Marketing Wheat and Barley

How can grain quality be standardized? What happens to feed barleys on the market? Can grain diseases be controlled? Is your wheat and barley seed capable of producing the quality demanded by the grain trade? These and other important local problems will be discussed at a series of wheat and barley meetings designed to aid farmers, elevator managers, and local crop organizations in improving the sale value of wheat and barley crops.

HIGH-QUALITY WHEAT AND BARLEY
GOAL FOR MINNESOTA COUNTIES

These meetings are sponsored by the Division of Agricultural Extension, University of Minnesota, the Northwest Crop Improvement Association, Minnesota Crop Improvement Association, Federal Grain Supervision Office and the Extension Division of the United States Department of Agriculture, elevator managers, farmers, and local business men in each locality.

THIS IS YOUR INVITATION to attend one of these wheat and barley meetings. If you are living in a good malting barley territory, you will want to know which varieties are most suitable and how you can be sure you are growing the right variety. If it is bread wheat you are producing, you will wish to know how your community can sell wheat at a premium over other communities.

Barley meetings will be held in Winona, Goodhue, Dakota, Watonwan, and Jackson counties. Meetings in Yellow Medicine will include wheat and barley problems and in Clay and Norman counties will be devoted largely to wheat.

These meetings are open to everyone, and free as the air you breathe. BRING YOUR SEED PROBLEMS WITH YOU AND A PINT OF YOUR OWN SEED.

SPECIAL FEATURES OF THE PROGRAM

FREE REGISTERED SEED STOCK. Ask how you can secure a substantial start in the production of pure seed at no additional cost.

FREE INSPECTION OF SEED. Bring a pint of your own wheat or barley seed and have it identified for variety and value for seed.

CONTROLLING GRAIN DISEASES. Disease infection of wheat and barley can be reduced. Do you know how it can be done at very little cost and how important it is?

MARKETING PROBLEMS and factors controlling price to the farmer will be discussed by a national authority on market grades.

PURE VARIETIES are practical and good economy. Can the average producer afford not to produce the best?

WHAT'S IN A NAME when small grains are sold on the open market?

If you are curious about these facts, or if you are not entirely familiar with any one of these questions, you cannot afford to miss hearing them discussed by these speakers.

Dr. John Parker, formerly of Minnesota, in charge of Crop Improvement in Kansas, says: "There are over 300 varieties of wheat grown in the United States. We are growing too many varieties and some definite program of reducing the number of less desirable ones must be developed."

SPEAKERS

- W. P. CARROLL, Senior Marketing Specialist, U. S. Department of Agriculture, Chicago, Illinois
- R. C. ROSE, Extension Pathologist, plant disease expert of the University of Minnesota, St. Paul
- E. R. AUSEMUS, U. S. Department of Agriculture, Associate Agronomist, Division of Cereal Crops and Diseases, in charge of wheat improvement at University Farm
- R. F. CRIM, Extension Agronomist, and Secretary of the Minnesota Crop Improvement Association, University Farm, St. Paul
- H. R. SUMNER, Executive Secretary of the Northwest Crop Improvement Association, Minneapolis
- H. MILLIMAN, Federal Grain Supervision Office, Minneapolis
- W. W. BROOKINS, Extension Agronomist, University Farm, directing cooperative programs for improvement of market quality in wheat and barley
