Samples were generally taken about every 5 feet.

**Data-Base Map**

By Marguerite C. Pettas and V.W. Chandler

2010

**Section 1: Data-Base**

**Purpose:** The purpose of this data-base is to provide a comprehensive overview of the geologic and hydrogeologic conditions within Cass County, Minnesota. This information is intended to aid in the planning and development of the area, as well as to support scientific research and environmental management.

**Data Collection:** Data were collected through a variety of methods, including soil borings, geophysical surveys, and water-level monitoring. This information was compiled into a digital database that can be accessed through the Internet.

**Future Data Collection:** Future data collection will focus on expanding the coverage of the geologic survey, particularly in areas that have not yet been studied.

**Acknowledgments:** The authors would like to acknowledge the support of the Cass County Board of Commissioners and the Minnesota Department of Natural Resources, as well as the contributions of the many individuals who provided data and assistance during the course of this project.

**Conclusion:** The data-base presented in this report is a valuable resource for anyone interested in the geology of Cass County. It provides a comprehensive overview of the area and can be used to support a wide range of activities, from environmental management to economic development.
