your Chances randomized trials](#).

The books are all complete and online free here.

Things you need to know

- How to read health news
- What to know about screening
- Why randomization is important

How we can know if a treatment works

Smart health choices

[Making sense of health advice](#)

Develop the skills for informed decisions

About Clinical Effectiveness Research

Clinical effectiveness research finds answers to the question "What works?" in medical and health care.

"Working" is a real health benefit - like symptom relief, quicker recovery, or longer life. To find out if something really works, all important effects need to be studied. That means possible harms as well as possible benefits.

Clinical or health effects are sometimes called [patient-relevant outcomes](#).

How to read health news

By Dr Alicia White

From "Behind the Headlines", provided by NHS Choices (from England's National Health Service).

If you've just read a health-related headline that has caused you to spit out your morning coffee ("Coffee causes cancer" usually does the trick), it's always best to follow the Blitz slogan: "Keep Calm and Carry On". On reading further, you'll often find the headline has left out something important, such as, "Injecting five rats with really highly concentrated coffee solution caused some changes in cells that might lead to tumours eventually. (Study funded by The Association of Tea Marketing)".

The most important rule to remember is: don't automatically believe the headline. It is there to draw you into buying the paper and reading the story. Would you read an article called, "Coffee pretty unlikely to cause cancer, but you never know"? Probably not.

To avoid spraying your newspaper with coffee in the future, you need to analyse the article to see what it says about the research it is reporting on. Bazian (the company I work for) has appraised hundreds of articles for Behind The Headlines on NHS Choices, and we've developed the following questions to help you figure out which articles you're going to believe and which you're not.

Does the article support its claims with scientific research?

Your first concern should be the research behind the news article. If an article touts a treatment or some aspect of your lifestyle that is supposed to prevent or cause a disease, but doesn't give any information about the scientific research behind it, then treat it with a lot of caution. The same applies to research that has not yet been published.

What is clinical effectiveness?

here might be animal testing. Studies observing patients

a particular treatment works. Many other factors could be involved with or without treatment, too.

can single out the true effects of specific actions. That is needed to be studied in [clinical trials](#).

sometimes confirm early results - and sometimes come to analyze, all the trials that have studied particular questions. It is important to look for studies other than trials as well, and address

methods have been proven to work - and what remains an important part of [informed decision-making](#).

data-based medicine or health care. And they are important

"comparative effectiveness reviews", and "health

In Summary, or . . . Why Does it Matter?

“Literacy matters in healthcare because life-threatening or potentially harmful mistakes may happen when people cannot read or understand written information.” *

Helen Osborne, author of **Health Literacy from A to Z: Practical Ways to Communicate Your Health Message** consultant and founder of Health Literacy Month, which is marked each October.

Outreach Services

- The University of Minnesota Health Sciences Libraries (HSL) serves as one of the two Research Libraries for the National Network of Libraries of Medicine, Greater Midwest Region (NN/LM, GMR) under a 5-year contract with the National Library of Medicine.
- The HSL provides outreach services Provide access to biomedical information to unaffiliated health professionals, including behavioral and mental health professionals, the public health workforce, minority health workers and rural, underserved hospitals
- Improve health through access to reliable information for consumer groups, including soldiers, veterans and their families, senior citizens, caregivers, K-12 schools, community-based and faith-based organizations
