University of Minnesota Twin Cities
2018-20 Graduate Courses

This document serves as an official historical record for a specific period in time. The information found is subject to change without notice. Colleges and departments make changes to their degree requirements and course descriptions frequently. More information is available at catalogs.umn.edu.

For current information, refer to:

- Program search: z.umn.edu/publicprogramsearch
- Course search: z.umn.edu/publiccoursecatalog
- University policies: policy.umn.edu

University of Minnesota Twin Cities
3 Morrill Hall, 100 Church St. S.E., Minneapolis MN 55455
Check the University Catalogs website at www.catalogs.umn.edu for the most current course information. The courses in this catalog are not offered every semester. To find out whether a course is offered during a particular semester, consult the class schedule at z.umn.edu/publicclasssearch.

Course Designators

In conjunction with course numbers, departments and programs are identified by a 2-, 3-, or 4-letter designator prefix (e.g., CE for Civil Engineering, POL for Political Science, ECON for Economics). When no designator precedes the number of a course listed as a prerequisite, that prerequisite course is in the same department as the course being described.

Course Numbers

- **0xxx**...Courses that do not carry credit toward any University degree.
- **1xxx**...Courses primarily for undergraduate students in their first year of study.
- **2xxx**...Courses primarily for undergraduate students in their second year of study.
- **3xxx**...Courses primarily for undergraduate students in their third year of study.
- **4xxx**...Courses primarily for undergraduate students in their fourth year of study; graduate students may enroll in such courses for degree credit. 4xxx courses can be counted for a Graduate School degree if the course is taught by a member of the graduate faculty or an individual appointed to Limited Teaching Status (LTS).
- **5xxx**...Courses primarily for graduate students; undergraduate students in their third or fourth year may enroll in such courses.

Course Symbols

The following symbols are used throughout the course prerequisites of most University catalogs to denote common and recurring items of information.

- **=**...Credit will not be granted if credit has been received for the course listed after this symbol.
- **&**...Concurrent registration is required (or allowed) in the course listed after this symbol.
- **#**...Approval of the instructor is required for registration.
- **%**...Approval of the department offering the course is required for registration.
- **@**...Approval of the college offering the course is required for registration.
- **,**...In prerequisite listings, comma means “and.”
- **1-4 cr [max 6]**...The course can be taken for 1 to 4 credits and may be repeated for up to 6 credits.

Abbreviations

The following abbreviations are used throughout the course prerequisites of most University catalogs to denote common and recurring items of information.

- **Prereq**...Course prerequisites.
- **cr**...Credit.
- **div**...Division.
- **DUS**...Director of undergraduate studies.
- **equiv**...Equivalent.
- **fr, soph, jr, sr**...Freshman, sophomore, junior, senior.
- **H**...Honors. Courses with an H following the course number satisfy honors requirements.
- **V**...Honors and Writing Intensive. Courses with a V following the course number satisfy both honors and liberal education writing intensive requirements.
- **W**...Writing Intensive. Courses with a W following the course number satisfy the writing intensive requirement for liberal education.
- **A-F only**...A-F grade basis only; course may not be audited or take pass/fail.
- **A-F or Aud**...A-F grade basis, or course may be audited for no grade.
- **S-N only**...S-N grade basis only (pass/fail), course may not be audited or taken A-F.
- **S-N or Aud**...S-N grade basis (pass/fail), or course may be audited for no grade.
- **No Grade**...No grade will be given for the course; typically used for laboratory components of courses.
- **OPT No Aud**...Student selects the grading option; course may not be audited.
- **Stdnt Opt**...Student selects the grading option; course may be audited.

Course Listing Sample

Xology (Xolo)

Xology and Diometrics

**College of Liberal Education**

**Xolo 5101. Methods in Xology. (3-4 cr [max 8 cr]; A-F only. Prereq-3578 or #)**

Historical, numerical, sociological, and Freudian methods of research in xology with applications to contemporary problems.

Credit will not be granted if credit has been received for the course listed after this symbol.
ACCT 5101. Intermediate Accounting I. (4 cr. ; A-F or Audit; Every Fall & Spring) Valuation, measurement, reporting issues related to selected assets/liabilities of firm. Theory underlying accounting issues. Applying accounting principles. prereq: Grade of at least B- in 2050, mgmt major or mgmt grad student, accounting certificate, select non mgmt students

ACCT 5102. Intermediate Accounting II. (; 4 cr. ; A-F or Audit; Every Fall & Spring) Basic valuation problems encountered in financial reporting. Focuses on valuation of liabilities. Accounting for leases, pensions, and deferred taxes. Introduces consolidated financial statements. prereq: 5101 [mgmt or grad mgmt student]

ACCT 5125W. Auditing Principles and Procedures. (WI; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer) Concepts of auditing internal control/financial statements in accordance with generally accepted auditing/professional standards established by Public Company Oversight Board (PCAOB) and American Institute of Certified Public Accountants (AICPA). Writing Intensive course. prereq: [3101 or 5101 or 5100 or 6100], [acct major or grad mgmt student]

ACCT 5126. Internal Auditing. (; 2 cr. ; A-F or Audit; Every Fall & Spring) Financial/operational auditing. Standards. Managing the function. prereq: 2050

ACCT 5135. Fundamentals of Federal Income Tax. (; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer) U.S. federal system of taxation. Concepts of gross income, deductions, credits. Analysis of structure of Internal Revenue Code, its provisions with respect to specific areas of law. Interrelationships between legislative, judicial, and administrative authority. Methods, tools, and techniques to conduct tax research. prereq: [2050 or MBA 6030], [mgmt or grad mgmt student]

ACCT 5160. Financial Statement Analysis. (; 2 cr. ; A-F or Audit; Every Fall & Spring) Interpretation/analysis of financial statements. Introduces basic techniques of financial statement analysis and applies them in different settings (e.g., in investment/credit decisions), prereq: [5100/6100 or 3101/5101], [accounting or finance major]

ACCT 5180. Consolations and Advanced Reporting. (2 cr. ; A-F or Audit; Every Spring & Summer) Theory underlying preparation of consolidated financial statements, as well as mechanical computations needed to prepare statements. prereq: 5101, 5102 recommended, or MBA 6030. MBA students must register A/F grade base.

ACCT 5201. Intermediate Management Accounting. (2 cr. ; A-F or Audit; Every Fall & Spring) This course is an in-action course. The course explores the topic of management accounting in greater depth. The course expands introductory course material via special emphasis on decision making, problem solving skills and exploration of accounting's role within overall management. The course is an in-action class. We will have a project working on a business case from a firm as the final assessment for the course. prereq: 3001, acct or finance major

ACCT 5236. Introduction to Taxation of Business. (; 2 cr. ; A-F or Audit; Every Fall & Spring) Introduction to the income tax laws governing the taxation of corporations, partnerships, limited liability companies, limited liability partnerships, and S corporations. Students will also increase their knowledge and skills related to tax research by writing research memorandums. prereq: 5135, acct major

ACCT 5310. International Accounting. (; 2 cr. ; A-F or Audit; Every Fall & Spring) Causes/hist of international differences in design of financial accounting/reporting systems, efforts to harmonize them into worldwide system. Role/impact of currency translation on financial statements. International Accounting Standards, conceptual framework. prereq: 5101; 5102 or concurrent registration is required (or allowed) in 5102 recommended

ACCT 5420. MAcc directed study. (1-4 cr. ; Student Option; Every Fall, Spring & Summer) Internship or directed study in Master of Accountancy degree program. prereq: MAcc student

ACCT 6100. Financial Statement Analysis. (; 4 cr. ; A-F only; Every Fall) Overview of asset/liability valuation, income measurement. How economic events are reported in the financial statements of a firm. Accounting theory/standard-setting process from perspective of users of financial statements. prereq: MBA 6030, MBA student

ACCT 6140. Managerial Economics. (; 3 cr. ; A-F only; Every Fall & Spring) N/A prereq: MBA 6030, MBA 6035

ACCT 6201. Control and Incentives. (; 4 cr. ; A-F only; Every Fall & Spring) Design of activity-based costing, performance measurement, and incentive systems to support strategy of firm. Use of accounting measurements in balanced scorecard, economic value-added, and decentralized decision making. Information issues in design of incentive systems. prereq: MBA 6235; micro economics recommended

ACCT 6320. Current Topics in Accounting. (; 1-4 cr. ; A-F only; Periodic Fall & Spring) Topics vary. prereq: MBA 6130, MBA student

ACCT 6335. Advanced Managerial Accounting. (; 2 cr. ; A-F or Audit; Every Spring) Topics of current interest. Detailed treatment of concepts learned in core. Application of concepts in complex settings. Harvard cases. prereq: MBA 6035 or MBA 6235

ACCT 6601. Internal Control. (4 cr. ; A-F only; Every Fall) Internal control from management's perspective. Application of COSO Internal Control?Integrated Framework and Enterprise Risk Management?Integrated Framework. prereq: MAcc grad major

ACCT 6603. Advanced Auditing. (4 cr. ; A-F only; Every Fall) Auditing of derivatives, business combinations, fair value instruments, and other accounting topics. Evaluating the discipline of forensic accounting.

ACCT 6604. Advanced Management Accounting. (2 cr. ; A-F only; Every Fall) Advanced Management Accounting will expose students to the application of management accounting from a strategic perspective. Students will deepen their knowledge and understanding of management accounting? s role in areas such as sustainability,
ACCT 6605. Negotiations for Financial Executives. (2 cr.; A-F only; Every Spring) In Negotiations for Financial Executives, students will develop an individual negotiating style and learn to adapt their negotiating style to various situations. Students will learn the methods and frameworks for negotiating effectively: preparation, setting high expectations, listening, and a commitment to ethics. During the course, students will have opportunities to apply the preparation model to plan a negotiation and actually apply their knowledge in a live case situation.

ACCT 8801. Topics in Empirical Research I. (2 cr.; [max 4 cr.]; Student Option; Every Fall & Spring) Capital-markets stream of empirical research in accounting. Accounting earnings and stock prices, earnings-based security valuation (theoretical and empirical), estimation of earnings-based risk measures, market anomalies, and related topics from corporate finance. Econometric techniques in market-based empirical research/application to data analysis. Prereq: Business admin PhD student or instr consent

ACCT 8802. Topics in Empirical Research II. (2 cr.; Student Option; Every Fall & Spring) Empirical capital markets research topics course. The course is designed to include current research topics in capital markets that are cutting-edge and topics in the instructor's area of expertise. Topics will vary with each offering.

ACCT 8803. Topics in Empirical Research III. (2 cr.; A-F only; Every Fall & Spring) The course is designed to include current research topics in Empirical Research that are cutting-edge and topics in the instructor's area of expertise. Topics will vary with each offering.

ACCT 8804. Empirical Research Topics II. (2 cr.; Student Option; Every Fall & Spring) Current research topics that are cutting-edge and in instructor's area of expertise. Topics in the area will vary.

ACCT 8811. Information Economics I. (2 cr.; Student Option; Periodic Fall & Spring) Asymmetric information, incentives, and contracts. Moral hazard, adverse selection, reputation, and signaling phenomena. Applications to accounting such as transfer pricing, budgeting, cost allocations, performance measurement, audit pricing. Prereq: Business admin PhD student or instr consent

ACCT 8812. Information Economics II. (4 cr.; Student Option; Every Fall & Spring)

ACCT 8813. Information Economics III. (2 cr.; A-F only; Every Fall & Spring) Asymmetric information, incentives, and contracts. Moral hazard, adverse selection, reputation, and signaling phenomena. Applications to accounting such as transfer pricing, budgeting, cost allocations, performance measurement, audit pricing.

ACCT 8821. Capital Markets I. (2 cr.; Student Option; Every Fall & Spring) Auction markets; price formation in experimental asset markets; experimental studies of information transfer and capital market efficiency; experimental tests of strategic behavior, trust, and reciprocity.

ACCT 8822. Capital Markets II. (2 cr.; Student Option; Every Fall & Spring) Heuristics and biases in information processing, auditor judgment, mental accounting, and decision aids.

ACCT 8823. Capital Markets III. (2 cr.; A-F only; Periodic Fall & Spring) PhD seminar course concentrating on current topics in Capital Markets.

ACCT 8831. Analytical Research Topics I. (2 cr.; Student Option; Every Fall & Spring) The course is designed to include current analytical research topics that are cutting-edge and topics in the instructor's area of expertise. Topics will vary with each offering.

ACCT 8832. Analytical Research Topics II. (2 cr.; Student Option; Every Fall & Spring) The course is designed to include current analytical research topics that are cutting-edge and topics in the instructor's area of expertise. Topics will vary with each offering.

ACCT 8833. Topics in Analytical Research III. (2 cr.; A-F only; Periodic Fall & Spring) PhD seminar course focusing on current topics in Analytical Research

ACCT 8892. Readings in Accounting. (1-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer) Readings appropriate to an individual student's program or objectives that are not available in regular courses. Prereq: Business admin PhD student or instr consent

ACCT 8894. Research in Accounting. (1-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer) Individual research on an approved topic appropriate to student's program and objectives. Prereq: Business admin PhD student or instr consent

Addiction Studies (ADDS)

ADDS 5031. Applied Psychopharmacology. (2 cr.; A-F only; Every Fall & Spring) Categories of psychoactive drugs. Medicines to treat mental disorders. Substances such as alcohol, nicotine, cocaine, and marijuana. What occurs physiologically when someone takes a psychoactive drug.

ADDS 5051. Methods and Models II: Cognitive Behavioral Therapy. (2 cr.; A-F only; Every Fall, Spring & Summer) Components of cognitive model. Assessment, case formulation, automatic thoughts, core beliefs, cognitive restructuring, behavior change elements, therapeutic relationship. Learn, practice, master key concepts.

ADDS 5061. Foundations of Group Work. (3 cr.; A-F only; Every Fall & Spring) Designing/facilitating therapy groups. Intra-/inter-personal dynamics, leadership skills, developmental aspects, ethical issues. Application to therapy of chemically addicted individuals. Lectures, discussion, experiential exercises, small groups, readings.

ADDS 5071. Foundations of Co-occurring Disorders. (2 cr.; A-F only; Every Fall, Spring & Summer) Understanding mentally ill/chemically abusive or dependent client. Intervention, advocacy, education, support for client/those part of his/her environment. Social, environmental, multicultural factors that contribute resources for these clients.

ADDS 5081. Multicultural Foundations of Behavioral Health. (3 cr.; A-F only; Every Fall & Spring) What is culture? How might culture, cultural practices, and history be significant in the use/abuse of substances? How is culture relevant to the attitudes/practices in the prevention/treatment of substance use/abuse? Multicultural counseling and cultural competence in addiction counseling. People as individuals. Clinician's own cultural worldview/other cultural worldviews.

ADDS 5091. Assessment and Treatment Planning I. (3 cr.; A-F only; Every Fall, Spring & Summer)
Core addictions counseling. Clinical assessment, case management, documentation treatment planning, ethical issues. Students begin process of securing internship.

ADPY 5121. Professional Seminar 1. (1 cr.; S-N only; Every Fall, Spring & Summer) Prepares students for successful entry into field of substance use disorder counseling by focusing on facets that are critical to their professional development. Through discussions, experiential learning activities, guest lectures and site visits, students gain further understanding of the internship placement process and requirements, settings that fit their individual training and career goals. Requirements for initial licensing and renewal, the testing process, models of professional development, the importance of professional advocacy and associations, self-care and requirements and benefits of clinical supervision. Professional ethics, including state rules, statutes, codes of conduct and regulations for practitioners and agencies are also addressed. Students will also develop their job search skills and apply them to secure a field placement for the internship seminar.

ADPY 5224. Integrating Spirituality in Counseling Practice. (2 cr.; A-F only; Every Fall, Spring & Summer) Knowledge/skills of counseling students/practitioners in professional competencies for addressing spiritual/religious issues. Lecture, discussion, experiential exercises/readings to advance cognitive, interpersonal/practical skills. Treatment of persons with co-occurring disorders.

ADDS 5950. Special Topics. (1-4 cr. [max 12 cr.]; A-F only; Every Fall, Spring & Summer) Special topics in addiction studies. prereq: dept consent

ADDS 5993. Directed Study. (1-3 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer) Directed study. prereq: dept consent

ADDS 5994. Directed Research. (1-3 cr. [max 9 cr.]; A-F only; Every Fall, Spring & Summer) Directed research. prereq: dept consent

ADDS 5996. Internship in Behavioral Health. (1-4 cr. [max 16 cr.]; S-N only; Every Fall, Spring & Summer) Supervised field work experience. Practical application of substance abuse counseling. Assessment, treatment planning, case management. prereq: [5001 or 5011], [5021, 5003 or 5031], [5002 or 5041], [4001 or 5091], and ADDS 5121 (for students admitted Sp 15 and later) Department permission required.

ADPY 5515. Neuropsychology: University Hospitals. (3-9 cr.; O-N or Audit; Every Fall) ADPY 7109. Adult Psychiatry: Duluth. (6 cr.; H-N or Audit; Every Fall & Spring) This externship in adult psychiatry provides a clinical exposure to the broad spectrum of psychiatric problems encountered in the general practice of psychiatry. The student has the opportunity to see and evaluate the various psychiatric syndromes from a hospital-based psychiatric unit. The program emphasizes an understanding of the psychodynamics, family interaction, sociological issues, and general life stresses precipitating the psychiatric picture. Subsequent treatment possibilities also are stressed, and the student has an opportunity for participating in treatment efforts at the hospital. In addition, the student may attend seminars and staff activities at St. Luke’s Hospital & Regional Trauma Center, Miller-Dwan Hospital, the Medical Center, and St. Mary’s Hospital in Duluth also are used. Efforts are made to tailor this course to the wishes of the student when it is feasible. prereq: SPECIAL INSTRUCTIONS: Students must contact the UMD Department of Family Medicine, 10 University Drive, Duluth, MN 55812 [218-726-7916] at least one month prior to quarterly cancel/add deadline.

ADPY 7121. Descriptive Psychiatry. (2 cr. [max 4 cr.]; H-N or Audit; Periodic Fall) Psychiatric diagnoses encountered in physical-disabilities/psychosocial work settings. Clinical presentations of common diagnoses. General diagnostic criteria. Intervention alternatives. prereq: [OT or PT] student, instr consent

ADPY 7500. Psychiatry Externship. (4 cr.; H-N only; Every Fall, Spring & Summer) This course is a requirement for all third year medical students. Its goal is to prepare medical students to recognize, diagnose, and care for patients with psychiatric disorders encountered in most medical practices.

ADPY 7502. Elective Rotation In Addiction Medicine. (6 cr.; H-N or Audit; Every Fall & Spring) Elective rotations are offered in a variety of substance abuse treatment settings. Our program is innovative and flexible, using interventions from many schools. Each treatment plan is fully individualized, and may include 12-step approaches, Rational Recovery, social learning theory, and psychiatric care. Designed for students of any specialty. prereq: AdPy 7-500

ADPY 7503. Elective Experience in Research in Addiction Medicine. (3-6 cr.; H-N or Audit; Every Fall & Spring) A variety of clinical research projects offer the student excellent opportunities for developing research skills, as well as a deeper understanding of the addiction process. Ongoing projects include research on medical complications of alcoholism, treatment of alcohol and other drug dependence, brain imaging, neuropsychological testing and impairment, case management, and homelessness and alcohol/drugs. Other projects are available or possible and can be arranged. prereq: Approval of course director

ADPY 7505. Assessment and Treatment of Torture Victims. (2 cr.; H-N or Audit; Every Fall, Spring & Summer) How to assess/treat survivors of political torture. As part of an interdisciplinary team, students have patient contact, participate in special projects. Two-week field experience. prereq: 7500, MED 7500, med sr

ADPY 7512. Psychiatry Consultation/Liaison. (4 cr.; H-N only; Every Fall, Spring & Summer) The student is teamed with a resident and staff who supervise progressive participation in service activities. Case-directed teaching is complemented by seminars with assigned readings and service conferences.

ADPY 7514. Substance Abuse and Associated Psychiatric Disorders. (6 cr.; H-N or Audit; Periodic Fall & Spring) The student works with patients with substance use and/or abuse disorders. The student's involvement covers a spectrum of services including inpatient, intensive outpatient program, partial hospitalization, outpatient program, and outpatient follow-up. Supervision is conducted by Senior G-4 Resident and Staff. prereq: Approval of course director

ADPY 7516. Chemical Dependency Services. (2 cr.; H-N only; Every Fall, Spring & Summer) The student's time is spent primarily in group therapy and lecture settings in the adult chemical dependency unit. The student will meet with the medical director during the rotation.

ADPY 7518. Geriatric Psychiatry. (4 cr.; H-N only; Every Fall, Spring & Summer) See patients 60+ years/their families. Evaluate brain-behavior complications of medical/neurological illness.

ADPY 7530. Psychiatry Scholarly Work. (4 cr.; H-N only; Every Fall, Spring & Summer) The student arranges a program with a faculty supervisor. Choosing the supervisor and the content of the course is the student's responsibility and must be approved by the faculty supervisor and course director. The student arranges a program with a faculty supervisor. Choosing the supervisor and the content of the course is the student's responsibility and must be approved by the faculty supervisor and Dr. Mackenzie.

ADPY 7535. Clinical Practice of Psychiatry. (4 cr.; H-N only; Every Fall, Spring & Summer) The various clinical experiences provide opportunities for diagnostic evaluation and treatment for a range of psychiatric disorders in adults and/or children, including bipolar and unipolar affective disorders, anxiety disorders, adjustment disorders, attentional disorders, personality disorders and some psychotic disorders.

ADPY 7640. Essentials of Interdisciplinary Health Care. (1 cr.; H-N or Audit; Periodic Fall & Spring) Knowledge/skills to work successfully in interdisciplinary health care. Web-based course.

ADPY 7910. Adult Psychiatry Medical Residency. (6 cr.; [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer) Adult psychiatry medical residency.
ADPY 7911. Psychiatry PGY-1 at VA Medical Center. (3 cr. [max 24 cr.]; H-N or Audit; Every Spring & Summer) Introduction to wide variety of psychiatric topics. Lectures by invited speakers and by clinical/psychiatric faculty. prereq: PGY-1 psychiatry resident, dept consent
ADPY 7930. Adult Psychiatry Medical Fellowship. (. 6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer) Adult psychiatry medical fellowship.
ADPY 7952. Geriatric Psychiatry Fellowship VA Med Ctr. (. 8 cr. [max 24 cr.]; H-N or Audit; Periodic Fall) Fifth year fellowship in geriatric psychiatry at VA Medical Center. prereq: Psychiatric resident/fellow, dept consent
ADPY 7971. Consultation Liaison Psychiatric Fellowship. (. 8 cr.; H-N or Audit; Every Spring & Summer) Fifth year fellowship in consult-liaison psychiatry. prereq: C-L fellow/psychiatric resident, dept consent
ADPY 7972. Psychiatric Child Fellowship: Year I. (3 cr. [max 24 cr.]; H-N or Audit; Every Fall, Spring & Summer) First year of two-year fellowship in child/adolescent psychiatry, PGY-4 level. prereq: Psychiatric resident/fellow, dept consent
ADPY 7973. Chemical Dependency Fellowship. (. 8 cr. [max 24 cr.]; H-N or Audit; Every Spring & Summer) Fifth year fellowship in addiction psychiatry medicine. prereq: Psychiatric resident/fellow, dept consent
ADPY 7974. Eating Disorders Fellowship. (. 8 cr. [max 24 cr.]; H-N or Audit; Every Spring & Summer) Fifth year fellowship in psychiatry eating disorders at Fairview-University Medical Center. prereq: Psychiatric resident/fellow, dept consent
ADPY 7981. Psychiatric Child Fellowship: Year 2. (. 8 cr. [max 24 cr.]; H-N or Audit; Every Spring & Summer) Second year of two-year fellowship in child/adolescent psychiatry, PGY-5 level. prereq: Psychiatric resident/fellow, dept consent
ADPY 8205. Special Assignments. (1-16 cr.; Student Option; )
ADPY 8206. Research. (. 1-16 cr.; Student Option; Every Spring & Summer)
ADPY 8249. Clinical Neuropsychopharmacology. (. 1-15 cr.; Student Option; Periodic Fall) The course is designed for a two-day presentation, four hours one afternoon, followed by eight hours the next day, to include the following subject matter: introduction to neurotransmitter theory and mechanism of action of psychotropic drugs; evaluation of anxiety states and use of antianxiety agents; clinical picture of depression, use of antidepressants, and principles of drug combinations; schizophrenia diagnosis, use of antipsychotic drugs, antiparkinson medication, parkinson side effects of neuroleptics, and tardive dyskinesia; clinical evaluation of epilepsy and use of anticonvulsants; neuropathology of sleep, prescription of hypnotics and sedatives, and significance of over-the-counter sleep aids; use of anorexiants, over-the-counter appetite suppressants, and opiate analgesics; geriatric psychopharmacology; classification of drug side effects and principles of drug interaction; abused drugs; and ethnopsychopharmacology. prereq: Resident status or 3rd- or 4th-yr med student or 8248 for grad students
ADPY 8970. Directed Studies. (. 1-24 cr.; Student Option; Every Spring & Summer)

Aerospace Engineering and Mechan (AEM)

AEM 5247. Hypersonic Aerodynamics. (3 cr.; A-F or Audit; Spring Odd Year) Importance/properties of hypersonic flow. Hypersonic shock and expansion-wave relations. Local surface inclination methods. Approximate/exact methods for hypersonic inviscid flow fields. Viscous flow: boundary layers, aerodynamic heating, hypersonic viscous interactions, computational methods. Hypersonic propulsion and vehicle design. prereq: 4202 or equiv, CSE grad student
AEM 5253. Computational Fluid Mechanics. (3 cr.; A-F or Audit; Every Fall) Introductory concepts in finite difference and finite volume methods as applied to various ordinary/partial differential model equations in fluid mechanics. Fundamentals of spatial discretization and numerical integration. Numerical linear algebra. Introduction to engineering and scientific computing environment. Advanced topics may include finite element methods, spectral methods, grid generation, turbulence modeling. prereq: [4201 or equiv], [CSci 1113 or equiv]. CSE grad student
AEM 5321. Modern Feedback Control. (. 3 cr.; Student Option; Every Fall) State space theory for multiple-input-multiple-output aerospace systems. Singular value decomposition technique, applications to performance/robustness. Linear quadratic gaussian and eigenstructure assignment design methods. Topics in H[infinity] symbol. Applications. prereq: 4321 or EE 4321 or ME 5281 or equiv
AEM 5333. Design-to-Flight: Small Uninhabited Aerial Vehicles. (3 cr.; A-F only; Periodic Spring) Designing, assembling, modeling, simulating, testing/lying of uninhabited aerial vehicles. Rapid prototyping software tools for vehicle modeling. Guidance, navigation, flight control, real-time implementations, hardware-in-the-loop simulations, flight tests. prereq: [4202, concurrent registration is required (or allowed) in 4303W, 4601] or equiv, instr consent
AEM 5401. Intermediate Dynamics. (. 3 cr.; A-F or Audit; Every Fall) Three-dimensional Newtonian mechanics, kinematics of rigid bodies, dynamics of rigid bodies, generalized coordinates, holonomic constraints, Lagrange equations, applications. prereq: CSE upper div or grad, 2012. Math 2243
AEM 5451. Optimal Estimation. (. 3 cr.; Student Option; Fall Even Year) Basic probability theory. Batch/recurve least squares estimation. Filtering of linear/non-linear systems using Kalman and extended Kalman filters. Applications to sensor fusion, fault detection, and system identification. prereq: [[MATH 2243 or STAT 3021 or equiv], [4321 or EE 4231 or ME 5281 or equiv]] or instr consent
AEM 5501. Continuum Mechanics. (. 3 cr.; Student Option; Every Fall) Concepts common to all continuous media; elements of tensor analysis; motion, deformation, vorticity; material derivatives; mass, continuity equation; balance of linear, angular momentum; geometric characterization of stress; constitutive equations. prereq: CSE upper div or grad, 3031, Math 2243 or equiv or instr consent
AEM 5503. Theory of Elasticity. (. 3 cr.; A-F or Audit; Every Spring) Introduction to the theory of elasticity, with emphasis on linear elasticity. Linear and nonlinear strain measures, boundary-value problem for linear elasticity, plane problems in linear elasticity, three dimensional problems in linear elasticity. Topics from nonlinear elasticity, micromechanics, contact problems, fracture mechanics. prereq: 4501 or equiv, Math 2263 or equiv or instr consent
AEM 5581. Mechanics of Solids. (. 3 cr.; Student Option; Fall Even Year) Continuum mechanics in one dimension: kinematics; mass, momentum/energy, constitutive theory. Wave propagation, heat conduction, Strings. Euler-Bernoulli theory. 3-D deformations/stress. Topics from fracture mechanics, structural stability, vibrations, thin films, layered media, smart materials, phase transformations, 3-D elastic wave propagation. Elasticity, viscoelasticity, plasticity. prereq: 3031 or equiv, [Math 2373 or equiv], [Math 2374 or equiv], [CSE grad student]
AEM 5651. Aeroelasticity. (. 3 cr.; A-F or Audit; Every Fall) Static aeroelastic phenomena, torsional divergence of a lifting surface control surface reversal. Aeroelastic flutter, unsteady aerodynamics. Problems of gust response, buffeting. Design project. prereq: 4202, 4301, [grad student or CSE upper div]
AEM 8000. Seminar: Aerospace Engineering and Mechanics. (. 1 cr. [max 4 cr.]; S-N or Audit; Every Fall & Spring) To be determined prereq: DGS consent
AEM 8201. Fluid Mechanics I. (. 3 cr.; Student Option; Every Fall) Mathematical and physical principles governing the motion of fluids. Kinematic, dynamic, and thermodynamic properties of fluids; stress and deformation; equations of motion; analysis of rotational and irrotational inviscid incompressible flow; two-dimensional and three-dimensional potential flow. prereq: 4201 or equiv, Math 2263 or equiv
AEM 8202. Fluid Mechanics II. (3 cr.; Student Option; Every Spring) Analysis of incompressible viscous flow; creeping flows; boundary layer flow. prereq: 8201

AEM 8203. Fluid Mechanics III. (3 cr.; Student Option; Every Fall) Analysis of compressible flow and shock waves; method of characteristics for one-dimensional unsteady flow and for two-dimensional steady flow. prereq: 8202

AEM 8207. Hydrodynamic Stability. (3 cr. max 4 cr.; Student Option; Periodic Fall) Theory of hydrodynamic stability. Stability of shear flows, rotating flows, boundary layer, two fluid flows, fingering flows, Rayleigh-Taylor instability, Kelvin Helmholtz instability, capillary instability, convective/absolute stability. Methods of linear stability, normal modes, energy theory of stability, nonlinear perturbation, bifurcation theory, transition to turbulence. prereq: 8201

AEM 8211. Theory of Turbulence I. (3 cr.; Student Option; Periodic Fall) Reynolds equations, methods of averaging, elements of stability theory and vortex dynamics; description of large vortical structures in mixing layers and boundary layers; horseshoe vortices; flow visualization. prereq: 8202

AEM 8212. Theory of Turbulence II. (3 cr.; Student Option; Periodic Fall) Prandtl's mixing length theory applied to classical boundary layer, pipe, jet, and wake flows; prediction methods used at Stanford Conference; law of wall; law of wake; K-epsilon method. prereq: 8211

AEM 8213. Turbulent Shear Flows. (3 cr.; A-F or Audit; Periodic Fall) Equations of motion for turbulent flow. Isotopic/homogeneous turbulence. Free shear flows. Wall turbulence, elements of vortex dynamics. prereq: 8201, 8202

AEM 8221. Rheological Fluid Mechanics. (3 cr.; Student Option; Periodic Fall) Methods of solution for flows of simple fluids with general constitutive equations. Topics from viscometric flow, extensional flow, perturbations of the rest state with steady and unsteady flow, secondary flow. prereq: 8201 or 5501 or instr consent

AEM 8231. Molecular Gas Dynamics. (3 cr.; Student Option; Periodic Fall) Kinetic theory of gases. Boltzmann equation, Maxwell-Boltzmann distribution, collisions, transport properties. Introduction to quantum mechanics. Statistical thermodynamics, classical/quantum statistics. Partition functions and thermodynamic properties. Irreversible thermodynamics. prereq: [4201 or equiv, [4203 or equiv], [ME 3324 or equiv]

AEM 8232. Physical Gas Dynamics and Molecular Simulation. (3 cr.; A-F or Audit; Periodic Spring) Molecular description of gas dynamics. Kinetic theory, transport theory, quantum mechanics for internal energy partitions, statistical thermodynamics. Finite rate chemical kinetics. Emphasis on link to continuum fluid dynamics. Overview of numerical simulation techniques for the Boltzmann equation with emphasis on direct simulation Monte Carlo. prereq: AEM 8231

AEM 8241. Perturbation Methods in Fluid Mechanics. (3 cr.; Student Option; Periodic Fall) Method of matched asymptotic expansions presented through simple examples and applied to viscous flows at high and low Reynolds numbers and other problems in fluid mechanics and applied mathematics. prereq: 8202 or instr consent

AEM 8251. Finite-Volume Methods in Computational Fluid Dynamics. (3 cr.; Student Option; Periodic Spring) Development of finite-volume computational methods for solution of compressible Navier-Stokes equations. Accuracy, consistency, and stability of numerical methods; high-resolution upwind shock-capturing schemes; treatment of boundary conditions; explicit and implicit formulations; considerations for high performance computers; recent developments and advanced topics. prereq: 4201 or 8201 or equiv, CSci 1107 or equiv

AEM 8256. Nonlinear Waves in Mechanics. (3 cr.; Student Option; Periodic Fall) Theory of kinematic, hyperbolic, and dispersive waves, with application to traffic flow, gas dynamics, and water waves. prereq: 5501 or instr consent

AEM 8271. Experimental Methods in Fluid Mechanics. (3 cr.; Student Option; Periodic Fall) Overview of computer organization, including external communications and A/D, D/A conversion. Measurement techniques, such as pressure measurements and hot-wire and laser Doppler anemometry. Signal processing and uncertainty; computer control of experiments. prereq: 4201, instr consent

AEM 8295. Selected Topics in Fluid Mechanics. (1-4 cr. max 8 cr.; Student Option; Periodic Fall; Spring & Summer) Includes individual student projects completed under guidance of a faculty sponsor. prereq: dept consent

AEM 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

AEM 8400. Seminar: Aerospace Systems. (1 cr. max 4 cr.; S-N or Audit; Every Fall & Spring) Developing program of research in aerospace systems. Discussions of current research/ topics of interest. prereq: Aerospace Eng grad student

AEM 8421. Robust Multivariable Control Design. (3 cr.; Student Option; Periodic Spring) Application of robust control theory to aerospace systems. Role of model uncertainty/ modeling errors in design process. Control analysis and synthesis, including $H_{inf symbol}$ and $H_{inf symbol}$ optimal control design and structural singular value [Greek letter nu] techniques. prereq: 5321 or equiv

AEM 8423. Convex Optimization Methods in Control. (3 cr.; A-F or Audit; Periodic Fall) Practical aspects of convex optimization methods applied to solve design/analysis problems in control theory. prereq: 5321 or EE 5321 or equiv

AEM 8426. Optimization and System Sciences. (3 cr.; A-F or Audit; Periodic Fall) Review of probability concepts and random variables, nonlinear stochastic differential equations and their numerical solutions, Monte-Carlo simulations, Gauss-Markov process, stochastic dynamic programming, and optimal control of practical uncertain dynamical systems. prereq: 5321 or 5431, CSE grad student

AEM 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

AEM 8451. System Identification: Theory and Applications. (3 cr.; A-F or Audit; Periodic Spring) Modeling methods for dynamic systems using measurement data, or in combination with first principles, based on theory of systems/signals. Primary emphasis on linear systems for control system design/simulation applications. Examples from aerospace applications. prereq: 4321 or equiv

AEM 8495. Advanced Topics in Aerospace Systems. (1-4 cr. max 32 cr.; A-F or Audit; Every Fall, Spring & Summer) Individual student projects completed under guidance of a faculty sponsor. prereq: dept consent
AEM 8500. Research Seminar in Mechanics of Materials. (1 cr.; [max 12 cr.]; S-N or Audit; Every Fall & Spring) Seminars given by students, faculty, and visitors on topics drawn from current research. prereq: instr consent

AEM 8511. Advanced Topics in Continuum Mechanics. (3 cr.; [max 6 cr.]; A-F or Audit; Periodic Fall) Constitutive equations; invariance and thermodynamic restrictions. Nonlinear elasticity theory; exact solutions, minimization, stability. Non-Newtonian fluids; viscometric flows, viscometric functions, normal stress. Other topics may include reactive and/or nonreactive mixtures, nonlinear plasticity, and deformable electromagnetic continua. prereq: 5501 or instr consent

AEM 8521. Advanced Topics in Elasticity. (3 cr.; A-F or Audit; Periodic Fall) Contact stresses, finite deformations, and other topics. prereq: 5503

AEM 8523. Elastodynamics. (3 cr.; A-F or Audit; Periodic Fall) Waves and vibrations in rods, beams, and plates; dispersion; volume and surface waves; reflection; energy theorems; vibrations of bounded media and relation to technical theories; elements of nonlinear waves, inelastic waves, and stability of motion of elastic systems. prereq: 4581 or 5501 or instr consent

AEM 8531. Fracture Mechanics. (3 cr.; A-F or Audit; Periodic Fall & Spring) Theories of mechanical breakdown. Kinetic rate theories and instability considerations; formation of equilibrium cracks and circular crack propagation under pulses; statistical aspects of strength and fracture of micromolecular systems; time and temperature dependency in fracture problems and instability of compressed material systems. prereq: 5503 or instr consent

AEM 8533. Theory of Plasticity. (3 cr.; Student Option; Periodic Fall) Theory of permanent deformation of ductile metals; bi-linear material models, Drucker's three bar truss, and other examples; 3-D continuum formulation, yield surfaces, hardening rules, and material stability; slip line theory. Prandtl punch solution; single crystal plasticity. prereq: 5203 or instr consent

AEM 8541. Mechanics of Crystalline Solids. (3 cr.; Student Option; Periodic Fall) Atomic theory of crystals and origins of stress in crystals. Relation between atomic and continuum description; phase transformations and analysis of microstructure; effects of shear stress, pressure, temperature, electromagnetic fields, and composition on transformation temperatures and microstructure; interfacial energy in solids. prereq: 5501 or instr consent

AEM 8551. Multiscale Methods for Bridging Length and Time Scales. (3 cr.; A-F or Audit; Periodic Spring) Classical/emerging techniques for bridging length/time scales. Nonlinear thermoelasticity, viscous fluids, and micromagnetics from macro/atomic viewpoints. Statistical mechanics, kinetic theory of gases, weak convergence methods, quasicontinuum, effective Hamiltonians, MD, new methods for bridging time scales. prereq: Basic knowledge of [continuum mechanics, atomic forces], familiarity with partial differential equations, grad student in [engineering or mathematics or physics]

AEM 8595. Selected Topics in Mechanics and Materials. (1-4 cr.; [max 8 cr.]; Student Option; Every Fall, Spring & Summer) Includes individual student projects completed under guidance of a faculty sponsor. prereq: dept consent

AEM 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) To be determined prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

AEM 8777. Thesis Credits. Master's. (1-18 cr.; [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

AEM 8880. Plan B Project. (1-3 cr.; [Student Option; Every Fall, Spring & Summer] Satisfies project requirement for Plan B Master's degree. May appear on M.S. program but does not count toward 20-credit minimum in the major field. Topic arranged by student and advisor; written report required. prereq: Grad aerospace engineering or mechanics major, dept consent

AEM 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

AFRO 5103. World History and Africa. (3 cr.; A-F or Audit; Fall Even Year) Contributions of African American thinkers to making of African history/strategies to rework theoretical/analytical foundations of world history. Writings/intellectual networks of major thinkers whose historical/ethnicographic works on Africa spanning nineteenth to twentieth century. prereq: Grad student or instr consent

AFRO 5181W. Blacks in American Theatre. (WI; 3 cr.; Student Option; Periodic Spring) Historical survey of significant events in the development of American Black theatrical tradition; essays, plays, playwrights, and theatres from early colonial references to Black Arts Movement.

AFRO 5182W. Contemporary Black Theatre: 1960-Present. (WI; 3 cr.; Student Option; Spring Even Year) Essays, plays, playwrights, theatres that have contributed to contemporary Black theatre from beginning of Black Arts Movement to present.

AFRO 5191. Seminar: The African American Experience in South Africa. (3 cr.; Student Option; Periodic Fall & Spring) Ideological, political, religious, and cultural ties that have informed African American and black South African relations from late 18th century to present.

AFRO 5406. Black Feminist Thought. (3 cr.; Student Option; Periodic Spring) Critically examine spatiality of African descendant women in Americas/larger black diaspora. Writings from black feminist/queer geographies, history, contemporary cultural criticism. Recent black feminist theorizing.

AFRO 5625. Women Writers of Africa and the African Diaspora. (3 cr.; Student Option; Spring Even Year) Works of black women writers from Europe, Africa, South America, and the Caribbean. Novels, drama, films, and essays.

AFRO 5627. Seminar: Harlem Renaissance. (3 cr.; Student Option; Every Fall) Review Harlem Renaissance from variety of perspectives. Literary, historical, cultural, political, international. Complex patterns of permeation/interdependency between worlds
inside/outside of what W.E.B. Du Bois called "the Veil of Color." prerequisite: Grad student or instr consent

AFRO 5866. The Civil Rights and Black Power Movement, 1954-1984. (3 cr.; A-F or Audit; Every Fall)

AFRO 5910. Topics in African American and African Studies. (2-4 cr.; max 12 cr.; Student Option; Every Fall, Spring & Summer) Topics vary by instructor.

AFRO 5932. The Production of Knowledge, Negotiating the Past, and the Writing of African Histories. (3 cr.; A-F or Audit; Periodic Fall & Spring) Recent scholarship on social history of Africa. Focuses on new literature on daily lives of ordinary people in their workplaces, communities, households. prerequisite: Grad student or instr consent

AFRO 5993. Directed Study. (1-3 cr.; Student Option; Every Fall, Spring & Summer) Guided individual reading/study for qualified seniors and graduate students. prerequisite: instr consent

AFRO 8202. Seminar: Intellectual History of Race. (3 cr.; Student Option; Every Fall & Spring) Shifting and contested meanings of "race" from the "Age of Conquest" to the present. Starting from the proposition that race is not a fixed or stable category of social thought or being, the seminar seeks to ascertain how and why Western ideas about race have changed.

AFRO 8554. Seminar: Gender, Race, Nation, and Policy—Perspectives from Within the African Diaspora. (3 cr.; Student Option; Every Fall & Spring) Interdisciplinary analysis of U.S. domestic and foreign policies as they affect Africans and peoples of African descent in the diaspora. Intersections of gender, race, nation, and class. prerequisite: instr consent

AFRO 8802. Seminar: Orientalism. (3 cr.; Student Option; Periodic Fall & Spring) Recent arguments related to Orientalism as a trend in modern literary and cultural criticism.

AFRO 8910. Topics in Studies of Africa and the African Diaspora. (3 cr.; max 9 cr.; Student Option; Every Fall & Spring) Topics specified in Class Schedule.

AFEE 5110. Foundations of Agricultural Education. (3 cr.; A-F only; Every Fall) This course explores historical and philosophical foundations and current structures of school-based agricultural education programs. Students will understand, value, and apply strategies to implement and manage the integrated program model of agricultural education.

AFEE 5111W. Agricultural Education: Methods of Teaching. (WI; 4 cr.; Student Option; Every Fall) Use of teaching resources; principles of teaching and learning; problem-solving techniques; lesson plan construction for large group, small group and individual investigations; student management; and assessment.

AFEE 5112. Agricultural Education Organization and Curriculum for Youth. (3 cr.; Student Option; Every Spring) Development of community school program in agriculture, agribusiness, and environmental science. Program to meet graduation outcomes and determine student needs.

AFEE 5114. Agricultural Education Teaching Seminar. (1 cr.; Student Option; Every Spring) Reflective learning on teacher preparation experience; identify issues and problems facing the discipline; needs for continual preparation and program adjustment.

AFEE 5118. Strategies for Managing and Advising the FFA Organization. (2 cr.; A-F or Audit; Every Spring) Principles and techniques to advise an FFA chapter. Historical and philosophical basis of FFA, organization and structure. Integration with classroom instruction, public relations, recruitment, and administration of FFA chapters.

AFEE 5220. Special Topics in Agriculture Education and Extension. (1-3 cr.; max 12 cr.; Student Option; Every Fall, Spring & Summer) Content varies by offering.

AFEE 5231. Agricultural Education Curriculum K-12. (2 cr.; A-F or Audit; Periodic Fall) Philosophy, organization, and administration of instruction in agricultural education programs at the elementary, middle, and high school levels.

AFEE 5233. Advanced Procedures in Teaching Agricultural Education. (2 cr.; A-F or Audit; Periodic Fall) New developments in methodology; assessment of innovations and procedures; consideration of various levels of instruction.

AFEE 5235. Experiential Learning in Agricultural Education. (2 cr.; Student Option; Periodic Fall & Spring) The organization and administration of agricultural experience programs for middle and secondary level students: career exploration, improvement projects, experiments, placement in production/business/community settings, entrepreneurship. Current state and national programs and resource material.

AFEE 5280. Current Issues for the Beginning Agricultural Education Teacher. (1-3 cr.; Student Option; Every Spring) Reflection, analysis on current problems and issues confronting beginning teachers of agricultural education. Issues in teaching methods, classroom and program management, discipline, curriculum, FFA and SAЕ development, school-to-work relationships.

AFEE 5697. Teaching Internship: School and Classroom Setting. (2 cr.; Student Option; Every Fall) Part-time supervised teaching experience in a school. Seminars on managing student's learning in context of work and human resource education programs in contemporary schools and on becoming a reflective educator. prerequisite: WHRE 5696 for initial licensure program

AFEE 5698. Teaching Internship. (2-8 cr.; max 16 cr.; Student Option; Every Spring) Teaching experience in a school system that provides programs to grades 5-12. prerequisite: Admission to initial licensure program

AFEE 5993. Directed Study in Agricultural Education and Extension. (1-4 cr.; max 8 cr.; Student Option; Every Fall, Spring & Summer) Topics may be chosen to permit study of areas within education or to supplement areas of inquiry not provided in the regular course structure.

AFEE 5995. Integrating Paper—Master of Education: Agricultural and Extension Education. (1-5 cr.; A-F or Audit; Every Fall, Spring & Summer) Students prepare a paper dealing with issues in agricultural education applied to professional responsibilities. AFEE 5995 can be taken for 1-5 credits, and students can enroll for two semesters for a combined max total of 5 credits.

AFEE 8090. Seminar: Agricultural Education and Extension. (1-3 cr.; max 6 cr.; Student Option; Periodic Fall & Spring) Topics on various aspects of agricultural education. Prepare, present, and critique a report. prerequisite: AgEd grad student

AFEE 8094. Research in Agricultural Education and Extension. (1-6 cr.; A-F or Audit; Every Fall, Spring & Summer) Select problems, prepare bibliographies, analyze and interpret data, and prepare manuscripts on studies. prerequisite: AgEd student doing Plan B research, dept consent
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

AGRO 5021. Plant Breeding Principles. (3 cr.; Student Option; Every Fall)
This course is intended for advanced undergraduate students and graduate students that are either (1) not plant breeding majors, who will benefit from a basic understanding of how genetics is applied to plant improvement; or (2) plant breeding majors lacking prior coursework in plant breeding. The objective of this course is to develop an understanding of the underlying principles, ideas, and concepts important to applying genetic principles to plant breeding, evaluating breeding methods, and enhancing genetic progress and efficiency.

AGRO 5121. Applied Experimental Design. (4 cr.; Student Option; Every Spring)
Principles of sampling methodologies, experimental design, and statistical analyses. Methods/procedures in generating scientific hypotheses, organizing, initiating, conducting, and analyzing scientific experiments using experimental designs and statistical procedures. prereq: Stat 5021 or equiv or instr consent

AGRO 5311. Research Methods in Crop Improvement and Production. (1 cr.; S-N or Audit; Every Fall & Summer)
Demonstrations and discussions of techniques in crop improvement and/or production research. Presentations integrate biotechnology with traditional breeding methods; production sessions emphasize ecologically sound cropping systems. prereq: applied plant sciences grad

AGRO 5321. Ecology of Agricultural Systems. (3 cr.; A-F or Audit; Every Spring)
Ecological approach to problems in agricultural systems. Formal methodologies of systems inquiry are developed/applied. prereq: [3xxx or above] course in [Agron or AnSc or Ent or Hort or PiP or Soil] or instr consent

AGRO 5431. Applied Plant Genomics and Bioinformatic. (3 cr.; Student Option; Every Fall)
Analysis, interpretation, visualization of large plant genomic datasets. Basic computer programming, analyzing large-scale genomics to answer basic/applied biological questions, understanding limitations of each application, presenting concise visual findings from large-scale datasets. prereq: Grad student or [undergrad with genetics course

AGRO 5580. Publishing in Plant Science Journals. (2 cr.; S-N only; Every Fall)
Organizational/writing skills for reporting research results in a peer-reviewed journal manuscript. Publication process; choosing your journal; characteristics of good scientific writing; ethics, plagiarism, and authorship; stating your objectives; writing the different components of a manuscript; citing literature; use of tables and figures; proofreading. Written manuscript ready for submission to a plant science journal. prereq: instr consent

AGRO 5999. Special Topics: Workshop in Agronomy. (1-6 cr.; Student Option; Every Fall, Spring & Summer)
Workshops on various topics in agronomy and plant genetics. Presenters/faculty may include guest lecturers/experts. Topics specified in class schedule.

AGRO 8005. Supervised Classroom or Extension Teaching Experience. (2 cr.; S-N or Audit; Every Fall & Spring)
Classroom or extension teaching experience in one of the following departments: Agronomy and Plant Genetics; Biosystems and Agricultural Engineering; Horticultural Science; Plant Pathology; or Soil, Water, and Climate. Participation in discussions about effective teaching to strengthen skills and develop personal teaching philosophy. prereq: Grad SENG major, instr consent

AGRO 8023. Evolution of Crop Plants. (3 cr.; A-F or Audit; Spring Even Year)
Origin, distribution, and evolution of cultivated plants; implication of the effects of evolutionary processes on crop breeding for needs of people today. prereq: 9 grad cr in ag or bio science

AGRO 8202. Breeding for Quantitative Traits in Plants. (3 cr.; Student Option; Spring Odd Year)
Principles and concepts of population and quantitative genetics/application in designing and implementing a plant breeding program/ theory, experimental approaches, and evidence that form the basis for these concepts and breeding strategies. prereq: [5201, STAT 5021] or instr consent

AGRO 8241. Chromosomal and Molecular Genetics of Plant Improvement. (3 cr.; Student Option; Spring Even Year)
Mixture of classical/current info in molecular plant genetics, biotech, and genomics. Students devise experiments in breeding, genetics, genomics, physiology, cellular/molecular biology, and other areas. prereq: Introductory Genetics course

AGRO 8900. Advanced Discussions. (1-3 cr.; max 36 cr.; Student Option; Periodic Fall & Spring)
Special workshops or courses in applied plant sciences for graduate students only.

Akkadian (AKKA)

AKKA 5011. Elementary Akkadian I. (3 cr.; Student Option; Periodic Fall)
Introduction to cuneiform script. Basics of Old Babylonian morphology and syntax. Written drills, readings from Hammurabi laws, foundation inscriptions, annals, religious and epic literature. prereq: Adv undergrads with instr consent or grades

AKKA 5012. Elementary Akkadian II. (3 cr.; Student Option; Periodic Fall)
Continuation of 5011. Readings include The Gilgamesh Epic, The Descent of Ishtar, Mari Letters, Annals of Sennacherib and Essarhaddon, Sargon II. prereq: 5011

American Indian Studies (AMIN)

AMIN 5107. The Structure of Anishinaabemowin, the Ojibwe Language. (3 cr.; A-F or Audit; Periodic Fall)
Analysis of grammatical structures of Anishinaabemowin. prereq: 3104

AMIN 5141. American Indian Language Planning. (3 cr.; A-F or Audit; Periodic Fall)
Planning for maintenance/revitalization of North American indigenous languages. Condition/status of languages. Documentation, cultivation, literacy, education. prereq: 3103 or 3123 or instr consent

AMIN 5202. American Indians and the Supreme Court. (3 cr.; Student Option; Periodic Fall & Spring)
Seminar explores the role and the practice of the US Supreme Court as a policy-making institution when dealing with indigenous nations and their citizens. Analysis of theoretical, behavioral, political, and institutional perspectives. Student work includes reading and textual analysis, leading discussions, analytical research paper.

AMIN 5402. American Indians and the Cinema. (AH,DSJ; 3 cr.; A-F or Audit; Every Spring & Summer)
Representations of American Indians in film, historically/contemporary. What such representations assert about Native experience and cultural viability. What they reflect about particular relationships of power.

AMIN 5409. American Indian Women: Ethnographic and Ethnohistorical Perspectives. (DSJ,HIS; 3 cr.; Student Option; Fall Even Year)
Comparative survey of ethnographic/ethnohistorical writings by/about American Indian women.

AMIN 5412. Comparative Indigenous Feminisms. (GP; 3 cr.; Student Option No Audit; Periodic Fall & Spring)
The course will examine the relationship between Western feminism and indigenous feminism as well as the interconnections between women of color feminism and indigenous feminism. In addition to exploring how indigenous feminists have theorized from 'the flesh' of their embodied experience of colonialism, the course will also consider how indigenous women are articulating decolonization and the embodiment of autonomy through scholarship, cultural revitalization, and activism.

AMIN 5890. Readings in American Indian and Indigenous History. (3 cr.; Student Option; Periodic Fall & Spring)
Students in this course will read recently published scholarship in American Indian and Indigenous history that takes up pressing research questions, promises to push inquiry in new directions, and that theorizes important interventions in our thinking to understand where the field is situated and moving. Reflecting the instinctively interdisciplinary nature of American Indian and Indigenous history, readings will be drawn not just from the discipline of history but across other disciplines such as Anthropology, American Studies, Geography, Literature, Political Science, and Legal Studies. As well, readings will include scholarship that reaches out to embrace the Global Indigenous studies turn. prereq:
Analysis of central theoretical work in the field and survey of key methodologies. prereq: grad AmSt major or instr consent or dept consent

AMST 8232. Cultural Fallout: The Cold War and Its Legacy, Research. (3 cr.; Student Option; Every Fall & Spring) Student produce a research paper on history/culture of Cold War era as it developed in United States after World War II. Research projects build upon readings from 8231. prereq: 8231

AMST 8239. Gender, Race, Class, Ethnicity, and Sexuality in the United States: Readings. (3 cr.; Student Option; Every Fall) Social, cultural, and artistic modes of self-expression. Intellectual analysis of people in the United States identified as female or male or as members of groups defined by race, ethnicity, class, or sexual orientation. prereq: instr consent

AMST 8240. Gender, Race, Class, Ethnicity, and Sexuality in the United States: Topical Development. (3 cr.; max 9 cr.) Social, cultural, and artistic modes of self-expression and intellectual analysis of people in the United States identified as female or male and/or as members of group defined by race, ethnicity, class, or sexual orientation. prereq: instr consent

AMST 8249. Popular Culture and Politics in the 20th Century: Readings. (3 cr.; Student Option; Periodic Fall) Popular arts in their political/social context. Issues of race, gender, class, and nationalism. prereq: instr consent

AMST 8250. Popular Culture and Politics in the 20th Century: Research Strategies. (3 cr.; Student Option; Periodic Fall) Popular arts in their political/social context. Focuses on issues of race, gender, class, and nationalism. prereq: 8239 or instr consent

AMST 8259. Literature, History, and Culture: Research Strategies. (3 cr.; Student Option; Periodic Fall & Spring) Interdisciplinary study of connections between literary expression and history, particularly as they articulate themes in American culture. prereq: instr consent

AMST 8260. Literature, History, and Culture: Topical Development. (3 cr.; Student Option; Periodic Fall & Spring) Interdisciplinary study of connections between literary expression and history, particularly as they articulate themes in American culture. prereq: instr consent

AMST 8288. Working in the Global Economy: Readings. (3 cr.; Student Option; Periodic Fall) Debates about global economy's consequences for American culture/character. Effects of global capitalism on factory work, service sector, pink-collar, and factory work in multinational corporations and professional/managerial positions inside/outside U.S. borders. How work is lived through race, class, gender, and nation.

AMST 8289. Ethnographic Research Methods: Research Strategies in American Studies. (3 cr.; Student Option; Periodic Spring) Students conduct an empirical research project, write a final paper. Assumptions/practices of positivism, reflexive science, and feminist methodology. Issues surrounding politics/ethics of feminist research. Dilemmas in practice of fieldwork, oral histories, reading, and writing. prereq: 8288 or instr consent

AMST 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

AMST 8401. Practicum in American Studies. (3 cr.; S-N or Audit; Periodic Fall & Spring) Training in teaching undergraduate courses in American studies. prereq: instr consent

AMST 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

AMST 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.) No Grade Associated; Every Fall, Spring & Summer x prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

AMST 8777. Thesis Credits: Master's. (1-18 cr.; max 50 cr.) No Grade Associated; Every Fall, Spring & Summer (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

AMST 8801. Dissertation Seminar. (3 cr.; S-N or Audit; Every Fall & Spring) Conceptualizing the research problem for the dissertation and structuring the process of writing a chapter of it. prereq: AmSt doctoral student beginning dissertation work

AMST 8888. Thesis Credit: Doctoral. (1-24 cr.; max 100 cr.) No Grade Associated; Every Fall, Spring & Summer (No description) prereq: Max 18 cr per semester or summer; 24 cr required

AMST 8920. Topics in American Studies. (3-4 cr.; max 12 cr.) (Student Option; Every Fall & Spring) Topics specified in Class Schedule.

AMST 8970. Independent Study in American Studies. (1-9 cr.; Student Option; Every Fall, Spring & Summer)
Independent study of interdisciplinary aspects of American civilization under guidance of faculty members of various departments. 

prereq: instr consent, dept consent

Anatomy (ANAT)

ANAT 5095. Advanced Problems in Anatomy. (1-6 cr. [max 12 cr.]; A-F only; Every Fall, Spring & Summer)
Exceptional projects that do not easily fit within confines of other ANAT offerings. Examples include but not limited to individual teaching or research projects. prereq: one or more ANAT classes, instr consent

ANAT 5150. Human Gross Anatomy. (5 cr.; A-F only; Every Fall)
Human cadaveric dissection based on traditional preparation, lab dissection, review sections, radiographic analysis, clinical correlations. Taught by regions. Extremities, torso, head/neck. Assessment by midterm/final written/practical examinations. prereq: instr consent, For Medical Students, or Graduate students enrolled in an appropriate graduate program as determined by instructor.

ANAT 5525. Anatomy and Physiology of the Pelvis and Urinary System. (1-2 cr.; A-F only; Every Spring)
Two-day intensive course. Pelvis, perineum, and urinary system with cadaveric dissection. Structure/function of pelvic and urinary organs, including common dysfunction and pathophysiology. Laboratory dissections, including kidneys, ureters, urinary bladder, pelvic viscera and perineum (male or female), pelvic floor, vascular and nervous structures. Grand rounds section. prereq: One undergard anatomy course, one undergrad physiology course, instr consent

ANAT 5999. Head and Neck Anatomy. (3 cr.; A-F or Audit; Every Fall & Summer)
A preclinical project course that can be individually arranged between the student and a faculty member for credit in areas not covered by regular courses. May include clinical/ basic science research, library research or special projects.

ANES 7183. Anesthesiology Advanced Elective. (4 cr.; H-N only; Every Fall, Spring & Summer)
The experience will build on the basics learned in rotation 7181, and include greater utilization of manual skills such as starting i.v. catheters, endotracheal intubation, and a greater understanding of physiology and interpretation of data from multiple simultaneous monitors.

ANES 7184. Rural Externship in Clinical Anesthesiology. (0-3 cr.; H-N only; Every Fall, Spring & Summer)
Students shadow surgical medical director in all aspects of patient care and administrative duties. Care of patients in OR. Clinic visits. Riding with paramedics. Meeting with CEO of hospital for strategic planning.

ANES 7185. Anesthesia Advanced Elective - VA. (4 cr.; H-N only; Every Fall, Spring & Summer)
This 4-week advanced rotation is focused on the medical student who is interested in pursuing a career in anesthesiology and/or desires additional anesthesia experience in managing medically complex patients undergoing middle to high-risk surgery. Students will have the opportunity to care for the aging veteran population. There will be an emphasis on managing patients with multiple co-morbid conditions undergoing cardiac and vascular surgery. Additionally, medical students will learn more advanced concepts during cases that include ENT, thoracic, and abdominal surgery. The medical student will develop skills including placing peripheral intravenous catheters, endotracheal intubation, arterial lines, and central lines. The medical student will develop a greater understanding of physics of fluids/gases, cardiac physiology, hemodynamics and pulmonary physiology, ventilator management and interpretation of data from multiple simultaneous monitors. They will function at the level of a sub-intern and will be given advanced responsibilities consistent with their level of knowledge and skill.

ANES 7186. Clinical Practice in Anesthesia. (15 cr.; H-N or Audit; Every Fall & Spring)

ANES 7286. Directed Study Anesthesia Project: Clinical. (1-15 cr.; H-N or Audit; Every Spring)

Animal Science (ANSC)

ANES 7910. Anesthesiology Medical Residency. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)

ANES 7930. Anesthesiology Medical Fellowship. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)

ANES 8269. Research in Anesthesia. (1 cr.; Student Option; Every Fall & Spring)
ANSC 5091. Research Proposals: From Ideas to Strategic Plans. (Wt; 3 cr.; Student Option; Every Fall & Spring)
You have a great research idea, now what? How do you turn your idea into a proposal? It has been said paraphrasing Edison, that innovation is one percent inspiration, ninety-nine percent perspiration. In this course, we will start with and inspiring idea and sweat our way to develop a research proposal. The students will go through a step-by-step process that starts choosing and defining a research idea, then proceeding to do literature reviews and to the development of hypothesis, aims, objectives and a research strategy. The aim of this course is to provide students with tools to understand the structure of scientific reports and proposals, literature searches and basic data interpretation. The student will learn about different research approaches and how to achieve consistency in their research projects. We will guide students in how to begin and develop a written research proposal that will satisfy the requirements of their advisers, institution and funding organizations. prereq: There are no prerequisites, however, having taken ANSC 3011 Statistics for Animal Science is desirable.

ANSC 5099. Special Workshop in Animal Science. (1-4 cr.; [max 12 cr.]; Student Option; Every Spring)
Topics vary. See Class Schedule or department. Topics may use guest lectures/experts. prereq: instr consent

ANSC 5200. Statistical Genetics and Genomics. (4 cr.; Student Option; Fall Even Year)

ANSC 5305. Companion & Wild Species Reproduction. (2 cr.; A-F only; Every Spring)
Principles of reproductive physiology specific to domesticated companion canine and feline species as well as avian species. These principles discussed in the context of the management of breeding and reproductive diseases in companion species as well as conservation management in wild species. prereq: instr consent

ANSC 5555. Applied Livestock and Poultry Microbiology. (2 cr.; A-F only; Spring Even Year)
This applied microbiology course is intended to provide theoretical basis and hands-on experience to students on major pathogenic bacteria colonizing livestock and domestic poultry. This course will provide skills to the students who seriously consider farm animal and poultry microbiology research and/or teaching in their careers. Pathogenic bacteria in livestock and poultry such as Listeria monocytogenes, Escherichia coli O157: H7, and Salmonella, fungal microorganisms (Aspergillus), and beneficial microorganisms such as Lactobacillus, will be discussed. In addition, the course will introduce feed testing methods (Bacteriological Analytical Manual (BAM) methodology), common antibacterials/antibiotics used for decontamination and disinfection, and the emerging alternatives to antibiotics with a perspective on bacterial antibiotic resistance. In a flipped class room format, the students will gather necessary information provided by the instructor, listen to short lectures on the methods and mechanisms, participate in demonstrations, and apply it in a typical BSLL2 laboratory set up under supervision. All students should undergo BSLL2 training prior to enrollment. Online training takes approximately 5-6 hours. Not more than 4 students will be allowed for each session due to BSLL2 pathogenic microbiology space restriction, access to RAR facilities, and some non-conventional microbiological methods. Special health conditions, pregnancy, and immunocompromised situations must be consulted with the instructor prior to enrollment. The students must obtain clearance from RHOC for their tetanus vaccination status.

ANSC 5625. Nutritional Biochemistry. (3 cr.; Student Option; Every Fall)
Overview of biochemical molecules and pathways important in nutritional events. prereq: BIOG 3021 or instr consent

ANSC 5626. Nutritional Physiology. (3 cr.; A-F only; Every Spring)
Whole body macronutrient metabolism as it relates to etiology of metabolic diseases. Signaling between tissues to control homeostasis. How dysregulation of crosstalk can lead to metabolic diseases. How diet, exercise, or starvation impact metabolism. Regulation of food intake and energy expenditure. Designing/analyzing/interpreting research data.

ANSC 5700. Cell Physiology. (4 cr.; A-F only; Every Fall)
Cell Physiology involves the study of control mechanisms involved in maintaining homeostasis with respect to a variety of parameters including regulation of pH, volume, nutrient content, intracellular electrolyte composition, membrane potential, receptor signaling and aspects of intercellular communication. The first half of this team-taught course is organized in a partially on-line format where students learn from on-line materials and then take an on-line quiz each week before meeting with the instructor to review key concepts in class. The second half of the course is presented in lecture format. Student evaluation is based on quiz scores, in-class exams and graded problem sets.

ANSC 8111. Genetic Improvement of Animals. (3 cr.; Student Option; Periodic Fall)
Application of population genetics to livestock breeding; selection index theory and practice; basis of relationships and covariances among relatives; and selection based on multiple sources of information. prereq: instr consent

ANSC 8121. Linear Model Methods. (3 cr.; Student Option; Periodic Fall)
Techniques and statistical tools for analysis of data. Matrix manipulation, least-squares procedures, correction for environmental factors, estimation of components of variance, and standard errors of estimates. prereq: Stat 5021

ANSC 8134. Ethical Conduct of Animal Research. (2 cr.; A-F or Audit; Every Fall)
Ethical considerations in use of animal subjects in agricultural, veterinary, and biomedical research. Federal, state, and University guidelines relating to proper conduct for acquisition/use of animals for laboratory, observational, epidemiological, and clinical research. Regulatory requirements, bases for what is deemed proper conduct. Societal impact on scientific investigations utilizing animal subjects. prereq: Grad student or prof school student or instr consent

ANSC 8141. Mixed Model Methods for Genetic Analysis. (2 cr.; max 4 cr.; A-F or Audit; Spring Odd Year)
Theoretical foundation of genetic prediction, selection index theory, best linear unbiased prediction, multivariate mixed models, estimation of variance components using maximum/restricted maximum likelihood methods, genomic prediction/variance component estimation. prereq: 5200 or CMB 5200 or equiv

ANSC 8194. Research in Animal Genetics. (1-3 cr.; Student Option; Every Fall, Spring & Summer)
Research in quantitative genetics, cytogenetics, molecular genetics, and other areas related to animal breeding. prereq: instr consent

ANSC 8211. Animal Growth and Development. (3 cr.; Student Option; Every Spring)
Whole body growth of animals, bone, and adipose tissue; structure, function, differentiation, and development of tissues; mode of action of hormones, growth factors, and growth promoters. prereq: instr consent

ANSC 8294. Research in Muscle Chemistry and Physiology. (1-3 cr.; Student Option; Every Fall, Spring & Summer)
Research in selected areas. prereq: instr consent

ANSC 8311. Animal Bioenergetics. (3 cr.; A-F or Audit; Every Fall & Spring)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
Integrated systems approach to energy metabolism of animals. Application of classical techniques of calorimetry and comparative slaughter. Development of systems for expressing energy content of feeds, and techniques for measuring whole body and organ metabolism of specific nutrients. prereq: instr consent; BioC 4331 recommended

ANSC 8312. Protein Metabolism. (3 cr.; A-F or Audit; Periodic Fall) Basic and applied concepts of protein metabolism in farm animals. prereq: BioC 4331

ANSC 8320. Concepts and Developments in Nutritional Physiology. (4 cr.; max 6 cr.; A-F or Audit; Every Spring) Review and critical evaluation of pertinent scientific literature. prereq: instr consent

ANSC 8330. Concepts and Developments in Animal Nutrition. (3 cr.; max 6 cr.; A-F or Audit; Every Fall) Review, critical evaluation of recent research reports. prereq: instr consent

ANSC 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

ANSC 8340. Concepts and Developments in Swine Nutrition. (2 cr.; max 4 cr.; A-F or Audit; Every Fall & Spring) Review and critical evaluation of scientific literature. prereq: instr consent

ANSC 8344. Mechanisms of Hormone Action. (2 cr.; Student Option; Fall Even Year) Major signal transduction, apoptosis. Topics incorporate pharmacology, biochemistry, and cell biology of hormone action in relevant physiological systems. Lectures on basic principles. Specialized lectures. Discussion of primary literature. prereq: Course in biochemistry or cell biology or instr consent

ANSC 8394. Research in Animal Nutrition. (1-3 cr.; Student Option; Every Fall, Spring & Summer) Research in selected areas: topics and animal species determined by consultation. prereq: instr consent

ANSC 8411. Physiology of Reproduction. (3 cr.; A-F or Audit; Periodic Fall) Emphasis is on gametogenesis, conception, and implantation. prereq: 3305 or equiv

ANSC 8421. Physiology of Fertilization and Gestation. (3 cr.; Student Option; Periodic Fall) Physiological events occurring during gametogenesis; capacitation and fertilization; period of the embryo; period of the fetus; and parturition. prereq: 3305 or instr consent

ANSC 8431. Immunoreproduction. (3 cr.; Student Option; Periodic Fall) Blood groups and polymorphic proteins affecting reproduction; immunoglobulin formation; antigens of semen, ova, and genital secretions; immunopathology; maternal-fetal incompatibility; and antibodies to hormones. prereq: 3305 or instr consent

ANTH 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

ANTH 8451. Reproductive Endocrinology. (2 cr.; A-F or Audit; Periodic Fall) Hormonal regulation of mammalian reproductive cycles and seasonal patterns; nutritional and stress effects on reproductive endocrinology; mechanism of hormone action. prereq: 3305 or 3327 or equiv, BioC 3021

ANTH 8494. Research in Animal Physiology. (1-3 cr.; Student Option; Every Fall, Spring & Summer) Individual research under faculty direction. Topic determined by consultation: a specialized aspect of a thesis problem or an independent problem of mutual interest to graduate student and adviser. prereq: instr consent

ANTH 8510. Graduate Seminar. (1 cr.; max 12 cr.; Student Option; Every Fall & Spring) Students attend seminars and lead a seminar, giving oral presentation of scientific data. Public speaking skills. Preparing visuals for scientific presentations. Audience critiques of presentations. prereq: instr consent

ANTH 8594. Research in Animal Science. (1-3 cr.; Student Option; Every Fall, Spring & Summer) Research including experimental studies in disciplines associated with animal production and research, with emphasis on interdisciplinary studies. prereq: instr consent

ANTH 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer) x prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

ANTH 8777. Thesis Credits: Master's. (1-18 cr.; max 50 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

ANTH 8888. Thesis Credit: Doctoral. (1-24 cr.; max 100 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 16 cr per semester or summer; 24 cr required

ANTH 8990. Curricular Practical Training. (1 cr.; max 2 cr.; S-N only; Every Fall, Spring & Summer) Industrial work assignment involving animal science. Review/approval by faculty member and director of graduate studies. Final report covering work assignment. prereq: AnSc grad student, dept consent

ANTH 5008. Advanced Flintknapping. (3 cr.; A-F or Audit; Periodic Fall) Hands-on training in techniques of advanced stone tool production, artifact reproduction, and lithic experimental design for academic/artistic purposes. prereq: [3008 or 5269] or instr consent

ANTH 5009. Human Behavioral Biology. (3 cr.; A-F or Audit; Every Spring) In-depth introduction to, and critical review of, human behavioral biology, examining the approaches in anthropology and related fields. Classic texts/recent empirical studies of humans and other species. Theoretical underpinnings of this new discipline/how well theoretical predictions have been supported by subsequent research.

ANTH 5015W. Biology, Evolution, and Cultural Development of Language. (SOCs, WI; 3 cr.; Student Option; Every Spring) Language in pre-historic humans. Brain/vocal tract structure. How gossip/music shaped human communication.

ANTH 5021W. Anthropology of the Middle East. (GP, WI, SOCS; 3 cr.; Student Option; Fall Even Year) Anthropological field methods of analyzing/interpreting Middle Eastern cultures/societies.

ANTH 5027W. Archaeology of Prehistoric Europe. (HIS, WI; 3 cr.; Student Option; Every Fall) How archaeologists/historians analyze/interpret artifacts to develop knowledge about formation of European society, from earliest evidence of human occupation to Roman Period. Interpreting archaeological evidence from specific sites to understand broad trends in human past.

ANTH 5028. Introduction to Historical Archaeology. (3 cr.; A-F or Audit; Periodic Fall & Spring) Emphasizes research approaches. Documentary research, oral history, probate inventories/acculturation, integration of documents/archaeological data, analysis of community patterning, social analysis of architecture, foodways, artifact identification, mean ceramic dating, industrial archaeology, estimation of social status with cemetery data, sampling, report writing.

ANTH 5031W. Ethnographies of Science. (WI; 3 cr.; A-F only; Spring Even Year) Ethnographic, historical, and sociological accounts of scientific practice. How facts are constructed/negotiated. Social, cultural, and political influences on scientific methods. How scientific projects articulate with hierarchies of race/gender. International differences in scientific practice. prereq: Sr or grad student or instr consent

ANTH 5041. Ecological Anthropology. (3 cr.; Student Option; Periodic Fall) Concepts, theories, and methods of ecological anthropology (cultural ecology) show how humans interact with the biophysical environment. Compare biological and cultural interactions with the environment; examine
ANTH 5122. Anthropology of Religion. (3 cr.; A-F only; Fall Odd Year)

The course examines the diachronic evolution of religion as well as its role in human behavior. Religion as a social institution, implicit or explicit cultural practice.

ANTH 5123. Primate Evolution. (3 cr.; A-F only; Fall Odd Year)

Evolutionary history of primates. Particular focus on origin/diversification of apos/Old World monkeys. A prior prerequisite course in biological anthropology or archaeology.

ANTH 5121. Business Anthropology. (2 cr.; Student Option; Every Spring)

Anthropological/ethnographic understandings/research techniques. Pre-Req: MBA student.

ANTH 5128. Anthropology of Education. (3 cr.; Student Option; Spring Odd Year)

ANTH 5221. Anthropology of Material Culture. (3 cr.; A-F or Audit; Periodic Fall)

The course examines material culture as a social creation studied from multiple theoretical and methodological perspectives (e.g., social anthropology, archaeology, primatology, history of science). The course examines the changing role of material culture from prehistory to the future.

ANTH 5244. Interpreting Ancient Bone. (4 cr.; A-F or Audit; Every Fall)

ANTH 5255. Archaeology of Ritual and Religion. (3 cr.; Student Option; Fall Even Year)

The course discusses evidence for the origins of religion and its diverse roles in human societies over millennia. It focuses on how artifacts and architecture are essential to religious experience. It asks: What constitutes religion for different cultures? Why is religion at the heart of politics, social life, and cultural imagination?

ANTH 5269. Analysis of Stone Tool Technology. (4 cr.; A-F or Audit; Fall Even Year)

The course offers practical lab experience in analyzing archaeological collections of stone tools to learn about human behavior in the past. Students gain experience needed to get a job in the cultural resource management industry.

ANTH 5401. The Human Fossil Record. (3 cr.; A-F only; Fall Even Year)

Fossil evidence paleoanthropologists use to reconstruct human evolutionary history. Taxonomy, phylogeny, behavior, ecology, tool use, land use, and biogeography. Examination of fossil casts, readings from primary/secondary professional sources. Prereq: 1001 or instr consent.

ANTH 5402. Zooarchaeology Laboratory. (3 cr.; A-F only; Every Fall)

How archaeologists reconstruct the past through the study of animal bones associated with artifacts at archaeological sites. Skeletal element (e.g., humerus, femur,ibia), and taxon (e.g., horse, antelope, sheep, bison, hyena) when confronted with bone. Comparative collection of bones from known taxa.

ANTH 5403. Quantitative Methods in Biological Anthropology. (4 cr.; Student Option; Fall Even, Spring Odd Year)

Quantitative methods used by biological anthropologists. Applying these methods to real anthropometric data. Lectures, complementary sessions in computer lab. Prereq: Basic univariate statistics course or instr consent.

ANTH 5405. Human Skeletal Analysis. (4 cr.; Student Option; Every Spring)

ANTH 5412. Comparative Indigenous Feminisms. (GP; 3 cr.; Student Option No Audit; Periodic Fall & Spring)

The course will examine the relationship between Western feminism and indigenous feminism as well as the interconnections between women of color feminism and indigenous feminism. In addition to exploring how indigenous feminists have theorized from ‘the flesh’ of their embodied experience of colonialism, the course will also consider how indigenous women are articulating decolonization and the embodiment of autonomy through scholarship, cultural revitalization, and activism.

ANTH 5442. Archaeology of the British Isles. (3 cr.; A-F only; Every Fall)

ANTH 5444. Archaeological Ceramics. (4 cr.; A-F only; Every Spring)

Ceramics as material, technology, and cultural/social trace. Methods of assessing technology/use. Research, design, and interpretation of ceramic analyses. Students work with collections and propose/answer a research question about a ceramic assemblage.

ANTH 5450. Spatial Analysis in Anthropology: Research Design and Field Applications. (3 cr.; Student Option No Audit; Spring Even Year)

This advanced undergraduate and graduate course introduces students to spatial analyses essential to anthropological ethnography, archaeology, and historical ecology. It builds on introductory courses at UMN, providing students an opportunity to learn anthropological applications of spatial analysis methods, including: research design, field mapping, database management, digital survey platforms, GIS analyses, and integration of quantitative and qualitative (ethnographic and historical) data. The structure of the course will follow the trajectory of a typical doctoral-level anthropological project, from pre-field data acquisition and preparation, to in-field data collection, post-field analysis, and presentation. Students who take this course will master skills that are crucial for successful anthropological spatial analysis in the field and laboratory.

ANTH 5501. Managing Museum Collections. (3 cr.; A-F or Audit; Fall Even Year)

The care and maintenance of collection objects and their associated information are a crucial part of both the sciences and the humanities. This course is designed to provide foundations and practical experience with many of the issues faced by those responsible for museum collections: conservation, legal issues, organization and classification, digitization, accessibility, and policies and procedures. The course includes lectures by museum professionals, field trips to local facilities, and hands-on activities. Credit will not be granted if credit has been received for ANTH 3501.

ANTH 5601. Archaeology and Native Americans. (DSJ; 3 cr.; Student Option; Fall Even Year)

Historical, political, legal, and ethical dimensions of the relationship of American archaeology to American Indian people. Case studies of how representational narratives about Native people are created through archaeology; responses by Native communities; and the frameworks for collaborative and equitable archaeological practice. Professional ethics in archaeology/heritage studies in American contexts.

ANTH 5980. Topics in Anthropology. (3 cr. [max 6 cr.]; Student Option; Every Fall & Spring)
ANTH 8001. Ethnography, Theory, History. (3 cr.; A-F or Audit; Every Fall)
Introduction to foundational concepts, methods, and ethnographic work. Emphasizes theories that have shaped 20th-century thinking in cultural anthropology. Connection of these theories to fieldwork and contemporary issues.

ANTH 8002. Ethnography: Contemporary Theory and Practice. (3 cr.; A-F or Audit; Every Spring)

ANTH 8004. Foundations of Anthropological Archaeology. (3 cr.; Student Option; Every Spring)
Theoretical foundations of anthropological archaeology in historical and contemporary perspective. prereq: 8001, 8002

ANTH 8005. Linguistic Anthropology. (3 cr.; Student Option; Fall Even Year)
Introduction to literature of anthropological linguistics.

ANTH 8009. Prehistoric Pathways to World Civilizations. (3 cr.; Student Option; Every Spring)
How did complex urban societies first develop? This course addresses this question in ten regions of the world including Maya Mesoamerica, Inca South America, Sumerian Near East, Shang Civilization in East Asia, and early Greece and Rome.

ANTH 8111. Evolutionary Morphology. (3 cr.; Student Option; Periodic Fall)

ANTH 8112. Reconstructing Hominin Behavior. (3 cr.; A-F or Audit; Spring Even Year)
Consider major hypotheses regarding evolution of human behavior. Evidence/arguments used to support or reject hypotheses. Consider link between bone biology/behavior. Archaeological record for more holistic understanding of evidence.

ANTH 8113. Primate Evolution. (3 cr.; A-F only; Fall Odd Year)
Evolutionary history of primates, with particular focus on origin/diversification of apes/Old World monkeys. prereq: Anthropology doctoral student

ANTH 8114. Biological Anthropology Graduate Program Seminar: Behavioral Ecology of Primates. (3 cr.; A-F or Audit; Fall Odd Year)
Course focuses on the behavioral ecology of primates, including humans, with a focus on how the evolution of social behaviors relates to ecology. The course serves as one of three Biological Anthropology Graduate Program Seminars, which provide training in the foundations of biological anthropology. For Biological Anthropology graduate students, the take-home exam for this course will stand as one of the three required Preliminary Papers. Students outside of Biological Anthropology are welcome to enroll pending permission of the instructor. prereq: Anthropology graduate student or instr consent.

ANTH 8120. Problems in Culture Change and Applied Anthropology. (3-6 cr.; Student Option; Periodic Fall & Spring)
Comparative studies of change in cultural systems. Impact of global processes on local cultures. Roles of anthropology and anthropologists in policy, planning, implementation, and evaluation.

ANTH 8201. Humans and Nonhumans: Hybrids and Collectives. (3 cr.; Student Option; Periodic Spring)
Social life as consisting of relationships not only among human beings, but also between humans and nonhumans: animals, plants, environments, technologies, etc. Focusses on hybridity, its role in formations of collective life.

ANTH 8203. Research Methods in Social and Cultural Anthropology. (3 cr.; Student Option; Every Fall)
Classic and current issues in research methodology, including positivist, interpretivist, feminist, and postmodernist frameworks. Methodology, in the broadest sense of the concept, is evaluated. Students conduct three research exercises and set up an ethnographic research project. prereq: Grad anth major or instr consent

ANTH 8205. Economic Anthropology. (3 cr.; Student Option; Periodic Fall & Spring)
Theoretical foundations of economic anthropology examined through critical readings of traditional, classical, and contemporary authors. Ethnographic puzzles of material life and issues of ecological degradation, development, market expansion, gender, and transglobal processes.

ANTH 8207. Political and Social Anthropology. (3 cr.; Student Option; Periodic Fall & Spring)
Western concepts of politics, power, authority, society, state, and law. Cross-cultural approaches to these concepts in historical perspective. Major theoretical frameworks and current problems and positions in social and political anthropology. Ethnographic classics and new directions.

ANTH 8213. Ecological Anthropology. (3 cr.; Student Option; Periodic Fall & Spring)
Seminar on method, theory, and key problems in ecological anthropology and human ecology. Examines approaches in light of human practices, interactions between culture and the environment, global environmental change, and our understanding of human dimensions of ecosystem-based management.

ANTH 8215. Anthropology of Gender. (3 cr.; Student Option; Periodic Fall & Spring)
Comparative, cross-cultural approach to gender. Focuses on various theories (e.g., feminist, postmodernist, psychoanalytic) of power, gender, authority, and femininity and masculinity. Gender ambiguity and issues of sexuality. prereq: Grad anth major or instr consent

ANTH 8219. Grant Writing. (2 cr.; Student Option; Periodic Fall & Spring)
Students draft a research proposal in their area of interest. Seminar involves reading and evaluating proposals, learning about funding and process of submitting proposals, nuts of bolts of composing a proposal, and ethics of research in anthropology. prereq: Grad anth majors preparing to submit research grant proposals next academic yr

ANTH 8220. Field School. (6 cr.; Student Option; Every Summer)
Advanced field excavation, survey, and research. Intensive training in excavation techniques, recordation, analysis, and interpretation of archaeological materials or prehistoric remains.

ANTH 8230. Anthropological Research Design. (3 cr. [max 6 cr.]; A-F or Audit; Periodic Fall & Spring)
Training seminar on research development, coordination, grant management, field/ laboratory research management, fundraising. prereq: Anth grad student or instr consent

ANTH 8244. Interpreting Ancient Bone. (4 cr.; A-F or Audit; Periodic Fall & Spring)
How anthropologists use fossil bones to answer questions of past human diet, behavior, and environments. Skeletal element and species identification (of humans, large mammals). Students analyze small assemblage of bones for class project. Scientific method, data analysis using computers. prereq: instr consent

ANTH 8333. FTE: Masters. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

ANTH 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

ANTH 8510. Topics in Archaeology. (3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)
Seminar examines particular aspects of archaeological methods and/or theory. Topics vary according to student and faculty interests.

ANTH 8555. Master's Project Credits. (3 cr.; S-N only; Every Fall, Spring & Summer)
Student may contact the department for more information.

ANTH 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr;
APST 5170. Topics in Apparel Studies. (3 cr.; A-F or Audit; Fall, Spring & Summer) In-depth investigation of specific topic, announced in advance.

APST 5193. Directed Study in Apparel Studies. (1-4 cr.; A-F or Audit; Fall, Spring & Summer) Independent study in apparel studies under tutorial guidance. prereq: instr consent

APST 5218. Fashion, Design, and the Global Industry. (3 cr.; A-F only; Every Fall) Relationship of fashion, dress, and culture to time, place, and design. Focuses on fashion centers, fashion industry, and globalization. Chinese fashion industry as case study.

APST 8170. Topics in Apparel Studies. (1-3 cr.; A-F or Audit; Fall & Spring) In-depth investigation of a topic announced in advance. prereq: Varies with topic

APST 8180. Professional Seminar. (1-2 cr.; A-F or Audit; Fall & Spring) Professional development issues/trends.

APST 8193. Directed Study. (1-3 cr.; A-F or Audit; Fall & Spring) Directed study in apparel studies. prereq: instr consent

APST 8222. Plan B Master's Project. (3 cr.; S-N or Audit; Fall & Spring) Plan B master's project. prereq: DHA master's student, instr consent

APST 8267. Dress and Culture. (3 cr.; A-F or Audit; Fall Even Year) Cultural factors of identity expressed through dress. Focuses on issues of cultural diversity through analysis of dress and textiles within a specific world region. prereq: 4212 or instr consent

APST 8268. Behavioral Aspects of Dress. (3 cr.; A-F or Audit; Fall Odd Year) Research and social science theories as applied to appearance/dress as manifestations of human behavior.

APST 8271. Retailing: Strategic Perspectives. (3 cr.; A-F or Audit; Fall Even Year) Selected topics in the field of retailing. Students extend their thinking regarding consumer behavior to strategic retail management.

APST 8272. Digital Consumers: Theories in Retail and Consumer Studies. (3 cr.; A-F or Audit; Spring Odd Year) Reviews range of critical theories in retail/consumer studies to explore issues in multi-channel retailing environments. Exposure to breadth of topics in multi-channel retailing. Practical research experience. prereq: DES 8102 or equivalent quantitative methods class

APEC 5321. Regional Economic Analysis. (3 cr.; Student Option; Every Fall) Statistical and econometric techniques for applied economists. Theory and application of multivariate regression model using data sets from published economic studies. Emphasis on use of statistical techniques to understand market behavior. prereq: Math 1272, Stat 5021, knowledge of matrix algebra

APEC 5322. Economic Data Analysis for Managerial and Policy Decisions. (3 cr.; Student Option; Every Spring) Statistical and econometric methods for the analysis of large data sets to support managerial and policy decisions. Methods for organizing, accessing, and ensuring the quality of data. Estimation techniques include panel data methods, limited dependent variable models, and time series analysis. Clarity of reporting and design of procedures for maintaining and updating data estimates. prereq: 5031 or instr consent

APEC 5517. Applied Microeconomics: Firm and Household. (3 cr.; Student Option; Every Fall) Quantitative techniques for analysis of economic problems of firms and households. Links between quantitative tools and economic analysis Regression analysis, mathematical programming, and present value analysis. prereq: APEC 3001, Math 1272, and Math 2243 or equiv or grad student or instr consent

APEC 5518. Applied Macroeconomics: Income and Employment. (3 cr.; Student Option; Every Spring) Static general equilibrium open economy models and simple business cycle models that examine economic growth, business cycles, and fiscal and monetary policy. Input-output analysis and large scale econometric models. Sources/properties of economy and sector-wide data. Empirical applications. prereq: 3001 or Math 1271 or Math 2243 or equiv or grad student or instr consent

APEC 5521. Economic Data Analysis for Managerial and Policy Decisions. (3 cr.; Student Option; Every Fall) Statistical and econometric techniques for applied economists. Theory and application of multivariate regression model using data sets from published economic studies. Emphasis on use of statistical techniques to understand market behavior. prereq: Math 1272, Stat 5021, knowledge of matrix algebra

APEC 5522. Economic Data Analysis for Managerial and Policy Decisions. (3 cr.; Student Option; Every Spring) Statistical and econometric methods for the analysis of large data sets to support managerial and policy decisions. Methods for organizing, accessing, and ensuring the quality of data. Estimation techniques include panel data methods, limited dependent variable models, and time series analysis. Clarity of reporting and design of procedures for maintaining and updating data estimates. prereq: 5031 or instr consent
crop, and dairy products. prereq: graduate student and 1101 or Econ 1101

APEC 5451. Food Marketing Economics. ( ; 3 cr.; A-F or Audit; Every Fall)

APEC 5481. Futures and Options Markets. ( ; 3 cr.; Student Option; Every Spring)
Economic concepts related to futures/options trading. Hedging, speculation.

APEC 5511. Labor Economics. ( ; 3 cr.; Student Option; Periodic Fall)
Theoretical foundations of labor markets. Inter-temporl/household labor supply. Demand for labor, efficiency wages. Human capital theory, unemployment, migration decisions. Analysis of econometric research applied to labor policy issues such as minimum wage, tax policy, social insurance, education. prereq: [3001 or Econ 3101 or PA 5021]; [PA 5032 or equiv] or instr consent

APEC 5651. Economics of Natural Resource and Environmental Policy. ( ; 3 cr.; Student Option; Every Spring)
Economic analyses, including project evaluation of current natural resource/ environmental issues. Intertemporal use of natural resources, natural resource scarcity/ adequacy, environmental quality, and mechanisms for pollution control and their implications for public policy. prereq: [3001 or Econ 3101], [3611 or ECON 3611 or ESPM 3261] or instr consent

APEC 5711. U.S. Agricultural and Environmental Policy. ( ; 3 cr.; Student Option; Periodic Spring)
U.S. agricultural policy in an open world economy; role of private markets and government in regulating supply and demand; income vs. price support, supply controls, environmental constraints, and export protectionism; functioning of markets; roles of public interest groups and future of American agricultural policy. prereq: 3002 or [Econ 3101, Stat 3022]; Econ 4211 recommended

APEC 5751. Global Trade and Policy. ( ; 3 cr.; Student Option; Every Fall)
Trade policies of import/export nations, gains from trade, trade negotiations/agreements. Free trade and common market areas. Exchange rate impacts. Primary commodities and market instability. Current trade issues. prereq: 3001 or Econ 3101 or PA 5021

APEC 5811. Business Economics and Strategy. (3 cr.; Student Option; Every Spring)
Strategic management for production, processing, wholesaling, retailing, and service. Strategy formulation, implementation, and control. Business plans. Case study analysis. prereq: graduate student and 3002, [3501 or FINA 3001], and [ACCT 3001 or MGMT 3001 or MKTG 3001]

APEC 5821. Food and Agribusiness Marketplace. (2 cr.; A-F only; Every Spring)
This is a graduate student survey course of the industry organization and current policy issues in the food and agribusiness marketplace. It represents a collaboration between the College of Food, Agricultural, and Natural Resource Sciences and the Carlson School of Management. The course uses short readings and speakers. A comprehensive look at all of the sectors in the food and agribusiness value chain is described. Topics include food policies (Farm Bills, food stamps, food labeling, and similar topics); environmental policies (water, invasive species, agriculture production and similar topics); and industrial organization issues (marketing and production contracts, overview of firm strategic orientation, distribution and similar topics). Readings, guest speakers, and presentations are used. prereq: graduate student

APEC 5831. The Business of Food Systems. (1 cr.; Student Option; Every Fall)
This is a graduate survey course to introduce students to the Minnesota food industry through its regulatory process, research and development, and industry structure. It is an integrated week long course that includes field study tours of Minnesota agriculture and food economy coupled with classroom instruction. Each year the course will focus on two Minnesota industries such as dairy, beef, soybean, corn, potatoes, and other agricultural and food industries. The course has been developed through a collaboration with College of Veterinary Medicine, School of Public Health, and College of Food, Agricultural, and Natural Resource Sciences.

APEC 5841. Agricultural Cooperatives and Mutuals. (3 cr.; Student Option; Every Fall)
Introduction to cooperative and mutual form of business organization. Extensive applications to agricultural, food, and consumer cooperatives are used. Active-student learning process with a distance learning component.

APEC 5891. Independent Study: Advanced Topics in Farm and Agribusiness

APEC 5991. Special Topics and Independent Study in Applied Economics. ( ; 1-4 cr.; max 48 cr.; Student Option; Every Fall, Spring & Summer)
Special classes, independent study, and supervised reading/research on subjects problems not covered in regularly offered courses. prereq: instr consent

APEC 8001. Applied Microeconomic Analysis of Consumer Choice and Consumer Demand. ( ; 2 cr.; A-F or Audit; Every Fall)
Consumer behavior/demand. Introduction to welfare analysis. General equilibrium analysis in pure exchange economy. Part of four-course sequence (APEC 8001-8004). prereq: [[5151 or Econ 3101 or Econ 5151 or intermediate microeconomic theory], [MATH 2243, MATH 2263] or equiv] or instr consent

APEC 8002. Applied Microeconomic Analysis of Production and Choice Under Uncertainty. ( ; 2 cr.; A-F or Audit; Every Fall)
Production, competitive markets, and choice under uncertainty. Technology and production, cost minimization and profit maximization, production duality, efficiency and technical change, general equilibrium of production. Part of four-course sequence (APEC 8001-8004). prereq: [3001 or ECON 8001 or ECON 8101], [MATH 2243, MATH 2263] or equiv] or instr consent

APEC 8003. Applied Microeconomic Analysis of Game Theory and Information. ( ; 2 cr.; A-F or Audit; Every Spring)
Strategic competition, game theory, and information. Non-cooperative games, static games of complete and imperfect information, dynamic games of complete/incomplete information, application of incomplete information, application of incomplete information, Part of four-course sequence (APEC 8001-8004). prereq: [3001 or ECON 8002 or ECON 8102], [MATH 2243, MATH 2263] or equiv] or instr consent

APEC 8004. Applied Microeconomic Analysis of Social Choice and Welfare. ( ; 2 cr.; A-F or Audit; Every Spring)
Welfare economics/measurement, externalities and social choice. Welfare theorems in general equilibrium, externalities and public goods, social choice, social welfare, and welfare change measurement. Part of four-course sequence (APEC 8001-8004). prereq: [3001 or ECON 8003 or ECON 8103], [MATH 2243, MATH 2263] or equiv] or instr consent

APEC 8202. Mathematical Optimization in Applied Economics. ( ; 3 cr.; Student Option; Every Fall)
Economic foundations and applications of mathematical and dynamic programming and optimal control. Mathematical optimization concepts; structures and economic interpretations of various models of the firm, consumer, household, sector, and economy.
APEC 8203. Applied Welfare Economics and Public Policy. (3 cr.; Student Option; Every Spring)
Basic concepts underlying measurement of welfare change, problems of market failure and externalities, social welfare functions, and distribution within and across generations. Application of concepts, based on case studies of the environment, returns to research, technical change, and agricultural policy. prereq: calculus, intermediate econ theory

APEC 8206. Dynamic Optimization: Applications in Economics and Management. (3 cr.; Student Option; Every Spring)
Formulation and solution of dynamic optimization problems using optimal control theory and dynamic programming. Analytical and numerical solution methods to solve deterministic and stochastic problems for various economic applications. prereq: 5151 or equiv or instr consent

APEC 8211. Econometric Analysis I. (4 cr.; Student Option; Every Fall)
Classical multiple linear regression, stochastic regressors, heteroscedasticity, autocorrelated disturbances, panel data, discrete dependent variables, prereq: ApEc 5031 or equiv OR Ph.D. student OR instr consent

APEC 8212. Econometric Analysis II. (4 cr.; Student Option; Every Spring)
Second semester of econometrics for Ph.D. students. Specification tests, instrumental variables, heteroscedasticity, panel data, simultaneous equations, bootstrap methods, limited dependent variable models, semiparametric estimation, econometrics of program evaluation, general method of moments, time series, hazard models. prereq: 8211 or equiv or instr consent

APEC 8221. Programming for Econometrics. (2 cr.; Student Option; Fall Even Year)
Applications of computer programming in econometrics. Introduction to and best practices in program writing, including writing functions, organizing and commenting code, vectorization and other performance tips. Programmatic acquisition of novel econometric models through Application Programming Interfaces (APIs), web scraping, and databases. Efficient cleaning and merging of datasets. Finally, a survey of common computational challenges in econometric estimation and potential solutions. prereq: APEC 5031 or equivalent

APEC 8222. Big Data Methods in Economics. (2 cr.; Student Option; Fall Even Year)
Challenges, techniques, and opportunities presented by data that has one or more of the following characteristics: large, unstructured, high frequency, variable quality. The course will consist of three parts: 1) computational tools for applying standard econometric techniques on large datasets, 2) extracting summary information from unstructured data (e.g., images, text) for use in econometric analysis, 3) application of statistical learning techniques (e.g., classifiers, regression trees, machine learning) and the role of such techniques in causal inference, prereq: APEC 5031 or equivalent; APEC 8221 or equivalent programming experience

APEC 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

APEC 8341. Applied Public Finance. (3 cr.; A-F or Audit; Periodic Spring)
Current economic research on government tax and expenditure policy. Apply tools of applied economics to public finance issues. Tax policy, taxation and household decisions (including labor supply and saving), taxation and the firm (including the cost of capital), and fundamental tax reform. Alternative demand models for public goods, public choice theory, and fiscal federalism. prereq: 8001-8004 or ECON 8001-8004 or ECON 8101-8104

APEC 8401. Consumer Behavior and Household Economics. (2 cr.; A-F or Audit; Periodic Fall)
Seven-week course. Microeconomic analysis of individual and household behavior, both theoretical and empirical issues. Demand theory?static models to dynamic models. Equivalence scales/intrahousehold allocation. prereq: [8001 or concurrent registration in 8001], [8002 or concurrent registration in 8002], [8003 or concurrent registration in 8003], [8004 or concurrent registration in 8004] or [ECON 8001 or concurrent registration in ECON 8001], [ECON 8002 or concurrent registration in ECON 8002], [ECON 8003 or concurrent registration in ECON 8003], [ECON 8004 or concurrent registration in ECON 8004] or [ECON 8101 or concurrent registration in ECON 8101], [ECON 8102 or concurrent registration in ECON 8102] or [ECON 8103 or concurrent registration in ECON 8103], [ECON 8104 or concurrent registration in ECON 8104] or [ECON 8211 or concurrent registration 8211], [8212 or concurrent registration 8212], [MATH 1271 or equiv]

APEC 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

APEC 8501. Labor Economics I. (2 cr.; A-F or Audit; Periodic Spring)
Theoretical and empirical studies of compensating differentials, discrimination, personnel economics, and gross flows. prereq: Concurrent enrollment in APEC 8502 or concurrent registration is required (or allowed) in 8003, 8211, 5032 or equiv

APEC 8502. Labor Economics II. (2 cr.; A-F or Audit; Periodic Spring)
Topics in applied microeconomics related to labor supply and human capital. Household decisions and resulting outcomes in labor market. Household labor supply. Estimation of labor supply and earnings functions. Theory of human capital, wage structure and determination, and impacts of tax and transfer policies.

APEC 8601. Natural Resource Economics. (3 cr.; Student Option; Periodic Fall & Spring)
Economic analysis of resource use and management. Capital theory, dynamic resource allocation. Applications to renewable and nonrenewable resources. Empirical studies, policy issues. prereq: [5151, 8202, 8206 [ECON 5151 or equiv]] or instr consent

APEC 8602. Economics of the Environment. (3 cr.; Student Option; Every Fall)
Economic analysis of environmental management, emphasizing environmental policy. Application of microeconomic theory to problems of market failure, market-based pollution control policies, contingent valuation, hedonic models, option value, and other topics. prereq: 8004 or ECON 8004 or ECON 8104 or equiv or instr consent

Model building and solution techniques. prereq: [5151, Econ 5151] or equiv or instr consent

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
APEC 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Doctoral Pre-Thesis Credits prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

APEC 8701. Trade and Development I. (2 cr.; Student Option; Fall Odd Year)
This course will analyze international trade and economic policies that affect trade. The course will consider the determinants of trade, the welfare effects of trade, and the implications of trade liberalization or protectionism. The course will use contemporary economic theory and econometric methods of analysis; and will provide an economic foundation for analyzing issues on the frontier of the academic literature and policy debate.

APEC 8702. Trade and Development II. (2 cr.; Student Option; Every Fall)
This course will focus on the applied microeconomics of international development. The course will focus on empirically testing the various theories developed to account for persistent economic underdevelopment and poverty. We will start from key ideas and methods in empirical development economics, then cover household models (both unitary and otherwise), intrahousehold models, market formation and market participation, land markets, technology adoption, risk and insurance, and other topics related to development microeconomics, all from an empirical perspective. prereq: First-year PhD level microeconomics and econometrics

APEC 8703. Trade and Development III. (2 cr. [max 3 cr.]; Student Option; Periodic Spring)
Topics in the microeconomic analysis of development covered include: education (both the determinants of educational outcomes and the impact of those outcomes on several economic outcomes), poverty, inequality, demography (population, fertility and gender issues), and the impact of international aid.

APEC 8704. Trade and Development IV. (2 cr.; Student Option; Every Spring)
This course will focus on the applied microeconomics of international development. It will empirically analyze various market failures in developing countries, their role in driving persistent poverty, and interventions to address them. The course will focus specifically on the functioning of financial, labor, and healthcare markets, as well as the influence of social networks and economic decisions and outcomes.

APEC 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

APEC 8793. Master’s Paper: Plan B Project. (1-6 cr.; S-N or Audit; Every Fall, Spring & Summer)

Students work under guidance of adviser to complete their Plan B Paper project. prereq: Agri/ApEc MS student or ApEc MS student

APEC 8801. Applied Production Theory. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Aspects of production theory. Axiomatic representations of multi-output technologies. Input, output, and directional distance functions. Cost, revenue, and profit functions and duality. Input/output separability. Jointness/non-jointness in production. Index numbers, measures of efficiency/productivity. prereq: [Econ 8001, Econ 8002, Econ 8003] or [Econ 8101, Econ 8102, Econ 8103] or equivar or instr consent

APEC 8803. Marketing Economics. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Review of market structure, conduct, and performance. Market interdependency over space/time. Product forms. Issues pertaining to market failures/interventions. prereq: [Econ 8001, Econ 8002] or [Econ 8101, Econ 8102] or instr consent

APEC 8804. Managerial Economics. (3 cr.; Student Option; Periodic Fall & Spring)
Analysis of managerial decisions by organizations/individual entrepreneurs. Application of dynamic programming to investment/resource allocation decisions. Economics of business organization, including boundaries of the firm, mechanisms for vertical coordination. Economic implications of alternative ownership structures. prereq: [8001, 8002, 8003, 8004] or [Econ 8101, Econ 8102, Econ 8103, Econ 8104] or instr consent; majors must register on A-F basis.

APEC 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Doctoral thesis credit. prereq: ApEc PhD student; max 18 cr per semester or summer; 24 cr required

APEC 8901. Graduate Seminar: MS & PhD. (1 cr.; S-N or Audit; Every Fall)
Attendance and active participation in applied economics research seminars. Effective research methods. Research topics and observe professional methods of research presentations.

APEC 8902. Graduate Research Development Seminar. (1 cr.; S-N or Audit; Every Fall & Spring)
Faculty, students, outside speakers present research ideas/results, which participants critique. Topics vary according to interests of speakers. prereq: ApEc MS student or ApEc PhD student

APEC 8903. PhD Qualifying Paper Seminar I. (1 cr.; S-N only; Every Fall)
Support for writing second year Qualifying Paper. Paper of purpose is to provide guided opportunity for doctoral students to complete substantial research paper. prereq: 8001-8004 or Econ 8001-8004 or Econ 8101-8104

APEC 8904. PhD Qualifying Paper Seminar II. (1 cr.; S-N only; Every Spring)
Provides support to doctoral students writing second year Qualifying Paper. Paper of purpose is to provide guided opportunity for students to complete substantial research paper. prereq: APEC 8903

APEC 8991. Advanced Topics in Applied Economics. (1-6 cr. [max 18 cr.]; Student Option; Every Fall, Spring & Summer)
Special seminars or individual work on subjects suited to needs of students. prereq: instr consent

APSC 8123. Research Ethics in the Plant and Environmental Sciences. (0.5 cr.; S-N or Audit; Every Spring)
Ethics training to graduate students enrolled in plant/environmental graduate research programs and fulfill requirement for training in responsible conduct of research. Course meets during first seven weeks of spring semester.

APSC 8201. Advanced Plant Breeding. (3 cr.; A-F or Audit; Spring Odd Year)
This course covers the principles underlying the application of genetics and statistics to cultivar development; evaluation of breeding methods; and methods to enhance genetic progress and efficiency through the application of statistical genetics, genomics, and molecular markers. In terms of format, this course is combination of lecture, discussion, and computer lab, varying according to the topic. An emphasis will be placed on classical and current literature to teach concepts, as well as hands-on experience with data analysis. Introductory courses in plant breeding/genetics and statistics. Knowledge of population and quantitative genetics would be useful but not required.

APSC 8270. Graduate Seminar. (2 cr.; max 4 cr.; A-F or Audit; Every Fall & Spring)
Examine qualities of effective scientific presentations. Develop skills in communicating scientific information effectively. Practice public speaking skills. Presenting scientific information to the general public. Organize a series of seminars. prereq: Grad major in Applied Plant Sciences or instructor consent

APSC 8280. Current Topics in Applied Plant Sciences. (1-3 cr. [max 4 cr.]; S-N or Audit; Periodic Fall & Spring)
This variable-credit course is a forum for learning and discussing contemporary topics in applied plant sciences. The topics covered differ according to the instructor and term that the class is taught.

APSC 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master’s student, adviser and DGS consent

APSC 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

APSC 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
TBD prereq; Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

APSC 8777. Thesis Credits: Master’s. (; 1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

APSC 8888. Thesis Credit: Doctoral. (; 1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

Applied Professional Studies (APS)

APS 5100. Topics in Applied Professional Studies. (; 1-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Topics in Applied Professional Studies. prereq: dept consent

APS 5101. Ecological Design for Horticulture. (; 3 cr.; A-F or Audit; Periodic Summer) Design/systems thinking with plant mechanisms. prereq: SOIL 5125, HORT 1001, dept consent

APS 5102. Garden Design: Theory and Application. (; 2 cr.; A-F or Audit; Periodic Spring) This course provides an overview of the garden design process, the analysis and conceptual design of the landscape, exploration of the design characteristics of plants, sustainable design and a descriptive journey into several historical garden styles. You will be introduced to a variety of topics, including the design process, basic design principles, and the basic concepts of graphic communication in garden design. A working knowledge of design process and principles is critical to quality design. This course is intended to strengthen student awareness and knowledge of design rather than fully develop the skills necessary to draw, develop and implement garden designs. This course is different from fact-based horticulture science courses. Although you will be held responsible for learning a broad range of principles and processes in this course, there are typically no absolute right answers relative to design assessment and critique. What is more important is that you gain the ability to articulate and assess design character and quality and give evidence of your thought process.

APS 5103. Integration of Sustainable Agriculture Concepts. (3 cr.; A-F only; Every Fall) Biodiversity, ecological balance, nutrient cycling, soil quality. Organic practices of tillage, fertility management, weed control, insect control. Specific practices compared with conventional/integrated pest management. Economic analysis of both organic/conventional practices. prereq: AGRO 1101 or AGRO 1103 or BIOL 1001 or BIOL 1009 or HORT 1001 or HORT 6011 or instr consent, [sr or grad student admitted to MPS in horticulture] Because of the Sxxx level, undergraduates need permission numbers to register. Students can obtain permissions by writing to: reekx001@umn.edu

APS 5201. Career and Job Search Preparation for Graduate Students. (; 1 cr.; S-N only; Every Fall & Spring) Job search and career development tools. Goals, networking, job search, resume/CV, interviewing. Assignments include resume/CV, informational interview, career development plan. prereq: dept consent

APS 5901. Microeconomics for High School Teaching. (3 cr.; A-F only; Every Summer) This is an online course intended for in-service and pre-service teachers who want to build or enhance their content knowledge in microeconomics and their pedagogical skills in teaching microeconomics to high school students. The course will include strategies for developing curriculum and instruction for microeconomics that engage students of diverse backgrounds. prereq: The prerequisites for this course are: licensed secondary school teachers in social studies, business, consumer science, or agricultural education; or pre-service secondary school teachers in a teaching licensure program in social studies, business, consumer science, and dept consent

APS 6001. Introduction to Applied and Professional Studies. (3 cr.; A-F only; Every Fall) This course serves as the introductory course for students in the Master of Professional Studies in Civic Engagement. Students in the course will be introduced to graduate level inquiry, and will augment critical thinking skills that frame applied business and disciplinary practice. Students will grapple with real-world problems and topical content, engaging with relevant scholarship, readings, and disciplinary methodologies. In doing so, they will gain proficiency in critical thinking, business ethics, and cultural competency in collaboration with their peers. This course offers students unique opportunities to engage in cross-disciplinary partnerships and creative problem-solving simulating real-world situations.

APS 6002. Civic Engagement Capstone. (3 cr.; S-N only; Every Spring) This course serves as the capstone course for students in the master of professional studies in civic engagement. This course will synthesize the disciplinary and applied business coursework taken by students during their graduate career and will facilitate completion of an individualized, applied capstone project based on their community engagement career focus. This culminating experience, taken in the final year of the program, will provide students with an opportunity to engage in creative problem solving to address pressing real-world needs.

APS 6011. Presentations in the Biological Sciences. (2 cr.; A-F only; Every Summer) Course introduces students to the diverse ways in which biologists communicate in their professional lives. In this course students will choose an article from the primary literature and practice presenting the information to a range of audiences through a variety of techniques including soundbites, interviews, conference talks, conference posters, TED talks, podcasts, and internet videos.

APS 6311. Cross-Functional Leadership and Communication. (; 3 cr.; A-F or Audit; Every Spring) This course provides a deep analysis of the leadership process, as influenced by social and emotional intelligence. Students will explore the interconnected roles that social intelligence and competencies play across diverse personal, cultural, and political contexts and business functions. Additionally, students will be asked to apply leadership frameworks to social and emotional intelligence competencies to enhance leadership capacity across individual, group, and organization levels.

APS 6312. Fundamentals of Organizational Finance. (; 3 cr.; A-F or Audit; Every Fall) This course explores organizational finance from the lens of a non-financial manager, helping students gain an applied understanding of financial and accounting concepts and the role finance plays in the economic viability of a business. Students will learn to construct financial statements and use these tools to strategically determine the overall business financial health. Students will forecast possibilities for future growth in relation to costs associated with operational expenses and the cost of capital. Students will review basic economic frameworks and complete case studies focusing on the connection of global economic influences to company and industry financial indicators. Specific topics include financial analysis; planning, forecasting, and budgeting; cash flow, and strategic financing.

APS 6313. Harnessing Big Data. (; 3 cr.; A-F or Audit; Every Fall) In this course, students will analyze the structure and reliability of big data sets and how big data can be applied to decision making in organizations. Students will learn to use numerical, statistical and geometric models to organize data, make predictions, form valid arguments, and support conclusions. Students will also be introduced to the growing field of Business Intelligence and Data Analytics. Topics include data mining, text mining, business intelligence architecture, data reporting systems, dashboards, and data visualization tools such as Tableau and Power BI.

APS 6314. Leading Projects and Teams. (; 3 cr.; A-F or Audit; Every Spring) This course provides students the background and skills needed to enhance teamwork, make informed business decisions, or resolve productivity issues effectively. This course will focus on the principles techniques, and tools used to plan, control, monitor, and review projects to meet organizational monetary and time constraints. Through case studies and practical application, students will practice
ARCH 5001. Architectural Design Studies: Representation & Design. (1 cr.; A-F only; Every Summer)
During this six week, summer intensive course, students will focus on basic issues of visual thinking and conceptual representation in architecture. This sequence of complementary exercises introduces issues and ways of working intended to complement educational backgrounds from other, non-architectural, disciplines. To do that we have designed the exercises to juxtapose different ways of perceiving and understanding constructed environments. While exploring these architectural ways of thinking, the exercises will also help to acknowledge preconceptions that may hinder one's ability to explore conceptual decisions.

ARCH 5101. Architectural Design Studies. (7 cr.; S-N only; Every Summer)
Principles/methods architecture design. Theories, history, technologies, media, and processes as foundation for critical thinking. Analytic modeling, visual thinking. prereq: 3+ track for MArch

ARCH 5110. Architecture as Catalyst. (1 cr. ; 3 cr.; A-F or Audit; Every Spring)
Topical workshops on design methods, theories, or emerging practices. prereq: MArch

ARCH 5207. Venice Design Workshop. (4 cr.; A-F only; Every Spring)
Design interventions with special concerns for urban landscapes, heritage conservation, and sustainable development. Jointly conducted with a graduate landscape architecture design studio. Design techniques for site plans/masterplans. Final project. prereq: MArch or instr consent

ARCH 5212. Undergraduate Architecture Studio 05: Advanced Design. (6 cr.; A-F only; Every Fall)
Advanced design studio to engage students in range of critical subjects to be determined by respective instructors. Intended to challenge students with independent/experimental approach to design that builds on prior knowledge, develop working methodologies/design ethics. prereq: C- or better in 3281, 3282, 4283, 4284

ARCH 5241. Principles of Design Programming. (3-4 cr.; A-F or Audit; Periodic Spring)

ARCH 5250. Advanced Topics in Design. (1-6 cr. ; max 24 cr.; A-F only; Every Fall, Spring & Summer)
Advanced topics in architectural design.

ARCH 5301. Conceptual Drawing. (3 cr.; A-F only; Every Spring)
Drawing as way of analyzing, exploring, and generating design ideas. Projection systems, diagramming, mapping. Different modes of visual perception. Nonverbal structures. prereq: MArch major or instr consent

ARCH 5313. Visual Communication Techniques in Architecture. (3 cr.; A-F or Audit; Every Fall & Spring)
Delineation, presentation, and design techniques. Various visual media and methods of investigation. prereq: M Arch major or instr consent

ARCH 5321. Architecture in Watercolor. (3 cr.; A-F or Audit; Every Fall, Spring & Summer)
Watercolor as a tool in design process. Foundation principles, techniques, medium, tools, materials. Color relationships, mixing, composition, applications to design. prereq: M Arch grad student or instr consent

ARCH 5350. Topics in Architectural Representation. (1-4 cr. ; max 16 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Selected topics in architectural representation.

ARCH 5361. 3-D Computer Architectural Modeling and Design. (3 cr.; A-F or Audit; Every Fall, Spring & Summer)
Use of 3D computer modeling for representation in abstract/realistic ways. Computer modeling software. Creation/arrangement of objects, setting up lighting, developing surface materials, creating still renderings/animations. Ways in which computer visualization can be used for design exploration, for feedback during development of ideas, and for realistic representation of fully formed designs. prereq: M Arch major

ARCH 5372. Computer Methods II. (1 cr.; S-N or Audit; Every Spring)
Current techniques, computer programs, and their application to architectural computing and design. prereq: 5371, concurrent registration is required (or allowed) in 8252 and M Arch major or instr consent

ARCH 5381. Introduction to Computer Aided Architectural Design. (3 cr.; A-F or Audit; Every Fall)
2-D drawing, 3-D modeling/animation, printing, plotting. Electronic networking/communications, database management, spreadsheet analysis, land-use analysis, project management. prereq: Arch or BED or M Arch or grad student in LA or instr consent

ARCH 5382. Computer Aided Architectural Design. (3 cr.; A-F or Audit; Every Spring)
2-D/3-D CAD, image manipulation. Advanced multimedia visualization techniques for design, including solid modeling, photo-realistic imaging, animation, video-editing/recording.

ARCH 5391. Design and Representation with BIM. (3 cr.; A-F or Audit; Every Fall)
In this course, students will be introduced to the concept of Building Information Modeling (BIM) through the use of Autodesk Revit, one of the BIM software tools most commonly used in architectural practice today. Students will engage in a series of design exercises that will require both learning and applying Revit in the context of real world architectural scenarios. In addition to learning Autodesk Revit as a design tool, we will examine the use of BIM...
technology within the architectural industry through a series of case study examples. Also, presenters will share firsthand accounts of CAD and BIM software being implemented in architectural practice.

ARCH 5392. Digital Documentation: Facades. (3 cr.; A-F or Audit; Every Spring)

This course explores two aspects of contemporary architectural practice that are bound up in a constantly evolving relationship: Facades and BIM. Over the course of the semester, students will study the anatomy of contemporary enclosure systems and understand the requirements that shape them. We will look at systems that are complex, layered and multi-functional, and develop an understanding of contemporary enclosure design relative to historical precedents.

ARCH 5410. Topics in Architectural History. (3 cr.; max 12 cr.); A-F or Audit; Every Fall & Spring

Advanced study in architectural history. Readings, research, seminar reports.

ARCH 5411. Principles of Design Theory. (3 cr.; A-F or Audit; Every Spring)

Principles of design and their instrumentation. How and why architecture theory is generated. Types and significance of formal analysis. Theoretical positions. Student model of criticism. Prereq: M Arch major or instr consent

ARCH 5412. Architecture: A Global and Cultural History. (3 cr.; A-F or Audit; Every Fall)

This course examines the history of architecture from a global perspective, addressing a variety of traditions and geographical locations, and following their interconnections and exchanges.

ARCH 5413. Modern and Contemporary Global Architecture. (3 cr.; A-F only; Every Spring)

This course is a global history of modern and contemporary architecture, tailored to graduate students in the M.Arch. program. The course examines the architectural production of the 20th and 21st centuries through the focused study of buildings, urban plans, unbuilt designs, manifestos, and other visual and textual documents. Students will be called upon to reflect on issues of design, planning, programming, technology, and representation, connecting this course to their architectural training and future professional practice.

At the same time, the course will offer a critical and multidisciplinary perspective, presenting architecture in the context of culture, politics, economics, ideology, and other historical developments. The premise of this course is the fundamental role of history for contemporary and future architectural practice. The course assignments, readings, and activities aim to spur a productive dialogue between critical reflection and historical knowledge with an eye towards creative action.

ARCH 5421. Architecture and Interpretation: The Cave and the Light. (3 cr.; A-F only; Periodic Spring)

Historical/hermeneutical investigation of iconography of grotto. Intertwined themes of descent into earth and ascent to light, from earliest strata of human culture to present day. Prereq: [3411, 3412] or instr consent

ARCH 5423. Gothic Architecture. (3 cr.; A-F or Audit; Spring Odd Year)

History of architecture and urban design in Western Europe, from 1150 to 1400. Emphasizes major figures (Brunelleschi, Alberti, Bramante, Palladio) and evolution of major cities (Rome, Florence, Venice). Prereq: MS Arch or M Arch major or instr consent

ARCH 5424. Renaissance Architecture. (3 cr.; A-F or Audit; Periodic Fall & Spring)

History of architecture and urban design in Italy, from 1400 to 1600. Emphasizes major figures (Bernini, Borromini, Cortona, Guarini) and evolution of major cities (Rome, Turin). Prereq: MS Arch or M Arch major or instr consent

ARCH 5425. Baroque Architecture. (3 cr.; A-F or Audit; Fall Odd Year)

Architecture and urban design in Italy, from 1600 to 1750. Emphasizes major figures (Bernini, Borromini, Cortona, Guarini) and evolution of major cities (Rome, Turin). Prereq: MS Arch or M Arch major or instr consent

ARCH 5431. Eighteenth-Century Architecture and the Enlightenment. (3 cr.; A-F or Audit; Periodic Fall & Spring)

Architecture, urban planning, and garden design in Europe and America from 1650 to 1850.

ARCH 5432. Modern Architecture. (3 cr.; A-F or Audit; Periodic Fall)

Architecture and urban design in Europe and the United States, from early 19th century to World War II. Prereq: MS Arch or M Arch major or instr consent

ARCH 5434. Contemporary Architecture. (3 cr.; A-F or Audit; Every Fall)

Developments, theories, movements, and trends in architecture and urban design, from World War II to present. Prereq: MS Arch or M Arch major or instr consent

ARCH 5435. History of American Architecture. (3 cr.; A-F or Audit; Periodic Fall)

Through lectures, readings, discussion, and research, we will analyze buildings and spaces/architect designed and ?vernacular?? in the context of social, political, economic, technological, and ecological change. As we address these issues, we will examine the ways design and daily life, performed locally, interacted with national and global systems and flows; and the role the built environment has played in advancing structures and concepts of class, gender, race, ethnicity, and power. Students will gain a broad familiarity with the history of American buildings and landscapes, develop critical frameworks for analysis, and enhance their understanding of the environments they interact with every day?as designers, citizens, consumers, and professionals.

ARCH 5441. Minnesota: Architecture and Landscapes. (3 cr.; A-F only; Every Spring)

History of major architectural monuments, urban phenomena, and landscape forms of Minnesota. Interrelationships between architecture, geography, and people. Prereq: [3411, 3412] recommended

ARCH 5446. Architecture Since World War II: Postwar Experimentation: Aesthetics and Politics of Architecture. (3 cr.; A-F only; Every Fall)

Eight-week seminar. Avant-garde architectural responses to postwar consciousness of social issues/meaning. How tenets of western avant-gardism were transformed by regional constraints when introduced to post-independent agendas of non-western world. Prereq: M Arch major

ARCH 5450. Topics in Architectural Theory. (1-3 cr.; max 9 cr.); A-F or Audit; Every Fall, Spring & Summer

Selected topics in architectural theory and criticism.

ARCH 5451. Architecture: Defining the Discipline. (4 cr.; A-F only; Periodic Fall & Spring)

Paradigms through which architecture has defined itself. Implications for its practice, product, and architecture in general. Lecture, discussion, design exercises. Prereq: M Arch major

ARCH 5452. Architecture: Design, Form, Order, and Meaning. (4 cr.; A-F or Audit; Every Fall & Spring)

Architecture and the issue of meaning. Explores fundamental and constituent elements of architectural form and order; their inherent tectonic, phenomenal, experiential, and symbolic characteristics; their potential and implications for the creation and structure of meaningful human places. Prereq: M Arch major or instr consent

ARCH 5461. North American Indian Architecture. (3 cr.; Student Option; Every Spring)

Historic/contemporary principles/theories of North American Indian architecture. Culture, technology, environment, art, and craft of North American Indians in their settlements/architecture. Prereq: M Arch major or instr consent

ARCH 5462. Venice: A Port City. (3 cr.; A-F only; Every Spring)

Historical understanding of Venice and its lagoon, the rise and decline of Venice as a maritime empire as well as a port city of global trades, and environmental issues of heritage conservation. Seminars/field trips highlighting architectural and artistic achievements of Venice. Prereq: M Arch or MLA or instr consent

ARCH 5515. Technology One: Building Materials and Construction Systems. (3 cr.; A-F only; Every Fall)

ARCH 5516. Technology Two: Luminous and Thermal Design. (6 cr.; A-F only; Every Spring)

Concepts/principles of daylighting, thermal, energy, and systems integration. Architectural/technological implications of lighting and thermal design. Ecological thinking in support
of sustainable design decision making. prereq: M Arch

ARCH 5517. Technology Three: Structural Systems. (; 3 cr. ; A-F only; Every Fall) Structural behavior in withstanding gravity and lateral forces. Evolution, range, and applications of structural systems. Structural analysis. Graphical methods, site visits, analog/digital modeling. Case studies, problems. prereq: M Arch student

ARCH 5518. Environmental Technology: Integrative Ecological Design for Responsive Architecture. (3 cr.; A-F only; Every Fall) This course introduces the ecological design concepts and principles of daylighting, thermal, energy, and building systems integration. The course will provide students with an understanding of the primary architectural and technological implications of lighting and thermal to inform design and ecological thinking and to support sustainable design decision-making.

ARCH 5521. Material Investigation: Concrete. (4 cr.; A-F only; Every Spring) Design projects identify common problems/improvements, investigate alternatives, and develop solutions where concrete is primary building material. prereq: MArch or MS

ARCH 5523. Material Investigation: Steel and Glass. (4 cr.; A-F only; Every Spring) Design projects identify common problems and improvements, investigate alternatives and develop solutions where steel and glass are the primary building materials. prereq: Grad student

ARCH 5527. Material Investigations: Stone and Water. (4 cr.; A-F only; Every Spring) Design projects identify common problems/improvements, investigate alternatives, and develop solutions where wood is primary building material. prereq: MArch or M.S.

ARCH 5539. Daylighting and Architecture Design. (4 cr.; A-F only; Every Spring) Ecological design approaches that combine ecological, physiological, and experiential aspects to enhance relationship to place. How formal, aesthetic, and experiential aspects of daylighting support/foster sustainable architectural design. prereq: M Arch major

ARCH 5541. Material Strategies. (3 cr.; A-F only; Every Fall) Emergent materials in advanced building design; strategies for material approaches relevant to global resource flows, technological trajectories, and sociocultural effects. Research projects based on evaluative tools and case studies. prereq: M Arch or Arch MS major

ARCH 5550. Topics in Technology. (1-4 cr. ; max 12 cr.; A-F only; Every Fall, Spring & Summer) Selected topics in architecture technology, e.g., construction, environmental management, energy performance, lighting, materials.

ARCH 5561. Tech 1, Structures for Building. (3 cr.; A-F only; Every Fall) Role of structure in architectural design. Common systems found throughout history. Review systems to identify parameters that influence structural decisions. prereq: M Arch major or instr consent

ARCH 5562. Tech 2, Intro to Building Technology. (3 cr.; A-F only; Every Fall) Origin/development of architectural idea. Designs as direct means of representing our underlying intentions. prereq: MArch or instr consent

ARCH 5563. Tech 3: Advanced Building Technology Integrated Building Systems. (3 cr.; A-F only; Every Fall) Logic of integrating building systems. Improving understanding of/thinking critically about integration principles, theories, practice, application. Identifying/working through problems the project architect must address. prereq: MArch or instr consent

ARCH 5564. Tech 4: Building Structural Systems. (3 cr.; A-F only; Every Fall) Main concepts related to building structures. Basic knowledge of flow of forces. Review of rules for sizing structures. Calculations to understand systems behavior. Knowledge/tools to design buildings considering structure within design process. prereq: MArch or instr consent

ARCH 5569. Development and Implementation of Research. (3 cr.; A-F only; Every Fall) Bridge gaps among architectural research, design, practice. Forum for students to independently develop research topics/implement research methods related to architectural scholarship/practice, aided by classmates, instructor, guest lecturers. prereq: instr consent

ARCH 55611. Design in the Digital Age. (3 cr.; A-F or Audit; Every Spring) Introduction to design, design process. Developing/understanding ways of seeing, thinking, and acting as a designer. Changes in design being wrought by digital technology. Team design project. prereq: Grad student or upper level undergrad student

ARCH 55621. Professional Practice in Architecture. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Legal, ethical, business, and practical requirements of architectural practice. Contemporary and historical models of contract formation, business principles, accounting, project management, design services, and marketing. prereq: M Arch major or instr consent

ARCH 55630. Practicum: Advanced Issues in Practice. (3 cr. ; max 6 cr.) S-N only; Every Fall & Spring) Advanced architectural practice topics not normally covered in curricula are examined/evaluated as foundation for licensure/ARE 4.0 testing processes. prereq: M.S. Architecture or MArch

ARCH 55650. Topics in Architectural Practice. (1-4 cr. ; max 16 cr.; Student Option; Every Fall, Spring & Summer) Topics in architectural practice, methods of design production, marketing, operation, and relationships among clients, architecture, and society. prereq: 5621, Arch major or 5621, M Arch major or instr consent

ARCH 55651. Building Stories. (3 cr. ; max 12 cr.; A-F only; Every Spring) Professional practice education by means of case study analysis.

ARCH 55670. Topics in Historic Preservation. (1-3 cr.; max 12 cr.; Student Option; Periodic Fall) Selected topics in the theory, philosophy, research, and methods of architectural historic preservation.

ARCH 55671. Historic Preservation. (3 cr.; Student Option; Every Fall) Philosophy, theory, origins of historic preservation. Historic archaeology/research, descriptive analysis, documentation of historic buildings. Government’s role in historic preservation, preservation standards/guidelines, preservation/building codes, preservation advocacy.

ARCH 55672. Historic Building Conservation. (3 cr.; Student Option; Every Spring) Historic building materials, systems, and methods of conservation. Discussion of structural systems, building repair and pathology, introduction of new environmental systems in historic buildings, and conservation of historic interiors. Research on historic building materials and techniques using primary and secondary resources and on documentation of a specific historic site through large-format photography and measured drawings. prereq: 3412, 5671 or instr consent

ARCH 55673. Historic Property Research and Documentation. (3 cr.; Student Option; Every Spring) Philosophy, theory, methods of historic building research. Descriptive analysis of buildings, building documentation, historical archaeology, architectural taxonomy. prereq: 3412, 3641, 4671, 5671, 4672 or 5672 or instr consent

ARCH 55674. World Heritage Conservation. (3 cr.; A-F only; Periodic Fall) Investigations of World Heritage conservation and nomination for the preservation of historic buildings and sites and their management for public use. Case studies link current practices, methods, and solutions with expert preservationists, site conservationists and local communities in the development and design of preservation strategies. prereq: MS in Arch-HP concentration or MARCH or MLA or instr consent

ARCH 5677. Preservation of the Vernacular Built Environment and Cultural Landscape. (3 cr.; A-F only; Periodic Spring)
Theoretical, methodological, practical implications of preserving vernacular environment such as commercial blocks, strips/buildings, warehouses/sheds, wharves/piers, abandoned streetcar tracks/railroad spurs. prereq: Grad student, open to upper level (junior/senior) undergraduates with instr consent. Honors student encouraged.

ARCH 5678. Preservation & Sustainability. (3 cr.; A-F or Audit; Every Spring)
Topics covered include identification of historic properties, consideration of constraints on modification, examination of potential energy-saving treatments, consideration of the full range of options for 7green? buildings and neighborhood, and discussion of resolution of conflicts between the two.

ARCH 5686. Research Practices Final Project: Research into Practice. (4 cr.; A-F only; Every Fall)
The course is the first of a three-??course final project sequence required as the capstone experience for MS-??RP students. The course provides a forum for understanding the current state of research in the design and building industry and its trajectories and trends. Student projects will apply this knowledge to a regionally based commercial or non-????profit practices in the building industry, assessing the firm??s research capacity, mapping its potential in context of innovative precedents and suggesting future growth. prereq: MS-RP student

ARCH 5687. Research Practices Final Project: Practice into Research. (4 cr.; S-N only; Every Fall)
Course is the second of a three-??course final project sequence required as the capstone experience for MS-??RP students. Building upon the previous semester understanding the state of research in the building industry, this course develops a single case study project in comparative context of contemporary practice. The work of individual students adds to a collective knowledge base on project best practices and development of industry-????wide metrics and standards. Course meets concurrently with ARCH 5688 Representation of Case Studies. prereq: Arch 5686

ARCH 5688. Research Practices Final Project: Representation of Case Studies. (1 cr.; A-F only; Every Fall)
The course is the third of a three-??course final project sequence required as the capstone experience for MS-??RP students. This course meets concurrently with ARCH 5687 Practice into Research. Information graphics are essential to understanding and explaining critical issues in a case study. The format of information can be designed to emphasize comparisons between projects or to highlight unique characteristics of individual projects. This course will explore a variety of strategies commonly used in case study documentation and ask the student to apply one method to present the case developed in ARCH 5687. prereq: Arch 5686

ARCH 5711. Theory and Principles of Urban Design. (3 cr.; A-F or Audit; Every Spring)
Seminar. Debate on dominant theories/paradigms informing city design from renaissance to 21th century. Critical issues central to current debates. prereq: M Arch major or LA grad major or grad student or instr consent

ARCH 5721. Case Studies in Urban Design. (3 cr.; A-F or Audit; Every Spring)
Reading seminar. Evolution of contemporary city. Dynamics that created contemporary urban spatial patterns. Planning/design theories that have guided public interventions in built environment. Thematic texts, classroom discussions. prereq: Grad student or instr consent

ARCH 5731. Territorial City. (3 cr.; A-F only; Every Fall)
Seminars. Students research, define, and test conditions within which the territory and contemporary city coexist. Site for research is Twin Cities metropolitan area. Readings, discussions, field trips, collaborative development of urban proposals.

ARCH 5750. Topics in Urban Design. (1-4 cr. [max 16 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Special topics in theory/practice of urban design.

ARCH 5756. Public Interest Design: Principles and Practices. (3 cr.; A-F or Audit; Every Spring)
As the allied fields of design evolve in response to an increasing number of global challenges?inequity, social and political turmoil, disruptive climate-change, accelerating population growth?the question of how designers will address the needs of the most vulnerable among us is fundamental. Public Interest Design (PID), an emerging area of specialization within the design professions, specifically considers the concerns of the vast majority of the world's inhabitants who are historically under-resourced and ill-equipped to respond to the "Grand Challenges" facing humankind. This course offers an introduction to PID and its application.

ARCH 5793. Directed Study. (1-4 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring)
Guided individual reading or study. prereq: instr consent

ARCH 8101. Subjects and Methods in Architecture. (2 cr.; S-N or Audit; Periodic Fall & Spring)
The discipline of architecture. prereq: Grad Arch major or instr consent

ARCH 8250. Advanced Topics in Design. (1-6 cr.; S-N or Audit; Periodic Spring & Summer)
Design studio. prereq: Admitted to 3+ track for MArch prog or instr consent

ARCH 8251. Graduate Architectural Design I. (6 cr.; A-F or Audit; Every Fall)
Design projects focused on fundamental issues of space/form/light/materiality in relation to human habitation. Design as a process of exploration/inquiry. Modes/media of representation, their critical impact. prereq: M Arch major or instr consent

ARCH 8252. Graduate Architectural Design II. (6 cr.; A-F or Audit; Every Spring)
Fundamental architectural problems involving design as a creative inquiry. Individual and collaborative effort. prereq: 8251, grad Arch major or instr consent

ARCH 8253. Graduate Architectural Design III. (6 cr.; A-F or Audit; Every Fall)
Issues of design process, representation, programming, technology, and urban relations. prereq: [8251, MArch] or instr consent

ARCH 8254. Technical Applications in Design. (3 cr. [max 6 cr.]; A-F or Audit; Every Fall)
Design potential inherent in technical development process of design project. Testing concepts, developing details, integrating building systems. Structural bay enclosure, cost considerations, regulatory compliance, Building information modeling, analog/digital representations in architecture document production, prereq: [8253, MArch major] or dept consent

ARCH 8255. Graduate Architectural Design V. (6 cr. [max 12 cr.]; A-F or Audit; Every Fall & Spring)
Fundamental architectural problems involving design as a creative inquiry. Individual/ collaborative effort. prereq: [8254, grad Arch major] or instr consent

ARCH 8295. Directed Graduate Architectural Design. (6 cr.; A-F or Audit; Every Spring)
N/A prereq: 8251, grad Arch major or instr consent

ARCH 8299. Master's Final Project. (10 cr.; S-N only; Every Spring)
Final studio project for Plan C master's. Measures knowledge of architecture and ability to conduct research for design proposal, communicate in visual/written representations. Proposal, graphic presentation of project. prereq: Plan C, MArch

ARCH 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
No description. prereq: Master's student, adviser and DGS consent

ARCH 8350. Advanced Topics in Representation. (1-3 cr.; A-F or Audit; Periodic Fall & Spring)
Theory and practice of visual representation in architecture. prereq: Grad Arch major or instr consent

ARCH 8450. Topics in Theory. (1-3 cr.; A-F or Audit; Every Fall & Spring)
ARCH 8494. Directed Research in Architectural History. (1-3 cr.; A-F or Audit; Every Spring) N/A prereq: Grad Arch major or instr consent

ARCH 8550. Topics in Technology. (1-3 cr.; A-F or Audit; Every Fall & Spring) Special topics in theory/practice of architecture technologies. prereq: Grad arch major or instr consent

ARCH 8561. Sustainable Design Theory and Practice. (3 cr.; A-F only; Every Fall) History, theory, and ethics of sustainable design processes/practices. Emphasizes approaches to sustainable architecture. Regional/global ecological issues, design strategies, methods of assessment. Primary architectural/technological implications of sustainable design theory/practice that inform design thinking/research. Sustainable design issues. Research projects, case studies, fieldwork. prereq: [5512, grad MS or MArch] or instr consent

ARCH 8563. Energy and Indoor Environmental Quality Issues in Sustainable Design. (3 cr.; A-F or Audit; Every Spring) Energy/IEQ aspects of sustainable design related to global environmental issues. Energy/IEQ strategies, methods, and tools as applied to sustainable building design. Research projects, case studies. prereq: [5513, grad MS or MArch] or instr consent

ARCH 8565. Materials Performance in Sustainable Building. (3 cr.; A-F only; Every Fall) Building-material properties, resource conservation, fabrication/construction processes in production of high performance sustainable building designs. Application of assessment/evaluation tools (LCA, BEES, Athena or LEED) for IEQ, waste reduction and management with an emphasis on experimental/analytic methods. Aesthetic/technical solutions that integrate design selection processes, construction methods, commissioning processes, and facility management, maintenance, and decommissioning. prereq: [5512, grad MS or March] or instr consent

ARCH 8567. Site and Water Issues in Sustainable Design. (3 cr.; A-F only; Every Fall) Site, water and site/building integration aspects of sustainable design. Ecological principles, site analysis. Water/site/building integration strategies, methods, and tools integrated with sustainable design issues such as energy, indoor environmental quality, and materials. Research projects, case studies, measurement methods. prereq: [5512, grad MS or MArch student] or instr consent

ARCH 8650. Topics in Architectural Practice. (1-3 cr.; A-F or Audit; Periodic Fall) N/A prereq: Grad Arch major or instr consent

ARCH 8750. Topics in Urban Design. (1-3 cr.; A-F or Audit; Periodic Fall) Special topics in theory/practice of architecture technologies. prereq: Grad arch major or instr consent

ARCH 8777. Thesis Credits: Master's. (1-18 cr.; max 50 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only

ARTS 5015. Advanced Dimensional Painting. (4 cr.; Student Option; Every Spring) Illusionary space applied to sculptural forms. Practical applications of spatial/painterly concepts. Emphasizes critical/visual judgment. Development of cohesive body of work reflecting interaction of two/three dimensions. prereq: 3105 or inst consent

ARTS 5110. Advanced Drawing. (4 cr.; max 16 cr.; Student Option; Every Fall & Spring) This studio course provides students the opportunity to investigate individual ideas and work on self-guided projects within a communal learning environment. Students will be encouraged to develop and execute their ideas with skillfulness and clarity. Through a consideration of diverse materials and practices, students will develop a proficiency in the language of contemporary drawing or painting. This course is designed to assist students in making connections between their own work and larger global themes and issues. Group and individual critiques, field trips, reviewing the work of other artists and readings will supplement studio work. Students are expected to spend time working on their projects outside of scheduled class time. prereq: previously completed a 3XXX course in Drawing or Painting

ARTS 5120. Advanced Painting. (4 cr.; max 16 cr.; Student Option; Every Fall & Spring) This studio course provides students the opportunity to investigate individual ideas and work on self-guided projects within a communal learning environment. Students will be encouraged to develop and execute their ideas with skillfulness and clarity. Through a consideration of diverse materials and practices, students will develop a proficiency in the language of contemporary painting. This course is designed to assist students make connections between their own work and larger global themes and issues. Group and individual critiques, field trips, reviewing the work of other artists and readings will supplement studio work. Students are expected to spend time working on their paintings outside of scheduled class time. prereq: 3120 or inst consent

ARTS 5140. Advanced Printmaking. (4 cr. [max 16 cr.]; Student Option; Every Fall & Spring) In-depth research of personal imagery using a broad range of historical and contemporary applications. Development of imagery using color, photo-mechanical, digital processes. Cross-media approaches. Prereq: previously completed a 3xxx-level course in Drawing or Painting

ARTS 5340. Advanced Sculpture: Carving and Construction. (4 cr. [max 8 cr.]; Student Option; Every Fall & Spring) Carving/construction using wood, other materials. Studio practice, investigation of historical/contemporary methods/concepts. Development of personal sculptural imagery. prereq: 3304

ARTS 5390. Advanced Sculpture Methods and Practice. (4 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Work in selected sculptural processes with intense studio activity. Development of innovative methods/techniques. prereq: 5300

ARTS 5404. BA Capstone and Exhibition. (3 cr.; S-N only; Every Fall & Spring) The BA Capstone and Exhibition will focus on building professional skills, developing a strong studio practice, and preparing for an exhibition in Regis Center Public Spaces.

ARTS 5407. BFA Capstone 2: Critique and Exhibition. (4 cr.; A-F only; Every Spring) This critique-based seminar will provide a structured critical forum for the discussion of your work, help you to verbally articulate and defend your work and prepare you in the presentation of your work. This is a self-motivated and self-directed class. It is expected that you will produce a substantial amount of work to show in this course. Your work is self-directed Artwork created from assignments (in other classes) will not be critiqued. Each artist will have two one-hour critiques of their work over the course of the semester. Critiques may include members from the arts community such as local artists, MIA, Midway Contemporary Art, Walker Art Center, The Soap Factory and Franklin Artworks. Grades are based on critique participation, attendance and your artist presentation. This class culminates in the BFA Exhibition in the Nash Gallery. Throughout the semester, we will meet with Nash Gallery staff to develop this final show.

ARTS 5490. Workshop in Art. (1-4 cr. [max 48 cr.]; Student Option; Every Fall, Spring & Summer) Selected topics and intensive studio activity. Topics vary yearly.

ARTS 5610. New Media: Making Art Interactive. (4 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring) Conceptual/aesthetic development with digital, interactive art. Experimental approaches to interactive technologies. Projects with responsive/tangible media. Theory/history of new media. prereq: 3601 or inst consent

ARTS 5650. Advanced Sound Art. (4 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Sound art practice/theory. Emphasizes individual creative projects using sound as
Theory, critical readings about historical and contemporary works in video. prereq: 3750
ARTS 5760. Experimental Film and Video. (; 4 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
Experimental approaches in producing digital video within a contemporary art context. Using digital media technologies in installation, performance, and interactive video art. Emphasizes expanding personal artistic development. Theoretical issues, critical/historical readings/writings in media arts. prereq: 3760
ARTS 5770. Animation. (; 4 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
Creating ideas visually with 2- and 3-dimensional animation technologies. Vector-and layer-based raster animation. Modeling objects and spaces, creating textures, lighting, movement, sound track. prereq: 3770
ARTS 5780. Advanced Super 8 and 16 MM Filmmaking. (4 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring)
This course will explore the medium of Super 8 filmmaking in the tradition of the experimental and avant-garde. We will focus on the physicality of the film stock, the basic mechanics of the camera and projector, and how these elements translate into a visual language and aesthetic. Students will learn how to shoot, process, edit, splice, project, and transfer their own Super 8 films. This course will balance the technical, conceptual, and historical aspects of small gauge or amateur analog filmmaking, and address what it means to work in this medium at the beginning of the 21st century. The course will include presentations, readings, and discussions on contemporary and historical artists in the medium, as well as outside film screenings and lectures. Classroom visits by artists will also provide an informed context for the primary course objective.
ARTS 5810. Advanced Ceramics. (; 4 cr. [max 16 cr.]; Student Option; Every Fall & Spring)
Critical discourse of aesthetics. History of, contemporary issues in clay and criticism. Independent, advanced projects. prereq: 3820 and 3830
ARTS 5850. Advanced Foundry and Metal Sculpture. (4 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
Metal casting of sculpture in bronze, iron, aluminum, other metals. Studio practice, investigation of historical/contemporary methods and concepts. Development of personal sculptural imagery. prereq: 3850 or instr consent
ARTS 5860. Advanced Sculpture. (; 4 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
This advanced Sculpture course is a self-motivated and self-directed studio class to help you develop and maintain a personal studio practice. The structure of this studio course provides space for in-depth research, idea development, individual exploration, experimentation, play and critical feedback.
ARTS 5890. 3D Modeling and Digital Fabrication. (4 cr. [max 12 cr.]; Student Option; Every Spring)
In this class, students will learn the basic skills of 3D computer modeling and digital fabrication to generate objects using the Department of Art's 3D Printers, 3-axis CNC Router and Laser Cutter. Instruction includes computer modeling in Adobe Illustrator and Rhino, transfer of files and object fabrication.
ARTS 5990. Independent Study in Art. (1-4 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
Independent study project designed by student in consultation with instructor. prereq: Major, completed regular course with instructor, instr consent
ARTS 8100. Practice and Critique: Drawing and Painting. (3 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
Creative practice/critique. Colloquium emphasizing individual goals/directions. Aesthetics, history, theory, contemporary issues in practices/criticism. prereq: Art MFA student
ARTS 8300. Practice and Critique: Sculpture. (3 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring)
Creative practice/critique. Colloquium emphasizing individual goals/directions. Aesthetics, history, theory, contemporary issues in practices/criticism.
ARTS 8333. FTE: Master’s. (; 1 cr. ; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master’s student, adviser and DGS consent
ARTS 8401. Studio and Pedagogy: Philosophy and Practice. (; 3 cr. [max 6 cr.]; Student Option; Every Spring)
Orientation to establishing studio practice, introduction of department and community resources, and preparation for teaching. Studio visits and critiques; development of teaching strategies. Required of drawing and painting students.
ARTS 8402. Theoretical Constructions in Contemporary Art. (; 3 cr.; Student Option; Every Fall & Spring)
ARTS 8403. MFA Professional Practices and Teaching Pedagogy. (3 cr.; A-F only; Every Spring)
This course is intended to provide a context for developing a career as an artist and explore how to create a sustainable artistic practice. This course will also explore issues in contemporary arts education through multiple approaches and best practices in teaching pedagogy. A primary goal of the course is to provide the Department of Art graduate instructors with an opportunity develop teaching skills before entering the classroom, access to UMN teaching resources and important information regarding expectations.

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
of University of Minnesota instructors and courses. Through visiting artist presentations, as well as those by professionals in arts administration, non-profits, established and non-traditional galleries, curators, critics, and recent art graduates, we will also examine the rich ecology of the arts in the Twin Cities community. We will also explore how to navigate the arts terrain successfully as an artist.

ARTS 8404. MFA Thesis Research + Writing. (3 cr.; A-F only; Every Fall) This workshop aims to facilitate the writing process of the MFA Thesis Supporting Paper for third-year graduate students. In accordance with the MFA advisory manual, students are challenged to articulate their creative investigations and processes as well as philosophical and critical perspectives developed throughout their course of study. By the time third-year reviews take place in December, students are expected to have a full-length draft of their text (15 pages, double-spaced, 12-point type) that names relevant reference points of the work, historical and contemporary art influences, a bibliography, and completes the requirements laid out in the MFA Advising Manual.

ARTS 8410. MFA Critique Seminar. (3 cr. [max 12 cr.]; A-F only; Every Fall & Spring) Taken for three semesters during the first and second year of the program, the MFA Critique Seminar provides candidates with an intellectual community and critical forum in which they may test, temper, and enlarge the ideas that underlie their artistic goals. The seminar will meet weekly to critique, in rotation, the work-in-progress of all candidates. The cross-disciplinary nature of the conversation is meant to foster the widest possible dialogue among artists, encourage divergent thinking and discourse the easy acceptance of received notions. The seminar will also include, critiques, and discussions with visiting artists, curators, etc.

ARTS 8420. MFA Studio. (3 cr. [max 12 cr.]; A-F only; Every Fall & Spring) This graduate level directed studio offers students the opportunity to work with individual faculty. Students arrange regular meetings and develop a proposal for the semester, which is approved by the instructor. Prior to registration, the student must contact the faculty member with whom they hope to work.

ARTS 8450. MFA Creative Thesis. (1-9 cr.; A-F only; Every Fall & Spring) Research/studio work in preparation for thesis exhibition. Third year students are required to complete 18 cr. of this course in their final year.

ARTS 8490. Workshop in Art. (1-4 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring) Selected topics/intensive studio activity. Topics vary yearly.

ARTS 8500. Practice and Critique: Printmaking. (3 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Creative practice/critique. Colloquium emphasizing individual goals/directions.

Aesthetics, history, theory, contemporary issues in practices/criticism.

ARTS 8600. Practice and Critique: Experimental and Media Arts. (3 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Creative practice/critique. Colloquium emphasizing individual goals/directions.

Aesthetics, history, theory, contemporary issues in practices/criticism.

ARTS 8700. Practice and Critique:Photography. (3 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Creative practice/critique. Colloquium emphasizing individual goals/directions.

Aesthetics, history, theory, contemporary issues in practices/criticism.

ARTS 8800. Practice and Critique: Ceramics. (3 cr. [max 12 cr.]; A-F or Audit; Every Fall & Spring) Creative practice/critique. Colloquium emphasizing individual goals/directions.

Aesthetics, history, theory, contemporary issues in practices/criticism.

ARTS 8990. MFA Creative Thesis. (1-9 cr. [max 18 cr.]; A-F only; Every Fall & Spring) Research/studio work in preparation for thesis exhibition.

Art History (ARTH)

ARTH 5115. Hellenistic and Iranian Asia: Art and Archaeology of Hellenistic, Scythian, Kushan, and Sogdian Asia. (3 cr.; Student Option: Every Fall & Spring) Transformations of Greek architecture, sculpture, painting, mosaic, and decorative arts beginning of the eastern Mediterranean and Hellenistic Asia. Art and archaeology of the post-Hellenistic Iranian world. Religious, political and historical contexts of archaeological sites, monuments, and art objects.

ARTH 5192. Persia and the Ancient Iranian World: Art and Archaeology of Achaemenid to Sasanian Persia. (3 cr.; Student Option; Every Fall & Spring) Art, archaeology of ancient Persia and the wider ancient Iranian world from the rise of the Achaemenid empire in 650 BCE to the advent of Islam in the seventh century CE.

ARTH 5301. Visual Culture of the Atlantic World. (3 cr.; A-F or Audit; Periodic Spring) Visual culture of Atlantic world, from Columbus to American Revolution. Visual objects, practices considered in context of Europe’s colonization of Americas. Slavery, religious conflict, international commerce, production of scientific knowledge addressed in terms of their impact upon visual imagery.

ARTH 5302. The Image Multiplied: Prints in Early Modern Europe. (3 cr.; A-F or Audit; Periodic Fall & Spring) The technology of mechanically reproducing complex visual images on paper, a development of fifteenth-century Europe, transformed the early modern world no less than the emergence of digital media has transformed our own. Techniques of woodcut, engraving and etching quickly became important media for innovation within the fine arts. At the same time, they became equally important as sources for devotional imagery, for disseminating copies of other artworks, for the expansion of knowledge through scientific illustration, and for the effective broadcasting of political and religious messages during centuries of extraordinary political and religious upheaval. In this course we will investigate the cultural history of printed images in Europe from the time of their emergence in the fifteenth century through the mid-eighteenth century. Through lectures and class discussion, you will develop a familiarity with the technical aspects of printmaking and apply that understanding to the historical interpretation of specific works. The course will not be an exhaustive survey of printmakers and printmaking styles during the early modern era but will instead approach the early modern print through the changing cultural circumstances of its production and reception. While we will consider the work of many lesser-known (and anonymous) artists, we will concentrate on the work of major printmakers such as Mantegna, D?rer, Goltzius, Rembrandt, Callot, Hogarth, and Piranesi. The course will include visits to local collections.

ARTH 5324. 15th-Century Painting. (3 cr.; Student Option; Periodic Fall & Spring) The origin, character, and development of painting in Northern and Southern Europe. prereq: Jr or sr or grad or instr consent

ARTH 5335. Baroque Rome: Art and Politics in the Papal Capital. (3 cr.; Student Option; Fall Even Year) Center of baroque culture--Rome--as city of spectacle and pageantry. Urban development. Major works in painting, sculpture, and architecture. Ecclesiastical/private patrons who transformed Rome into one of the world’s great capitals.

ARTH 5336. Transformations in 17th Century Art: Caravaggio, Velazquez, and Bernini. (3 cr.; Student Option; Periodic Fall & Spring) This course offers an in-depth examination of three of the most innovative masters of early modern European art, the painters Michelangelo Merisi da Caravaggio and Diego Velázquez, and the sculptor and architect Gianlorenzo Bernini. Through selected readings, slide presentations and discussions, we will explore the lives and works of these artists, paying particular attention to the ways they created an entirely new relationship between the work of art and the viewer and ushered in a radically new way of conceiving visual imagery.

ARTH 5411. Gender and Sexuality in Art Since 1863. (3 cr.; Student Option; Periodic Fall & Spring) History of art from late 19th to early 21st century. How gender/sexuality have been central to that period’s artistic production, art criticism, and aesthetic theorization. How gender/sexuality are important themes for artists. How the writing of history reveals
In-depth examination of development of objects/motifs. Topics specified in Class Schedule. prereq: instr consent

ARTH 5950. Topics: Art History. (3 cr. ; A-F or Audit; Periodic Fall & Spring) Selected topics, with special attention to current scholarly disputes. Topics specified in Class Schedule. prereq: instr consent

ARTH 8190. Seminar: Issues in Ancient Art and Archaeology. (; 3 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Focus on a major art historical theme, artist, period, or genre.

ARTH 8333. FTE: Master’s. (; 1 cr. ; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

ARTH 8340. Seminar: Baroque Art. (; 3 cr. [max 12 cr.]; Student Option; Every Spring) Topics vary. prereq: instr consent

ARTH 8400. Seminar: Issues in 19th-Century Art. (; 2 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring) Typical seminars have included symbolism, role of the academy and the avant-garde, surrealism in art and theory, and Franco-American relationships at the turn of the 20th century. prereq: instr consent

ARTH 8444. FTE: Doctoral. (; 1 cr. ; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

ARTH 8500. Issues in Latin American Art. (; 3 cr. [max 12 cr.]; Student Option; Every Spring)
ARTH 8520. Seminar: American Art and Material Culture. (3 cr.; max 12 cr.) ; Student Option; Periodic Fall & Spring)
Topics in American art, popular art, and material culture, emphasizing methods and techniques of inquiry: creation and use of archives, oral history, sources for pictorial evidence, and current approaches to interpreting traditional and non-traditional data.
prereq: instr consent

ARTH 8666. Doctoral Pre-Thesis Credits. (; 1-6 cr.; max 12 cr.) ; No Grade Associated; Every Fall, Spring & Summer)
tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

ARTH 8710. Seminar: Islamic Art. (3 cr.; max 12 cr.) ; Student Option; Periodic Fall & Spring)
Focus depends on current research interests of the professor and needs and interests of graduate students in Islamic and Asian art history. prerreq: instr consent

ARTH 8720. Seminar:East Asian Art. (3 cr.; max 12 cr.) ; Student Option; Periodic Fall & Spring)
Research focuses on closely defined topic, such as a short period of Chinese art, a restricted subject, or role of a single artist. A substantive research paper is required and participation in the seminar dialogue is expected. prerreq: instr consent

ARTH 8770. Seminar: Art of India. (3 cr.; max 12 cr.) ; Student Option; Periodic Fall & Spring)
Selected problems and issues in history of South Asian art. Topic varies by offering. prerreq: 3 cr art history, instr consent

ARTH 8783. Art, Diplomacy, and Empire. (3 cr. ; A-F only; Periodic Fall & Spring)
This course examines the mobility and agency of objects and people in diplomatic practice. An emerging body of scholarship within Renaissance and early modern studies explores the exchange and global circulation of objects and their role in cultural encounters. The possibilities offered by this 'material turn' highlight the potential of objects to enable cultural contact, conversion, and exchange across traditional political and cultural boundaries. At the same time, recent innovative and interdisciplinary approaches to exchange highlight cultural aspects of the diplomatic encounter. As a result, the roles of diplomats, interpreters, merchants as well as various types of objects and services continue to be interpreted in new ways. This course will introduce students to canonical texts associated with gift-exchange and reciprocity, and will explore their relevance to the disciplines of history and art history particularly with regard to imperial encounters and exchanges.

ARTH 8783. Art, Diplomacy, and Empire. (3 cr.; A-F only; Periodic Fall & Spring)
This course examines the mobility and agency of objects and people in diplomatic practice. An emerging body of scholarship within Renaissance and early modern studies explores the exchange and global circulation of objects and their role in cultural encounters. The possibilities offered by this 'material turn' highlight the potential of objects to enable cultural contact, conversion, and exchange across traditional political and cultural boundaries. At the same time, recent innovative and interdisciplinary approaches to exchange highlight cultural aspects of the diplomatic encounter. As a result, the roles of diplomats, interpreters, merchants as well as various types of objects and services continue to be interpreted in new ways. This course will introduce students to canonical texts associated with gift-exchange and reciprocity, and will explore their relevance to the disciplines of history and art history particularly with regard to imperial encounters and exchanges.

ARTH 8888. Thesis Credit: Doctoral. (1-24 cr.; max 100 cr.) ; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 24 cr required

ARTH 8890. Seminar: Issues in the History of Art. (3 cr.; max 12 cr.) ; Student Option; Every Fall & Spring)
Theoretical or topical issues. Topics vary. prerreq: 3 cr art history, instr consent

ARTH 8970. Directed Studies. (1-3 cr.; max 12 cr.) ; Student Option; Every Fall, Spring & Summer)
tbd prereq: instr consent

ARTH 8770. Seminar: Islamic Art. (3 cr.; max 12 cr.) ; Student Option; Periodic Fall & Spring)
Focus depends on current research interests of the professor and needs and interests of graduate students in Islamic and Asian art history. prerreq: instr consent

ACL 5212. Creative Entrepreneurship and Resource Development. (3 cr.; A-F or Audit; Every Spring)
An entrepreneurial approach to developing resources (including financial, human, and partnership) for arts and culture based enterprises whether using a nonprofit, for-profit or social enterprise business model. The course will investigate and discuss the complexities and nuances of how to determine the appropriate business model and develop both earned and philanthropic income. Students focus on framing and articulating the relevance of the enterprise as well as understanding the perspectives of audiences, customers, funders and donors. The course also explores the role of communications strategies in support of fundraising, and the importance of leadership in acquiring resources to sustain and grow successful organizations. Students develop both a broad understanding of resources as well as detailed strategies for supporting work in arts and culture based enterprises.

ACL 5221. Ethical Dilemmas and Legal Issues for Cultural Leaders. (3 cr.; A-F or Audit; Every Spring)
This course explores topics in ethics, law and leadership. Through interactive sessions, readings, presentations, discussions, papers and guest speakers, student-leaders will develop knowledge, tools and resources for assessment of ethical and legal issues within arts and cultural contexts. The course will engage student-leaders with an overview of relevant topics and a foundation for further exploration of self selected topics. Student-leaders will learn to spot issues and identify when to seek legal guidance, and assess considerations relevant to critical problem solving and informed decision-making.

ACL 5241. Financial Management for Arts Nonprofits. (2 cr.; A-F or Audit; Every Fall)
This course introduces students to concepts and applications of financial management and leadership practices for nonprofits with a specific focus on arts and cultural organizations. The goal of the course is to develop both theoretical and practical understanding of the central responsibilities of financial management and leadership in order to equip students to use financial information, identify business models, and employ a financial lens for planning and decisions. Focus will be on the fundamentals of budgeting and accounting, interpretation of financial statements, data, and procedures for operational forecasts, as well as the fiduciary responsibilities of nonprofit boards.

ACL 5251. Arts Advocacy in the Political Landscape. (2 cr.; A-F or Audit; Every Fall)
No artist or arts organization functions in a vacuum. They are surrounded by communities dealing with many social issues, and by
Asian American Studies (AAS)

AAS 5920. Topics in Asian American Studies. (1-4 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring) Topics specified in Class Schedule.

AAS 5993. Directed Readings. (1-4 cr. [max 8 cr.]; Student Option; Periodic Fall) Directed reading--must be set up with individual instructor.

AAS 5996. Graduate Proseminar. (1 cr. [max 4 cr.]; S-N only; Every Fall & Spring) Discussions/presentations from various disciplinary perspectives, research, activism, and performance in Asian American/Diasporic Studies. Students engage in dialogue, observe models of scholarly engagement, and reflect on issues within Asian American/diasporic studies.

Asian Languages and Literature (ALL)

ALL 5250. Advanced Topics in Asian Film and Media. (3 cr. [max 6 cr.]; A-F only; Periodic Fall & Spring) Examines theme, problem, region, style or filmmaker in Asian cinema. Focuses on (geo)political and socioeconomic contexts in relation to artistic and interpretive frameworks.

ALL 5276. Liberalism and Its Critics: Global Perspectives. (3 cr.; A-F only; Fall Odd Year) Survey of liberal political thought and various critics of it that arose in extreme left/right political perspectives, including those in colonial contexts and within non-Western religious formations, especially Hindu and Muslim.

ALL 5277. Space and Modernity in Asia. (3 cr.; Student Option; Periodic Fall & Spring) Examines methods, vocabularies, and theories necessary to articulate new spatial approaches to modern Asian cultural texts, including literature, films, and urban spaces. Special focus on Soja, Lefebvre, Winichakul, Henry, Ai, Zhang, and Furuhata.

ALL 5351. Chinese New Media. (3 cr.; A-F only; Every Fall) This course explores new media and intermediality from specific moments in the history of modern China. The new visuality of the late Qing Dynasty offers examples of how new forms of visual culture became both reflexive and constitutive of modernity. Later, silent cinema of the Republican era both drew upon and defined itself against existing Chinese dramatic forms, particularly opera.
In the 1930s, the arrival of sound in cinema provided a space for phonographic modernity to be expressed through film. In the People’s Republic, the productive interplay between traditional art forms and cinema entered a new era, culminating in the cinematic adaptations of the ?model plays? of the Cultural Revolution. Finally, recent years have seen the explosive growth of digital cinema, computer animation, internet culture, and gaming communities.

ALL 5359. Early Shanghai Film Culture. (3 cr.; Student Option; Spring Even Year) Shanghai film culture, from earliest extant films of 1920s to end of Republican Era in 1949. Influences on early Chinese film, from traditional Chinese drama to contemporary Hollywood productions. Effects of leftist politics on commercial cinema. Chinese star system, material film culture.

ALL 5374. The Monkey King and Transcultural China: Chinese Myth, Legend, and Ideology. (?; 3 cr.; Student Option No Audit; Periodic Fall & Spring) Early Chinese myths/legends/historical narratives about the Monkey King. Cultural formations from later periods, including contemporary popular culture and Asian American literature. Construction of China/Chinese in 20th Century seen through the Monkey as a figure of otherness and in-betweeness in relation to globalization and cross-cultural identity.

ALL 5436. Literature by 20th-Century Japanese Women in Translation. (3 cr.; Student Option; Periodic Fall) Literary/historical exploration of selected works by Japanese women writers in variety of genres. All literary texts read in English.

ALL 5446. Kabuki: A Pop, Queer, and Classical Theater in Japan. (3 cr.; A-F only; Spring Odd Year) Kabuki, an all-male theater of "song (ka)/dance (bu)/acting (ki)" that came into being in the 17th century, still boasts popularity in Japan. This course explores kabuki in several contexts: historical, theatrical, literary, and theoretical. It aims to historicize this performing art in its four-hundred-year dynamic trajectory against the static understanding that it is a national, high culture. No less importantly, we inquire into theoretical implications of subject matter, such as citationality, gender construction, and the like. Furthermore, this course attends to what is usually marginalized in kabuki historiography: koshibai (unlicensed small troupes of kabuki); onna yakuisha (women kabuki actors who mastered the acting techniques established by male kabuki actors--including the technique of female impersonation). Open to anyone with an interest, no previous knowledge of Japanese studies, theater studies, or Japanese literature/cultures. Problems in contemporary academic theory in humanities. Application of theory to Asian issues raised. Interventions of critical theory. Ethics of professional peer review. Crisis in higher education.

ALL 8333. FTE: Master’s. (?; 1 cr.; No Grade Associated; Every Fall, Spring & Summer) x prereq: Doctoral student, [adviser, DGS] consent

ALL 8444. FTE: Doctoral. (?; 1 cr.; No Grade Associated; Every Fall, Spring & Summer) x prereq: Doctoral student, [adviser, DGS] consent

ALL 8666. Doctoral Pre-Thesis Credits. (?; 1-6 cr.; [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) x prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

ALL 8888. Thesis Credit: Doctoral. (?; 1-24 cr.; [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) x

ALL 8920. Topics in Asian culture. (?; 1-3 cr.; [max 9 cr.]; S-N only; Every Fall & Spring) Topics specified in Class Schedule.

ALL 8990. Directed Readings. (?; 1-4 cr.; [max 16 cr.]; Student Option; Every Fall & Spring) Directed readings in foreign language(s) of specialty, where appropriate. prereq: PhD student

Astronomy (AST)

AST 5012. The Interstellar Medium. (?; 4 cr.; Student Option; Periodic Fall) Survey of physical processes in the interstellar medium. Dynamic processes, excitation processes, emission and absorption by gas and dust. Hot bubbles, Hill regions, molecular clouds. prereq: 2001, Phys 2601 or instr consent

AST 5022. Relativity, Cosmology, and the Universe. (?; 4 cr.; Student Option; Periodic Fall & Spring) Large-scale structure/history of universe. Introduction to Newtonian/relativistic world models. Physics of early universe, cosmological tests, formation of galaxies. prereq: [2001, Phys 2601] or instr consent

AST 5201. Methods of Experimental Astrophysics. (?; 4 cr.; Student Option; Spring Even Year) Contemporary astronomical techniques and instrumentation. Emphasizes data reduction and analysis, including image processing. Students make astronomical observations at O’Brien Observatory and use department’s computing facilities for data analysis. Image processing packages include IRAF, AIPS, IDL, MIRA. prereq: Upper div CSE or grad or instr consent

AST 8001. Radiative Processes in Astrophysics. (?; 4 cr.; Student Option; Periodic Fall) Introduction to classical/quantum physics of electromagnetic radiation as it applies to astrophysics. Emphasizes radiative processes (e.g., emission, absorption, scattering) in astrophysical contexts (e.g., ordinary stars, ISM, neutron stars, active galaxies). prereq: instr consent
AST 8011. High Energy Astrophysics. (4 cr.; Student Option; Periodic Fall)
Energetic phenomena in the universe. Radiative processes in high energy regimes; supernovae, pulsars, and X-ray binaries; radio galaxies, quasars, and active galactic nuclei. prereq: instr consent

AST 8021. Stellar Astrophysics. (4 cr.; Student Option; Periodic Fall)
Stellar structure, evolution, and star formation. Emphasizes contemporary research. prereq: instr consent

AST 8031. Astrophysical Fluid Dynamics. (4 cr.; Student Option; Periodic Fall)
Introduction to physics of ideal/non-ideal fluids with application to problems of astrophysical interest. Steady/unsteady flows, instabilities, turbulence. Conducting fluid flows. Magnetohydrodynamics. prereq: instr consent

AST 8041. Comparative Planetology. (4 cr.; Student Option; Periodic Fall)
Overview of different knowledge of the solar system. Formation history of protostellar nebula, physical properties of major planetary bodies/moons. Sun and fossils of epoch of planetary system formation: comets, asteroids, minor bodies. prereq: instr consent

AST 8051. Galactic Astronomy. (4 cr.; Student Option; Periodic Fall)
Content, structure, evolution, and dynamics of Milky Way Galaxy. Emphasizes recent observations from space-/ground-based telescopes. prereq: instr consent

AST 8061. Radio Astronomy. (4 cr.; Student Option; Periodic Fall)

AST 8071. Infrared Astronomy. (4 cr.; Student Option; Periodic Fall)

AST 8081. Cosmology. (4 cr.; Student Option; Periodic Fall)
Role of gravity in cosmology. Background, recent research advances. prereq: instr consent

AST 8110. Topics in Astrophysics. (4 cr.; A-F or Audit; Periodic Fall & Spring)
The course will concentrate on two topics in cosmology: formation of the large scale structure in the Universe, and gravitational lensing and its applications. The course will cover the evolution of structure in the early Universe, growth of super- and sub-horizon sized perturbations, transfer function, linear theory of gravitational instability, evolution of mass clustering, statistics of discrete objects, Cold, hot and warm dark matter, and means of measuring mass inhomogeneities. Gravitational lensing is a rapidly growing and wide-reaching field within modern astrophysics and cosmology. In the last 2 decades it has grown from a niche topic to a versatile and indispensable tool. It is now utilized in the studies of planetsfinding exoplanets using microlensing), stars (measuring limb darkening, masses, radii, motions of stars), galaxies and clusters of galaxies (mapping out detailed distribution and clumpiness of dark matter, and constraining properties of dark matter particles), and the distribution of mass on the largest cosmological scales (using distant galaxies, and Cosmic Microwave Background as sources). Lensing is often used for its magnifying power to examine highest redshift galaxies (using clusters of galaxies as telescopes), as well as accretion disks around supermassive black holes (using microlensing by stars in external galaxies). About half of the course will be lectures (interspersed throughout the semester), the rest will be seminar-style discussions of current literature, lead by students.

AST 8120. Topics in Astrophysics. (2-4 cr.; Student Option; Periodic Fall)
NA prereq: instr consent

AST 8200. Astrophysics Seminar. (1-3 cr.; Student Option; Every Fall & Spring)
TBD prereq: instr consent

AST 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall & Spring)
(No description) prereq: Master's student, adviser and DGS consent

AST 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

AST 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

AST 8777. Thesis Credits: Master's. (1-18 cr.; [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

AST 8888. Thesis Credit: Doctoral. (1-24 cr.; [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 24 cr required

AST 8990. Research in Astronomy and Astrophysics. (1-4 cr.; Student Option; Every Fall & Spring)
Research under supervision of a graduate faculty member. prereq: instr consent

Biochemistry (BIOC)

BIOC 5002. Critical Evaluation of Biochemistry Research. (1 cr.; S-N only; Every Fall & Spring)
Bio 5002 guides advanced undergraduates and new graduate students as they learn how to design experiments and to critically evaluate a wide variety of cutting-edge research projects, both as readers and as researchers. Introductory lectures include peer review, experimental design, critical thinking and the psychology of judgment and decision-making. This is followed by a series of guest speakers who will guide students as they develop their skills in evaluation of current research papers.

BIOC 5213. Selected Topics in Molecular Biology. (3 cr.; A-F only; Every Fall)
Cutting edge areas in molecular biology. Topics focus on the "3 Rs" of DNA: repair, replication, and recombination. Faculty who are experts in these areas teach modules on specific topics, including discussion of their research interests. prereq: 4332 or 8002 or [3021, BIOL 4003] or instr consent

BIOC 5216. Current Topics in Signal Transduction. (3 cr.; A-F only; Every Spring)
Principles of cell signaling. Important signaling pathways/experimental approaches to study signal transduction. Discussion of current issues/unanswered problems in field. prereq: Bio 4332 or Biol 4004 or instr consent

BIOC 5225. Graduate Laboratory in NMR Techniques. (1 cr.; S-N only; Every Spring)
Practical aspects of nuclear magnetic resonance (NMR) spectrometry. Hands-on experience with 500/600 MHz instruments. Sample preparation/handling, contamination sources, tube/probe options, experiment selection, experimental procedures, software, data processing. prereq: 8001 or instr consent

BIOC 5309. Biocatalysis and Biodegradation. (3 cr.; Student Option; Every Spring)
Fundamentals of microbial enzymes/metabolism as pertaining to biodegradation of environmental pollutants/biosynthesis for making commodity chemicals. Practical examples. Guest speakers from industry.

BIOC 5351. Protein Engineering. (3 cr.; A-F only; Every Fall)
Key properties of enzymes/molecular basis, computer modeling strategies, mutagenesis strategies to create protein variants, expression/screening of protein variants. Evaluate research papers, identify unsolved practical/theoretical problems, plan protein engineering experiment.

BIOC 5352. Biotechnology and Bioengineering for Biochemists. (3 cr.; A-F or Audit; Periodic Spring)
Protein biotechnology. Microorganisms used as hosts for protein expression, protein expression, and engineering methods. Production of enzymes of industrial interest. Applications of protein biotechnology in bioelectronics. Formulation of therapeutic

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
biopharmaceuticals. prereq: [[3021 or 4331 or BIOL 3021 or or MICB 4111]. [BIOL 3301 or MICB 3301]] or instr consent

**BIOC 5361. Microbial Genomics and Bioinformatics.** (3 cr.; Student Option; Every Fall & Spring)
Introduction to genomics. Emphasizes microbial genomics. Sequencing methods, sequence analysis, genomics databases, genome mapping, prokaryotic horizontal gene transfer, genomics in biotechnology, intellectual property issues. Hands-on introduction to UNIX shell scripting, genomic data analysis using R and Excel in a computer lab setting. prereq: College-level courses in [organic chemistry, biochemistry, microbiology]

**BIOC 5444. Muscle.** (3 cr.; Student Option; Every Spring)
Muscle molecular structure/function and disease. Muscle regulation, ion transport, and force generation. Muscular dystrophy and heart disease. prereq: 3021 or BIOL 3021 or 4331 or BIOL 3431 or PHSL 3061 or instr consent

**BIOC 5527. Introduction to Modern Structural Biology.** (4 cr.; Student Option; Every Fall)
Methods employed in modern structural biology to elucidate macromolecular structures. Primary focus on X-ray diffraction, nuclear magnetic resonance (NMR) spectroscopy and mass spectrometry. Principles underlying structural biology and structure/function relationships. prereq: [intro biochemistry, intro physics] or physical chemistry or instr consent

**BIOC 5528. Spectroscopy and Kinetics.** (4 cr.; Student Option; Every Spring)
Biochemical dynamics from perspectives of kinetics and spectroscopy. Influence of structure, molecular interactions, and chemical transformations on biochemical reactions. Focuses on computational, spectroscopic, and physical methods. Steady-state and transient kinetics. Optical and magnetic resonance spectroscopies. prereq: Intro physical chemistry or equiv; intro biochemistry recommended

**BIOC 5535. Introduction to Modern Structural Biology - Diffraction.** (2 cr.; A-F or Audit; Every Fall)
Theory and practice in the determination of three-dimensional structures of macromolecules using X-ray and neutron diffraction and electron microscopy. prereq: [introductory biochemistry, introductory physics, college calculus] or physical chemistry or instr consent

**BIOC 5536. Introduction to Modern Structural Biology - Nuclear Magnetic Resonance.** (2 cr.; Student Option; Every Fall)
Theory and practice in the determination of three-dimensional structures of macromolecules using NMR. prereq: [introductory biochemistry, introductory physics, college calculus] or physical chemistry or instr consent

**BIOC 5960. Special Topics in Biochemistry.** (3 cr.; A-F only; Every Spring)
In-depth study of topics in biochemistry. prereq: [[3021 or equiv], CHEM 2301] or instr consent

**BIOC 6011. Biochemistry for Dental Students.** (4 cr.; A-F or Audit; Every Fall)
Survey of chemical properties, biosynthesis, catabolism, structure/function of biomolecules. Fundamentals of molecular biology/metabolic regulation. prereq: Dental student

**BIOC 6021. Biochemistry.** (3 cr.; Student Option; Every Fall, Spring & Summer)

**BIOC 8001. Biochemistry: Structure, Catalysis, and Metabolism.** (3 cr.; Student Option; Every Fall)
Protein structure, methods to determine structure, protein folding, forces stabilizing macromolecular structure, protein engineering, design. Dynamic properties of proteins/enzymes, enzyme substrate complexes, mechanism of enzyme catalysis. Enzymology of metabolic regulation and cell signaling. prereq: BMXB or MCB or concurrent registration with required (or allowed) in G grad student or instr consent

**BIOC 8002. Molecular Biology and Regulation of Biological Processes.** (3 cr.; A-F only; Every Fall)
Classical to current topics in molecular biology. Aspects of DNA, RNA, and protein biology. DNA replication, repair, and recombination. RNA transcription, editing, and regulation. Protein translation/modification. Technologies such as deep-sequencing micro-RNA and prions. prereq: [BMXB or MCB] grad student or instr consent

**BIOC 8005. Biochemistry: Structure and Catalysis.** (2 cr.; A-F or Audit; Every Fall)
Protein structure, methods to determine structure, protein folding, forces stabilizing macromolecular structure, protein engineering, design. Dynamic properties of proteins/enzymes, enzyme substrate complexes, mechanism of enzyme catalysis.

**BIOC 8006. Biochemistry: Metabolism and Control.** (2 cr.; A-F or Audit; Every Fall)
Enzymology of metabolism, metabolic regulation, metabolic control and cell signaling.

**BIOC 8007. Molecular Biology of DNA.** (2 cr.; A-F or Audit; Every Fall)
Structure and organization of genes. Replication, transcription, epigenetic modification of chromatin. Genome editing. Deep sequencing. Cellular adhesion mechanisms. prereq: BMXB or MCB concurrent registration is required (or allowed) in G grad student or instr consent

**BIOC 8008. Molecular Biology of RNA.** (2 cr.; A-F or Audit; Every Fall)
Translation. RNA editing. Epigenetics and long non-coding RNA. MicroRNAs and RNA interference. Pre-mRNA processing.

**BIOC 8084. Research and Literature Reports.** (1 cr. [max 5 cr.]; S-N or Audit; Every Fall & Spring)
Current developments. prereq: Grad BMXB major or instr consent

**BIOC 8184. Graduate Seminar.** (1 cr. [max 5 cr.]; S-N or Audit; Every Fall & Spring)
Reports on recent developments in the field and on research projects in the department. prereq: grad BMXB major or DGS consent

**BIOC 8215. Signal Transduction and Gene Expression.** (3 cr.; Student Option; Every Fall & Spring)
Cell signaling, metabolic regulation in development. Procarotid/eucaryotic systems used as models for discussion. Literature-based course. prereq: 8002 or instr consent

**BIOC 8290. Current Research Techniques.** (1-3 cr. [max 9 cr.]; S-N or Audit; Every Fall & Spring)
Research project carried out in laboratory of a staff member. prereq: Grad BMXB major

**BIOC 8333. FTE: Master's.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

**BIOC 8401. Ethics, Public Policy, and Careers in Molecular and Cellular Biology.** (1 cr. [max 2 cr.]; S-N or Audit; Every Fall & Spring)
Ethics of scientific investigation from viewpoint of western scientific enterprise. Relationship between science, culture, and public policies. Careers in molecular/cellular biology. Nontraditional career tracks. Invited speakers, case studies, small-group discussions, lectures. prereq: Grad student in [BMXB or MCB] concurrent registration is required (or allowed) in G

**BIOC 8444. FTE: Doctoral.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

**BIOC 8666. Doctoral Pre-Thesis Credits.** (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

**BIOC 8777. Thesis Credits: Master’s.** (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

**BIOC 8888. Thesis Credit: Doctoral.** (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 24 cr required

**Bioethics, Center for (BTHX)**
BTHX 5000. Topics in Bioethics. (1-4 cr. [max 8 cr.]; Student Option; Every Fall & Spring)
Bioethics topics of contemporary interest. Topics specified in Class Schedule.
BTHX 5010. Bioethics Proseminar. (2 cr.; A-F only; Every Fall)
Introduction to topics in bioethics. prereq: Bioethics grad student or grad minor

BTHX 5100. Introduction to Clinical Ethics. (3 cr.; Student Option; Every Fall & Spring)
Most frequent ethical problems faced by clinicians, patients/families, and ethics consultants. Forcging life sustaining treatment, decisional capacity, informed consent, treatment refusals, death/dying, pediatric ethics, reproductive issues, research ethics, psychiatric illness. Real cases.

BTHX 5110. Ethical Issues in Pediatrics. (2 cr.; Student Option; Every Spring)
Bioethics concerns the identification, analysis, and resolution of ethical problems that arise in planning for the care of patients in biomedical research, and in relation to the natural world. This course deals with ethical problems that occur frequently in pediatrics settings, in clinical and public health venues, in research and in the environment. The course emphasizes the ethical responsibilities of laypersons, health professionals, researchers and policy makers in planning for and resolving bioethics issues in pediatrics, including the prenatal and perinatal period. Issues addressed include reproductive issues, death and dying, forgoing life sustaining treatment, conflicts and war, research with children and pregnant women, genetics, public and global health, social justice and other topics.

BTHX 5120. Dying in Contemporary Medical Culture. (2 cr.; Student Option; Every Fall)
Examines practices of dying and death in contemporary U.S. culture, moral problems associated with these practices, possible solutions, and practical applications. Readings will consist of cultural critiques, bioethics literature, and empirical research.

BTHX 5210. Ethics of Human Subjects Research. (3 cr.; Student Option; Fall Even Year)
Issues in ethics of human subjects research. prereq: Grad student or instr consent

BTHX 5220. Standards for Research with Human Participants: A Lecture Series for Researchers. (1 cr.; Student Option; Fall Even Year)
This series of lectures presents various legal and regulatory standards that apply to research using human participants. Some are of general interest (e.g., Informed Consent); others will interest more specialized researchers (e.g., International Research).

BTHX 5300. Foundations of Bioethics. (3 cr.; Student Option; Every Spring)
Overview of major contemporary frameworks used to approach ethical issues in bioethics. prereq: Grad student or instr consent

BTHX 5325. Biomedical Ethics. (3 cr.; Student Option; Every Fall & Spring)
Major topics/issues in biomedical ethics. Patients' rights/duties, informed consent, confidentiality, ethical issues in medical research, initiation/termination of medical treatment, euthanasia, abortion, allocation of medical resources, prereq: Jr or sr or grad student or instr consent

BTHX 5400. Intro Ethics in Hlth Policy. (3 cr.; Student Option; Spring Even Year)
Topics vary to reflect issues of current significance. Relates to law/policies as appropriate but focuses on moral analyses of policy issues. prereq: Grad student or professional student or instr consent

BTHX 5411. Health Law and Policy. (3 cr.; A-F or Audit; Spring Even Year)

BTHX 5453. Law, Biomedicine, and Bioethics. (1-4 cr.; A-F only; Spring Even Year)
Law/bioethics as means of controlling important biomedical developments. Relationship of law and bioethics. Role of law/bioethics in governing biomedical research, reproductive decisionmaking, assisted reproduction, genetic testing/screening, genetic manipulation, and cloning. Definition of death. Use of life-sustaining treatment. Organ transplantation. prereq: Grad student or instr consent

BTHX 5510. Gender and the Politics of Health. (3 cr.; Student Option; Periodic Fall & Spring)
Significance of gender to health and health care. Feminist analysis regarding moral/political importance of gender, possibly including contemporary western medicine? s understanding of the body, childbirth, and reproductive technologies; cosmetic surgery; chronic illness; disability; participation in research; gender and classification of disease. Care work, paid/non-paid. Readings from feminist theory, history, social science, bioethics, and moral philosophy.

BTHX 5520. Social Justice and Bioethics. (3 cr.; Student Option; Fall Even Year)
This course explores matters of social justice related to health. Readings from multiple disciplinary perspectives ground examination of how to understand social justice in this context. Class sessions will primarily focus on specific practical issues such as health disparities, the politics of inclusion and exclusion in clinical research, resource allocation in resource poor settings, and health professional roles during war. Discussions incorporate consideration of these issues institutional and broader social contexts. This course is appropriate for a wide audience including students from the health professions, philosophy, social science, and law.

BTHX 5530. Investigative Journalism and Bioethics. (3 cr.; Student Option; Periodic Fall & Spring)
This seminar will explore the links between bioethics and journalism, examining classic and contemporary works of investigative health journalism, works of literary non-fiction related to medicine and health, and investigative work by bioethicists. It will also examine the art of muckraking, non-profit investigative journalism, the public relations industry, the decline of print journalism and the rise of digital media, and how these developments are shaping the relationship between bioethicists and the press.

BTHX 5540. Bioethics, Psychiatry & Psychology. (3 cr.; A-F only; Periodic Fall & Spring)
Explore philosophical and ethical issues in psychiatry and psychology. Potential topics include the moral responsibility of psychophaths for their actions, false memories of Satanic ritual abuse, insanity pleas, the sociology of institutionalization, clinical trials of psychiatric drugs, cosmetic psychopharmacology, recent work in experimental philosophy, and classic experiments in social psychology.

BTHX 5560. Research & Publication Seminar. (1 cr.; A-F only; Every Fall)
Publication strategy/venues. Authorship issues/ ethics in publication. Manuscript formatting/ letters of submission. Peer review. prereq: [Junior or senior or grad student], bioethics grad majors must register A-F

BTHX 5620. Social Context of Health and Illness. (3 cr.; Student Option; Spring Even Year)
Social context in which contemporary meanings of health and illness are understood by providers/patients. Ethical implications. Readings from history, social science, literature, and first-person accounts. prereq: Grad student or instr consent

BTHX 5630. Bioethics Colloquium. (1 cr.; max 2 cr.; S-N only; Every Fall & Spring)
This course features presentations from a variety of departments and programs across campus that deal in some way with ethics as a theoretical and/or applied concept. Students will attend these presentations; engage with scholars thinking about ethics from multiple perspectives; and be able to bring these perspectives to bear upon their own research. The course is thus an opportunity to explore ethics as it might be conceptualized or practiced in the social sciences, law, public policy, global health, and many other arenas, and in turn to think about how these disparate frameworks and practices can be usefully put into conversation with bioethics, and with their own projects.

BTHX 5650. Disability Ethics. (3 cr.; A-F only; Spring Odd Year)
This course is an examination of ethical issues pertaining to disability, with an emphasis on discussion and consideration of widely contrasting perspectives. Issues discussed include physician-assisted suicide, euthanasia, selective abortion, cochlear implant technology, sterilization, special versus inclusive education, Universal Design/Universal Instructional Design, disability accommodations, and built and social environments, examined within
social, legal, policy, and cultural environments. Assignments include, readings, viewings, journaling, field projects, and research papers.

BTHX 5710. Ethical Issues in Global Health. (3 cr.; Student Option; Fall Even Year) This course examines ethical issues related to global health. Topics may include religion, morality, public policy, and the connection between health and human rights. Open to juniors, seniors, graduate and professional students.

BTHX 5800. Animal Ethics. (3 cr.; Student Option; Periodic Fall & Spring) Human relationships with animals are changing and this course offers a venue for exploring some of the ethical issues in these evolving relationships. The course will discuss the differences between animal ethics and animal welfare and examine the morality and ethics of human-animal interactions in various contexts. These include cultural and historical views of animals; animals as companions; the use of animals in scientific research, entertainment, and service work; euthanasia; animal production and sustainability; and conservation issues.

BTHX 5900. Independent Study in Bioethics. (1-4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer) Students propose area for study with faculty guidance, write proposal which includes outcome objectives and work plan. Faculty member directs student's work and evaluates project. prereq: instr consent

BTHX 8000. Advanced Topics in Bioethics. (1-4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer) Advanced study of bioethics topics of contemporary interest. prereq: Grad or professional student

BTHX 8100. Advanced Theory & Practice of Clinical Ethics. (2 cr.; Student Option; Every Spring) This graduate seminar examines the principles and practices of health care ethics consultation. Focuses on the Core Competencies for Health Care Ethics Consultation promulgated by the American Society for Bioethics and Humanities. Topics include the nature and goals of health care ethics consultation, methods and processes of health care ethics consultation, evolving standards of clinical practice, core skills and core knowledge for ethics consultation, consultation evaluation, accountability, and institutional relationships, and special obligations of ethics consultants and institutions. The course serves graduate students in bioethics, ethics committee members (including community/lay members) and ethics consultants, clinical staff and faculty, law students, student clinicians, and students of the social and behavioral sciences and other disciplines. prereq: BTHX 5100 or instr consent

BTHX 8110. Ethical Issues in Pediatrics. (2 cr.; Student Option; Every Spring) Bioethics concerns the identification, analysis, and resolution of ethical problems that arise in planning for the care of patients in biomedical research, and in relation to the natural world. This course deals with ethical problems that occur frequently in pediatrics settings, in clinical and public health venues, in research and in the environment. The course emphasizes the ethical responsibilities of laypersons, health professionals, researchers and policy makers in planning for and resolving bioethics issues in pediatrics, including the prenatal and perinatal period. Issues addressed include reproductive issues, death and dying, forgoing life-sustaining treatment, conflicts and war, research with children and pregnant women, genetics, public and global health, social justice and other topics.

BTHX 8114. Ethical and legal issues in Genetic Counseling. (3 cr.; A-F or Audit; Every Spring) Professional ethics. Ethical/legal concerns with new genetic technologies. prereq: [MCDG MS, genetic counseling specialization] or instr consent

BTHX 8120. Dying in Contemporary Medical Culture. (2 cr.; Student Option; Every Fall) Examines practicalities of dying and death in contemporary U.S. culture, moral problems associated with these practices, possible solutions, and practical applications. Readings will consist of cultural critiques, bioethics literature, and empirical research.

BTHX 8331. The Psychology of Morality. (3 cr.; A-F or Audit; Fall Even Year) Current research topics in socio-political moral judgment and moral development. prereq: Grad

BTHX 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) tbld prereq: Master's student, adviser consent, DGS consent

BTHX 8500. Practicum in Bioethics. (1-4 cr. [max 16 cr.]; Student Option No Audit; Every Fall & Spring) Supervised placement to apply knowledge/skills from core courses. Individualized plan is developed between student, bioethics adviser or DGS, and mentor at practicum site. prereq: Bioethics grad [major or minor] or instr consent

BTHX 8510. Gender and the Politics of Health. (3 cr.; Student Option; Spring Even Year) Significance of gender to health and health care. Feminist analysis regarding moral/political importance of gender, possibly including contemporary western medicine? s understanding of the body, childbirth, and reproductive technologies; cosmetic surgery; chronic illness; disability; participation in research; gender and classification of disease. Care work, paid/non-paid. Readings from feminist theory, history, social science, bioethics, and moral philosophy. prereq: instr consent

BTHX 8520. Social Justice and Bioethics. (3 cr.; Student Option; Fall Even Year) This course explores matters of social justice related to health. Readings from multiple disciplinary perspectives ground examination of how to understand social justice in this context. Class sessions will predominantly focus on specific practical issues such as health disparities, the politics of inclusion and exclusion in clinical research, resource allocation in resource poor settings, and health professional roles during war. Discussions incorporate consideration of these issues? institutional and broader social contexts. This course is appropriate for a wide audience including students from the health professions, philosophy, social science, and law.

BTHX 8540. Bioethics, Psychiatry & Psychology. (3 cr.; A-F only; Periodic Fall & Spring) Explore philosophical and ethical issues in psychiatry and psychology. Potential topics include the moral responsibility of psychopaths for their actions, false memories of Satanic ritual abuse, insanity pleas, the sociology of institutionalization, clinical trials of psychiatric drugs, cosmetic psychopharmacology, recent work in experimental philosophy, and classic experiments in social psychology.

BTHX 8610. Medical Consumerism. (3 cr.; Student Option; Spring Even Year) Roots/implications of "medical consumerism." How consumerist model shapes concepts of disease/disability. Larger historical developments that have led to current situation. How movement toward consumerism changes the profession of medicine. How tools of medical enhancement shape the way we think about our identities and live our lives. Texts from philosophy, history, literature, law, film, and social sciences.

BTHX 8650. Bioethics, Psychiatry & Psychology. (3 cr.; A-F only; Periodic Fall & Spring) Explore philosophical and ethical issues in psychiatry and psychology. Potential topics include the moral responsibility of psychopaths for their actions, false memories of Satanic ritual abuse, insanity pleas, the sociology of institutionalization, clinical trials of psychiatric drugs, cosmetic psychopharmacology, recent work in experimental philosophy, and classic experiments in social psychology.

BTHX 8710. Ethical Issues in Global health. (3 cr.; Student Option; Every Fall) This course examines ethical issues in global health which encompasses issues of religion, morality, public policy, disability rights, and health system structure. During this course, we draw from the literature on policies, traditions in the ethics of health, public health, health care and transnational cases.

BTHX 8755. Plan B Capstone. (1-7 cr. [max 14 cr.]; No Grade Associated; Every Fall, Spring & Summer) Research project. Topic arranged between student/instructor. Written report required. prereq: Advanced Plan B MA student.

BTHX 8777. Thesis Credits: Master's. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) tbld

BTHX 8800. Animal Ethics. (3 cr.; Student Option; Periodic Fall & Spring)
Human relationships with animals are changing and this course offers a venue for exploring some of the ethical issues in these evolving relationships. The course will discuss the differences between animal ethics and animal welfare and examine the morality and ethics of human-animal interactions in various contexts. These include cultural and historical views of animals; animals as companions; the use of animals in scientific research, entertainment, and service work; euthanasia; animal production and sustainability; and conservation issues.

BTHX 8900. Advanced Independent Study in Bioethics. (1-4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer) Students propose area for individual study with faculty guidance. Students write proposal, which includes outcome objectives and work plan. Faculty member directs student's work and evaluates project. prereq: instr consent

Bioinformatics (BIN)

BINF 5490. Topics in Bioinformatics. (1-6 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Independent or group study in bioinformatics. prereq: instr consent

Biology (BIOL)

BIOL 5309. Molecular Ecology And Ecological Genomics. (3 cr.; Student Option; Fall Even Year) Application of molecular tools (PCR, sequencing, AFLP, SNPs, QTL) and analyses of molecular data for understanding ecological/evolutionary processes. Strengths/weaknesses of techniques/analyses. Questions molecular tools are used to answer. prereq: BIOL 3407 or BIOL 4003

BIOL 5407. Ecology. (3 cr.; Student Option; Every Fall & Spring) Principles of population growth/interactions and ecosystem function applied to ecological issues, including regulation of human populations, dynamics/impacts of disease, invasions by exotic organisms, habitat fragmentation, and biodiversity. Lab. prereq: [One semester college biology, [MATH 1142 or MATH 1271 or MATH 1281 or equiv], grad student] or instr consent

BIOL 5409. Evolution. (3 cr.; Student Option; Every Fall) Diversity of forms in fossil record and in presently existing biology. Genetic mechanisms of evolution. Examples of ongoing evolution in wild/domesticated populations and in disease-causing organisms. Lab. prereq: One semester of college biology, grad student

BIOL 5910. Special Topics in Biology for Teachers. (1-4 cr. [max 12 cr.]; Student Option; Every Spring & Summer) Courses developed for K-12 teachers depending on topics or subtopics which might include any of the following: plant biology, animal biology, genetics, cell biology, biochemistry, microbiology, prepr: BA or BS in science or science education or elementary education or K-12 licensed teacher

In-depth study of special topic in life sciences.

BIOL 6793. Directed Studies. (1-7 cr.; Student Option; Every Fall, Spring & Summer) Individual study on selected topics/problems. Emphasizes either readings/use of scientific literature or laboratory/field techniques. prereq: MBS, 7 or max, instr consent

BIOL 6794. Directed Research. (1-7 cr.; S-N or Audit; Every Fall, Spring & Summer) Laboratory or field investigation of selected areas of research. prereq: MBS, instr consent

BIOL 6999. Capstone Project. (2 cr.; S-N or Audit; Every Fall, Spring & Summer) Independent, original investigation of a relevant subject, challenge, or issue within biological sciences. Project takes approximately 120 hours. prereq: MBS, instr consent

BIOL 8100. Improvisation for Scientists. (1 cr.; S-N or Audit; Every Fall) This is a 7-week course designed to practice a wide array of strategies in order to gain awareness and control over your personal expression. Students will develop more effective ways to expand their ability to navigate the stress generally associated with delivering content in front of others. By learning how to manage their personal expression more effectively, students will be able to use specific tools in order to adapt their expression to various settings (large audiences, small groups, or one on one interviews/counseling). Adapting exercises from techniques such as improvisation and storytelling, class will provide a comfortable and safe environment for students who want to expand their confidence when presenting for others.

Biomedical Engineering (BMEN)

BMEN 5001. Advanced Biomaterials. (3 cr.; A-F or Audit; Every Fall) Commonly used biomaterials. Chemical/physical aspects. Practical examples from such areas as cardiovascular/orthopedic applications, drug delivery, and cell encapsulation. Methods used for chemical analysis and for physical characterization of biomaterials. Effect of additives, stabilizers, processing conditions, and sterilization methods. prereq: 3301 or MatS 3011 or grad student or instr consent

BMEN 5031. Engineering Extracellular Matrices. (3 cr.; A-F only; Every Fall) This class explores the complex set of fibrous and linking proteins of tissues, namely the extracellular matrix (ECM). The ECM is crucial not only for maintaining the structure of tissues but also for guiding and maintaining cellular functions and fate processes. The purpose of the course is to become acquainted with ECM proteins and to investigate how control or manipulation of ECM proteins impacts on cell and tissue function with an emphasis on impacts for regenerative medicine. In the course of this study, we will apply fundamentals of physics, chemistry, and mathematics to make predictions, solve problems and optimize outcomes related to ECM engineering. Required prerequisites: Upper Division Undergraduate or Graduate level student standing in CSE. Recommended prerequisites: BMEN 2501, 3011/3105, 3111/3115, 3311/3315, or equivalents (introductory cell/molecular biology, biomaterials, biotransport, biomechanics).

BMEN 5041. Tissue Engineering. (3 cr.; Student Option; Every Fall) Fundamentals of wound healing and tissue repair; characterization of cell-matrix interactions; case study of engineered tissues, including skin, bone marrow, liver, vessel, and cartilage; regulation of biomaterials and engineered tissues. prereq: CSE upper div or grad student or med student or instr consent

BMEN 5101. Advanced Bioelectricity and Instrumentation. (3 cr.; Student Option; Periodic Spring) Instrumentation, computer systems. and processing requirements for clinical physiological signals. Electrode characteristics, signal processing, and interpretation of physiological events by ECG, EEG, and EMG. Measurement of respiration and blood volume/flow. prereq: [CSE upper div, grad student] or instr consent

BMEN 5111. Biomedical Ultrasound. (3 cr.; Student Option; Every Spring) Introduction to biomedical ultrasound, including physics of ultrasound, transducer technology, medical ultrasound imaging, photoacoustic imaging, applications of non-linear acoustics, and high-intensity ultrasound. prereq: [PHYS 1302 or equiv], [MATH 2374 or equiv] or instr consent

BMEN 5151. Introduction to BioMEMS and Medical Microdevices. (2 cr.; A-F or Audit; Every Spring) Design/microfabrication of sensors, actuators, drug delivery systems, microfluidic devices, and DNA/protein microarrays. Packaging, biocompatibility, ISO 10993 standards. Applications in medicine, research, and homeland security. prereq: CSE sr or grad student or medical student

BMEN 5201. Advanced Biomechanics. (3 cr.; Student Option; Periodic Fall & Spring) Introduction to biomechanics of musculoskeletal system. Anatomy, tissue material properties. Kinematics, dynamics, and control of joint/limb movement. Analysis of forces/motions within joints. Application to injury, disease. Treatment of specific joints, design of orthopedic devices/implants. prereq:
BMEN 5311. Advanced Biomedical Transport Processes. (3 cr.; Student Option; Every Spring)

BMEN 5321. Microfluidics in Biology and Medicine. (3 cr.; A-F or Audit; Every Fall)
Fundamentals of microfluidics. Fluid mechanics/transport phenomena in microscale systems. Pressure/surface driven flows. Capillary forces, electrokinetics, hydraulic circuit analysis. Finite element modeling for microfluidic systems. Design/ fabrication methods for microfluidic devices. prereq: [3111, AEM 4201, ChEn 4005, ME 3331 or ME 3332 or CSE grad student or instr consent]

BMEN 5351. Cell Engineering. (; 3 cr.; Student Option; Periodic Fall & Spring)
Engineering approaches to cell-related phenomena important to cell/tissue engineering. Receptor/ligand binding. Trafficing/signaling processes. Applications to cell proliferation, adhesion, and motility. Cell-matrix interactions. prereq: [2401, 2501 or concurrent registration is required (or allowed) in 5501], [MATH 2243 or MATH 2373] or CSE upper div or grad student or instr consent

BMEN 5361. 3D Bioprinting. (2 cr.; A-F only; Every Fall)
3D Bioprinting has recently emerged as a new biofabrication technology that merges many engineering fields (eg. BME, MechE, ChemE) with other disciplines such as Materials Science, Stem Cell Biology, Physiology, Surgery and Pharmacology. This course serves as an introduction to the field and how its disciplines interface, while providing the student with knowledge of many of the most common bioprinting methods and applications being developed today through lectures by experts in the field (academia and industry) as well as hands-on lab exercises in the UMN 3D Bioprinting Facility.

BMEN 5401. Advanced Biomedical Imaging. (; 3 cr.; A-F or Audit; Every Fall)
Functional biomedical imaging modalities. Principles/applications of technologies that offer high spatial/temporal resolution. Bioelectromagnetic and magnetic resonance imaging. Other modalities. prereq: CSE upper div or grad student or instr consent

BMEN 5411. Neural Engineering. (; 3 cr.; Student Option; Every Fall)
Theoretical basis. Signal processing techniques. Modeling of nervous system, its response to stimulation. Electrode design, neural modeling, cochlear implants, deep brain stimulation. Prosthetic limbs, micractuality control, prosthetic vision. Brain machine interface, seizure prediction, optical imaging of nervous system, place cell recordings in hippocampus. prereq: 3401 recommended

BMEN 5412. Neuromodulation. (3 cr.; A-F or Audit; Every Fall)
Fundamentals of bioengineering approaches to modulate the nervous system, including bioelectricity, biomagnetism, and optogenetics. Computational modeling, design, and physiological mechanisms of neuromodulation technologies. Clinical exposure to managing neurological disorders with neuromodulation technology.

BMEN 5413. Neural Decoding and Interfacing. (; 3 cr.; A-F or Audit; Every Spring)
Neural interface technologies currently in use in patients as well as the physical, neural coding, and hardware features relating to their implementation in humans. Practical and ethical considerations for implanting these devices into humans. prereq: 5411, [3201 or 3401 or equiv recommended]

BMEN 5421. Introduction to Biomedical Optics. (; 3 cr.; A-F or Audit; Periodic Spring)
Biomedical optical imaging/sensing principles, laser-tissue interaction, detector design, noise analysis, interferometry, spectroscopy. Optical coherence tomography, polarization, birefringence, flow measurement, fluorescence, nonlinear microscopy. Tours of labs. prereq: CSE sr or grad student

BMEN 5501. Biology for Biomedical Engineers. (; 3 cr.; Student Option; Periodic Fall & Spring)
Concepts of cell/tissue structure/function. Basic principles of cell biology. Tissue engineering, artificial organs. prereq: Engineering upper div or grad student

BMEN 5501. Cardiovascular Devices. (1 cr.; A-F or Audit; Every Spring)
Design of cardiovascular devices with experts from local medtech companies. Discussion of clinical need, the generic design (emphasizing use of engineering principles), typical testing and validation methods, and major limitations of the available devices. Design, analysis, and testing of these and related devices. prereq: BMEN 3011, 3111, 3211, or equivalents with instr consent

BMEN 5701. Cancer Bioengineering. (3 cr.; A-F or Audit; Every Fall)
Cancer-specific cell, molecular/genetics events. Quantitative applications of bioinformatics/systems biology, optical imaging, cell/matrix mechanics. Drug transport (with some examination of design of novel therapeutics). prereq: [Upper division CSE undergraduate, CSE graduate student] or instr consent

BMEN 5901. Special Topics in Biomedical Engineering. (; 3 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring)
Special topics in biomedical engineering.

BMEN 5920. Special Topics in Biomedical Engineering. (; 3 cr. [max 6 cr.]; Student Option; Every Fall)
Special topics in biomedical engineering.

BMEN 8001. Polymeric Biomaterials. (; 3 cr.; A-F or Audit; Every Spring)
Introduction to polymeric biomaterial research. Molecular engineering, characterization of properties, material-cell interaction, biocompatibility/bioactivity. Applications in biology and medicine. prereq: [5001, [CHEN 4214 or MAT 4214 or equiv] or instr consent

BMEN 8041. Advanced Tissue Engineering Lab. (3 cr.; A-F or Audit; Every Spring)
Tissue engineering refers to the generation of biological substitutes to restore, maintain or improve tissue function. Toward this end, tools and knowledge from several disciplines might be applied including biological sciences (molecular, cellular and tissue anatomy and physiology), engineering (transport phenomena, material science, mechanical characterization) and biotechnology (cell culture, gene transfer, metabolomics). This course will cover some introductory and advanced lab techniques used in tissue engineering.

BMEN 8101. Biomedical Digital Signal Processing. (; 3 cr.; A-F or Audit; Every Fall)
Signal processing theory for analyzing real world digital signals. Digital signal processing and mathematical algorithms used as basis for analysis of stochastic signals. Spectral analyses, noise cancellation, optimal filtering, blind source separation, beamforming techniques. prereq: [(MATH 2243 or MATH 2373), [MATH 2263 or MATH 2374]) or equiv

BMEN 8151. Biomedical Electronics and Implantable Microsystems. (3 cr.; Student Option; Every Spring)
This class is about bioelectronics and the synergy between electronics and biomedical applications. It discusses how to architect robust ultra-low-power electronics with applications in implantable, noninvasive, wireless, sensing, and stimulating biomedical systems. Half of the classes span feedback systems, transistor device physics, noise, and circuit-analysis techniques to provide a circuit-foundation. The other half are research papers that describe the utilization of these circuits in implantable and wearable systems. Some of these systems include cochlear implants for the deaf, brain implants for the blind and paralyzed, cardiac devices for noninvasive medical monitoring, and biomolecular sensing systems. Prerequisites: BMEN 5101 or equivalent background in bioinstrumentation and electric circuits.

BMEN 8201. Advanced Tissue Mechanics. (3 cr.; A-F or Audit; Every Spring)
Tissues exist in dynamic mechanical environments where they must maintain a fine balance between applied loads and internal tension. Active adaptability of biological materials can significantly complicate measurement of their mechanical behavior. This course will cover fundamental continuum approaches for determining the complex stress states of actively responsive tissues as well as the force-feedback relationships that drive early development and allow mature tissues to maintain mechanical equilibrium. Topics will include theoretical approaches for active force generation, soft tissue finite growth, extracellular matrix remodeling, and constrained mixtures. These methods are applicable to a wide range of biomechanical
BMEN 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

BMEN 8334. Laboratory Neuroengineering. (1 cr. [max 6 cr.]; S-N only; Every Fall, Spring & Summer) Lab rotation in neuroengineering. prereq: Grad student in CSE or neuroscience

BMEN 8335. Neuroengineering Practicum. (3 cr. [max 6 cr.]; A-F only; Every Spring) Topics/issues in neuroengineering. Ethics, professional conduct, conflicts, plagiarism, copyright, authorship, research design considerations, intellectual properties, review process, professional presentations, proposal writing. prereq: PhD student in BMEN, EE, ME, or NSCI or instr consent

BMEN 8381. Bioheat and Mass Transfer. (3 cr.; Student Option; Periodic Spring) Analytical/numerical tools to analyze heat/ mass transfer phenomenon in cryobiological, hyperthermic, other biomedically relevant applications. prereq: CSE grad student, upper div transport/fluids course; [physics, biology] recommended

BMEN 8401. New Product Design and Business Development. (4 cr.; A-F or Audit; Every Fall) Student teams work with CSE and CSOM faculty and company representatives to develop a product concept for sponsoring company. Assignments include concept/detail design, manufacturing, marketing, introduction strategy, profit forecasting, production of product prototype. prereq: BME graduate student, some design experience; 8401, 8402 must be taken same yr

BMEN 8402. New Product Design and Business Development. (4 cr.; A-F or Audit; Every Spring) Student teams work with CSE and CSOM faculty and company representatives to develop a product concept for sponsoring company. Assignments include concept/detail design, manufacturing, marketing, introduction strategy, profit forecasting, production of product prototype. prereq: 8401

BMEN 8411. Neuroengineering Seminar. (2 cr. [max 4 cr.]; S-N only; Every Fall & Spring) Lectures presented by researchers in the field of neuroengineering. Students will discuss speaker papers in advance of the talks and meet with presenters afterwards. Each student will also deliver one seminar presentation per semester.

BMEN 8421. Biophotonics. (3 cr.; A-F or Audit; Every Spring) Understanding light microscopy and the interaction of light with biological materials is widely applicable to numerous research programs. In fact, it is a fundamental approach to addressing critical questions at the cellular and subcellular scales. This course will emphasize the fundamentals of light microscopy and microscopes, fundamentals of fluorescence and fluorescence microscopy (transitions, quantum yield, bleaching, lifetime etc.) and practical applications of fluorescence microscopy (confocal microscopy for optical sectioning, multiphoton microscopy, harmonic generation, FRET, FRAP, and fluorescence lifetime in the time and frequency domains). Course material will span theory, practical applications of microscopy and published literature. prereq: Graduate students in physical sciences (engineering, physics, chemistry etc.), or graduate students with an undergraduate degree in the physical sciences or mathematics, or consent of instructor. In addition to previous course work in engineering and/or physics, a working understanding of microscopy is recommended. Although not required, concurrent or previous enrollment in BMEN 5421 (Biomedical Optics) is recommended.

BMEN 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

BMEN 8501. Dynamical Systems in Biology. (3 cr.; A-F or Audit; Every Fall) Nonlinear dynamics with specific emphasis on behavior of excitable systems (neurons/ cardiac myocytes). prereq: Grad student in engineering or physics or math or physiology or neuroscience

BMEN 8502. Physiological Control Systems. (3 cr.; A-F only; Every Spring) Simulation, identification, and optimization of physiological control systems. Linear and non-linear systems analysis, stability analysis, system identification, and control design strategies, including constrained, adaptive, and intelligent control. Analysis and control of physiological system dynamics in normal and diseased states. prereq: 8101 or equiv

BMEN 8511. Systems and Synthetic Biology. (3 cr.; A-F or Audit; Every Fall) Systems/synthetic biology methods used to characterize/engineer biological systems at molecular/cellular scales. Integration of quantitative experimental approaches/mathematical modeling to elucidate biological design principles, create new molecular/cellular functions.

BMEN 8601. Biomedical Engineering Seminar. (1 cr.; S-N or Audit; Every Fall) Lectures and demonstrations of university and industry research introducing students and faculty to methods and goals of biomedical engineering.

BMEN 8602. Biomedical Engineering Seminar. (1 cr.; S-N or Audit; Every Spring) Lectures and demonstrations of university and industry research introducing students and faculty to methods and goals of biomedical engineering.

BMEN 8611. Professional Skills and Ethics for Biomedical Engineers. (2 cr.; Student Option; Every Fall) This course covers a number of practical aspects surrounding research, including: how to prepare a fellowship application (or more generally a proposal); how to write a manuscript; how to give a seminar; career advice for non-academic career paths; how to network with companies; research ethics; data management; research integrity. The format of the course will be a two hour meeting each week. The first hour will cover specific issues using historical literature references with the second hour devoted to a guest lecture presentation on topics relevant to the themes of the course. Students will be required to complete the online Responsible Conduct of Research (RCR) Core Curriculum for Engineering and Technology and pass the final assessment as part of this course.

BMEN 8630. Biomedical Engineering Graduate Student Seminar. (1 cr.; max 3 cr.; S-N or Audit; Periodic Fall) Student presentations of current thesis research or other areas of biomedical engineering. prereq: Grad BMEN major

BMEN 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer) TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st 2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

BMEN 8710. Directed Research. (1-4 cr.; Student Option; Every Fall, Spring & Summer) TBD

BMEN 8720. Internship in Biomedical Engineering. (1-3 cr.; max 6 cr.; S-N or Audit; Every Fall, Spring & Summer) Supervised lab or industrial experience unrelated to student’s normal academic or employment experience. prereq: Grad BMEN major

BMEN 8777. Thesis Credits: Master’s. (1-18 cr.; max 50 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

BMEN 8820. Plan B Project. (2-3 cr.; Student Option; Every Fall, Spring & Summer) Project chosen by student and adviser to satisfy M.S. Plan B project requirement. Written report required. prereq: BMEN MS student
**Biomedical Science (BMSC)**

**BMSC 8990. Research: Biomedical Sciences.** (1-7 cr. [max 42 cr.]; S-N or Audit; Periodic Fall) Content determined by interest of student in consultation with staff. prereq: Enrollment in MD/PhD program

**Bioproducts and Biosystems Eng (BBE)**

**BBE 5001. Chemistry of Biomass and Biomass Conversion to Fuels and Products.** (4 cr. ; A-F or Audit; Every Fall) Chemistry of biomass. Sustainable utilization for biofuels/bioproducts. Bio-based materials, chemicals, energy. Environmental implications. Chemical principles/reactions underlying the structure, properties, processing, and performance of plant materials. prereq: Grad student or instr consent

**BBE 5023. Process Control and Instrumentation.** (3 cr.; Student Option; Every Fall) Fundamental principles in system dynamics/control. Emphasizes process systems and problems faced by process engineers. prereq: Grad student or instr consent

**BBE 5095. Special Problems.** (1-5 cr.; Student Option; Every Fall, Spring & Summer) Advanced individual-study project. Application of engineering principles to specific problem. prereq: instr consent

**BBE 5302. Biodegradation of Bioproducts.** (3 cr.; Student Option; Every Spring) Organisms and their importance to bio-based products: deterioration, control, bioprocesses for benefit. prereq: Grad student or instr consent

**BBE 5303. Introduction to Bio-based Materials Science.** (3 cr.; Student Option; Every Spring) Principles of materials science, their application to bio-based materials. Project required.

**BBE 5305. Pulp and Paper Technology.** (3 cr.; Student Option; Every Spring) Pulping processes, fiber refining/processing, paper manufacturing, fiber/paper properties, papermaking, paper requirements, effluent treatment. Chemical/mechanical pulping, pulp preparation, secondary fiber, de-inking, wet end additives. Lab problems/exercises supplemented by lectures. Online course.

**BBE 5333. Off-road Vehicle Design.** (4 cr.; A-F only; Every Spring) Mechanics involved in designing/testing off-road vehicles. Vehicle mechanics, traction, performance. Complexity/modeling of vehicle interaction with soil, muskeg, snow. Case study or literature review. Develop paper for publication. prereq: [BIOE 2001, 4303] or [AEM 2021, AEM 3031]. [3012 or concurrent registration is required (or allowed) in 3012 or CEGE 3502 or concurrent registration is required (or allowed) in CEGE 3502], upper div CSE or instr consent

**BBE 5401. Bioproducts Separation and Purification Processes.** (3 cr.; A-F or Audit; Every Fall) Unit operations of bioproducts engineering/manufacture. Project required. prereq: Grad student or instr consent

**BBE 5402. Bio-based Products Engineering Lab II.** (1 cr.; A-F or Audit; Every Fall) Laboratory exercises in bi-based products engineering. prereq: Grad student or instr consent

**BBE 5403. Bio-based Products Engineering Lab I.** (1 cr.; A-F or Audit; Every Spring) Laboratory exercises in bio-based products engineering. prereq: Grad student or instr consent

**BBE 5404. Biopolymers and Biocomposites Engineering.** (3 cr.; A-F or Audit; Every Fall) Structure/properties of biopolymers. Engineering of composites from biopolymers/plant-based materials. prereq: grad student or instr consent

**BBE 5480. Special Topics.** (1-4 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Topics specified in Class Schedule.

**BBE 5513. Watershed Engineering.** (3 cr.; A-F or Audit; Every Fall) Application of engineering principles to managing surface runoff from agricultural, range, and urban watersheds. Design of facilities and selection of land use practices for controlling surface runoff to mitigate problems of flooding and degradation of surface-water quality. prereq: 3023, upper div CSE

**BBE 5523. Ecological Engineering Design.** (3 cr.; A-F only; Every Spring) Application of ecological engineering to design of remediation systems. Artificial ecosystems, ecosystem/wetland restoration, constructed wetlands, biological engineering for slope stability, waste treatments. Restoring ecological service of watersheds. prereq: [CHEM 1022 or CHEM 1062, CHEM 1066], BBE 3012, grad student or instr consent

**BBE 5535. Assessment and Diagnosis of Impaired Waters.** (3 cr.; A-F only; Every Fall) Assessing impaired waters and developing TMDL for conventional pollutants. Preparing/communicating legal, social and policy aspects. TMDL analysis of real-world impaired waters problem. Field trip to impaired waters site. prereq: Grad student or instr consent

**BBE 5608. Environmental and Industrial Microbiology.** (3 cr.; A-F only; Every Fall) Use of microbes/enzymes to detoxify contaminants in field or in containment facilities. Contaminants, sources, fates. Biological organisms, pathways, catalysts utilized in bioremediation. Site inspection practices, bioremediation technologies, application in real-world situations. prereq: [BIOL 1001 or BIOL 1009], CHEM 1011

**BBE 5713. Biological Process Engineering.** (3 cr.; A-F only; Every Spring) Material/energy balances. Homogeneous reactions of bioprocess engineering and biological systems. Fermentation engineering, reactor design fundamentals. Filtration, centrifugation, separation, absorption, extraction, chromatography. Biorefining. Conversion of biomass into bioenergy, biochemicals, and biomaterials. prereq: [3033, 4013 or concurrent registration is required (or allowed) in 4013], or instr consent

**BBE 5723. Food Process Engineering.** (3 cr.; A-F or Audit; Every Spring) Food processing engineering. Applications of material balance, energy balance, fluid dynamics, and heat/mass transfer to refrigeration, freezing, psychrometrics, dehydration, evaporation, non-thermal processing, and separation. Development/control for food products. prereq: [4013 or concurrent registration is required (or allowed) in 4013], or instr consent

**BBE 5733. Renewable Energy Technologies.** (3 cr.; A-F or Audit; Every Spring) Energy security and its environmental, economic and societal impacts. Current and emerging technologies for production and use, characteristics of renewable energy, key methods for efficient production, current and probable future, and impact on sustainable development. prereq: Grad student or instr consent

**BBE 5743. Nanobiotechnology & Nanobiotechnology.** (3 cr.; Student Option; Every Spring) This course will educate on the interdisciplinary areas of biotechnology/nanobiotechnology and nanobiotechnology, including engineering principles and inherent technological applications. prereq: Instructor consent

**BBE 5753. Air Quality and Pollution Control Engineering.** (3 cr.; A-F or Audit; Every Spring) Air quality and pollution control engineering systems. Air pollutant sources, emissions
transformations, dispersion, fate and impacts. Introduction to air quality and pollution laws, regulations and permits. Control technologies including energy conservation, cyclones, electrostatic precipitators, fabric filters, absorbers, adsorbers, incinerators and biofilters. Course Prerequisites Graduate student or instructor consent Credit will not be granted if credit has been received for CEGE 5561

BBE 8001. Seminar I. (1 cr.; A-F only; Every Fall) Presentation/discussions on current research topics, research philosophy/principles, proposal writing, professional presentations.

BBE 8002. Seminar II. (1 cr. [max 2 cr.]; A-F only; Every Fall) Organization/critique of seminars on new developments in biosystems and agricultural engineering, prereq: 8001 or concurrent registration is required (or allowed) in 8001 or equiv

BBE 8003. Research Seminar II. (1 cr. [max 2 cr.]; S-N or Audit; Every Spring) Moderate and critique seminars in biosystems and agricultural engineering. prereq: 8002 or equiv

BBE 8005. Supervised Classroom or Extension Teaching Experience. (2 cr.; S-N or Audit; Every Fall & Spring) Teaching experience is offered in the following departments: Biosystems and Agricultural Engineering; Agronomy and Plant Genetics; Horticultural Science; Soil, Water, and Climate; Plant Pathology. Discussions about effective teaching to strengthen skills and develop a personal teaching philosophy. prereq: instr consent

BBE 8013. Parameter Estimation in Biosystems and Agricultural Engineering. (3 cr.; A-F or Audit; Periodic Fall & Spring) Procedures for estimating parameter values and parameter uncertainty from experimental data. Values and interpretation of linear and nonlinear models using ordinary and weighted least-square methods. Design of experiments. Application to biosystems and agricultural engineering problems. prereq: Stat 3021 or equiv, computer programming course

BBE 8094. Advanced Problems and Research. (2-6 cr.; Student Option; Periodic Fall & Spring) TBD prereq: 5095

BBE 8300. Research Problems. (1-10 cr.; Student Option; Every Fall & Spring) Independent research under faculty guidance. prereq: instr consent

BBE 8303. Machinery Modeling. (3 cr.; Student Option; Periodic Fall & Spring) Machinery systems modeling using multibody dynamics simulation software (MBS). Review models presented in literature. Report on limitations of modeling approaches used. Models developed in students’ areas of interest. prereq: [3012 or CEGE 3502], AEM 2021

BBE 8304. Advanced Topics in Wood Drying. (2 cr.; Student Option; Every Fall) Rheological behavior of first-dried solid wood. Significance of creep to stress-strain pattern, shrinkage, and degrade development in lumber drying. Interpretation/evaluation of schedules, processes, and primary/auxiliary equipment used in commercial drying processes. Energy consideration in drying processes. prereq: 4304

BBE 8307. Advances and Methods in Forest Products Pathology and Preservation. (2 cr.; Student Option; Every Spring) Principles of wood protection, methods of evaluating preservatives. Emphasizes international developments. prereq: 4303

BBE 8311. Mechanics of Wood and Wood Composites. (2 cr.; Student Option; Every Spring) Advanced topics on behavior of wood composites. prereq: instr consent

BBE 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

BBE 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

BBE 8513. Hydrologic Modeling of Small Watersheds. (3 cr.; Student Option; Spring Even Year) Study/representation of hydrologic processes by mathematical models. Stochastic meteorological variables, infiltration, overland flow, return flow, evapotranspiration, channel flows. Approaches for model calibration/evaluation. prereq: [3012 or CEGE 3502], hydrology course

BBE 8523. Coupled Heat, Moisture, and Chemical Transport in Porous Media. (3 cr.; A-F or Audit; Periodic Fall) Mathematical study of coupled heat, moisture, and chemical transport in porous media. Derivation of governing equations for coupled heat, moisture, and chemical transport. Derivation of numerical solution techniques to solve coupled equations. Comparison of numerical solutions to analytical solutions. prereq: [CSci 5301 or equiv], [Math 5512, Math 5513] or equiv, [Soil 5232 or equiv], computer programming

BBE 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.) (No description) prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 10 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

BA 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

BA 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.) (No description) prereq: Doctoral student, adviser and DGS consent

BLAW 6158. The study of laws affecting private business and publicly-traded companies.. (2 cr. [max 4 cr.]; A-F only; Every Spring) This course highlights topics that are important to any business manager, with particular emphasis on areas of interest for those aspiring to high level executive/management positions with publicly-traded companies. General topics include: contracts, real estate law, the law of agency, employment law, certain discrimination laws (including Minnesota’s fairly recent protections for women in the workplace), and forms of business entity. Public company subjects include: pros and cons of going public, the IPO process, federal securities laws and SEC regulations regarding public company reporting requirements, insider trading, the Sarbanes-Oxley Act of 2002 and its impact on corporate governance, trends in shareholder democracy rights and shareholder activism, and the role of boards and audit committees. Throughout the course, we will examine the impact of the Supreme Court on American business. prereq: MBA student

CMBA 5554. International Residency. (1.5 cr.; A-F only; Every Spring)
CMBA 5625. Entrepreneurship and Innovation. (3 cr.; A-F only; Every Spring) Entrepreneurial role of employee/management in increasing organizational value through creation/formation of new businesses, products, or markets within entities ranging from early stage companies to social ventures to F500 corporations.

CMBA 5710. Leadership. (1.5 cr.; A-F only; Every Fall) Self-awareness/insight concerning personal leadership/core values. Increase capabilities to understand potential personal derailment patterns/create effective strategies to address challenges. Develop lifelong executive leadership practices/habits for high performance in demanding circumstances.

CMBA 5711. Negotiation. (3 cr.; A-F only; Every Fall) Securing agreements between two or more parties who are interdependent and are seeking to maximize their own outcomes. Negotiation in various settings. Simulations, role-playing, cases.

CMBA 5712. Information Technology. (1.5 cr.; A-F only; Every Fall) Course prepares you with an inside-out and an outside-in perspective of how information technology is disrupting a variety of industries, how to compete in such an environment and how to strategically manage the IT function within companies to have an efficiency-innovation duality. Key principles covered in the class are developing a state-of-the-art IT strategy, getting first-hand exposure to ERP systems and learning the organizational changes involved in implementing such systems, applying disruptive and big-bang theories of IT enables disruption and learning the nuances of platform competition and multi-sided markets to fight such disruption.

CMBA 5713. Managerial Accounting. (3 cr.; A-F only; Every Fall) How to analyze accounting for management decisions. Planning/control. Transfer pricing, performance measurements, cost behavior, cost allocation, activity-based costing, standard costs.

CMBA 5714. Advanced Marketing. (3 cr.; A-F only; Every Fall) Product markets in which organization should compete. Sustainable competitive advantage. Matching marketing strategy with environment. Coordinating marketing/business functions. Organizing/managing marketing process. Cases.

CMBA 5715. Advanced Financial Management. (3 cr.; A-F only; Every Fall) Executive-level corporate financial policy. Rigorous case-oriented approach. Students apply principles of finance on their own initiative.

CMBA 5721. Advanced Management Topics. (1.5 cr. [max 3 cr.]; A-F only; Every Spring) Topics reflects strengths, talents, and interests of class. Topics integrate different aspects of curriculum while not being limited by specific area/paradigm.

CMBA 5723. Ethics. (1.5 cr.; A-F only; Every Fall & Spring) Role of ethics in corporate strategy. Stakeholder management, individual/collective responsibility, international business ethics. Business's responsibility to the environment. Truthful/tasteful advertising. Obligations to local community. Managing diverse workforce.

CMBA 5724. International Residency. (1.5 cr.; A-F only; Every Spring) Students travel to international location for 11 days. Discussions with international colleagues. Applying program concepts. Sensitivity to cultural/social differences. Pre-trip preparation, on-site discussion, trip assignment.

CMBA 5810. Introduction to Statistics and Business Analytics. (3 cr.; A-F only; Every Fall) This course focuses on the use of data to solve business problems and the development of skills necessary to (1) formulate a management problem as a statistical problem; (2) collect appropriate data and perform fundamental procedures of statistical analysis; and (3) to interpret, critically evaluate, and implement the results of the statistical analysis. In particular, the student should be able to: generate and use basic graphical and numerical descriptive methods; apply basic estimation and testing procedures; estimate and interpret the parameters of simple and multiple regression model; to test the utility of the model and to use it for estimation and prediction; think statistically about issues facing her/his organization; recognize when statistical methods are effective, and when they are not; and to translate, communicate, and critically evaluate the results of statistical analyses.

CMBA 5811. Financial Accounting. (3 cr.; A-F only; Every Fall) Students learn about the accounting system used by firms to measure and report their economic performance and financial position to external parties. Students analyze corporate financial reports to discover the impact of significant economic events. Discussions and cases focus on the role of financial reporting standards in informing financial intermediaries and contributing to the efficient allocation of capital in a modern economy.

CMBA 5812. Organizational Behavior. (3 cr.; A-F only; Every Fall) Course's main purpose is to prepare you to successfully engage and lead people to achieve organizational goals. Effective managers must not only develop winning strategies, but they must also implement them. Doing so requires a thorough understanding of organizational behavior. Broadly speaking, organizational behavior is the systematic study of how people behave in organizational settings. This course is designed to develop your understanding of the complexity of organizations and how they affect behavior, build your self-knowledge and people-leadership skills, and help you learn and apply appropriate tactics and tools to improve organizational functioning and facilitate personal career success. Course topics include organizational (e.g. structure and culture), interpersonal (e.g. power and influence, social networks, conflict), and individual (e.g. decision making, motivation) aspects of organizational behavior.

CMBA 5813. Competing In The Digital Age. (1.5 cr.; A-F only; Every Fall) Course prepares you with an inside-out and an outside-in perspective of how information technology is disrupting a variety of industries, how to compete in such an environment and how to strategically manage the IT function within companies to have an efficiency-innovation duality. Key principles covered in the class are developing a state-of-the-art IT strategy, getting first-hand exposure to ERP systems and learning the organizational changes involved in implementing such systems, applying disruptive and big-bang theories of IT enables disruption and learning the nuances of platform competition and multi-sided markets to fight such disruption.

CMBA 5814. Economics. (1.5 cr. [max 3 cr.]; A-F only; Every Fall) The goal is to improve corporate decision-making by developing better understanding of the economic environment. Emphasis is strategic, not theoretical (this is not a standard macro course.) We shall consider two primary kinds of economic phenomena (and models): i) long-run economic growth; ii) business cycles. Also and importantly, we will learn about what a central bank does and spend some time on the current world financial/macroeconomic mess. How could we do otherwise? Students will learn appropriate tools to analyze these phenomena and apply them to their own decision-making environments, both organizational and personal.

CMBA 5815. Marketing Management. (3 cr.; A-F only; Every Spring) This is a study of management of the marketing function. We strive for an understanding of foundational marketing concepts and of the skills needed for strategy development. We also consider the importance of integrating financial data, operational factors, and human resource issues along with marketing research pertaining to product offering decisions, distribution channels, pricing and communication.

CMBA 5816. Strategic Management. (3 cr.; A-F only; Every Spring) Course provides an integrated, top management viewpoint for business students. It frames the functional courses in the CE MBA Fall, 2018
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

CMBA 5817. Financial Management. (3 cr.; A-F only; Every Spring)
Students apply concepts of risk, return, and valuation to decisions that a corporate financial officer or person in small business must make about sources/uses of funds during changing financial markets.

CMBA 5818. Supply Chain and Operations. (3 cr.; A-F only; Every Spring)
A majority of the people and physical assets of a company are involved in operations. The operations function represents the physical core of every company: The systems and processes that generate the goods and services to be sold to customers. World-class operations can lead to a significant and enduring competitive advantage. Failing operations mean low productivity and bad press at best, and company failure at worst. Understanding operations means understanding processes and supply chains. This course is designed to develop a basic framework to comprehend key design decisions and trade-offs within that context. As such, the course encompasses both manufacturing and service operations. Course also highlights why successful supply chain and operations management has to be strategic in nature, and how the operations function relates to other business functions such as marketing or product development.

CMBA 5820. Negotiation Strategies: Creative Solutions for Difficult Problems. (3 cr.; A-F only; Every Fall)
Negotiation is the art and science of securing agreements between two or more parties who are interdependent and who are seeking to maximize their own outcomes. As such, this course deals with understanding the behavior of individuals, groups, and organizations in the context of competitive situations. We focus on understanding both the theory and process of negotiation in a variety of settings. This course is designed to be relevant to the broad spectrum of negotiation problems that are faced by managers and professionals. It is designed to complement the technical and diagnostic skills learned in other courses in the program. A basic premise of the course is that while a manager needs analytical skills to discover optimal solutions to problems, a broad array of negotiation skills are needed to get these solutions accepted and implemented. This course will allow participants the opportunity to develop these skills experientially and to understand negotiation in useful analytic frameworks. As such, considerable emphasis will be placed on simulations, role-playing, and cases.

CMBA 5821. Managerial Accounting. (3 cr.; A-F only; Every Fall)
This course presents the topic of management accounting in depth. The purpose of management accounting is to provide information to management for costing products and decision making as well as for planning, controlling, and evaluating business activities. The student who successfully completes this class will be able to identify a managerial issue and create a solution to the problem.

CMBA 5822. Applied Leadership. (1.5 cr.; A-F only; Every Fall)
The course objectives are to build stronger self-awareness and insight concerning personal leadership and core values, increase capabilities to understand potential personal derailment patterns and create effective strategies to address these challenges, better nurture and leverage strengths for executive leadership performance, effectively coach and motivate others as a key executive leadership attribute, and develop deeper lifelong executive leadership practices and habits for high performance in demanding circumstances. prereq: CMBA student

CMBA 5823. Competing Globally. (3 cr.; A-F only; Every Fall)
In this course we explore the many faces of global competition. We challenge the assumptions that global strategy is a precursor to success by exploring a set of complex forces that drive firms to internationalize. The course places special emphasis on emerging markets, given that they are home to most of the global growth and population, as well as institutional voids. We focus on factors that determine strategic choices firms make as they build their international presence, by exploring how firms: build international presence by selecting countries, and modes of entry; benefit from national competitive advantage in developed and emerging markets; diagnose and address cultural challenges of working across borders, organize to share knowledge across borders; build and sustain their multifaceted global legitimacy; collaborate across borders; prepare their managers to address cultural, personal, and career challenges in expatriate roles and on global teams.

CMBA 5824. Corporate Responsibility & Ethics. (1.5 cr.; A-F only; Every Fall)
In this course we will explore both ethical challenges in the contemporary business environment as well as the strategic opportunities offered by corporate social responsibility. Students will conduct stakeholder analysis, apply ethical principles, consider alternatives, and recommend and defend an "ethical" final decision. We will seek to answer the question "can business do good, and also do well?"

CMBA 5825. Strategic Marketing. (3 cr.; A-F only; Every Spring)
Marketing begins and ends with the buyer. Hence, marketing strategy is the study of delivering value to buyers in a manner that exceeds the value proposition of marketplace rivals, using both internal and external resources. From determining consumer needs to assuring customer satisfaction, a clear understanding of buyer behavior is critical to the successful formulation and implementation of marketing strategy. To that end, this course is designed to provide prospective general managers the intellectual tools necessary to design actionable marketing strategies. There will be a strong emphasis on managerial action and multiple theoretical perspectives will be discussed.

CMBA 5826. Corporate Strategy. (1.5 cr.; A-F only; Every Spring)
This course focuses on the strategic management of firm scope (i.e., choosing what your firm does and does not do). It provides understanding about strategic choices such as outsourcing or ?insourcing? activates and entering or leaving lines of business. We develop and employ a set of tools that provide a disciplined way to investigate these issues. Why companies exist, notion of added value, how companies add value through resources and incentives to develop resources, why a company would participate in more than one line of business, and what considerations should guide corporate renewal.

CMBA 5827. Advanced Financial Management. (3 cr.; A-F only; Every Spring)
Financial Management introduced the theory of corporate finance and the application of value creation principles to, mainly, business operating decisions at the level of the project or initiative. This course moves on to consider decisions at the firm level. Among the questions addressed in this course are how best to measure overall firm performance, how to best finance the company, including debt versus equity questions, when to include options in the firm?s financing arrangements, when to lease resources rather than buy them, when to pay a dividend and/or repurchase shares and whether mergers and acquisitions generate value added.

CMBA 5828. International Residency - Study Abroad. (1.5 cr.; A-F only; Every Spring)
Students travel to an international location for 9-10 days. This provides the opportunity to engage in discussions with international colleagues, apply program concepts, and develop a broader sensitivity to cultural and social differences. Pre-trip preparation, assignments, on-site discussions and activities, and post-trip assignments are required.

CMBA 5829. International Residency? Global Virtual Team Project. (1.5 cr.; A-F only; Every Spring)
The Virtual Team Project (VTP) provides Carlson School Executive MBA students with the unique opportunity to work in a collaborative team environment across cultures, industries, and markets alongside students from our Vienna Executive MBA program and our China Executive MBA program. As participants in the VTP, students
develop advanced skills in teamwork, cross-cultural collaboration, and business plan development within a dynamic environment shaped by academic rigor and the demands of real-world international business.

CMBA 5530. Advanced Management Topic Elective: Power & Influence. (1.5 cr.; A-F only; Every Spring) Elective courses are offered across cohorts on preference basis. Course topics may change from year to year and can cover a variety of areas including entrepreneurship/innovation, strategy, IT, and others.

CMBA 5531. Advanced Management Topic Elective. (1.5 cr.; A-F only; Every Spring) Elective courses are offered across cohorts on preference basis. Course topics may change from year to year and can cover a variety of areas from entrepreneurship/innovation, strategy, IT, and others.

CMBA 5532. Advanced Management Topic Elective. (1.5 cr.; A-F only; Every Spring) Elective courses are offered across cohorts on preference basis. Course topics may change from year to year and can cover a variety of areas from entrepreneurship/innovation, strategy, IT, and others.

CMBA 5533. Advanced Management Topics Elective. (1.5 cr.; A-F only; Every Spring) Elective courses are offered across cohorts on preference basis. Course topics may change from year to year and can cover a variety of areas from entrepreneurship/innovation, strategy, IT, and others.

Carlson School of Management (CSOM)

CSOM 8101. Methods and Topics in Applied Economics. (2-4 cr.; Student Option; Every Spring) Intermediate methods/topics in business research.

Center for Allied Health Prog (CAHP)

CAHP 5110. Foundations of Interprofessional Communication and Collaboration. (1 cr.; S-N only; Every Fall) Interprofessional approach to health care. Directed group activities in five two-hour sessions: personal/professional image, teamwork, self/peer assessment; health professions; professional identity/integrity; relationships between professions and those they serve. Includes online modules. prereq: Enrolled CLSP or OT student

Chemical Engineering (CHEN)

CHEN 5531. Electrochemical Engineering and Renewable Energy. (3 cr.; A-F only; Every Fall) Fundamentals of electrochemical engineering. Electrochemical mass transfer electrokinetics, thermodynamics of electrochemical cells, modern sensors. Formation of thin films and microstructured materials. Computer-based problems. prereq: [MATS 3011 or instr consent], [upper div CSE or grad student]

CHEN 5751. Biochemical Engineering. (3 cr.; A-F or Audit; Every Spring) Chemical engineering principles applied to analysis/design of complex cellular/enzyme processes. Quantitative framework for design of cells for production of proteins, synthesis of antibodies with mammalian cells, or degradation of toxic compounds in contaminated soil. prereq: [3005 or 4005], [concurrent registration is required (or allowed) in 3006 or concurrent registration is required (or allowed) in 4006], [concurrent registration is required (or allowed) in 3102 or concurrent registration is required (or allowed) in 4102]

Whole organ, body heat transfer issues. Blood flow, oxygenation. Heat/mass transfer in respiratory systems. Biotransport issues in artificial organs, membrane oxygenators, drug delivery applications. prereq: 3005 or 4005 or equiv

CHEN 5771. Colloids and Dispersions. (3 cr.; A-F or Audit; Every Fall) Preparation, stability, coagulation kinetics or colloidal solutions. DLVO theory, electrokinetic phenomena. Properties of micelles, other microstructures. prereq: Physical chemistry

CHEN 8101. Fluid Mechanics I: Change, Deformation, Equations of Flow. (3 cr.; A-F or Audit; Every Fall) Equations of change of mass, momentum, angular momentum. Kinematics of deformation, convective transport. Applications to fluid statics/dynamics of Newtonian fluids. Examples of exact solutions of Navier-Stokes equations, useful simplifications. prereq: Chemical engineering grad student or instr consent

CHEN 8102. Principles and Applications of Rheology. (2 cr.; A-F or Audit; Periodic Spring) Deformation and flow of non-Newtonian and viscoelastic fluids, plastic materials, and perfectly elastic solids. Phenomenological and molecular interpretation of rheology of elastomers, polymer melts and polymer solutions, application of rheology to polymer processing. prereq: 8101

CHEN 8112. Rheology Laboratory Project. (1 cr.; A-F or Audit; Every Spring) How to make rheological lab measurements. Students select/characterize rheologically interesting material with help of instructor. Oral/written report. Half-semester course. prereq: 8101, [4702 or concurrent registration is required (or allowed) in 4702 or 8102 or concurrent registration is required (or allowed) in 8102]

CHEN 8115. Electron Microscopy of Soft Matter. (2 cr.; A-F or Audit; Periodic Fall) Operation principles of transmission electron microscope (TEM) and scanning electron microscope (SEM). How these instruments are applied in study of soft materials (e.g., liquid, semi-liquid material systems). Unique specimen preparation techniques, low image contrast, electron-beam radiation-damage, and limited signal-to-noise ratio. TEM/SEM digital imaging, prereq: Chemical engineering or materials science/engineering grad major or instr consent

CHEN 8201. Applied Math. (3 cr.; A-F or Audit; Every Fall) Integrated approach to solving linear mathematical problems. Linear algebraic equations. Linear ordinary and partial differential equations using theoretically numerical analysis based on linear operator theory. prereq: Chemical engineering grad student or instr consent

CHEN 8221. Synthetic Polymer Chemistry. (4 cr.; A-F or Audit; Every Fall) Condensation, radical, ionic, emulsion, ring-opening, metal-catalyzed polymerizations.
Chain conformation, solution thermodynamics, molecular weight characterization, physical properties. prereq: [Undergraduate organic chemistry course, undergraduate physical chemistry course] or instr consent

CHEN 8302. Physical Rate Processes II: Mass Transfer. (3 cr.; A-F or Audit; Periodic Fall) Applications of mass transfer. Membranes, including gas separation and reverse osmosis. Controlled drug release. Dispersion, including examples of pollution modeling. Adsorption/chromatography. Coupled heat/mass transfer, including cooling towers. Double-diffusive effects. prereq: Chemical engineering grad student or instr consent

CHEN 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

CHEN 8401. Physical and Chemical Thermodynamics. (3 cr.; A-F or Audit; Every Fall) Principles of thermodynamics with emphasis on solving problems encountered in chemical engineering and materials science. An organized exposition of fundamental concepts that will help students understand and analyze the systems they are likely to encounter while conducting original research. This course is for students who seek a much deeper understanding than a typical undergraduate course provides. prereq: Undergraduate engineering course or chemistry course in thermodynamics. Chemical Engineering graduate student, or instructor consent.

CHEN 8402. Statistical Thermodynamics and Kinetics. (3 cr.; A-F or Audit; Every Spring) Introduction to statistical mechanical description of equilibrium and non-equilibrium properties of matter. Emphasizes fluids, classical statistical mechanics. prereq: Chemical engineering grad student or instr consent

CHEN 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

CHEN 8502. Process Control. (3 cr.; A-F or Audit; Periodic Fall) For linear systems: stability, controllability, observability, pole-placement via state feedback state observers, output feedback, and robustness of control systems. For nonlinear systems: solution properties, stability analysis, singular perturbations, feedback linearization via state feedback, and direct synthesis via output feedback. prereq: Chemical Engineering grad major or instr consent

CHEN 8503. Chemical Rate Processes: Homogeneous Reactions. (3 cr.; A-F or Audit; Periodic Fall) Description/characterization of chemically reacting systems. Theories of elementary reactions. Experimental methods for investigating elementary reactions. Applications of chemical kinetics to complex reactions, such as combustion, flames, and the atmosphere. prereq: Chemical engineering grad student or instr consent

CHEN 8555. Chemical Engineering Teaching Practicum. (1-6 cr.; max 12 cr.) (No Grade Associated; Every Fall, Spring & Summer) Experience in instruction including grading of student work, holding of office hours, and in special cases, lecturing. Students will work with and receive feedback from a faculty member in CEMS. prereq: Grad ChEn major and DGS permission

CHEN 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.) (No Grade Associated; Every Fall, Spring & Summer) tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

CHEN 8754. Systems Analysis of Biological Processes. (3 cr.; Student Option; Every Spring) Relating biological processes at molecular level to physiological level of cells/organisms/populations. Methodology for analyzing data. Quantification of molecular interplays. prereq: Grad student in [life sciences or chemical/physical sciences or engineering]; ChEn students must take A/F

CHEN 8771. Interfaces and Colloids. (3 cr.; A-F or Audit; Every Fall) Interfacial tension/thermodynamics, capillarity, contact angle, wettability, adhesion, preparation/stability of colloids. DLVO theory, electrokinetic phenomena, micelles, rheology of dispersions. prereq: Physical Chemistry

CHEN 8777. Thesis Credits: Master's. (1-18 cr.; max 50 cr.) (No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

CHEN 8888. Thesis Credit: Doctoral. (1-24 cr.; max 100 cr.) (No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

CHEN 8900. Seminar. (1 cr.; S-N or Audit; Every Fall) Presentation and discussion of papers concerning newer developments in chemical engineering, materials science, and related fields.

CHEN 8901. Seminar. (1 cr.; max 9 cr.) (S-N only; Every Spring) Presentation and discussion of papers concerning the newer developments in chemical engineering.

CHEN 8902. Seminar: Finite Element Methods of Computer-aided Analysis. (1 cr.; A-F or Audit; Every Spring) Fundamentals of finite element method as applied mathematics. How to construct finite element codes and put them into operation. prereq: Chemical engineering grad student or instr consent

CHEN 8993. Directed Study. (1-12 cr.; Student Option; Every Fall, Spring & Summer)

CHEN 8994. Directed Research. (1-12 cr.; Student Option; Every Fall, Spring & Summer)

CHEN 8995. Special Topics. (1-4 cr.; Student Option; Every Fall, Spring & Summer) New or experimental courses offered by department or visiting faculty

Chemical Physics (CHPH)

CHPH 8081. M.S. Plan B Project I. (4 cr.; A-F only; Every Fall, Spring & Summer) Topic arranged by student adviser. Written report required. prereq: Grad chem phys major

CHPH 8082. M.S. Plan B Project II. (4 cr.; A-F only; Every Fall, Spring & Summer) Topic arranged by student adviser. Written report required. prereq: Grad chem phys major

CHPH 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

CHPH 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent
CHEM 8601. Seminar: Modern Problems in Chemical Physics. (4 cr.; Student Option; Every Spring)
Modern physical methods, techniques, and ideas used in chemical physics. Some of these are: Fundamentals of quantum mechanics, quantum electrodynamics, statistical mechanics, solid-state theory, molecular theory of liquids, and computational methods. prereq: Grad chem physics major or instr consent

CHEM 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer)
tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr.; dept consent for 3rd/4th registrations, up to 24 combined cr.; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr.

CHEM 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

CHEM 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall & Spring)
(No description) prereq: Max 18 cr per semester or summer; 24 cr required

Chemistry (CHEM)

CHEM 5210. Materials Characterization. (4 cr.; Student Option; Every Spring)
Modern tools/techniques for both bulk- and thin-film characterization. Topics may include ion-solid interactions, Rutherford backscattering, secondary ion mass spectrometry, solid-state NMR, x-ray photoelectron spectroscopy, small-angle x-ray/neutron scattering, transmission/scanning electron/probe microscopy, near-field scanning optical microscopy, porosimetry, adsorption techniques, and ellipsometry. prereq: grad student or instr consent

CHEM 5245. Introduction to Drug Design. (3 cr.; A-F or Audit; Periodic Fall)
Concepts that govern design/discovery of drugs. Physical, biologic, medicinal chemical principles applied to explain rational design and mechanism of action drugs. prereq: 2302 or equiv

CHEM 5755. X-Ray Crystallography. (4 cr.; A-F or Audit; Every Spring)
Essentials of crystallography as applied to modern, single crystal X-ray diffraction methods. Practical training in use of instrumentation in X-ray crystallography faculty in Department of Chemistry. Date collection, correction/refinement, structure solutions, generation of publication materials, use of Cambridge Crystallographic Structure Database. prereq: Chem grad student or instr consent

CHEM 8011. Mechanisms of Chemical Reactions. (4 cr.; Student Option; Every Fall)
Reaction mechanisms and methods of study. Mechanistic concepts in chemistry. Gas phase reactions to mechanisms, "electron pushing" mechanisms in organic reactions, mechanism of enzymatic reactions. Kinetic schemes and other strategies to investigate mechanisms. prereq: 2302 or equiv

CHEM 8021. Computational Chemistry. (4 cr.; Student Option; Every Spring)

CHEM 8066. Professional Conduct of Chemical Research. (1 cr.; S-N or Audit; Periodic Fall)
Builds sensitivity to ethical issues in chemical research. Readings/case studies, small-group/large-group discussion, summarizing comments from instructors/guests/panels having special expertise. Weekly seminar. prereq: Chem grad student

CHEM 8081. M.S. Plan B Project I. (1-4 cr.; A-F or Audit; Every Fall, Spring & Summer)
Satisfies project requirement for Plan B master's degree. May appear on M.S. degree program, but does not count toward 14-credit minimum in major field. Topic arranged by student adviser; written report required. 8081 required; 8082 optional. prereq: grad chem major

CHEM 8082. M.S. Plan B Project II. (1-4 cr.; A-F or Audit; Every Fall, Spring & Summer)
Satisfies project requirement for Plan B master's degree. May appear on M.S. degree program, but does not count toward 14-credit minimum in major field. Topic arranged by student adviser; written report required. 8081 required; 8082 optional. prereq: grad chem major

CHEM 8151. Analytical Separations and Chemical Equilibria. (4 cr.; Student Option; Every Fall & Spring)
Advanced treatment of principles of analytical chemistry, chemical equilibria, and dynamics. Chromatographic and other modern analytical scale separation techniques. Emphasizes column dynamics and retention mechanisms. prereq: instr consent

CHEM 8152. Analytical Spectroscopy. (4 cr.; Student Option; Every Fall)
Survey of analytical spectroscopic methods. Design/application of spectroscopic instruments, including signal generation, acquisition, and interpretation. May include nuclear magnetic resonance, electron paramagnetic resonance, infrared and ultraviolet/visible spectroscopy, and mass spectrometry. prereq: grad chem major or instr consent

CHEM 8153. Extracting Signal From Noise. (5 cr.; A-F or Audit; Every Spring)
Use of analog/digital electronics and computational methods in experiments. Passive circuits, operational amplifiers, filters, oscillators and Laplace transform techniques in analysis, domain conversion for data acquisition/control, statistics, experimental design. Introduction to chemometrics, Fourier analysis, convolution/deconvolution, curve fitting. prereq: [4101 or equiv], differential equations course

CHEM 8155. Advanced Electroanalytical Chemistry. (4 cr.; Student Option; Every Spring)
Thermodynamics/kinetics of electron/ion transfer, electric double layer, mass transfer by diffusion/migration. Ion-selective electrodes, chronocoulometry, cyclic voltammetry, chronocoulometry, cyclic voltammetry, pulse voltammetry, ion-transfer voltammetry, impedance spectroscopy, bioelectroanalysis, rotating disk electrodes, microelectrodes, chemically modified electrodes. Scanning electrochemical microscopy. EC-STM, quartz crystal microbalance.

CHEM 8157. Bioanalytical Chemistry. (4 cr.; A-F or Audit; Periodic Spring)
Theory and practical aspects of analytical methods used in determination/characterization of biologically important materials. Enzymatic/kinetic methods in study of proteins, carbohydrates, lipids, and nucleic acids.

CHEM 8159. Nuclear Magnetic Resonance Spectroscopy. (4 cr.; Student Option; Periodic Fall)
Detailed understanding of relaxation processes, chemical exchange, quadrupolar effects, NMR, NMR hardware, and solid state NMR. NMR imaging and Pulsed Field Gradient (PGF) NMR are discussed. prereq: Sem of organic chem

CHEM 8180. Special Topics in Analytical Chemistry. (2-4 cr.; Student Option; Periodic Fall)
Topics (and availability) vary by year depending on instructor and development of the field. prereq: Grad chem major or instr consent

CHEM 8201. Materials Chemistry. (4 cr.; A-F or Audit; Every Fall)
Crystal systems/unit cells, phase diagrams, defects/interfaces, optical/dielectric properties, electrical/thermal conductivity, X-ray diffraction, thin film analysis, electronic structure, polarons/phonons, solid state chemistry, liquid/molecular crystals, polymers, magnetic/optical materials, porous materials, ceramics, piezoelectric materials, biomedical materials, catalysts. prereq: [4701, 3902] or instr consent

CHEM 8211. Physical Polymer Chemistry. (4 cr.; Student Option; Every Spring)

CHEM 8221. Synthetic Polymer Chemistry. (4 cr.; Student Option; Every Fall)
Condensation, radical, ionic, emulsion, ring-opening, metal-catalyzed polymerizations. Chain conformation, solution thermodynamics, molecular weight characterization, physical properties. prereq: [Undergrad organic
CHEM 8280. Special Topics in Materials Chemistry. (2-4 cr.; Student Option; Periodic Fall & Spring)
Topics (and availability) vary by year depending on instructor and development of the field. prereq: Grad chem major or instr consent

CHEM 8321. Organic Synthesis. (4 cr.; Student Option; Every Fall)
Core course; fundamental concepts, reactions, reagents, structural and stereochemical issues, and mechanistic skills necessary for understanding organic chemistry. prereq: 2302 or equiv

CHEM 8322. Advanced Organic Chemistry. (4 cr.; Student Option; Every Spring)
Modern studies. Topics, which vary by year, include natural products, heterocycles, asymmetric synthesis, organometallic chemistry, and polymer chemistry. prereq: 2302 or equiv

CHEM 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

CHEM 8352. Physical Organic Chemistry. (4 cr.; Student Option; Every Spring)
Fundamental concepts, mechanistic tools for analyzing organic reaction mechanisms. Solvation, reactive intermediates, gas phase chemistry, photochemistry, strained-ring chemistry. prereq: 4011 or 8011

CHEM 8361. Interpretation of Organic Spectra. (4 cr.; Student Option; Every Fall)
Practical application of nuclear magnetic resonance, mass, ultraviolet, and infrared spectral analyses to solution of organic structural problems. prereq: 2302 or equiv

CHEM 8380. Special Topics in Organic Chemistry. (1-4 cr.; Student Option; Periodic Spring)
Topics (and availability) vary by year depending on instructor and development of the field. prereq: grad chem major or instr consent

CHEM 8411. Introduction to Chemical Biology. (4 cr.; Student Option; Every Fall)
Chemistry of amino acids, peptides, proteins, lipids, carbohydrates, and nucleic acids. Structure, nomenclature, synthesis, and reactivity. Overview of techniques used to characterize these biomolecules. prereq: 2302 or equiv

CHEM 8412. Chemical Biology of Enzymes. (4 cr.; Student Option; Periodic Spring)
Enzyme classification with representative examples from current literature. Strategies used to decipher enzyme mechanisms. Chemical approaches for control of enzyme catalysis. prereq: 2302 or equiv

CHEM 8413. Nucleic Acids. (4 cr.; Student Option; Periodic Fall)
Chemistry and biology of nucleic acids: structure, thermodynamics, reactivity, DNA repair, chemical oligonucleotide synthesis, antisense approaches, ribozymes, overview of techniques used in nucleic acid research, interactions with small molecules and proteins. prereq: 2302 or equiv

CHEM 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

CHEM 8480. Special Topics in Biological Chemistry. (2-4 cr.; Student Option; Periodic Spring)
Topics (and availability) vary by year, depending on instructor and development of the field. prereq: Grad chem major or instr consent

CHEM 8541. Dynamics. (4 cr.; Student Option; Periodic Fall)
Mathematical methods for physical chemistry. Classical mechanics/dynamics, normal modes of vibration. Special topics such as rotational motion, Langevin equation, Brownian motion, time correlation functions, collision theory, cross sections, energy transfer, molecular forces, potential energy surfaces, classical electrostatics, Shannon entropy. prereq: Undergrad physical chem course

CHEM 8551. Quantum Mechanics I. (4 cr.; Student Option; Every Fall)
Review of classical mechanics. Postulates of quantum mechanics with applications to determination of single particle bound state energies and scattering cross-sections in central field potentials. Density operator formalism with applications to description of two level systems, two particle systems, entanglement, and Bell inequality. prereq: undergrad physical chem course

CHEM 8552. Quantum Mechanics II. (4 cr.; Student Option; Every Spring)
Second Quantization/Density matrices; Molecular Electronic Structure Theory; Hartree-Fock Theory; Electron Correlation; Configuration Interaction; Perturbation Theory; Energy Derivatives; Coupled-Cluster;Density Functional Theory; Relativistic Quantum Chemistry; prereq: 8551

CHEM 8561. Thermodynamics, Statistical Mechanics, and Reaction Dynamics I. (4 cr.; Student Option; Every Fall)
Two-part sequence. Thermodynamics, equilibrium statistical mechanics, ensemble theory, partition functions. Applications, including ideal gases/crystals. Theories of simple liquids, Monte Carlo, and molecular dynamics simulations. Reaction dynamics from microscopic viewpoint. prereq: undergrad physical chem course

CHEM 8562. Thermodynamics, Statistical Mechanics, and Reaction Dynamics II. (4 cr.; Student Option; Every Spring)
Two-part sequence. Thermodynamics, equilibrium statistical mechanics, ensemble theory, partition functions. Applications, including ideal gases/crystals. Theories of simple liquids, Monte Carlo, and molecular dynamics simulations. Reaction dynamics from microscopic viewpoint. prereq: 8561

CHEM 8563. Molecular Simulations. (2 cr.; Student Option; Every Spring)
Principles of Monte Carlo/molecular dynamics simulations. Algorithms, simulation set-up/analysis, applications to chemical systems. Hands-on computational project that requires writing of computer code. prereq: grad chem major or instr consent

CHEM 8564. Laser Spectroscopy. (2 cr.; Student Option; Every Spring)
Fundamentals of light-molecule interactions/manifestation in spectroscopic observables. Time correlation functions, spectroscopic llineshapes, linear/nonlinear material responses, material susceptibilities. Role of lasers in measuring quantities. prereq: grad chem major or instr consent

CHEM 8565. Chemical Reaction Dynamics. (2 cr.; Student Option; Periodic Spring)
Fundamentals of chemical reaction dynamics including potential energy surfaces, collision theory, statistical mechanical background and transition state theory, variational transition state theory, activation energy, tunneling, unimolecular reactions, energy transfer, reactions in solution, solvation free energy, potential of mean force, quasithermodynamic treatment, reactions in solution, diffusion control, Kramers? theory, and photochemistry

CHEM 8566. Spin Dynamics. (2 cr.; Student Option; Periodic Spring)
Chemistry 8566 is a 2-semester course on spin dynamics. The course prerequisites are described in the CSE Bulletin. Briefly, they are: one year of college-level chemistry, one year of college-level physics, and one year of college-level calculus. All of the prerequisites should have been completed before enrollment in this course. Students who do not satisfy the course prerequisites, please contact the instructor.

CHEM 8567. Biophysical Chemistry. (2 cr.; Student Option; Periodic Spring)
CHEM 8567 is a graduate level course which emphasizes how macromolecular and membrane structure and dynamics impact biological function. Topics to be covered include high-resolution structure determination, biomolecular spectroscopy, and microscopy as applied to folding, solvation, and reaction dynamics. The objectives for this course are to become well-versed in the language of biophysics, at a level sufficient to understand and critically evaluate the literature and to understand fundamental concepts related to structure determination and structure-function relationships of biomolecules, and to be able to apply those concepts to a variety of biological systems.

CHEM 8568. Chemical Bonding at Surfaces. (2 cr.; Student Option; Periodic Spring)
A brief overview of surface science, chemical reactions at surfaces, and interactions of surfaces with light. Students will also be exposed to physical principles of chemical reactions such as transition-state theory and kinetics in within the framework of surface science.
CHEM 8580. Special Topics in Physical Chemistry. (2-4 cr. [max 8 cr.]; Student Option; Periodic Spring) Topics (and availability) vary depending on instructor and development of the field. prereq: grad chem major or instr consent

CHEM 8601. Seminar: Modern Problems in Chemistry. (1 cr.; S-N or Audit; Every Fall & Spring) Weekly seminar series on modern chemical topics. prereq: grad chem major or instr consent

CHEM 8602. Seminar Presentation: Modern Problems in Chemistry. (1 cr.; A-F or Audit; Every Fall & Spring) Weekly seminar series on modern chemical topics presented by students. prereq: grad chem major or instr consent

CHEM 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) Tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

CHEM 8700. Advanced Concepts in Medicinal Chemistry: Combinatorial Methods in Chemical Biology. (2 cr.; A-F or Audit; Periodic Fall) Principles of current combinatorial methods for generation of biological/chemical libraries. Emphasizes utility in biology and in drug design. Material is drawn from primary literature. prereq: [2302 or equiv], [BioC 4331 or equiv]

CHEM 8715. Physical Inorganic Chemistry. (4 cr.; Student Option; Every Fall) Physical methods and concepts applied to inorganic and organometallic systems, including many of the following methods: NMR, IR, UV-VIS, ESR, M(3)ssbauer and mass spectroscopy, magnetic measurements, X-ray diffraction. prereq: 4701 or equiv, grad chem major or instr consent

CHEM 8725. Organometallic Chemistry. (4 cr.; Student Option; Periodic Fall) Synthesis, reactions, structures, and other important properties of main group and transition metal organometallic compounds; treatment in terms of modern electronic and structural theory; emphasis on their use as stoichiometric and homogeneous catalytic reagents in organic and inorganic systems. prereq: 4701 or equiv, grad chem major or instr consent

CHEM 8735. Bioinorganic Chemistry. (4 cr.; Student Option; Periodic Fall) Survey of role of metal ions in biology; emphasizes structure, function, and spectroscopy of metalloproteins and their synthetic analogs. prereq: 4701 or equiv, grad chem major or instr consent

CHEM 8745. Advanced Inorganic Chemistry. (4 cr.; Student Option; Periodic Spring) Survey of topics in main group and transition metal chemistry; emphasizes synthesis, structure, physical properties, and chemical reactivity. prereq: 8715, grad chem major or instr consent

CHEM 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

CHEM 8780. Special Topics in Inorganic Chemistry. (2-4 cr.; Student Option; Periodic Fall) Topics (and availability) vary by year depending on instructor and development of the field. prereq: Grad chem major or instr consent

CHEM 8880. Special Topics in Chemistry. (2-4 cr.; Student Option; Every Spring) Topics (and availability) vary depending on instructor and development of the field. prereq: Grad chem major or instr consent

CHEM 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

Chicano Studies (CHIC)

CHIC 5412. Comparative Indigenous Feminisms. (GP; 3 cr.; Student Option; Periodic Fall & Spring) The course will examine the relationship between Western feminism and indigenous feminism as well as the interconnections between women of color feminism and indigenous feminism. In addition to exploring how indigenous feminists have theorized from ‘the flesh’ of their embodied experience of colonialism, the course will also consider how indigenous women are articulating decolonization and the embodiment of autonomy through scholarship, cultural revitalization, and activism.

CHIC 5920. Topics in Chicana(o) Studies. (3 cr.; Student Option; Every Fall & Spring) Multidisciplinary themes in Chicana(o) studies. Issues of current interest.

CHIC 5993. Directed Studies. (1-3 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer) Guided individual reading, research, and study for completion of the requirements for a senior paper or honors thesis. prereq: instr consent

Child & Adolescent Psychiatry (CAPY)

CAPY 5660. ADHD Throughout the Life Span: Perspectives on Diagnosis, Assessment, and Developmental Course. (2-12 cr.; Student Option; Every Fall & Summer) ADHD, from its earliest presentation to its later adult manifestations. Clinical depression, diagnostic criteria. Disorders that commonly coexist with ADHD. Standard assessment procedures for making a diagnosis. Developmental changes in clinical procedures. prereq: Upper div

CAPY 5672. Children’s Exposure to Domestic Violence: Effects on Child Functioning, Treatment Implications. (1 cr.; Student Option; Periodic Spring) Effects of exposure to domestic violence in context of development, from infancy to late adolescence. Assessment strategies, best practices in intervention/prevention for vulnerable children and adolescents. Multidisciplinary approaches to working with children exposed to violence (e.g., judicial, medical, law enforcement partnerships).

CAPY 7201. Diagnostic Practicum in Child and Adolescent Psychiatry. (1-6 cr.; H-N or Audit; Every Fall, Spring & Summer) Multidisciplinary evaluations of children, adolescents, and their families are presented for discussion, dynamic and diagnostic formulations, and disposition planning in a conference setting. Consultation to schools, residential treatment centers, and community agencies may be included. prereq: instr consent

CAPY 7203. Child and Adolescent Psychiatry for Psychology Interns: Fairview-University Medical Center. (1-6 cr.; O-N or Audit; Every Fall, Spring & Summer) Assessment/therapeutic interventions with children, adolescents, and families in child/adolescent psychiatric settings. prereq: instr consent

CAPY 7521. Outpatient Clinical Child and Adolescent Psychiatry for Primary Care Physicians. (2-12 cr.; O-N or Audit; Every Fall, Spring & Summer) Supervised diagnostic and therapeutic experiences in an outpatient setting. Consultation to schools, residential treatment centers, and community agencies may be included. prereq: cr ar, reg med

CAPY 7602. Introductory Readings and Research Methods in Child, Adolescent, and Family Psychiatry. (2-6 cr.; H-N or Audit; Every Fall, Spring & Summer) Child development, diagnostic/therapeutic techniques, psychopathology. Readings/discussions with faculty. prereq: Med student, instr consent

CAPY 7603. Clinical Child Psychiatry. (4 cr.; H-N only; Every Fall, Spring & Summer) In this elective, the student will have an opportunity to experience the clinical practice of child and adolescent psychiatry across...
Child Psychology (CPSY)

CPSY 5171. Practicum: Applying Instructional Methods in the Elementary School. (2 cr.; S-N only; Every Fall) Practicum: Applying Instructional Methods in Elementary School is a semester long, full day experience during which teaching candidates gradually increase teaching responsibilities through observation and guided practice in an elementary (grade K-3) classroom, in a co-teaching model. The practicum experience is taken in the Elementary Methods Teaching Block. Methods course teaching assignments are done during the practicum experience.

CPSY 5181. Clinical Experience in Elementary School Teaching. (10 cr. [max 20 cr.]; S-N or Audit; Every Fall, Spring & Summer) Students spend full days in the elementary classroom gradually assuming responsibility for teaching the class. Students prepare a portfolio based on criteria given. One seminar per week.

CPSY 5187. Capstone Project: Improvement of Teaching in Early Childhood Education. (2-4 cr.; Student Option No Audit; Every Fall, Spring & Summer) This is the capstone for teaching candidates in the M.Ed. in Early Childhood Education. Students will complete an in-depth reflective teaching portfolio and parallel assignments. The course requires demonstration of the linking of child development theory, knowledge of developmentally appropriate teaching, and reflective practice. prereq: Completion of all requirements for Early Childhood Teacher Licensure, other than CI 5181, which is taken concurrently.

CPSY 5241. Practicum in Early Childhood Education. (3 cr.; A-F only; Every Fall & Spring) This course offers a great introduction to the early childhood experience for those interested in working with young children. Helpful first course to explore Early Childhood major (can also count in CPSY BA). Students will review early development and learn how this knowledge is applied in educational and early care settings. Time spent observing early childhood programs through practicum experiences around the city.

CPSY 5251W. Social and Philosophical Foundations of Early Childhood Education. (WI; 3 cr.; A-F only; Every Fall) This course traces the history of early childhood education from Plato to the present, as well as explores various program models and the standards movement, including the Minnesota Early Learning Indicators. The course includes lecture, discussion, videos and vignettes, assignments, and requires students to begin developing a personal teaching philosophy. It is also a writing intensive course which incorporates writing instruction and professional writing expectations throughout all course assignments and activities.

CPSY 5252. Facilitating Social and Emotional Learning in Early Childhood Development. (3 cr.; A-F only; Every Fall) This course explores social and emotional development throughout the early childhood (0-8) years. Explore the variety of ways that social interactions and emotional understanding occur in young children with a special emphasis on the role of adults in facilitating these processes. Students will encounter a blend of theory and application as they learn to promote children's mental health, under特殊 circumstances such as trauma, and respond to challenging behaviors across early learning settings. prereq: CPSY 2301 or equiv or inst consent. For Early Childhood or ECSE students.

CPSY 5253. Facilitating Cognitive and Language Learning in Early Childhood Education. (3 cr.; A-F only; Every Fall) Overview of cognitive and language characteristics of children ages 0-8 years and of how teachers can plan curriculum to facilitate children's development in these areas. prereq: CPSY 2301 or equiv or inst consent. For Early Childhood or ECSE students.

CPSY 5254. Facilitating Creative and Motor Learning in Early Childhood Education. (2 cr.; A-F only; Every Spring) Learn how young children develop creativity and motor skills from birth - age 8. Engage in hands-on exploration of creative classroom materials and responsive action-oriented and applied assignments with small groups of children in early childhood education settings. prereq: CPSY 2301 or equiv or inst consent. For Early Childhood and ECSE students.

CPSY 5261. Early Learning in Infancy and Toddlerhood. (3 cr.; Student Option; Periodic Summer) This course provides an understanding of infant and toddler development. It offers multiple perspectives and current research related to the timetable of infant and toddler development, as well as the role of caregivers, environment, and culture in development. Special attention will be given to policies/programming that concern infants, toddlers, and their families. Students will be expected to understand the nuanced and varied ways in which development unfolds, including areas of exceptionality, as well as explore the roles of professionals and community members in supporting infant and toddler development.

CPSY 5281. Student Teaching in Early Childhood Education. (6-8 cr.; S-N or Audit; Every Fall & Spring) Student teaching plus weekly seminar for students pursuing the Early Childhood teaching licensure. Application of theory/research relating to teaching preschool children. Student teach either 5 mornings per week (7:45-12:30) for 8 credits or 3 afternoons per week (11:45-4:30) for 6 credits. In addition, ALL students participate in weekly (Fridays 12:30-2) seminars. prereq: Early Childhood or ECSE student. Recommended completion of CPSY 5252, 5253, and 5254 prior to student teaching.

CPSY 5301. Advanced Developmental Psychology. (3 cr.; A-F or Audit; Every Fall & Summer) This course is an exploration of life span development through the lenses of social, cultural, cognitive, biological, and learning theories and research. A primary emphasis of the class is on gaining better conceptual understanding of different perspectives on healthy development in order to support informed practical understanding of how to help children, adolescents, and adults progress through the developmental periods and to help them with the challenges they face across their lifespan. This course is intended for graduate students. Undergraduate students should take CPSY 2301 or 3301 and not also 5301.

CPSY 5302. Cognitive and Biological Development. (3 cr.; Student Option; Every Fall) This course concerns the development and function of thinking skills throughout the lifespan, touching upon several aspects of what makes humans unique. How are humans able to perceive, evaluate, interpret, infer, remember, symbolize, plan, evaluate, problem solve, and hypothesize? What influences the very emergence of such abilities and the nature of their function? What obstacles interfere with the development or the quality of cognitive processes? Brain development and other biological factors, and our relationships and other environmental factors influence our thinking and its development. Throughout this course, we will discuss how knowledge about cognitive development can influence our work with children, adolescents, and adults, in daily life, professional practice, and public policy. Among the many applications of our knowledge of cognitive development, in this course we will focus on select examples relevant to parenting, education, and media exposure, and on topics initiated by students. The course will address individual differences and cultural differences in cognitive development, and how knowledge about variation in typical cognitive development provides an important foundation for understanding atypical cognitive development.

CPSY 5303. Social and Emotional Development. (3 cr.; Student Option; Every Spring) What are the roots of becoming who we are, as individuals in society? What roles do others play? Parents, siblings, peers, teachers, and communities -- play in the socialization of an individual, and how stable are the forces and outcomes of these influences? This course focuses on social development throughout the human lifespan, with an emphasis on how biology, culture, and relationships influence that development. Throughout this course,
we will discuss how knowledge about social development can inform our interpretation of social issues and guide our reaction to them, in terms of behaviors, practices, and public policy. Among the many possible applications of social development, we focus in particular (but not exclusively) on positive psychology, widespread social problems such as poverty and social disparities, and prevention science. We emphasize individual differences in social development, and attend to the interplay between social development and cognition, learning, and biological development.

CPSY 5304. Research Methods in Applied Child and Adolescent Development. (3 cr.; Student Option; Every Spring) Applied child and adolescent development research builds upon traditions of general, clinical, developmental, and educational psychology research, while focusing on efforts to address social needs, social problems, and public policy. Knowledge of scientifically sound and effective approaches to studying social problems and solutions will support those individuals who lead, contribute to, or use research. That is, knowledge gained from this course will support your development as an investigator or research associate, and it will also empower your role as a savvy consumer of the research you intend to apply to practice or policy.

CPSY 5306. Ethics and Professionalism in Applied Child and Adolescent Development. (2 cr.; A-F only; Every Fall) This course concerns ethical principles, issues, and codes relevant to research and practice in applied developmental psychology. These ethical considerations pertain to the work of professionals and researchers in communities, school, medical, and social agencies that serve children, youth, families, and adults. Throughout the course, we will consider the general principles that guide ethical behaviors and decision-making across settings, unique issues that may arise in specific settings, and the roles served by formal codes of conduct. We will also consider the roots of ethical thinking, behavior, and decision-making, and the social and cultural influences on individuals' developing sense of ethics.

CPSY 5310. Current Issues in Applied Child and Adolescent Development. (3 cr.; Student Option No Audit; Periodic Fall & Spring) Applied Child and Adolescent Development (ACAD) evolved from social scientists' efforts to contribute to solving problems in society. At its inception in the early 1980s, Werteil described the applied developmental scientist as ??being increasingly called upon to participate as social change agents and public policy advisers?? (occupying) an important position in many health care, education, human service and public policy settings. ACAD also focuses on positive psychology, supporting healthy development as a preventative vs. only reactive approach to positive change; and appreciates the reciprocal relation between research and practice. This seminar course provides students with a sample of the wide range of current issues faced by applied developmental scientists.

CPSY 5360. Special Topics in Developmental Psychology. (1 cr. [max 3 cr.]; Student Option; Every Summer) Study in specialized areas of developmental psychology. Topics/credits vary.

CPSY 5413. Early Childhood and Public Policy. (3 cr.; Student Option; Every Fall) State, federal, and international policies and legislative activity touching first five years of a child’s life. Family, community, and institutional roles in promoting children’s social, cognitive, and emotional development. Issues related to health, mental health, poverty, developmental delays, and special needs.

CPSY 5414. Individualized Learning Experience in Early Childhood and Public Policy. (1-3 cr.; Student Option; Periodic Spring) Individualized, applied learning experience. Focuses on early childhood policy development, research, or evaluation. Students attend an early childhood policy lecture series and participate in small discussion groups and follow-up activities. Prereq: Early Childhood Policy Certificate student, instr consent

CPSY 5501. Foundations in Infant and Early Childhood Mental Health I. (3 cr.; A-F only; Fall Odd Year) History, theory, research, concepts, and issues in infant mental health. Issues pertinent to difficulties in development. Readings, visual material. Expert guest lectures. Prereq: [Baccalaureate degree in early-childhood-related field from an accredited U.S. institution or documented equiv], experience in early childhood [research or practice]

CPSY 5506. Infant Observation Seminar I. (1 cr.; S-N only; Spring Odd Year) How an infant develops in context of family relationships over a 9-12 month period. Students observe an infant for one hour a week, write a narrative, and discuss observations.

CPSY 5508. Infant Observation Seminar II. (1 cr.; S-N only; Summer Odd Year) How an infant develops in context of family relationships over a nine- to twelve-month period. Students observe an infant for one hour a week, write a narrative, and discuss observations.

CPSY 5511. Infant Observation Seminar III. (1 cr.; S-N only; Fall Even Year) How an infant develops in context of family relationships over 9-12 month period. Students observe an infant for one hour a week, write a narrative, and discuss observations.

CPSY 5513. Early Childhood Assessment. (3 cr.; A-F only; Summer Odd Year) The course introduces processes and evidence-based methods of early childhood assessment and diagnosis from a developmental, multi-disciplinary framework. Prereq: [Baccalaureate degree in early-childhood-related field from accredited U.S. institution or documented equiv], [experience in early childhood research or practice]

CPSY 5515. Assessment in Infant and Early Childhood Mental Health: NCAST. (2 cr.; S-N only; Summer Odd Year) Achieving reliability in two observational measures of parent-child interaction: (1) nursing child assessment feeding (2) teaching Scales. Discussion, lecture, videotapes, listening/observation tasks. Prereq: [Baccalaureate degree in early-childhood-related field from accredited U.S. institution or documented equiv], [experience in early childhood research or practice]

CPSY 5518. Prevention and Intervention in Early Childhood: Principles. (3 cr.; A-F only; Fall Even Year) Students design prevention/intervention programs and apply evidence-based strategies in workplace/practicum settings. Readings, in-class reflective practice groups. Prereq: 5501, 5503, 5506, 5508

CPSY 5521. Prevention and Intervention in Early Childhood: Practice. (3 cr.; A-F only; Spring Odd Year) Students design prevention/intervention programs and apply evidence-based strategies in workplace/practicum settings. Readings, in-class reflective practice groups.

CPSY 5523. Reflective Supervision in Infant and Early Childhood Mental Health: Community-based. (1 cr.; S-N only; Spring Even Year) Principles/strategies of reflective supervision/consultation. Discussion, final assignment designated by instructor.

CPSY 5525. Reflective Supervision in Infant and Early Childhood Mental Health: Clinical. (1 cr.; S-N only; Spring Even Year) Principles and strategies of reflective supervision/consultation. Discussion, final assignment designated by instructor.

CPSY 5601. Child Life Theory, Practice and Program Development. (3 cr.; A-F only; Every Fall) With a strong foundation in the theory and science of child development, Child Life Specialists promote effective coping for children experiencing the stress and uncertainty of illness, injury, disability, and hospitalization. Child Life Specialists translate the theory of developmental science into practice and advocate for patient- and family-centered care in medical settings. This course will provide an overview of history, fundamental theories, relevant research, and application of the Child Life Professional Practice. The Official Documents of the Child Life Council (2011) will be analyzed as a source of guiding principles for professional practice. An introduction to Child Life program development is also examined in this course. This course must be taken prior to a child life internship.
CPSY 5602. Developmental Perspectives on Illness and Injury in Healthcare. (3 cr.; A-F only; Every Spring)
With a strong foundation in the theory and science of child development, Child Life Specialists promote effective coping for children experiencing the stress and uncertainty of illness, injury, disability, and hospitalization. Child Life Specialists translate the theory of developmental science into practice and advocate for patient- and family-centered care in medical settings. This course will provide an overview of developmental theories as they apply to children and adolescents experiencing illness and injury in healthcare. Child Life preparation, relaxation interventions, and patient support practices for ill children will be examined.

CPSY 5603. Therapeutic Play for Child Life Practice. (3 cr.; A-F only; Every Spring)
With a strong foundation in the theory and science of child development, Child Life Specialists promote effective coping for children experiencing the stress and uncertainty of illness, injury, disability, and hospitalization. Child Life Specialists translate the theory of developmental science into practice and advocate for patient- and family-centered care in medical settings. This course will provide an overview of the theoretical framework of play across childhood development and its role within pediatric healthcare settings and Child Life practice. Students will gain a professional understanding of therapeutic play interventions essential for facilitation of children’s coping and adjustment in various healthcare experiences.

CPSY 5604. Therapeutic Relationships: Supporting Children in Healthcare. (3 cr.; A-F only; Every Fall)
With a strong foundation in the theory and science of child development, Child Life Specialists promote effective coping for children experiencing the stress and uncertainty of illness, injury, disability, and hospitalization. Child Life Specialists translate the theory of developmental science into practice and advocate for patient- and family-centered care in medical settings. This course will provide an overview of the role of Child Life professionals in therapeutic relationships with patients, caregivers and families. The theoretical foundations of therapeutic relationships will be examined and students will gain a working knowledge of the philosophies and principles underpinning patient and family-centered care.

CPSY 5605. Childhood Death and Bereavement. (3 cr.; A-F only; Every Fall)
With a strong foundation in the theory and science of child development, Child Life Specialists promote effective coping for children experiencing the stress and uncertainty of illness, injury, disability, and hospitalization. Child Life Specialists translate the theory of developmental science into practice and advocate for patient- and family-centered care in medical settings. This course will provide an overview of the fundamental theories of children’s concept of death and the grief process across development. Students will gain an understanding of how Child Life Specialists collaborate with multidisciplinary care teams to support and provide culturally competent care to pediatric patients and their families at end-of-life and bereavement.

CPSY 5981. Cross-Cultural Experiences in Education and English Teaching in Brazil. (GP; 12 cr. [max 24 cr.]; S-N only; Periodic Fall & Spring)
This course provides an experiential introduction to the process of learning and teaching a second language to young children in an international setting. Students will engage in inquiry, planning, classroom teaching and reflection as they participate on a team developing curriculum in a partial day English immersion classroom. Through readings, videos, a homestay experience, small group projects, classroom observations, and participation as part of a team of English teachers in Brazil, students will gain an introduction to Brazilian culture, learn the basics of the local education system, and experience firsthand what it is like to learn a new language. Students will next be exposed to some of the basic elements of early childhood second language teaching, will help to plan and co-deliver relevant and appropriate curriculum, write lesson plans and engage in reflective practice with their teaching team. Finally, because of the cultural immersion element of the class, students will be supported to 1) reflect on their personal cultural adjustment process, 2) develop an effective working relationship with their co-teachers, and 3) consider the ethical dilemma present in the provision of educational opportunity to Brazil’s marginalized communities.

CPSY 5991. Independent Study in Child Development. (1-12 cr. [max 24 cr.]; Student Option No Audit; Periodic Fall & Spring)
Independent study arranged with child development faculty member.

CPSY 5996. Field Experience in Applied Child and Adolescent Development. (1-12 cr; S-N only; Periodic Fall, Spring & Summer)
Emphasizes field experiences focusing on the development of children and adolescents as individuals or members of groups; may include interactions with children and adolescents in natural settings, or research on applied topics or with atypical populations.

CPSY 8101. Graduate Fellowship Proposal Writing Seminar. (1 cr.; S-N only; Every Fall)
The primary purpose of this course is to prepare students to submit a competitive NSF Graduate Research Fellowship proposal. Students submitting to other organizations are welcome to join the course, but all of the assignments and focus will be on increasing NSF and predoctoral fellowship competitiveness. This course is intended primarily for doctoral students in their first or second year of study.

CPSY 8102. Writing Developmental Psych Grants for NIH and NSF. (1-3 cr. [max 4 cr.]; A-F only; Spring Odd Year)
Research/identify potential funding sources at NIH/NSF, create right fit between proposals/agency program goals, address guideline of proposals, write effective key elements of proposal, understand review criteria, complete grant review, interpret feedback from reviews. prereq: Doctoral students in second year of study or beyond

CPSY 8301. Developmental Psychology: Cognitive Processes. (4 cr.; Student Option; Every Fall)
Perceptual, motor, cognitive, and language development, and biological bases of each. Conceptual framework of research issues. prereq: Doctoral student, instr consent

CPSY 8302. Developmental Psychology: Social and Emotional Processes. (4 cr.; Student Option; Every Spring)
Normative issues and individual differences in social development from infancy through adolescence. Emphasizes developmental psychopathology, life span considerations. prereq: Doctoral student, instr consent

CPSY 8304. Developmental Research Methods. (3 cr.; Student Option; Every Spring)
Review of research strategies and designs for conducting research in developmental psychology, as well as strengths and weaknesses of each. Students will learn to (a) communicate about empirical research, (b) critically review methods used in empirical studies, and (c) design research to maximize knowledge gained, while recognizing its limitations.

CPSY 8307. Prelim Seminar. (1 cr.; S-N only; Every Spring)
Prepare for written preliminary examination during summer of second year of doctoral study. Critically discuss issues/themes in field using key readings suggested by faculty/past readings from core child development doctoral courses. prereq: Child psychology PhD student in second year of study

CPSY 8311. Landmark Issues and Great Controversies in Child Development. (2 cr.; S-N or Audit; Every Fall)
History of developmental psychology and child development movement in context of conceptual/theoretical controversies. Presentations by students/instructor. prereq: CPSy doctoral student or instr consent

CPSY 8321. Seminar in Teaching Developmental Psychology. (1 cr.; Student Option; Every Fall)
Apprentices attend weekly seminar meetings covering all aspects of university teaching. Planning course coverage, teaching techniques, developing learning activities and examinations. Preparation for CPSY 8322. prereq: CPSy doctoral student or instr consent

CPSY 8322. Apprenticeship in Teaching Developmental Psychology. (1-3 cr.; S-N only; Every Spring)
Co-instruct a section of a CPSY undergraduate course. Plan syllabus, prepare/deliver lectures, devise active learning activities, prepare exams/assignments, and grade. Meet with apprenticeship supervisor to discuss teaching
progress/issuses. prereq: Child psychology
doctoral student
CPSY 8333. FTE: Master's. (1 cr.; No
Grade Associated; Every Fall, Spring &
Summer)
(No description) prereq: Master's student,
adviser and DGS consent
CPSY 8360. Special Topics in
Developmental Psychology. (1-3 cr. [max
12 cr.]; Student Option; Every Fall & Spring)
Intensive study in specialized areas of
developmental psychology. Topics/credits vary.
prereq: Doctoral student
CPSY 8444. FTE: Doctoral. (1 cr.; No
Grade Associated; Every Fall, Spring &
Summer)
(No description) prereq: Doctoral student,
adviser and DGS consent
CPSY 8606. Advanced Developmental
Psychopathology. (3 cr.; Student Option;
Every Fall)
Alternative formulation of childhood disorders,
emphasizing competency training rather than
medical nosology. prereq: Doctoral student or
instructor consent
CPSY 8607. Developmental Neurobiology of
Stress and Emotion. (3 cr.; Student Option;
Periodic Fall)
Maladaptive responses to stress are
components of both the etiology and
expression of many psychiatric disorders.
In addition, individuals differ in their stress
vulnerability, with some seeming to thrive
despite the odds, and others succumbing to
even relatively mild adversity. These individual
differences are likely the interactions of genes
and experiences; early experiences may be
particularly noteworthy.
CPSY 8608. Clinical Intervention with
Children. (3 cr.; Student Option; Periodic
Spring)
This course is a graduate seminar designed
to introduce students to child treatment
theory and techniques. The course has
two objectives: (1) to introduce students to
current clinical theory and research, relevant
to clinical practice with children, and (2)
to teach students basic clinical skills and
interventions that will prepare them for their first
child psychotherapy case during their clinical
practicum. The course will cover a variety of
topics, including the therapeutic relationship
and the therapeutic process, an introduction to
different modalities of child psychotherapy (with
a focus on cognitive-behavioral and behavioral
interventions), and ?real life? clinical practice
issues (working with minority populations,
working in a managed care environment, and
broader children?s mental health issues).
CPSY 8660. Advanced Developmental
Psychology. (1-4 cr. [max 21 cr.]; Student
Option; Periodic Fall & Spring)
Intensive study in advanced areas of
developmental psychology. Topics/credits vary.
prereq: Doctoral student
CPSY 8666. Doctoral Pre-Thesis Credits.
(1-6 cr. [max 12 cr.]; No Grade Associated;
Every Fall, Spring & Summer)
tbd prereq: Doctoral student who has not
passed prelim oral; no required consent for
1st/2nd registrations, up to 12 combined cr;
depth consent for 3rd/4th registrations, up to 24
combined cr; doctoral student admitted before
summer 2007 may register up to four times, up
to 60 combined cr
CPSY 8777. Thesis Credits: Master's. (1-18
cr. [max 50 cr.]; No Grade Associated; Every
Fall, Spring & Summer)
(No description) prereq: Max 18 cr per
semester or summer; 10 cr total required [Plan
A only]
CPSY 8888. Thesis Credit: Doctoral. (1-24
cr. [max 100 cr.]; No Grade Associated; Every
Fall, Spring & Summer)
(No description) prereq: Max 18 cr per
semester or summer; 24 cr required
CPSY 8980. Research Seminar in Child
Psychology. (1-3 cr. [max 15 cr.]; Student
Option; Every Fall, Spring & Summer)
Participation in organized research group in
developmental psychology. prereq: Doctoral
student
CPSY 8993. Directed Study in Child
Psychology. (0-1 cr.; Student Option; Every
Fall & Spring) tbd prereq: Doctoral student or
instructor consent
CPSY 8994. Research Problems in Child
Psychology. (0-4 cr. [max 24 cr.]; Student
Option: Every Fall & Spring)
Individual empirical investigation. prereq:
Doctoral student or instructor consent
CPSY 8996. Directed Field Experiences in
Child Psychology. (0-6 cr.; S-N or Audit;
Every Fall, Spring & Summer)
Emphasizes field experiences focusing on
intellectual and/or social development of
children as individuals or members of groups;
may include interactions with children in natural
settings, or research on applied topics or with
atypical populations. prereq: Doctoral student,
instructor consent

**China Executive MBA (CHMB)**

CHMB 5800. Organizational Behavior. (3
cr.; A-F only; Every Fall)
Theories/frameworks for analyzing behavior of
individuals, groups, and the organization itself.
Emphasizes making decisions and developing
action plans that enable managers to provide
effective leadership. Personnel selection,
reward/compensation systems, collective
bargaining.

CHMB 5801. Financial Accounting. (3
cr.; A-F only; Every Fall)
External accounting system used by firms
to measure their economic performance
and financial position. Students analyze
corporate financial reports to discover impact
of significant economic events. Rise of financial
reporting standards and financial intermediaries
in efficient allocation of capital in a modern
economy. Discussions, cases.

(3 cr.; A-F only; Every Fall)
Exploratory data analysis, basic inferential
procedures, statistical process control,
regression analysis.

CHMB 5803. Operations Management. (3
cr.; A-F only; Every Fall)
How to manage operations function in
manufacturing/service organizations.
Emphasizes strategic impact of operations
decisions. Operations strategy, process design,
productivity improvement, quality management,
business process re-engineering, service
quality, forecasting, demand management,
inventory management, production planning,
project management, scheduling, supply
chain management, international operations
management.

CHMB 5804. Managerial Accounting. (3
cr.; A-F only; Every Fall)
How to analyze accounting for use in
management decisions. Planning and control.
Transfer pricing, performance measurements,
cost behavior, cost allocation, activity based
costing, standard costs.

CHMB 5805. Financial Management. (3
cr.; A-F only; Every Spring)
Theory/practice of finance from analytical
approach. Students apply basic financial
concepts of risk, return, and valuation to
decisions that a corporate financial officer or
person engaged in small business must make
about sources/uses of funds during changing
financial markets.

CHMB 5806. Marketing Management. (3
cr.; A-F only; Every Spring)
Developing/implementing most appropriate
combination of variables to carry out a firm's
strategy in its target markets. Applying analytic
perspectives, concepts, and decision tools
of marketing to decisions in product offering,
distribution, pricing, and communication.

CHMB 5807. Business Strategy. (3 cr.; A-F
only; Every Spring)
Formulating strategy for an enterprise.
Shaping mission, product-market choice, and
organizational character. Shaping allocation of
resources to meet organizational circumstances
and conflicting stakeholder interests. Situational
analysis, strategy development. Written/oral
presentation of strategic analyses/recommendations.

CHMB 5808. Strategic Marketing. (3 cr.; A-F
only;)
Product markets in which an organization
should compete. Sustainable competitive
advantage that should be developed. Matching
marketing strategy with the environment.
Coordination between marketing and other
business functions. Organization/management
of marketing. Case studies.

CHMB 5809. Advanced Financial
Management. (3 cr.; A-F only;)
Executive level corporate financial policy.
Students are challenged to apply basic
principles of finance on their own initiative.
Rigorous case-oriented approach.

CHMB 5810. International Environment. (1.5
cr.; A-F only; Every Fall)
How to develop an integrative framework for dealing with international activities of a newly exporting company or a full-fledged multinational. How international environment constrains decision-making, how currency prices are determined, and how to manage exchange risk in coordination with strategic choices of the firm. prereq: China Executive MBA student

CHMB 5811. Information Technology Management. (; 3 cr.; A-F only;) Managing information resources/technology. Students gain exposure to various information technologies, examine their applications, explore competitive advantages associated with information technology, and address organizational/managerial implications.

CHMB 5813. Ethics and Leadership. (; 3 cr.; A-F only; Every Fall & Spring) Role that ethics can play in corporate strategy. Key concepts include stakeholder management, individual/collective responsibility, and international business ethics. Theoretical considerations applied to issues such as a business's responsibility to the environment, truthful/tasteful advertising, obligations to local community, and managing a diverse workforce.

CHMB 5815. International Human Resources Management. (; 3 cr.; A-F only; Every Spring) Topics reflect the strengths, talents, and interests of the class. Integrates different aspects of the curriculum while not being limited by a specific area or paradigm.

CHMB 5816. International Residency. (6 cr.; A-F only; Every Fall & Spring) Students travel to an international location for 11 days and engage in discussions with international colleagues, apply program concepts, and develop a broader sensitivity to cultural/social differences. Pre-trip preparation, on-site discussion, and trip assignment are required.

CHMB 5817. China's Economy. (; 1.5 cr.; A-F or Audit; Every Spring) Focusing on China's economy, this course is designed as a required course for all China Executive MBA students. prereq: China Executive MBA student

CHMB 5818. Law and Business. (; 3 cr. [max 6 cr.]; A-F only; Every Spring) Legal/regulatory environment of business operations in China.

Chinese (CHN)

CHN 5011. Research Methods. (; 4 cr.; Student Option; Periodic Fall) Introduction to the sources and approaches of research in language and literature. prereq: 3032 or 3112

CHN 5040. Readings in Chinese Texts. (3 cr. [max 12 cr.]; A-F or Audit; Every Fall & Spring) Students read authentic materials of various types to increase reading/speaking ability. Topics specified in Class Schedule. prereq: 4042 or equiv or instr consent

CHN 5041. Media Chinese. (3 cr.; A-F or Audit; Every Fall) Conducted 100% in Mandarin Chinese, this course trains students to comprehend media Chinese by listening to and viewing Chinese television programs and online/internet resources. Course content includes international and Chinese national news, social issues, historical events, and interpersonal relations relevant to modern Chinese society, history, and culture. Students must have taken 3-4 years of college-level Chinese or demonstrate the same level of Chinese proficiency.

CHN 5042. Contemporary Chinese Texts 1949-present. (3 cr.; A-F or Audit; Periodic Fall & Spring) Advanced Chinese language course focused on contemporary Chinese short stories, novels, and prose written since 1949, especially from 1978 to the present. These literary works explore various aspects of contemporary Chinese society, history, and culture including: social prejudices and discrimination against the mentally and physically disadvantaged, the Anti-Rightist Movement, the Cultural Revolution, the drug problem, male-female relationships, education, parental love (and lack thereof), traditional Chinese views of life, rape and sex, influence from the West, and more. Class discussion focuses on the use of the language, the social interpretation of the texts, and the Chinese cultural and philosophical implications found in those works. prereq: CHN 4042 or instructor consent. Recommended: CHN 5041

CHN 5120. Topics in Chinese Linguistics. (; 4 cr. [max 8 cr.]; Student Option; Periodic Fall) Studies of the structure and change in the Chinese language. prereq: 4121 or 4125

CHN 5211. Introductory Classical Chinese I. (3 cr.; Student Option; Periodic Fall) Reading excerpts from canonical Chinese texts. Transnational nature of Classical Chinese/its importance in study of East Asian cultures. Taught in English. prereq: Two years of an East Asian language (Chinese, Japanese, Korean) or equivalent or instr consent

CHN 5212. Introductory Classical Chinese II. (3 cr.; Student Option; Periodic Spring) Reading excerpts from canonical Chinese texts. Transnational nature of Classical Chinese/its importance in study of East Asian cultures. Taught in English. prereq: 5211 and two years of an East Asian language (Chinese, Japanese, Korean) or its equivalent or instr consent

CHN 5213. Literary Chinese in the Analects. (3 cr.; Student Option No Audit; Every Fall) The "Analects" is a collection of the sayings of Confucius and his disciples. As one of the most revered classics in the Chinese tradition, it is essential for understanding Chinese cultural values, and contains complex philosophical themes for critical thinking. Linguistically, the "Analects" provides an excellent example of the classical Chinese language, and is the source of many common Chinese idioms. This class takes key passages from the "Analects" in the original and aims to equip students with a holistic understanding of Chinese language, culture, and history. Prerequisite: CHN 3022 or instructor consent.

CHN 5393. Directed Study. (1.5 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Guided individual reading or study. Prereq-instr consent, dept consent, college consent.

CHN 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

CHN 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

CHN 8494. Directed Research. (1-5 cr. [max 16 cr.]; Student Option; Every Fall & Spring) Individual study/research with guidance of a faculty member.

CHN 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

CHN 8777. Thesis Credits: Master's. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

CHN 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

Civil, Environ, and Geo-Engin (CEGE)

CEGE 5094. Civil Engineering Research. (1-4 cr.; Student Option; Every Fall & Spring) Research or independent study in concrete, structural steel, soils, hydraulics, hydrology/municipal, environmental, or transportation problems. Investigations, reports, tests, designs. prereq: instr consent

CEGE 5180. Special Topics. (1-4 cr. [max 12 cr.]; A-F or Audit; Periodic Fall & Spring) Topics vary depending on faculty and student interests. prereq: instr consent

CEGE 5211. Traffic Engineering. (3 cr.; A-F or Audit; Periodic Spring) Principles of vehicle and driver performance as they apply to the safe and efficient operation of highways. Design and use of traffic control devices. Capacity and level of service. Trip
CEGE 5212. Transportation Policy, Planning, and Deployment. (3 cr.; A-F or Audit; Every Fall) Principles/techniques related to transportation systems. Historical perspective, characteristics of travel demand, demand management. Pre-travel/booking systems. Case studies. Field projects. Prereq: Upper Division CE, EnvE, or GeoE student, grad student, or instructor consent

CEGE 5213. Transit Planning and Management. (3 cr.; A-F only; Every Fall) Principles/techniques related to transit systems. Historical perspective, characteristics of travel demand, demand management. Pre-travel/booking systems. Case studies. Field projects. Prereq: Upper Division CE, EnvE, or GeoE student, grad student, or instructor consent

CEGE 5541. Prestressed Concrete Design. (3 cr.; A-F or Audit; Fall Odd Year) Design of prestressed concrete structures. Time dependent effects, behavior, flexure, shear, torsion, deflections, continuous systems. Prereq: CEGE 4401, upper division CSE or grad student or instr consent

CEGE 5415. Masonry Structures. (3 cr.; A-F or Audit; Periodic Fall) Masonry materials and their production. Mortars, grouts. Design of unreinforced and reinforced masonry structural systems. Walls, columns, lintels. Codes/specifications, testing. Prereq: CEGE 3401, upper division CSE or grad student or instr consent; 4401 recommended

CEGE 5511. Urban Hydrology and Water Quality. (4 cr.; A-F or Audit; Every Fall) Urban hydrology for small watersheds and the management of storm water quality and quantity. Prereq: CEGE 4501, upper division CSE or grad student or instructor consent

CEGE 5541. Environmental Water Chemistry. (3 cr.; max 4 cr.; A-F or Audit; Fall Even Year) Introduction to water chemistry. Physical chemical principles, geochemical processes controlling chemical composition of waters, behavior of contaminants that affect the suitability of water for beneficial uses. Prereq: CEGE 3501, Chem 1061, Chem 1062, upper division CSE or grad student or instructor consent

CEGE 5542. Experimental Methods in Environmental Engineering. (3 cr.; A-F or Audit; Periodic Spring) Tools necessary to conduct research in environmental engineering and chemistry. Theory of operation of analytical equipment. Sampling and data handling methods, statistical analyses, experimental design, laboratory safety. Lecture, laboratory. Prereq: CEGE 3501, (CEGE 5541 recommended) Chem 1022, upper division CSE or grad student or instructor consent

CEGE 5414. Fluid Mechanics. (4 cr.; A-F or Audit; Fall Odd Year) Environmental fluid mechanics is the study of the interaction of fluid flows that occur in aquatic ecosystems with the growth and behavior of living organisms. Prereq: CEGE 3502 or AEM 4201 or Chem 3005, upper division CSE or grad students or instructor consent

CEGE 5551. Environmental Microbiology. (3 cr.; A-F or Audit; Fall Even Year) Role of microorganisms in environmental bioremediation, pollution control, water/wastewater treatment, biogeochemistry, and human health. Prereq: Upper division CSE or grad student or instructor consent

CEGE 5552. Environmental Microbiology Laboratory. (1 cr.; A-F only; Fall) Basic microbiological techniques: isolation, identification/enumeration of bacteria, BOD, biodegradable kinetics, disinfection. Lab. Prereq: CEGE 5551 or concurrent registration is required (or allowed) in CEGE 5551

CEGE 5570. Design for Sustainable Development - India. (3-9 cr.; A-F only; Every Summer) In this interdisciplinary course in Bangalore (India's fast-growing entrepreneurship hub) you will work in teams with local partners to research and design sustainable solutions to development challenges of water, energy, waste, agriculture, transportation, and health. Prereq: Open to graduate students from all majors

CEGE 5582. Design for Sustainable Development - Nicaragua. (3-9 cr.; A-F only; Every Summer) His interdisciplinary course will introduce you to innovative approaches to complex sustainable development problems. You will work in teams to research and design solutions to real social and environmental challenges while living with host families and developing your intercultural competence. Prereq: Open to graduate students from all majors

CEGE 5501. Mass and Heat Transfer. (3 cr.; max 4 cr.; A-F or Audit; Periodic Fall) Examples of free and moving boundary problems: metal solidification, filling, polymer molding, flow in porous media, ground freezing. Solutions: analytical, fixed finite difference, fixed finite element, front tracking schemes, general deforming finite element methods. Prereq: 8401 or instr consent

CEGE 5581. Water Resources Engineering. (4 cr.; A-F or Audit; Periodic Fall) Research or independent study in concrete, structural steel, soils, hydraulics, hydrology, and municipal, environmental, or transportation problems. Investigations, reports, tests, or designs. Prereq: instr consent

CEGE 5582. Design for Sustainable Development - Nicaragua. (3-9 cr.; A-F only; Every Summer) In this interdisciplinary course in Bangalore (India's fast-growing entrepreneurship hub) you will work in teams with local partners to research and design sustainable solutions to development challenges of water, energy, waste, agriculture, transportation, and health. Prereq: Open to graduate students from all majors

CEGE 5580. Experiential Education Abroad. (1-5 cr.; max 495 cr.; S-N only; Every Fall, Spring & Summer) Special engineering studies abroad. Studies/reports supervised by staff.

CEGE 8022. Numerical Methods for Free and Moving Boundary Problems. (3 cr.; A-F or Audit; Periodic Fall) Examples of free and moving boundary problems: metal solidification, filling, polymer molding, flow in porous media, ground freezing. Solutions: analytical, fixed finite difference, fixed finite element, front tracking schemes, general deforming finite element methods. Prereq: 8401 or instr consent

CEGE 8094. Civil Engineering Research. (1-4 cr.; max 12 cr.; Student Option; Every Fall, Spring & Summer) Research or independent study in concrete, structural steel, soils, hydraulics, hydrology, and municipal, environmental, or transportation problems. Investigations, reports, tests, or designs. Prereq: instr consent

CEGE 8220. Seminar. Transportation. (1 cr.; max 3 cr.; S-N or Audit; Every Fall & Spring) Content depends on instructor and student. Sample topics: traffic safety, traffic flow theory, transportation materials, transportation planning, transportation economics.

CEGE 8202. Networks and Places: Transportation, Land Use, and Design. (4 cr.; A-F or Audit; Every Fall) Pre-travel/booking systems. Case studies. Field projects. Prereq: Upper Division CE, EnvE, or GeoE student, grad student, or instructor consent

CEGE 8211. Theory of Traffic Flow. (4 cr.; Student Option; Every Fall) Relationship between land use and transportation. Developing synthetic design skills for linking land use transportation in urban/regional settlements. Economic, political, legal, institutional frameworks for planning. Parallel computer lab, practicum assignment.

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

CEGE 8212. Advanced Travel Demand Modeling and Supply Analysis. (3 cr.; Student Option; Fall Odd, Spring Even Year) Application of random utility theory to model travel demand; deterministic and stochastic trip assignment; network design problems; transportation planning software. prereq: 5211 or equiv, Stat 5021

CEGE 8213. Advanced Transportation Technologies Seminar. (1 cr.; S-N or Audit; Periodic Fall & Spring) Advanced technologies specifically related to transportation. Topics drawn from core science/technology areas of human factors, intelligent vehicles, traffic modeling/management, sensing, communications, and controls.

CEGE 8215. Transportation Data Analysis. (3 cr.; Student Option; Spring Even Year) Maximum likelihood methods for generalized linear models, with logit/probit models. Linear regression as special cases. Applications to gap acceptance, discrete choice, speed/headway distributions, accident modeling. Introduction to Bayesian inference. prereq: [5210 or 5212]; [Stat 5021 or equiv]

CEGE 8216. Urban Traffic Operations. (3 cr.; Student Option; ) Capacity analysis techniques for urban streets, optimal traffic signal timing, coordination, real time control. Traffic signal hardware, including detectors/controllers. Operational techniques for traffic management. Use of computer program packages in traffic engineering practice. Freeway operations/control.

CEGE 8231. Advanced Pavement Engineering. (3 cr.; Student Option; Periodic Fall) Advanced concepts in pavement analysis and design; computation of stresses and strains in flexible and rigid pavement systems; review of Bourness theory, Burmeister model, and Westergaard model; load transfer in rigid pavements; temperature induced stresses; mechanics of drainage, prereq: 4231 or instr consent

CEGE 8233. Advanced Bituminous Materials Characterization. (3 cr.; Student Option; Periodic Fall) Applications of viscoelasticity, rheology, elastoplasticity, and fracture mechanics to bituminous materials characterization. Lectures, discussions of advanced research reading assignments, laboratory assignments. prereq: [4042, grad student] or instr consent

CEGE 8300. Seminar: Geomechanics. (1-3 cr. [max 4 cr.]; S-N or Audit; Every Fall & Spring) Presentations on various topics.

CEGE 8311. Advanced Rock Mechanics. (3 cr.; A-F or Audit; Periodic Fall) Stress transformations; principal stresses and directions. Friction and behavior of rock joints; stability of frictional sliding. Elastic waves; acoustic emission and seismic measurements. Fragmentation and rock breakage. prereq: CSE grad student, 4311 or GeoE 4311 or instr consent

CEGE 8322. Storage and Flow of Granular Materials. (3 cr.; A-F or Audit; Periodic Fall) Plasticity of granular media. Static and dynamic method of slices. Storage and flow of granular materials in bins and hoppers. Stress concentrations, arching, piping. Experiments on granular material properties and flow. prereq: CSE grad student, 4301 or instr consent

CEGE 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

CEGE 8336. Boundary Element Methods I. (3 cr.; A-F or Audit; Fall Even Year) Introduction to boundary element methods for elastostatics; stress discontinuity, displacement discontinuity, and direct boundary integral methods. Derivation of basic mathematical solutions from the theory of elasticity. Applications in geomechanics. prereq: CSE grad student

CEGE 8337. Boundary Element Methods II. (3 cr.; A-F or Audit; Periodic Fall) Transient and nonlinear problems. prereq: 8336. GeoE 8336 or instr consent

CEGE 8352. Advanced Groundwater Mechanics II. (3 cr.; A-F or Audit; Periodic Fall) Applying complex methods, including conformal mapping, in groundwater mechanics; solving problems with free boundaries using
the hodograph method; drains in aquifers with free boundaries; superposition of solutions with drains; singular Cauchy integrals; boundary elements. prereq: 4351, CSE grad student or instr consent

CEGE 8361. Engineering Model Fitting. (3 cr.; A-F or Audit; Fall Even Year)
Parameter estimation and inverse modeling for civil and geological engineering. Formulating engineering model fitting problems; comparing and selecting various fit criteria; implementing numerical algorithms; analyzing and interpreting results using both statistical and qualitative tools; designing future measurement plans. prereq: CSE grad student or instr consent

CEGE 8400. Seminar: Structures. (1 cr. [max 3 cr.]; S-N or Audit; Every Fall & Spring)
Content depends on instructor and student. Sample topics: theory of elasticity, optimization, reliability, wave propagation, soil dynamics, experimental equipment, wind forces on structures, structural failures, modern construction practices.

CEGE 8401. Fundamentals of Finite Element Method. (3 cr.; A-F or Audit; Every Spring)
Elements of calculus of variations; weak and strong formulations of linear continuum and structural problems. Isoparametric elements and numerical integration. Basic concepts of error analysis and convergence. Analysis of plates and shells. Introduction to mixed methods and time dependent problems. prereq: 4411 or instr consent

CEGE 8402. Nonlinear Finite Element Analysis. (3 cr.; A-F or Audit; Periodic Fall)
Large strains and work conjugate stresses. Equilibrium and principle of virtual work for nonlinear problems. Nonlinear elasticity and plasticity. Finite element discretization and nonlinear algebraic equations. Linearization and solution algorithms for nonlinear problems. Structural stability. prereq: 8401 or instr consent; offered alt yrs

CEGE 8411. Plate Structures. (3 cr.; A-F or Audit; Periodic Fall)
Analysis of plate structures based on the small-deflection elastic Kirchhoff-Love theory. Classical and numerical analysis methods. Skew and orthotropic plate structures. Elements of large deflection theory and stability of plates. prereq: 5411 or instr consent; offered alt yrs

CEGE 8412. Shell Structures. (3 cr.; A-F or Audit; Periodic Fall)
Static analysis of thin elastic shells based on Love's postulates. Membrane and bending theories. Thermal stresses in cylinders. Buckling of shells of revolution. Offered alternate years. prereq: CSE grad or instr consent

CEGE 8413. Fracture and Scaling. (3 cr.; A-F or Audit; Periodic Spring)
Linear elastic fracture mechanics, cohesive fracture, scaling, strength statistics. prereq: 5411

CEGE 8421. Structural Dynamics. (3 cr.; A-F or Audit; Every Fall)
Response of discrete/continuous systems to dynamic loading. Formulation/solution of problems of one or more degrees of freedom. Modal analysis. Numerical integration and transform techniques. Response of dynamic systems to base motion using response spectrum methods. prereq: 3401, AEM 2012 or instr consent; concurrent registration is required (or allowed) in 4411 recommended

CEGE 8422. Earthquake Engineering. (3 cr.; A-F or Audit; Periodic Spring)
Introduction to earthquake engineering; response spectra; energy absorption capacity of structures; estimation of damping; earthquake resistant design; seismic design codes; base isolation; soil-structure interaction. Blast resistant design. Wind effects on structures. prereq: 8421 or instr consent

CEGE 8431. Structural Stability. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Classification of discrete/continuous conservative/nonconservative systems. Buckling analysis of, e.g., structural members, frameworks, and plates by classical/numerical methods. Offered alternate years. prereq: CSE grad student or instr consent

CEGE 8432. Analysis of Thin-Walled Members. (3 cr.; A-F or Audit; Periodic Fall)
Analysis of thin-walled structural members based on Vlasov theory and its modifications. Members with open and closed cross sections. Second-order effects and buckling. Influence of inelastic material behavior on buckling. prereq: 5411 or instr consent; offered alt yrs

CEGE 8441. Ductile Behavior of Steel Structures. (3 cr.; A-F or Audit; Fall Even Year)
Advanced topics in behavior of steel structures; Modeling techniques for material/geometric nonlinearity. Plastic analysis. Introduction to plasticity of continuum bodies. Computer methods. Seismic design, code provisions. prereq: 4411 or equiv

CEGE 8442. Analysis of Structural Systems. (3 cr.; A-F or Audit; Periodic Fall)
Advanced theory and computational techniques for analyzing complex structural building systems. Using comprehensive geometric and material nonlinear analysis for designing steel and composite structures. prereq: CEGE 5411 or equivalent

CEGE 8443. Fracture of Materials and Structures. (3 cr.; A-F or Audit; Every Spring)
Foundations of engineering fracture mechanics. Analytical, computational, and experimental tools to analyze/design solid structures and materials containing cracks. Predicting structural performance, designing experiments. Metals, concretes, rocks, ceramics, advanced composites, biological structures, micro-devices. prereq: 4401 or instr consent

CEGE 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

CEGE 8451. Behavior of Reinforced Concrete Structures. (3 cr.; A-F or Audit; Every Fall & Spring)
Advanced topics; experimental and theoretical background to design code provisions. Moment-curvature analysis of members. Shear; torsion; disturbed regions. Beam column joints; shear walls. Effects of earthquake loading. Limit analysis. prereq: 4412 or instr consent

CEGE 8461. Structural Reliability. (3 cr.; A-F or Audit; Periodic Fall)

CEGE 8490. Special Topics. (1-4 cr. [max 8 cr.]; A-F or Audit; Periodic Fall & Spring)
Topics vary depending on faculty and student interests. prereq: instr consent

CEGE 8500. Environmental Seminar. (1 cr. [max 3 cr.]; S-N or Audit; Every Spring)
Broad coverage of topics in environmental engineering and science. Speakers consist primarily of graduate students in these areas, but presentations may also be given by University faculty and guest speakers. prereq: grad CC major or instr consent

CEGE 8501. Environmental Fluid Mechanics I. (4 cr. A-F or Audit; Every Fall)
Basic laws of mass, energy, and momentum transport in environmental fluid flow. Exact and approximate solutions for viscous flow. Irrotational flow; gravity waves. Similitude and inspectional analysis. Laminar boundary layers and slender flows. Application to engineering and environmental problems. prereq: 3502 or equiv or instr consent

CEGE 8502. Environmental Fluid Mechanics II. (4 cr.; A-F or Audit; Every Fall & Spring)
Reynolds equations. Developed and developing turbulent boundary layers and slender flows, and their interaction with inviscid flow. Jets, plumes, wakes and shear layers. Statistical description of turbulence; data analysis. prereq: 8501 or instr consent

CEGE 8503. Environmental Mass Transport. (4 cr.; A-F or Audit; Periodic Fall)
Principles of intraphase and interfacial chemical transport and fate in the environment, specifically the processes of diffusion, dispersion, and convection. Application to surface water and atmospheric mixing; dispersion in groundwater, and transport between these media. prereq: 3502, 3501 or equiv or instr consent

CEGE 8504. Theory of Unit Operations. (4 cr.; A-F or Audit; Periodic Fall & Spring)
Theoretical basis, design, operation of chemical/physical processes used in treating/controlling water quality. Adsorption, ion exchange, sedimentation, thickening, filtration, gas transfer, coagulation, flocculation, membrane processes, disinfection. prereq: 5541

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
CEGE 8505. Biological Processes. (3 cr.; A-F or Audit; Every Spring)
Theoretical principles underlying chemical and biological wastewater treatment processes, including aerobic and anaerobic treatment for organic carbon and nutrient removal. Mathematical models of microbial growth kinetics and mass transport in suspended growth and attached film applications are developed. prereq: 4502, 4501 or instr consent

CEGE 8506. Stochastic Hydrology. (4 cr.; A-F or Audit; Periodic Fall)
Analysis and synthesis of hydrologic series and systems; derived distributions; uncertainty and risk analysis; flood frequency analysis; multivariate time series analysis; correlation and spectral analysis; series of long-range dependence; linear estimation; geostatistics; sampling networks; hydrologic forecasting. prereq: Stat 3021 or equiv or instr consent

CEGE 8507. Advanced Methods in Hydrology. (4 cr.; A-F or Audit; Periodic Fall)
Notions of scale-invariance, scaling, and multiscaling in geophysical processes; methods of multiscaling analysis; wavelet transforms; time-frequency-scale analysis and fractal analysis. Applications in atmospheric, hydrologic, and geomorphologic processes. prereq: 8506

CEGE 8508. Ecological Fluid Mechanics. (4 cr.; A-F or Audit; Every Fall)
Fluid mechanics of microbiological processes in lakes, rivers, and wetlands. Small-scale fluid motion, nutrient uptake, growth kinetics, ecosystem metabolism, scaling, lab/field microstructure measurements. prereq: 3502 or equiv

CEGE 8511. Mechanics of Sediment Transport. (3 cr.; A-F or Audit; Every Fall)
Particle motion in fluids. Criteria for incipient motion. Formulations for bedload and suspended load. Bedform mechanics and hydraulic resistance relations. Channel stability, aggradation and degradation, alluvial stream morphology. prereq: 3502 and 4501 or instr consent

CEGE 8521. The Atmospheric Boundary Layer. (4 cr.; A-F or Audit; Periodic Summer)
Land-atmosphere interactions and turbulent transport in the atmospheric boundary layer (ABL), the lowest part of the atmosphere. ABL development and dynamics. Turbulence, surface energy balance, spectral analysis, similarity theory. Flow over homogeneous and heterogeneous surfaces. Atmospheric stability, measurement, simulation of turbulent fluxes. prereq: CSE or COAFES grad student or instr consent

CEGE 8541. Aquatic Chemistry. (3 cr.; A-F or Audit; Periodic Spring)
Advanced course on water chemistry; physical chemical principles and geochemical processes controlling the chemical composition of natural waters, soil- and sediment-water interactions. Emphasizes behavior of inorganic contaminants in natural waters and engineered systems and dissolved natural organic matter. prereq: 4541 or instr consent

CEGE 8542. Chemistry of Organic Pollutants in Environmental Systems. (3 cr.; A-F or Audit; Periodic Fall)
Structural characteristics and physico-chemical properties of organic contaminants in aquatic systems. Emphasizes PCBs, PAHs, dioxins, insecticides, herbicides, and chlorinated solvents. Factors affecting their transport/ transformation. Structure- and property-activity relationships, their use in predicting organic chemical behavior. prereq: [4541, 5541] or instr consent

CEGE 8551. Environmental Microbiology: Molecular Theory and Methods. (4 cr.; A-F or Audit; Fall Even Year)
Introduction to microbial genetics and molecular phylogeny. Application of nucleic-acid techniques in environmental microbiology and microbial ecology.

CEGE 8552. Groundwater Microbiology: Laboratory. (4 cr.; A-F or Audit; Periodic Fall)
Subsurface microbial ecology, biogeochemical cycling, metabolic classification of subsurface bacteria, modeling bacterial transport, diagnosis of microbial induced fouling (MIF) events, bioremediation of contaminated aquifers. Lectures and four lab hours per week. prereq: grad CE major or instr consent, exposure to basic environ engr and microbiol

CEGE 8553. Biofilms. (3 cr.; A-F or Audit; Periodic Fall)
Science/engineering concepts to investigate formation/function of biofilms. Properties/composition of biofilms, transport/ transformation processes in biofilms, communication in biofilms, mathematical modeling. Applications in environmental engineering. prereq: 4551 or instr consent

CEGE 8561. Analysis and Modeling of Aquatic Environments I. (3 cr.; A-F or Audit; Every Spring)

CEGE 8562. Analysis and Modeling of Aquatic Environments II. (3 cr.; A-F or Audit; Every Spring)

CEGE 8566. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer)
TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

CEGE 8577. Thesis Credits: Master's. (1-18 cr.; max 50 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

CEGE 8888. Thesis Credit: Doctoral. (1-24 cr.; max 100 cr.; No Grade Associated; Every Fall, Spring & Summer)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
Clinical Laboratory Science (CLS)

CLS 5090. Special Laboratory Methods. (1-2 cr.; A-F or Audit; Every Fall & Spring)
Assignment on an individual basis to one of a variety of special areas of experience in the clinical lab. preq: instr consent

CLS 5100. Virology, Mycology, and Parasitology for Medical Technologists. (2 cr.; A-F or Audit; Every Spring)
Lab diagnosis of viral, fungal, and parasitic infections. Lecture. preq: microbiology course with lab, biochem course

CLS 5120. Seminar: Clinical Laboratory Science. (1 cr.; [max 3 cr.]; S-N or Audit; Every Fall & Spring)
Current literature. Presentation/discussion of research. preq: instr consent

CLS 5121. Journal Presentations. (1 cr.; [max 2 cr.]; S-N or Audit; Every Fall & Spring)
Critical analysis, evaluation, discussion of current journal articles in student's specialty area. preq: 1st yr CLS grad student

CLS 5125. Practicum Teaching. (1-2 cr.; A-F or Audit; Every Fall & Spring)
Supervised teaching experience, develop skills using instructional materials, tests, and measurements. preq: instr consent

CLS 5129. Elements of Laboratory Administration. (2 cr.; A-F or Audit; Every Fall & Spring)
Leadership styles, employee selection and evaluation, communications, motivation, morale, discipline, job descriptions, record keeping, budgets, cost accounting, purchasing, product evaluation, lab safety, labor relations, government regulations. preq: instr consent

CLS 5130. Practicum in Laboratory Administration. (2 cr.; A-F or Audit; Every Fall & Spring)
Supervised experience and assignment of specific problems related to lab service and management in health care institutions. preq: instr consent

CLS 5140. Techniques for Teaching. (2 cr.; A-F or Audit; Every Fall & Spring)
Developing objectives, classroom activities, and evaluation criteria for medical technology education. preq: instr consent

CLS 5165. Advanced Clinical Immunohematology. (3 cr.; A-F or Audit; Every Fall & Spring)
Observation, study, and practice in special problems, advanced techniques, and methodology. preq: instr consent

CLS 5402. Molecular Diagnostics. (1 cr.; A-F only; Every Fall)
Basic theory/application of molecular diagnostics in clinical lab. Lecture, lab. preq: instr consent

CLS 5768. Advanced Hematology. (5-10 cr.; A-F or Audit; Every Fall, Spring & Summer)
Practical experience collecting bone marrow from patients. Diagnosing hematological diseases by evaluating and interpreting cells from clinical specimens of bone marrow, peripheral blood, and, if applicable, lymph nodes. preq: instr consent

CPMS 5101. Introduction to Clinical Physiology and Movement Science. (3 cr.; A-F or Audit; Every Fall & Spring)
Overview of clinical physiology and clinical movement science. For students in such diverse fields as bioengineering, kinesiology, neuroscience, physical therapy, psychology, public health, occupational therapy.

CPMS 5201. Colloquium in Clinical Physiology and Movement Science. (1 cr.; S-N or Audit; Every Fall & Spring)
Interdisciplinary course meets 1st and 3rd week of the month. Current research areas, scientific methods, and interpretation of results in the areas of clinical movement science and clinical physiology. preq: Undergrad level in basic anatomy and physiology is highly recommended

CPMS 8201. Seminar in Clinical Physiology and Movement Science. (4 cr.; S-N or Audit; Every Fall & Spring)
Meets 1st and 3rd week of the month. Current research areas, scientific methods, and the interpretation of results in the areas of clinical movement science and clinical physiology.

Cognitive Science (CGSC)

CGSC 8000. Seminar: Philosophy of the Cognitive Sciences. (3 cr.; S-N or Audit; Every Fall & Spring)
Philosophical framework for analyzing cognitive sciences. Recent developments in metaphysics and epistemology. Nature of scientific theories, methodologies of cognitive sciences, relations among cognitive sciences, relation of cognitive science to epistemology and various philosophical problems. preq: Grad cog sci minor or instr consent

CGSC 8001. Proseminar in Cognitive Science. (2 cr.; S-N or Audit; Every Fall & Spring)
Survey of major topics, including theoretical assumptions, methods, and samples of current research. preq: Grad cog sci minor or instr consent

CGSC 8041. Cognitive Neuroscience. (4 cr.; A-F or Audit; Every Fall & Spring)
Relations between brain activity and cognitive function in mammals. Working memory, attention, decision processing, executive
function, categorization, planning, sequence processing. Behavioral/physiological perspectives. Disruption of cognitive function following brain damage. Extracellular recording of single neuron activity in nonhuman primates. Functional neuroimaging/magnetoencephalography in humans. prereq; instr consent

CGSC 8360. Seminar: Topics in Cognitive Science. (1-4 cr. [max 24 cr.]; Student Option; Periodic Fall & Spring) Lectures and in-depth discussion on a topic.

CGSC 8410. Perspectives in Learning, Perception, and Cognition. (2 cr. [max 24 cr.]; S-N only; Every Fall & Spring) Lectures/discussions in cognitive sciences by local/visiting faculty.

CGSC 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) tbd prereq: Doctoral student, adviser consent, DGS consent

CGSC 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

CGSC 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer, 24 cr required

CGSC 8991. Independent Study. (1-4 cr. [max 15 cr.]; Student Option; Every Fall, Spring & Summer) Independent study. prereq: instr consent

Col of Food, Agr & Nat Res Sci (CFAN)

CFAN 5480. Topics in CFANS. (1-4 cr. [max 8 cr.]; Student Option; Periodic Fall, Spring & Summer) Lectures by visiting scholar(s) or regular faculty member. Topics specified in Class Schedule. prereq: Grad student

CFAN 5500. International Field Studies Seminar. (1-3 cr. [max 6 cr.]; A-F or Audit; Every Fall & Spring) Interface the future with natural resource, environmental, economic, food safety, public policy, ethical issues transcending national borders. Seminars take place in various countries/regions. Active learning, lectures, discussion tutorials, field trips, reports, exams. prereq: instr consent

CFAN 5501. Costa Rica--Sustainable Development. (3 cr.; A-F only; Every Spring) Costa Rica's development strategy. Agriculture, tourism, energy, urbanization. Synergies/tension between economic, social, environmental impacts. How organizations maximize benefits associated with sustainable development. prereq: grad student, instr consent

CFAN 5518. Environmental Issues in New Zealand. (GP; 3 cr.; A-F only; Every Spring) This Global Seminar, Environmental Issues in New Zealand, is open to any undergraduate or graduate students regardless of major. Priority for enrollment is given to University of Minnesota students, but students from other institutions may attend if space is available. There are no course prerequisites and all instruction is in English. New Zealand is a modern country with friendly people and awesome scenery. Our daily news is filled with reports on climate change, water scarcity and pollution, soaring energy costs, and food shortages. Solutions must consider environmental, economic, and social implications of our management strategies. Frequently there are tradeoffs between benefits and costs. University students as future leaders of business, government, and social programs should understand how to analyze environmental issues. What are the issues? Who is affected? What alternatives exist to solve them? What are the environmental, economic, and social tradeoffs between these alternatives? What are reliable sources of information? How can each of us contribute to solutions? New Zealand has undergone significant changes in its plant and animal composition following the invasion of humans and the exotic species they introduced. Alarmed by these changes, New Zealanders recently have made significant strides in recognizing environmental issues and seeking sustainable solutions. They offer valuable lessons for U.S. students to bring home and apply to our own environmental issues.

CFAN 8101. Professional Skills for Scientists. (2 cr.; S-N only; Spring Odd Year) Presentations, discussions, and exercises in leading people and in managing money, time, operations, and projects within the context of research and development in the food, agricultural, and natural resource sciences.

Coll of Science, Engineering (CSE)

CSE 5101. Introduction to Engineering Design for Teachers. (3 cr.; Student Option No Audit; Every Summer) History, career opportunities, portfolios, visualization, geometry, modeling, construction, analysis, documentation. Part of Project Lead the Way curriculum. Prereq-college consent.

CSE 5102. Principles of Engineering for Teachers. (3 cr.; Student Option No Audit; Every Summer) Communication/documentation, design process, engineering systems, strength of materials, testing, reliability, statics/dynamics. Part of Project Lead the Way curriculum. Prereq-college consent.

CSE 5104. Civil Engineering and Architecture. (3 cr.; Student Option No Audit; Every Summer) Overview of civil engineering and architecture, their interrelationship/dependence on each other. Students use software to solve real world problems. Project/site planning. Project documentation/presentation. Part of Project Lead the Way. Prereq-college consent.

CSE 5105. Gateway to Technology. (3 cr.; Student Option No Audit; Every Summer) Activity-oriented middle school curriculum to help students in grades six-eight explore math, science, and technology. Five independent, nine-week units: design/modeling, automation/robotics, magic of electrons, science of technology, and flight/space. Prereq-college consent.

College of Liberal Arts (CLA)

CLA 8000. Topics in Graduate Studies. (1-3 cr. [max 6 cr.]; Student Option; Periodic Fall, Spring & Summer) This is a topics course related to graduate students in CLA.

Communication Studies (COMM)

COMM 5110. Special Topics in Communication Theory. (3 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer) Advanced theoretical problems. See department office for current offering.

COMM 5211. Critical Media Studies: Theory and Methods. (3 cr.; A-F only; Every Spring) Survey of theories, research methods, and scholars dominating critical media studies since late 1920s. prereq: Grad student or instr consent

COMM 5221. Media, Race, and Identity. (3 cr.; Student Option; Periodic Fall) Critical media studies perspective on cultural politics of race and ethnicity. Social construction of race, politics of racism, media representations of race. prereq: 3211 or instr consent

COMM 5231. Media Outlaws. (3 cr.; Student Option; Fall Even Year) People working outside of mainstream media institutions who find creative/provocative ways to use media as space for cultural, political, or economic critique/resistance.

COMM 5250. Environmental Communication. (3 cr.; A-F only; Every Spring) Historical, cultural, material contexts within which environmental communication takes place. Understand environmental communication as well as develop communication strategies that lead to more sustainable social practices, institutions, systems.

COMM 5261. Political Economy of Media Culture. (3 cr.; Student Option; Fall Even Year) Organizational practices of media communicators. Media content as link between communicators and audiences. How viewers use/process media content. prereq: 3211 or instr consent

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
COMM 5401. Advanced Theories of Communication. (3 cr.; Student Option; Every Fall, Spring & Summer) Survey of major theoretical approaches to communication including, positivism, constructivism, and systems. prereq: 3401 or grad

COMM 5402. Advanced Interpersonal Communication. (3 cr.; Student Option; Every Spring) Social scientific approaches to interpersonal communication. Theory, research findings. prereq: 3401 or 3402

COMM 5411. Small Group Communication Research. (3 cr.; A-F or Audit; Every Spring) Survey of small group communication research; theory and practice. Group decision-making and leadership. prereq: 3411 or instr consent

COMM 5431. The Process of Persuasion. (3 cr.; Student Option; Every Fall & Spring) Communication campaigns (e.g., advertising, political) illustrating persuasive processes and theories. Research paper required. prereq: 3431

COMM 5441. Communication in Human Organizations. (3 cr.; Student Option; Every Fall, Spring & Summer) Communication in organizational settings. Organizational structure and dynamics and their effect upon the communication process. Individual projects.

COMM 5451W. Intercultural Communication Processes. (WI; 3 cr.; Student Option; Periodic Fall) Theory and research on cultural differences in values, norms, behaviors, and perceptions that affect communication across cultures internationally and domestically.

COMM 5611. Survey of Rhetorical Theory. (3 cr.; Student Option; Periodic Fall) Rhetorical theory, from ancient to contemporary period. Application to public discourse.

COMM 5615W. Introduction to Rhetorical Criticism. (WI; 3 cr.; Student Option; Every Spring) Analysis of public discourse using various theoretical perspectives. prereq: 1101; 3601 recommended

COMM 5617. History and Criticism of U.S. Public Discourse: 1630-1865. (3 cr.; Student Option; Periodic Fall) How discourse has been used to establish or maintain power. Speeches and public debates used to examine American public address from 17th century (e.g., Puritan sermons) to the Civil War. prereq: Jr

COMM 5970. Directed Study. (1-3 cr. [max 18 cr.]; Student Option; Every Fall, Spring & Summer) Guided individual reading or study. Instructor and department consent is required.

COMM 5994. Communication Research Practicum. (1-3 cr. [max 9 cr.]; S-N or Audit; Every Fall, Spring & Summer) Students participate in research group. prereq: instr consent

COMM 8000. Communication Studies Research Colloquium. (1 cr. [max 4 cr.]; S-N only; Every Fall & Spring) The Friday Colloquium is a mix of research presentations by scholars in Communication Studies and related fields, and workshops on professional development. The Colloquium provides graduate students with a broader introduction to the field, cutting edge work, and opportunities for developing their interests and skills. The content and specific requirements of COMM 8xxx will vary by year, depending upon the faculty member who coordinates the colloquium series and the direction provided by the Director of Graduate Studies. In the fall of each year, the professional development portion of the Colloquium will focus on teaching. Professional development sessions in the spring may include: navigating the job market, publishing, networking, or alternative academic career paths, depending on the range of speakers and interests of the cohort.

COMM 8100. Communication Studies Research Colloquium. (0 cr.; S-N only; Every Fall & Spring) The Friday Colloquium is a mix of research presentations by scholars in Communication Studies and related fields, and workshops on professional development. The Colloquium provides graduate students with a broader introduction to the field, cutting edge work, and opportunities for developing their interests and skills. The content and specific requirements of COMM 8xxx will vary by year, depending upon the faculty member who coordinates the colloquium series and the direction provided by the Director of Graduate Studies. In the fall of each year, the professional development portion of the Colloquium will focus on teaching. Professional development sessions in the spring may include: navigating the job market, publishing, networking, or alternative academic career paths, depending on the range of speakers and interests of the cohort.

COMM 8101. Introduction to Graduate Communication Studies. (3 cr.; A-F or Audit; Every Fall) COMM 8101 is a required course that provides beginning graduate students with a foundation for understanding the discipline of communication studies from the perspective of a graduate student, scholar, and faculty citizen.

COMM 8110. Seminar: Communication Research Methods. (3 cr.; max 15 cr.; Student Option; Every Fall, Spring & Summer) Evaluation of research methods in speech-communication. prereq: undergrad degree in spch-comm or equiv

COMM 8210. Seminar: Selected Topics in U.S. Electronic Media. (3 cr.; max 18 cr.; Student Option; Periodic Fall & Spring) Literature survey; evaluating research on topics; conducting independent research project on a particular topic. prereq: 5210 or instr consent; offered when feasible

COMM 8211. Critical Communication Studies: History, Theory, Method. (3 cr.; Student Option; Every Fall, Spring & Summer) Qualitative research methods for studying media institutions, texts, audiences, and contexts.

COMM 8231. Seminar: National and International Electronic Media Systems. (3 cr.; Student Option; Periodic Fall) Historical and contemporary aspects of national and international electronic media systems. Roles of national and international regulatory bodies. Approaches to programming and evidence of effectiveness. prereq: 4231 or instr consent

COMM 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

COMM 8402. Seminar: Interpersonal Communication. (3 cr.; Student Option; Every Fall, Spring & Summer) Evaluate and develop new perspectives for analyzing, diagnosing, and managing interpersonal communication problems. prereq: 5402 or instr consent

COMM 8403. Seminar: Emotion and Communication. (3 cr.; Student Option; Every Fall, Spring & Summer) Major theories of emotion and the role of emotion in communication.

COMM 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) Development of ideas/methods for research project, M.A. Plan B project, or Ph.D. dissertation. prereq: instr consent

COMM 8452. Seminar: Methods of Intercultural/Diversity Facilitation. (3 cr.; Student Option; Every Fall, Spring & Summer) Theories of and techniques for managing effective intercultural communication and diversity. Intercultural training. prereq: 4451 or 5452 recommended

COMM 8502. Seminar: Communication Theory Construction. (3 cr.; Student Option; Periodic Fall & Spring) Logic of communication theory development and modification from a social scientific perspective. Types of communication theories. prereq: 5421 or instr consent

COMM 8504. Seminar: Rhetorical Criticism. (3 cr.; Student Option; Every Fall, Spring & Summer) Rhetorical criticism theories and methods. Rhetoric as applied to literary studies and the growth of hermeneutics as vantage points for reassessing rhetorical methods. prereq: 5615 or instr consent

COMM 8606. Seminar: Rhetorical Analysis of Campaigns and Movements. (3 cr.; Student Option; Periodic Fall)
Literature and methodology in historical and contemporary rhetorical campaigns and movements.

COMM 8611. Seminar: Rhetoric. (3 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring) History/criticism of rhetorical theory. Research in rhetoric. prereq: 5611 or instr consent

COMM 8625. Seminar: Communication Ethics. (3 cr.; A-F or Audit; Periodic Fall) Independent research on communication ethics in interpersonal, group, organizational, intercultural, and media settings. Theories of ethics and methods of analysis. prereq: Ethics course or instr consent

COMM 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr.; dept consent for 3rd/4th registrations, up to 24 combined cr.; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr.

COMM 8777. Thesis Credits: Master's. (1-18 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

COMM 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

COMM 8910. Advanced Topics in Communication Studies. (3 cr. [max 18 cr.]; Student Option; Periodic Fall & Spring) Literature survey; evaluating research on topics; conducting independent research project on a particular topic.

COMM 8994. Directed Research. (1-3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Supervised research project.

Compar Study in Discourse/Soc (CSDS)

CSDS 5302. Aesthetics and the Valuation of Art. (3 cr.; Student Option; Periodic Fall & Spring) Society, ideology, aesthetic value in light of recent critical theories of visual art, music, literature. Mediations of place, social class, gender, ideology on aesthetic judgment in post-renaissance Western culture.

CSDS 5305. Vision and Visuality: An Intellectual History. (3 cr.; A-F only; Periodic Fall & Spring) Central role of vision/visuality in modernity. Modern age as scopic regime. Ways that ideas/ideologies of perception have shaped aesthetic experience within social existence.

CSDS 5401. Origins of Cultural Studies. (3 cr.; Student Option; Periodic Fall & Spring) Intellectual map of the creation of cultural studies as a unique approach to studying social meanings. Key figures and concepts, including nineteenth- and early twentieth century precursors.

CSDS 5555. Introduction to Semiotics. (3 cr.; Student Option; Periodic Spring) Problems of the sign. Sign function/production. Signifying systems as articulated in philosophy, linguistics, anthropology, psychoanalysis, and art theory. Applying semiotics to various signifying practices (e.g., literature, cinema, daily life).

CSDS 5993. Directed Study. (1-3 cr. [max 9 cr.]; Student Option; Every Fall & Spring) Guided individual reading and study. prereq: instr consent

CSDS 8001. Basic Research Seminar: Comparative Studies in Discourse and Society I. (3 cr.; Student Option; Every Fall) Key texts, positions, problems in field of comparative critical theory. Historical precursors, influential contemporary debates, disciplinary genealogies.

CSDS 8002. Basic Research Seminar in Comparative Studies in Discourse and Society II. (3 cr.; Student Option; Every Spring) Key texts, positions, problems in field of comparative critical theory. Special attention to historical precursors, influential contemporary debates, disciplinary genealogies.

CSDS 8333. FTE: Master's. (3 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

CSDS 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

CSDS 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) Doctoral Pre-Thesis Credits prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr.; dept consent for 3rd/4th registrations, up to 24 combined cr.; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr.

CSDS 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

CSDS 8902. Methodologies Colloquium. (1 cr. [max 2 cr.]; S-N only; Every Fall & Spring) Presentations by CL/CSDS faculty. Methods in relation to field as a whole. Library component. Meetings with research librarians. prereq: CSDS grad major or instr consent

CSDS 8910. Advanced Topics in Comparative Studies in Discourse and Society. (3 cr. [max 24 cr.]; Student Option; Every Fall & Spring) Themes in comparative, sociohistorical analysis of discursive practices. Individually or team taught. Topics vary by instructor and semester.

CSDS 8920. Advanced Topics in Comparative Studies in Discourse and Society. (3 cr. [max 15 cr.]; Student Option; Every Fall) Practical applications of specific methodologies and theories to a determined area. Topics vary by instructor and semester.

CSDS 8993. Directed Study in Comparative Studies in Discourse and Society. (1-4 cr. [max 48 cr.]; Student Option; Every Fall & Spring) Directed Study in Comparative Studies in Discourse and Society prereq: instr consent

CSDS 8994. Directed Research in Comparative Studies in Discourse and Society. (1-4 cr.; Student Option; Every Fall & Spring) Directed Research in Comparative Studies in Discourse and Society prereq: instr consent

Comparative & Molecular Biosci (CMB)

CMB 5200. Statistical Genetics and Genomics. (4 cr.; A-F or Audit; Fall Even Year) Statistical issues in genetics. Gene detection, including statistical analysis/designs for linkage study and for mapping quantitative trait loci. Linkage analysis using pedigree data for codominant/dominant markers. Using radiation hybrid mapping and single cell typing. Design issues in linkage analysis, parentage testing, and marker polymorphism.

CMB 5571. Pathogenomics and Molecular Epidemiology - Learning to Fly. (3 cr.; A-F only; Every Spring) This course is designed provide an introduction to the use of molecular methods in our understanding of the pathogenesis, etiology, and transmission of infectious diseases that are important to both animals and public health. This is intended as a hands-on course for the student to learn techniques related to genome
sequencing, pangenome analysis, phylogenetic analysis, and metagenomic analysis, and then apply these techniques towards their own research.

CMB 5594. Directed Research in Comparative and Molecular Biosciences. (1-4 cr.; Student Option; Every Fall, Spring & Summer) Independent study as determined by instructor. Usual activity includes conducting research in instructor's lab. prereq: Jr, instr consent

CMB 5912. Creativity. (1 cr.; Student Option; Every Spring) Creativity will be explored and used to provide new perspectives on a variety of professional goals, activities and challenges. Lectures will be followed by a mixture of individual and group activities to provide a guided exploration of how these creative approaches can be applied to many situations. Students will learn skills to expand their vision, become more adept at problem solving, design more innovative research, inspire themselves and others and become more fascinating communicators.

CMB 5915. Essential Statistics for Life Sciences. (3 cr.; A-F or Audit; Every Fall) This course is a broad overview of the principles and methods of statistical analysis used in life sciences research, including biological, veterinary, and translational research, and provides the background a new researcher needs to understand and apply commonly used statistical methods and the preparation needed for more advanced coursework. Classes will include general instruction and background information, detailed examples of how to perform the analyses, with actual data sets, and discussion on how the topic has been applied in biological research, including reading and assessing papers in the field. Computing will be performed using the R software environment, though students may use alternate software with permission. Topics will include: Descriptive statistics and exploratory graphics Understanding statistical inference and interpreting P-values and confidence intervals. One and two sample inference, including t-tests, proportion tests, and non-parametric alternatives Linear regression, including the effects of confounders ANOVA methods, including pairwise comparisons and multiple comparisons

CMB 8012. Basic Concepts in Skeletal Biology. (2 cr.; A-F or Every Spring) Cells (osteoblasts, osteoclasts, chondrocytes) that make up skeleton. Transcription/signaling networks regulating cell growth/differentiation. Mechanisms of bone remodeling. Regulation of bone by agents such as hormones. prereq: CMB grad student or instr consent

CMB 8100. Research Rotation in Comparative and Molecular Biosciences. (1 cr. [max 2 cr.]; S-N only; Every Fall & Spring) Current developments in faculty research. Topics specific to research adviser's area of interest. Eight weeks.

CMB 8134. Ethical Conduct of Animal Research. (3 cr.; Student Option; Every Fall) Ethical considerations in the use of animal subjects in agricultural, veterinary, and biomedical research. Federal, state, and University guidelines relating to proper conduct for acquisition and use of animals for laboratory, observational, epidemiological, and clinical research. Regulatory requirements. Bases for proper conduct. Societal impact on scientific investigations utilizing animal subjects.

CMB 8202. Mechanisms of Animal Health and Disease II. (3 cr.; A-F or Audit; Every Fall) Multi-perspective approach to critically evaluating journal articles, as done for peer-reviewed journals. Aspects of host/pathogen interactions, including molecular/genetic mechanisms of host resistance/pathogenesis.

CMB 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

CMB 8344. Mechanisms of Hormone Action. (2 cr.; Student Option; Fall Even Year) Mechanisms of hormone/cytokine action. Focuses on major signal transduction apoptosis. Topics incorporate pharmacology, biochemistry, and cell biology of hormone action in relevant physiological systems. Lectures on basic principles. Specialized lectures. Discussion of primary literature. prereq: Course in biochemistry or cell biology or instr consent

CMB 8361. Neuro-Immune Interactions. (3 cr.; Student Option; Fall Odd Year) Regulatory systems (neuroendocrine, cytokine, and autonomic nervous systems) linking brain and immune systems in brain-immune axis. Functional effects of bidirectional brain-immune regulation. Offered fall of even-numbered years. prereq: [MICB 5218 or equiv], [NSC 5561 or equiv]

CMB 8371. Mucosal Immunobiology. (3 cr.; A-F or Audit; Periodic Fall) Host immune processes at body surfaces. Innate/adaptive immunity at mucosal surfaces. Interactions/responses of various mucosal tissues to pathogens. Approaches to target protective vaccination to mucosal tissues. Lectures, journal. prereq: [MICA 8001 or equiv or instr consent

CMB 8394. Research in Comparative Biomedical Sciences. (1-6 cr.; max 18 cr.) Student Option; Every Fall, Spring & Summer) Directed research determined by student's interests, in consultation with faculty mentor. prereq: Grad CMB major

CMB 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

CMB 8481. Advanced Neuropharmaceutics. (4 cr.; A-F or Audit; Fall Even Year) Delivery of compounds to central nervous system (CNS) to activate proteins in specific brain regions for therapeutic benefit. Pharmaceutical/pharmacological issues specific to direct drug delivery to CNS. prereq: instr consent

CMB 8550. Comparative and Molecular Biosciences Seminar. (1 cr.; max 8 cr.) S-N or Audit; Every Fall & Spring) Student/faculty presentations of their own research or a directed topic. prereq: Biol sciences grad student

CMB 8560. Research and Literature Reports. (1 cr.; max 2 cr.) S-N or Audit; Every Fall & Spring) Current developments in cellular and molecular mechanisms of animal health and disease.

CMB 8571. Pathogenomics and Molecular Epidemiology - Learning to Fly. (3 cr.; A-F or Audit; Every Spring) This course is designed provide an introduction to the use of molecular methods in our understanding of the pathogenesis, etiology, and transmission of infectious diseases that are important to both animals and public health. This is intended as a hands-on course for the student to learn techniques related to genome sequencing, pangenome analysis, phylogenetic analysis, and metagenomic analysis, and then apply these techniques towards their own research.

CMB 8777. Thesis Credits: Master's. (1-18 cr.; max 50 cr.) No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

CMB 8888. Thesis Credit: Doctoral. (1-24 cr.; max 100 cr.) No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

CMB 8910. Statistical Principles of Research Design. (3 cr.; A-F or Audit; Every Spring)
This course is a broad overview of the principles and techniques of research design and methods used in veterinary and translational research, and provides the background a new researcher needs to understand the literature and make good decisions about what is appropriate for their research, prereq: intro grad level stats course or it's equivalent

### Comparative Literature (CL)

**CL 5302. Aesthetics and the Valuation of Art.** (3 cr.; Student Option; Periodic Fall & Spring) Society, ideology, aesthetic value in light of recent critical theories of visual art, music, literature. Mediations of place, social class, gender, ideology on aesthetic judgment in post-renaissance Western culture.

**CL 5305. Vision and Visuality: An Intellectual History.** (3 cr.; A-F only; Periodic Fall & Spring) Central role of vision/visuality in modernity. Modern age as scopic regime. Ways that ideas/ideologies of perception have shaped aesthetic experience within social existence.

**CL 5401. Origins of Cultural Studies.** (3 cr.; Student Option; Periodic Fall & Spring) Intellectual map of the creation of cultural studies as a unique approach to studying social meanings. Key figures and concepts, including nineteenth- and early twentieth century precursors.

**CL 5555. Introduction to Semiotics.** (3 cr.; Student Option; Periodic Spring) Problems of the nature of the sign; sign function; sign production; signifying systems as articulated in philosophy, linguistics, anthropology, psychoanalysis, and art theory. Applying semiotics to various signifying practices (e.g., literature, cinema, daily life).

**CL 5992. Directed Reading in Comparative Literature.** (1-3 cr. [max 9 cr.]; Student Option; Every Fall & Spring) Guided individual reading and study. prereq: instr consent

**CL 8001. Basic Research Seminar in Comparative Literature I.** (3 cr.; Student Option; Every Fall) Key texts, positions, problematics in field of comparative critical theory. Historical precursors, influential contemporary debates, disciplinary genealogies.

**CL 8002. Basic Research Seminar in Comparative Literature II.** (3 cr.; Student Option; Every Fall) Key texts, positions, problematics in field of comparative critical theory. Special attention to historical precursors, influential contemporary debates, disciplinary genealogies.

**CL 8333. FTE: Master’s.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

**CL 8362. Modernity and Its Others.** (4 cr.; Student Option; Periodic Fall & Spring) Dialectical interrogation of Western and non-Western theories of modernity. Reckoning with differences and variations in its history, providing an account of the normative category of modernity (designated as European), and alternative articulations around the globe.

**CL 8444. FTE: Doctoral.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

**CL 8666. Doctoral Pre-Thesis Credits.** (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) Doctoral pre-thesis credits. prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

**CL 8777. Thesis Credits: Master’s.** (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

**CL 8888. Thesis Credit: Doctoral.** (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

**CL 8901. Intro to the Profession: Critical Methods of Research, Pedagogy, and Creative Work in the Humanities.** (3 cr.; Student Option; Every Spring) Preparates graduate majors for teaching. Issues of pedagogy. Preparing syllabi for specific courses that graduate instructors teach. Required for students planning to teach in Department of Cultural Studies and Comparative Literature. prereq: Grad comp lit major

**CL 8902. Methodologies Colloquium.** (1 cr. [max 2 cr.]; S-N only; Every Fall & Spring) Presentations by CL/CSDS faculty. Methods in relation to field as a whole. Library component. Meetings with research librarians. prereq: CL grad major or instr consent

**CL 8910. Advanced Topics in Comparative Literature.** (3 cr. [max 24 cr.]; Student Option; Every Fall & Spring) Practical applications of specific methodologies and theories to a determined area. Topics vary by instructor and semester.

**CL 8920. Advanced Topics in Comparative Literature.** (3 cr. [max 15 cr.]; Student Option; Periodic Fall & Spring) Practical applications of specific methodologies and theories to a determined area. Topics vary by instructor and semester.

**CL 8992. Directed Reading in Comparative Literature.** (1-4 cr. [max 12 cr.]; Student Option; Every Fall & Spring) tbd prereq: instr consent

**CL 8994. Directed Research in Comparative Literature.** (1-4 cr. [max 48 cr.]; Student Option; Every Fall & Spring) Directed research. prereq: instr consent

### Computer Engineering (CMPE)

**CMPE 8333. FTE: Master’s.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

**CMPE 8777. Thesis Credits: Master’s.** (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

### Computer Science (CSCI)

**CSCI 5103. Operating Systems.** (3 cr.; Student Option; Every Fall) Conceptual foundation of operating system designs and implementations. Relationships between operating system structures and machine architectures. UNIX implementation mechanisms as examples. prereq: 4061 or instr consent

**CSCI 5105. Introduction to Distributed Systems.** (3 cr.; Student Option; Periodic Spring) Distributed system design and implementation. Distributed communication and synchronization, data replication and consistency, distributed file systems, fault tolerance, and distributed scheduling. prereq: [5103 or equiv] or instr consent

**CSCI 5106. Programming Languages.** (3 cr.; Student Option; Every Fall) Design and implementation of high-level languages. Course has two parts: (1) language design principles, concepts, constructs; (2) language paradigms, applications. Note: course does not teach how to program in specific languages. prereq: 4011 or instr consent

**CSCI 5115. User Interface Design, Implementation and Evaluation.** (3 cr.; Student Option; Every Fall) Theory, design, programming, and evaluation of interactive application interfaces. Human capabilities and limitations, interface design and engineering, prototyping and interface construction, interface evaluation, and topics such as data visualization and World Wide Web. Course is built around a group project. prereq: 4041 or instr consent

**CSCI 5117. Developing the Interactive Web.** (3 cr.; Student Option; Spring Even Year) Hands-on design experience using modern web development tools. Students work in teams to develop software programs using each of four toolkits. Analyze developments in forum posts and classroom discussions. prereq: 4131 or 5131 or instr consent; upper div or grad in CSci recommended

**CSCI 5123. Recommender Systems.** (3 cr.; Student Option; Fall Odd Year) An overview of recommender systems, including content-based and collaborative algorithms for recommendation, programming of recommender systems, and evaluation and
metrics for recommender systems. prereq: Java programming and 2033 and 3081, or instructor consent.

CSCI 5125. Collaborative and Social Computing. (3 cr.; Student Option; Spring Even Year)
Introduction to computer-supported cooperative work, social computing. Technology, research methods, theory, case studies of group computing systems. Readings, hands-on experience. prereq: 5115 or instr consent

CSCI 5127W. Embodied Computing: Design & Prototyping. (WI; 3 cr.; Student Option; Fall Even Year)
In this course, you will learn and apply the principles of embodied computing to human-centered challenges. Through a semester-long team project, you will learn and demonstrate mastery of human-centered embodied computing through two phases: (1) investigating human needs and current embodied practices and (2) rapidly prototyping and iterating embodied computing solutions. One of the ways you will demonstrate this mastery is through the collaborative creation of a written document and project capstone video describing your process and prototype. prereq: CSci 4041, upper division or graduate student, or instructor permission; CSci 5115 or equivalent recommended.

CSCI 5143. Real-Time and Embedded Systems. (3 cr.; A-F only; Periodic Spring)
Real-time systems that require timely response by computer to external stimulus. Embedded systems in which computer is part of machine. Increasing importance of these systems in commercial products. How to control robots and video game consoles. Lecture, informal lab. prereq: [4061 or instr consent], experience with C language

CSCI 5161. Introduction to Compilers. (3 cr.; Student Option; Every Spring)
Techniques for translating modern programming languages to intermediate forms or machine-executable instructions/their organization into compiler. Lexical analysis, syntax analysis, semantic analysis, data flow analysis, code generation. Compiler project for prototypical language. prereq: [2021, 5106] or instr consent

CSCI 5204. Advanced Computer Architecture. (3 cr.; Student Option; Every Fall)
Instruction set architecture, processor microarchitecture, memory, I/O systems. Interactions between computer software and hardware. Methodologies of computer design. prereq: 4203 or EE 4363

CSCI 5211. Data Communications and Computer Networks. (3 cr.; Student Option; Every Fall)
Concepts, principles, protocols, and applications of computer networks. Layered network architectures, data link protocols, local area networks, network layer/routing protocols, transport, congestion/flow control, emerging high-speed networks, network programming interfaces, networked applications. Case studies using Ethernet, Token Ring, FDDI, TCP/IP, ATM, Email, HTTP, and WWW. prereq: [4061 or instr consent], basic knowledge of [computer architecture, operating systems, probability], grad student

CSCI 5221. Foundations of Advanced Networking. (3 cr.; Student Option; Spring Even Year)
Design principles, protocol mechanisms. Network algorithms, implementation techniques. Advanced network architectures, state-of-art/emerging networking technologies/applications, network modeling. Simulation, experiments. prereq: 4211 or 5211 or equiv; intro course in computer networks recommended

CSCI 5231. Wireless and Sensor Networks. (3 cr.; Student Option; Spring Odd Year)
Enabling technologies, including hardware, embedded operating systems, programming environment, communication, networking, and middleware services. Hands-on experience in programming tiny communication devices. prereq: 4211 or 5211 or instr consent

CSCI 5251. Introduction to Computer Security. (3 cr.; Student Option; Every Fall)
Concepts of computer, network, and information security. Risk analysis, authentication, access control, security evaluation, audit trails, cryptography, network/database/application security, viruses, firewalls. prereq: 4061 or equiv or instr consent

CSCI 5302. Analysis of Numerical Algorithms. (3 cr.; Student Option; Every Spring)
Additional topics in numerical analysis. Interpolation, approximation, extrapolation, numerical integration/differentiation, numerical solutions of ordinary differential equations. Introduction to optimization techniques. prereq: 2031 or 2033 or instr consent

CSCI 5304. Computational Aspects of Matrix Theory. (3 cr.; Student Option; Every Fall)

CSCI 5403. Computational Complexity. (3 cr.; Student Option; Periodic Fall & Spring)
Computational models, complexity measures in each model, and related complexity classes. prereq: 4041 or instr consent

CSCI 5421. Advanced Algorithms and Data Structures. (3 cr.; Student Option; Every Fall & Spring)
Fundamental paradigms of algorithm and data structure design. Divide-and-conquer, dynamic programming, greedy method, graph algorithms, amortization, priority queues and variants, search structures, disjoint-set structures. Theoretical underpinnings. Examples from various problem domains. prereq: 4041 or instr consent

CSCI 5451. Introduction to Parallel Computing: Architectures, Algorithms, and Programming. (3 cr.; Student Option; Every Spring)
Parallel architectures design, embeddings, routing. Examples of parallel computers. Fundamental communication operations. Performance metrics. Parallel algorithms for sorting. Matrix problems, graph problems, dynamic load balancing, types of parallelisms. Parallel programming paradigms. Message passing programming in MPI. Shared-address space programming in OpenMP or threads. prereq: 4041 or instr consent

CSCI 5461. Functional Genomics, Systems Biology, and Bioinformatics. (3 cr.; Student Option; Every Spring)
Computational methods for analyzing, integrating, and deriving predictions from genomic/proteomic data. Analyzing gene expression, proteomic data, and protein-protein interaction networks. Protein/gene function prediction, Integrating diverse data, visualizing genomic datasets. prereq: 3003 or 4041 or instr consent

CSCI 5465. Introduction to Computing for Biologists. (3 cr.; Student Option; Fall Odd Year)
This course is designed for graduate students in biology or other related sciences that wish to learn fundamental computing skills that will enable them to develop their own computational approaches for meaningful interpretation of scientific data. Students will complete programming assignments in Python and R. No previous programming knowledge assumed. Prereq: Introductory biology course; non-CSE students only.

CSCI 5471. Modern Cryptography. (3 cr.; Student Option; Periodic Fall & Spring)
Introduction to cryptography. Theoretical foundations, practical applications. Threats, attacks, and countermeasures, including cryptosystems and cryptographic protocols. Secure systems/networks. History of cryptography, encryption (conventional, public key), digital signatures, hash functions, message authentication codes, identification, authentication, applications. prereq: [2011, 4041, [familiarity with number theory or finite fields]] or instr consent

CSCI 5481. Computational Techniques for Genomics. (3 cr.; Student Option; Every Fall)

CSCI 5511. Artificial Intelligence I. (3 cr.; Student Option; Every Fall)
CSCI 5512. Artificial Intelligence II. (3 cr.; Student Option; Every Spring) Uncertainty in artificial intelligence. Probability as a model of uncertainty, methods for reasoning/learning under uncertainty, utility theory, decision-theoretic methods. prereq: [STAT 3021, 4041] or instr consent

CSCI 5521. Introduction to Machine Learning. (3 cr.; Student Option; Periodic Fall) Problems of pattern recognition, feature selection, measurement techniques. Statistical decision theory, nonstatistical techniques. Automatic feature selection/data clustering. Syntactic pattern recognition. Mathematical pattern recognition/artificial intelligence. prereq: [2031 or 2033], STAT 3021 or instr consent

CSCI 5523. Introduction to Data Mining. (3 cr.; Student Option; Periodic Fall & Spring) Data pre-processing techniques, data types, similarity measures, data visualization/exploration. Predictive models (e.g., decision trees, SVM, Bayes, K-nearest neighbors, bagging, boosting). Model evaluation techniques. Clustering (hierarchical, partitional, density-based), association analysis, anomaly detection. Case studies from areas such as earth science, the Web, network intrusion, and genomics. Hands-on projects. prereq: 4041 or equiv or instr consent

CSCI 5525. Machine Learning. (3 cr.; Student Option; Fall Every Year) Models of learning. Supervised algorithms such as perceptrons, logistic regression, and large margin methods (SVMs, boosting). Hypothesis evaluation. Learning theory. Online algorithms such as winnow and weighted majority. Unsupervised algorithms, dimensionality reduction, spectral methods, Graphical models. prereq: Grad student or instr consent

CSCI 5551. Introduction to Intelligent Robotic Systems. (3 cr.; Student Option; Periodic Fall) Transformations, kinematics/reverse kinematics, dynamics, control. Sensing (robot vision, force control, tactile sensing), applications of sensor-based robot control, robot programming, mobile robotics, microrobotics. prereq: 2031 or 2033 or instr consent

CSCI 5552. Sensing and Estimation in Robotics. (3 cr.; Student Option; Periodic Spring) Bayesian estimation, maximum likelihood estimation, Kalman filtering, particle filtering. Sensor modeling and fusion. Mobile robot motion estimation (odometry, inertial, laser scan matching, vision-based) and path planning. Map representations, landmark-based localization, Markov localization, simultaneous localization/mapping (SLAM), multi-robot localization/mapping. prereq: [5551, Stat 3021] or instr consent

CSCI 5561. Computer Vision. (3 cr.; Student Option; Every Spring) Issues in perspective transformations, edge detection, image filtering, image segmentation, and feature tracking. Complex problems in shape recovery, stereo, active vision, autonomous navigation, shadows, and physics-based vision. Applications. prereq: 5511 or instr consent

CSCI 5607. Fundamentals of Computer Graphics 1. (3 cr.; Student Option; Every Fall) Fundamental algorithms in computer graphics. Emphasizes programming projects in C/C++. Scan conversion, hidden surface removal, geometrical transformations, projection, illumination/shading, parametric cubic curves, texture mapping, antialiasing, ray tracing. Developing graphics software, graphics research. prereq: concurrent registration is required (or allowed) in 2033, concurrent registration is required (or allowed) in 3081

CSCI 5609. Visualization. (3 cr.; Student Option; Fall Every Year) Fundamental theory/practice in data visualization. Programming applications. Perceptual issues in effective data representation, multivariate visualization, information visualization, vector field/volume visualization. prereq: [1913, 4041] or equiv or instr consent

CSCI 5611. Animation & Planning in Games. (3 cr.; Student Option; Fall Odd Year) Theory behind algorithms used to bring virtual worlds to life. Computer animation topics. Real-time, interactive techniques used in modern games. Physically-based animation, motion planning, character animation, simulation in virtual worlds. prereq: 4041 or 4611 or instr consent

CSCI 5619. Virtual Reality and 3D Interaction. (3 cr.; Student Option; Spring Odd Year) Introduction to software, technology/applications in virtual/augmented reality, 3D user interaction. Overview of current research. Hands-on projects. prereq: 4611 or 5607 or 5115 or equiv or instr consent

CSCI 5707. Principles of Database Systems. (3 cr.; Student Option; Every Fall) Concepts, database architecture, alternative conceptual data models, foundations of data manipulation/analysis, logical data models, database designs, models of database security/integrity, current trends. prereq: [4041 or instr consent], grad student

CSCI 5715. From GPS and Virtual Globes to Spatial Computing. (3 cr.; Student Option; Spring Even Year) Mathematical concepts, geo-information, representations, algorithms, data-structures/access methods, analysis, architectures, interfaces, reasoning, time. prereq: Familiarity with Java, C++, or Python

CSCI 5801. Software Engineering I. (3 cr.; Student Option; Every Fall) Advanced introduction to software engineering. Software life cycle, development models, software requirements analysis, software design, coding, maintenance. prereq: 2041 or instr consent

CSCI 5802. Software Engineering II. (3 cr.; Student Option; Periodic Spring) Introduction to software testing, software maturity models, cost specification models, bug estimation, software reliability models, software complexity, quality control, and experience report. Student groups specify, design, implement, and test partial software systems. Application of general software development methods and principles from 5801. prereq: 5801 or instr consent

CSCI 5890. Special Topics in Computer Science. (1-3 cr.; max 27 cr.; Student Option; Periodic Fall & Spring) Lectures and informal discussions on current topics in computer science. prereq: instr consent; may be repeated for cr

CSCI 5991. Independent Study. (1-3 cr.; max 9 cr.; Student Option; Every Fall, Spring & Summer) Independent study arranged with CS faculty member. prereq: instr consent; may be repeated for cr

CSCI 5994. Directed Research. (1-3 cr.; max 9 cr.; Student Option; Every Fall, Spring & Summer) Directed research arranged with faculty member. prereq: instr consent; may be repeated for cr

CSCI 5996. Curricular Practical Training. (1-3 cr.; max 3 cr.; S-N or Audit; Every Fall, Spring & Summer) Industrial work assignment involving advanced computer technology. Reviewed by faculty member. Grade based on final report covering work assignment. prereq: [CSci or CompE] major, instr consent

CSCI 8001. Introduction to Research in Computer Science I. (1 cr.; A-F only; Every Fall) First of two-part sequence course. Students must take both parts to complete course and receive grade. Conducting literature review. Identifying research questions. Writing a research proposal. Research areas in CS. Practical research skills. Research ethics. Resources. prereq: 1st yr CS PhD student
CSCI 8002. Introduction to Research in Computer Science, II. (2 cr. ; A-F only; Every Spring)
Second of two-part sequence course. Students must take both parts to complete course and receive grade. Conducting literature review. Identifying research questions. Writing a research proposal. Research areas in CS. Practical research skills. Research ethics. Resources. prerequisite: 8001, 1st yr CS PhD student

CSCI 8101. Advanced Operating Systems. (; 3 cr. ; Student Option; Periodic Fall)
Successful research systems and existing theory of systems design. Goal is not merely to catalog systems or learn mathematics, but to develop a sense of elegance of design that leads to successful systems. prerequisite: 5103 or instr consent

CSCI 8102. Foundations of Distributed Computing. (; 3 cr. ; Student Option; Periodic Spring)
Fundamental principles underlying design of distributed and multiprocessor operating systems. Foundations of distributed computing systems; shared multiprocessor systems. prerequisite: 8101 or instr consent

CSCI 8115. Human-Computer Interaction and User Interface Technology. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Current research issues in human-computer interaction, user interface toolkits and frameworks, and related areas. Research techniques, model-based development, gesture-based interfaces, constraint-based programming, event processing models, innovative systems. HCI in multimedia systems. prerequisite: 5115 or instr consent

CSCI 8117. Understanding the Social Web. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Research on the social web, Read, present, and discuss papers, do homework using social web research techniques such as data analysis and simulation. Semester research project. prerequisite: CS grad or instr consent

CSCI 8161. Advanced Compiler Techniques. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Techniques for uniprocessors and parallel computers. Fundamental program analysis algorithms such as data flow analysis and data dependence analysis. Variety of code generation and transformation techniques. prerequisite: 4061 or instr consent

CSCI 8205. Parallel Computer Organization. (; 3 cr. ; Student Option; Every Spring)
Design/implementation of multiprocessor systems. Parallel machine organization, system design. Differences between parallel, uniprocessor machines. Programming models. Synchronization/communication. Topologies, message routing strategies. Performance optimization techniques. Compiler, system software issues. prerequisite: 5204 or EE 5364 or instr consent

CSCI 8211. Advanced Computer Networks and Their Applications. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Current research issues in traffic and resource management, quality-of-service provisioning for integrated services networks (such as next-generation Internet and ATM networks) and multimedia networking. prerequisite: 5211 or instr consent

CSCI 8271. Security and Privacy in Computing. (; 3 cr. ; A-F or Audit; Periodic Fall)
Recent security/privacy issues in computer systems/networks. Threats, attacks, countermeasures. Security research, authentication, network security, wireless security, computer system security, anonymous system, pseudonym, access control, intrusion detection system, cryptographic protocols. How to pursue research in security and design secure systems. prerequisite: [5211, 5103] or instr consent; 5471 or EE 5248 or Math 5248 or equiv recommended

CSCI 8314. Sparse Matrix Computations. (; 3 cr. ; Student Option; Periodic Spring)
Sparsity and sparse matrices. Data structures for sparse matrices. Direct methods for sparse linear systems. Reordering techniques to reduce fill-in such as minimal degree ordering and nested dissection ordering. Iterative methods. Preconditioning algorithms. Algorithms for sparse eigenvalue problems and sparse least-squares. prerequisite: 5304 or numerical linear algebra course or instr consent

CSCI 8333. FTE: Master's. (; 1 cr. ; No Grade Associated; Every Fall, Spring & Summer)
(No description) prerequisite: Master's student, adviser and DGS consent

CSCI 8363. Numerical Linear Algebra in Data Exploration. (; 3 cr. ; Student Option; Periodic Spring)
Computational methods in linear algebra, matrix decompositions for linear equations, least squares, eigenvalue problems, singular value decomposition, conditioning, stability in method for machine learning, large data collections. Principal directions, unsupervised clustering, latent semantic indexing, linear least squares fit. Markov chain models on hyperlink structure. prerequisite: 5304 or instr consent

CSCI 8442. Computational Geometry and Applications. (; 3 cr. ; Student Option; Periodic Spring)
Designing efficient algorithms and data structures for geometric problems. Models of computation, convex hulls, geometric duality, multidimensional search, Voronoi diagrams and Delaunay triangulations, linear programming in fixed dimensions, lower bound techniques. Applications, advanced topics. prerequisite: 5421 or instr consent

CSCI 8444. FTE: Doctoral. (; 1 cr. ; No Grade Associated; Every Fall, Spring & Summer)
(No description) prerequisite: Doctoral student, adviser and DGS consent

CSCI 8551. Intelligent Agents. (; 3 cr. ; Student Option; Periodic Fall)
Theories of intelligent agents. Agent architectures; knowledge representation, communication, cooperation, and negotiation among multiple agents; planning and learning; issues in designing agents with a physical body; dealing with sensors and actuators; world modeling. prerequisite: 5511 or instr consent

CSCI 8666. Doctoral Pre-Thesis Credits. (; 1-6 cr. ; max 12 cr.) ; No Grade Associated; Every Fall, Spring & Summer)
tbd prerequisite: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

CSCI 8701. Overview of Database Research. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Research papers from journals and conferences on current topics in databases, such as database research methodologies, relational implementation techniques, active databases, storage systems, benchmarking, distributed and parallel databases, new data models, prototype systems, data mining, and future directions. prerequisite: 5708 or instr consent

CSCI 8715. Spatial Data Science Research. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Motivation, models of spatial information, querying spatial data, processing strategies for spatial queries, multi-dimensional storage/ access methods, spatial graph datasets, spatial data mining, trends (e.g., spatio-temporal databases, mobile objects, raster databases), research literature, how to pursue research. prerequisite: 4707 or 5707 or 5715 or GIS 5571 or GIS 5573

CSCI 8725. Databases for Bioinformatics. (; 3 cr. ; Student Option; Periodic Spring)
DBMS support for biological databases, data models. Searching integrated public domain databases. Queries/analyses, DBMS extensions, emerging applications. prerequisite: 4707 or 5707 or instr consent

CSCI 8735. Advanced Database Systems. (; 3 cr. ; A-F or Audit; Periodic Fall)
Database systems for emerging applications, nontraditional query processors, multi-dimensional data indexing. Current research trends. prerequisite: 4707 or 5707 or 5708

CSCI 8760. Plan B Project. (; 3 cr. ; S-N or Audit; Every Fall & Spring)
Project arranged between student and faculty. prerequisite: CSci MS student, instr consent

CSCI 8777. Thesis Credits: Master's. (; 1-18 cr. ; max 50 cr.) ; No Grade Associated; Every Fall, Spring & Summer)
(No description) prerequisite: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

CSCI 8801. Advanced Software Engineering. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Software reusability, internet/intranet programming, software reengineering, and software safety. prerequisite: 5801 or instr consent

CSCI 8888. Thesis Credit: Doctoral. (; 1-24 cr. ; max 100 cr.) ; No Grade Associated; Every Fall, Spring & Summer)
(No description) prerequisite: Max 18 cr per semester or summer; 24 cr required

CSCI 8970. Computer Science Colloquium. (; 1 cr. ; S-N or Audit; Every Fall & Spring)
Recent developments in computer science and related disciplines. Students must attend 13 of the 15 lectures.

CSCI 8980. Special Advanced Topics in Computer Science. (1-3 cr. [max 27 cr.]; Student Option; Every Fall & Spring) Lectures and informal discussions. prereq: instr consent

CSCI 8991. Independent Study. (1-3 cr. [max 9 cr.]; Student Option; Every Fall & Spring) Independent study with professor. prereq: instr consent

CSCI 8994. Directed Research in Computer Science. (1-3 cr. [max 9 cr.]; Student Option; Every Fall & Spring) Directed research with professor. prereq: instr consent

Conservation Sciences (CONS)

CONS 8001. Conservation Biology Seminar. (1 cr. [max 6 cr.]; S-N or Audit; Every Fall & Spring) Topics vary. prereq: instr consent

CONS 8004. Economic and Social Aspects of Conservation Biology. (3 cr.; Student Option; Every Fall) Economic/social aspects of conservation biology. Ecological economics, human dimension of conservation biology, values of conserving species/ecosystems. prereq: CBio student or instr consent

CONS 8093. Directed Study Experience. (1-5 cr. [max 6 cr.]; S-N or Audit; Periodic Fall) Directed Study Experience prereq: instr consent

CONS 8095. Contemporary Problems in Conservation Biology. (1 cr.; S-N or Audit; Every Fall & Spring) Comprehensive review of conservation biology issue. Written exam, prereq: 8004, FW 8452, instr consent

CONS 8103. Research in Support of Resource Management: a Dialog With Land Managers. (2 cr.; S-N only; Fall Odd Year) Effective communication between researchers and natural resource managers. Organized around research needs of land managers. Students select topics of interest from these needs and, as small teams, prepare short research proposals to address each topic.

CONS 8201. How to Excel in Graduate School. (2 cr. [max 8 cr.]; S-N only; Every Fall) Overview of history/philosophy of science as framework for writing thesis or dissertation. How to conduct research. Time management.

CONS 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

CONS 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

CONS 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

CONS 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

CONS 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) Doctoral thesis credit. prereq: Max 18 cr per semester or summer; 24 cr required; prior to passing written and oral prelims, must have: 1 yr coursework in program; approval on a degree program; 1-2 pg research proposal (approved by adviser) to DGS asst

Continuing Dental Education (CDED)

CDED 6101. Postgraduate Contemporary Esthetic Dentistry I: Level I—Lecture/Laboratory Series. (5 cr.; S-N or Audit; Every Fall, Spring & Summer) Dental materials, occlusion, dental photography, smile design, anterior ceramic restorations, posterior ceramic restorations. Color, bleaching, and endoesthetics. Anterior composite restorations. Posterior composite restorations, fiber-reinforced composite bridges, in-office indirect restorations, partial/full denture esthetics, implant esthetics, perio esthetics, practice management for contemporary esthetic dentistry. Lectures, discussion, lab applications.

CDED 6202. Postgraduate Contemporary Esthetic Dentistry: Level II—Patient Series. (5 cr.; S-N or Audit; Every Fall, Spring & Summer) Dental photography, anterior/posterior composite restorations, indirect anterior restorations, direct posterior restorations. Lectures, case presentations. Clinical experience with multi-unit, complex restorative problems. prereq: 6101

CDED 7302. Postgraduate Contemporary Esthetic Dentistry: Level III—Orthodontic and Periodontal Esthetics. (1-1.5 cr.; S-N or Audit; ) How periodontal/orthodontic therapies may be used to enhance esthetic outcome of restorative cases. How to use cephalometric analysis for evaluating facial esthetics. When to use limited orthodontic treatment before restorative treatment. How to eliminate uneven gingival contours, lengthen crowns, recontour interdental papilla, and optimize periodontal esthetics around dental implants. Lectures, workshop with removable appliances. Surgical demonstrations, discussions of cases from practice.

CDED 7303. Postgraduate Contemporary Esthetic Dentistry: Level III—Dental Implants. (2 cr.; S-N or Audit; ) How to use dental implants as part of restorative treatment plan. Patient selection/ treatment planning, surgical phases of implant placement, restorative phases of implant placement, perioesthetics related to dental implants. Lectures, lab, clinical demonstrations, discussion of cases from practice.

CDED 7306. Postgraduate Contemporary Esthetic Dentistry: Level III—Diagnostic Box. (1 cr.; S-N or Audit; ) Advanced techniques for photographic, cosmetic, and occlusal analysis. How to customize gender, age, and personality into case design. Emphasizes effective case presentation and staff involvement. Lecture, lab, clinical experience with diagnostic records, cosmetic previews.

CDED 7307. Postgraduate Contemporary Esthetic Dentistry: Level III—Technology in Restorative Dentistry. (1 cr.; S-N or Audit; ) How to incorporate new technologies into practice. Composite curing technology, digital radiography, high tech software programs CAD/CAM technology digital cameras, diagnodont, intraoral cameras, other new high tech equipment. CEREC, digital radiography, digital cameras, diagnodont, high tech software systems. Small group interaction with faculty.

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

University of Minnesota Twin Cities Catalog Fall, 2018
CDED 7401. Postgraduate Contemporary Esthetic Dentistry: Level III—Research Design. (1 cr.; S-N or Audit; )
Analyzing research findings, writing a research proposal. Problem-based dental literature. Evaluate claims made by dental manufacturers. Methods of research design, data collection/interpretation. Methods to pose a research question, prepare a research plan, and apply analytical skills to everyday practice.

CDED 7402. Postgraduate Contemporary Esthetic Dentistry: Level III—Independent Research Paper. (3-5 cr.; S-N or Audit; Periodic Fall & Spring)
Independent research paper under supervision of faculty mentor. Selected topic must pose a research question, follow established research protocol, and advance knowledge in the field of contemporary restorative/esthetic dentistry. prereq: 7401

COPT 5001. Elementary Coptic. (3 cr.; Student Option; )
Introduction to Coptic grammar and vocabulary, chiefly in the Sahidic dialect.

COPT 5002. Elementary Coptic. (3 cr.; Student Option; Periodic Fall)
Reading a variety of Coptic literature, such as Gnostic, martyrological, or monastic texts. prereq: 5001 or equiv

CSPH 5115. Cultural Awareness, Knowledge and Health. (3 cr.; Student Option; Every Spring)
How knowledge can become resource for individual, family, community health. Interactive glimpse of wisdom of cultural communities. Develop capacity to see culture within professional education/practice. Cultural constructs underpinning medical system, role of culture in interaction between practitioner/patient, role of reconnection to cultural heritage in healing. prereq: Jr or Sr or grad student or instr consent

CSPH 5118. Whole Person, Whole Community: The Reciprocity of Wellbeing. (3 cr.; Student Option No Audit; Every Fall & Spring)
This course explores the symbiotic and reciprocal relationship between individual and community health and wellbeing, as well as the many factors/forces which influence that relationship. Drawing upon recent studies in the area of reciprocal/symbiotic effects between individual wellbeing and community wellbeing, this course will include the following core topics: definitions of community and related dimensions of wellbeing, importance of Individual/Community reciprocity (Social Justice, Equity, Safety, and Trust), historical trauma and healing, and individual action and personal empowerment in community transformation. Utilizing elements of the Center for Spirituality & Healing's Wellbeing model and modes of contemplative practice, this course will ultimately assist learners through phases of individual reflection and mindfulness for the purpose of creating more open and reciprocal relationships with entities they describe as their communities. An extension of recent studies in the area of the reciprocal (or rippling) effect between individual wellbeing and community wellbeing this course will guide individuals in identifying the various communities in which they live or participate, the roles they "play" within those communities and why/how this knowledge can help prepare them for action and leadership. Main themes of the course will include: - Mindfulness, Reflection and Healing: Historical Trauma and Marginalization. - Roles and Reciprocity: Justice, Equity, Security and Trust between individuals and their communities. - Transformation: Individual Action/Leadership as Bridge between Personal and Community Wellbeing.

CSPH 5121. Whole Systems Healing: Health and the Environment. (2 cr.; Student Option; Every Fall & Spring)
Selected interfaces between human health and the environment. Using complexity theory as a theoretical framework, students use phenomenological methodologies to analyze and describe the interrelated dynamics of human and natural systems. Case studies. Develop strategies to optimize the healthy functioning of human/environmental systems. prereq: Jr or Sr or grad student

CSPH 5201. Spirituality and Resilience. (2 cr.; Student Option; Every Spring & Summer)
Links between resilience and spirituality. Applications of resilience/heath realization model to students' professional and personal lives. Review of literature, theory, and research. prereq: Jr or Sr or grad student or instr consent

CSPH 5211. Peacemaking and Spirituality: A Journey Toward Healing and Strength. (2-3 cr.; Student Option; Every Fall & Summer)
Influence of spirituality upon process of resolving conflict and making peace in intense interpersonal/intrapersonal conflicts in multiple health care and social work settings, including in families, between patients/clients and nurses/social workers, within communities, among friends, between co-workers, or within ourselves. prereq: Jr or Sr or grad student or instr consent

CSPH 5212. Peacebuilding Through Mindfulness: Transformative Dialogue in the Global Community. (3 cr.; Student Option; Every Spring & Summer)
Contemplative/mindfulness practice. Tapping into reservoir of strength, compassion, and wisdom that fosters expressions of unconditional love, reconciliation, and forgiveness. Shifting from ego centered cognitive analysis/assessment to heart centered presence and deep listening grounded in humility/compassion. Native American circle process, including use of talking piece. prereq: Jr or Sr or grad student or instr consent

CSPH 5215. Forgiveness and Healing: A Journey Toward Wholeness. (3 cr.; Student Option; Every Spring & Summer)
Impact of forgiveness on process of interpersonal healing. Forgiveness/healing in health care and social work settings from multiple spiritual/secular traditions. prereq: Jr or Sr or grad student or instr consent

CSPH 5225. Meditation: Integrating Body and Mind. (2 cr.; Student Option; Periodic Fall)
Meditation as a physical, emotional, intellectual, and spiritual inquiry. Students examine a variety of texts and develop ability to enter a state of calm, meditative awareness. prereq: Jr or Sr or grad student or instr consent

CSPH 5226. Advanced Meditation: Body, Brain, Mind, and Universe. (1 cr.; Student Option; Periodic Fall)
Students work to integrate meditation practice into daily life, cultivating awareness of the fundamental oneness of body, brain, mind, and universe. Mind-body interactions in health. "Hard problem" of consciousness in brain science. Emergence of compassion, wisdom, and healing in non-discursive awareness. prereq: [5225, Jr or Sr or grad student] or instr consent

CSPH 5311. Introduction to Traditional Chinese Medicine. (2 cr.; A-F or Audit; Every Spring & Summer)
Philosophical roots of Shamanism, Confucianism, Taoism, and Buddhism. Influence of these philosophies on Chinese medicine. Evolution of concepts of the tao, Yin-
Yang, microcosm, macrocosm. Development of herbal medicine, Tui Na, Qi Gong, acupuncture, moxibustion. Traditional Chinese medicine etiology of disease, physiology, diagnosis, therapy, disease prevention, ethics, psychology, cosmology. prereq: Jr or sr or grad student or instr consent

CSPH 5313. Acupuncture. (1 cr.; Student Option; Every Fall & Summer) Principles and research-based guidelines for use, and techniques of stimulation of acupressure points. Methods for self care and care of others. Treatment of pain conditions, chronic health conditions, palliative care, oncology, women's health care.

CSPH 5315. Traditional Tibetan Medicine: Ethics, Spirituality, and Healing. (2 cr.; Student Option; Periodic Fall) Ethics, spirituality, and healing from the perspective of traditional Tibetan medicine. Belief that illness results from imbalance and that treating illness requires correcting underlying imbalance. How to apply these principles, integrate them into clinical practice, and consult with a traditional Tibetan doctor. prereq: Jr or sr or grad student or instr consent

CSPH 5317. Yoga: Ethics, Spirituality, and Healing. (2 cr.; Student Option; Every Summer) Students test claim that systematic yoga practice leads to optimal health. Yoga's philosophy, scientific evidence, practical application. Students propose research-based programs for integrating yoga into personal/professional life.

CSPH 5318. Tibetan Medicine, Ayurveda, and Yoga in India. (4 cr.; Student Option No Audit; Every Fall & Summer) Students study with expert practitioners in India. Using critical thinking, philosophical knowledge, cultural practices, scientific evidence, and research-based programs to integrate these traditions into personal/professional life. prereq: [5315, 5317] or instr consent

CSPH 5319. Yoga and Ayurveda in India. (4 cr.; Student Option No Audit; Every Spring) Yoga and Ayurveda are interrelated, ancient, holistic Indian traditions that integrate ethics, spirituality, and healing. While studying with expert practitioners at the University of Minnesota and in India, students will examine the claim that the systematic practice of these traditions promotes healing and optimal health. prereq: CSPH 4311 (and instructor approval), CSPH 5317 or CSPH 5318 or instructor consent.

CSPH 5331. Foundations of Shamanism and Shamanic Healing. (2 cr.; S-N or Audit; Periodic Fall) 3-day retreat intensive. Shamanic philosophies, ritual etiquette, Core beliefs common to all shamanic healing practices. Cross-cultural healing beliefs/practices, unique psychology for understanding them, their use with contemporary healing practices and for personal growth. prereq: Jr or sr or grad student or instr consent

CSPH 5332. Global Healing Traditions: Amazonia Plant Spirit Medicine. (2 cr.; Student Option; Periodic Fall) Non-biomedical traditional healing paradigms as practiced in other parts of the world. Focuses on indigenous healing practices in Peru as directed by a local shaman. prereq: [5331, [grad student or jr or sr in health science or practicing health professional]] or instr consent

CSPH 5341. Overview of Indigenous Hawaiian Healing. (2 cr.; Student Option; Every Fall) Traditional Hawaiian healing, ho'olomilomi (massage), la‘au lapa‘au (herbal medicine) and ho‘oponopono (conflict resolution). Hawaiian epistemology, traditions, and cultural values compared with western. The science of traditional ecological knowledge for healing and self-reliance.

CSPH 5401. People, Plants, and Drugs: Introduction to Ethnopharmacology. (3 cr.; Student Option; Every Fall, Spring & Summer) Biologically active substances used in traditional cultures. Ethnopharmacology's past, current, and potential contributions to human knowledge. Concrete examples. prereq: Jr or sr or grad student or instr consent

CSPH 5405. Plants in Human Affairs. (4 cr.; Student Option; Periodic Fall) Twelve-day, intensive course. Introduction to ethnobotany/ethnopharmacology. Lectures, field trips, presentations by local experts. prereq: Jr or sr or grad student or instr consent

CSPH 5421. Botanical Medicines in Integrative Healthcare. (3 cr.; Student Option; Every Fall) Widely-used botanical medicines from biomedical perspective. Alternative therapeutic systems presented according to bodily systems/processes. Evidence for therapeutic use. Botanical characteristics, traditional uses, chemical properties, dosage, hazards/safety issues, quality control. prereq: Jr or sr or grad student or instr consent

CSPH 5431. Functional Nutrition: An Expanded View of Nutrition, Chronic Disease, and Optimal Health. (2 cr.; Student Option; Periodic Fall) Principles of nutrition related to metabolic function. Model attempts to reduce chronic disease by looking for underlying causes/triggers and to intervene to restore function and achieve optimal health. Emphasizes importance of nutrition as a component of self-care. prereq: [ Jr or sr or grad student] in Health Sciences or instr consent

CSPH 5503. Aromatherapy Fundamentals. (1 cr.; Student Option; Every Spring & Summer) For health professional students/practicing health professionals. Essential oil therapy and current aromatherapy practices in clinical settings. Key safety/toxicity issues. Critique scientific/historical evidence about the therapeutic qualities of six essential oils in common use by the public and in clinical settings. prereq: Jr or sr or grad student

CSPH 5511. Interdisciplinary Palliative Care: An Experiential Course in a Community Setting. (2 cr.; Student Option; Every Fall & Spring) Multidisciplinary student teams partner with interdisciplinary community hospice teams in delivery of care to patients in a variety of settings. Series of seminars employs self-analysis/case studies. prereq: instr consent

CSPH 5512. Spiritual Aspects of Palliative Care. (2 cr.; Student Option; Every Fall, Spring & Summer) This course examines spiritual care as an essential component of providing palliative care across the life span. Students will explore spiritual assessment tools, spiritual care models, and formulate a spiritual care plan within an interdisciplinary team perspective. prereq: Instructor consent

CSPH 5513. Living Well, Dying Well: Empowering Patient Communication at the End of Life. (2 cr.; Student Option No Audit; Every Fall) Students will learn how to provide compassionate and effective care at the end of life, including appropriate communication with patients, families, and healthcare providers at crucial points of care. Students will also explore their own perspectives about end of life and learn the importance of self-care. The course will help students reframe end-of-life care from a focus on medical death to an emphasis on humane dying through reflection on values, hopes, and plans. Students will learn to support individuals through personal connection and the sharing of narratives and wisdom.

CSPH 5521. Therapeutic Landscapes. (3 cr.; Student Option; Every Spring) Principles of therapeutic design for specific population requirements. Therapeutic landscape design. Incorporates interdisciplinary interaction between horticulture, landscape architecture, and health science departments. prereq: [ Jr or sr or grad student] in [health sciences or therapeutic recreation or horticulture or landscape architecture] or health professional or instr consent

CSPH 5522. Therapeutic Horticulture. (3 cr.; Student Option; Periodic Fall) Central elements of therapeutic horticulture in context of multiple health care settings.
CSPH 5533. Introduction to Energy Healing. (2 cr.; Student Option; Every Fall) Healing techniques that use energetic systems in body to enhance body's ability to heal. Therapeutic touch, healing touch, Reiki, acupuncture, reflexology, magnets, homeopathy. Scientific theories on mechanisms of energetic medicine and ways to measure energy. Students interact with practitioners of energy healing. prereq: Jr or Sr or grad student or instr consent

CSPH 5535. Reiki Healing. (1 cr.; S-N only; Every Fall, Spring & Summer) History, principles, precepts, and practical application of Reiki energy healing. Alternative energy healing modalities, current research findings. Activation of the Reiki energy, hand positions to perform a treatment. Students provide Reiki treatments, discuss findings. prereq: Jr or Sr or grad student or instr consent

CSPH 5536. Advanced Reiki Healing: Level II. (3 cr.; S-N only; Every Spring) Principles/application of Reiki energy healing. Four levels of healing. Emphasizes healing at spiritual level. Activation of Reiki energy. Symbols that allow for energy transfer through space/time. Using second level Reiki energy for both distance healing and standard Reiki treatment. Students provide Reiki treatments, discuss findings. Current literature, research findings. prereq: 5535, instr consent

CSPH 5541. Emotional Healing and Happiness: Eastern and Western Approaches to Transforming the Mind. (2 cr.; Student Option; Every Fall) Experiential training in the cultivation of happiness, emotional health, and healing for multi-disciplinary professions. Ancient/contemporary, eastern/western approaches. How to integrate techniques to transform emotions and mind states. Meditation, integrative approaches. Case examples. prereq: Sr or grad student or instr consent

CSPH 5555. Introduction to Body and Movement-based Therapies. (2 cr.; Student Option; Periodic Fall) Theories/approaches of selected somatic therapies, including dance, movement, and body-based therapies. Historic/theoretical perspectives on use of movement, dance, and somatic re-patterning. Demonstrations of techniques. Application of techniques to specific populations/settings. prereq: Jr or Sr or grad student or instr consent

CSPH 5561. Overview of the Creative Arts in Health and Healing. (2 cr.; Student Option; Every Summer) How creative arts therapies are integrated into health care. Art therapy, poetry therapy, dance/movement therapy, music therapy. Guided experiential exercises, discussions, readings, individual learning interventions, lectures. prereq: Jr or Sr or grad student

CSPH 5601. Music, Health and Healing. (2 cr.; Student Option; Every Fall & Summer) Music therapy, music medicine, music psychotherapy. Techniques/interventions, hypotheses/rationale related to interventions. Related research. prereq: Jr or Sr or grad student or instr consent

CSPH 5631. Healing Imagery I. (2 cr.; Student Option; Every Spring) How imagery and imagery interventions are implemented for healing and to promote health/wellbeing. Experience/create imagery interventions. Instructional strategies include experiential, discussions, readings, lecture, and individual learning interventions. prereq: Jr or Sr or grad student

CSPH 5641. Animals in Health Care: The Healing Dimensions of Human/Animal Relationships. (3 cr.; Student Option; Every Summer) Central elements of animal assisted therapy in multiple health care settings. History, principles, and evidence-based guidelines. Community-based interventions, in-class demonstrations, field trips. prereq: Jr or Sr or grad student

CSPH 5642. Nature Heals: An Introduction to Nature-Based Therapeutics. (3 cr.; Student Option; Every Fall, Spring & Summer) This course will cover the basic theories and approaches of Nature-Based Therapeutics including restorative environments, therapeutic horticulture, animal assisted interactions, therapeutic landscapes, forest bathing, green care farming, facilitated green exercise, wilderness therapy and ecopsychology. The course includes: 1) historic and theoretical perspectives 2) research into specific techniques 3) application of techniques to specific populations and setting

CSPH 5643. Horse as Teacher: Intro to Nature-Based Therapeutics Equine-Assisted Activities & Therapies (EAAT). (3 cr.; Student Option; Every Fall) This course is designed to introduce students to the field of Equine-Assisted Activities and Therapies (EAAT) and to the range of therapeutic and learning opportunities found within equine interactions. Five domains of practice in EAAT are covered and include physical, social, cognitive, psychological and spiritual contexts. The course presents historical and theoretical concepts which helped develop various types of EAATs, and how the growth of EAAT nationally and internationally has continued to mold the profession. Students will learn to describe safety guidelines, best practices as they are currently known, and precautions and contraindications in EAAT sessions. During a three-day face-to-face class, students will engage in hands-on learning with horses and apply course concepts and topics during this intensive. Students will evaluate peer-reviewed literature in EAAT research to identify the strengths and weaknesses of such published material. Students will synthesize reading, lecture and experiential learning to develop an EAAT plan for an assigned target group population. prereq: Jr or Sr or grad or instr consent

CSPH 5702. Fundamentals of Health Coaching II. (4 cr.; A-F or Audit; Every Spring) Basic tenets of health coaching model. Tools for self development, deep listening, and effective communication. Core building blocks for optimal health from a holistic perspective. Identifying benchmarking stages/patterns of change, interfacing with interdisciplinary health care providers, locating resources to assist clients in decision making, and educating clients on self-care practices. prereq: CSPH 5701; admitted to Integrative Health and Wellbeing Coaching MA program; or, Integrative Therapies and Healing Practices Certificate-Health Coaching track; or, instr consent.

CSPH 5704. Business of Health Coaching. (2 cr.; A-F only; Every Fall) Applying health coaching knowledge/skills in service delivery venues or private practice. Starting business. Business models. Student determine structure/venue appropriate for
them. Legal/ethical considerations. prereq: 5101, 5701, 5702, admitted to Integrative Health and Wellbeing Coaching MA; or, Integrative Therapies and Healing Practices Certificate-Health Coaching track; or inst consent.

CSPH 5705. Health Coaching Professional Internship. (2 cr.; S-N only; Every Spring) 120 hours of health coaching practice. Students work with individual clients in acute/longitudinal encounters, provide wellness teaching, design career plan. Prerequisite CSPH 5701, 5702, 5703; admitted to Integrative Health and Wellbeing Coaching MA; or, Integrative Therapies and Healing Practices Certificate-Health Coaching track [CSPH 5101, 5704 recommended]

CSPH 5706. Lifestyle Medicine. (2 cr.; Student Option; Every Fall & Summer) This course provides a foundation in the theory and clinical application of lifestyle medicine. Lifestyle medicine aims to address the behavioral and lifestyle bases of common illnesses through promoting healthy behaviors and reducing harmful behaviors. In this course, we will explore optional nutrition, lifestyle, physical activity, and attitude. We will examine the emerging evidence base of lifestyle medicine and how it relates to health promotion and disease prevention. Participants will be introduced to common laboratory and imaging findings, and how they relate to optimal health. prereq: basic course in Biology or Human Physiology.

CSPH 5707. Coaching People with Clinical Conditions. (2 cr.; Student Option; Every Spring & Summer) This course provides the student with a basic awareness and expanded perception of prevalent clinical conditions, and supports the development of empathy. It equips the student with best practice coaching skills to use with a client managing one or more clinical conditions. And it supports the development of professional communication skills. prereq: CSPH 5701, 5702 and 5706; practicing health professional admitted to one of the following programs: Integrative Health and Wellbeing Coaching Master's, Integrative Therapies and Healing Practices Certificate-Health Coaching track; CSPH 5701; CSPH 5702; or instructor consent. This course provides Health Coaching students the opportunity to advance coaching skills/strategies through individual client practice under the supervision of an experienced Health Coaching instructor. The student health coach will engage in recorded in-person and/or telephone coaching sessions, and receive live feedback from the instructor. The student will assess their own integration of coaching skills through completion of self-skills assessment (level appropriate) that includes self-reflection. A final skills assessment (level appropriate) that will completed utilizing the standardized tool developed for the University of Minnesota Health Coaching program (developed in alignment with guidelines the International Consortium for Health and Wellness Coaching). Prereq: Jr or sr or grad student or instr consent

CSPH 5710. Health and Wellbeing Group Coaching. (2 cr.; Student Option No Audit; Every Fall) The Group Coaching course expands the competencies of the Health Coach from the one-to-one coaching process to a group format. Theories and tools of group coaching will be applied to facilitating a group coaching process in the community. Course progress will include: Foundations of Group Coaching; Developing Group Coaching Skills; Application of Group Coaching Skills to a Community Organization; Expanding Theory and Application of Group Coaching. Prereq admission to Integrative Health & Wellbeing Coaching MA or graduate Certificate in Integrative Therapies and Healing Practices-Health Coaching program or instructor approval; CSPH 5701, 5702, 5706; recommended CSPH 5707; or instructor approval.

CSPH 5711. Optimal Healing Environments. (3 cr.; Student Option; Every Fall) Development/implementation of optimal healing environments. Evidence base supporting structural, architectural, human, and care processes. Emphasizes identifying models of optimal healing environments and leadership strategies that support diffusion of innovation. prereq: Jr or Sr or grad student or inst consent

CSPH 5712. Supervised Health Coaching Skills Advancement. (1-2 cr. [max 6 cr.]; S-N only; Every Fall, Spring & Summer) Prereq admitted to Integrative Health and Wellbeing Coaching Master of Arts, Integrative Therapies and Healing Practices Certificate-Health Coaching Track; CSPH 5701; CSPH 5702; or instructor consent. This course provides Health Coaching students the opportunity to advance coaching skills/strategies through individual client practice under the supervision of an experienced Health Coaching instructor. The student health coach will engage in recorded in-person and/or telephone coaching sessions, and receive live feedback from the instructor. The student will assess their own integration of coaching skills through completion of self-skills assessment (level appropriate) that includes self-reflection. A final skills assessment (level appropriate) will be completed utilizing the standardized tool developed for the University of Minnesota Health Coaching program (developed in alignment with guidelines the International Consortium for Health and Wellness Coaching). Prereq: Jr or Sr or grad student or inst consent

CSPH 5713. Health Coaching for Health Professionals. (2 cr.; A-F only; Every Fall) Prereq enrolled in Doctor of Nursing Practice-Integrative Health and Healing track or other health professional program; or instr consent. This course explores the basic tenets of the four pillars of health coaching model: self-awareness, mindful presence, authentic communication, and safe/sacred space. Students will learn to identify/benchmark stages/patterns of change and to respectfully collaborate with interdisciplinary health care providers and facilitate clients ability to achieve sustainable lifestyle changes. Consistent, nonjudgmental application of a holistic perspective of optimal health and wellbeing in patient encounters will be discussed and demonstrated. Students will have the opportunity to observe and to practice applying tools and practices from motivational interviewing, emotional intelligence, appreciative inquiry and non-violent communication. Students will identify the basic elements of an effective coach/client interchange in order to apply basic, effective coaching techniques. Students will be able to differentiate between health coaching, nurse education, case/disease management, and therapy. The course will discuss the importance of coaching personal development in professional practice so that students may apply tools for self-reflection and personal growth in their own lives and work settings.

CSPH 5805. Wellbeing in the Workplace. (3 cr.; Student Option No Audit; Every Fall & Spring) Work and experiences in the workplace have a profound impact on many dimensions of individual and collective wellbeing, including a sense of purpose and meaning, financial and emotional security, quality of relationships and community, physical and emotional health, and the local and global environments. In this course, students will learn multi-disciplinary perspectives on key challenges in creating workplaces that contribute to greater wellbeing. Students will also reflect on their own personal experiences with wellbeing in their current and past work environments and examine strategies for enhancing wellbeing based on interdisciplinary theory and research. Specific topics include the importance of purpose and meaning at work, challenges in achieving work-life integration, the impact of technology on work expectations, and organizational change. This course is based on a whole-life, integrative model of wellbeing and draws from research and theory across the social, behavioral, and health sciences.

CSPH 5806. Wellbeing and Resiliency for Health Professionals. (1 cr.; Student Option; Every Fall; Spring, Summer) This course will teach health professional students and health professionals self-care strategies that will improve their individual wellbeing and reduce the stress and burnout often experienced in these professions. Improving individual wellbeing will also contribute to greater wellbeing in the teams and systems in which these professionals work.

CSPH 5807. Mindfulness in the Workplace: Pause, Practice, Perform. (2 cr.; Student Option; Every Fall & Spring) An experiential course designed to teach core mindfulness skills while also exploring specific applications to the workplace setting. Explores key mindfulness traits and how they relate to essential workplace skills, such as resilience, task execution, critical analysis, intra/interpersonal growth, and leadership. The course will explore existing workplace programs and how corporate culture can be a barrier or a catalyst for adoption of mindfulness principles. From the perspective of the workplace and academic literature,
students will gain an understanding of how to practically apply evidence-based techniques to help them succeed on the job.

CSPH 5905. Food Matters: Cook Like Your Life Depends On It. (1 cr.; Student Option; Every Fall & Spring)
This course examines the role of food as it bears on the current acute care approach to health and healing, the predominance of chronic disease and the important role that lifestyle (physical activity, stress, sleep, diet) has on all aspects of well-being. For healthcare students and future practitioners, this course will support the development of personal food and cooking skills. This will allow them to serve as models to patients, as well as provide tools, resources and applications to support and guide patients in addressing their own diet and cooking challenges, specifically as they pertain to improving their health outcomes. Provides an in-depth exploration of dietary trends, their risks and benefits in relation to current health concerns such as diabetes, obesity, heart disease, etc. Also examines the impact of the Standard American Diet (SAD?) on these public and personal health problems linked to diet and lifestyle. Analyzes the components of a food system including how production, distribution and consumption of food are interrelated.

CSPH 6000. Integrative Therapies and Healing Practices Topics. (1-4 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer)
Topics-based exploration/research on integrative therapies/healing practices. prereq: Grad student or instr consent

CSPH 7001. The Healer’s Art. (1 cr.; S-N only; Every Spring)
Hidden crisis in medicine. Growing loss of meaning/commitment experienced by physicians nationwide under stresses of today’s health care system. How to stress-proof students to meet challenges of practices. prereq: Medical student

CSPH 8100. Special Topics in Complementary Therapy and Healing Practices. (1-6 cr. [max 12 cr.]; Student Option; Periodic Fall, Spring & Summer)
Critiquing research on complementary therapies (e.g., design, outcome measures). Synthesizing research findings for a therapy. Hypothesizing future directions for research on complementary therapies.

CSPH 8101. Critiquing and Synthesizing Complementary and Alternative Healing Practices (CAHP) Research. (2 cr.; Student Option; Periodic Fall, Spring & Summer)
Seminar. Students evaluate peer-reviewed literature in complementary/alternative healing practices (CAHP) research. Identifying strengths/weaknesses of published research, synthesizing findings from multiple studies. prereq: Grad student

CSPH 8191. Independent Study in Integrative Therapies and Healing Practices. (1-6 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)
Individual study with faculty guidance. Students write proposal, including outcome objectives/work plan. Faculty member directs work, evaluates project. prereq: instr consent

CSPH 8701. Integrative Health and Wellbeing Coaching MA Capstone Project. (2 cr.; S-N only; Every Fall & Spring)
Culminating course for the master of arts in integrative health and wellbeing coaching program. Students use coaching data collected during the Advanced Health Coaching practicum, Health Coaching Professional internship, or Group Health Coaching course to write and orally present a research-informed concept analysis and retrospective narrative case report. prereq: Integrative Health and Wellbeing Coaching MA student, CSPH 5701, 5702, 5703, 5704, 5706, 5707, 5709.

Cultural Stdy/Comparative Lit (CSCL)

CSCL 5261. European Intellectual History: The Early Modern Period, Antiquity to 1750. (3 cr.; Student Option; Periodic Fall)
First of a two-semester course. European thought in its historical/cultural context. Emphasizes development of philosophical/scientific thought, its relation to thinking about the individual and the community. Readings from original sources.

CSCL 5282. European Intellectual History: The Modern Period, 1750-Present. (3 cr.; A-F or Audit; Periodic Spring)
Second of a two-semester course. European thought in its historical/cultural context. Emphasizes development of philosophical/scientific thought, its relation to thinking about the individual and the community. Readings are from original sources.

CSCL 5302. Aesthetics and the Valuation of Art. (3 cr.; Student Option; Periodic Fall & Spring)
Society, ideology, and aesthetic value considered in light of recent critical theories of visual art, music, and literature. Meditation of place, social class, gender and ideology on aesthetic judgment in post-Renaissance Western culture.

CSCL 5305. Vision and Visuality: An Intellectual History. (3 cr.; A-F only; Periodic Fall & Spring)
Central role of vision/vitality in modernity. Modern age as scopic regime. Ways that ideas/ideologies of perception have shaped aesthetic experience within social existence.

CSCL 5331. Discourse of the Novel. (3 cr.; Student Option; Periodic Fall)
Comparative study of the novel, 18th century to present. Its relations to ordinary language practices, emergent reading publics, technologies of cultural dissemination, problems of subjectivity, and its role in articulating international cultural relations.

CSCL 5401. Origins of Cultural Studies. (3 cr.; Student Option; Periodic Fall & Spring)
Intellectual map of the creation of cultural studies as a unique approach to studying social meanings. Key figures and concepts, including nineteenth- and early twentieth century precursors.

CSCL 5411. Avant-Garde Cinema. (4 cr.; A-F or Audit; Every Fall)
History/theory of avant-garde cinema, from classical period (1920s) to post-WWII. prereq: 1921 or ARTH 1921W or equiv

CSCL 5555. Introduction to Semiotics. (3 cr.; Student Option; Periodic Spring)
Role of music in American/European film from early 20th century silent cinema to near present. Narrative features, shorts, documentary, horror, thriller, science fiction, comedy, cartoon. Film music as social/cultural practice and as part of political economy within culture industry.

CSCL 5833. Marx, Freud, Nietzsche: Intellectual Foundations. (3 cr.; Student Option; Periodic Fall & Spring)
Three thinkers who defined modernity: Marx, Freud, and Nietzsche. Central tenets of their thought/terms associated with their theories. Their careers portrayed against the background of their times; their place in intellectual history.

CSCL 5910. Topics in Cultural Studies and Comparative Literature. (3-4 cr.; max 32 cr.; Student Option; Every Fall, Spring & Summer)
Topics specified in Class Schedule.

CSCL 5944H. Honors Thesis. (3 cr.; A-F only; Every Fall & Spring)
Honors thesis. prereq: Candidate for honors in CSCL, consent of CSCL honors adviser

CSCL 5993. Directed Study. (1-3 cr.; max 9 cr.; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. Prereq-instr consent, dept consent, college consent.

Curriculum and Instruction (Cl)

CI 5008. Theory and Practice of Arts Teaching. (1-2 cr. [max 3 cr.]; A-F or Audit; Every Fall & Spring)
Designed for students pursuing visual or performing arts education licensure, the course explores: 1) Arts concepts, skills, and processes appropriate for elementary school; 2) methods of teaching arts for social justice; and 3) an overview of children’s production of and responses to visual and performing art.

CI 5049. Digital Media & Technology Integration: Arts Education Theory & Practice. (3 cr.; A-F or Audit; Every Summer)
This course explores issues in the visual and performing arts regarding the current and
potential use of technology and digital media in P-12 arts classrooms. Through readings, discussions, artistic production, academic writing, and collaboration, you will understand the use and integration of technology in P-12 arts classrooms as pedagogical tools; the function of scaffolding students' use of digital media as part of 21st century arts teaching and learning; various technological supports for student learning and artistic production; specific digital media theories, pedagogies, and content knowledge; the use of technology in designing, sharing, and conducting lessons; issues concerning the assessment and exhibition of student works; and practical issues of using technology for teaching in and through the arts.

CI 5050. Issues in Art Education. (1-4 cr. [max 8 cr.]; Student Option; Every Fall & Summer) Issues/trends, current practices, recent research.

CI 5065. Improving Arts Programs in the Schools. (3 cr.; A-F or Audit; Every Fall) This course provides students with an exploration of issues in visual and performing arts instruction, including teaching methods and evaluation, philosophical frameworks of pedagogy, and institutional issues concerning arts programs in middle and high schools; social and cultural structures of schooling, practical issues, and teaching arts.

CI 5069. Curriculum Innovations in Arts Education. (3 cr.; A-F or Audit; Every Fall) This course provides students with an examination of traditions in American schooling related to visual and performing arts education curricula.

CI 5075. The Social, Historical and Cultural Foundations of Arts Education. (3 cr.; A-F or Audit; Periodic Fall) The Social, Historical and Cultural Foundations of Arts Education will examine the arts in public education since the 1800s.

CI 5078. Application of Aesthetic Theory in Education. (2 cr.; A-F or Audit; Every Spring & Summer) The course explores: contemporary theories of arts; psychological and philosophical foundations; an overview of children's production of and responses to visual and performing arts.

CI 5096. Arts Education Practicum. (1-6 cr. ; A-F or Audit; Every Fall) In this course, students complete practicum observations in designated K-12 visual art or performing art, special education, and kindergarten classrooms.

CI 5097. Student Teaching in Arts Education. (8 cr.; S-N or Audit; Every Spring & Summer) Teacher candidates spend 16 weeks student teaching in visual art, dance, or theatre. Eight weeks occur in an elementary setting and eight weeks occur in a secondary setting including, but not limited to, middle school.

CI 5105. Increasing Access and Success in Undergraduate Classrooms. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Fundamentals and best practices for promoting student access, persistence, and retention within classroom. Focuses on traditionally under-represented/served populations.

CI 5106. Multicultural Teaching and Learning in Diverse College Contexts. (3 cr.; A-F only; Every Fall) Theory/pedagogy for culturally responsive teaching from perspectives of teachers/learners in postsecondary settings. Critical multicultural education, universal instructional design, integrated multicultural instructional design.

CI 5111. Introduction to Elementary School Teaching. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Curriculum organization, instruction, management, assessment, professional decision making, prereq: Foundations of ed major or elem ed initial lic.

CI 5116. Action Research in Educational Settings. (3 cr.; A-F or Audit; Every Spring) Action research as method of improving teaching/learning in educational settings. Experience doing research in classrooms. Relative strengths/challenges of different approaches to classroom research. Ethical issues.

CI 5121. Culture Power and Education. (3 cr.; A-F only; Every Fall & Spring) In this course we will explore the manifestations of culture and power in education. We will examine the ways in which culture is a mediating factor in the educational achievement of underrepresented students. We will explicate the relationship between home/community and school cultures; and illuminate the detrimental impact of subtractive schooling practices. We then explore the theories and research that have shown the importance of integrating students' interests, knowledges, and experiences/cultures-for increasing student engagement and achievement. Our examination of culturally relevant pedagogy we will move beyond an understanding of "culture" within education as the "celebration" of ethnic food, songs and customs. Instead, we shift toward a more complex understanding of "culture" that takes into account the influences of ethnic culture, youth culture, and popular culture.

CI 5122. Social Class, Education and Pedagogy. (3 cr.; A-F only; Every Fall & Spring) This course will immerse students in social, psychological, economic, and political aspects of social class and poverty, and the implications for education as a social institution and classroom pedagogy. Students will engage in inquiries around social class in the U.S.; working-class literature for adults and children; labor histories; and economic systems' and will learn to design social class-sensitive teaching practices guided by five principles for social class-sensitive change.

CI 5136. History of the American Curriculum. (3 cr.; Student Option;) Survey of formation of public school subjects and curriculum theory in United States.

Social, political, and economic implications of curriculum theory.

CI 5145. Critical Pedagogy. (3 cr.; A-F or Audit; Every Spring) Examination of critical pedagogy; critique of power relations regarding race, culture, class, gender, and age in various educational settings; consideration of improved practice in education for children, youth, and adults.

CI 5150. Curriculum Topics. (3 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer) Special topics, current trends in curriculum. Subject integration, curriculum contexts, development, implementation, evaluation.

CI 5155. Contemporary Approaches to Curriculum: Instruction and Assessment. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Current research/issues that cross disciplinary boundaries in curriculum development, instructional practices, and assessment methods. Interrelations among curriculum, instruction, and assessment within framework of constructivist learning theory. Individual classroom practices/theories, prereq: Grad students only.

CI 5156. Popular Culture, Teaching, and Learning. (3 cr.; A-F only; Every Fall) Approaches to the study of popular culture and education. Intersection between everyday life and broader historical contexts. Sporting events, toys, clothing, shopping malls, vampire mania, music festivals, video, and comics are the kinds of popular forms of culture we will engage as we develop teaching/learning strategies, prereq: Grad student or sr in a program that values teaching as a component of the discipline.

CI 5163. Child and Adolescent Development for Teaching and Learning I. (1 cr.; A-F only; Every Fall & Summer) Attending to constant transitions/development in which children and adolescents negotiate their road to adulthood. How to foster learning/ positive development, prereq: Enrolled in teacher initial licensure program.

CI 5164. Child and Adolescent Development for Teaching and Learning II. (2 cr.; A-F only; Every Fall & Spring) Transitions/development in which children/adolescents negotiate road to adulthood. How to foster learning/positive development, prereq: Enrolled in teacher initial licensure program.

CI 5177. Practical Research. (1-3 cr.; A-F or Audit; Every Fall, Spring & Summer) Preparation for identifying a research and development topic, reviewing the existing
knowledge on the topic, planning and carrying out a project, further investigating the topic, and writing a report on the project. prereq: CI MEd student, or CI or EdPA Teacher Leadership MEd student

CI 5186. School-Related Projects. (1-4 cr.; A-F or Audit; Every Fall, Spring & Summer) Research or evaluation project related to teaching, curriculum, or other aspect of schooling. Approved and supervised by faculty advisor. prereq: MEd student

CI 5187. Practicum: Improvement of Teaching in Elementary or Pre-Kindergarten Schools. (2-3 cr.; S-N or Audit; Every Fall, Spring & Summer) Elementary school classroom teaching project designed to improve specific teaching skills. Approved and directed by adviser. prereq: Students in early childhood educ M Ed, or elem educ M Ed, or teaching M Ed

CI 5190. Directed Individual Study in Curriculum and Instruction. (1-6 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Producing/evaluating curriculum materials. Literature review of issues/problems. Assessing curriculum processes. prereq: Grad student, instr consent

CI 5211. Elementary Education Content and Pedagogy I. (4 cr.; A-F only; Every Fall, Spring & Summer) Teacher Candidates will complete eight modules on elementary content/pedagogy instruction across disciplines. Introduce various concepts/practices that will be spiraled in each subject area.

CI 5212. Elementary Education Content and Pedagogy II. (3 cr.; A-F only; Every Fall, Spring & Summer) Teacher Candidates will complete five modules on elementary content/pedagogy instruction across disciplines. Builds on various concepts/practices from introductory course. Introduces content that will be spiraled in each subject area.

CI 5213. Elementary Education Content and Pedagogy III. (3 cr.; A-F only; Every Fall, Spring & Summer) Teacher Candidates will complete six modules on elementary content/pedagogy instruction across disciplines. Builds on various concepts/practices from two previous introductory courses. Introduces content that will be spiraled in each subject area.

CI 5214. Elementary Education Content and Pedagogy IV. (3 cr.; A-F only; Every Fall, Spring & Summer) Teacher Candidates will complete five modules on elementary content/pedagogy instruction across disciplines. Builds on various concepts/practices from previous three courses. Introduces content that will be spiraled in each subject area.

CI 5215. Elementary Education Content and Pedagogy V. (2 cr.; A-F only; Every Fall, Spring & Summer) Teacher Candidates will complete five modules on elementary content/pedagogy instruction across disciplines. Builds on various concepts/practices from introductory courses. Introduces content in each subject area. Serves as conclusion to elementary ed content/pedagogy courses.

CI 5254. Kindergarten Methods. (2 cr.; A-F or Audit; Every Fall, Spring & Summer) Purpose of kindergarten, its place in elementary program. Curriculum appropriate for needs of age group, including children with special needs. Assessment procedures, role of classroom teacher. prereq: Foundations of Education/Elementary Education or M.Ed./ILP Elementary Education

CI 5283. Practicum: Applying Instructional Methods in the Elementary Classroom. (1-3 cr.; max 6 cr.; S-N only; Every Fall & Spring) Field-based practicum in elementary school setting. In-class discussions about application of classroom teaching to school setting. prereq: M.Ed./Elementary education initial licensure student, enrolled in elementary education methods course

CI 5285. Clinical Experience in Elementary School Teaching. (12 cr. max 24 cr.; S-N only; Every Fall, Spring & Summer) Students spend full days in elementary classroom, gradually assuming responsibility for teaching, and prepare portfolio based on criteria given. One seminar per week. prereq: M.Ed./Elementary education initial licensure students

CI 5286. Student Teaching Seminar: Elementary Education. (3 cr.; max 6 cr.; A-F only; Every Fall & Spring) Weekly seminar supplementing student teaching experience. Class discussions, sharing of artifacts from the classroom, reflections, and readings. prereq: M.Ed./Elementary education initial licensure only

CI 5287. Capstone Project: Improvement of Teaching in Elementary and Pre-Kindergarten Schools. (3 cr.; A-F only; Every Fall, Spring & Summer) Elementary school classroom teaching project to improve specific teaching skills. Approved/directed by adviser. prereq: M.Ed./elementary education initial licensure student

CI 5300. Teaching Introductory Computer Concepts and Skills. (1-3 cr.; A-F or Audit; Every Spring) Pedagogical strategies for teaching keyboarding and word processing.

CI 5301. Foundations of Computer Applications for Business and Education. (3 cr.; A-F only; Every Fall, Spring & Summer) Instructional uses of computers/representative business, education, marketing applications. Word processing, databases, spreadsheets, graphic design. Expectations are for demonstrations of skills on apps/understanding of concepts that go beyond basic.

CI 5304. Data Management for Online Integration. (3 cr.; Student Option; Every Spring) Using database software to organize, manage, and display online data, to create content management systems, and to integrate into existing websites.

CI 5305. Integrated Computer Applications in Business and Marketing Education. (3 cr.; Student Option; Every Fall & Spring) Case-based authentic business computing problems requiring integration of two or more application packages. Pedagogical issues of learning/teaching advanced computer applications.

CI 5307. Technology for Teaching and Learning. (1.5 cr.; A-F or Audit; Every Fall, Spring & Summer) Diverse educational technology in K-12 classrooms. Effective use of technology. Computer technologies used to stimulate personal productivity/communication and to enhance teaching/learning processes. prereq: [MEd/initial licensure or CLA music ed major or preteaching major or instr consent], basic computer skills

CI 5321. Foundations of Distance Education. (3 cr.; A-F or Audit; Every Summer) History, philosophies, technologies, and best practices related to distance learning environments. Distance education theories. Issues in distance education.

CI 5323. Online Learning Communities. (3 cr.; A-F or Audit; Every Spring) Students design/research an online learning environment that promotes community. What community is, how it fosters learning in educational learning environments. Theories of distance learning instruction. Community models, technological tools to develop online communities.

CI 5325. Designing and Developing Online Distance Learning. (3 cr.; A-F or Audit; Every Fall) Students research, use, and evaluate technologies for distance learning and design their own learning environments. prereq: 5351 or 5362 recommended

CI 5327. Designing Online Adventure Learning. (3 cr.; A-F or Audit; Every Spring) Bring adventure to your online learning environments: learn to design, develop, and deliver an online program that provides opportunities to explore real-world issues through authentic learning experiences in a collaborative online space. You'll engage learners virtually and in real-time. For more info go to http://www.chasingseals.com then sign up and start exploring.

CI 5330. Special Topics in Learning Technologies. (3 cr. max 9 cr.; A-F or Audit; Every Fall & Summer) Topics related to needs of in-service teachers. Topics, location, credits. Duration flexible.

CI 5331. Introduction to Learning Technologies. (3 cr.; A-F or Audit; Every Fall) An exciting look at the field of learning technologies (LT), examining the numerous opportunities this area of study brings to individuals who decide to pursue a LT degree. Students engage in numerous real-world projects as they come to understand both the
past and future of technology in education, business, and society as a whole.

CI 5336. Planning for Multimedia Design and Development. (3 cr.; A-F or Audit; Every Spring)
Theory, research, practice in instructional design. Generic components of instructional design process. Applying principles to design/development of computer-based instructional materials.

CI 5351. Technology Tools for Educators. (3 cr.; A-F or Audit; Every Fall)
Develop skills in using technology applications to support teaching and learning. Internet applications, presentation software, Web 2.0 technologies, and Web site development.

CI 5361. Teaching and Learning with the Internet. (; 2-3 cr.; Student Option; Every Spring)
Implications/challenges in using Internet-based technologies in classroom. Pedagogical models.

CI 5362. Foundations of Interactive Design for Web-based Learning. (3 cr.; A-F or Audit; Every Fall)
Processes of designing/developing interactive learning media and online applications from ground up. Focused on usability/aesthetics in online learning.

CI 5363. New Media and Interaction Design for Online and Mobile Learning. (3 cr.; A-F or Audit; Every Fall)

CI 5365. Contemporary Software Development Issues and Tools. (3 cr.; A-F or Audit; Every Summer)
Software used in multimedia design/development. Uses of the software, intricacies of interface, relevant programming principles. Introduction to developing multimedia applications. prereq: Familiar with standard computer/Internet operations

CI 5367. Interactive Multimedia Instruction. (3 cr.; A-F or Audit; Every Spring)
Principles of effective computer-based design; tools in multimedia development; contemporary issues and skills used in the design, development, and implementation of interactive multimedia instruction. Use multimedia development tools, create a multimedia portfolio, and investigate the issues surrounding their effective use. prereq: Knowledge of principles and procedures of CBI design and one multimedia authoring system.

CI 5371. Learning Analytics: Theory and Practice. (3 cr.; Student Option; Every Fall)
Learning analytics as a nascent field is broadly defined as the "measurement, collection, analysis and reporting of data about learners and their contexts, for purposes of understanding and optimizing learning and the environments in which it occurs." This course aims to provide a general, non-technical survey of learning analytics, as well as its application in various educational contexts. In particular, we will discuss foundations of learning analytics, survey pertinent education theories, discuss new forms of assessment, explore popular data mining techniques, review learning analytical tools and case studies, and de-sign analytics for our own interested contexts. Given the breadth of this field, additional support is provided for deep dives in special interest areas. Overall, this course provides a comprehensive, theory-driven overview of learning analytics to orient students to this nascent field and prepare them for advanced research/practice in learning analytics.

CI 5390. Learning Technologies Field Experiences. (; 2 cr.; S-N only; Every Fall & Spring)
Field-based experience for students enrolled in computers, keyboarding, and related technology applications methods classes. Apply learning from University courses to the K-12 school setting. In-class discussions about the application of classroom learning to the school setting. prereq: Students in teachers of computers/keyboarding/related technology applications additional licensure program

CI 5402. Introduction to Special Collections. (; 3 cr.; A-F or Audit; Periodic Fall)
Uses Children's Literature Research Collection as research material. Study of manuscripts, original art, and letters. prereq: Children's lit course

CI 5403. Writing For and By Children. (3 cr.; A-F only; Every Fall)

CI 5404. Multicultural Literature for Children and Adolescents. (; 3 cr.; A-F or Audit; Spring Odd Year)
Course explores multicultural literature for children and adolescents as a site where difference can be emphasized and appreciated rather than downplayed and muted. We study award-winning works of fiction and arrive at a definition of multicultural literature for the modern classroom.

CI 5405. Middle School Language Arts Methods. (; 2 cr.; A-F only; Fall Odd Year)
Introduction to the unique needs of middle school students in the language arts classroom. Language arts content and pedagogical skills. Adolescent development/psychology. Field placement in a middle school language arts classroom. prereq: Elem ed licensure student

CI 5410. Special Topics in the Teaching of Literacy. (; 1-3 cr. [max 9 cr.]; Student Option; Every Fall & Summer)
Topics related specifically to the needs of in-service teachers. Topics, location, credits, and duration will be highly flexible.

CI 5413. Foundations of Reading. (3 cr.; A-F or Audit; Periodic Spring)
Reading processes, development of readers. Assessment and tutoring of individual children in reading and other literacy practices. prereq:

CI 3610 and concurrent registration with CI 5414

CI 5414. Practicum: Working With Developing Readers. (2 cr.; S-N only; Every Fall & Spring)
Field-based practicum. Students apply learning from their University course to working with developing readers. Instructor provides specific assignment. prereq: CI 3610 and concurrent registration with CI 5413 required; elementary education foundations major

CI 5417. Elementary literacy instruction for ESL Students. (; 3 cr.; A-F or Audit; Fall Odd Year)
Teaching reading/writing in elementary grades to students from diverse languages. Second-language literacy development. Phonemic awareness, phonics, fluency, vocabulary, comprehension. Ways to connect students? background knowledge to literacy curriculum. prereq: Bachelor's degree completed

CI 5419. The American Middle School. (; 3 cr.; Student Option; Every Fall & Summer)
Focus on the uniqueness of the early adolescent and appropriate learning situations. For educators working with middle-level students.

CI 5422. Teaching Writing in Schools. (; 3 cr.; A-F or Audit; Periodic Fall & Spring)

CI 5425. Reading Instruction in the Elementary Grades. (; 3 cr.; A-F only; Every Fall & Spring)
Curricular/methodological issues in teaching of reading. Reading/orthographic processes, strategy instruction for word recognition/comprehension, authentic assessment strategies, and teaching diverse students. prereq: [Elementary or early childhood] licensure student

CI 5426. Language Arts Instruction in the Elementary Grades. (; 3 cr.; A-F only; Every Fall & Spring)
Curricular/methodological issues of language arts. Oral language development, response to literature, writing processes, authentic assessment strategies. Teaching diverse students. prereq: Elementary or early childhood licensure student

CI 5431. Introduction to Instructional Leadership in K-12 Reading. (; 3 cr.; A-F or Audit; Every Summer)
K-12 curriculum in reading, major theories/research that motivate curriculum. Major instructional principles, alignments needed, resources available, prereq: Minnesota license valid for classroom teaching in pre-kindergarten, [adult basic education or grades kindergarten through 6 or 1 through 6 or 5 through 8 or 9 through 12 or kindergarten through 12]

CI 5432. Instructional Leadership in Reading in Kindergarten and the Elementary Grades. (; 3 cr.; A-F or Audit; Every Fall)
Research-based reading instruction for elementary grades. How to help other teachers
improve practice. Characteristics of effective schools within context of improving students. reading achievement. prereq: 5431

CI 5433. Instructional Leadership in Reading for the Middle and Secondary Grades. (3 cr ; A-F or Audit; Every Spring) Curriculum/instruction for middle/secondary school students. prereq: 5432

CI 5434. Professional Development and Evolving Practice in K-12 Reading. (3 cr ; A-F or Audit; Every Summer) Developing e-portfolio to assess competence in standards for teaching K-12 reading. Evolving teaching practices. Applications of current technologies. prereq: 5433

CI 5435. Instructional Leadership in Preventing Reading Difficulties. (3 cr ; A-F or Audit; Every Fall) Research-based reading interventions for struggling readers. How to help other teachers improve their practice. Theory/research behind preventing reading. prereq: 5435.

CI 5442. Literature for Adolescents. (3 cr ; A-F or Audit; Periodic Fall & Spring) Characteristics of literature written for adolescents; rationale for using adolescent literature; adolescents' reading interests and attitudes; analysis of quality and appeal; individualized reading programs; methods of promoting reading; multicultural literature; developing teaching activities.

CI 5451. Teaching Reading in Middle and Secondary Grades. (3 cr ; A-F or Audit; Every Fall) Methods of accommodating to students' abilities and facilitating reading in regular content classes.

CI 5452. Reading in the Content Areas for Initial Licensure Candidates. (1-2 cr ; A-F only; Periodic Fall & Spring) Web-based course. Fostering students' reading related to learning from text. prereq: Concurrent enrollment in licensure area methods course(s), enrolled in Initial Licensure Program. Internet access, basic understanding of [computer use, Web browsers, email, word processing software]

CI 5463. Minnesota Writing Project Annual Invitational Summer Institute. (3 cr ; A-F only; Every Summer) Workshop. Participants reflect on their own literacy processes, participate in a writing group, discuss current reading texts, and demonstrate best practices in classroom. prereq: Licensed teacher or administrator or [space available, faculty letter of recommendation]

CI 5464. The Politics of Literacy and Race in Schools. (3 cr ; A-F or Audit; Every Fall) Literacy and race in schools examined, especially how power plays out, and what are the possibilities for creating radical democratic forms of life. Reactions of language, literacy, whiteness, and racial identities are explored. Topics include educators' talk and silence about race, Ebonics, and youth's racial identities in global times.

CI 5465. Writing and Social Justice: A Minnesota Writing Project Open Institute. (3 cr ; Student Option; Every Summer) This course focuses on practices within literacy instruction as related to the current educational landscape and a theme of social justice. In this course, participants will focus on three areas: writing, teaching, and learning. Participants will reflect on their own writing processes as they write, share, and participate in a community of writers. Writing groups will meet several times during the course. Participants will also consider the theory and practice of writing instruction that helps students achieve their potential as writers and change agents. In addition, participants will investigate a literacy issue relevant to the course theme, social justice, and will present it as a research project or lesson. This course is offered for practicing teachers at all levels and across disciplines.

CI 5471. Clinical Experience in Teaching Secondary English. (3 cr ; A-F only; Every Fall) Initial licensure candidates in English Education will observe the teaching and learning experience in a school and classroom context; implement approaches, assessments, and philosophies learned about in corresponding methods courses; reflect upon the complexities of classroom life in a seminar format; and co-plan and co-teach a five-day unit. prereq: Must register same semester as CI 5441 and CI 5451.

CI 5472. Teaching Critical Media Analysis in Schools. (3 cr ; A-F or Audit; Every Fall & Spring) “Critical” media literacy means that we focus on, among other things, analyzing the intersection between media and issues of identity -- like gender, race, and sexuality. We also focus on how to teach critical media analysis to students and others.

CI 5474. New Literacies Frameworks and Instruction: Digital Texts and Digital Reading. (3 cr ; A-F only; Every Fall) Read digital texts against backdrop of traditional print-based notions of reading, literacy, school curricula/instruction. Assists education professionals in making school/district-wide decisions based on sound research on digital reading/new literacies.

CI 5475. Teaching Digital Writing. (3 cr ; A-F or Audit; Every Fall) Blogs, wikis, online discussion. Database searches. Integration of images, audio, video, text. Digital note-taking, mapping, storytelling. Online discussions, collaborative writing. Audio production. Formatting/design techniques. Online evaluation. E-portfolios.

CI 5483. Critical Literacy, Storytelling, and Creative Drama. (3 cr ; Student Option; Every Summer) This course examines how storytelling and creative drama can be used as tools to help develop students? critical literacy and to assist them in becoming more fluent readers and writers. Storytelling is a unique blend of performance, literature, and folklore. It engages personal and cultural identities and promotes creative thinking. Critical literacy is the ability to analyze the presentation of information and identify how it influences listeners and readers. Writing, performing, and analyzing narratives are, therefore, powerful means for developing critical literacy. In other words, critical literacy is the focus; theater and storytelling are the vehicles. Key topics to be covered include: 1) A historical background on fairy and folk tales, legends, fables, myths, and the different oral traditions; 2) Tools for developing a critical view of diverse tales; 3) Practical instruction on how to use storytelling and story genres in the classroom to develop critical literacy; 4) Assessing storytelling work in the classroom. Students will meet in the first week at the University to learn tools of the Neighborhood Bridges program and in the second week practice and observe each other’s teaching with local school classrooms. In the past we have worked with 4th graders and 6th graders, though we will also discuss how course content applies to high school students.

CI 5484. Improving Secondary English Language Arts Instruction: Seminar for Early Career Teachers Part I. (1.5 cr ; A-F only; Every Fall) This online course is designed for MEd students in Curriculum and Instruction who...
have recently earned the Communication Arts and Literature (English Language Arts) teaching license. The purpose of this course sequence is for secondary English Language Arts (ELA) teachers to examine their practice in a collaborative community and to improve teacher effectiveness through ongoing feedback from the instructor and other participants. The course will provide support through small group discussions and peer and instructor response. Key topics to be covered include: 1) frameworks for understanding teacher growth in ELA contexts; 2) developing an ELA classroom ecology; and 3) supporting and assessing student learning in the ELA Common Core Standards. This 1.5-credit course was designed in a sequence with CI 5485: Improving Secondary English Language Arts Instruction: Seminar for Early Career Teachers Part II, which is also 1.5 credits and offered in the following spring. prereq: Recently received Communication Arts and Literature (i.e., English Language Arts) teaching license.

CI 5485. Improving Secondary English Language Arts Instruction in the First Three Years: Part II. (1.5 cr.; A-F only; Every Spring)
This course is designed for MEd students in Curriculum and Instruction who have recently earned the Communication Arts and Literature (English Language Arts) teaching license. The purpose of this course sequence is for secondary English Language Arts (ELA) teachers in their first three years to examine their practice in a collaborative community and to improve teacher effectiveness through ongoing feedback from the instructor and other participants. The course will provide support through small group discussions and peer and instructor response. This 1.5-credit course was designed in a sequence with CI 5484: Improving English Language Arts Instruction in the First Three Years: Part I, which is also 1.5 credits and taken in the previous fall. This second course in the sequence will focus on teacher-driven professional inquiry that participants began developing during the fall course. prereq: Successful completion of CI 5484.

CI 5493. Minnesota Writing Project Directed Studies. (1-3 cr.; A-F only; Every Summer)
Directed study for teachers involved in MWP. Capstone course for those enrolled in the Certificate in Teaching Writing and Critical Literacy. Teachers investigate current theory and practice of literacy instruction. Ongoing cohort for those enrolled in the Certificate. prereq: Teaching license, [CI 5483 or enrolled in the Certificate for Teaching Writing and Critical Literacy] or instructor permission.

CI 5496. Directed Experiences in Teaching English. (4-8 cr.; S-N or Audit; Every Fall & Spring)
Student teaching/clinical experience for English Education (Comm Arts & Lit) initial licensure and middle level endorsement students. Credits vary depending on length of field experience and should be determined with your academic adviser. prereq: MEd/initial licensure students in English ed only

CI 5502. Science Instruction in the Elementary Grades. (3 cr.; A-F or Audit; Every Fall & Spring)
Methods/materials for teaching science/health at elementary school level. prereq: Early Childhood or Elementary Education ILP.

CI 5511. Introduction to Secondary Science: Laboratory-based Instruction. (4 cr.; A-F only; Every Fall, Spring & Summer)
Inquiry about teaching/learning, observing/analyzing instruction, reflecting on own/each other’s science teaching. How to use various instructional techniques/methods.

CI 5512. Secondary Science Methods: Understanding the Nature of Science. (3 cr.; A-F only; Every Fall, Spring & Summer)
Inquiry about teaching/learning, observing/analyzing instruction, reflecting on own/each other’s science teaching. How to use various instructional techniques/methods.

CI 5513. Secondary Science Methods: Equity in Science Teaching. (3 cr.; A-F only; Every Fall, Spring & Summer)
Inquiry about teaching/learning, observing/analyzing instruction, reflecting on own/each other’s science teaching. How to use various instructional techniques/reflect upon teaching. Develops understanding of research-based instructional methods in secondary science classrooms.

CI 5514. Secondary Science Methods: The Science Learning Environment. (2 cr.; A-F only; Every Fall, Spring & Summer)
Inquiry about teaching/learning, observing/analyzing instruction, reflecting on science teaching. How to use various instructional techniques/reflect upon teaching. Develops understanding of equitable science teaching practices/safe student-centered classroom culture.

CI 5515. Secondary Science Methods: Developing Adaptive Expertise. (3 cr.; A-F only; Every Fall, Spring & Summer)
Inquiry about teaching/learning, observing/analyzing instruction, reflecting on science teaching. How to use various instructional techniques/reflect upon professional growth using evidence from teaching. Identify goals/instruction plans for professional practice.

CI 5530. Secondary Science Methods I. (3 cr.; A-F only; Every Summer)
Lab-based science teaching in secondary school setting. Research-based teaching strategies are modeled that address national/state-level standards. How to use various inquiry-based instructional techniques/methods.

CI 5531. Secondary Science Methods II. (3 cr.; A-F or Audit; Every Fall)
Methods of planning/teaching science to middle school students. prereq: Initial licensure student in science ed and CI 5530 Secondary Science Methods I

CI 5532. Secondary Science Methods III. (3 cr.; A-F or Audit; Every Spring)
Methods of planning/teaching science for secondary school students. prereq: Admission to initial licensure program in science and CI 5531 Secondary Science Methods II

CI 5533. Current Developments in Science Teaching. (3 cr.; A-F or Audit; Every Summer)
Using curriculum standards to design science courses. prereq: MEd, initial licensure, grad student, or instr consent

CI 5534. Studies in Science Education. (3 cr.; A-F or Audit; Every Fall)
Improvement of science teaching through the application of research findings. prereq: M.Ed., init lic, or instr consent

CI 5535. Foundations of Science Education. (3 cr.; A-F or Audit; Every Spring)
Analysis of present science teaching practices in light of historical and philosophical foundations of science education. prereq: M.Ed., grad student, or instr consent

CI 5536. Equity, Policy, and Assessment in Science Education. (3 cr.; A-F only; Every Fall)
Nature of equity, diversity, and policy matters that influence schools/teachers involved in science teaching and scientific literacy. Classroom presentations, discussions, readings in current research. prereq: Med, or grad student, or instr consent

CI 5537. Principles of Environmental Education. (3 cr.; A-F or Audit; Every Fall)
Critical review of Environmental Education, its history, theories, curricula, teaching methods, and assessment practices. Development of an exemplary unit plan for teaching environmental studies. prereq: Undergrad in NRES or M.Ed. or grad student in education or instr consent

CI 5538. Action Research in Science Education. (3 cr.; A-F only; Every Spring)
This course is designed to accomplish several main goals for those enrolled: (1) articulate their own understanding of what it means for there to be equity in science education and how their personal interpretation aligns with existing frameworks for viewing equity; (2) become familiar with interactions between equity and educational policies, including standardized testing, school organization, and teacher preparation in Minnesota; (3) design and conduct an investigation around a classroom dilemma pertaining to an issue of equity.

CI 5540. Special Topics: Science Education. (1-4 cr.; max 12 cr.; Student Option; Every Fall, Spring & Summer)
Detailed examination and practice of the teaching of one area of science (e.g. geology, health, physical science) or one method of instruction (e.g. laboratories, demonstrations, Internet, simulations).

CI 5541. Teaching History and Nature of Science. (3 cr.; A-F or Audit; Every Fall)
Understanding nature of science (NOS). Integrate/reflect on NOS in secondary science classroom. Historical cases/integrating NOS with science content/scientific inquiry. prereq:
CI 5551. Reflecting on Science Classroom Practices I. (1.5 cr.; A-F only; Every Fall) Students reflect on their instruction and student learning during first years of teaching. Monthly meetings, observations, online discussion. Classroom management, planning, inquiry-based teaching, assessment, equity in the classroom.

CI 5552. Reflecting on Science Classroom Practices II. (1.5 cr.; A-F only; Every Spring) Students reflect on their instruction and student learning during first years of teaching. Monthly meetings, observations, online discussion. Classroom management, planning, inquiry-based teaching, assessment, equity in the classroom.

CI 5596. Clinical Experience in Middle School Science. (4 cr.; A-F or Audit; Every Fall) Supervised clinical experience in middle school science teaching.

CI 5597. Clinical Experience in Secondary School Science Teaching. (4-8 cr.; S-N or Audit; Every Spring) Supervised clinical experience in secondary school science teaching, prereq: initial licensure or instr consent

CI 5608. CARLA Summer Institute Seminar. (1-4 cr. [max 16 cr.]; Student Option No Audit; Every Summer) The Center for Advanced Research on Language Acquisition (CARLA) offers a series of intensive summer institutes to provide timely professional development for foreign language and ESL educators throughout the country. The special topics offered under CI 5608 are designed to provide language teachers with the latest research-based information and best practices skill development as the field of language instruction evolves. Each institute is highly interactive and includes discussion, theory-building, hands-on activities, and plenty of networking opportunities with colleagues from around the world.

CI 5612. ESL Methods for Multilingual Development. (3 cr.; A-F only; Every Fall, Spring & Summer) Introduction to methods of developing reading, writing, speaking, listening skills among English learners in K-12. Reflect on beliefs/ideas, cultivate orientation towards reflective teaching/life-long learning.

CI 5613. Testing and Assessment for English Learners. (3 cr.; A-F only; Every Fall, Spring & Summer) Develop awareness/familiarity with policies, procedures, practices in use in attempting to determine academic readiness of students learning English as secondary language in American public schools.

CI 5614. Curriculum and Materials Development for English Learners. (3 cr.; A-F only; Every Fall, Spring & Summer) Explore role ESL teachers play in curriculum/materials development. Historical overview of curriculum development in second language education, factors that influence curriculum development, range of models for curriculum development tailored to English learners.

CI 5615. Academic English for English Learners: Planning, Assessment, Instruction. (2 cr.; A-F only; Every Fall, Spring & Summer) Prepares ESL teacher candidates to develop academic English skills of English learners of various proficiencies through bilingual teaching strategies. Prepares students to offer leadership with colleagues from content areas to integrate language/content. Includes focused study of advanced-level syntactic structures/completion of edTPA.

CI 5616. Academic Language and English Learners I. (1 cr.; A-F only; Every Summer) Working with English learners and other linguistically diverse students across content areas to develop academic language proficiency. Prereq: Enrolled in teacher initial licensure program

CI 5617. Academic Language and English Learners II. (1 cr.; A-F only; Every Spring) Working with English learners and other linguistically diverse students across all content areas to develop academic language proficiency. Prereq: Enrolled in teacher initial licensure program

CI 5619. Teaching World Languages and Cultures in Elementary Settings. (3 cr.; Student Option; Every Summer) Methods/materials for elementary world language instruction; development of oral communication/literacy in world languages; world language program design; global awareness/cross-cultural experience; children's language; children's literature, games, and songs; planning/development of units and lessons.

CI 5620. Introduction to Second Language Acquisition for Language Teachers. (3 cr. [max 6 cr.]; Student Option; Every Summer) Current research and theory in the area of second language acquisition (SLA). Topics include the similarities and differences across first and second language acquisition; the role of individual differences in language learning (including age, first language, aptitude among others). Implications for sociolinguistic diversity in the United States.

CI 5621. Culture as the Core in the Second Language Classroom. (2 cr.; Student Option No Audit; Every Summer) How language teachers foster development of intercultural communicative competence through a pedagogical approach that addresses the nature of culture and culture learning, and the interrelatedness of language and culture learning.

CI 5622. Growing Learner Language: A Hands-On Approach to Developing the Language Learners Produce. (2 cr.; Student Option No Audit; Every Summer) The focus of this institute is on the growth and development of the language learners produce, and how that growth may be enhanced by ongoing pedagogical innovation. This institute uses the problem-solving framework of Exploratory Practice to promote a culture of instructor initiative that promotes and responds to learner language development in the classroom. Participants begin with a brief review of theories of second language acquisition, and then work together to reflect on videos of learner language as it is produced by different kinds of learners. Institute participants work with instructors to identify specific features in these learners' language. Participants then apply those insights to their own classrooms by learning how to set up engaging, puzzle-solving activities that stimulate growth in learner language. Finally, participants learn how to design pre- and post-course measures that demonstrate the impact of their innovations in instruction on the growth of specific features and dimensions of learner language in their own classrooms.

CI 5623. Improving Language Learning: A Practical Course in Styles- and Strategies-based Instruction. (2 cr.; Student Option No Audit; Every Summer) Learner-focused approach to teaching that helps students understand and make the most of their own learning styles/strategies. Participants create materials/lessons and explore ways to incorporate strategies into their own language curricula.

CI 5624. Content-based Language Instruction and Curriculum Development. (2 cr.; Student Option No Audit; Every Summer) Intensive professional development to help foreign language teachers learn to implement the CBI curricular approach in the language classroom. Introduces all phases of CBI curricular development and provides resources necessary to ensure successful implementation.

CI 5625. Developing Assessments for the Second Language Classroom. (2 cr.; Student Option No Audit; Every Summer) Assessment fundamentals and various topics, including assessment frameworks, performance assessment models, national standards, effective evaluation, and authentic materials. Participants use backward design to develop rating criteria and rubrics, and a standards-based performance assessment unit.

CI 5626. Developing Learners' Sociocultural Competence. (2 cr.; Student Option No Audit; Every Summer) Overview of how to incorporate a pragmatics component into second/foreign language curriculum to enhance learners' sociocultural competence. Includes approaches to teaching/evaluating pragmatics.

CI 5627. Creativity in the Second Language Classroom. (2 cr.; Student Option; Every Summer)
Career Language Teachers Part 1. (1.5 cr.; A-F only; Fall Odd Year)
This course provides recently licensed practicing teachers an opportunity to continue to develop their skills as reflective practitioners within the context of World Languages and ESL with a focus on their own teaching practices and student learning. Participants engage in online discussions, read, reflect, and create professional growth plans.

CI 5637. Problems of Practice in Second Language Education: Seminar for Early Career Language Teachers Part 2. (1.5 cr.; A-F only; Spring Even Year)
In this course, recently licensed practicing teachers continue to develop their skills as reflective practitioners within the context of World Languages and ESL with a focus on their own teaching practices and student learning. Participants engage in online discussions, read, reflect, and implement and report on professional growth plans. Prerequisite: Completion of CI 5636 or instructor consent.

CI 5641. Language, Culture, and Education. (3 cr.; A-F or Audit; Periodic Spring & Summer)
Applies current sociolinguistic and discourse theory/research to study of relationships between language and culture in educational settings: language curriculum and instruction; classroom language use; borders between school and home/community language use; and educational policies on literacy/second-language instruction.

CI 5642. Assessing English Learners. (3 cr.; A-F or Audit; Spring Odd Year)
Current practices concerning language and academic content assessment of English learners (ELs) at the school site, state, and national level; factors affecting academic learning needs of ELs/where assessment fits into that picture.

CI 5644. Practicum in Language Teaching: ESL and World Languages. (1-6 cr.; S-N only; Every Spring)
Practical, hands-on training in teaching of English as a Second Language. Applying theoretical/practical material studied in prior course work. Discuss readings/research articles on SLA, applying theoretical/practical principles to specific critical classroom incidents.

CI 5654. Teaching English Learners in the Elementary Classroom. (3 cr.; A-F only; Every Fall, Spring & Summer)
Benefits/challenges of working with English learners (ELs). Linguistically/culturally diverse students. Instructional practices/strategies for teaching ELs in elementary classrooms. Language learning/bilingualism. Cultural differences. Prereq: Early Childhood or Elementary Education ILP

CI 5646. English Grammar for ESL Teachers. (3 cr.; Student Option; Every Fall)
English syntax from pedagogical perspective. Grammatical structures that challenge ESL learners. Analyzing learner errors. Issues/activities related to teaching grammar in ESL contexts. Prereq: LING 5001 or instr consent

CI 5648. Advanced Practices in Teaching Academic Language. (3 cr.; A-F only; Every Spring)
Prepares K-12 teachers for second language proficiency. Read/discuss current research. Implement innovative teaching practices. Prereq: Grad student, instr consent

CI 5649. Language Analysis for ESL Teaching in Higher Ed. (4 cr.; Student Option No Audit; Every Spring)
Overview of complex aspects of English grammar not covered in 5646. Academic uses of passives, indirect objects, conditionals, relative clauses, complementation, reported speech, deixis/reference, articles, prepositions, phrasal verbs, pragmatics. Prereq: 5646

CI 5651. Foundations of Second Languages and Cultures Education. (3 cr.; A-F or Audit; Every Fall)
Historical overview of second language teaching/learning in U.S. introduction to second language acquisition. Second language instructional concepts across elementary, secondary/university options for foreign language, bilingual education, immersion language programs, and English as a second language programs. Theoretical frameworks for language instruction are tied to practice.

CI 5653. Methods in Teaching English as a Second Language (ESL) in Higher Education. (3 cr.; Student Option No Audit; Every Fall & Spring)
Theory/practice teaching academic English as second or foreign language in contexts of higher education. History of field/varied methods in language teaching. Current best practices in teaching academic English pronunciation, listening, speaking, reading, writing skills. Prereq: An intro to linguistics course

CI 5655. Teaching Literacy in Second Language Classrooms. (3 cr.; Student Option No Audit; Every Fall)
Reading comprehension/composing processes in a second language; relationship between first and second literacy development; relationship between reading and writing; relationship of culture to reading comprehension and writing; politics of literacy; assessment of second language literacy; using technology to enhance literacy instruction.

CI 5656. Teaching Speaking and Listening in Second Language Classrooms. (3 cr.; A-F or Audit; Spring Even Year)
Theories/methods in teaching language as communication in oral/aural modes; planning student interaction; classroom organization for oral language learning/acquisition; using technology to enhance interaction; assessment of listening comprehension and oral communication.

CI 5658. Foreign Language Testing and Assessment. (3 cr.; A-F or Audit; Spring Odd Year)
For world language/EFL teachers. Aligning foreign language classroom instruction/
CI 5560. Special Topics in the Teaching of Second Languages and Cultures. (1-4 cr.; max 12 cr.; Student Option: Every Spring & Summer) Topics related specifically to the needs of the in-service teacher. Topics, location, credits, and duration are flexible.

CI 5662. Second Language Curriculum Design. (3 cr.; A-F or Audit; Every Spring) Historical overview of curriculum development in second language education; contexts that influence curriculum development; models for curriculum development in second language settings; politics of curricular reform; national/state standards and implications for curriculum development; effects of technology on second language curriculum.

CI 5670. Foundations of Dual Language and Immersion Education. (3 cr.; Student Option: Every Fall) Research foundations and program principles for dual language/immersion. Second language acquisition; critical features of program design/implementation; benefits/challenges of dual language/immersion; program assessment; advocacy. Theory/research for dual language/immersion tied to practical application. prereq: Enrollment in certificate program in dual language/immersion educ or instr consent

CI 5671. Curriculum Development and Assessment in Dual Language/Immersion Classrooms. (3 cr.; Student Option: Fall Odd Year) Content-based language instruction and curriculum development for dual language, bilingual, and immersion contexts; balancing content/language goals/objectives in curriculum and instruction; integration of language, literacy content, and culture in curriculum; standards-based instruction; backwards design; assessment that aligns with content-based curriculum and instruction. prereq: instr consent

CI 5672. Language-Focused Instructional Practices and Strategies for Dual Language/Immersion Classrooms. (3 cr.; Student Option: Every Spring) Counterbalancing content with integrated focus on language and literacy development for dual language, bilingual, and immersion classrooms. Materials development; proactive/reactive instructional techniques; noticing and awareness-raising strategies; structuring student language production; differentiating for content, ability, and language. prereq: instr consent

CI 5673. Immersion 101: An Introduction to Immersion Teaching. (2 cr.; Student Option No Audit; Every Summer) Research-based introduction to issues for teachers, administrators, and district personnel in K-12 immersion education. One-way (foreign language), two-way (bilingual), and indigenous programs. Principles/practices that inform language-attentive curriculum development/instruction.

CI 5676. Biliteracy Development in Dual Language/Immersion Classrooms. (3 cr.; Student Option: Spring Odd Year) This course aims to provide dual language, bilingual and language immersion educators with an understanding of the complex phenomena of literacy and biliteracy and with a range of instructional strategies for fostering literacy and biliteracy development in dual language/immersion classrooms.

CI 5683. Directed Study in Second Language Education. (1-4 cr.; Student Option: Every Fall, Spring & Summer) Individual or group work on curricular, instructional, or assessment problems. prereq: instr consent

CI 5696. Practicum: Teaching World Languages and Cultures in Elementary Schools. (2-6 cr.; Student Option: Every Fall, Spring & Summer) Teaching and learning experiences in Second Languages and Cultures at the elementary-school level. Requires students to work in a public school setting. prereq: 5619, adviser approval; credits cannot be counted on a graduate degree program for endorsement candidates

CI 5697. Practicum: ESL in the Elementary School. (2-6 cr.; Student Option: Every Fall, Spring & Summer) Teaching/learning experiences in an English as a Second Language setting at elementary school level. Requires students to work in a public school setting. prereq: Adviser approval

CI 5698. Student Teaching in Second Languages and Cultures. (2-6 cr. [max 14 cr.]; Student Option: Every Fall, Spring & Summer) Student teaching in Second Languages and Cultures at the secondary level for teachers already licensed in another field. Requires students to work in a public school setting. prereq: Adviser approval; credits cannot be counted on a graduate degree program

CI 5699. Clinical Experiences in Second Languages. (3-12 cr. [max 16 cr.]; A-F or Audit; Every Fall & Spring) Teaching and learning experiences in elementary and secondary second language instructional settings. Includes a seminar held concurrently to support the student teaching experience. prereq: SLC initial licensure program only

CI 5701. Oral Expression and Questionings in the Elementary Grades. (3 cr.; A-F only; Every Fall & Spring) Content/organization of elementary social studies programs. Programs of understanding. Improving learning situation. prereq: Early Childhood or Elementary Education ILP

CI 5702. Social Studies Instruction in the Elementary Grades. (3 cr.; A-F only; Every Fall & Spring) Content/organization of elementary social studies programs. Programs of understanding. Improving learning situation. prereq: Early Childhood or Elementary Education ILP

CI 5744. Seminar: Reflecting on Professional Development in Social Studies Education. (3 cr.; A-F only; Every Fall) Reflecting on teaching experience, examining social/cultural context of teaching/learning, developing a professional identity. Refining teaching and teacher research skills. prereq: Secondary social studies initial licensure student

CI 5745. Engaging Youth With Social Studies Texts. (3 cr.; A-F only; Every Spring) Ways to engage students (grades 5-12) in social studies (textbooks, literature, speeches, editorials, political cartoons, tables, graphs, maps, film.). Developing middle/high school students' disciplinary literacy.

CI 5746. Global and Multicultural Education in the Secondary Classroom. (3 cr.; A-F only; Every Spring) Issues, classroom practices, and controversies surrounding global/multicultural perspective-taking in social studies education. Strategies for helping secondary social studies students develop global/multicultural worldviews.

CI 5747. Global and Environmental Education: Content and Practice. (3 cr.; A-F or Audit; Every Spring) Preparates educators for leadership responsibilities in the area of global environmental education. Focus on the knowledge and process skills necessary to carry out a leadership role in the curriculum.

CI 5762. Developing Civic Discourse in the Social Studies. (3 cr.; A-F or Audit; Periodic Spring & Summer) Philosophies, strategies, and research on developing civic discourse in secondary social studies classroom. Selecting issues. Democratic classroom climate. Relating to social/cultural contexts.

CI 5768. Clinical Experiences in Teaching Social Studies. (1-8 cr. [max 16 cr.]; S-N or Audit; Every Fall & Spring)
Student teaching experiences for students preparing to become secondary social studies teachers. Teacher candidates work closely with social studies teachers in grades 5-12 to plan and implement engaging and meaningful learning experiences for middle and high school students. prereq: ME/initial licensure student

CI 5811. Introduction to Teaching Secondary Mathematics. (4 cr.; A-F only; Every Fall, Spring & Summer) Introduction to teaching mathematics. Fundamental mathematical ideas/different ways children think about these ideas.

CI 5812. Teaching Algebra. (3 cr.; A-F only; Every Fall, Spring & Summer) Uses algebra as vehicle to discuss student learning trajectories, ways to measure students understanding, make instructional decisions to help students grow.

CI 5813. Teaching Geometry. (3 cr.; A-F only; Every Fall, Spring & Summer) Geometric/measurement ideas as vehicle to model ways to engage/manage students in more effective ways.

CI 5814. Teaching and Learning Mathematics. (3 cr.; A-F only; Every Fall, Spring & Summer) Topics require more sophisticated understanding of teaching based on first year experience/reflect deeper on teaching.

CI 5815. Leadership in Mathematics Education. (2 cr.; A-F only; Every Fall, Spring & Summer) Preparing to give back to profession as you grow in role as teacher leader.

CI 5822. Mathematics Instruction in the Elementary Grades. (; 3 cr.; A-F or Audit; Every Fall & Spring) Principles of learning mathematics in elementary grades. Objectives, content, philosophy, instructional materials, methods of instruction/evaluation, prereq: Early Childhood or Elementary Education ILP

CI 5890. Clinical Experiences for K-12 Teaching. (1-4 cr.; A-F only; Every Fall, Spring & Summer) Practical teaching/learning experiences in school setting. Includes co-teaching during student teaching and coaching/assessment by a university supervisor.

CI 5891. Introduction to Equity-Based Pedagogy. (1 cr.; A-F only; Every Fall, Spring & Summer) Introduces aspects of inequities in U.S. society/school. Examines how social class/poverty permeated education as social institution/classroom pedagogy. Covers five principles for social class-sensitive change/intersections between social class/other markers of difference.

CI 5892. Enacting Equity-Based Pedagogy. (2 cr.; A-F only; Every Fall, Spring & Summer) Extended study of inequities. Examines working-class literature for adults/children. Labor histories, economic systems, hierarchies of class, race, gender, sexuality, language in schools/communities.

CI 5983. Equity-Based Pedagogy/Advocacy. (1 cr.; A-F only; Every Fall, Spring & Summer) Extends study of inequities in society. Five principles for social class-sensitive change. Intersections between social class/other markers of difference such as race, gender, sexuality, language.

CI 5984. Planning Design and Management. (1 cr.; A-F only; Every Fall, Spring & Summer) Foundational understanding of being teacher, developing culturally responsive classroom, designing learning experiences. Conceptualization of teacher nationally/locally, language in classroom. Foundational concepts/tools used when facilitating learning.

CI 5985. Academic Language and English Learners in the Content Areas. (1 cr.; A-F only; Every Fall, Spring & Summer) Prepares teacher candidates to work effectively with English learners/other linguistically diverse students across all content areas. Develop students' academic language proficiency as needed for school success.

CI 5986. Foundations of Special Education. (1 cr.; A-F only; Every Fall, Spring & Summer) Skills to promote learning/success for all students, including those at risk for school failure/with special needs. Introduces research/issues emphasizing collaborative problem solving approach that facilitates effective family-professional partnerships/educational programming for individuals with disabilities.

CI 5987. Child and Adolescent Development for Teaching, Learning, and Assessment. (1 cr.; A-F only; Every Fall, Spring & Summer) Cognitive, social, emotional development of childhood/adolescence. Ecological influences in development. Theories of learning/cognition, cognitive/social development, motivation, individual/group differences, testing/assessment, teaching methodologies, pragmatic issues.

CI 5988. Clinical Experience: Improvement of Teaching. (2 cr.; A-F only; Every Fall, Spring & Summer) Capstone project. Link theory/practice, integrate coursework with experiences in classroom.

CI 5993. Directed Study in Family, Youth, and Community. (; 1-3 cr. [max 9 cr.]; A-F only; Every Fall, Spring & Summer) Self-directed study in areas not covered by regular courses. Specific program of study is jointly determined by student and advising faculty member. prereq: instr consent

CI 8075. Seminar: Art Education. (; 2 cr.; A-F or Audit; Periodic Fall & Spring) Reports, evaluation of problems, and review of recent literature. prereq: Educ grad student or instr consent

CI 8079. Research in Art Education. (; 3 cr.; A-F or Audit; Periodic Fall) Current research agenda. Helps students identify research questions and choose appropriate methodologies. prereq: Educ grad student or instr consent

CI 8085. Narrative Inquiry in Education. (3 cr.; Student Option; Spring Even Year) Through readings and activities focused on published studies and articles, students explore theory/application of two narrative research forms, narrative analysis— in which stories of informants are collected and analyzed, and narrative construction—in which researchers compose qualitative data collected in research settings into the form of stories.

CI 8095. Problems: Art Education. (; 1-12 cr.; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance; may include advanced studio practice and educational issues requiring a research methodology. prereq: Grad art educ major or instr consent

CI 8111. Representations of Knowledge in Curriculum and Culture. (; 1-3 cr.; Student Option; Periodic Fall) Overview of research and theory on sociology of knowledge and education. Conceptions of knowledge in curriculum; connections between cultural conditions and curriculum design and implementation; influence of national political agendas, population, the mass media, and textbooks on curriculum in diverse educational settings. prereq: CI grad student or instr consent

CI 8115. Curriculum and Achievement Outcomes in a Diverse Society. (; 3 cr.; A-F or Audit; Periodic Fall) Analysis of American public school experiences for students of African-American, Hispanic, Asian, and American Indian background; social, political, regional, and educational variables that influence student outcomes; perspectives concerning ethnic student achievement; factors influencing school achievement, and prospects for change. prereq: Doctoral student

CI 8121. Curriculum Change: Perspectives, Processes, and Participants. (; 3 cr.; Student Option; Periodic Fall) Examination of curriculum within educational organizations; educational organization as mediator and transmitter of societal/cultural perspectives; implications of organizational context for curriculum change, change processes, and change participants. prereq: CI grad student or instr consent

CI 8127. Curriculum Theory and Research: Alternative Paradigms and Research Methods. (; 3 cr.; Student Option; Periodic Fall) Traditions of inquiry, exemplary studies, and associated research methods; survey and assessment of topics and methods as applied to curriculum questions; and relationships between theory and research. prereq: GI grad student or instr consent

CI 8131. Curriculum and Instruction Core: Critical Examination of Curriculum in Context. (; 3 cr.; A-F or Audit; Periodic Fall & Spring)
CI 8132. Curriculum and Instruction Core: Teaching Theory and Research. (3 cr.; A-F or Audit; Every Fall & Spring)
Overview of research on teaching: historical perspective, modern research/findings, implications for practice/research. prereq: CI PhD or MA student or inst consent

CI 8133. Research Methods in Curriculum and Instruction. (3 cr.; A-F or Audit; Every Fall, Spring & Summer)
Survey of educational research methods, comparison of underlying assumptions/procedures. prereq: CI PhD or MA student or inst consent

CI 8134. Foundations of Research in Curriculum and Instruction I. (3 cr.; A-F or Audit; Every Spring)
This Foundations of Research course is the first of a two-course sequence required for PhD students in Curriculum and Instruction. The course is designed to ground students in qualitative and quantitative paradigms and epistemology and prepare students for specialized methodology courses that focus on specific research approaches in education.

CI 8135. Foundations of Research in Curriculum and Instruction II. (3 cr.; A-F or Audit; Every Spring)
This Foundations of Research course is the second of a two-course sequence required for PhD students in Curriculum and Instruction. The course is designed to ground students in qualitative and quantitative paradigms and epistemology and prepare students for specialized methodology courses that focus on specific research approaches in education.

CI 8145. Using Mixed Methods in Educational Research. (3 cr.; A-F or Audit; Every Fall & Spring)
Conceptual issues surrounding design/use of mixed methods in addressing problems/research questions in education. Critique of select mixed design exemplars published in respected research publications/practical application of analyses of data using mixed inquiry methods. prereq: [8133, 8148, OLPD 8812] or equiv. [CI PhD student or inst consent], additional quantitative/qualitative methodology courses recommended

CI 8146. Critical Ethnography in Education. (3 cr.; A-F or Audit; Spring Odd Year)
Theoretical/methodological foundations. Possibilities and problems for understanding inequality/disparities in education. Research design, data collection, analysis, writing. prereq: MA or PhD student or Inst consent

CI 8147. Critical Discourse Analysis in Educational Research. (3 cr.; A-F or Audit; Fall Odd Year)
Students apply CDA methods to analysis of written, visual, and spoken texts in social settings such as schools, families, and communities. prereq: [MA or PhD] student

CI 8148. Conducting Qualitative Studies in Educational Contexts. (3 cr.; Student Option; Every Spring)
Qualitative research methods. Ethnography, sociolinguistics, symbolic interactionism. Observation, prereq: CI 8133 and [CI or OLPD PhD student]

CI 8149. Qualitative Research: Coding, Analysis, Interpretation, and Writing. (3 cr.; A-F or Audit; Periodic Fall)
How to code/analyze field notes. Individual/group interviews, multimedia using NUDIST NVivo software. Students interpret analyzed material and complete an article length document that includes a related research/methodology. prereq: [8133, 8148, grad student, completion of a qualitative research study] or inst consent

CI 8150. Research Topics in Curriculum & Instruction. (3 cr. max 9 cr.); A-F only; Periodic Spring & Summer)
Special topics, current research trends in curriculum and instruction. Research review, subject integration, curriculum contexts, development, implementation, data collection, analysis, evaluation.

CI 8151. Paradigms and Practices in Teacher Preparation. (3 cr.; A-F or Audit; Fall Even Year)

CI 8152. Teacher Learning and Professional Development. (3 cr.; A-F or Audit; Fall Odd Year)
Theoretical/empirical work on teacher learning, professional communities, teacher inquiry, perspectives on outcomes of professional development, and policy recommendations for supporting teacher learning. Research methodologies. prereq: Grad student

CI 8153. Research Approaches to Classroom Discourse. (3 cr.; A-F or Audit; Fall Even Year)
This course introduces students to major traditions in analysis of classroom discourse, anthropological linguistics, conversational analysis, sociocultural, critical discourse and multimodal discourse analysis and their use in conjunction with other qualitative approaches to classroom research. Analysis of genre, gesture, and verbal performance are also addressed.

CI 8154. Culturally Relevant Pedagogy. (3 cr.; A-F or Audit; Fall Even Year)

CI 8155. Immigrant Families and U.S. Schools. (3 cr.; A-F or Audit; Fall Odd Year)

CI 8156. Asian American Education. (3 cr.; A-F or Audit; Spring Even Year)

CI 8159. Culture and Teaching Colloquium. (3 cr. max 6 cr.); A-F or Audit; Every Fall)
Doctoral seminar. Interdisciplinary perspectives on theme central to cultural study of teaching. Theme varies year to year.

CI 8161. Research Experience I: Study Design and Planning. (3 cr.; Student Option No Audit; Every Fall)
Students identify research topic, conduct literature review, refine research questions, design study, obtain IRB approval as needed, and begin data collection. Readings, seminar discussions, peer critique of work. prereq: [8134, 8135, 6-12 cr. of research methodology, CI PhD student] or inst consent

CI 8162. Research Experience II: Data Analysis and Manuscript Preparation. (3 cr.; Student Option No Audit; Every Spring)
Students complete data collection/analysis, prepare research manuscript. Seminar discussions, critical examination of their own and peers? work. prereq: 8161

CI 8165. Queer and Feminist Theories: Collective Memory Research Methods. (3 cr.; A-F only; Spring Even Year)
Seminar for advanced graduate students to work with queer and feminist theories in what is broadly constructed as educational research. We consider post-modern theoretical work that recognizes the "rational" and the mind/body dichotomy as constructions which reproduce existing structures. Collective memory writing is explored as a research method.

CI 8181. Seminar in Teaching in Colleges of Education. (3 cr.; Student Option; Periodic Fall)
Goals, instructional strategies, evaluation procedures, and professional considerations. prereq: CI PhD student or inst consent

CI 8195. Problems: Improvement of Instruction. (1-6 cr.; Student Option; Every Fall & Summer)
Independent research in curriculum and instruction. prereq: inst consent

CI 8196. Practicum in Teaching in Colleges of Education. (1 cr.; S-N only; Periodic Fall & Spring)
Practicum experience for graduate students to learn how to teach a college level course through a supervised, mentored experience. Supervised teaching occurs in an education course at the University or other institution.

CI 8197. Problems: Curriculum Studies. (1-4 cr.; max 8 cr.); A-F or Audit; Every Fall)
Directs students to completing Plan B paper for M.A. degree. prereq: MA student

CI 8198. Problems: Teacher Education. (1-6 cr. max 12 cr.; Student Option; Every Spring)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
CI 8594. Conducting Research in Science Education. (3 cr.; Student Option; Periodic Fall) Application of research methodology to a specific science education issue. prerequisite: science education course

CI 8595. Problems: Science Education. (3 cr.; maximum 6 cr.; Student Option; Every Fall & Spring) Independent research. prerequisite: science education course

CI 8545. Indigenous Language Revitalization and Activist Research Methods. (3 cr.; A-F only; Fall Even Year) This course is a hands-on look at activist research methods situated in the context of Indigenous Language Revitalization. That is, what happens when a community problem is the organizing force in research? Students will be expected to both engage in language learning, research, designing a research project, and connecting this to critical thinking as applied to culture, language, and Indigenous language revitalization.

CI 8650. Seminar: Special Topics in Second Languages and Cultures Research. (1-3 cr.; maximum 6 cr.; Student Option; Periodic Fall & Summer) Research topics vary. prerequisite: science education course

CI 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; maximum 12 cr.; No Grade Associated; Every Fall, Spring & Summer) TBD prerequisite: Doctoral student who has not passed preliminary oral; no required consent for 1st/2nd registrations, up to 12 combined cr; department consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

CI 8671. Sociolinguistic Research Approaches to Education. (3 cr. [maximum 6 cr.]; A-F only; Spring Odd Year) This course provides students with an overview of current research approaches, theories, and methods in linguistic anthropology and sociolinguistics with a focus on educational contexts and linguistic diversity. Course activities include reviewing and critiquing current research and theory in the field and working on small projects.

CI 8689. Language and Education Policy. (3 cr. [maximum 6 cr.]; A-F or Audit; Every Spring) Students will gain a solid understanding of language policy theory, language policy research methods, and key empirical findings. They will acquire skills to critically analyze and evaluate language policy, and gain experience and academic practice in doing so.

CI 8691. Readings in Second Languages and Cultures Education. (1-3 cr.; Student Option; Every Fall & Spring) Independent reading. prerequisite: science education course.

CI 8695. Problems: Second Languages and Cultures Education. (1-6 cr. [maximum 12 cr.]; Student Option; Every Fall & Spring) Independent research. prerequisite: science education course

CI 8742. Seminar: Research in Social Studies Education. (3 cr.; A-F or Audit; Every Spring) Critical review and analysis of seminal research studies; criteria for appraising research findings; educational implications. prerequisite: science education course

CI 8777. Thesis Credits: Master's. (1-18 cr. [maximum 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) TBD

CI 8795. Problems: Social Studies Education. (1-6 cr. [maximum 12 cr.]; Student Option; Every Fall, Spring & Summer) Independent research. prerequisite: science education course

CI 8796. Research Internship in Social Studies Education. (1-6 cr.; A-F or Audit; Every Fall, Spring & Summer) Internship with social studies education faculty member; experience in collecting and analyzing data; drafting and presenting reports; writing for publication. prerequisite: science education course

CI 8888. Thesis Credits: Doctoral. (1-24 cr.; maximum 100 cr.; No Grade Associated; Every Fall, Spring & Summer) Thesis credits: Doctoral prerequisite; maximum 18 cr per semester or summer; 24 cr required

CI 8900. Family, Youth, and Community Colloquium. (1-4 cr.; maximum 8 cr.; No Grade Associated; Every Fall, Spring & Summer) Theories, practices, pedagogies, epistemologies, and public policies not dealt with in regular courses. Content varies by offering. prerequisite: MA or PhD student

CI 8913. Interpretive Research. (3 cr.; maximum 6 cr.; A-F only; Every Fall) Hermeneutic, ethnmethodological, and phenomenological research methodologies. Ethics, evaluation, and usefulness of interpretive research. Practice in conducting interpretive research.

CI 8914. Critical Science Research. (3 cr.; A-F only; Every Spring) Origins, influences, characteristics, and central concepts. Distinction between critical science and other action research. Requisite skills/knowledge for conducting critical science research, using that knowledge in a project.

CI 8994. Directed Research in Family, Youth, and Community. (1-6 cr.; A-F only; Every Fall, Spring & Summer) TBD prerequisite: science education course.

Dakota (DAKO)

DAKO 5126. Advanced Dakota Language I. (3 cr.; maximum 12 cr.; A-F or Audit; Every Fall) Focuses on immersion method.

DAKO 5129. Advanced Dakota Language II. (3 cr.; maximum 12 cr.; A-F or Audit; Every Spring) Focuses on immersion method.

DAKO 5226. Dakota Mastery I. (3 cr.; maximum 6 cr.; Student Option; Every Fall) This content-based Dakota language class will focus on Dakota culture and history. Students will learn through both oral and written texts. Both traditional and contemporary stories will be discussed and utilized to give students a better view of Dakota ontology and epistemology. The effects of colonization and the need for decolonization will be also be discussed through the lens of Dakota stories and culture.

Dance (DNCE)

DNCE 5010. Modern/Contemporary Dance Technique 7. (2 cr. [maximum 4 cr.]; Student Option; Every Fall) Seventh course in ten-section sequence of modern dance technique. Continuation of technical development. Performance range/style. Students study with various guest artists. prerequisite: department consent, audition

DNCE 5020. Modern/Contemporary Dance Technique 8. (2 cr. [maximum 4 cr.]; Student Option; Every Spring) Eighth course in ten-section sequence of modern dance technique. Performance range/style. Students study with various guest artists. prerequisite: 5010, department consent, audition

DNCE 5030. Modern/Contemporary Dance Technique 9. (2 cr. [maximum 6 cr.]; A-F or Audit; Every Fall) Ninth course in ten-section sequence of modern dance technique. It focuses on pre-professional technique training for students prepared for that level of technical achievement and readying themselves for a potential career as contemporary dance professionals. All Dance Program Modern Dance Technique courses examine the practical application and understanding of principles of space, time, and energy focusing on alignment, weight, momentum, power for the body’s core, joint and skeletal articulation, clarity of focus and intent, flexibility, strength, stamina and energy flow and lines through the use of breath appropriate to the technical level of the course. The course also explores a range of performance strategies that students may encounter for future performance experiences within the dance program and beyond.

DNCE 5040. Modern/Contemporary Dance Technique 10. (2 cr. [maximum 6 cr.]; Student Option; Every Spring) Tenth course in ten-section sequence of modern dance technique. It focuses on pre-
professional technique training for students prepared for that level of technical achievement and readying themselves for a potential career as contemporary dance professionals. All dance program modern dance technique courses examine the practical application and understanding of principles of space, time, and energy focusing on alignment, weight, momentum, power for the body's core, joint and skeletal articulation, clarity of focus and intent, flexibility, strength, stamina and energy flow and lines through the use of breath appropriate to the technical level of the course. The course also explores a range of performance strategies that students may encounter for future performance experiences within the dance program and beyond.

DNCE 5110. Ballet Technique 7. (3 cr. [max 2 cr.]; Student Option; Every Fall) Continuation of ballet technique. Musically, performance, stylistic differences. Practical work conducted within context of choreographic/aesthetic development of ballet. prereq: dept consent, audition

DNCE 5120. Ballet Technique 8. (3 cr. [max 2 cr.]; Student Option; Every Spring) Continuation of 5110. Musicality, performance, stylistic differences. Practical work conducted within context of choreographic/aesthetic development of ballet. prereq: 5110, dept consent, audition

DNCE 5334. Introduction to Dance/Movement Therapy. (2 cr.; Student Option; Every Spring) Historical/theoretical perspectives on use of movement/dance in relationship to psychology/healing. D/MT pioneers/techniques. Applications of D/MT with various populations/settings. Experiential course. prereq: dept consent

DNCE 5443. Theorizing Dancing Bodies. (3 cr.; Student Option; Every Fall) Major developments in Western philosophic thought on dance and dance theory, from its beginnings to present. prereq: instr consent

DNCE 5454. (Re)Writing the Dancing Body. (3 cr.; Student Option; Every Spring) Modes of writing found in dance studies. Oral histories, historical documentation, performance reviews, performance ethnographies, scholarly essays. Discussion/critique of existent modes of writing. Writing/rewriting practice. prereq: Grad student

DNCE 5495. Dance and Global Tourism. (3 cr.; Student Option No Audit; Every Fall) Politics of dance/performance for tourism industry. Ways in which dancing body produces ideas of nation-state. How this reflects stereotypes of female identity in global context. prereq: Grad student

DNCE 5500. Topics in Dance. (1-3 cr. [max 30 cr.]; Student Option; Periodic Fall, Spring & Summer) Topics specified in Class Schedule.

DNCE 5601. Dance Composition 5. (1-2 cr.; Student Option; Every Spring) Final part of six-semester sequence in dance composition. Exploration of movement through independently scheduled rehearsals. Choreographic concepts. Tools in dance creation, development/refinement of movement, structure of groups choreography. prereq: 4601, 4602, dept consent

DNCE 5700. Performance. (1 cr. [max 4 cr.]; Student Option; Every Fall & Spring) Technique, improvisation, choreography, music, design, and technical production as they relate to dance performance. prereq: concurrent registration is required (or allowed) in technique course, dept consent

DNCE 5858. Dance Pedagogy. (3-4 cr.; Student Option; Every Fall) Teaching dance provides the foundational pedagogy and methods for artful and responsible teaching and learning in dance. Students will examine key dance education theories and quality teaching practices, and then apply the theories by developing and teaching dance lessons. The course introduces tools that assist in the planning, teaching, assessing, and sharing of dance experiences with children, adolescent, and adult learners in a variety of settings. Specific learning opportunities include: readings, investigation and discussion of dance pedagogy; the creation of lesson plans; teaching labs (in-class and off-site supervised practice teaching); and clinical observations where students can observe the theory in practice.

DNCE 5993. Directed Studies. (1-4 cr. [max 10 cr.]; Student Option; Every Fall & Spring) Guided individual study. Prereq-instr consent, dept consent, college consent.

Data Science (DSCI)

DSCI 5994. Directed Research. (1-3 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer) Directed Research

DSCI 8760. Data Science M.S. Plan B Project. (3 cr. [max 6 cr.]; S-N only; Every Fall, Spring & Summer) Project arranged between student and faculty.

DSCI 8970. Data Science M.S. Colloquium. (1 cr.; S-N or Audit; Every Fall) Recent developments in Data Science and related disciplines. Students must attend 13 of the 15 lectures.

DSCI 8991. Independent Study. (1-3 cr. [max 6 cr.]; Student Option; Every Fall) Independent study with professor. prereq: instr consent

Dental Hygiene (DH)

DH 5201. Management Internship. (5 cr. [max 4 cr.]; S-N only; Every Fall, Spring & Summer) Supervised experience in oral health care industry. Experience in corporations, health care management organizations, long-term care facilities, publishing firms, or professional organizations. An internship is required (minimum 14 weeks). prereq: Dental hygiene grad student

DH 5203. Capstone Project. (3 cr.; S-N only; Every Fall, Spring & Summer) Formulation of extensive business plan/project related to area of interest based on coursework taken or internship experience. prereq: Dental hygiene grad student

DH 5401. Research Methods in Health Sciences. (3 cr.; A-F only; Every Summer) Developing skills in scientific method. Analyzing research findings. Types of research, problem selection, hypothesis writing, research planning/design, data collection/measuring techniques, analysis/interpretation of data. Ethics. prereq: Dental hygiene grad student

DH 5403. The Discipline of Dental Hygiene. (2 cr.; A-F only; Every Summer) Dental hygiene practice grounded in science and guided by research evidence. Etiology, prevention, and treatment of dental caries, periodontal diseases, oral cancer, and other conditions. Advances in technology. prereq: Dental hygiene grad student

DH 5405. Curriculum and Course Development. (2 cr. [max 4 cr.]; A-F only; Every Fall) Curriculum/course development/management, competency-based education/outcomes assessment. Role of accreditation in dental hygiene education. Students develop competency-based dental hygiene curriculum/course. prereq: Dental Hygiene grad student

DH 5407. Instructional Strategies for Effective Teaching. (2 cr.; A-F only; Every Fall) Application of principles of learning. Learning/teaching styles, student-centered teaching, instructional strategies. Microteaching selected strategies. prereq: Dental hygiene grad student

DH 5409. Dental Hygiene Clinic Administration. (2 cr.; A-F only; Every Spring) Theory/practice of dental hygiene preclinical/clinical instruction. Administration of clinic. Developing protocols, calibrating faculty, monitoring student progress. Central Regional Dental Testing Service exam, clinic evaluation mechanisms, quality assurance. prereq: Dental hygiene grad student

### Dental Therapy (DT)

**DT 5000. Dental Therapy Capstone Project.** (2 cr.; S-N only; Every Spring) In-depth, independent, project-based research topic from interests in oral health. Intensive, active-learning initiative requiring significant effort in planning/implementation. Final written product/oral presentation mandatory, demands extensive systematic investigation/research.

**DT 5140. Preventive Pediatric Dental Clinic.** (1 cr.; A-F only; Every Fall) Oral health promotion of pediatric patients. Brushing techniques, fluoride application, dietary analysis/counseling. Students interact with parents of pediatric patients.

**DT 5141. Clinical Pediatric Dentistry III.** (2 cr.; A-F only; Every Fall, Spring & Summer) Early childhood development, dental care for children. Prereq: Must be in the dental therapy program, passed basic foundation competencies.

**DT 5162. Principles of Exodontia and Minor Oral Surgery.** (1 cr.; A-F only; Every Fall & Spring) Develop knowledge/skill for exodontia/minor oral surgery.

**DT 5241. Oral Radiology Clinic II.** (1 cr.; A-F only; Every Fall) Clinical instruction in oral radiography. Intraoral/extraoral radiographic procedures, evaluations. Prereq: Must be in dental therapy masters program.

**DT 5220. Comprehensive Care Clinic.** (1-5 cr. [max 10 cr.]; S-N only; Every Spring) Assessment, treatment, and management of patients. Concepts/principles of evidence-based dentistry as applied to clinical practice.

**DT 5321. Treatment Planning for the Dental Therapist.** (1 cr.; S-N only; Every Fall, Spring & Summer) Formal lecture presentations regarding fundamentals of assessment/treatment planning of dental cases. Prepare student to understand University of Minnesota School of Dentistry protocol in development of optimal, alternative, emergency treatment plans.

**DT 5360. Outreach Experiences I.** (1 cr.; S-N only; Every Fall) Students work in clinics outside of U of M with underserved patients.

**DT 5361. Outreach Experiences II.** (2 cr.; S-N only; Every Fall, Spring & Summer) Experiences that reinforce principles of delivering dental health care/services to patients, including underserved patient populations, in contemporary off-site clinical settings.

**DT 5410. Applied Dental Biomaterials.** (1 cr.; A-F only; Every Summer) Application of scientific principles to selection/ utilization of dental materials. Prereq: 2nd yr DT student.

**DT 5429. Introduction to Psychomotor Skill Development.** (1 cr.; S-N only; Every Fall) Virtual reality based training for psychomotor skills required in prosthodontic/operative courses. Eye-hand/mirror skills, ergonomics used while preparing teeth for restoration. Prereq: In dental therapy program.

**DT 5430. Oral Anatomy.** (2 cr.; A-F only; Every Fall) Morphological characteristics of human dentition, associated contiguous structures. Foundational knowledge applied to situations encountered in general dental clinical practice. Prereq: Accepted into dental therapy masters program.

**DT 5431. Oral Anatomy Laboratory.** (3 cr.; A-F only; Every Fall) Manual dexterity skills, anatomy of human dentition. Prereq: Accepted into masters in dental therapy program.

**DT 5432. Operative Dentistry I.** (1 cr. [max 2 cr.]; A-F only; Every Fall, Spring & Summer) How to treat dental caries. Therapeutic treatment of underlying pathology. Surgical treatment of early caries lesion.

**DT 5433. Operative Dentistry I Pre-Clinic Laboratory.** (2 cr.; A-F only; Every Fall, Spring & Summer) How to treat dental caries. Therapeutic treatment of underlying pathology. Surgical treatment of early caries lesion. Hands-on projects working with models simulating teeth and surrounding structures. Prereq: 2nd yr masters in dental therapy student.

**DT 5434. Operative Dentistry II Lecture.** (1 cr.; A-F only; Every Fall, Spring & Summer) How to surgically manage more advanced caries lesions. Transition from pre-clinic lab to clinic setting. Prereq: Enrolled in master’s in dental therapy program.

**DT 5435. Operative Dentistry II for the Dental Therapist, Lab.** (1 cr.; A-F only; Every Fall, Spring & Summer) More advanced caries lesions: diagnosis, structural preparation, decay removal and restoration.

**DT 5443. Operative Clinic III.** (4 cr.; A-F only; Every Fall, Spring & Summer) How to place restorations. Students place single-tooth restorations on patients.

**DT 5460. Essentials of Clinical Care I For the Dental Therapist.** (10 cr. [max 12 cr.]; S-N only; Every Fall) Students provide comprehensive care under direction of clinical faculty. May include periodontics, operative, pediatric care, and health promotion. Limited care may be given on rotations to oral surgery clinics.

**DT 5471. Prosthodontic Topics for Dental Therapy.** (2 cr.; A-F only; Every Summer) Lectures, lab projects of selected prosthodontic techniques to enable the dental therapist to provide/cement quality pre-fabricated metal or resin provisional crowns and other prosthodontic procedures in the scope of DT practice.

**DT 5960. Essentials of Clinical Care II for the Dental Therapist.** (5-10 cr. [max 20 cr.]; S-N only; Every Summer) Students provide comprehensive care under direction of clinical faculty. May include periodontics, operative, pediatric care, and health promotion. Limited care may be given on rotations to oral surgery clinics.

**DT 6164. Principles of Exodontia and Minor Oral Surgery for the ADT student.** (1 cr. [max 2 cr.]; A-F only; Every Fall, Spring & Summer) This course develops knowledge and skill in the advanced dental therapy (ADT) student in exodontia and minor oral surgery.

**DT 6321. Treatment Planning.** (2 cr.; A-F only; Every Fall) Fundamentals of assessment/dental treatment planning using University of Minnesota School of Dentistry protocol in developing optimal, alternative, emergency treatment plans. Case-
based treatment planning/small group seminars utilized.

**DT 6340. Advanced Dental Therapy Prep Clinic.** (10 cr.; A-F only; Every Fall) Preparation for licensed dental therapists to be eligible for advanced dental therapy certification. Course has four requirements: completion of designated clinic hours, self-assessment records, faculty assessment records, final interview that can be completed with patients from student's place of employment.

**DT 6341. Advanced Dental Therapy Prep Lecture.** (2 cr.; A-F only; Every Fall) Preparation for licensed dental therapists to become eligible for advanced dental therapy certification. Topics range from essential basic sciences to specific clinical procedures. prereq: Must be a licensed dental therapist who was originally trained at the University of Minnesota, School of Dentistry.

### Dentistry (DENT)

**DENT 6113. Oral Radiology Clinic III.** (1-2 cr.; A-F or Audit; Every Fall, Spring & Summer) This course consists of radiographing dental school patients, radiographic interpretations, panoramic and extraoral technique seminars and quality assurance procedures.

**DENT 6225. Advanced Oral and Maxillofacial Surgery Elective.** (1-5 cr.; S-N or Audit; Every Fall) Diagnosis/treatment of dentoalveolar pathology. 25-125 contact hours.

**DENT 6230. Oral and Maxillofacial Surgery Externship Elective.** (0 cr.; S-N or Audit; Periodic Fall & Spring) Students gain additional surgical experiences and determine if career in oral/maxillofacial surgery is desirable. prereq: Interview with externship dir, letter stating student registered in good standing at ADA-accredited dental school; experience in dentoalveolar surgery procedures preferred.

**DENT 6231. Hospital Dentistry Clinic Rotation.** (0 cr.; S-N or Audit; Every Fall) Managing hospitalized patients, operating room protocol, patient admission and discharge, and ambulatory patients.

**DENT 6232. Hospital Dentistry Clinic Rotation.** (1 cr.; S-N or Audit; Every Fall & Spring) Managing hospitalized patients, operating room protocol, admission/discharge of patients, ambulatory patients.

**DENT 6319. Surgical and Clinical Oral and Maxillofacial Pathology.** (1-10 cr.; S-N or Audit; Periodic Fall & Spring) This elective involves spending time with Division of Oral and Maxillofacial Pathology faculty while they diagnose surgical pathology cases and see clinical oral pathology referral patients.

**DENT 6470. Health Ecology Elective.** (1-10 cr.; Student Option; Every Fall & Spring) Highly motivated students earn academic credit for activities in special-interest areas.

**DENT 6480. Advanced General Dentistry Elective.** (1-10 cr.; Student Option; Every Fall, Spring & Summer) Block rotations of 2 to 10 weeks in selected special clinics and programs such as prisons, regional treatment centers, and migrant worker health care programs.

**DENT 6490. Health Ecology: Independent Study.** (1-10 cr.; Student Option; Every Fall & Spring) Arranged with any Health Ecology faculty member.

**DENT 6591. Pediatric Dentistry Independent Study.** (2 cr.; Student Option; S-N or Audit; Every Fall & Spring) Students may be assigned independent projects or additional clinical experiences in pediatric dentistry.

**DENT 6713. Endodontics: Independent Study.** (1 cr.; A-F or Audit; Every Fall & Summer) Has three phases: case presentations, literature review, laboratory. prereq: Completion of 3rd yr of dental school, dept consent

**DENT 6715. Advanced Endodontic Elective.** (0 cr.; S-N only; Every Fall) Current data relevant to methods/materials in endodontic dentistry.

**DENT 6931. Application of Occlusal Appliances.** (1 cr.; S-N only; Every Fall & Spring) Focuses on fabrication, application, and adjustment of occlusal appliances. Clinical, lab, and practice issues.

**DENT 7000. Dental Clinic.** (1-6 cr.; Student Option; Periodic Fall, Spring & Summer) Focuses on fabrication, application, and adjustment of occlusal appliances. Clinical, lab, and practice issues.

**DENT 7021. Contemporary Diagnosis and Management of Orofacial Pain.** (1 cr.; A-F only; Every Spring) Pain mechanisms, pathways, and assessment of orofacial pain. Pharmacology of pain and strategies for effective pre- and post-operative pain management.

**DENT 7031. Advanced Seminar in Clinical Geriatric Dentistry.** (1-2 cr.; S-N or Audit; Every Fall) Oral health problems in elderly, clinical implications of biological aging changes, geriatric medical concerns, medical risk assessment, medication issues, ethical/legal concerns, dental management of patients in long-term care settings. prereq: [Advanced or grad] student in [dentistry or other AHC discipline]

**DENT 7032. Field Experience: Administration in a Multidisciplinary Health Center.** (1-3 cr.; Student Option; Every Spring & Summer) Administrative and management issues in a multidisciplinary health care environment. Student placement with faculty approval and oversight at the Amherst H. Wilder Senior Health Clinic or other sites. Project emphasis on strategic planning, organizational structure, budgeting and financial management, personnel management, communications, quality assurance activities, or other topics.

**DENT 7033. Teaching and Evaluation in Dentistry.** (3 cr.; A-F or Audit; Every Spring) Application of educational and psychological principles to professional dental education. Design and implementation of curricular components based on principles of learning and instruction. Review of evaluation and measurement theories and practices in the context of student performance and assessment. Survey of program evaluation methods. prereq: Dent or OBio grad student or instr consent

**DENT 7061. Special Oral Pathology I.** (1 cr.; S-N or Audit; Every Fall & Spring) Review of clinical, radiographic, and treatment aspects of oral disease and oral manifestations of systemic disease. Prereq: [Resident or grad student] in discipline other than oral pathology

**DENT 7062. Special Oral Pathology II.** (1 cr.; S-N only; Every Spring) Review of the clinical, radiographic, and treatment aspects of oral disease and oral manifestations of systemic disease. Preq: 7061, resident [or grad student] in discipline other than oral pathology.

**DENT 7071. General Practice Residency Dental Clinic.** (13 cr.; max 78 cr.; S-N only; Every Fall, Spring & Summer) Clinical course for residents of the General Practice Residency Program.

**DENT 7082. Carniofacial Growth and Development.** (2 cr.; A-F only; Every Fall) This course is structured as a combination of two-hour lectures, seminars, and distance learning meeting once a week. The overall objectives of this course are to present essential concepts necessary to understand growth and development as it pertains to orthodontic diagnosis and treatment planning.

**DENT 7101. Management Philosophy for Dental Practices.** (1 cr.; A-F only; Every Fall & Spring) Seminar on philosophy and techniques used in the administration and management of offices.
for dental specialists. prereq: Dentistry grad student

DENT 7102. Conscious Sedation. (2 cr.; A-F only; Every Fall)
Oroal, inhalation, and intravenous sedation for dental patients. Topics include patient selection and physical risk assessment; selection and administration of sedative agents; and prevention, recognition, and management of medical emergencies. prereq: Dentistry grad student

DENT 7111. Current Literature Review in Dentistry. (2 cr.; A-F only; Every Fall & Spring)
Current literature in dentistry and related disciplines. Formal setting for students to meet and review current literature that is of significance to all. prereq: Grad student in [dentistry or oral biology] or instr consent

DENT 7112. Treatment Planning Seminar. (2 cr. [max 4 cr.]; A-F only; Every Fall & Spring)
Multidisciplinary format for discussion of complex dental patients. Evaluating, diagnosing, and developing a comprehensive treatment plan for complex dental patients.

DENT 7121. Psychological Issues in Medical and Dental Patient Management. (1 cr.; Student Option; Every Fall & Spring)
Psychological issues in medical and dental evaluation and treatment, psychopathology, stress, and illness.

DENT 7123. Temporomandibular Disorders and Orofacial Pain. (1 cr.; A-F or Audit; Every Fall)
Basic didactic information needed to recognize/manage patients with temporomandibular disorders. Overview of scope/complexity of clinical practice of TMD/Orofacial Pain management.

DENT 7220. Prosthetically-Driven Implant Surgery and Treatment Planning. (1 cr.; A-F only; Every Fall)
Patient selection. Treatment planning for implant therapy. Indications/contra-indications of various types of implants. Treatment planning, implant surgery, bone grafting procedures. prereq: Prosthodontics resident

DENT 7411. Dental Biomaterials in Prosthodontics. (1 cr.; A-F only; Summer Odd Year)

DENT 7991. Independent Study. (1-4 cr.; max 8 cr.; Student Option No Audit; Every Fall, Spring & Summer)
Individualized study under supervision of graduate faculty member in MS-Dentistry Program. Focus determined by faculty and student. prereq: Enrolled in an advanced dental education program

DENT 7993. Curricular Practical Training Elective. (1 cr. [max 4 cr.]; S-N only; Every Fall, Spring & Summer)
This course is an elective internship or employment to gain practical work experience, advance professional skills and explore career interests.

DENT 8031. Topics and Problems in Dental Education. (1-3 cr.; Student Option; Every Spring & Summer)
Independent study in student learning, instructional development, curriculum planning, student testing and evaluation, and academic administration, where these areas and their interfaces are applied directly to professional dental education. Provides opportunity for applying and extending concepts learned in Dent 7033.

DENT 8061. Clinical Topics in TMD. (2 cr.; A-F only; Every Fall)
Structured as a combination of 2-hour lectures and seminars meeting once a week. The overall objectives are to present essential concepts necessary to the diagnosis and management of temporomandibular disorders (TMD), as well as background on how TMD can affect patient care for the orthodontist. It should be noted the course is not designed to meet the needs of a person providing specialty care for TMD and orofacial pain. The students will learn evidence-based approaches to diagnose and provide and predictable and efficient treatment for patients with mild TMD conditions. Critical review of classic and current TMD and orodental literature is an important component of this course. Hands-on clinical experience will consist of two clinical sessions.

DENT 8090. Evidence-based Clinical Pediatric Dentistry. (2 cr.; A-F or Audit; Every Fall, Spring & Summer)
Selected pediatric dentistry topics. In-depth literature review, seminar discussion.

DENT 8091. Interdisciplinary Care of the Cleft Palate Patient. (1 cr.; S-N or Audit; Every Summer)
Comprehensive surgical, dental, and speech and hearing evaluation and management of patients with cleft lip and palate.

DENT 8100. Topics in Advanced Periodontology: Literature Review. (2 cr.; Student Option; Every Fall, Spring & Summer)
State-of-the-art information on a variety of topics concerning risk factors and therapeutic modalities for periodontal disease.

DENT 8101. Dental Implantology: A Multidisciplinary Approach. (2 cr.; Student Option; Every Fall & Summer)
Dental implant therapy from perspective of several dental disciplines.

DENT 8120. Advanced Principles and Techniques of Orofacial Pain Disorders. (2 cr. [max 3 cr.]; A-F or Audit; Every Spring)
Interdisciplinary study of theory, principles, epidemiology, mechanisms associated with TMJ/craniofacial pain disorders. Basis for scientific understanding of diagnostic management strategies. prereq: Participation in TMJ, orofacial pain advanced education program

DENT 8121. Current Literature in TMD and Orofacial Pain. (1 cr.; A-F or Audit; Every Fall, Spring & Summer)
Review of current literature/how it relates to past literature. Theories on pain, philosophies of management.

DENT 8123. Advanced Topics in Orofacial Pain. (2 cr.; A-F or Audit; Every Spring)
Review of cutting edge research and clinical findings regarding etiology and treatment of acute and chronic orofacial pain conditions and related disorders. prereq: Grad student in dentistry or other health sciences grad student or instr consent

DENT 8200. Dental Clinic for Oncology Fellows. (13 cr.; S-N only; Every Fall, Spring & Summer)
Train oral/maxillofacial surgeons in principals/practice of head/neck oncology. Treatment of benign/malignant disease including salivary gland tumors. Training will emphasize multidisciplinary care of head/neck oncology patient.

DENT 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master’s student, adviser and DGS consent

DENT 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

Dermatology (DERM)

DERM 7182. Dermatology Preceptorship. (4 cr.; H-N only; Every Fall, Spring & Summer)
This elective is useful to the student planning a career in a primary care specialty or dermatology.

DERM 7183. Advanced Dermatology. (4 cr.; H-N only; Every Fall, Spring & Summer)
Students will gain further experience in all aspects of dermatology. This course is appropriate for medical students interested in pursuing a career in Dermatology.

DERM 7185. Research in Dermatology. (3-8 cr. [max 16 cr.]; H-N only; Every Fall, Spring & Summer)
An introduction to research in dermatology. The student pursues a research project through clinical or laboratory research. The specific project is individually formulated by the student and faculty. As time permits during this course, the student is invited to attend research and teaching conferences conducted by the Department of Dermatology.

DERM 7910. Dermatology Medical Residency. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Dermatology medical residency.

DERM 7920. Medicine/Dermatology Medical Residency. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Medicine/dermatology medical residency.

DERM 7930. Dermatology Medical Fellowship. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

Design (DES)

DES 5160. Topics in Design. (1-4 cr.; max 24 cr.; A-F only; Every Fall, Spring & Summer)
Topics in design

DES 5165. Design and Globalization. (3 cr.; A-F or Audit; Every Fall)
The course explores how culture, identity, and difference are defined and produced and the role that design plays in the production of difference, inequality, and marginalization. prereq: Grad student

DES 5168. Evidence-Based Design. (3 cr.; A-F or Audit; Every Fall)
Origins of evidence-based design/possible benefits and detractors. Students learn various components as a process/ explore methods of integrating process via application to a design project in their area of expertise. Process, impact, influence, and anticipated outcomes are documented/ analyzed as compared to a typical design process approach. prereq: CDes grad student or instr consent

DES 5170. Topics in Design. (3 cr.; max 24 cr.; A-F or Audit; Periodic Fall)
In-depth investigation of single specific topic, announced in advance.

DES 5185. Human Factors in Design. (3 cr.; A-F or Audit; Periodic Fall)
Theories/methods that influence the assessment of physical, social, and psychological human factors. Development of user needs with application to designed products that interact with human body. prereq: Grad student or sr or instr consent

DES 5188. Anthropometrics, Sizing & Fit. (4 cr.; A-F only; Periodic Fall & Spring)
Comprehensive attention to ergonomics and anthropometric variance across populations is crucial to the advancement of wearable products and apparel. This course will examine the relationship between body size, body shape, product design, sizing systems, and fit. Students will examine existing sizing systems and develop new sizing systems using anthropometric data, body scan technology, and Op/TeX 3D patternmaking software. A special focus will be given to examining innovative tools that encourage the merging of anthropometrics and design throughout the design process. This class is suitable for students across a variety of disciplines.

DES 5193. Directed Study in Design. (1-6 cr.; max 36 cr.; A-F only; Every Fall, Spring & Summer)
Directed Study in Design prereq: dept consent

DES 5196. Field Study: National/International. (1-10 cr.; A-F or Audit; Every Fall, Spring & Summer)
Faculty-directed field study in a national or international setting.

DES 8102. Quantitative Research Methods. (3 cr.; A-F only; Fall Even Year)
Quantitative research methods for issues related to humans, their behaviors, and everyday living in the designed environment.

DES 8103. Qualitative and Mixed Methods Research. (3 cr.; A-F or Audit; Fall Odd Year)
A scientific approach to qualitative research. Methods/strategies combined to explore complex research questions.

DES 8112. Design Theory. (3 cr.; A-F or Audit; Spring Even Year)

DES 8113. Teaching and Assessment. (2 cr.; A-F or Audit; Fall Odd Year)

DES 8114. Design Studio. (4 cr.; A-F or Audit; Fall Even Year)
Advanced problem analysis, design solution. prereq: Design grad student or instr consent

DES 8115. Grant Writing. (2 cr.; A-F or Audit; Fall Even Year)
Interdisciplinary course.

DES 8151. Product Development: Theory and Practice. (3 cr.; A-F only; Spring Odd Year)
Product development theories/methods as applied in many design fields. Emphasizes retail setting. Seminar format discussion, case studies, observation/critique of hands-on industry product development project.

DES 8164. Innovation Theory and Analysis. (3 cr.; A-F or Audit; Spring Odd Year)
Theories and factors that influence adoption and diffusion of designed products. Methodologies used in analysis of diffusion process.

DES 8166. Material Culture and Design. (3 cr.; A-F or Audit; Periodic Spring)
Research approaches to material culture study using artifacts from Goldstein Museum of Design. prereq: [DHA or DES] grad student or instr consent

DES 8167. Aesthetics of Design. (3 cr.; A-F or Audit; Periodic Spring)
How we perceive, analyze, value, and evaluate design outcomes/results.

DES 8170. Topics in Design. (1-3 cr.; max 6 cr.; A-F or Audit; Every Fall & Spring)
In-depth investigation of topic announced in advance.

DES 8181. Research Ethics. (1 cr.; S-N or Audit; Every Spring)
Overview of ethical concerns/questions in conducting/disseminating research. Mentoring relationships, use of human subjects, data handling, plagiarism, authorship, publishing, research funding, social responsibility of researchers, code of conduct. prereq: Grad student

DSSC 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

DSSC 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

DSSC 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer)
Doctoral pre-thesis credits. prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

DSSC 8777. Thesis Credits: Master’s. (1-18 cr.; max 50 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

DSSC 8888. Thesis Credit: Doctoral. (1-24 cr.; max 100 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 24 cr required

DSSC 8111. Approaches to Knowledge and Truth: Ways of Knowing in Development Studies and Social Change. (3 cr.; S-N or Audit; Every Fall)
Approaches practiced by physical, biological, social science, and humanities scholars. “Ways of knowing” in different cultures/groups. Issues/methodological challenges facing interdisciplinary/international studies. Taught by faculty from biological, social sciences, and humanities. prereq: Grad DSSC minor or instr consent

DSSC 8112. Scholarship and Public Responsibility. (1-24 cr.; max 2 cr.; S-N only; Every Spring)
Seminar. Concerns/themes relevant to public engagement in academic work. Diverse practices of reading, writing, and pedagogy. Privileged locations of knowledge. Practices of collaborative work. prereq: Grad DSSC minor or instr consent

DSSC 8211. Doctoral Research Workshop in Development Studies and Social Change. (3 cr.; S-N or Audit; Every Fall)
Interdisciplinary workshop to assist doctoral students in writing successful research and grant proposals to support their dissertation research on themes related to global social change. Enables students to develop interdisciplinary peer review and feedback skills and consider ethical and practical issues global
south research, prereq: Grad DSSC minor or instr consent

DSSC 8310. Topics in Development Studies and Social Change. (1.3 cr. [max 9 cr.]; S-N only; Every Fall & Spring) Seven-week to full semester seminar. Topical issues in development and social change.

Doctor of Dental Surgery (DDS)

DDS 6111. Periodontology I Lecture. (1.5 cr.; A-F only; Every Summer) Periodontal anatomy, physiology/etiology of periodontal diseases. Clinical, histopathological, and pathogenesis of gingivitis and periodontitis. Role of genetics, tobacco use, and systemic disorders.

DDS 6112. Periodontology II: Technique. (2 cr.; A-F or Audit; Every Fall) Presurgical procedures in periodontics. Clinical skills to examine, diagnose, prevent, and treat periodontal diseases. Prereq-In DDS program.

DDS 6113. Periodontology III Lecture. (1.5 cr.; A-F only; Every Spring) Clinical procedures associated with surgical phase of periodontal therapy, including implants. Evaluation of periodontal treatment, maintenance phase, relationship between periodontics and other disciplines in dentistry. Clinical research. Integrating periodontics into general practice.

DDS 6121. Periodontology Clinic. (2 cr.; A-F or Audit; Every Spring) Nonsurgical and surgical treatment of periodontal diseases, evaluation of periodontal therapy, implementation of maintenance programs.

DDS 6122. Periodontology Clinic DDS3. (2 cr.; A-F only; Every Spring) Nonsurgical and surgical treatment of periodontal diseases, evaluation of periodontal therapy, and implementation of maintenance programs.

DDS 6124. Periodontology Clinic D4. (2 cr. [max 4 cr.; A-F only; Every Spring) This course is designed to enable the dental student to gain expertise, knowledge and confidence in the clinical skills needed to examine, diagnose and treat the periodontal patient. Students are expected to complete 3-4 competencies and a Patient Case presentation.

DDS 6130. Introduction to Clinical Dentistry. (2.2 cr. [max 20 cr.; S-N only; Every Summer) Methods/procedures consistent with preclinical teaching in traditional predoctoral program. Prereq: Enrolled in PASS

DDS 6131. Pediatric Dentistry Pre-Clinic. (1.7 cr.; A-F or Audit; Every Spring & Summer) Physical, emotional, dental, and language development. Diagnosis, prevention, and management of oral diseases in children.

DDS 6141. Pediatric Dentistry Clinic. (3.6 cr.; A-F only; Every Fall, Spring & Summer) Preventive/clinical topics/techniques. Diagnosis, treatment planning, and clinical treatment of pediatric patients. Prereq-3rd yr DDS student.

DDS 6151. Pain and Anxiety Control. (1.2 cr.; A-F or Audit; Every Spring & Summer) Didactic/clinical aspects of pain/anxiety control as pertains to dentistry. Emphasizes use of local anesthetics, conscious sedation (nitrous oxide inhalation). Acute/chronic pain mechanisms, neuropathic pain, issues pertaining to narcotic/other drug abuse.

DDS 6152. Oral and Maxillofacial Surgery I. (1.1 cr.; A-F only; Every Fall) Introduction to concepts of oral/maxillofacial surgery. Emphasizes fundamental skills of oral surgery that apply to practice of general dentistry.

DDS 6153. Oral and Maxillofacial Surgery II. (1.2 cr.; A-F only; Every Spring) Fundamental clinical/diagnostic skills that apply to practice of general dentistry. Surgical procedures, complications, facial fractures, congenital abnormalities. Prereq-Oral Surgery I.

DDS 6161. Oral & Maxillofacial Surgery Clinic Rotation. (2.5 cr.; S-N or Audit; Every Spring) Oral Surgery Clinic experience.

DDS 6171. Orthodontics I. (2.7 cr.; A-F only; Every Fall) Supervision, guidance, and correction of growing or mature dentofacial structures. Growth/development of craniofacial structures. Diagnostic methods, biology of tooth movement and biomechanics. Clinical diagnosis, treatment planning.

DDS 6172. Orthodontics II. (1.5 cr.; A-F only; Every Spring) Lectures examine clinical management of specific orthodontic problems; and principles and procedures in preventative, interceptive, and corrective orthodontics examined through case analysis and treatment planning. Lab covers practical applications of developing occlusion analysis; and fundamentals of orthodontic appliances.

DDS 6181. Orthodontic Clinic Rotation. (1 cr.; S-N or Audit; Every Fall & Spring) Diagnosis, treatment timing, and treatment objectives; skills required to perform orthodontic procedures.

DDS 6211. Introduction to Oral Biology. (0.6 cr.; S-N only; Every Spring) Biology of the mouth. Broad overview of current information on the following topics: plaque microbiology, bone growth and remodeling, oral diseases, bad breath, and amalgam fillings. Prereq-1st yr [DDS or DT student].

DDS 6212. Topics in Dental Biochemistry. (1.1 cr.; A-F only; Every Spring) Biological, chemical, and biochemical phenomena in oral cavity and their interrelationships. Biological/chemical basis of dental caries. How saliva, dental plaque, and plaque fluid interact with and impact caries process. Metabolic handling, antacaries mechanisms of fluoride. prereq: 1st yr [DDS or DT student]

DDS 6214. General Histology. (3.7 cr.; A-F or Audit; Every Fall) Structure/function of cells, tissues, and organs. Prereq-Accepted into DDS program.

DDS 6231. Physical Evaluation I. (2.9 cr.; A-F only; Every Spring) Concepts of diagnosis and patient evaluation for physical examination in various adult clinical programs in School of Dentistry. Prereq: 1st yr [DDS or DT student]

DDS 6232. Physical Evaluation II. (2.2 cr.; A-F or Audit; Every Fall) Lecture and case-based series designed to review physical evaluation of common medical/systemic problems of patient management and care based on principles of medical management, thorough evaluation, and recognition of the medically compromised patient. Includes acute management of medical emergencies in dental practice.

DDS 6234. Radiographic Interpretation. (2 cr.; A-F only; Every Fall) Dental record keeping. Documentation/analysis of medical/clinical findings. Patient's rights, informed consent. Radiographic interpretation of deviations from normal. Prereq-In DDS program.

DDS 6235. Oral Radiography Preclinical Lab I. (0.9 cr.; S-N only; Every Fall) Preclinical demonstration-participation phases in radiographic technique, using mounted human skulls. Prereq-In DDS program.

Application of clinical knowledge, skills, and the principles of care to the comprehensive assessment, diagnosis, treatment planning, and management of patients.

**DDS 6313. Comprehensive Care Clinic II.** (1 cr. [max 3 cr.]; S-N only; Every Fall, Spring & Summer)

Patient management skills. Diagnosis, treatment planning, delivery of comprehensive care, efficient use of clinic time. Prereq-6050.

**DDS 6314. Treatment Planning and Introduction to Patient Care.** (4.1 cr. or S-N; Every Fall & Spring)

**DDS 6315. Clinical Geriatric Dentistry Rotation.** (0 cr. or S-N only; Every Fall)

The purpose of this rotation is to complement and reinforce information provided in didactic course DDS 6338 Geriatrics and Special Needs Patient Care to enable upper level students to interact with older adults with complex dental, medical and psycho-social concerns during routine dental appointments.

**DDS 6322. Treatment Planning Clinic II.** (1 cr. or A-F or Audit; Every Spring)

Devise initial plan from established database; make case presentation; develop final treatment plan, informed consent and appointment plan; and make financial arrangements. Prereq: Patient Management II Resource Workbook

**DDS 6325. Dental Professional Development I.** (1 cr.; S-N only; Every Fall & Spring)

First of a series that prepares the student in professionalism and practice management. Uses self-assessment and strategic planning to lead students to identify personal and professional aspirations. Four sequential levels of learning creating progressively higher levels of competence using a blended-learning format including online education, simulations and self-directed learning.

**DDS 6326. Dental Professional Development II.** (1 cr.; S-N only; Every Summer)

Focuses on Career Planning, Personal Strategic Planning, Personal Finance and Debt Management. Students apply principles and tools learned to their future professional practice and career.

**DDS 6327. Dental Professional Development III.** (2 cr.; S-N only; Every Spring)

This course focuses on preparing the student in professionalism, critical thinking, problem solving and practice management. It uses a blended-learning format that includes online education, simulations and self-directed learning. It lays the groundwork for students to develop day-to-day leadership skills needed to operate a successful dental practice.

**DDS 6328. Dental Professional Development IV.** (1 cr.; S-N only; Every Summer)

Fourth and final course sequence in Dental Professional Development. Focuses on completing business plans and refining personal and professional strategic plans applying skills learned in the previous three courses.

**DDS 6331. Dental Public Health I.** (1.9 cr.; S-N only; Every Fall)

**DDS 6332. Dental Public Health II.** (1 cr.; S-N only; Every Spring)

Aspects/principles of prevention, risk assessment, screening, dietary analysis, Models of health education, health promotion. How dental profession influences public. Student groups research/present materials about oral health topic.

**DDS 6333. Professional Problem Solving.** (0.8 cr.; S-N only; Every Spring)

Forum for discussion of clinical dental cases in context of ethics/professionalism. Five workshops based on ADA principles of ethics and code of professional conduct. Prereq-DDS 3rd yr.

**DDS 6335. Professional Problem Solving.** (0.3 cr.; S-N only; Every Fall)

Forum for discussion of clinical dental cases in context of ethics/professionalism. Given over fall/spring semester of 4th year. Three workshops on dental cases/ethics.

**DDS 6336. Dental Practice Management.** (2 cr.; S-N only; Every Spring)

Skills in planning, organizing, leading, and controlling the clinical, business, and human aspects of dental practice.

**DDS 6337. Current Legal Issues for the New Dentist.** (2.1 cr.; S-N only; Every Fall)

Legal issues: regulation of the profession, associateships, purchasing a dental practice, starting a practice, dental risk management, contract law considerations. Prereq-In DDS program.

**DDS 6338. Special Issues in Oral Health Care: Geriatric, Hospital, and Special Needs Patient Dentistry.** (1.7 cr.; A-F only; Every Summer)

Delivering optimal oral health care to older adults and patients with special needs. Clinical management of patients with social, psychological, physiological, and dental characteristics. Dentistry in hospital setting. Prereq-4th yr DDS program student.

**DDS 6339. Emergency Preparedness.** (0.8 cr. [max 1.6 cr.]; S-N only; Every Spring)

Emergency preparedness for the dental office with emphasis on teamwork skills. Online module, lectures, and participation in simulated realistic disaster scenarios with interprofessional teams. Prereq-Must be enrolled in a School of Dentistry program.

**DDS 6340. Medical Emergencies and Patient Safety in the Dental Clinical Environment.** (0.5 cr.; S-N only; Every Spring)

Hands-on/didactic training in recognizing/managing medical emergencies. Patient safety/
reduction of risks for accidental patient injury in dental clinical environment.

**DDS 6360. Introduction to Outreach Experiences.** (0.5 cr.; S-N only; Every Spring) Provide dental care to underserved populations in various clinical settings throughout Minnesota.

**DDS 6361. Outreach Experiences I.** (2 cr.; S-N only; Every Fall, Spring & Summer) Dental care/involvement in community health promotion/service events to under-served populations throughout Minnesota.

**DDS 6362. Outreach Experiences II.** (2 cr.; S-N only; Every Fall) Provide dental care/involvement in community health promotion/service events to underserved populations in various clinical settings throughout Minnesota. Prereq: Doctor of Dental Surgery Program.

**DDS 6363. Outreach Experiences III.** (2 cr.; S-N only; Every Spring) Dental care/involvement in community health promotion/service events to under-served populations throughout Minnesota.

**DDS 6411. Applied Dental Biomaterials.** (2 cr.; A-F only; Every Spring) Prosthodontics, operative dentistry. Students apply scientific principles to selection/utilization of biomaterials, and evaluate a recent research publication. Prereq: In DDS program.

**DDS 6431. Oral Anatomy I.** (2 cr. [max 4 cr.]; A-F or Audit; Every Fall) Morphological characteristics of human dentition and associated contiguous structures. Foundational knowledge applied to situations in general clinical practice. Lectures, lab. Prereq: 1st yr DDS student.

**DDS 6433. Introduction to Psychomotor Skill Development I and II.** (0.7 cr. [max 1.4 cr.]; S-N only; Every Fall) Virtual-reality-based training for psychomotor skills. Mirror skills, proper ergonomics. Preparation of intra-coronal activity. Prereq: 1st yr DDS student.

**DDS 6434. Operative Dentistry I.** (1.7 cr.; A-F only; Every Fall & Summer) Restorative of small caries lesions, cervical abrasion lesions, and attrition defects. Practical aspects of caries risk assessment, lesion identification, and comprehensive caries management. Emphasizes indications for surgical intervention, principles of restoration design, and rationale for various design features. Prereq: Dental Anatomy, Biomaterials.

**DDS 6435. Operative Dentistry I Laboratory.** (2.3 cr.; A-F or Audit; Every Fall & Summer) Restoration of small caries lesions, cervical abrasion lesions, and attrition defects in clinical simulation setting. Emphasizes designing/ executing retentive/resistant restorations, conserving tooth structure, and operating in clinically relevant orientations. Self-evaluation techniques, discriminatory skills. Prereq: Dental Anatomy, Biomaterials.

**DDS 6436. Operative Dentistry II.** (2.1 cr.; A-F only; Every Fall) Diagnosis, treatment planning, and treatment of moderate to severe phase of dental caries. Use of dental amalgam, cast gold, composite resin, and cast porcelain. Aesthetic modifications to teeth. Prereq: In DDS program.

**DDS 6437. Operative Dentistry II Lab.** (2.9 cr.; A-F only; Every Fall) Exercises in treatment of moderate to severe phase of dental caries utilizing dental amalgam, cast gold, composite resin, and cast porcelain. Aesthetic modifications to teeth. Prereq: In DDS program.

**DDS 6439. Operative Dentistry IV.** (1.4 cr.; A-F only; Every Fall) Contemporary aspects of operative Dentistry. Students, working in groups, answer clinical questions. Evidence-based approach. Prereq: 3rd yr DDS student.

**DDS 6441. Operative Dentistry Clinic II.** (4 cr.; A-F only; Every Fall & Spring) Students, under direction of instructor, place single tooth restorations on patients, perform dental exams, and prepare treatment plans for patients with consultation from Operative Dentistry Division faculty. Prereq: Operative Dentistry I, II, III, Operative Dentistry I, II Lab.

**DDS 6442. Operative Dentistry Clinic V.** (7.5 cr.; A-F only; Every Spring) Clinical application of operative dentistry diagnosis, treatment planning, clinical judgment, and technical skills. Prereq: Operative Dentistry I, II, III, Operative Dentistry I and II Lab.

**DDS 6451. Introduction to Endodontics Lecture and Laboratory.** (3.7 cr.; A-F or Audit; Every Summer) Study of morphology, physiology, and pathology of the human dental pulp and periradicular tissues.

**DDS 6461. Endodontic Clinic D3.** (2 cr.; S-N only; Every Fall & Spring) Clinical practice for endodontics.

**DDS 6462. Endodontic Clinic.** (2 cr.; A-F or Audit; Every Spring) Clinical practice for endodontics.

**DDS 6471. Preclinical Prosthodontics Single Crown Restoration Lecture II.** (1.5 cr. [max 3 cr.]; A-F or Audit; Every Spring) Provides fundamental knowledge/procedural skills necessary for managing simulated patient cases that require full crown restoration.

**DDS 6472. Preclinical Prosthodontics Single Crown Restoration Technique Laboratory II.** (3.3 cr. [max 6.6 cr.]; A-F or Audit; Every Spring & Summer) Lab techniques, fundamentals of tooth preparation.

**DDS 6473. Preclinical Prosthodontic Technique Lecture III.** (1.5 cr.; A-F or Audit; Every Fall & Summer) Fixed, removable, occlusion topics.

**DDS 6474. Preclinical Prosthodontics Technique Laboratory III.** (2.1 cr.; A-F or Audit; Every Fall & Summer) Fixed, removable, occlusion topics.

**DDS 6475. Preclinical Prosthodontics Techniques Lecture IV.** (1.8 cr.; A-F only; Every Fall) Theory/practice in complete denture construction. Diagnosis, treatment planning/sequencing for edentulous patient. Instruments, terminology, principles, technical/clinical procedures. Prereq: DDS program.

**DDS 6476. Preclinical Prosthodontic Technique Laboratory IV, Complete Dentures.** (2.3 cr.; A-F only; Every Fall) Technical/clinical laboratory procedures used for fabrication/replacement of teeth with complete dentures. Prereq: DDS program.

**DDS 6477. Preclinical Prosthodontics Technique Lecture V, Removable Partial Dentures.** (2.5 cr.; A-F only; Every Spring) Principles/philosophies of removable partial denture prosthodontics. Design/fabrication of removable prosthesis to replace teeth for partially edentulous patient. Lecture format, plus an interactive seminar.

**DDS 6478. Preclinical Prosthodontics Technique Laboratory V, Partial Dentures.** (2.2 cr.; A-F only; Every Spring & Summer) Technical/clinical laboratory procedures used for fabrication/replacement of teeth with partial dentures.

**DDS 6479. Clinical Occlusion.** (1 cr. [max 2 cr.]; A-F or Audit; Every Spring) Clinical variation in occlusion encountered in a typical clinical setting. Guidelines to manage this variation. Prereq: Enrolled in dentistry program.

**DDS 6481. Fixed Prosthodontics Clinic II.** (1 cr. [max 2 cr.]; S-N only; Every Fall & Summer) Diagnosis, design, construction of fixed prosthetic cases.

**DDS 6482. Removable Prosthodontics Clinic II.** (1 cr. [max 2 cr.]; S-N only; Every Fall, Spring & Summer) Clinical practice in partial and complete removable denture prosthodontics for DDS third-year students.

**DDS 6483. Fixed Prosthodontics Clinic IV.** (7.5 cr.; A-F only; Every Spring) Diagnosis, design, construction of fixed prosthodontic cases.

**DDS 6484. Removable Prosthodontics Clinic IV.** (4 cr.; A-F only; Every Spring) Clinic practice in complete/partial removable denture prosthodontics.

**DDS 6485. Preclinical Removable Prosthodontics Lectures for PASS.** (2.5 cr.; A-F only; Every Spring) Principles and philosophies of removable partial denture prosthodontics. Design and
fabrication of removable prosthesis to replace teeth for partially edentulous patient. Lecture and interactive seminar.

**DDS 6486. Removable Prosthodontics Laboratory for PASS.** (2.2 cr.; A-F only; Every Spring)
Technical and clinical laboratory procedures used for fabrication/replacement of teeth with partial dentures.

**DDS 6487. Fixed Prosthodontics for PASS (Program for Advanced Standing Students).** (3 cr.; A-F only; Every Summer)
Pre-clinical didactic and laboratory course designed to provide students with the knowledge and procedural skills necessary for managing simulated patient cases requiring full crown restoration.

**DDS 6491. Preclinical Prosthodontics Technique Lecture VI.** (1.9 cr.; A-F only; Every Summer)

**DDS 6492. Preclinical Prosthodontics Techniques Laboratory VI.** (1 cr.; A-F only; Every Summer)

**DDS 6493. Prosthodontics I.** (1.1 cr. [max 2.2 cr.]; A-F only; Every Spring)
Links preclinical clinical areas. Treatment planning for abutments, retainers, and pontics. Design principles for porcelain fused to metal restorations, pontic designs, occlusion. Prerequisite: Fundamentals of prosthodontics shape/color, aesthetics of anterior prosthodontics.

**DDS 6494. Global and Integrated Competency Assessment Course.** (1 cr.; S-N only; Every Spring)
Global/integrated assessment of didactic/clinical competency for 4th year DDS students. Results of assessment shall be used to establish/maintain standards/competency of University of Minnesota, School of Dentistry.

**DDS 6495. Oral & Maxillofacial Surgery Honors Elective Course.** (1 cr.; S-N only; Every Fall, Spring & Summer)
This course provides Doctor of Dental Surgery students the opportunity to participate in a week-long externship experience in the Oral & Maxillofacial clinic at the University of MN, School of Dentistry. Students will be shadowing the OMS Residents as they care for patients. This includes evaluation and management of a surgical patient, pre- & post-operative care, and treatment planning.

**DDS 6496. Predoctoral Prosthodontics Honors Course.** (1 cr.; S-N only; Every Fall & Spring)
Clinical, laboratory, and seminar based course for senior dental honors students. Theory and practice in complete denture construction and implant restoration.

**DDS 6511. Foundations of Interprofessionalism, Communication, and Collaboration.** (1 cr.; S-N only; Every Fall)
First of three phases of Center for Interprofessional Education's health curriculum. Online work, face-to-face sessions. Professional identity, integrity. Relationships between professionals and those they serve. Social networking, tools for self/peer assessment.

**DDS 6570. Mission of Mercy Volunteer Elective Experience.** (0 cr.; S-N only; Every Fall)
Short term volunteer experience to learn public health aspects of oral health. Must be approved by School of Dentistry. Must have faculty supervision.

**DDS 6571. Special Smiles Volunteer Elective Experience.** (0 cr.; S-N only; Every Summer)
Short term volunteer experience with Special Smiles event. Public health initiatives of oral health. Must be approved by School of Dentistry. Must have faculty supervision.

**DDS 6572. Team Smiles Volunteer Elective Experience.** (0 cr.; S-N only; Every Summer)
Short term volunteer experience for Team Smiles event. Students experience public health initiative in oral health. Must be approved by School of Dentistry. Must have faculty supervision.

**DDS 6588. Common Hope: Short-term Clinical Experience in Guatemala Elective.** (0 cr.; S-N only; Every Spring)
Students spend up to two weeks working with Common Hope in Guatemala providing oral health care in cities of Antiqua/San Rafael. Clinical care given under direct supervision of School of Dentistry faculty licensed dentist.

**DDS 6601. Phillips Neighborhood Elective Volunteer Experience.** (0 cr.; No Grade Associated; Every Fall, Spring & Summer)
Opportunity to observe/assist in provision of health care services to populations diverse in age, ethnicity, social environment. Experience unique clinical settings.

**DDS 6602. Harbor Lights Elective Volunteer Experience.** (0 cr.; No Grade Associated; Every Fall & Spring)
Short term volunteer experience to learn about particular aspect of oral health. Must be approved by School of Dentistry/have faculty supervision. Prereq: Must be in DDS program.

**DDS 6603. Elective Regional Volunteer Experience.** (0 cr.; S-N only; Every Fall, Spring & Summer)
Short term volunteer experience to learn particular aspect of oral health. Must be approved by School of Dentistry. Must have faculty supervision.

**DDS 6604. Elective Regional Volunteer Experience.** (0 cr.; S-N only; Every Fall, Spring & Summer)
Short term volunteer experience to learn particular aspect of oral health. Must be approved by School of Dentistry. Must have faculty supervision.

**DDS 6605. Advanced Practice Management Elective.** (0-2 cr.; S-N only; Every Spring)
Fundamentals of business management related to maintaining dental practice. Components include economics, planning practice philosophy, operational decisions, financial decisions, financial analysis, business taxation, evaluation.

**DDS 6606. Rural Dentistry Scholars Elective.** (0-1 cr.; S-N only; Every Fall, Spring & Summer)
The Rural Dentistry Scholars Elective course (RDS) is for second and third year DDS students and Dental Therapy students selected to participate in the MN Collaborative Rural Oral Health Project (MN-CROHP) to address the rural dental workforce issues. Students spend 3.5 weeks in a rural dental practice in selected counties in MN under the mentorship of a rural dentist. During the same period they participate in community activities for oral health promotion and disease prevention instruction during community events and in K-12 schools and network with other health care providers in the community. Through a grant, students receive stipend and receive reimbursement for housing and travel costs.

**DDS 6607. Interprofessional Leadership and Facilitation Elective.** (1 cr.; S-N only; Every Fall)
Instruction on Kotter's 8-Step Process for leading change. Attend facilitator training associated with AHC course Foundations of Interprofessional Communication/Collaboration. Facilitate six small group sessions of first-year students within AHC. Prereq: Four-year DDS student.

**DDS 6608. Elective Externship I.** (1-5 cr.; S-N only; Every Fall, Spring & Summer)
Short-term externship to become familiar with a particular aspect of oral health or participate in international exchange program.

**DDS 6609. Elective Externship II.** (1-5 cr.; [max 10 cr.]; S-N only; Every Fall, Spring & Summer)
Short-term externship to become familiar with a particular aspect of oral health or participate in international exchange program.

**DDS 6610. Elective Externship III.** (1-5 cr.; S-N only; Every Fall, Spring & Summer)
Short-term externship to become familiar with a particular aspect of oral health or participate in international exchange program.

**DDS 6611. Study Abroad Externship.** (1-10 cr.; [max 25 cr.]; S-N only; Every Fall, Spring & Summer)
Short-term externship to become familiar with a particular aspect of oral health or participate in international exchange program.

**DDS 6612. Union Gospel Mission Volunteer Outreach Opportunity.** (0 cr.; S-N only; Every Fall, Spring & Summer)
Volunteer at Union Gospel Mission in St. Paul, Minnesota under guidance of School of Dentistry faculty.

**DDS 6613. Endodontic Topics for the General Dentist.** (0 cr.; S-N only; Every Fall & Spring)
Presentations on scientific/biologic basis for root canal therapy.
DDS 6614. Predoctoral Periodontal Honors. 
(2 cr.; A-F only; Every Spring) 
Surgical periodontics. Lab exercises, gingivectomy, modified Widman flap, apically positioned flap with osseous recontouring, free gingival graft procedures. Surgically placed dental implants in aplastic maxible. Students assist senior periop residents in surgery, perform surgery on their own patient.

DDS 6615. Oral and Maxillofacial Pathology Independent Study. 
(1 cr.; max 2 cr.; S-N or Audit; Every Fall & Spring) 
Independent projects in oral and maxillofacial pathology designed by student and faculty. This elective covers primarily retrospective surgical pathology studies although active laboratory research may be possible.

DDS 6616. Advanced Simulation Clinic Elective I. 
(0.5 cr.; S-N only; Every Fall, Spring & Summer) 
Operative dental procedures. Psychomotor skills for performing basic operative preparations according to specifications of DentSim software. Prereq-DDS program.

DDS 6617. Advanced Simulation Clinic Elective II. 
(0.5 cr.; S-N only; Every Fall, Spring & Summer) 
Additional operative dental procedures. Psychomotor skills for performing basic operative preparations according to specifications of DentSim software. Prereq-DDS program.

DDS 6619. Moderate Sedation Techniques. 
(0 cr.; S-N only; Every Fall) 
Planning/administration of moderate sedation via parenteral access (intraovenous).

DDS 6621. Introduction to CAD/CAM Restorations. 
(2 cr.; S-N only; Every Fall, Spring & Summer) 
CAD/CAM in restorative dentistry. Emphasizes clinical aspects. Students deliver CAD/CAM restorations to patients.

DDS 6622. EBD: Advanced Dental Materials for Esthetic & Digital Applications. 
(1 cr.; S-N only; Every Fall, Spring & Summer) 

DDS 6623. Oral Disease Clinic Elective. 
(0 cr.; S-N only; Every Fall, Spring & Summer) 
Students experience clinical oral pathology diseases not normally seen during dental clinic rotations. Students observe operator protocol, management, and referrals.

DDS 6624. Disaster 101 Elective. 
(1 cr.; S-N only; Every Fall & Spring) 
Disaster preparedness. Timeliness/quality of response. Students participate in simulated disaster scenarios in interprofessional teams. Prereq-In DDS program.

DDS 6625. Pediatric Dentistry Honors Elective. 
(0.5 cr.; A-F only; Every Fall, Spring & Summer) 
Didactic discussions/clinical sessions with pediatric patients requiring advanced dental treatment and/or advanced behavioral management skills.

DDS 6626. Orofacial Pain Clinic Elective. 
(1 cr.; max 2 cr.; S-N only; Every Fall, Spring & Summer) 
Two days of observation in the Orofacial Pain Clinic while residents and faculty evaluate and manage patients with orofacial pain conditions. Students will gain working knowledge of patient interviewing skills, musculoskeletal exam of the head and jaw, jaw range of motion and function. They will also gain knowledge of how to prescribe and deliver dental appliances.

DDS 6627. Oral Pathology Clinical Pathologic Correlation. 
(1 cr.; max 4 cr.; S-N only; Every Fall & Spring) 
This oral pathology elective has two parts. Every week one clinical oral path case will be uploaded in the course website for students to review. Students will meet as a group once a month for discussion of the four cases. One student will introduce one case involving discussion of the history, clinical presentation, establishing a clinical differential diagnosis, discuss of next steps in diagnosis and treatment planning.

DDS 6630. Dental Research Training. 
(2-6 cr.; S-N or Audit; Every Summer) 
Research project, written report.

DDS 6631. DDS/PhD Research Elective I. 
(2 cr.; max 6 cr.; S-N only; Every Fall, Spring & Summer) 
Integrate research education with dental education. Attend labs one-half day per week, MNCrest seminar monthly, and oral biology student seminar weekly. Additional research time/credits may be permitted with approval of associate dean for academic affairs. Prereq: Students must be part of the MinnCrest program.

DDS 6632. DDS/PhD Research Elective II. 
(2 cr.; max 6 cr.; S-N only; Every Fall, Spring & Summer) 
Integrate research education with dental education. Attend lab one-half day per week, MNCrest seminar monthly, and oral biology student seminar weekly. Additional research time/credits may be permitted with approval of associate dean for academic affairs. Prereq: Students must be part of the MinnCrest Program.

DDS 6640. Curricular Practical Training Elective. 
(1 cr.; max 4 cr.; S-N only; Every Fall, Spring & Summer) 
This course is an elective internship or employment to gain practical work experience, advance professional skills and explore career interests.

DDS 6900. Dental Clinic. 
(1-15 cr.; S-N or Audit; Every Fall, Spring & Summer) 
Elective clinical course for students and adult special students who want additional clinical training in comprehensive dental care.

DDS 6901. Essentials of Clinical Care DDS2. 
(0 cr.; S-N only; Every Fall, Spring & Summer) 
This course will introduce sophomore doctor of dental surgery students to the clinical care of patients. Students will assist in care provision in multiple care environments under the direction and supervision of experienced clinical faculty. This course will encompass clinical training over two semesters and a final grade is given at the end of the last semester. This course will also allow students to volunteer to assist at the Union Gospel Mission Dental Clinic in St. Paul. Prereq: Must be enrolled in the Doctor of Dental Surgery Program.

DDS 6911. Essentials of Clinical Care: D3. 
(0-18 cr.; max 72 cr.; S-N only; Every Fall, Spring & Summer) 
Students provide comprehensive care under direction of clinical faculty. May include periodontics, operative, prosthodontics/ endodontics, and health promotion. Limited care may be given on rotations to oral surgery/ endodontics clinics. Prereq-DDS 3rd yr.

DDS 6918. Evidence Based Dentistry. 
(2 cr.; A-F only; Every Fall & Spring) 
Background knowledge and skills to integrate the best research evidence with clinical expertise and patient preferences in making clinical decisions. Principles of evidence-based dentistry are discussed as well as their clinical application. Prereq-Must be in DDS program.

DDS 6921. Essentials of Clinical Care: D4. 
(0-18 cr.; max 54 cr.; S-N only; Every Fall, Spring & Summer) 
Students provide comprehensive care under direction of clinical faculty. May include periodontics, operative, prosthodontics/ endodontics, and health promotion. Limited care may be given on rotations to oral surgery and endodontics clinics. Prereq-DDS 4th yr.

DDS 6931. Dental Clinic. 
(1-15 cr.; S-N only; Every Fall, Spring & Summer) 
Elective clinical course. Clinical training in comprehensive dental care.

DDTS 7103. Biochemistry & Cell Biology for Dental Students. 
(4 cr.; max 8 cr.; A-F only; Every Fall) 
This course covers four main classes of biomolecules (nucleic acids, proteins, carbohydrates, and lipids) and how they interact at the cellular and organismal levels. Dental students will learn about the building blocks that comprise these biomolecules and how they are produced and degraded as part of normal cellular growth processes. These basic biochemical concepts will then be transferred to cellular processes including enzyme kinetics, roles of salivary enzymes in health and disease, metabolic pathways, and regulation of cellular processes such as cell cycle progression and the blood-clotting cascade. Upon completion of the course, students will be able to explain the role of these biomolecules in health and disease, with an emphasis on oral health, as well as being capable of diagnosing diseases based on biochemical characterization of patient samples.
DTCH 5993. Directed Studies. (1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Guided individual reading or study. Prereq-instr consent, dept consent, college consent.

Early Modern Studies (EMS)

EMS 5500. Topics in Early Modern Studies. (3 cr. [max 6 cr.]; Student Option; Every Fall & Spring) Selected topics in early modern studies from various disciplinary perspectives/world regions. prereq: Grad student

EMS 8100. Workshop in Early Modern Studies. (1-3 cr. [S-N only; Every Fall & Spring) Lectures and workshops offered by various centers, departments, institutes, and libraries across disciplines on Twin Cities campus. Online reports and discussion. prereq: instr consent

EMS 8250. Seminar in Early Modern Studies. (3 cr. [max 6 cr.]; Student Option; Every Spring) Current research and debates in early modern studies. Theoretical approaches to major questions shaping seminar's subject matter.

EMS 8500. Topics in Early Modern Studies. (3 cr. [max 6 cr.]; Student Option; Every Fall & Spring) Selected topics in early modern studies from various disciplinary perspectives and world regions. prereq: Grad student

EMS 8993. Directed Study. (1-6 cr.; A-F or Audit; Every Fall, Spring & Summer) Students work on tutorial basis. Guided individual reading or study. prereq: Grad student

Earth Sciences (ESCI)

ESCI 5093. Directed Studies in Earth Sciences. (1-4 cr. [max 16 cr.]; Student Option; Every Fall & Spring) Independent, directed study in earth sciences arranged by student/faculty member.

ESCI 5102. Climate Change and Human History. (3 cr.; Student Option; Spring Even Year) Causes of long-/short-term climate change. Frequency/magnitude of past climate changes, their geologic records. Relationship of past climate changes to development of agrarian societies and to shifts in power among kingdoms/city-states. Emphasizes last 10,000 years. prereq: 1001 or equiv or instr consent

ESCI 5201. Time-Series Analysis of Geological Phenomena. (3 cr.; A-F or Audit; Periodic Fall) Time-series analysis of linear and nonlinear geologic and geophysical phenomena. Examples drawn from ice age cycles, earthquakes, climatic fluctuations, volcanic eruptions, atmospheric phenomena, thermal convection and other time-dependent natural phenomena. Modern concepts of nonlinear dynamics and complexity theory applied to geological phenomena. prereq: Math 2263 or instr consent

ESCI 5203. Mineral and Rock Physics. (3 cr.; Student Option; Periodic Spring) Physical properties of minerals and rocks as related to the composition and dynamics of the Earth's crust, mantle, and core. prereq: 2201, Phys 1302

ESCI 5302. Isotope Geology. (3 cr.; A-F or Audit; Every Fall) Theory and uses of radioactive, radiogenic, and stable isotopes in geology. Radiometric dating, deanothermometry, and tracer techniques in geologic processes. prereq: 3303W or instr consent

ESCI 5351. Geochemical Modeling of Aquifer Systems. (3 cr.; Student Option; Spring Odd Year) Using mass transfer reaction path models to assess chemical evolution of natural fluids, hydrothermal alteration processes, and formation of hydrothermal ore deposits. prereq: 4401

ESCI 5353. Electron Microprobe Theory and Practice. (3 cr.; Student Option; Periodic Fall) Characterizing solid materials with electron beam instrumentation, including reduction of X-ray data to chemical compositions. prereq: [One yr chem, one yr physics] or instr consent

ESCI 5502. Advanced Structural Geology. (3 cr.; Student Option; Periodic Fall) Analysis of structures and fabric of deformed rocks. Determination of states of stress and strain in rocks and of evolution of these with time. Deformation mechanisms. Extensive reading in journal literature. Field trips. prereq: 4501 or instr consent

ESCI 5503. Advanced Petrology. (3 cr.; Student Option; Fall Odd Year) Quantitative approach to modern igneous/metamorphic petrology. Emphasizes thermodynamics of minerals/melts and with applications to phase diagrams, thermobarometry, melting relationships, and energetics of petrologic mass transfer. prereq: 2302, CHEM 1061, CHEM 1065, [MATH 1372 or MATH 1272 or MATH 1572]

ESCI 5504W. Neotectonics. (WI; 3 cr.; Student Option; Fall Even Year) Integration of multidisciplinary elements of geology, geodesy, geodynamics, seismotectonics, tectonophysics to examine recent/active tectonics of Earth’s lithosphere. Extensional, compressional, wrench-tectonic regimes with global case studies incorporating mantle to surface processes. prereq: [2201, 4501] or instr consent

ESCI 5501W. Advanced Sedimentology. (WI; 4 cr.; Student Option; Fall Odd Year) Principles/processes of sedimentary geology. Interactions among lithosphere, biosphere, atmosphere, hydrosphere. Detrital/carbonate facies of modern/ancient systems, coastal processes, geobiology, tectonics, paleoclimate, structural diagenesis, paleosols, volcanic sedimentation. prereq: 4602 or instr consent

ESCI 5705. Limnogeology and Paleoenvironment. (3 cr.; Student Option; Periodic Fall) Within-lake, hydrogeologic, and landscape (geological/biological) processes that lead to formation of various proxy records of paleoenvironment. Systems approach to physical, geochemical, biogeochemical, and biotic proxies. Basic principles, case studies. Emphasizes how proxy records relate to paleoclimate. prereq: instr consent

ESCI 5805. Standards and Practices for Professional Geoscientists. (3 cr.; Student Option; Every Spring) This course is meant to provide students with a clear understanding of the standards and practices regularly used by Geoscience professionals in industry and agency. The course builds on the foundational knowledge offered through the core curriculum of the Earth Sciences undergraduate major, and fills a critical gap in showing how this knowledge is translated into common standards and practices, regulations, funding mechanisms, and even professional expectations within a variety of geoscience disciplines. In short, this course aims to smooth a student's transition from University to an entry-level position from which they can build a successful and sustainable career. This course is targeted for both upper level undergraduates and graduate students. Aspects of the course include: Detailed discussion of regional stratigraphy, bedrock and glacial geology and how they relate to various industrial applications and environmental issues. Examination of state and federal environmental regulations,
as well as the phases of environmental impact statements. Survey of fundamental investigation techniques (GeoProbe drilling, hollow-stem auger drilling, well installation, analytical testing, soil, groundwater, air). Introduction to environmental clean-up grants and their management. Assessment of topics covered in the National Association of State Boards of Geology (ASBOG) Fundamentals of Geology (FG) exam. This exam is a required step on the way to becoming a registered geologist. The exam is offered in mid-March, and the expectation is that students participating in the class will take it. Coordination and completion of the 40 hour HAZWOPER training through UMN. Invited lectures from select representatives of various subsfields and professional organizations (groundwater & contaminant hydrogeology, mining & geophysical exploration, environmental engineering, petroleum) to give students a jumpstart in their professional networking.

**ESCI 5971. Field Hydrogeology.** (2 cr. ; Student Option; Every Summer) Aquifer, vadoze zone, and surface water hydrology field techniques. Shallow soil boring and sampling. Well installation. Single/multiple well aquifer testing. Ground water sampling for chemical analysis. Weather data collection, hydrogeologic mapping, water balance calculation. prereq: instr consent

**ESCI 5980. Seminar: Current Topics in Earth Sciences.** (1-4 cr. [max 12 cr. ] ; S-N or Audit; Periodic Fall & Spring) Topics in earth sciences investigated in a seminar format.

**ESCI 8001. Introductory Graduate Seminar.** (2 cr. ; S-N or Audit; Every Fall) Graduate level survey of important research, concepts, and methods in the earth sciences; familiarization with program faculty/facilities and basics of science writing and proposal craft. prereq: Grad student status in earth sci

**ESCI 8203. Environmental Geophysics.** (3 cr. ; Student Option; Every Fall) Seismic exploration (reflection/refraction). Potential techniques (gravity/magnetics), electrical techniques of geophysical exploration. prereq: Phys 1301 or equivalent

**ESCI 8204. Geomagnetism and Paleomagnetism.** (3 cr. ; Student Option; Spring Even Year) Present geomagnetic field at Earth's surface, secular variation, geomagnetic field reversals. Physical/chemical basis of paleomagnetism. Origin of natural remanent magnetization, mineralogy of magnetic minerals, magnetic polarity stratigraphy, apparent polar wander, environmental magnetism. prereq: 2201, Phys 1302, [Math 1272 or instr consent]

**ESCI 8243. Principles of Rock Magnetism.** (1-3 cr. ; Student Option; Periodic Fall) Remanent magnetizations, their classification and origins. Fundamentals of fine particle magnetism; magnetic minerals; separation of multicomponent magnetizations; effects of chemical change on magnetization; magnetic proxies of climatic and environmental change; biomagnetism. prereq: 4204 or instr consent

**ESCI 8333. FTE: Master's.** (1 cr. ; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

**ESCI 8353. Phase Equilibrium in Mineral Systems.** (3 cr. ; Student Option; Periodic Fall) Principles of homogeneous and heterogeneous equilibria and their application to problems in petrology. Emphasis on derivations from first principles and formulation of algebraic and graphical methods essential to multicomponent systems. prereq: 4301, Chem 3551, Math 2243

**ESCI 8354. Igneous Petrology.** (3 cr. ; Student Option; Periodic Fall) Igneous rocks and processes, emphasizing geochemistry of melts and minerals. Content varies with instructor and student interest. prereq: 4301 or instr consent

**ESCI 8355. Metamorphic Petrology.** (3 cr. ; Student Option; Periodic Fall) Metamorphic processes; relation of theory and observation to current problems. Relation of fundamental concepts and techniques to progressive development of mineral assemblages. Term paper required. prereq: 8353

**ESCI 8401. Aqueous Environmental Geochemistry.** (3 cr. ; Student Option; Periodic Spring) General principles of solution chemistry applied to geology. Solution-mineral equilibria. Redox processes in natural waters. Geochemistry of hydrothermal fluids. Environmental geochemistry. prereq: Chem 5501 or instr consent

**ESCI 8402. Biogeochemical Cycles in the Ocean.** (3 cr. ; Student Option; Fall Even Year) Marine biogeochemistry/chemical oceanography. Processes controlling chemical composition of oceans past/present. Cycles of major/minor constituents, including carbon, nitrogen, phosphorus, silicon, oxygen/their isotopes. Role of cycles in climate system. prereq: [Chem 1021, Chem 1022] or instr consent

**ESCI 8444. FTE: Doctoral.** (1 cr. ; No Grade Associated; Every Fall, Spring & Summer) (no description) prereq: Doctoral student, adviser and DGS consent

**ESCI 8501. Structural Geology.** (4 cr. ; Student Option; Every Fall) Fundamental concepts related to deformation of Earth's crust. Processes associated with deformation, faulting, folding, fabric development. Lab/recitation include solving problems, conducting physical-numerical experiments. Term Paper. Field trips. prereq: 2301 or instr consent

**ESCI 8502. Tectonic Styles.** (3 cr. ; Student Option; Spring Odd Year) Origin/nature of major types of tectonic disturbances affecting crust/lithosphere, including analysis of form/development of individual structural components/relationship to plate tectonics. Changes over geologic time in nature of orogenic processes. prereq: 4501 or 8501 or instr consent

**ESCI 8511. Mechanics of Sediment Transport.** (3 cr. ; A-F or Audit; Every Fall) Particle motion in fluids. Criteria for incipient motion. Formulations for bedload and suspended load. Bedform mechanics, hydraulic resistance relations. Channel stability, aggradation/degradation, alluvial stream morphology.

**ESCI 8601. Introduction to Stream Restoration.** (3 cr. ; A-F or Audit; Every Fall) Background material essential for participating in a stream restoration project. How to assimilate geologic, hydrologic, and ecological data at the watershed and reach scales to plan a restoration project and evaluate/critique existing stream restoration projects. prereq: Grad student in CE or ESCI or EEB or WRS or FW or BAE or FR or HORT or ENR or LA or SRSE or instr consent

**ESCI 8602. Stream Restoration Practice.** (2 cr. ; S-N only; Every Summer) Field experience, group design project. Students provide a stream restoration context for each other's elective coursework, complete critical assessments of stream restoration projects, and design a stream restoration site. prereq: 8601 or CE 8601

**ESCI 8666. Doctoral Pre-Thesis Credits.** (1-6 cr. ; max 12 cr. ; No Grade Associated; Every Fall, Spring & Summer) Doctoral pre-thesis credits. prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

**ESCI 8712. Transport Phenomena and Analytical Geohydrology.** (3-4 cr. ; Student Option; Every Fall) Microscopic flow parameters, momentum, mass and energy transport through porous media. Geologic factors in aquifer performance, equations for groundwater flow, and analysis of pump tests. prereq: 5701 or CE 3502 or instr consent

**ESCI 8718. Numerical Methods in Hydrogeology.** (4 cr. ; A-F or Audit; Periodic Fall) Introduction to finite difference and finite element methods in hydrogeology. Students develop one- and two-dimensional models of diffusion and advection-dispersion equations. prereq: 5701, CSci 1107 or instr consent

**ESCI 8777. Thesis Credits: Master’s.** (1-18 cr. ; max 50 cr. ; No Grade Associated; Every Fall, Spring & Summer) (no description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

**ESCI 8801. Geomicrobiology.** (3 cr. ; Student Option; Every Spring)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

Geosphere/biosphere interactions over temporal/spatial scales. Global biogeochemical cycling, microbe-metal interactions, microbial paleobiology, environmental geomicrobiology, life detection, habitability of planets. prereq: One semester college level biology

**ESCI 8888. Thesis Credit: Doctoral.** (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (no description) prereq: Max 18 cr per semester or summer; 24 cr required

**ESCI 8970. Seminar: Current Topics in Earth Sciences.** (1-4 cr. [max 32 cr.]; Student Option; Periodic Fall & Spring) Seminar course. Individual topics will be determined and added per semester. prereq: instr consent

**ESCI 8980. Seminar: Current Topics in Earth Sciences.** (1-4 cr. [max 30 cr.]; Student Option; Every Fall, Spring & Spring) Selected seminar topics. prereq: instr consent

**ESCI 8994. Research in Earth Sciences.** (1-4 cr. [max 30 cr.]; S-N or Audit; Every Fall & Spring) Independent research under faculty supervision. prereq: instr consent

**Ecology, Evolution, and Behav (EEB)**

**EEB 5042. Quantitative Genetics.** (3 cr.; A-F only; Every Fall) Fundamentals of quantitative genetics. Genetic/environmental influences on expression of quantitative traits. Approaches to characterizing genetic basis of trait variation. Processes that lead to change in quantitative traits. Applied/evolutionary aspects of quantitative genetic variation. prereq: [BIOL 4003 or GCD 3022] or instr consent; a course in statistics is recommended

**EEB 5053. Ecology: Theory and Concepts.** (4 cr.; Student Option; Fall Odd Year) Classical and modern mathematical theories of population growth, interspecific interactions, ecosystem dynamics and functioning, with emphasis on underlying assumptions and on effects of added biological reality on robustness of predictions, stability, interspecific interactions, ecosystem structure and functioning. prereq: Biol 3407 or instr consent

**EEB 5068. Plant Physiological Ecology.** (3 cr.; Student Option No Audit; Spring Even Year) Plant function, its plasticity/diversity in ecological context. Impact of environmental stresses on major physiological processes of plants, including photosynthesis, respiration, water uptake/transport, and nutrient uptake/assimilation. Lab, field trip to Cedar Creek. prereq: BIOL 2022 or BIOL 3002 or BIOL 3407 or BIOL 3408W or instr consent

**EEB 5221. Molecular Evolution.** (3 cr.; A-F or Audit; Periodic Fall) Molecular basis of evolutionary change. Selection, neutral evolutionary processes at molecular level. Evolution from gene to genome level: protein structure/function, multigene families, organelle genomes, genome organization. Lectures, current literature, workshops. prereq: ([BIOL 4003 or GCD 3022], grad student) or instr consent

**EEB 5322. Evolution and Animal Cognition.** (3 cr.; Student Option; Periodic Fall) Animal cognitive abilities. Learning, perception, memory, navigation, and communication from evolutionary/comparative perspective. Cognitive abilities as adaptations that solve specific environmental problems. Empirical methods for assessing cognitive abilities. Emphasizes parsimonious interpretations of data. Controversial topics such as animal intelligence, animal language and whether non-human animals have a "theory of mind." prereq: Biol 3411 or Psy 3061 or instr consent

**EEB 5327. Behavioral Ecology.** (3 cr.; Student Option; Spring Even Year) Evolutionary principles applied to aggressive competition, mate choice, cooperation, and parental investment. Optimization models used to examine foraging strategies, predator/prey interactions, and territoriality. Evolution of sex, sexual selection, dispersal. Evolutionary game theory. prereq: Biol 3411 or instr consent

**EEB 5371. Principles of Systematics.** (3 cr.; Student Option; Spring Odd Year) Theoretical/practical procedures of biological systematics. Phylogeny reconstruction. Computer-assisted analyses, morphological and molecular approaches, species concepts/speciation, comparative methods, classification, historical biogeography, nomenclature, use/value of museums. prereq: Grad student or instr consent

**EEB 5407. Ecology.** (3 cr.; Student Option; Every Fall) Principles of ecology from populations to ecosystems. Applications to human populations, disease, exotic organisms, habitat fragmentation, biodiversity and global dynamics of the earth. prereq: [Math 1142, 1241, 1271 or equivalent]

**EEB 5409. Evolution.** (3 cr.; Student Option; Every Fall & Spring) Diversity of forms in fossil record and in presently existing biology. Genetic mechanisms of evolution, including natural selection, sexual selection, genetic drift. Examples of ongoing evolution in wild/domesticated populations and in disease-causing organisms. Lab. prereq: One semester college biology

**EEB 5534. Biodiversity Sci: The origins, maintenance, consequences, detection and assessment of biodiversity.** (ENV; 3 cr.; A-F only; Every Fall) Biodiversity science is a rapidly expanding field of inquiry with increasing digital resources and global monitoring capabilities precisely at the moment in history that scientists recognize as the Sixth Extinction. In other words, we are currently facing a biodiversity crisis with threats to the Earth's biota not seen since the dinosaurs perished 65 million years ago. "Biodiversity" was coined by W.G. Rosen and E.O. Wilson in the 1980s to describe the variation in all of life on Earth. The term is now widely used in both the scientific and popular literature and is at the center of scientific enquiry, conservation efforts, large-scale collaborative pursuits of technological advances to allow monitoring from space, and global assessments that interface with international policy. Biodiversity requires integration across multiple disciplines from evolution, to ecology, remote sensing, conservation biology, economics and the social sciences, including the environmental policy. Biodiversity science is thus inherently interdisciplinary. As a consequence, rarely does a single course provide students the opportunity to focus on this critical topic from multiple perspectives and dimensions. This new course seeks to provide students intensive study of biodiversity from six perspectives: 1) the origins of biodiversity, including the processes of speciation and extinction over macroevolutionary timescales and those involved in generating biological variation at microevolutionary scales; 2) the ecological problem of species coexistence, given the nature of competitive interactions and biological filters with a focus on the interactions of individual species and major threats to biodiversity; 3) the consequences of biodiversity and biodiversity loss for ecosystem functions, focusing on ecosystem scale processes; 4) the services or benefits to humans attributed to biodiversity, including cultural benefits of biodiversity; here we discuss both practical and ethical arguments for sustaining biodiversity; 5) methods of detecting biodiversity including classic field biodiversity observations and taxonomic collections and emerging remote sensing methods that harness hyperspectral data and satellite imagery; and 6) scientific assessments of biodiversity that communicate the science of biodiversity to policymakers, particularly the Intergovernmental Platform on Biodiversity and Ecosystem Services (IPBES). The IPBES involves scientists from around the world and integrates indigenous and local knowledge (ILK). The United Nations and governments around the globe are sponsoring the IPBES, building on earlier assessments such as a prominent one in the UK. Several guest lecturers from across the University will participate in discussions and aid in development of computer labs (including Sharon Jansa (CBS), Keith Barker (CBS), Joe Knight (CFANS), and others).

**EEB 5601. Limnology.** (3 cr.; Student Option; Every Fall) Advanced introduction to description/analysis of interaction of physical, chemical, and biological factors that control functioning of life in lakes and other freshwater aquatic environments. prereq: Grad student or instr consent

**EEB 5605. Limnology Laboratory.** (2 cr.; A-F or Audit; Every Fall) Field/lab methods to obtain information on environmental conditions in aquatic environments and measure abundance of aquatic organisms, especially plankton. Field/lab instruments, sampling devices, microscopy,
Evolution and Behavior. Prepare students for members representing fields of Ecology, Evolution, and Behavior. prereq: Grad student in Ecology, Evolution, and Behavior Semester. (1 cr. : S-N only; All Fall & Spring)

Distributed Graduate Seminar. (1-6 cr. ; S-N only; Every Fall, Spring & Summer) Faculty members will conduct lab tours in their research of EEB graduate faculty, their postdocs and current graduate students. Faculty members will conduct lab tours in their laboratory and/or inform students about their research. This seminar will be organized by the DGS or a faculty member designated by the DGS.

EEB 8151. EEB Lab Tours. (1 cr. : S-N only; Every Spring) The goal of the Laboratory Tour seminar is to acquaint incoming graduate students with the research of EEB graduate faculty, their postdocs and current graduate students. Faculty members will conduct lab tours in their laboratory and/or inform students about their research. This seminar will be organized by the DGS or a faculty member designated by the DGS.

EEB 8200. Sustainability Science Distributed Graduate Seminar. (3 cr. ; Student Option; Every Spring) Theories of sustainability science. Interactions between human/environmental systems. Improving present/future generations. Presentations/papers. Contemporary research from earth systems science, resource economics, institutional analysis, ecology, geography, development studies, health sciences, engineering.

EEB 8201. Graduate Foundations in Ecology, Evolution and Behavior Semester 1. (4 cr. ; A-F only; All Fall) Foundational knowledge in ecology, evolution, behavior, prereq: Grad student in Ecology, Evolution and Behavior.

EEB 8202. Graduate Foundations in Ecology, Evolution and Behavior - Semester 2. (4 cr. ; A-F only; All Spring) Foundational knowledge in ecology, evolution, behavior. Second semester of two-semester sequence. prereq: 8601, EEB grad student.

EEB 8301. Prelim Proposal Writing Seminar. (1 cr. : S-N only; All Fall) Learn about structure/format of research proposal under guidance of three faculty members representing fields of Ecology, Evolution/Behavior. Prepare students for writing written preliminary exam. prereq: EEB grad student.

EEB 8302. EEB Written Prelim Workshop. (1 cr. : S-N only; All Spring) Provide time for students to meet/discuss issues associated with writing written preliminary exam. Workshop sections of written preliminary exam with peers. Exam should be reviewed informally by committee/revised by student before final submission. prereq: EEB grad student.

EEB 8303. Prelim Proposal Writing Seminar. (1 cr. : No Grade Associated; All Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent.

EEB 8360. Behavioral Biology Seminar. (1 cr. : max 5 cr.; S-N or Audit; All Fall & Spring) Research topics in selected areas. prereq: instr consent.

EEB 8444. FTE: Doctoral. (1 cr. : No Grade Associated; All Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent.

EEB 8500. NSF GRF Graduate Research Fellowship Proposal Writing Seminar. (1 cr. : max 2 cr.; S-N only; All Fall) Prepare EEB students to submit a competitive fellowship proposal to an external organization (e.g., NSF Graduate Research Fellowship program). In addition to announced meeting time, students meet once a week in small groups to discuss proposals/provide each other with feedback. prereq: EEB grad student only.

EEB 8601. Introduction to Stream Restoration. (3 cr. ; Student Option; Fall Even Year) Science/policy behind stream restoration. How to evaluating/ critiquing a stream restoration project. Assimilate geomorphic, hydrologic, and ecological data at watershed and reach scales to plan a restoration project. Developing a monitoring/assessment program for an existing or future restoration project. prereq: Grad student in [CE or GEO or EEB or WRS or FW or BAE or FR or HORT or ENV or LA or SRSE] or instr consent.

EEB 8602. Stream Restoration Practice. (2 cr. ; S-N only; Fall Odd Year) Field experience, group design project. Students provide a stream restoration context for each other's elective coursework, complete critical assessments of stream restoration projects, and design a stream restoration site. prereq: CE 8601 or GEO 8601.

EEB 8641. Spatial Ecology. (3 cr. ; Student Option; Periodic Fall & Spring) Introduction to spatial ecology. Role of space in population dynamics and interspecific interaction. Single species/multispecies models. Deterministic/stochastic theory. Modeling, effects of implicit/explicit space on competition, pattern formation, stability, diversity, and invasion. Reading/discussion of recent literature. prereq: [3407, 2 sem calculus] or instr consent.

EEB 8666. Doctoral Pre-Thesis Credits. (1-6 cr. : max 12 cr.; No Grade Associated; All Fall, Spring & Summer) TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr.

EEB 8777. Thesis Credits: Master's. (1-18 cr. ; max 50 cr.; No Grade Associated; All Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or semester; 10 cr total required [Plan A only].

EEB 8888. Thesis Credit: Doctoral. (1-24 cr. ; max 100 cr.; No Grade Associated; All Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or semester; 24 cr required.

EEB 8980. Seminar on Current Topics. (1-3 cr. ; max 30 cr.; S-N only; All Fall & Spring) Current research in ecology, evolution, behavior. prereq: EEB grad student.

EEB 8990. Graduate Seminar. (1-3 cr. ; Student Option; All Fall & Spring) Research topics in selected areas. prereq: instr consent.

EEB 8991. Independent Study: Ecology, Evolution, and Behavior. (1-10 cr.; Student Option; All Fall & Spring) Individual research on a specialized topic. prereq: instr consent.

EEB 8994. Directed Research. (1-5 cr. ; max 10 cr.; S-N or Audit; All Fall & Spring) TBD prereq: instr consent.

Economics (ECON)

ECON 5109. Game Theory for Engineers. (3 cr.; A-F only; All Spring) Introduction to game theory. Utility theory, noncooperative/cooperative games, bargaining theory. Games in normal/extensional form. Nash equilibria/refinements. prereq: [Math 2283, 2373, 2374, 3283] or Math 4606, [M.S./Ph.D. student in engineering or comp sci or info tech or operations mgmt] or instr consent.

ECON 5890. Economics of the Health-Care System. (3 cr.; A-F or Audit; All Fall) Economic analysis of U.S. health-care sector. Emphasizes problems of pricing, production, distribution. Health-care services as one factor contributing to nation's health. prereq: 3101 or instr consent.

ECON 8003. Microeconomic Analysis. (2 cr.; Student Option; All Spring) Theories of consumer demand, producer supply, and market equilibrium; general equilibrium and welfare. Sample topics: externalities, economics of information and uncertainty, and game theory. This seven-week course meets with 4163. prereq: 8002.

ECON 8004. Microeconomic Analysis. (2 cr.; Student Option; All Spring) Theories of consumer demand, producer supply, and market equilibrium; general equilibrium and welfare. Sample topics:
externalities, economics of information and uncertainty, and game theory. This seven-week course meets with 4164. prereq: 8003

ECON 8101. Microeconomic Theory. (2 cr.; Student Option; Every Fall)
Decision problems faced by the household and firm; theories of choice under conditions of certainty and uncertainty. Partial equilibrium analysis of competition and monopoly. General equilibrium analysis. Welfare economics: economic efficiency of alternative market structures, social welfare functions. Dynamics: stability of markets, capital theory. Seven-week course. prereq: 5151 or equiv, Math 2243 or equiv, concurrent registration is required (or allowed) in Math 5615 or concurrent registration in Math 8601, grad econ major or instr consent

ECON 8102. Microeconomic Theory. (2 cr.; Student Option; Every Fall)
Decision problems faced by the household and firm; theories of choice under conditions of certainty and uncertainty. Partial equilibrium analysis of competition and monopoly. General equilibrium analysis. Welfare economics: economic efficiency of alternative market structures, social welfare functions. Dynamics: stability of markets, capital theory. Seven-week course. prereq: 8101, concurrent registration is required (or allowed) in Math 5615 or concurrent registration is required (or allowed) in Math 8601, grad econ major or instr consent

ECON 8103. Microeconomic Theory. (2 cr.; Student Option; Every Spring)
Decision problems faced by the household and firm; theories of choice under conditions of certainty and uncertainty. Partial equilibrium analysis of competition and monopoly. General equilibrium analysis. Welfare economics: economic efficiency of alternative market structures, social welfare functions. Dynamics: stability of markets, capital theory. Seven-week course. prereq: 8102, concurrent registration is required (or allowed) in Math 5616 or concurrent registration is required (or allowed) in Math 8602 or comparable abstract math course, grad econ major or instr consent

ECON 8104. Microeconomic Theory. (2 cr.; Student Option; Every Spring)
Decision problems faced by the household and firm; theories of choice under conditions of certainty and uncertainty. Partial equilibrium analysis of competition and monopoly. General equilibrium analysis. Welfare economics: economic efficiency of alternative market structures, social welfare functions. Dynamics: stability of markets, capital theory. Seven-week course. prereq: 8103, concurrent registration is required (or allowed) in Math 5616 or concurrent registration is required (or allowed) in Math 8602 or comparable abstract math course, grad econ major or instr consent

ECON 8105. Macroeconomic Theory. (2 cr.; Student Option; Every Fall)
Dynamic general equilibrium models: solving for paths of interest rates, consumption, investment, prices. Models with uncertainty, search, matching, indivisibilities, private information. Implications for measurement and data reporting. Overlapping generations and dynasty models. Variational and recursive methods. This seven-week course meets with 4165. prereq: 5152 or equiv, Math 2243, Math 2263 or equiv or instr consent

ECON 8106. Macroeconomic Theory. (2 cr.; Student Option; Every Fall)
Dynamic general equilibrium models: solving for paths of interest rates, consumption, investment, prices. Models with uncertainty, search, matching, indivisibilities, private information. Implications for measurement and data reporting. Overlapping generations and dynasty models. Variational and recursive methods. This seven-week course meets with 4166. prereq: 8105

ECON 8107. Macroeconomic Theory. (2 cr.; Student Option; Every Spring)
Dynamic general equilibrium models: solving for paths of interest rates, consumption, investment, prices. Models with uncertainty, search, matching, indivisibilities, private information. Implications for measurement and data reporting. Overlapping generations and dynasty models. Variational and recursive methods. This seven-week course meets with 4167. prereq: 8106

ECON 8108. Macroeconomic Theory. (2 cr.; Student Option; Every Spring)
Dynamic general equilibrium models: solving for paths of interest rates, consumption, investment, prices. Models with uncertainty, search, matching, indivisibilities, private information. Implications for measurement and data reporting. Overlapping generations and dynasty models. Variational and recursive methods. This seven-week course meets with 4168. prereq: 8107

ECON 8111. Introduction to Mathematical Economics. (2 cr.; Student Option; Every Fall & Spring)
Use of mathematical models in economic theory. prereq: Math 2243 or equiv, concurrent registration is required (or allowed) in Econ 8101, concurrent registration is required (or allowed) in Math 5615 or equiv or instr consent; Math 4242 recommended

ECON 8112. Introduction to Mathematical Economics. (2 cr.; Student Option; Periodic Fall)
Use of mathematical models in economic theory. Standard techniques, prereq: 8111, concurrent registration is required (or allowed) in 8102, concurrent registration is required (or allowed) in Math 5615 or equivalent abstract math course

ECON 8113. Introduction to Mathematical Economics. (2 cr.; Student Option; Periodic Fall)
Use of mathematical models in economic theory. May include special topics. prereq: 8112, Math 5616 or comparable abstract math course, concurrent registration is required (or allowed) in 8103

ECON 8117. Noncooperative Game Theory. (2 cr.; Student Option; Every Fall)
Solution concepts for noncooperative games in normal form, including Nash and perfect equilibrium and stable sets of equilibria. Extensive form games of perfect and incomplete information, sequential equilibrium, and consequences of stability for extensive form applications including bargaining and auctions. Seven-week course. prereq: Math 5616 or equiv or instr consent

ECON 8118. Noncooperative Game Theory. (2 cr.; Student Option; Every Fall & Spring)
Solution concepts for noncooperative games in normal form, including Nash and perfect equilibrium and stable sets of equilibria. Extensive form games of perfect and incomplete information, sequential equilibrium, and consequences of stability for extensive form applications including bargaining and auctions. Seven-week course. prereq: 8104, Math 5616 or equiv or instr consent

ECON 8119. Cooperative Game Theory. (2 cr.; Student Option; Every Spring)
Basics of cooperative game theory, emphasizing concepts used in economics. Games with and without transferable utility; the core, the value, and other solution concepts. Recent results, including potentials, reduced games, consistency, and noncooperative implementation of cooperative solution concepts. Seven-week course. prereq: 8104, Math 5616 or equiv or instr consent

ECON 8181. Advanced Topics in Microeconomics. (2 cr.; max 4 cr.; Student Option; Every Fall)
Faculty and student presentations based on recent literature. Seven-week course. prereq: 8104 or instr consent

ECON 8182. Advanced Topics in Microeconomics. (2 cr.; max 4 cr.; Student Option; Every Spring)
Faculty and student presentations based on recent literature. Seven-week course. prereq: 8104 or instr consent

ECON 8185. Advanced Topics in Macroeconomics. (2 cr.; max 4 cr.; Student Option; Every Fall & Spring)
Faculty and student presentations based on recent literature. Seven-week course. prereq: 8104 or instr consent

ECON 8186. Advanced Topics in Macroeconomics. (2 cr.; max 4 cr.; Student Option; Periodic Spring)
Faculty and student presentations based on recent literature. Seven-week course. prereq: 8104 or instr consent

ECON 8191. Workshop in Mathematical Economics. (1-3 cr.; max 10 cr.; Student Option; Every Fall)
Students conduct research and present papers under faculty supervision. prereq: 8104 or instr consent

ECON 8192. Workshop in Mathematical Economics. (1-3 cr.; max 10 cr.; Student Option; Every Spring)
Students work on research and present papers under faculty supervision. prereq: 8104 or instr consent

ECON 8201. Econometric Analysis. (2 cr.; Student Option; Every Fall)
Basic linear regression model, its variants. Panel data, censored/truncated regression, discrete choice models. Time series, simultaneous equation models. prereq: [[3010 or equiv]. [Math 1272 or equiv], Stat 5102] or instructor consent

ECON 8203. Econometric Analysis. (2 cr.; Student Option; Every Spring)
Basic linear regression model, its variants. Panel data, censored/truncated regression, discrete choice models. Time series, simultaneous equation models. prereq: 8202

ECON 8204. Econometric Analysis. (2 cr.; Student Option; Every Spring)
Basic linear regression model, its variants. Panel data, censored/truncated regression, discrete choice models. Time series, simultaneous equation models. prereq: 8202

ECON 8205. Applied Econometrics. (2 cr.; Student Option; Every Fall)
Application in research, including classical and Bayesian approaches; formulation, comparison, and use of models and hypotheses; inference and prediction in structural models; simulation methods. Seven-week course. prereq: Math 4242 or equiv, concurrent registration is required (or allowed) in Econ 8101, concurrent registration is required (or allowed) in Econ 8105, concurrent registration is required (or allowed) in Stat 5101 or instr consent

ECON 8206. Applied Econometrics. (2 cr.; Student Option; Every Fall)
Application in research, including classical and Bayesian approaches; formulation, comparison, and use of models and hypotheses; inference and prediction in structural models; simulation methods. Seven-week course. prereq: 8205, concurrent registration is required (or allowed) in 8102, concurrent registration is required (or allowed) in 8106, concurrent registration is required (or allowed) in 8107, concurrent registration is required (or allowed) in Stat 5101 or instr consent

ECON 8207. Applied Econometrics. (2 cr.; Student Option; Every Spring)
Application in research, including classical and Bayesian approaches; formulation, comparison, and use of models and hypotheses; inference and prediction in structural models; simulation methods. Seven-week course. prereq: 8206, concurrent registration is required (or allowed) in 8103, concurrent registration is required (or allowed) in 8107, concurrent registration is required (or allowed) in Stat 5102 or instr consent

ECON 8208. Applied Econometrics. (2 cr.; Student Option; Periodic Spring)
Application in research, including classical and Bayesian approaches; formulation, comparison, and use of models and hypotheses; inference and prediction in structural models; simulation methods. Seven-week course. prereq: 8207, concurrent registration is required (or allowed) in 8104, concurrent registration is required (or allowed) in Stat 5102 or instr consent

ECON 8211. Econometrics. (2 cr.; Student Option; Every Fall)
Linear regression; general linear hypotheses; Gauss Markov Theorem, generalized least squares and their applications. Decision-theoretic choice among estimators. Simultaneous equations models; identification and estimation. Asymptotic distribution theory. Applications, including multivariate time series models and/or limited dependent variables models. Seven-week course. prereq: 5151, 5152, Math 4242 or equiv, Stat 5102 or instr consent

ECON 8212. Econometrics. (2 cr.; Student Option; Every Fall)
Linear regression; general linear hypotheses; Gauss Markov Theorem, generalized least squares and their applications. Decision-theoretic choice among estimators. Simultaneous equations models; identification and estimation. Asymptotic distribution theory. Applications, including multivariate time series models and/or limited dependent variables models. Seven-week course. prereq: 8211

ECON 8213. Econometrics. (2 cr.; Student Option; Periodic Fall)
Linear regression; general linear hypotheses; Gauss Markov Theorem, generalized least squares and their applications. Decision-theoretic choice among estimators. Simultaneous equations models; identification and estimation. Asymptotic distribution theory. Applications, including multivariate time series models and/or limited dependent variables models. Seven-week course. prereq: 8213 or instr consent

ECON 8281. Advanced Topics in Econometrics. (2 cr. [max 4 cr.]; Student Option; Periodic Fall & Spring)
Faculty and student presentations based on recent literature. Seven-week course. prereq: 8103 or instr consent; offered when feasible

ECON 8282. Advanced Topics in Econometrics. (2 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)
Workshop in Econometrics prereq: 8103 or instr consent

ECON 8311. Economic Growth and Development. (2 cr.; Student Option; Every Fall)
Methods of analyzing dynamical systems; applying methods to new models of growth and development; deriving and evaluating models' quantitative implications in light of growth and development in a number of countries. Seven-week course. prereq: 8311 or instr consent

ECON 8312. Economic Growth and Development. (2 cr.; Student Option; Every Fall & Spring)
Methods of analyzing dynamical systems; applying methods to new models of growth and development; deriving and evaluating models' quantitative implications in light of growth and development in a number of countries. Seven-week course. prereq: 8311 or instr consent

ECON 8313. Economic Growth and Development. (2 cr.; Student Option; Every Spring)
Methods of analyzing dynamical systems; applying methods to new models of growth and development; deriving and evaluating models' quantitative implications in light of growth and development in a number of countries. Seven-week course. prereq: 8312 or instr consent

ECON 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

ECON 8381. Advanced Topics in Economic Development. (2 cr. [max 4 cr.]; Student Option; Periodic Fall & Spring)
Faculty and student presentations based on recent literature. Seven-week course. prereq: 8103 or instr consent; offered when feasible

ECON 8391. Workshop in Economic Growth and Development. (1-3 cr. [max 10 cr.]; Student Option; Every Fall)
Workshop in Economic Growth and Development prereq: instr consent

ECON 8392. Workshop in Economic Growth and Development. (1-3 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)
tbd prereq: instr consent

ECON 8401. International Trade and Payments Theory. (2 cr.; Student Option; Every Fall)
Impact of trade on factor rentals. Stolper-Samuelson, Rybczynski, and factor price equalization theorems. Heckscher-Ohlin theorem. Derivation of offer curves and general international equilibrium. Transfer problem. Seven-week course. prereq: 8103, 8105 or instr consent

ECON 8402. International Trade and Payments Theory. (2 cr.; Student Option; Every Fall & Spring)
Tariffs, quotas, and other barriers to trade; gains from trade; trading blocs; increasing returns; growth. This is a seven-week course. prereq: 8401 or instr consent

ECON 8403. International Trade and Payments Theory. (2 cr.; Student Option; Every Spring)
International business cycles; exchange rates; capital movements; international liquidity. This is a seven-week course. prereq: 8402 or instr consent

ECON 8404. International Trade and Payments Theory. (2 cr.; Student Option; Periodic Fall)
Theoretical models of international trade. Trade data, empirical work on trade. Seven-week course. prereq: [8402, 8403] or instr consent

ECON 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

ECON 8481. Advanced Topics in International Trade. (2 cr. [max 4 cr.]; Student Option; Every Fall & Spring)
ECON 8482. Advanced Topics in International Trade. (2 cr. [max 4 cr.]; Student Option; Periodic Fall & Spring) Faculty and student presentations based on recent literature. Seven-week course. prereq: 8403 or instr consent

ECON 8491. Workshop in Trade and Development. (1-3 cr. [max 10 cr.]; Student Option; Every Fall) Workshop in Trade and Development prereq: instr consent

ECON 8492. Workshop in Trade and Development. (1-3 cr. [max 10 cr.]; Student Option; Every Spring) tbd prereq: instr consent

ECON 8501. Wages and Employment. (2 cr. [max 4 cr.]; Student Option; Every Fall) Economic analysis of labor markets and their operation under conditions of both individual and collective bargaining. Implications of labor market operations for resource allocation, wage and price stability, income and employment growth. Wage structures and wage levels. Wage and employment theories and practices. Economic impacts of unions. Seven-week course. prereq: 8102, 8106 or instr consent

ECON 8502. Wages and Employment. (2 cr. [max 4 cr.]; Student Option; Every Fall & Spring) Economic analysis of labor markets and their operation under conditions of both individual and collective bargaining. Implications of labor market operations for resource allocation, wage and price stability, income and employment growth. Wage structures and wage levels. Wage and employment theories and practices. Economic impacts of unions. Seven-week course. prereq: 8501 or instr consent

ECON 8503. Wages and Employment. (2 cr. [max 4 cr.]; Student Option; Every Spring) Economic analysis of labor markets and their operation under conditions of individual and collective bargaining. Implications of labor market operations for resource allocation, wage and price stability, income and employment growth. Wage structures and wage levels. Wage/employment theories/practices. Economic impacts of unions. Seven-week course. prereq: 8502 or instr consent

ECON 8581. Advanced Topics in Labor Economics. (2 cr. [max 4 cr.]; Student Option; Every Fall, Spring & Summer) Faculty and student presentations based on recent literature. Seven-week course. prereq: 8502 or instr consent

ECON 8582. Advanced Topics in Labor Economics. (2 cr. [max 4 cr.]; Student Option; Every Fall, Spring & Summer) Faculty and student presentations based on recent literature. Seven-week course. prereq: 8502 or instr consent

ECON 8601. Industrial Organization and Government Regulation. (2 cr.; Student Option; Every Fall) Behavior of businesses and industries: productivity, firm size distributions, exit-entry dynamics, etc. Theories of the firm, industry structure and performance, invention and innovation, and technology adoption. Positive and normative theories of regulation. Seven-week course. prereq: 8102 or instr consent

ECON 8602. Industrial Organization and Government Regulation. (2 cr.; Student Option; Every Fall) Behavior of businesses and industries: productivity, firm size distributions, exit-entry dynamics, etc. Theories of the firm, industry structure and performance, invention and innovation, and technology adoption. Positive and normative theories of regulation. Seven-week course. prereq: 8102 or instr consent

ECON 8603. Industrial Organization and Government Regulation. (2 cr.; Student Option; Every Spring) Behavior of businesses and industries: productivity, firm size distributions, exit-entry dynamics, etc. Theories of the firm, industry structure and performance, invention and innovation, and technology adoption. Positive and normative theories of regulation. Seven-week course. prereq: 8602 or instr consent

ECON 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) tbd prereq: Doctoral student who has not passed prelim oral: no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

ECON 8681. Advanced Topics in Industrial Organization. (2 cr. [max 4 cr.]; Student Option; Periodic Fall & Spring) Faculty and student presentations based on recent literature. Seven-week course. prereq: 8603 or instr consent

ECON 8681. Workshop in Applied Microeconomics. (1-3 cr. [max 10 cr.]; Student Option; Every Fall) Workshop in Applied Microeconomics prereq: instr consent

ECON 8692. Workshop in Applied Microeconomics. (1-3 cr. [max 10 cr.]; Student Option; Every Spring) Workshop in Applied Microeconomics prereq: instr consent

ECON 8701. Monetary Economics. (2 cr.; Student Option; Every Fall) Economic role of principal financial institutions. Determinants of value of money. Principal problems of monetary policy. Seven-week course. prereq: 8103, 8106 or instr consent

ECON 8702. Monetary Economics. (2 cr.; Student Option; Every Fall & Spring) Economic role of principal financial institutions. Determinants of value of money. Principal problems of monetary policy. Seven-week course. prereq: 8701 or instr consent

ECON 8703. Monetary Economics. (2 cr. [max 4 cr.]; Student Option; Every Spring) Economic role of principal financial institutions. Determinants of value of money. Principal problems of monetary policy. Seven-week course. prereq: 8702 or instr consent

ECON 8704. Financial Economics. (2 cr.; Student Option; Every Fall) Role of financial institutions in efficient allocation of risk; multiperiod and continuous-time securities markets; theory of firm under uncertainty; financial intermediation; derivation of empirical asset-pricing relationships; tests concerning alternative market structures. Seven-week course. prereq: 8103, 8106 or instr consent

ECON 8705. Financial Economics. (2 cr.; Student Option; Every Fall & Spring) Role of financial institutions in efficient allocation of risk; multiperiod and continuous-time securities markets; theory of firm under uncertainty; financial intermediation; derivation of empirical asset-pricing relationships; tests concerning alternative market structures. Seven-week course. prereq: 8704 or instr consent

ECON 8706. Financial Economics. (2 cr.; Student Option; Every Spring) Role of financial institutions in efficient allocation of risk; multiperiod and continuous-time securities markets; theory of firm under uncertainty; financial intermediation; derivation of empirical asset-pricing relationships; tests concerning alternative market structures. Seven-week course. prereq: 8705 or instr consent

ECON 8777. Thesis Credits. Master's. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

ECON 8781. Advanced Topics in Monetary Economics. (2 cr. [max 4 cr.]; Student Option; Every Spring) Faculty and student presentations based on recent literature. Seven-week course. prereq: 8702 or instr consent

ECON 8781. Workshop in Macroeconomics. (1-3 cr. [max 10 cr.]; Student Option; Every Fall) Workshop in Macroeconomics prereq: instr consent

ECON 8782. Workshop in Macroeconomics. (1-3 cr. [max 10 cr.]; Student Option; Every Spring) Workshop in Macroeconomics prereq: instr consent

ECON 8801. Public Economics. (2 cr. [max 4 cr.]; Student Option; Every Fall & Spring) Theories of public choice and role of government in economy. Economic effects of taxes, public debt, and public expenditure. Current problems in economics of public sector, including political economy. Seven-week course. prereq: 8103, 8106 or instr consent

ECON 8802. Public Economics. (2 cr.; Student Option; Every Fall & Spring) Theories of public choice and role of government in economy. Economic effects
of taxes, public debt, and public expenditure. Current problems in economics of public sector, including political economy. Seven-week course. prereq: 8801 or instr consent

**ECON 8803. Public Economics.** (2 cr.; Student Option; Periodic Spring) Theories of public choice and role of government in economy. Economic effects of taxes, public debt, and public expenditure. Current problems in economics of public sector, including political economy. Seven-week course. prereq: 8802 or instr consent

**ECON 8881. Advanced Topics in Public Economics.** (2 cr. [max 4 cr.]; Student Option; Every Fall) Faculty and student presentations based on recent literature. Seven-week course. prereq: 8803 or instr consent

**ECON 8888. Thesis Credit: Doctoral.** (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

**ECON 8891. Workshop in Public Economics and Policy.** (1-3 cr. [max 10 cr.]; Student Option; Periodic Fall & Spring) Workshop in Public Economics and Policy prereq: instr consent

**ECON 8892. Workshop in Public Economics and Policy.** (1-3 cr. [max 10 cr.]; Student Option; Periodic Fall & Spring) Workshop in Public Economics and Policy prereq: instr consent

**ECON 8990. Individual Graduate Research.** (1-7 cr.; Student Option; Every Fall, Spring & Summer) Individual Graduate Research prereq: instr consent

### Education (EDUC)

**EDUC 8333. FTE: Master’s.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

**EDUC 8444. FTE: Doctoral.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

**EDUC 8666. Doctoral Pre-Thesis Credits.** (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

**EDUC 8777. Thesis Credits: Master's.** (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

**EDUC 8888. Thesis Credit: Doctoral.** (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

### Educational Psychology (EPSY)

**EPSY 5001. Learning, Cognition, and Assessment.** (3 cr.; Student Option; Every Fall, Spring & Summer) Principles of learning, cognition, cognitive development, classroom management, motivation, instruction, assessment. Behaviorism, cognitive/social constructivism, human information processing theory. Intelligence, knowledge acquisition, reasoning skills, scholastic achievement, standardized testing, reliability/validity, student evaluation, performance assessment, portfolios, demonstrations. Applications to instruction/organization of curricular materials. prereq: MED/initial licensure student or CLA music ed or preteaching major or instr consent; psych course recommended

**EPSY 5015. Teaching Students with Special Needs in Inclusive Settings.** (1 cr.; A-F only; Every Summer) Areas of exceptionality defined in federal/state regulations. Historical perspectives, definitions, etiology, characteristics, needs, and service delivery systems. Collaborating with special education personnel. prereq: Enrolled in a teacher initial licensure program

**EPSY 5016. Teaching Students with Special Needs in Inclusive Settings.** (1 cr.; A-F only; Every Fall) Attending to constant transitions/development in which children/adolescents negotiate their road to adulthood. How to foster learning/positive development. prereq: Enrolled in teacher initial licensure program

**EPSY 5017. Teaching Exceptional Students in General Education Classrooms.** (2 cr.; A-F or Audit; Every Summer) This course will provide an overview of the areas of exceptionality defined in federal and state regulations. The focus of this course will be on historical perspectives, definitions, etiology, characteristics, needs, and service delivery systems for each area of exceptionality as well as the general educator's role in collaborating with special education personnel in order to meet the needs of students with special needs.

**EPSY 5101. Intelligence and Creativity.** (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Contemporary theories of intelligence and intellectual development and contemporary theories of creativity and their implications for educational practices and psychological research.

**EPSY 5113. Psychology of Instruction and Technology.** (3 cr.; Student Option; Periodic Spring) Introduction to adult learning and instructional design. Application of core foundational knowledge to development of effective learning environments for adults. Topics include philosophy, learning theories, instructional models, development and experience, individual differences, evaluation, assessment, and technology.

**EPSY 5114. Psychology of Student Learning.** (3 cr.; A-F or Audit; Every Fall & Spring) This course is designed for students to engage in advanced study in the psychology of student learning, cognition, and development as it applies to educational psychology. Topics include: principles of learning, cognitive development, behaviorism, motivation, intelligence, reasoning, instruction, and assessment.

**EPSY 5119. Mind, Brain, and Education.** (3 cr.; Student Option No Audit; Spring Odd Year) How educationally relevant skills/concepts develop in both typical/atypical children. prereq: 3301 or equiv

**EPSY 5135. Human Relations Workshop.** (4 cr.; Student Option; Every Fall & Summer) Experiential course addressing issues of prejudice and discrimination in terms of history, power, and social perception. Includes knowledge and skills acquisition in cooperative learning, multicultural education, group dynamics, social influence, effective leadership, judgment and decision-making, prejudice reduction, conflict resolution.

**EPSY 5151. Cooperative Learning.** (3 cr.; Student Option; Every Spring) Participants learn how to use cooperative learning in their setting. Topics include theory and research, teacher's role, essential components that make cooperation work, teaching social skills, assessment procedures, and collegial teaching teams.

**EPSY 5157. Social Psychology of Education.** (3 cr.; A-F or Audit; Every Fall) Overview of social psychology and its application to education. Participants study the major theories, research, and major figures in field. Class sessions include lectures, discussions, simulations, role-plays, and experiential exercises.

**EPSY 5191. Education of the Gifted and Talented.** (3 cr.; A-F or Audit; Every Spring & Summer) Theories of giftedness, talent development, instructional strategies, diversity and technological issues, implications for educational practices and psychological inquiry, and international considerations.

**EPSY 5200. Special Topics: Psychological Foundations.** (1-4 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring) Focus on special topics in psychological and methodological concepts relevant to advanced educational theory, research, and practice not covered in other courses.

**EPSY 5216. Introduction to Research in Educational Psychology and Human Development.** (3 cr.; A-F or Audit; Every Fall) Designing/conducting a research study. Reviewing literature, formulating research problem, using different approaches to gather
EPSY 5221. Principles of Educational and Psychological Measurement. (3 cr.; Student Option; Every Fall) Concepts, principles, and methods in educational/psychological measurement. Reliability, validity, item analysis, scores, score reports (e.g., grades). Modern measurement theories, including item response theory and generalizability theory. Emphasizes construction, interpretation, use, and evaluation of assessments regarding achievement, aptitude, interests, attitudes, personality, and exceptionality.

EPSY 5243. Principles and Methods of Evaluation. (3 cr.; Student Option; Every Fall, Spring & Summer) Introductory course in program evaluation; planning an evaluation study, collecting and analyzing information, reporting results; overview of the field of program evaluation.

EPSY 5244. Survey Design, Sampling, and Implementation. (3 cr.; Student Option; Every Fall) Survey methods, including mail, phone, and Web-based e-mail surveys. Principles of measurement, constructing questions/forms, pilot testing, sampling, data analysis, reporting. Students develop a survey proposal and a draft survey, pilot the survey, and develop sampling/data analysis plans. prereq: [5221 or 5231 or 5261 or equiv]. [CEHD grad student or MEd student]

EPSY 5245. Advanced Survey Data Analysis for Categorical and Rating Scale Data. (1 cr.; Student Option; Every Spring) Practical course. Specific nature of survey data (typically categorical or ordinal). Appropriate data analytic methods. prereq: 5244, 5261

EPSY 5246. Evaluation Colloquium: Psychological Foundations. (1 cr. [max 8 cr.]; S-N or Audit; Periodic Fall & Spring) Informal seminar of faculty and advanced students interested in the issues and problems of program evaluation. prereq: 5243 or EdPA 5501

EPSY 5247. Qualitative Methods in Educational Psychology. (3 cr.; Student Option; Every Fall) Introduction to qualitative methods of inquiry. Contrasting different research traditions (e.g., case study, phenomenology, ethnography, social interactionism, critical theory). Practice with field notes, observations, and interviewing. Use of NVIVO to track/code data. prereq: Graduate student or Applied Psychology in Educational and Community Settings Minor

EPSY 5261. Introductory Statistical Methods. (3 cr.; Student Option; Every Fall, Spring & Summer) Application of statistical concepts/procedures. Graphs, numerical summaries. Normal distribution, correlation/regression analyses, probability, statistical inferences for one or two samples. Hypothesis tests, Chi-square tests. Conceptual understanding/application of statistics.

EPSY 5262. Intermediate Statistical Methods. (3 cr.; Student Option; Every Fall & Spring) Application of statistical concepts/procedures. Analysis of variance, covariance, multiple regression. Experimental design: completely randomized, block, split plot/repeated measures. prereq: 3264 or 5261 or equiv

EPSY 5271. Becoming a Teacher of Statistics. (3 cr.; Student Option; Periodic Fall & Spring) Current methods of teaching first courses in statistics. Innovative teaching methods, materials, and technological tools. Types of first courses, reform recommendations, goals for student learning, recommended content, teaching methods, technology, student assessment. prereq: 5261 or equiv

EPSY 5272. Statistics Teaching Internship. (1-3 cr.; S-N only; Every Fall & Spring) Supervised teaching experience. prereq: Grad student, instr consent

EPSY 5400. Special Topics in Counseling Psychology. (1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Theory, research, and practice in counseling and student personnel psychology. Topics vary.

EPSY 5415. Child and Adolescent Development and Counseling. (4 cr.; A-F or Audit; Every Fall & Summer) Development, issues, and needs of children, kindergarten through high school ages. Counseling/developmental theory/strategies, family/social environment. Cultural diversity, legal/ethical issues in counseling children/adolescents. prereq: Grad student or MEd student or K-12 [counseling endorsement or licensure] student

EPSY 5421. Leadership and Administration of Student Affairs. (3 cr.; Student Option; Every Fall, Spring & Summer) Theoretical advocacy/administrative structure, and evaluation methods used in college/university student affairs.

EPSY 5435. Introduction to School Counseling. (3-6 cr.; A-F only; Every Fall & Spring) History/evolution of school counselor role in schools. Duties/demands of school counselor. Examine comprehensive guidance programming in K-12 schools. Issues in school counseling profession. prereq: CSPP grad student in school counselor prog or instr consent

EPSY 5436. Crisis Management and Consulting in Schools. (3 cr.; A-F or Audit; Every Fall) Issues, topics, problems. Diversity in school counseling. Review, discussion, analysis of current literature. Students develop prevention, intervention, guidance programs for K-12 schools. prereq: CSPP grad student in school counselor program or instr consent

EPSY 5451. College Students Today. (3 cr.; Student Option; Every Fall, Spring & Summer) Issues involving diverse populations of students in colleges/universities. Student development theory, students' expectations/interests, how college affects student outcomes. Role of curricular/extracurricular activities and of student-faculty interactions.

EPSY 5461. Cross-Cultural Counseling. (3 cr.; A-F or Audit; Every Fall) Effect of cross-cultural/cross-national psychological differences in human traits/characteristics. Framework for development/implementation of counseling interventions.

EPSY 5604. Transition From School to Work and Community Living for Persons With Special Needs. (3 cr.; Student Option; Every Spring & Summer) Use of strategies/models for improving transition of youth from school to work and community living. Course content that specifically addresses all phases of student assessment, individualized transition planning. Parent, family, and student involvement in designing post school options. Community-based services (employment, residential living, social and recreational services, etc). Comprehensive interagency approaches.

EPSY 5605. Collaborative Practices for the Special Educator. (3 cr.; A-F only; Every Spring) Skills/knowledge required to consult/collaborate with school personnel, families, other professionals to maintain effective educational support.

EPSY 5611. Research-based Practices in Academic and Behavior Disabilities. (3 cr.; A-F only; Every Fall) Research that provides conceptual basis to aid in understanding of students with academic difficulties. Develop critical thinking skills through examination of research-based practices.

EPSY 5613. Foundations of Special Education I. (DSJ; 3 cr.; A-F or Audit; Periodic Fall, Spring & Summer) Organization of educational programs/services for people with disabilities. First course for students seeking to become licensed in special education.

EPSY 5614W. Assessment and Due Process in Special Education. (WI; 3 cr.; A-F or Audit; Every Spring & Summer) Participants will learn basic standardized assessment and how it directly relates to special education. In addition, students will use the assessment as part of an ongoing process for making instructional programming decisions. Students will apply skills in designing and evaluating assessment plans and in making eligibility decisions.

EPSY 5616. Classroom Management and Behavior Analytic Problem Solving. (3 cr.; Student Option; Every Fall, Spring & Summer)
Assumptions, principles, procedures of problem solving approach to analyzing behavior/programs for classroom management. Conducting observations, intervening, evaluating behavioral change.

EPSY 5617. Academic and Social Interventions for Students with Mild to Moderate Disabilities. (3 cr.; A-F only; Every Spring)
Use problem solving model to make data-based decisions regarding implementation and evaluation of instruction for students with academic and behavioral difficulties. prerequisites: instr consent

EPSY 5618. Specialized Interventions for Students With Mild/Moderate Disabilities in Reading & Written Language. (3 cr.; A-F or Audit; Every Fall)
Historical/contemporary perspectives, empirical evidence relating to reading/written language instruction/assessment designed to improve outcomes of students with disabilities. Field work in tutoring.

EPSY 5619W. Specialized Interventions in Mathematics for Students with Mild to Moderate Disabilities. (WI; 3 cr.; A-F only; Every Fall)

EPSY 5621. Assessment and Instructional Design for Students with Developmental Disabilities. (3 cr.; A-F or Audit; Every Spring)
Methods/materials course. Functional/standards-based approaches to promoting academic learning in students with developmental disabilities. prerequisites: 5613, 5614

EPSY 5622. Programs and Curricula for Students with Developmental Disabilities. (3 cr.; Student Option; Every Summer)
Developing programs/curricula for students with moderate, severe, profound developmental delays, as well as severe multihandicapping conditions. Special consideration given to preparing children/youth for integrated community environments. prerequisites: 5621 or 5661 and 5662

EPSY 5623. Ethics in Applied Behavior Analysis. (3 cr.; A-F only; Every Fall, Spring & Summer)
This course explores ethical and professional considerations that pertain to the practice of applied behavior analysis as well as ethical and disciplinary standards of the profession. Specifically, this course examines the Professional and Ethical Compliance Code for Behavior Analysts. Emphasis will be placed upon ethical and professional conduct and legal issues relevant to BCBA level practitioners. Topics such as informed consent, due process, protection of confidentiality, and selection of least intrusive, least restrictive behavior change procedures will be discussed. This course will focus on ethical decision-making processes. Issues related to cultural and ethnic diversity and ethics in applied behavior analysis will also be explored.

EPSY 5624. Biomedical and Physical Impairments of Students with Developmental Disabilities. (2 cr.; A-F or Audit; Every Fall & Summer)

EPSY 5625. Education of Infants, Toddlers, and Preschool Children with Disabilities: Introduction. (2 cr.; A-F or Audit; Every Fall)
Overview of the issues, problems, and practical applications in designing early intervention services for young children with disabilities and their families.

EPSY 5626. Seminar: Developmental Disabilities and Instructional Management. (3 cr.; Student Option; Every Fall & Summer)
Data-based strategies for school and nonschool instruction of learners with developmental disabilities including assessment, design, implementation, and evaluation of curriculum and instruction: curriculum content, concept and task analysis, classroom arrangements, natural and instructional cues, corrections, and consequences. prerequisites: [5621, 5622] or instr consent

EPSY 5627. Seminar: Advanced Issues in Learning Disabilities. (3 cr.; A-F only; Every Fall & Summer)
Read, reflect, lead discussions related to issues in field of LD. Topics examined through relevant research in field of LD. prerequisites: Special Education graduate or licensure student or instr consent

EPSY 5628. Characteristics of Moderate to Severe Learning Disabilities. (3 cr.; A-F only; Every Fall & Summer)
Characteristics of moderate/severe learning disabilities including (but not limited to) cognitive processing, language, attention/memory, co-existing conditions. Dyslexia, dysgraphia, dyscalculia. prerequisites: Special Education graduate or licensure student or instr consent

EPSY 5629. Strategic Instructional Methods for Students Academically At-Risk. (3 cr.; A-F only; Every Fall & Summer)
Knowledge/skills needed to teach KU-CRL research-based learning strategies for students considered academically at-risk. Content relevant to basic skills/content instruction for students in K-12 settings will be included. prerequisites: Special Education graduate or licensure student or instr consent

EPSY 5631. Module 1: Introduction to Augmentative and Alternative Communication. (1 cr.; A-F only; Every Fall, Spring & Summer)
Terms/concepts related to augmentative/alternative communication. Myths/facts regarding AAC.

EPSY 5632. Module 2: Evidence-based Methods for AAC Assessment and Intervention. (2 cr.; A-F only; Every Fall & Summer)
Evidence-based tools to conduct augmentative/alternative communication (AAC) assessments. AAC intervention plans. Data-driven strategies to evaluate progress.

EPSY 5634. Module 4: Assistive technology with Deaf/Hard of Hearing Students. (2 cr.; A-F only; Every Spring & Summer)
Theoretical/applied study communication modalities for children/adults who are Deaf or Hard of Hearing. Assessment/development of models including gestures, speech reading, Cued Speech, sign language. Picture Exchange Communication Systems, high/low tech devices. prerequisites: Special Education licensure student or instr consent

EPSY 5636. Sensory Impairments of Students With Developmental Disabilities. (2 cr.; Student Option; Every Fall)
Characteristics of learners with visual/auditory impairments. Design of instructional programs to remediate or circumvent disabilities, including use of prosthetic devices. prerequisites: 5613, 5614

EPSY 5637. Core Practices in Special Education: Foundations of Special Education. (1 cr.; S-N only; Every Fall)
This course is an online module designed to be taken the first semester of a 4-semester sequence in the Clinical EBD Licensure Program. All materials necessary for proficient completion of the course will be delivered via on-line course. There will be no additional readings associated with this online module. prerequisites: Enrolled in Special Ed MEd or Special Ed ILP MEd program with EBD Residency-Based subplan

EPSY 5638. Core Practices in Special Education: IEP Writing. (1 cr.; S-N only; Every Spring)
This course is an online module designed to be taken the second semester, in conjunction with the IEP Process course, of a 4-semester sequence in the Clinical EBD Licensure Program. All materials necessary for proficient completion of the course will be delivered via on-line course. There will be no additional readings associated with this online module.

EPSY 5641. Foundations of Deaf Education. (3 cr.; A-F only; Every Fall)
Philosophical foundations of deaf and hard of hearing (DHH) education. Engage in discussion, debates and processes that have influenced deaf education, communication methodologies and placement options in the US. Considered from the perspective of deaf children, adults and their families.

EPSY 5642. Early Intervention for Infants, Toddlers and Families: Deaf and Hard of Hearing. (3 cr.; A-F only; Every Spring)
Early identification and intervention with deaf and hard of hearing children including the development of ASL and English. Emergent Literacy in the homes and the role of Deaf Mentors. Emphasis on the importance of early exposure to fully accessible language and addressing the issue of language deprivation. prerequisites: Preservice teacher in deaf education licensing program or instr consent

EPSY 5643. Seminar: Identity, Culture and Diversity in Deaf Education. (2 cr.; A-F only; Every Fall)
Reflecting on your own identity as a future teacher of the deaf and how to facilitate the identity development of your students. Having a deep understanding of the diversity of students and their families is essential to foster these relationships and communication. Synthesis of previously learned material into practice.

**EPSY 5644. Early Childhood Language and Literacy Development and Best Practices: Deaf and Hard of Hearing.** (3 cr.;/ A-F only; Every Fall) Perspectives and best practices related to the development of early language and literacy skills in ASL and English for deaf and hard of hearing children. prereq: Preservice teacher in deaf education licensing program or instr consent.

**EPSY 5645. Deaf Plus: Educating and Understanding Deaf Students with Disabilities.** (1 cr. ; A-F only; Every Summer) Building an understanding of the complex issues and best practices involved in educating deaf learners with disabilities. Working with families and service providers, identifying resources, understanding identification, placement, assessment and intervention strategies to modify curriculum to work with deaf students with varying disabilities.

**EPSY 5646. Best Practices Teaching Reading and Writing for School Age: Deaf and Hard of Hearing.** (3 cr. ; A-F only; Every Spring) Understanding and application of best practices for teaching reading/writing with DHH students in school age settings including incorporating bilingual strategies (making connections between ASL and English).

**EPSY 5647. Spoken Language Practices and Assistive Technology: Deaf and Hard of Hearing.** (2 cr. ; A-F only; Every Summer) Study of the role and function of spoken language, various assessments prepare children and how to analyze each language. Students gain knowledge of the parts of each language, various assessments prepare future teachers to evaluate and facilitate the development of ASL and English. Readings drawn from both bilingual and Deaf education.

**EPSY 5654. Current Research, Issues and Trends in Deaf Education.** (1 cr. ; A-F only; Every Spring) Examining current research, issue trends in Deaf Education to help prepare future teachers to develop an understanding of research and apply critical thinking to analyze new issues, problem solve, and consider participating in research to practice opportunities that may arise during their career in Deaf Education.

**EPSY 5656. Advanced Issues in Emotional Behavior Disorders.** (3 cr. ; A-F or Audit; Every Fall) Emphasis on children, youth, young adults. How emotional behavior disorders affects functioning in school/post-secondary life.

**EPSY 5657. Interventions for Behavioral Problems in School Settings.** (3 cr. ; A-F or Audit; Every Fall) Comprehensive behavioral programs for students with social and or emotional disabilities. Instructing students with social and or emotional disabilities.

**EPSY 5658. Characteristics of Moderate to Severe Emotional/Behavioral Disorders.** (3 cr. ; A-F only; Every Fall & Summer) Applying principles of assessment/ individualized intervention for students with severe emotional behavior disorders(EBD). prereq: Special Education graduate or licensure student.

**EPSY 5659. Foundations of Behavior Analysis.** (3 cr. ; A-F only; Every Fall) Behavior analysis is the science of behavior along a continuum of basic to applied learning processes, both operant and respondent. Applied behavior analysis (ABA) is concerned with the improvement and understanding of human behavior. It is the science in which strategies derived from the principals of basic behavior analysis are applied systematically to improve socially significant behavior and experimentation is used to identify the variables responsible for change (Cooper, Heron, & Heward, 2007). This course focuses on basic concepts and methodologies involved in behavior analysis, and their relation to other theories of learning and behavior. This course is designed for individuals interested in learning from the perspective of behavior analysis and individuals who are interested in learning theory as it applies to individuals with significant cognitive and language impairments. This course is also designed to prepare students for the Behavior Analyst Certification Board (BACB) exam.

**EPSY 5661. Introduction to Autism Spectrum Disorder.** (3 cr. ; A-F only; Every Fall) Knowledge/skills needed to promote learning/ success for school age children with Autism Spectrum Disorder. Definition, etiology, and characteristics of ASD. Current research/ issues. Collaborative problem solving, family-professional partnerships, educational programming.

**EPSY 5662. Assessment and Identification of Autism Spectrum Disorders.** (2 cr. ; A-F only; Every Summer) Selection/use of assessment procedures that may be used to screen/identify children with autism spectrum disorders. prereq: 5661, Spec Ed grad or licensure student or instr consent.

**EPSY 5663. Assessment and Intervention for Individuals with Autism Spectrum Disorder.** (3 cr. ; A-F only; Every Spring) Selection/use of range of procedures, including nd bias, specific assessments to assess/ identify children with autism spectrum disorder. Specific intervention strategies designed to teach beginning communication/social skills to children with Autism Spectrum Disorder (ASD). prereq: 5661, Spec Ed grad or licensure student or instr consent.

**EPSY 5664. Transitions for Individuals with Autism Spectrum Disorders.** (2 cr. ; A-F only; Every Summer) Legal/practical aspects of transition planning, specifically for students with ASD. prereq: 5661, [Spec Ed grad or licensure student or instr consent]

**EPSY 5668. Education of Preschool Children With Disabilities: Methods and Materials.** (3 cr. ; A-F only; Every Spring) Methods and materials available to maximize developmental and educational outcomes for young children with disabilities, age 3 to 5, and their families in home, community, and school-based settings. Develop, implement, and evaluate individualized education and family service plans. prereq: [5616, 5625] or instr consent.

**EPSY 5682. Education of Infants and Toddlers with Disabilities: Methods and Materials.** (3 cr. ; A-F only; Each Spring) Methods/materials available to maximize developmental and educational outcomes for young children with disabilities, birth to age 3, and their families in home, community, and school-based settings. Students develop, implement, and evaluate individualized education/family service plans. prereq: [5616, 5625] or instr consent.

**EPSY 5690. Experimental Teaching Seminar: Med Culminating Project.** (2 cr. ; A-F only; Every Fall & Spring). Experimental teaching utilizing data based instruction for affecting student growth. Conduct experimental teaching project during student teaching year. Guided through formal writing process for submitting short literature review or research report for M.Ed. prereq: instr consent.

**EPSY 5701. Practicum: Field Experience in General Education - Inclusive Classrooms.** (1-2 cr. ; S-N only; Every Fall & Spring) Field-Based Practicum. Observe and actively participate in an inclusive (with and without disabilities) general education classroom. An
emphasis is placed on communication skills and reflective practice.

EPSY 5704. Practicum: Special Education Field Experience in Middle and Secondary School Classrooms. (1-2 cr.; S-N only; Every Fall & Spring)
Pre-Student Teaching/Field-Based Practicum.
Gain a better understanding of the role of special education teachers (in a variety of settings) and related service professionals. Apply knowledge from University courses in school settings - connecting theory, research, and practice.

EPSY 5705. Practicum: Special Ed Field Experience in Early Childhood SpEd (ECSE) & Elementary School Classrooms. (1-2 cr.; S-N only; Every Fall & Spring)
Pre-Student Teaching/Field-Based Practicum.
Gain a better understanding of the role of special education teachers (in a variety of settings) and related service professionals. Apply knowledge from University courses in school settings - connecting theory, research, and practice.

EPSY 5706. Practicum in Moderate to Severe Developmental Disabilities. (2 cr.; S-N only; Every Fall & Spring)
Practicing principles required for successful inclusion. Address model for best practices/requirements specified by Minnesota Board of Teaching.

EPSY 5707. Practicum in Moderate to Severe Learning Disabilities. (3 cr.; S-N only; Every Fall & Spring)
Moderate/severe learning disabilities. Transfer of theoretical knowledge to practical application. Role of LD teacher in variety of settings.

EPSY 5708. Practicum in Moderate to Severe Emotional/Behavioral Disorders. (3 cr.; S-N only; Every Fall & Spring)
Moderate/severe emotional behavior disorders. Transfer of theoretical knowledge to practical application. Role of EBD teacher in variety of settings.

EPSY 5720. Special Topics: Special Education. (1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)

EPSY 5741. Student Teaching: Academic and Behavioral Strategist. (3-6 cr.; S-N only; Every Fall & Spring)
Transfer of theoretical knowledge to practical application. Responsibilities of special education teacher in variety of settings. prerequisite: Special education licensure program or instructor consent.

EPSY 5742. Student Teaching: Autism Spectrum Disorders. (6 cr.; S-N only; Every Fall & Spring)
Transfer of theoretical knowledge to practical application. Role/responsibilities of special education teacher in settings of elementary/secondary age.

EPSY 5751. Student Teaching for Deaf Education. (1-6 cr. [max 80 cr.]; A-F only; Every Spring)
Students participate in educational programming for infants, children, and youth who are deaf or hard of hearing. On-site, directed experiences under supervision of master teachers of deaf/hard of hearing students.

EPSY 5752. Student Teaching: Learning Disabilities. (1-6 cr. [max 10 cr.]; S-N or Audit; Every Fall, Spring & Summer)
Supervised experience in teaching related work in schools or other agencies serving children and adolescents with learning disabilities. prerequisite: instructor consent

EPSY 5754. Student Teaching: Social and Emotional Disabilities. (1-6 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Teach students with social and emotional disorders at public schools and other appropriate sites. Attend a weekly seminar on student teaching competencies. prerequisite: Completion of all licensure coursework for social and emotional disorders, instructor consent

EPSY 5755. Student Teaching: Developmental Disabilities, Mild/Moderate. (1-6 cr.; A-F or Audit; Every Fall & Spring)
Supervised student teaching, or special practicum project, in schools or other agencies serving students at elementary/secondary levels who have mild to moderate developmental disabilities. prerequisite: Completion of all licensure coursework, instructor consent

EPSY 5756. Student Teaching: Developmental Disabilities, Moderate/Severe. (1-6 cr.; A-F or Audit; Every Fall & Spring)
Supervised student teaching, or special practicum projects, in schools or other agencies serving students at elementary/secondary levels who have moderate to severe developmental disabilities. prerequisite: Completion of all licensure coursework, instructor consent

EPSY 5761. Student Teaching in Early Childhood Special Education Settings for Children Aged Three to Five Years. (3 cr. [max 6 cr.]; S-N only; Every Fall & Spring)
Student teachers work closely with their cooperating teacher and University supervisor to design/implement programming for children in classrooms. Course includes a seminar with discussion, cooperative learning experiences, and some lectures. prerequisite: Licensure candidate in Early Childhood/Early Childhood Licensure Program, completion of all other licensure requirements for ECSE, instructor consent; completion of Birth-3 student teaching should be completed after age 3-5 student teaching when possible

EPSY 5762. Student Teaching in Early Childhood Special Education for Children Aged Birth to Three Years. (3 cr. [max 6 cr.]; S-N only; Every Fall & Spring)
Student teachers work closely with cooperating teacher and University supervisor to design/implement programming for families with children aged birth-to-three in their homes.

Course includes seminar with discussion, cooperative learning experiences, and some lectures. prerequisite: Licensure candidate in Early Childhood/Early Childhood Licensure Program, completion of all other licensure requirements for ECSE, instructor consent; completion of Birth-3 student teaching should be completed after age 3-5 student teaching when possible

EPSY 5763. Practicum in Special Education: Behavior Intervention Planning and Implementation. (2 cr.; S-N only; Every Fall)
This course will be delivered within a clinical model of instruction where the instructor serves as a coaching guide and the candidates participate in a community of practice with their peers. It is expected that given the instructor’s coaching and the interactions within the community of practice, that the candidate will complete the portfolio associated with this course and, as part of that completion, demonstrate proficiency in all competencies associated with this course in order to earn a passing grade. As such, there is not a didactic instruction component or assigned readings for this clinical model of instruction-based course.

EPSY 5764. Practicum in Special Education: IEP Process. (2 cr.; S-N only; Every Spring)
This course will be delivered within a clinical model of instruction where the instructor serves as a coaching guide and the candidates participate in a community of practice with their peers. It is expected that given the instructor’s coaching and the interactions within the community of practice, that the candidate will complete the portfolio associated with this course and, as part of that completion, demonstrate proficiency in all competencies associated with this course in order to earn a passing grade. As such, there is not a didactic instruction component or assigned readings for this clinical model of instruction-based course.

EPSY 5765. Practicum in Special Education: Instructional Planning and Delivery. (2 cr.; S-N only; Every Fall)
This course will be delivered within a clinical model of instruction where the instructor serves as a coaching guide and the candidates participate in a community of practice with their peers. It is expected that given the instructor’s coaching and the interactions within the community of practice, that the candidate will complete the portfolio associated with this course and, as part of that completion, demonstrate proficiency in all competencies associated with this course in order to earn a passing grade. As such, there is not a didactic instruction component or assigned readings for this clinical model of instruction-based course.

EPSY 5800. Special Topics in School Psychology. (1-9 cr. [max 36 cr.]; Student Option; Every Fall & Spring)
Current issues in school psychology or areas not normally available through regular curriculum offerings.

EPSY 5801. Assessment and Decision Making in School and Community Settings. (3 cr.; A-F or Audit; Every Fall & Spring)
Introduction to psychological and educational assessment for individuals who work with
is jointly determined by student and advising faculty member. prereq: instr consent

EPSY 8112. Mathematical Cognition. (3 cr.; ; Student Option; Fall Even Year)
Cognitive science research. Papers investigating how adults/children understand fundamental mathematical concepts. Papers drawn from psychology, neuroscience, education literatures. prereq: 5114 or equiv

EPSY 8113. The Psychology of Scientific Reasoning. (3 cr.; ; Student Option; Spring Even Year)
Research at intersection of cognitive science, educational psychology, science education. What psychology tells us about how people think, reason, make decisions. Read empirical research that explores psychological processes that underlie scientific reasoning. prereq: 5114 or equivalent

EPSY 8114. Seminar: Cognition and Learning. (3 cr.; ; Student Option; Every Fall)
Advanced study in critical analysis and application of contemporary psychological theory and research in cognition and learning for education.

EPSY 8116. Reading for Meaning: Cognitive Processes in the Comprehension of Texts. (3 cr.; ; Student Option; Every Fall)
Cognitive processes that take place during reading comprehension/imPLICATIONS of these processes for instruction/assessment.

EPSY 8117. Writing Empirical Paper and Research/Grant Proposals in Education and Psychology. (3 cr.; ; Student Option; Every Spring)
Scientific writing skills. Focuses on logic/argumentation. Each student produces an empirical paper or research proposal. Breaks down the writing process into components: one component per week. Each week, students write a section of their paper/proposal and critique others’ prereq: instr consent

EPSY 8118. Advanced Cognitive Psychology. (3 cr.; ; Student Option; Every Fall)
This course is a graduate introduction to cognitive psychology. It is “advanced” in the sense that it focuses on higher-level cognition, and also in its emphasis on theories and models in addition to empirical results. Graduate students interested in cognitive psychology are invited to register for the course, regardless of disciplinary background.

EPSY 8132. Personality Development and Socialization. (3 cr.; ; Student Option; Every Spring)
Major research and theoretical work. Developmental and educational influences on personality. prereq: Personality or child psych course

EPSY 8157. Key Topics and Issues in Applying Social Psychology to Education. (3 cr.; ; Student Option; Every Spring)
This course, designed for advanced graduate students, covers a number of classic and contemporary topics in social psychological theory, research, and methods, examining core theories and how they have persisted or changed over time and how those theories and approaches have been applied to research in and issues of education broadly conceived.

EPSY 8215. Advanced Research Methodologies in Education. (3 cr.; ; Student Option; Every Fall)

EPSY 8216. Seminar: Research Processes in Psychological Foundations of Education. (3 cr.; ; Student Option; Spring Even Year)
Advanced examination of research processes in educational psychology. Invited faculty discuss specific research designs. Students refine/implement research projects and present them in class. prereq: [5216, admitted to doctoral program in psych foundations] or instr consent

EPSY 8220. Special Topics: Seminar in Quantitative Methods. (1-6 cr.; ; Student Option; Periodic Fall, Spring & Summer)
Seminars focus on specialized current topics in methodology in statistics, measurement, evaluation, and statistics education, including primary-source readings and in-depth exploration of advanced methodologies.

EPSY 8222. Advanced Measurement: Theory and Application. (4 cr.; ; Student Option; Spring Odd Year)
Generalizability theory, item response theory, factor models for test items, binomial model. Application to problems of designing, linking assessments. Includes computer lab. prereq: [5221 or PSY 5862 or equiv], [8252 or equiv]

EPSY 8224. Performance Assessment Design and Analysis. (3 cr.; ; Student Option; Spring Even Year)
Conceptualization, design, implementation, analysis of performance assessments as employed in both small-scale (e.g., classrooms, large-scale (e.g., statewide, national testing programs), professional (e.g., teacher assessment, professional certification) settings. prereq: 5221, [5262 or 8261 or 8251 or equiv]

EPSY 8225. Operational Measurement: Test Score Quality Assurance, Standard Setting, and Equating. (3 cr.; ; Student Option; Spring Even Year)
Principles/practices of test score quality assurance, standard setting/equating. Operational testing programs. Focus on achievement tests. prereq: 5221, [8252 or equiv]

EPSY 8226. Item Response Models: Theory and Applications. (3 cr.; ; Student Option; Spring Even Year)
Item response theory. Application in education/psychology/social science. 1-, 2-, 3-parameter models for dichotomous/graded response models. Partial credit models for polytomous
EPSY 8251. Statistical Methods in Education I. (3 cr.; Student Option; Every Fall, Spring & Summer)
Statistical Methods in Education I is the first course in an entry-level, doctoral sequence for students in education. This course covers estimation and hypothesis testing with a particular focus on ANOVA and an introduction to multiple linear regression. Prepares students for EPSY 8252/8262. prereq: [EPSY 5261 or equiv] or undergrad statistics course

EPSY 8252. Statistical Methods in Education II. (3 cr.; Student Option; Every Fall & Spring)
Statistical Methods in Education II is the second course in an entry-level, doctoral sequence for students in education. This course focuses on multiple linear regression and provides an introduction to linear mixed models. prereq: [EPSY 8251, 8261 or equiv]

EPSY 8264. Advanced Multiple Regression Analysis. (3 cr.; Student Option; Every Fall)
General linear model used as context for regression. Matrix algebra, multiple regression, path analysis, polynomial regression, standardized regression, stepwise solutions, analysis of variance, weighted least squares, logistic regression. prereq: [EPSY 8252 or equiv], regression/ANOVA course, familiarity with statistical analysis package

EPSY 8265. Factor Analysis. (3 cr.; Student Option; Every Fall)
Factor analytic techniques/applications. Component, common factor, confirmatory analysis. Factor extraction, estimating number of dimensions. Rotation, factor scores, hierarchical factor analysis. prereq: [EPSY 8252 or equiv or instr consent]

EPSY 8266. Statistical Analysis Using Structural Equation Methods. (3 cr.; Student Option; Periodic Spring)
Quantitative techniques using manifest/latent variable approaches for analysis of educational/social science data. Introduction to structural equation modeling approaches to multiple regression, factor analysis, path modeling. Developing, estimating, interpreting structural equation models. prereq: 8265, [EPSY 8252 or equiv]

EPSY 8267. Applied Multivariate Analysis. (3 cr.; Student Option; Spring Every Year)
Use/interpretation of results from several multivariate statistical techniques. Matrix algebra, variance/covariance, Hotelling’s T2, GLM, MANOVA, MANCOVA, discriminant analysis, canonical correlations, dimensionality, principal components, latent composites, distance, hierarchical clustering, prereq: [EPSY 8252 or equiv], familiarity with matrix algebra, knowledge of a computerized statistics package

EPSY 8268. Hierarchical Linear Modeling in Educational Research. (3 cr.; Student Option; Every Fall)
Conceptual framework of hierarchical linear models for nested data, their application in educational research. Nature/effects of nested data, logic of hierarchical models, mixed-effects models. Estimation/hypothesis testing in these models, model-checking, nonlinear models. prereq: [EPSY 8252 or equiv]

EPSY 8271. Statistics Education Research Seminar: Studies on Teaching and Learning Statistics. (3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)
Introduction to classic/current research related to teaching/learning of statistics. Research from psychology, education, and statistics. Students focus on a particular research question and review the literature related to that question.

EPSY 8282. Statistical Analysis of Longitudinal Data. (3 cr.; Student Option; Every Fall)
Traditional/modern approaches to analyzing longitudinal data. Dependent t-test, repeated measures ANOVA/MANOVA. Linear mixed models, multilevel models, generalized models. Required labs using SAS computer program. prereq: [EPSY 8252 or equiv]

EPSY 8283. Research Synthesis and Meta-Analysis. (3 cr.; Student Option; Fall Even Year)
Meta-analysis is a methodology for conducting quantitative literature reviews in which the outcomes of empirical research studies are aggregated and their variation studied. This course will cover topics on problem formulation, sampling, variable coding, data analysis, and presentation of results in meta-analytic research. prereq: EPSY 8252 or equiv

EPSY 8290. Special Topics: Seminar in Psychological Foundations. (1-6 cr. [max 15 cr.]; Student Option; Periodic Fall, Spring & Summer)
Students formulate research designs. Learning and cognition, social psychology, measurement, and statistics. prereq: instr consent

EPSY 8300. Special Topics in Educational Psychology. (1-4 cr. [max 9 cr.]; Student Option; Every Fall & Spring)
Issues or related coursework in areas not normally available through regular curriculum offerings.

EPSY 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

EPSY 8400. Topics: Counseling and Student Personnel Psychology. (1-3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)
Topics in counseling and student personnel psychology, or related coursework in areas not normally available through regular curriculum offerings.

EPSY 8402. Individual Counseling: Theories, Applications & Counseling Skills. (4 cr.; A-F only; Every Fall)
This course will give the student an opportunity to read, think critically about, dialogue, and write on central counseling theories and therapies. During this course, students will begin to develop a useful theoretical viewpoint that will guide their work with clients and assist them in understanding the work of other therapists. In addition, students will practice and receive feedback on basic (common factors) counseling skills as well as counseling skills that are specific to various types of treatment approaches.

EPSY 8403. Social/Cultural Contexts: Counseling and Skills. (3 cr.; A-F or Audit; Every Spring)
Bases personal dimensions of race, ethnicity, gender, class, beliefs, disability, age, sexual orientation, and geographic origin. Societal and personal biases and stereotypes; multicultural concepts and culturally appropriate counseling procedures. prereq: Grad ed psy major with CSPP subprog or instr consent

EPSY 8404. Group Counseling: Theory, Applications, and Skills. (3 cr.; A-F or Audit; Every Spring)
Theories, research, and procedures of group counseling and of groups such as psychoeducational groups. Applications to various settings and populations. Ethical issues in group work. Practice of group skills and techniques, including group participation and observation. prereq: Ed psy MA or PhD student with CSPP subprog or instr consent

EPSY 8405. Career Development: Theory, Skills, and Counseling Applications. (3 cr.; A-F or Audit; Every Fall)
Career development theory/practice over life span. Emphasizes career counseling for individuals/organizations, systems approaches to career programs in education/business. Traditional/contemporary theories/practices. prereq: CSPP grad student

EPSY 8406. Professional Ethics for Counselors and Psychologists. (3 cr.; A-F only; Every Fall)
Theory, research, and practice in counseling ethics. Scope/impact of professional ethics. Ethical decision making. Ethics and the law. Ethical practice in special settings. Scholarship/research in counseling ethics. Lectures, discussions, case studies, individual/group examination of original research. prereq: CSPP grad student

EPSY 8407. Assessing and Counseling Clients With Psychological Disorders. (4 cr.; A-F or Audit; Every Spring)
Etiology, symptom patterns, and assessment/treatment for various psychological disorders. DSM diagnoses. Empirically validated psychological assessment and counseling methods. Field-based enquiry. prereq: CSPP PhD or MA student or instr consent

EPSY 8411. Advanced Counseling Research. (4 cr.; A-F or Audit; Every Fall)
Focus on critically reviewing counseling research, qualitatively and quantitatively integrating research, and designing valid research. prereq: Ed psy PhD student with CSPP subprog or instr consent

EPSY 8412. Seminar: Advanced Counseling Theory and Ethics. (4 cr.; A-F or Audit; Every Spring)
Comparative analysis of theoretical models and methods used in contemporary counseling and...
psychotherapy; ethical standards and models of ethical decision making for professional roles. prereq: Ed psy PhD student with CSPP subprog or infr consent

**EPSY 8413. Personality Assessment of Adolescents and Adults.** (.3 cr.; A-F only; Every Spring)
Assessment interviews, objective personality assessments (e.g., MMPI-2), projective tests (e.g., Thematic Apperception Test), and assessment report writing. prereq: [8407 or PSY 5604H or PSY 8111 or PSY 8112], doctoral student, infr consent

**EPSY 8431. Master's Research Seminar: CSPP.** (.3 cr.; [max 4 cr.]; A-F or Audit; Every Spring)
Survey of research methods, data-based decision making, basic research design skills, and research evaluation. prereq: 5261-1 or equiv, 5221-1 or equiv, EPSY MA student with CSPP subprog or infr consent

**EPSY 8444, FTE: Doctoral.** (.1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

**EPSY 8452. Psychological Aspects of Counseling Supervision.** (.3 cr.; Student Option; Every Fall)
Theories, review of relevant research, demonstration, and in-class practice of supervision skills. prereq: Ed psy PhD student with CSPP subprog or infr consent

**EPSY 8501. Counseling Pre-Practicum I.** (.3 cr.; A-F or Audit; Every Fall)
Overview of basic helping skills through demonstration, in-class practice. prereq: CSPP or genetic counseling) grad student

**EPSY 8502. Field Placement in Counseling and Student Personnel Psychology.** (.2 cr.; S-N or Audit; Every Fall & Spring)
Students participate under supervision in practitioner activities within a counseling work environment. prereq: 8501 or infr consent

**EPSY 8503. Counseling Practicum I.** (.1-4 cr.; A-F or Audit; Every Fall)
Beginning-level supervised practice in counseling with individuals and groups; emphasizes systematic evaluation of student's counseling practice through direct observations, video, and audio tapes. prereq: 8502 or infr consent

**EPSY 8504. Counseling Practicum II.** (.1-4 cr.; A-F or Audit; Every Spring)
Intermediate supervised practice in counseling with individuals and groups; emphasizes ethical issues with systematic evaluation of student's practice through direct observations, video, and audio tapes, prereq: 8503 or infr consent

**EPSY 8509. Supervision Practicum: CSPP.** (1-2 cr.; [max 6 cr.]; Student Option; Every Fall & Spring)
Doctoral students meet weekly with master's prepracticum or practicum students for didactic supervision activities. Specific activities determined by master's prepracticum or practicum instructor. Doctoral students meet weekly with master's prepracticum or practicum instructor and other doctoral student supervisors for consultation/supervision. prereq: [Ed psy PhD student with CSPP subprog] or infr consent

**EPSY 8512. Internship: CSPP.** (.1-12 cr.; S-N only; Every Fall, Spring & Summer)
Supervised internship in counseling psychology. prereq: EdPsy PhD student with CSPP subprog

**EPSY 8521. Practicum in Student Affairs and Student Development.** (.1-4 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring)
Supervised practice in university and college student development offices. prereq: EdPsy MA or PhD student with CSPP subprog or infr consent

**EPSY 8522. Counseling Practicum: Advanced.** (.3 cr. [max 12 cr.]; A-F only; Every Fall & Spring)
Advanced skills-practicum in counseling, counseling psychology, or student development. prereq: [Grad EdPsy PhD student with CSPP subprog] or infr consent; instructor consent required after 2 repeats

**EPSY 8600. Special Topics: Special Education Issues.** (.1-3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)
Current trends (e.g., schoolwide discipline, models of collaboration, and diversity) investigated by formulating research projects. Students write a media piece describing an issue and its impact on the community.

**EPSY 8602. Advanced Topics in Special Education Research.** (3 cr. [max 12 cr.]; A-F only; Every Fall & Spring)
This course will offer sections on varying topics focused on research, policy, practice, and related issues in special education and disability services for advanced graduate seminars. The course is intended to allow enrolled students to conduct in-depth and focused review and analysis of scholarship in a contemporary area of special education, and to provide each student the opportunity to develop in-depth understanding of a specific topic within this area. This is a seminar course, with a combination of faculty-presented, student-presented, and group discussion content. Course topics will include an overview of relevant theoretical models, research methods, empirical and other findings, and areas of emerging interest, scholarship, policy, and practice. prereq: Completion of EPSY 8701, 8702, and 8694 or equivalent coursework; doctoral student in Special Education or a related academic area, or permission of instructor

**EPSY 8612. Seminar: Students with Academic Difficulties.** (.3 cr.; A-F or Audit; Every Fall & Spring)
Survey, analysis, and application of relevant theories and research related to current issues. Students in course develop skills in scholarly inquiry, writing, and debate.

**EPSY 8651. Seminar on Social and Emotional Disabilities.** (.3 cr.; A-F or Audit; Every Fall & Spring)
Review and critical analysis of current trends and future directions of education of students with social and emotional disabilities.

**EPSY 8666. Doctoral Pre-Thesis Credits.** (.1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Doctoral Pre-Thesis Credits prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

**EPSY 8694. Research in Special Education.** (.3 cr.; Student Option; Every Fall & Spring)
Design and implementation of research related to the unique developmental characteristics of exceptional learners.

**EPSY 8701. Doctoral Core Seminar: Special Education I.** (.3 cr. [max 6 cr.]; A-F or Audit; Every Fall)
Required for students with a family/life span focus on social development, behavioral interaction, and cultural interactions. prereq: EdPsy PhD student with spec ed subprog or infr consent

**EPSY 8702. Doctoral Core Seminar: Special Education II.** (.3 cr. [max 6 cr.]; A-F or Audit; Every Spring)
Required for students focusing on communication/language/academics. prereq: 8701 or infr consent

**EPSY 8706. Single Case Designs in Intervention Research.** (.3 cr.; Student Option; Periodic Spring)
Design and analysis of single-case experiments to examine effects of interventions on individual behavior in school, home, and community.

**EPSY 8707. Principles of Behavior Analysis and Learning.** (.3 cr.; A-F only; Every Fall)
Historical development of behavioral science. Thinking about learning/behavior, applying principles to common human experiences. Scholarly leadership skills. prereq: [Grad student, foundational course in [learning or psychology]] or infr consent

**EPSY 8708. Functional Behavior Assessment.** (.3 cr.; A-F only; Every Spring)
Applications of principles of behavior. Historical/contemporary approaches. Functional analysis. Treatment of challenging behavior/learning problems. prereq: [Grad student, one [learning or psychology] course] or infr consent

**EPSY 8709. Sp Ed Issues - Language & Early Literacy Dev., Asmnt, & Intervention for Young Children.** (3 cr.; A-F only; Fall Even Year)
This seminar course will address contemporary issues in theory, assessment, and interventions to promote language and early literacy development for young children (typically, those not yet age-eligible to enroll in kindergarten) at risk for later reading delays. The course will review and analyze relevant theoretical models, basic research related
to these theories, and applied research in assessment and intervention, particularly research conducted in the past five years as well as emerging issues of research and practice.

EPSY 8772. Seminar in Early Intervention. (2 cr.; Student Option; Every Fall & Spring) Explores research from diverse disciplines related to education of infants, toddlers, and preschool children with disabilities and their families. Discusses practical application of this research.

EPSY 8777. Thesis Credits: Master's. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

EPSY 8800. Special Topics in School Psychology. (1-4 cr. [max 9 cr.]; Student Option; Every Spring & Summer) Issues or related coursework in areas not normally available through regular curriculum offerings.

EPSY 8811. Assessment in School Psychology I: Foundations of Academic Assessment. (3 cr.; A-F or Audit; Every Fall) Theories and models of psychoeducational assessment of children and adolescents within home, school, and community. Conceptual and empirical foundations of eco-behavioral assessment that lead to efficient but comprehensive assessment of children presented from problem-solving perspective. prereq: Grad ed psy major with school psy subprog or instr consent

EPSY 8812. Assessment in School Psychology II: Intellectual and Social-Emotional Domains. (3 cr.; A-F or Audit; Every Spring) Builds on EPSY 8811. Emphasizes gathering data on a child's intellectual and social-emotional functioning and educational progress, prereq: Grad ed psy major with school psy subprog or instr consent

EPSY 8813. Introductory Practicum in School Psychology. (2 cr. [max 4 cr.]; A-F only; Every Fall & Spring) Students complete a variety of learning activities intended to foster familiarity with the school environment and role of the school psychologist including school observations, and formal and informal assessment techniques. All measures complement other facets of assessment presented in EPSY 8811 and 8812.

EPSY 8815. Behavioral and Social Emotional Prevention and Intervention. (3 cr.; A-F or Audit; Periodic Fall & Spring) Theories and research-based practices underlying prevention and intervention practices to support students? behavioral, social, and emotional development. Applied projects and assignments in practicum placements. prereq: EPSY 8821, 8811, 8812

EPSY 8816. Academic Prevention and Intervention. (3 cr.; A-F or Audit; Every Fall & Spring) Theories and research-based approaches to prevention, instruction, and intervention practices to support students? cognitive and academic development in core curricular domains. Applied projects and assignments in practicum placements.

EPSY 8817. Problem Analysis and Consultation in School Psychology. (3 cr.; A-F or Audit; Every Spring) Practical application of problem analysis and consultation models with school staff, parents, and students. Theories, approaches, and barriers to research-based indirect services in school psychology. Applied projects and assignments in practicum placements.

EPSY 8818. Intermediate Practicum in School Psychology. (2 cr. [max 4 cr.]; A-F only; Every Fall & Spring) Students complete a variety of learning activities intended to foster familiarity with the role of the school psychologist including formal and informal assessment techniques, academic and social-emotional interventions, and consultation. All interventions and consultation activities are linked to didactic portions of EPSY 8815, 8816, 8817. prereq: concurrent registration is required (or allowed) in 8815 or concurrent registration is required (or allowed) in 8816

EPSY 8819. Emotion & Childhood Psychopathology. (3 cr.; A-F only; Every Spring) This seminar is designed to provide an overview of historical and current perspectives on emotion and childhood psychopathology, including current diagnostic and classification systems, with emphasis on specific disorders. The course will focus on disorders that are typically observed by psychologists working in schools and other applied settings.

EPSY 8821. Issues in School Psychology. (3 cr.; A-F or Audit; Every Fall & Spring) School psychologists in professional field of specialization in psychology/education. Historical, theoretical, and research basis of school psychology. How school systems operate. Common roles/functions of school psychologists. In-class discussion, didactic/field-based assignments. prereq: EPSY grad student with SchlPsy subprog

EPSY 8822. Research in School Psychology. (3 cr. [max 12 cr.]; A-F only; Every Fall & Spring) Integrative, developmental series of discussions/activities about research in school psychology. Instruction/discussion regarding consumption, synthesis, conduct, dissemination of school psychology research.

EPSY 8823. Ethics and Professional Standards in School Psychology. (3 cr.; A-F or Audit; Every Fall & Spring) Ethics, law, and current educational issues applied to study/practice of school psychology. Ethical principles, state/federal laws governing educational practices. How mandates are applied to work of school psychologists in general/special populations (e.g., special education, ESL, ethnic/racial minorities). Students apply learning as researchers and practicing school psychologists in schools. prereq: 8821

EPSY 8831. Comprehensive School Practicum in School Psychology. (3 cr. [max 6 cr.]; A-F only; Every Fall & Spring) Supervised school field placement requiring assessment, consultation, prevention, and intervention activities.

EPSY 8832. Advanced Practicum in School Psychology. (3 cr. [max 6 cr.]; A-F only; Every Fall, Spring & Summer) Supervised field placement individualized to student interests and training goals. May require variety of assessment, consultation, prevention, and intervention activities.

EPSY 8841. Practicum: Instruction and Supervision in School Psychology. (3 cr. [max 6 cr.]; A-F or Audit; Every Fall, Spring & Summer) Didactic training/supervised experience teaching. Knowledge/skills in strategies for effective classroom instruction/supervision in individual/small group instruction. Construct teaching portfolio. prereq: Grad ed psy major with school psy subprog or instr consent

EPSY 8842. Internship: School Psychological Services. (1-10 cr. [max 99 cr.]; S-N or Audit; Every Fall, Spring & Summer) Advanced field placement. Full-time supervised experience for one year or part-time for no more than two years. prereq: Grad ed psy major with school psy subprog, instr consent

EPSY 8843. Internship - School Psychology. (1 cr. [max 4 cr.]; S-N only; Every Fall & Spring) Advanced field placement. Full-time supervised experience for one year or part-time for no more than two years. prereq: instr consent

EPSY 8849. Assessment in Early Childhood. (3 cr.; A-F or Audit; Spring Even Year) Training psychologists/researchers in use of various assessment tools, including observational assessment strategies, for children birth-age 7. Intended primarily for graduate level practitioners-in-training interested in applied information on assessment/intervention services. prereq: (8811, 8812) or equivalent in related programs

EPSY 8850. Doctoral Seminar in School Psychology: Research, Training, Practice, Policy Issues, and Action Plans. (3 cr.; A-F only; Every Fall & Spring) Critical issues in school psychology led by students or visiting professionals. Outside reading/research. Scientific findings/implications for training, practice, policy, and research. Students create professional-development plan. prereq: [(Grad student in school psychology, coursework in school psychology) or advanced PhD student from related department], instr consent

EPSY 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required
EPSY 8905. History and Systems of Psychology: Landmark Issues in Educational Psychology. (3 cr.; Student Option; Every Spring) Critical issues in learning and cognition, statistics and measurement, counseling, school psychology, social psychology of education, and special education. Prereq: Ed psy PhD student

EPSY 8993. Directed Study: Educational Psychology. (1-10 cr. [max 20 cr.]; A-F or Audit; Every Fall, Spring & Summer) Arranged independently with individual faculty members. Prereq: instr consent

EPSY 8994. Research Problems: Educational Psychology. (1-6 cr. [max 18 cr.]; A-F or Audit; Every Fall, Spring & Summer) Research methodology, techniques, and literature. Students participate in formulating/executing research proposal. Prereq: instr consent

Educational/Human Development (EDHD)

EDHD 5004. Teaching Students With Special Needs in Inclusive Settings. (2 cr.; A-F or Audit; Every Fall, Spring & Summer) Exceptionalities in educational settings as defined in federal/state rules/regulations. Historical perspectives, definitions, etiology, needs, characteristics. Service delivery systems for each exceptionality. Prereq: Teacher preparation program in [CEHD or music education or agriculture education or DirecTrack] or instr consent; licensure students must take this course for a grade

EDHD 5100. International Topics for Graduate Students. (1-12 cr.; Student Option; Every Fall, Spring & Summer) Off-campus course. Topics from research exploration to academic/engagement activities. Delivered in international setting. Course requirements are determined by instructor(s) and reflect graduate-level rigor.

EDHD 5200. Special Topics: Professional Development for Educators. (1-12 cr.; Student Option; Every Summer) Special topics course that permits offering a variety of research-based and scholarly content to meet the needs of educators from P-12 settings.

EDHD 5300. Special Topics in Education and Human Development. (1-6 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Special topics in education and human development.

Electrical & Computer Eng (EE)

EE 5041. Industrial Assignment for Graduate Students. (1 cr.; S-N only; Every Fall, Spring & Summer) Optional industrial work assignment. Evaluation based on student's formal written report covering semester's work assignment. This course counts for 6 credits of Academic Progress for the semester in which it is taken. Prereq: Consent of Advisor and Office of the DGS

EE 5121. Transistor Device Modeling for Circuit Simulation. (3 cr.; Student Option; Periodic Fall & Spring) Basics of MOS, bipolar theory. Evolution of popular device models from early SPICE models to current industry standards. Prereq: [3115, 3161, CSE grad student] or dept consent

EE 5141. Introduction to Microsystems Technology. (4 cr.; Student Option; Every Spring) Microelectromechanical systems composed of microsensors, microactuators, and electronics integrated onto common substrate. Design, fabrication, and operation principles. Labs on micromachining, photolithography, etching, thin film deposition, metalization, packaging, and device characterization. Prereq: [3161, 3601, CSE grad student] or dept consent

EE 5163. Semiconductor Properties and Devices I. (3 cr.; Student Option; Every Fall) Prerequisites/properties of semiconductor devices. Selected topics in semiconductor materials, statistics, and transport. Aspects of transport in p-n junctions, heterojunctions. Prereq: [3161, 3601, CSE grad student] or dept consent

EE 5164. Semiconductor Properties and Devices II. (3 cr.; Student Option; Every Spring) Prerequisites/properties of semiconductor devices. Charge control in different FETs, transport, modeling. Bipolar transistor models (Ebers-Moll, Gummel-Poon), heterostructure bipolar transistors. Special devices. Prereq: 5163 or instr consent

EE 5171. Microelectronic Fabrication. (4 cr.; Student Option; Every Fall) Fabrication of microelectronic devices. Silicon integrated circuits, GaAs devices. Lithography, oxidation, diffusion. Process integration of various technologies, including CMOS, double poly bipolar, and GaAs MESFET. Prereq: CSE grad student or dept consent

EE 5173. Basic Microelectronics Laboratory. (1 cr.; Student Option; Every Fall) Students fabricate a polysilicon gate, single-layer metal, NMOS chip, performing 80 percent of processing, including photolithography, diffusion, oxidation, and etching. In-process measurement results are compared with final electrical test results. Simple circuits are used to estimate technology performance. Prereq: [5171 or concurrent registration is required (or allowed) in 5171], CSE grad student] or dept consent

EE 5181. Micro and Nanotechnology by Self Assembly. (3 cr.; Student Option; Spring Odd Year) Self-assembly process of micro and nano structures for realization of 1-, 2-, 3-dimensional micro- and nano-devices. Micro and nanoscale fabrication by electrostatic, magnetic, surface tension, Capillary, intrinsic and extrinsic forces. Nanoscale lithographic patterning. Devices packaging, Self-healing process. Prereq: EE 3161, Phys 1302

EE 5231. Linear Systems and Optimal Control. (3 cr.; Student Option; Every Fall) Properties and modeling of linear systems. Linear quadratic and linear-quadratic-Gaussian regulators. Maximum principle. Prereq: [3015, CSE grad student] or instr consent

EE 5235. Robust Control System Design. (3 cr.; Student Option; Every Spring) Development of control system design ideas; frequency response techniques in design of single-input/single-output (and MIMO) systems. Robust control concepts. CAD tools. Prereq: CSE grad, 3015, 5231 or instr consent

EE 5239. Introduction to Nonlinear Optimization. (3 cr.; Student Option; Periodic Fall & Spring) Nonlinear optimization, Analytical/computational methods. Constrained optimization methods. Convex analysis, Lagrangian relaxation, non-differentiable optimization, applications in integer programming. Optimality conditions, Lagrange multiplier theory, duality theory. Control, communications, management science applications. Prereq: [3025, Math 2373, Math 2374, CSE grad student] or dept consent

EE 5301. VLSI Design Automation I. (3 cr.; Student Option; Periodic Fall & Spring) Basic graph/numerical algorithms. Algorithms for logic/high-level synthesis. Simulation algorithms at logic/circuit level. Physical-design algorithms. Prereq: [3031, CSE grad student] or dept consent

EE 5323. VLSI Design I. (3 cr.; Student Option; Every Fall) Combinational static CMOS circuits. Transmission gate networks. Clocking strategies, sequential circuits. CMOS process flows, design rules, structured layout techniques. Dynamic circuits, including Domino CMOS and DCVS. Performance analysis, design optimization, device sizing. Prereq: [2301, 3115, CSE grad student] or dept consent

EE 5324. VLSI Design II. (3 cr.; Student Option; Every Spring) CMOS arithmetic logic units, high-speed carry chains, fast CMOS multipliers. High-speed
performance parallel shifters. CMOS memory cells, array structures, read/write circuits. Design for testability, including scan design and built-in self test. VLSI case studies. prereq: [5323, CSE grad student] or dept consent

EE 5327. VLSI Design Laboratory. (3 cr.; Student Option; Every Spring) Complete design of an integrated circuit. Designs evaluated by computer simulation. prereq: [4301, CSE grad student] or concurrent registration is required (or allowed in 5323). CSE grad student] or dept consent

EE 5329. VLSI Digital Signal Processing Systems. (3 cr.; Student Option; Periodic Fall & Spring) Programmable architectures for signal/media processing. Data-flow representation. Architecture transformations. Low-power design. Architecture for two's complement/redundant representation, carry-save, and canonical signed digit. Scheduling/allocation for high-level synthesis. prereq: [[5323 or concurrent registration is required (or allowed in 5323)], CSE grad student] or dept consent

EE 5333. Analog Integrated Circuit Design. (3 cr.; Student Option; Every Fall) Fundamental circuits for analog signal processing. Design issues associated with MOS/BJT devices. Design/testing of circuits. Selected topics (e.g., modeling of basic IC components, design of operational amplifier or comparator or analog sampled-data circuit filter). prereq: [3115, CSE grad student] or dept consent

EE 5340. Physics of Computing: Basics. (3 cr.; Student Option; Every Spring) Physics of Computer will explore how physical principles and limits have been shaping paradigms of computing. A key goal of this course is to understand how (and to what extent) a paradigm shift in computing can help with emerging energy problems. Topics include: Physical limits of computing, coding and information theoretical foundations, computing with beyond-CMOS devices, reversible computing, quantum computing, stochastic computing. Previous course in Computer Architecture is suggested but not required.

EE 5351. Applied Parallel Programming. (3 cr.; Student Option; Every Fall) Parallel programming/architecture. Application development for many-core processors. Computational thinking, types of parallelism, programming models, mapping computations effectively to parallel hardware, efficient data structures, paradigms for efficient parallel algorithms, application case studies. prereq: [4363 or equivalent], programming experience (C/C++ preferred)

EE 5355. Algorithmic Techniques for Scalable Many-core Computing. (3 cr.; Student Option; Spring Odd Year) Algorithm techniques for enhancing the scalability of parallel software: scatter-together, problem decomposition, binning, privatization, tiling, regularization, compaction, double-buffering, and data layout. These techniques address the most challenging problems in building scalable parallel software: limited parallelism, data contention, insufficient memory bandwidth, load balance, and communication latency. Programming assignments will be given to reinforce the understanding of the techniques. prereq: basic knowledge of CUDA, experience working in a Unix environment, and experience developing and running scientific codes written in C or C++. Completion of EE 5351 is not required but highly recommended.

EE 5364. Advanced Computer Architecture. (3 cr.; Student Option; Every Fall) Instruction set architecture, processor microarchitecture. Memory and I/O systems. Interactions between computer software and hardware. Methodologies of computer design. prereq: [4363 or CSci 4203], CSE grad student] or dept consent

EE 5367. Computer Systems Performance Measurement and Evaluation. (3 cr.; Student Option; Periodic Fall & Spring) Tools/techniques for analyzing computer hardware/software performance. Benchmark programs, measurement tools, performance metrics. Deterministic/probabilistic simulation techniques, random number generation/testing. Bottleleneck analysis. prereq: [4363 or 5361 or CSci 4203 or 5201], [CSE grad student] or dept consent

EE 5373. Data Modeling Using R. (1 cr.; A-F only; Periodic Fall & Spring) Introduction to data modeling and the R language programming. Multi-factor linear regression modeling. Residual analysis and model quality evaluation. Response prediction. Training and testing. Integral lab. An introductory course in probability and statistics is suggested but not required; basic programming skills in some high-level programming language, such as C/C++, Java, Fortran, etc also suggested.

EE 5381. Telecommunications Networks. (3 cr.; Student Option; Periodic Fall & Spring) Fundamental concepts of modern telecommunications networks, mathematical tools required for their performance analysis. Layered network architecture, point-to-point protocols/links, delay models, multiaccess communication/routing. prereq: [4501, 5531, CSE grad student] or dept consent

EE 5391. Computing With Neural Networks. (3 cr.; Student Option; Periodic Fall & Spring) Neural networks as a computational model. Connections to AI, statistics and model-based computation. Associative memory and matrix computation; Hopfield networks. Supervised networks for classification and prediction. Unsupervised networks for data reduction. Associative recognition/retrieval, optimization, time series prediction, knowledge extraction. prereq: [3025 or Stat 3091], CSE grad student] or dept consent

Information-Theoretic Analysis. Feedback in digital circuits/genetic regulatory systems. Synthesizing stochastic logic and probabilistic biochemistry. prereq: MATH 2263 or dept consent

EE 5505. Wireless Communication. (3 cr.; Student Option; Every Spring) Introduction to wireless communication systems. Propagation modeling, digital communication over fading channels, diversity and spread spectrum techniques, radio mobile cellular systems design, performance evaluation. Current European, North American, and Japanese wireless networks. prereq: [4501, CSE grad student] or dept consent; 5501 recommended

EE 5549. Digital Signal Processing Structures for VLSI. (3 cr.; Student Option; Periodic Fall & Spring) Pipelining. Parallel processing. Fast convolution, FIR, rank-order, IIR, lattice, adaptive digital filters. Scaling and roundoff noise. DCT. Viterbi coders. Lossless coders,
video compression. prereq: [4541, CSE grad student] or dept consent

EE 5551. Multiscale and Multirate Signal Processing. (3 cr.; Student Option; Periodic Fall & Spring)
Scaling equations. Discrete wavelet transform. Applications in signal/image processing.
prereq: [4541, 5551, CSE grad student] or dept consent

EE 5561. Image Processing and Applications. (3 cr.; Student Option; Every Spring)
Two-dimensional digital filtering/transforms. Application to image enhancement, restoration, compression, and segmentation. prereq: [4541, 5581, CSE grad student] or instr consent

EE 5581. Information Theory and Coding. (3 cr.; Student Option; Fall Even Year)
Source/channel models, codes for sources/channels. Entropy, mutual information, capacity, rate-distortion functions. Coding theorems. prereq: [5531, CSE grad student] or dept consent

EE 5583. Error Control Coding. (3 cr.; Student Option; Periodic Spring)
Error-correcting codes. Concepts, properties, polynomial representation. BCH, Golay, Reed-Muller/Reed-Solomon codes. Convolutional codes. Iterative codes. prereq: [3025, Math 2373] or equiv. [CSE grad student or dept consent

EE 5585. Data Compression. (3 cr.; Student Option; Periodic Fall & Spring)

EE 5601. Introduction to RF/Microwave Engineering. (3 cr.; Student Option; Periodic Fall & Spring)

EE 5602. RF/Microwave Circuit Design. (3 cr.; Student Option; Periodic Fall & Spring)
Transmission lines, network analysis concepts. CAD tools for passive/active designs. Diode based circuit designs (detectors, frequency multipliers, mixers). Transistor based circuit design (amplifiers, oscillators, mixer/doubler). prereq: [5601 or equiv]. [CSE grad student or instr consent

EE 5611. Plasma-Aided Manufacturing. (4 cr.; A-F or Audit; Periodic Fall & Spring)
Manufacturing using plasma processes. Plasma properties as a processing medium. Plasma spraying, welding and microelectronics processing. Process control and system design; industrial speakers. Cross-disciplinary experience between heat transfer design issues and manufacturing technology. prereq: [(ME 3321, ME 3322) or equiv. [upper div CSE or grad student] or dept consent

EE 5613. RF/Microwave Circuit Design Laboratory. (2 cr.; A-F only; Every Spring)
Scattering parameters, planar lumped circuits, transmission lines, RF/microwave substrate materials, matching networks/tuning elements, resonators, filters, combiners/dividers, couplers. Integral lab. prereq: [5601 or concurrent registration is required (or allowed in 5601), CSE grad student] or dept consent

EE 5616. Antenna Theory and Design. (3 cr.; Student Option; Periodic Fall & Spring)
Antenna performance parameters, vector potential/radiation integral, wire antenna structures, broadband antenna structures, microstrip/aperture theory, antenna measurements. prereq: [5601 or concurrent registration is required (or allowed in 5601), CSE grad student] or dept consent

EE 5621. Physical Optics. (3 cr.; Student Option; Every Spring)
Physical optics principles, including Fourier analysis of optical systems/images, scalar diffraction theory, interferometry, and coherence theory. Diffractive optical elements, holography, astronomical imaging, optical information processing, microoptics. prereq: [3015, CSE grad student] or dept consent

EE 5622. Physical Optics Laboratory. (1 cr.; Student Option; Every Spring)

EE 5624. Optical Electronics. (4 cr.; Student Option; Every Fall)
Fundamentals of lasers, including propagation of Gaussian beam, optical resonators, and theory of laser oscillation. Polarization optics, electro-optic, acousto-optic modulation, nonlinear optics, phase conjugation. prereq: [3601 or Phys 3002]. CSE grad student] or dept consent

EE 5627. Optical Fiber Communication. (3 cr.; Student Option; Periodic Fall & Spring)

EE 5628. Fiber Optics Laboratory. (1 cr.; Student Option; Spring Odd Year)
Experiments in fiber optics. Dielectric waveguides, modes in optical fibers, fiber dispersion/attenuation, properties of light sources/detectors, optical communication systems. prereq: [5627 or concurrent registration is required (or allowed in 5627), CSE grad student] or instr consent

EE 5629. Optical System Design. (2 cr.; Student Option; Periodic Fall & Spring)
Elementary or paraxial optics. Non-paraxial, exact ray tracing. Energy considerations in instrument design. Fourier optics and image quality. Design examples: telescopes, microscopes, diffraction-limited lenses, projectors, scientific instruments. prereq: CSE grad student or dept consent

EE 5640. Introduction to Nano-Optics. (3 cr.; Student Option; Every Fall)
This course will cover the physics and technology of nano-optics and plasmonics and their potential applications in biochemical sensing, super-resolution imaging, optical trapping, light emission, and spectroscopy. The following topics will be covered: - Maxwell's equations, E&M of metals - Fresnel's equations, light propagation in periodic media - Physics of surface plasmon waves - Metallic waveguides: metal-insulator-metal vs. insulator-metal-insulator - Optical antennas - Noble metal nanoparticles: Synthesis, optical properties, and applications - Optical biosensors based on surface plasmon resonance (SPR) - Surface enhanced Raman scattering (SERS) - Surface enhanced Infrared Absorption (SEIRA) - Super-resolution imaging and near-field optical microscopy - Light transmission through nano-apertures (extraordinary optical transmission) - Plasmonics at long wavelengths (infrared and terahertz) - Plasmonics in atomically thick materials Knowledge of Maxwell's equations, Matlab, or Mathematica coding is suggested but not required.

EE 5649. Infrared Devices and Technology. (3 cr.; Student Option; Periodic Fall)
One of the most economically and scientifically important but relatively unknown device technologies is infrared detection, sensing and imaging. Today the application space is much larger than traditional military applications and includes weather and climate satellites, industrial process control, petrochemical analysis, pollution sensing, astronomy, and biomedical clinical diagnostics. This class covers the basic physics of infrared emission and absorption in solid-state materials, molecules, and the atmosphere. It also discusses detector technology (with particular emphasis on types of semiconductor and quantum-dot photon detectors, microbolometers, and thermoelectric detectors) and the infrared spectroscopy of molecules to show why the infrared is so important in the study of chemical, biological, and atmospheric systems. The class will also examine types of commonly used spectrometers: cavity, dispersive, and FTIR and sampling of important applications: passive and active standoff detection, satellite climate and atmospheric monitoring, industrial and petrochemical analysis, and LiDAR. Other topics will be introduced as time allows.

EE 5653. Physical Principles of Magnetic Materials. (3 cr.; Student Option; Every Fall)
Physics of diamagnetism, paramagnetism, ferromagnetism, antiferromagnetism, ferrimagnetism. Ferromagnetic phenomena.
Characteristics of protection components. 
prereq: [4721, CSE grad student] or dept consent

EE 5741. Advanced Power Electronics. (3 cr.; Student Option; Periodic Spring) 
Physics of solid-state power devices, passive components, magnetic optimization, advanced topologies. 
Unify power factor correction circuits, EMI issues, snubbers, soft switching in dc/ac converters. Practical considerations. 
very low voltage output converters. Integrated computer simulations. 
prereq: CSE graduate student or dept consent

EE 5745. Wind Energy Essentials. (2 cr.; Student Option; Every Fall) 
prereq: CSE graduate student or dept consent

EE 5811. Biological Instrumentation. (3 cr.; Student Option; Spring Odd Year) 
This course will cover the physics and technology of biological instruments. 
The operating principles of optical, electrical, and mechanical biosensors will be discussed, followed by transport and delivery of biomolecules to the sensors. Techniques to manufacture these sensing devices, along with microfluidic packaging, will be covered. Lectures will be complemented by lab demo sessions to give students hands-on experiences in microfluidic chip fabrication, microscopy, and particle trapping experiments.

EE 5940. Special Topics in Electrical Engineering I. (1-4 cr.; max 12 cr.; Student Option; Every Fall, Spring & Summer) 
Special topics in electrical and computer engineering. 
Topics vary.

EE 5950. Special Topics in Electrical Engineering II. (1-4 cr.; max 12 cr.; Student Option; Every Fall & Spring) 
Special topics in electrical and computer engineering. 
Topics vary.

EE 5960. Special Topics in Electrical Engineering III. (1-4 cr.; max 12 cr.; Student Option; Every Fall & Spring) 
Special topics in electrical and computer engineering. 
Topics vary.

EE 5970. Special Topics in Electrical Engineering IV. (1-4 cr.; max 12 cr.; Student Option; Periodic Fall & Spring) 
Special topics in electrical and computer engineering. 
Topics vary. prereq: EE or CompE graduate student or instr consent; only available for Rochester Campus

EE 5980. Teaching, Grading, and Lab Instruction Seminar. (1 cr.; No Grade Associated; Every Fall) 
The purpose of this course is to provide guidance and instruction in teaching, grading, and laboratory procedures. 
In addition, you will be provided with structured links to self-help resources, support from faculty, peers, and staff that will improve your effectiveness and efficiency while teaching and grading. 
The course is broken out into four components: 
- A pre-seimester orientation and series of three workshops (4 hours) - A series of bi-weekly seminars spaced throughout the semester (approx. 4 hours) - A private teaching consultation by CEI (3 hours, lab TAs only) - A wrap-up discussion session (2 hours)

EE 5990. Curricular Practical Training. (1-2 cr.; max 6 cr.; S-N or Audit; Every Fall, Spring & Summer) 
Industrial work assignment involving advanced electrical engineering technology. Review by faculty member. Final report covering work assignment. prereq: Grad student, instr consent

EE 8100. Advanced Topics in Electronics. (1-3 cr.; max 12 cr.; Student Option; Periodic Fall) 
Topics vary according to needs and staff availability. prereq: instr consent

EE 8141. Advanced Heterojunction Transistors. (3 cr.; Student Option; Periodic Fall) 
Recent developments in device modeling with emphasis on bipolar junction transistors. High-level effects in base and collector regions and their interrelationship. prereq: 5664 or instructor consent

EE 8161. Physics of Semiconductors. (3 cr.; Student Option; Periodic Fall & Spring) 

EE 8163. Quantum Electronics. (3 cr.; A-F or Audit; Periodic Fall & Spring) 

EE 8190. Electronics Seminar. (1 cr.; max 3 cr.; S-N or Audit; Every Fall & Spring) 
Current literature, individual assignments. 
prereq: instr consent

EE 8210. System Theory Seminar. (1 cr.; max 3 cr.; S-N or Audit; Periodic Fall & Spring) 
Current literature, individual assignments.

EE 8213. Advanced System Theory. (3 cr.; Student Option; Periodic Fall) 
Generalized linear systems; applications, structural properties, computational approaches, classification, functional behavior, and synthesis. prereq: IT grad student, instr consent
EE 8215. Nonlinear Systems. (3 cr.; Student Option; Periodic Fall & Spring) Current topics in stability analysis of nonlinear systems, design of controllers for nonlinear systems, discrete-time and stochastic nonlinear systems. prereq: instr consent

EE 8230. Control Theory Seminar. (1 cr. [max 3 cr.]; S-N or Audit; Periodic Fall & Spring) Current literature, individual assignments.

EE 8231. Optimization Theory. (3 cr.; Student Option; Periodic Fall) Introduction to optimization in engineering; approximation theory. Least squares estimation, optimal control theory, and computational approaches. prereq: instr consent

EE 8300. Advanced Topics in Computers. (1-3 cr. [max 12 cr.]; Student Option; Periodic Fall) Topics vary according to needs and staff availability. prereq: instr consent

EE 8310. Advanced Topics in VLSI. (1-3 cr. [max 12 cr.]; Student Option; Periodic Fall) Topics vary according to needs and staff availability. prereq: instr consent

EE 8320. Advanced Topics in Design Automation. (1-3 cr. [max 12 cr.]; A-F or Audit; Periodic Fall) State-of-the-art automated design tools for electronic system design. Topics vary. prereq: Grad student or instr consent

EE 8331. CMOS Data Converters: A/D and D/A. (3 cr.; Student Option; Every Fall & Spring) Data converters, low power low voltage analog circuits. Basic background in design of CMOS analog-to-digital and digital-to-analog converters. Special circuit design techniques for low power design. Students design/test several design problems. prereq: 5333 or instr consent

EE 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

EE 8337. Analog Circuits for Wire/Wireless Communications. (3 cr.; A-F or Audit; Every Spring) Basic background, advanced design concepts necessary to design integrated CMOS RF circuits. Emphasizes CMOS and RF. Where appropriate, mention is made of bipolar circuits and applications to other communications areas. prereq: 5333

EE 8350. Advanced Verification Methodologies for VLSI Systems. (3 cr.; Student Option; Every Fall) Object-oriented programming in SystemVerilog. Randomization techniques, threads, interprocess communication, and functional coverage determination. Advanced interfaces and assertion-based verification. UVM tests, components, agents, environments, factory pattern, transactions, and sequences. Formal and semi-formal verification methods. Other advanced verification techniques of current research interest. Prerequisites: EE 5327 VLSI Design Lab or equivalent

EE 8351. Design Automation Techniques for Variation-Aware Computing. (3 cr.; Student Option; Fall Even Year) High-performance chip design can only be performed with the assistance of design automation tools that comprehend the needs of the designer and deliver solutions that can correctly analyze and optimize these systems. The objective of this class is to provide a view of this emerging universe and acquaint students with new research in this area. Specific topics to be covered include 1) Overview of technology trends and emerging systems 2) Variation-aware design and 3) Design automation issues. Prerequisites: CSE grad student. Some background in VLSI design and/or design automation is suggested but not required. Such prior exposure will make the experience in the class much more meaningful.

EE 8360. Computer Systems Seminar. (1 cr. [max 3 cr.]; S-N or Audit; Every Fall & Spring) Current literature, individual assignments.

EE 8370. Computer Aided Design Seminar. (1 cr. [max 3 cr.]; S-N or Audit; Every Fall & Spring) Current literature, individual assignments. prereq: [EE or CompE or CSci] grad major, instr consent

EE 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

EE 8500. Seminar: Communications. (1 cr. [max 3 cr.]; S-N or Audit; Every Fall & Spring) Current literature, individual assignments.

EE 8510. Advanced Topics in Communications. (1-3 cr. [max 12 cr.]; Student Option; Periodic Fall) Topics vary according to needs and staff availability. prereq: instr consent

EE 8520. Advanced Topics in Signal Processing. (1-3 cr. [max 12 cr.]; Student Option; Every Spring) Topics vary according to needs and staff availability. prereq: instr consent

EE 8581. Detection and Estimation Theory. (3 cr.; Student Option; Periodic Spring) Risk theory approach to detection and estimation, random process representation, signal parameter estimation. Waveform estimation; detection of phase, frequency, and delay in signals. Applications to communications and radar-sonar signal design and processing. prereq: 5531 or instr consent

EE 8591. Predictive Learning from Data. (3 cr.; Student Option; Fall Even Year) Methods for estimating dependencies from data have been traditionally explored in such diverse fields as: statistics (multivariate regression and classification), engineering (pattern recognition, system identification), computer science (artificial intelligence, machine learning, data mining) and bioinformatics. Recent interest in learning methods is triggered by the widespread use of digital technology and availability of data. Unfortunately, developments in each field are seldom related to other fields. This course is concerned with estimation of predictive data-analytic models that are estimated using past data, but are used for prediction or decision making with new data. This course will first present general conceptual framework for learning predictive models from data, using Vapnik-Chervonenkis (VC) theoretical framework, and then discuss various methods developed in statistics, pattern recognition and machine learning. Course descriptions will emphasize methodological aspects of machine learning, rather than development of new algorithms. prereq: CSE grad student or instr consent

EE 8601. Advanced Electromagnetic Theory. (3 cr.; A-F or Audit; Periodic Fall) Aspects of electromagnetic theory. Review of introductory material. Scattering theory, geometric theory of diffraction, integral equation methods, Green's functions. prereq: 4601 or equiv

EE 8610. Seminar: Electronics, Fields, and Photonics. (3 cr. [max 3 cr.]; S-N or Audit; Every Fall & Spring) Students are assigned readings from current literature and make individual presentations to class. From time to time outside speakers present research papers. prereq: EE grad major or instr consent

EE 8611. Plasma Physics. (3 cr.; Student Option; Periodic Fall) Plasma theory and charged particle transport phenomena: collision processes, orbit theory, kinetic theory, Boltzmann transport equation, moment (continuity) equations, magnetohydrodynamics, transport properties. Applications of plasma theory to modeling of dc, rf, and microwave discharges. prereq: instr consent

EE 8620. Advanced Topics in Magnetics. (3 cr.; [max 12 cr.]; Student Option; Periodic Fall) Topics vary according to needs and staff availability. prereq: 5683 or instr consent

EE 8630. Advanced Topics in Electromagnetics. (3 cr. [max 12 cr.]; Student Option;) Topics vary according to needs and staff availability.
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

EE 8660. Seminar: Magnetics. (1 cr. [max 3 cr.]; S-N or Audit; Every Fall & Spring) Current literature, individual assignments.

EE 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr.; dept consent for 3rd/4th registrations, up to 24 combined cr.; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr.

EE 8725. Advanced Power System Analysis and Economics. (3 cr.; Student Option; Periodic Fall) Solving sets of equations that involve large sparse matrices. Sparse matrix storage, ordering schemes, application to power flow, short circuit calculation, optimal power flow, and state estimation. prereq: 4721, CSE grad student or instr consent

EE 8741. Power Electronics in Power Systems. (3 cr.; Student Option; Periodic Fall) Impact of power electronics loads on power quality. Passive and active filters. Active input current wave shaping. HVDC transmission. Static VAR control, energy storage systems. Interconnecting photovoltaic and wind generators. Static phase shifters and circuit breakers for flexible AC transmission (FACTS). prereq: 4741, IT grad student or instr consent

EE 8744. Modeling, Analysis, and Control of Renewable Energy Systems. (3 cr.; Student Option; Every Fall) The electrical power system has been widely recognized as the most important engineering achievement of the 20th century. High power quality and availability are maintained in the bulk power system mainly by enforcing hierarchical operational practices, central decision making, and topological redundancy. However, this status quo is being challenged by changing generation, consumption and operational landscapes. Particularly, increased renewable generation, supply scarcity, the impetus to improve resiliency to extenuating weather impacts, and expanding electricity access call for the development of transformative architectural and operational paradigms. Recognizing these developments, this course will present enabling modeling, analysis, and control methods that will be integral to architect next-generation renewable-based power systems. These methods will be developed adopting a bottom-up approach by leveraging recent theoretical advances in circuit theory, nonlinear systems, complex networks, and stochastic processes.

EE 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

EE 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) Thesis credit.

EE 8920. Teaching Experience in Electrical and Computer Engineering. (1 cr. [max 3 cr.]; S-N only; Every Spring) Coteach class under guidance of faculty mentor. Students directly teach approximately half of the classes. Feedback to improve teaching effectiveness. Meet regularly with peers and instructor to discuss teaching concerns/issues. prereq: PhD candidate in electrical engineering, passed written preliminary exam

EE 8925. Ethics in Electrical and Computer Engineering. (1 cr.; S-N only; Every Fall) Topics on issues such as data integrity, professional conduct, authorship, plagiarism, patents, copyrights, conflicts, and disclosures. Students study cases, present findings, and write report. prereq: Grad student in electrical engineering

EE 8940. Special Investigations. (1-3 cr.; Student Option; Every Fall, Spring & Summer) Studies of approved theoretical or experimental topics. prereq: 1-3 cr [may be repeated for cr]; IT grad student or instr consent

EE 8950. Advanced Topics in Electrical and Computer Engineering. (1-3 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Topics vary according to needs and staff availability. prereq: Cr ar [may be repeated for cr]; instr consent

EE 8965. Plan C Project I. (3 cr.; Student Option; Every Fall, Spring & Summer) Project topics arranged between student and adviser. Written reports. prereq: Grad EE major

EE 8967. Plan C Project II. (1-3 cr.; Student Option; Every Fall, Spring & Summer) Project topics arranged between student and adviser. Written reports. prereq: EE grad student

EE 8970. Graduate Seminar I. (1 cr. [max 3 cr.]; S-N or Audit; Every Fall) Recent developments in electrical engineering, related disciplines. prereq: Grad student

EE 8980. Graduate Seminar II. (1 cr. [max 3 cr.]; S-N or Audit; Every Spring) Recent developments in electrical engineering, related disciplines.

Endodontics (ENDO)

ENDO 5304. Advanced Clinical Endodontics. (1-6 cr.; A-F or Audit; Every Fall & Summer) Diagnosis/treatment of clinical cases. Complex cases, new/unique techniques.

ENDO 5305. Advanced Clinical Endodontics. (1-6 cr.; A-F or Audit; Every Fall) Diagnosis/treatment of clinical cases. Complex cases, new techniques. prereq: 5304
ENDO 5306. Advanced Clinical Endodontics. (1-6 cr.; A-F or Audit; Every Spring) Diagnosis/treatment of clinical cases. Complex cases, new techniques.

ENDO 5307. Advanced Clinical Endodontics. (1-6 cr.; A-F or Audit; Every Summer) Diagnosis/treatment of clinical cases. Complex cases, new techniques. prereq: 5306

ENDO 5308. Advanced Clinical Endodontics. (1-6 cr.; A-F or Audit; Every Fall) Diagnosis/treatment of clinical cases. Complex cases, new techniques. prereq: 5307, dept consent

ENDO 5309. Advanced Clinical Endodontics. (1-6 cr.; A-F or Audit; Every Spring) Diagnosis/treatment of clinical cases. Complex cases, new techniques. prereq: 5308

ENDO 5310. Advanced Clinical Endodontics. (1-6 cr.; A-F or Audit; Every Summer) Diagnosis/treatment of clinical cases. Complex cases, new techniques. prereq: 5309

ENDO 5311. Advanced Endodontic Emergency. (1 cr.; S-N or Audit; Every Summer) Each student is assigned weekly periods (8 hours/week) and is responsible for all emergencies in the endodontic clinic during this time. prereq: dept consent

ENDO 5312. Advanced Endodontic Emergency. (1 cr.; S-N or Audit; Every Fall) Students assigned 8 hrs/wk), are responsible for emergencies in clinic. prereq: 5311

ENDO 5313. Advanced Endodontic Emergency. (1 cr.; S-N or Audit; Every Spring) Students assigned 8 hrs/wk), are responsible for emergencies in clinic. prereq: 5312

ENDO 5314. Advanced Endodontic Emergency. (1 cr.; S-N or Audit; Every Summer) Students assigned 8 hrs/wk), are responsible for emergencies in clinic. prereq: 5313

ENDO 5315. Advanced Endodontic Emergency. (1 cr.; S-N or Audit; Every Fall) Students assigned 8 hrs/wk), are responsible for emergencies in clinic. prereq: 5314, dept consent

ENDO 5316. Advanced Endodontic Emergency. (1 cr.; S-N or Audit; Every Spring) Students assigned 8 hrs/wk), are responsible for emergencies in clinic. prereq: 5315

ENDO 5317. Advanced Endodontic Emergency. (1 cr.; S-N or Audit; Every Summer) Students assigned 8 hrs/wk), are responsible for emergencies in clinic. prereq: 5316

ENDO 5329. Clinical Seminar I. (1 cr.; A-F or Audit; Every Fall) Oral/visual presentation of endodontic cases with follow up. Presentation of surgery cases before surgery. prereq: dept consent

ENDO 5330. Review of Cases. (1-2 cr.; A-F or Audit; Every Spring & Summer) Oral/visual presentation of endodontic cases with follow up. Presentation of cases before surgery. prereq: 5329

ENDO 5331. Review of Cases. (1 cr.; A-F or Audit; Every Fall) Oral/visual presentation of endodontic cases with follow up. Presentation of cases before surgery. prereq: 5330

ENDO 5332. Review of cases. (1 cr.; A-F or Audit; Every Spring) Oral and visual presentation of endodontic cases with follow up. Presentations of surgery cases before surgeries. prereq: dept consent

ENDO 5400. Advanced Endodontics for the General Dentist. (1 cr.; S-N or Audit; Periodic Fall & Spring) Advanced diagnosis/treatment of endodontics in clinic/office setting. Internship. prereq: dept consent

ENDO 8001. Research in Endodontics. (1-2 cr.; Student Option; Every Fall) Organized literature review in area of student's interest, selection of thesis project, and completion of research and thesis. prereq: dept consent

ENDO 8002. Research in Endodontics. (1-2 cr.; Student Option; Every Spring & Summer) Organized literature review in area of student's interest, selection of thesis project, and completion of research and thesis. prereq: dept consent

ENDO 8004. Research in Endodontics. (1-2 cr.; Student Option; Every Fall) Organized literature review in area of student's interest, selection of thesis project, and completion of research and thesis. prereq: dept consent

ENDO 8005. Research in Endodontics. (1-2 cr.; A-F only; Every Spring) Organized literature review in area of student's interest, selection of thesis project, and completion of research and thesis. prereq: dept consent

ENDO 8310. Literature Review. (2 cr.; A-F or Audit; Every Fall) Critical review of classic and current endodontic literature. prereq: dept consent

ENDO 8311. Literature Review. (2 cr.; A-F or Audit; Every Spring & Summer) Critical review of classic/current endodontic literature. prereq: 8310

ENDO 8312. Literature Review. (2 cr.; A-F or Audit; Every Fall) Critical review of classic/current endodontic literature. prereq: 8311

ENDO 8313. Literature Review. (2 cr.; A-F or Audit; Every Spring) Critical review of classic/current endodontic literature. prereq: 8312

ENDO 8320. Advanced Endodontic Lecture. (1 cr.; A-F or Audit; Every Fall) Pulpal and periapical pathology, diagnosis, and treatment planning. prereq: dept consent

ENDO 8321. Advanced Endodontic Lecture. (1 cr.; A-F or Audit; Every Spring & Summer) Pulpal/periapical pathology, diagnosis, treatment planning. prereq: 8320

ENDO 8322. Advanced Endodontic Lecture. (1 cr.; A-F or Audit; Every Fall) Pulpal/periapical pathology, diagnosis, treatment planning. prereq: 8321

ENDO 8323. Advanced Endodontic Lecture. (1 cr.; A-F or Audit; Every Spring) Pulpal/periapical pathology, diagnosis, treatment planning. prereq: 8322

ENDO 8335. Endodontics/Periodontics Seminar. (1 cr.; S-N or Audit; Every Spring) Discussions of endo-perio problems. prereq: dept consent

English as a Second Language (ESL)

ESL 5006. English for Business Interactions. (2 cr. [max 4 cr.]; Student Option; Every Fall & Spring) Designed for high-intermediate to advanced non-native speakers of English who are currently business majors or in closely related major. Writing for business communication, self-editing skills, communication styles, presentations, telephone communication. prereq: Grad, non-native English speaker

ESL 5008. Speaking for Professional Settings. (2 cr.; Student Option; Every Fall & Spring) This course is designed for graduate students who are non-native speakers of English seeking to improve their English speaking skills for professional contexts. The course assumes that students already have a high level of proficiency in English; this course will help students refine their skills for specific professional situations. The course covers topics such as small talk, networking, interviewing, and presentation skills. Students will increase their confidence to communicate in a variety of settings including informal exchanges, career fairs, conference presentations, and job interviews. prereq: Graduate student

ESL 5302. Academic Writing. (4 cr. [max 8 cr.]; Student Option; Every Fall & Spring) This four credit course is designed for graduate students for whom English is not a native language. This course focuses on foundational writing skills and emphasizes the writing process - developing ideas, drafting, revising, and editing. Guided textual analyses of readings are used to develop writing skills through the close examination of strategies employed by accomplished writers. Through ongoing, active participation, students learn...
to (1) match writing to audience and purpose, 
(2) produce different genres of academic writing, (3) incorporate source material into writing, and (4) critique their writing and that of others. Emphasis is on basic writing skills culminate in students’ ability to transfer acquired skills into discipline-specific writing.

Through development of personal voice and an appreciation for the importance of the credibility of the writer, students also learn to recognize and avoid plagiarism. Problems with sentence structure, lexical grammar, and diction are addressed individually.

ESL 5900. Special Topics in English Language. (1-5 cr. max 15 cr.; Student Option; Periodic Fall, Spring & Summer)
Topics vary. prereq: Non-native speaker of English

English: Literature (ENGL)

ENGL 5001. Ph.D. Colloquium: Introduction to Literary Theory and Literary Studies in the Modern University. (3 cr.; Student Option; Every Spring)
Where and what is literary study vis-à-vis the history of the discipline, of the humanities, and of the university—all in the context of a graduate education. Literary theory focusing on key theoretical works that address the discipline, the humanities, and the university.

ENGL 5020. Studies in Narrative. (3 cr. max 6 cr.; Student Option; Periodic Fall & Spring)
Examine issues related to reading and understanding narrative in a variety of interpretive contexts. Topics may include "The 19th- century English (American, Anglophone) Novel," "Introduction to Narrative," or "Techniques of the Novel." Topics specified in the Class Schedule.

ENGL 5040. Theories of Film. (3 cr. max 9 cr.; Student Option; Periodic Fall)
Advanced topics regarding film in a variety of interpretive contexts, from the range and historic development of American, English, and Anglophone film (e.g., "Fascism and Film," "Queer Cinemas"). Topics and viewing times announced in Class Schedule. prereq: Grad student or instr consent

ENGL 5090. Readings in Special Subjects. (1-4 cr. max 12 cr.; Student Option; Every Fall & Spring)
General background preparation for advanced study. Diverse selection of literatures written in English, usually bridging national cultures and time periods. Readings specified in Class Schedule.

ENGL 5110. Medieval Literatures and Cultures: Intro to Medieval Studies. (3 cr. max 9 cr.; Student Option; Every Spring)
Major and representative works of the Middle Ages. Topics specified in the Class Schedule.

ENGL 5121. Readings in Early Modern Literature and Culture. (3 cr. max 9 cr.; Student Option; Periodic Fall & Spring)
Topics readings in early modern poetry, prose, fiction, and drama. Attention to relevant scholarship or criticism. Preparation for work in other courses or seminars. prereq: Grad student or instr consent

ENGL 5140. Readings in 18th Century Literature and Culture. (3 cr.; Student Option; Every Spring)
Literature written in English, 1660-1798. Topics may include British literature of Reformation and 18th century, 18th-century American literature, a genre (e.g., 18th-century novel). prereq: Grad student or instr consent

ENGL 5150. Readings in 19th-Century Literature and Culture. (3 cr. max 9 cr.; Student Option; Periodic Fall, Spring & Summer)
Topics may include British Romantic or Victorian literatures. American literature, important writers from a particular literary school, a genre (e.g., the novel). Readings.

ENGL 5170. Readings in 20th-Century Literature and Culture. (3 cr. max 9 cr.; Student Option; Periodic Fall) British, Irish, or American literatures, or topics involving literatures of two nations. Focuses either on a few important writers from a particular literary school or on a genre (e.g., drama). Topics specified in Class Schedule.

ENGL 5300. Readings in American Minority Literature. (3 cr. max 9 cr.; Student Option; Every Fall)
Contextual readings of 19th-20th-century American minority writers. Topics specified in Class Schedule.

ENGL 5501. Origins of Cultural Studies. (3 cr.; Student Option; Periodic Fall & Spring)
Intellectual map of the creation of cultural studies as a unique approach to studying social meanings. Key figures and concepts, including nineteenth- and early twentieth century precursors.

ENGL 5510. Readings in Criticism and Theory. (3 cr. max 9 cr.; Student Option; Spring Odd Year)

ENGL 5593. The African-American Novel. (3 cr.; Student Option; Every Fall)

ENGL 5597. Seminar: Harlem Renaissance. (3 cr.; Student Option; Every Fall & Spring)
Multidisciplinary review of Jazz Age’s Harlem Renaissance: literature, popular culture, visual arts, political journalism, major black writers/figures. prereq: Grad student or instr consent

ENGL 5701. Great River Review. (4 cr.; Student Option; Every Spring)
Students will be assigned roles, both editorial and managerial, to assist in production of The Great River Review journal. They will explore and present on the history of the small magazine in American literature and meet with Twin Cities publishing professionals.

ENGL 5743. History of Rhetoric and Writing. (3 cr.; Student Option; Periodic Fall & Spring)
Assumptions of classical/contemporary rhetorical theory, especially as they influence interdisciplinary field of composition studies. prereq: Grad student or instr consent

ENGL 5790. Topics in Rhetoric, Composition, and Language. (3 cr. max 9 cr.; Student Option; Periodic Fall & Spring)
Topics specified in Class Schedule. prereq: Grad student or instr consent

ENGL 5800. Practicum in the Teaching of English. (1-3 cr.; Student Option; Every Fall)
Discussion of and practice in recitation, lecture, small-groups, tutoring, individual conferences, and evaluation of writing/reading. Emphasizes theory informing effective course design/teaching for different disciplinary goals. Topics vary. See Class Schedule. prereq: Grad student or instr consent

ENGL 5805. Writing for Publication. (3 cr.; Student Option; Fall Even Year)
Conference presentations, book reviews, revision of seminar papers for journal publication, and preparation of a scholarly monograph. Style, goals, and policies of journal and university press editors/readers. Electronic publication. Professional concerns. prereq: Grad student or instr consent

ENGL 5992. Directed Readings, Study, or Research. (1-3 cr. max 45 cr.; Student Option; Every Fall, Spring & Summer)
TBD Prereq: Grad student or instr consent.

ENGL 8090. Seminar in Special Subjects. (3 cr. max 12 cr.; Student Option; Every Fall)
Sample topics; literature of World War II, writings of the Holocaust, literature of English Civil War, advanced versification.

ENGL 8110. Seminar: Medieval Literature and Culture. (3 cr. max 12 cr.; Student Option; Periodic Fall & Spring)
Sample topics: Chaucer; "Piers Plowman"; Middle English literature, 1300-1475; medieval literary theory; literature/class in 14th-century; texts/heresies in late Middle Ages.

ENGL 8120. Seminar in Early Modern Literature and Culture. (3 cr. max 12 cr.; A-F or Audit; Every Fall & Spring)
British writers/topics, from Reformation to French Revolution. In first half of period (which divides at 1640), a typical topic is Spenser and epic tradition; in second half, women historians before Wollstonecraft.

ENGL 8140. Seminar in 18th Century Literature and Culture. (3 cr. max 12 cr.; Student Option; Periodic Fall & Spring)
Advanced study of literature written in English, 1660-1798. Topics may include British literature of Reformation and 18th century, 18th-century American literature, a genre (e.g.,
18th-century novel), prereq: Grad student or instr consent

ENGL 8150. Seminar in Shakespeare.  (3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)
Perspectives/works vary with offering and instructor. Recent topics include Global Shakespeare, Shakespearian Comedy, and Shakespeare and Performance.

ENGL 8170. Seminar in 19th-Century British Literature and Culture.  (3 cr. [max 12 cr.]; Student Option; Every Fall & Spring)

ENGL 8180. Seminar in 20th-Century British Literature and Culture.  (3 cr. [max 12 cr.]; A-F or Audit; Periodic Fall)
Sample topics: modernism, Bloomsbury Group, working-class/immigrant literature. Topics specified in Class Schedule.

ENGL 8190. Seminar in 20th-Century Anglophone Literatures and Cultures.  (3 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring)
Topics in Anglophone literatures of Canada, Africa, the Caribbean, India and Pakistan, and the Pacific. Sample topics: Stuart Hall and Black Britain; Salman Rushdie and cosmopolitan literatures; national literatures and partitioned states. Topics specified in Class Schedule.

ENGL 8200. Seminar in American Literature.  (3 cr. [max 12 cr.]; Student Option; Every Fall & Spring)

ENGL 8290. Topics, Figures, and Themes in American Literature.  (3 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring)

ENGL 8300. Seminar in American Minority Literature.  (3 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
Sample topics: Harlem Renaissance, ethnic autobiographies, Black Arts movement. Topics specified in Class Schedule.

ENGL 8333. FTE: Master's.  (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
Sample topics: Harriet Jacobs, Margaret Walker, and other African-American women writers. Topics specified in Class Schedule.

ENGL 8400. Seminar in Post-Colonial Literature, Culture, and Theory.  (3 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
Sample topics: Marxism and nationalism; modern India; feminism and decolonization; "the Empire Writes Back"; Islam and the West. Topics specified in Class Schedule.

ENGL 8444. FTE: Doctoral.  (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
FTE Doctoral credits

ENGL 8510. Studies in Criticism and Theory.  (3 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring)
Developments within critical theory that have affected literary criticism, by altering conceptions of its object ("literature") or by challenging conceptions of critical practice. Topics specified in Class Schedule.

ENGL 8520. Seminar: Cultural Theory and Practice.  (3 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
Sample topics: semiotics applied to perspective paintings, numbers, and money; analysis of a particular set of cultural practices by applying various theories to them. Topics specified in Class Schedule.

ENGL 8530. Seminar in Feminist Criticism.  (3 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring)
Brief history of feminist criticism, in-depth treatment of contemporary perspectives/issues. Topics specified in Class Schedule.

ENGL 8600. Seminar in Language, Rhetoric, Literature, and Composition.  (3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)

ENGL 8625. Dissertation Seminar: Preparing the Book List and Prospectus.  (2 cr.; Student Option; Every Spring)
Assembling book list, defining field of study, and articulating a rationale for list. How to conceptualize/develop dissertation prospectus. Students work with faculty instructor, advising committee, and peer writing group. Prereq: English PhD student in (3rd or 4th yr); at least 12 cr completed

ENGL 8626. Dissertation Seminar: Writing the Dissertation.  (2 cr.; Student Option; Every Spring)
Conceptualizing dissertation (using model of Graduate School doctoral Dissertation Fellowship application). Producing dissertation draft chapter/proposal. Students work with instructor, advising committees, and peer writing groups. Prereq: English PhD student, passed prelim exam

ENGL 8666. Doctoral Pre-Thesis Credits.  (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Doctoral Pre-Thesis Credits prerequisite: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

ENGL 8888. Thesis Credit: Doctoral.  (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 24 cr required

ENGL 8992. Directed Reading in Language, Literature, Culture, Rhetoric, Composition, or Creative Writing.  (1-9 cr. [max 15 cr.]; Student Option; Every Fall & Spring)
Directed Reading in Language, Literature, Culture, Rhetoric, Composition, or Creative Writing prerequisite: student consent, dept consent
by pivotal 20th-century writers such as John Hersey, Joseph Mitchell, Lillian Ross, Michael Herr, Norman Mailer, Gay Talese, Joan Didion, Tom Wolfe, and Hunter S. Thompson, and will trace how their pioneering methods influenced contemporary journalism as well as the documentary films of Errol Morris and contemporary nonfiction writers expanding into new forms.

**ENGW 5701. Great River Review.** (4 cr.; Student Option; Every Spring)
Students will be assigned roles, both editorial and managerial, to assist in production of The Great River Review journal. They will explore and present on the history of the small magazine in American literature and meet with Twin Cities publishing professionals.

**ENGW 5993. Directed Study in Writing.** (1-4 cr. [max 18 cr.]; Student Option; Every Spring & Summer)
Projects in writing poetry, fiction, drama, and nonfiction, or study of ways to improve writing. Prereq: instr consent, dept consent, college consent.

**ENGW 8101. Reading Across Genres.** (4 cr.; Student Option No Audit; Every Fall)
Contemporary writing in fiction, poetry, creative nonfiction. Primarily reading course rather than writing course. Prereq: Students may not audit this course.

**ENGW 8110. Seminar: Writing of Fiction.** (4 cr. [max 16 cr.]; Student Option; Every Spring)
Focuses on full-length book (e.g., novel, short story collection). Assignments in common. Individual project. Prereq: dept consent.

**ENGW 8120. Seminar: Writing of Poetry.** (4 cr. [max 8 cr.]; Student Option; Every Spring)
Focuses on exploration and practice of various styles. Assignments in common and individual project. Prereq: dept consent.

**ENGW 8130. Seminar: Writing of Literary Nonfiction.** (4 cr. [max 8 cr.]; Student Option; Every Fall & Spring)
Advanced workshop. Assignments in common and individual projects. Prereq: dept consent.

**ENGW 8140. Thesis Seminar: Poetry.** (4 cr. [max 8 cr.]; Student Option; Every Fall)
For students working on their creative project. Prereq: Creative writing MFA student, instr consent.

**ENGW 8150. Thesis Seminar: Fiction.** (4 cr. [max 8 cr.]; Student Option; Every Fall)
Students work on creative project. Prereq: Creative writing MFA student, instr consent.

**ENGW 8160. Thesis Seminar: Nonfiction.** (4 cr. [max 8 cr.]; Student Option; Every Fall)
Students work on their creative project. Prereq: Creative writing MFA student, instr consent.

**ENGW 8170. MFA Practicum: EngW 1101W.** (1-3 cr.; S-N only; Every Fall & Spring)
Teaching Practicum for Teaching Assistants assigned to EngW 1101W. Prereq: Creative writing MFA student, instr consent.

**ENGW 8180. Thesis Seminar: Multi-Genre.** (4 cr.; A-F only; Every Fall)
Thesis preparation course for advanced graduate students in the creative writing MFA program. Prereq: MFA creative writing program grad student.

**ENGW 8310. Topics in Creative Writing.** (2-8 cr. [max 8 cr.]; Student Option; Periodic Fall & Spring)
Special topics in fiction, literary nonfiction, poetry. Topics specified in Class Schedule. Prereq: [English or creative writing] grad major or dept consent.

**ENGW 8333. FTE: Master’s.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
No description. Prereq: Master’s student, adviser and DGS consent.

**ENGW 8990. MFA Creative Thesis.** (2-8 cr. [max 48 cr.]; Student Option; Every Fall, Spring & Summer)
For students working on their creative project. Prereq: 8140, 8150, 8160, creative writing MFA student, instr consent.

**Entomology (ENT)**

**ENT 5011. Insect Structure and Function.** (4 cr.; A-F or Audit; Every Spring)
Comparative study of insect structures/functions from evolutionary perspective. Introduction to physiology of digestion, respiration, other organ systems.

**ENT 5021. Insect Biodiversity and Evolution.** (4 cr.; Student Option; Every Fall)

**ENT 5025. Field Methods in Insect Taxonomy.** (1 cr.; Student Option; Fall Odd Year)

**ENT 5041. Insect Ecology.** (3 cr.; Student Option; Fall Even Year)
Synthetic analysis of the causes of insect diversity and of fluctuations in insect abundance. Focus on abiotic, biotic, and evolutionary mechanisms influencing insect populations and communities. Prereq: Biol 5041 or EEB 5122 or instr consent.

**ENT 5051. Scientific Illustration of Insects.** (3 cr.; Student Option; Spring Even Year)

**ENT 5061. Insect Molecular Science.** (2 cr.; Student Option; Periodic Fall & Spring)
Molecular genetic techniques and their applications. Emphasizes insect species other than Drosophila. Application of genetic techniques to physiological processes. Prereq: [5011, basic genetics course] or instr consent.

**ENT 5081. Insects, Aquatic Habitats, and Pollution.** (3 cr.; A-F or Audit; Every Fall)

**ENT 5121. Applied Experimental Design.** (4 cr.; Student Option; Periodic Fall)
Principles of sampling methodologies, experimental design, and statistical analyses. Methods/procedures in generating scientific hypotheses. Organizing, initiating, conducting, and analyzing scientific experiments. Using experimental designs and statistical procedures. Offered with AGRO 5121. Prereq: Stat 5021 or equiv or instr consent.

**ENT 5126. Spatial and Temporal Analysis of Ecological Data.** (3 cr. [max 6 cr.]; A-F or Audit; Spring Even Year)
This course covers linear models (regression and ANOVA) and extensions to temporal data and spatial point processes, lattice/areal data, and geostatistics. The course bridges sufficient theory to understand why contending with spatiotemporal dependence is important with enough application to make students confident in their own data analyses.

**ENT 5275. Medical Entomology.** (3 cr.; Student Option; Every Fall)
Biological arthropod vectors of human disease. Emphasizes disease transmission and host, vector, and pathogen interactions. Prereq: instr consent.

**ENT 5341. Biological Control of Insects and Weeds.** (3-4 cr.; Student Option; Periodic Spring)
Biological control of arthropod pests and weeds. Analysis of relevant ecological theory and case studies; biological control agents. Lab includes natural enemy identification, short experiments, and computer exercises. Prereq: 3001, Biol 1009, EEB 3001 or grad.

**ENT 5361. Aquatic Insects.** (4 cr.; A-F or Audit; Every Spring)
Taxonomy, natural history of aquatic insects including their importance in aquatic ecology, water resource management, recreation, and conservation. Emphasizes family-level identification of immatures/adults. Field trips scheduled to local aquatic habitats. A collection is required. Prereq: instr consent.

**ENT 5900. Basic Entomology.** (1-6 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
For graduate students who need to make up certain deficiencies in their biological science background. Prereq: instr consent.
ENT 5910. Special Problems in Entomology. (1-6 cr. ; max 10 cr.) ; Student Option; Every Fall & Spring) Individual field, lab, or library studies in various aspects of entomology. prereq: instr consent

ENT 5920. Special Lectures in Entomology. (1-4 cr. ; max 12 cr.) ; S-N only; Every Fall & Spring) Lectures or labs in special fields of entomological research. Given by visiting scholar or regular staff member.

ENT 8006. Supervised Laboratory or Extension Teaching Experience. (1-3 cr. ; A-F or Audit; Every Fall, Spring & Summer) Training/experience conducting lab or extension based educational activities in Entomology. Students select a faculty member to serve as their sponsor, and develop lecture outlines or instructional aids such as web sites, web-based training sites, print materials, demonstration aids, and demonstration projects. Students prepare/conduct lab or extension presentations. Overviews of web-based instructional aids. prereq: 3005 or equiv or instr consent

ENT 8051. Toxicology. (2 cr. ; Student Option; Periodic Fall) Chemistry, mode of action of conventional insecticides. Insect growth regulators, microbial pesticides. Transgenic viruses, genetically modified plants. Offered alternate years. prereq: [5011, [organic, inorganic] chem courses, biochem course] or instr consent

ENT 8061. Scientific Communication and Ethics. (1 cr. ; S-N or Audit; Every Fall) Students develop/use critical elements of scientific communication, within an ethical framework. Elements in writing scientific manuscripts and research proposals. Oral communication for scientific, outreach, and classroom presentations.

ENT 8200. Colloquium in Social Insects. (1-3 cr. ; Student Option; Periodic Spring) Current research on bees, wasps, ants, and termites. Student critiques and research reports. prereq: 3020 or 3200

ENT 8210. Colloquium in Insect Evolution. (1-3 cr. ; Student Option; Periodic Fall) Research issues in systematics and evolution. Comparative biology, biogeography, and molecular evolution. Students may re-enroll as topics alternate. Students critique papers from primary literature. prereq: 5371 or instr consent

ENT 8240. Colloquium in Insect Ecology. (1-2 cr. ; Student Option; Every Fall & Spring) Advanced topics. prereq: 5041 or 5045 or instr consent

ENT 8300. Graduate Seminar. (1-2 cr. ; S-N or Audit; Every Fall & Spring) Oral and written reports on and discussion by students of selected topics from current literature. prereq: instr consent

ENT 8333. FTE: Master’s. (1 cr. ; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

ENT 8444. FTE: Doctoral. (1 cr. ; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

ENT 8594. Research in Entomology. (1-16 cr. ; max 96 cr.; S-N or Audit; Every Fall & Spring) Directed research.

ENT 8666. Doctoral Pre-Thesis Credits. (1-6 cr. ; max 12 cr.) ; No Grade Associated; Every Fall, Spring & Summer) TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr. doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

ENT 8777. Thesis Credits: Master’s. (1-18 cr. ; max 50 cr.) ; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; minimum of 10 cr required [Plan A only]

ENT 8888. Thesis Credit: Doctoral. (1-24 cr. ; max 100 cr.) ; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

Entrepreneurship (ENTR)

ENTR 6010. Opportunity Identification and Evaluation. (4 cr. ; A-F only; Periodic Fall) Developing the ability to spot, select, and evaluate business opportunities for new firm startups and corporate ventures. Core concepts, models, guidelines. Acquisition of practical knowledge/skill through direct observation, interaction, and practice. prereq: MBA student

ENTR 6020. Business Formation. (4 cr. ; A-F only; Every Fall & Spring) Business formation from concept development through startup. Business concept, plan, forecast, and budget. Resource markets/assembly. Problems/opportunities from concept stage through establishment of viable business. Cases, exercises, projects, business plans, guest speakers. prereq: MBA student

ENTR 6021. Preparing and Implementing the Business Plan. (2 cr. ; max 4 cr.) ; A-F only; Every Fall & Spring) Students work collaboratively to develop/implement business plans for a business venture, given a business opportunity. Pre/ gossip. Pre/ acquisition. Student teams present aspects of their business plan: “elevator pitch,” company mission, product/service value proposition, market segmentation, competitive analysis, strategy, marketing plan, financial projections. Students comment on each other’s plans. prereq: MBA student

ENTR 6023. Financing Business Ventures. (4 cr. ; A-F only; Every Spring & Summer) Translating a business plan into a financing plan. Developing alternative financing. Choosing a plan, based on financial/ nonfinancial criteria. Types of non-Fortune 1,000-type businesses as financiers view them. U.S. financial institutions: what they finance, their financing criteria. Financing instruments used in the United States, when/why to use them. Cases, exercises, guest speakers. prereq: MBA student

ENTR 6036. Managing the Growing Business. (2 cr. ; A-F only; Every Spring & Summer) Challenges posed by rapid growth/change in independent startups. Infrastructure development, radical changes in strategy, continuous needs for substantial additional resources. Emphasizes analysis of factors accelerating/impeding growth and review/creation of growth strategies. Integration of concepts from strategy, operations, marketing, finance, and human resource management. prereq: MBA student

ENTR 6037. Corporate Venturing. (2 cr. ; A-F or Audit; Every Fall & Summer) Entrepreneurial role of top management in maintaining/creating stakeholder value through formation/acquisition of new businesses, products, or markets within established corporations. Strategic role of corporate venturing. Cases, guest speakers, group projects. prereq: MBA student

ENTR 6041. Initiating New Product Design and Business Development. (2-4 cr. ; max 10 cr.) ; A-F only; Every Fall & Spring) Product development projects sponsored by business organizations. Supervision by faculty adviser/executives from sponsoring company. Lectures, workshops, guest speakers, team meetings, company visits, projects. prereq: MBA student

ENTR 6042. Implementing New Product Design and Business Development. (4 cr. ; max 8 cr.) ; A-F only; Every Spring) Implementation of product development projects begun in the Fall term in ENTR 6041. Projects are sponsored by businesses. Supervision by faculty advisors and sponsoring executives. Lectures, workshops, guest speakers, team meetings, company visits, and projects. prereq: MBA student

ENTR 6080. Technology Commercialization for Scientists and Engineers. (1-2 cr. ; S-N or Audit; Periodic Fall) Theoretical knowledge and real-world examples of skills/knowledge required to commercialize scientific discoveries/engineering inventions. Commercializing technology process, including starting/running a new company. prereq: Registered Ph.D. student in [IT or College of Biological Sciences or College of Agriculture, Food and Environmental Sciences or Medical School], instr consent

assembly. Problems/opportunities from concept stage through establishment of viable business. Cases, exercises, projects, speakers. prereq: CSOM grad student or instr consent

ENTR 6087. New Product Design and Business Development. (6 cr.; A-F only; Periodic Fall, Spring & Summer) Nine month project course in designing new products and business plans through prototype stage. Teams of CSOM and CSE students work with personnel from sponsoring organizations. Weekly lectures and team meetings. Formal design reviews and presentations. prereq: Grad student in CSOM or CSE or instr consent

ENTR 6089. Research Seminar in Entrepreneurial Studies. (1 cr.; A-F only; Periodic Fall) Research into populations of individual new and growing businesses. Evaluation of existing studies, development of research questions; selection of research methods, information collection and analysis. Final report suitable for publication. prereq: Grad student in CSOM or instr consent

ENTR 6090. Topics in Entrepreneurship. (2-4 cr. (max 8 cr.); A-F only; Every Fall & Spring) Selected topics in value creation; in business formation, growth, restructuring; in social and economic impact of new businesses, and entrepreneurship and public policy. prereq: CSOM grad student or instr consent

ESPM 5015. Invasive Plants and Animals. (3 cr.; Student Option; Fall Odd Year) Overview of invasive plants/animals in North America and around the world. A range of taxa are covered along with their impact and approaches to control. Readings, discussions, and lectures from experts on topics such as invasion theory and real-world management.

ESPM 5031. Applied Global Positioning Systems for Geographic Information Systems. (3 cr.; A-F or Audit; Every Spring) GPS principles, operations, techniques to improve accuracy. Datum, projections, and coordinate systems. Differential correction, accuracy assessments discussed/applied in lab exercises. Code/carryer phase GPS used in exercises. GPS handheld units, PDA based ArcPad/GPS equipment. Transferring field data to/from desktop systems, integrating GIS data with GPS. prereq: Grad student or instr consent

ESPM 5061. Water Quality and Natural Resources. (3 cr.; Student Option; Every Fall & Spring) Recent literature in field. Complements 4061. Ecology of aquatic ecosystems, how they are valuable to society and changed by landscape management. Case studies, impaired waters, TMDL process, student engagement in simulating water quality decision making.

ESPM 5071. Ecological Restoration. (3 cr.; Student Option; Every Fall) Ecological/physiological concepts for revegetation of grasslands, wetlands, forests, and landscapes. Plant selection, plant establishment/evaluation. State/federal programs that administer restoration/reclamation. Field trips. prereq: [One college course in ecology, one college course in [plant science or botany]] or instr consent

ESPM 5102. Managing International Natural Resources Programs and Projects: Forests, Water and Land Use. (3 cr.; A-F only; Every Spring) Global hot spots where biodiversity is threatened by multiple stressors (zoonotic disease, rapid growth, opening of new frontiers, climate change). Strategies to address complex situations. Emphasis on learning interdisciplinary applied skills, management practices, hands-on techniques.

ESPM 5108. Ecology of Managed Systems. (4 cr.; A-F or Audit; Every Fall) Analysis of functioning of ecosystems primarily structured by managed plant communities. Managed forests, field-crop agroecosystems, rangelands, aquatic systems. Structure-function relations. Roles of biodiversity in productivity, resource-use efficiency, nutrient cycling, resilience. Emerging principles for design of sustainable managed ecosystems, provision of ecological services. prereq: Sr or grad student

ESPM 5111. Hydrology and Water Quality Field Methods. (3 cr.; A-F or Audit; Every Spring) Integrates water quality, surface/groundwater hydrology. Case studies, hands-on field data collection, calculations of hydrological/water quality parameters. Meteorological data, snow hydrology, stream gauging, well monitoring, automatic water samplers. Designing water quality sampling program. Geomorphology, interception, infiltration. prereq: Grad student or instr consent

ESPM 5211. Survey, Measurement, and Modeling for Environmental Analysis. (3 cr.; Student Option; Every Spring) Introduction to survey, measurement, and modeling concepts/methods for study of natural resources and environmental issues. Emphasizes survey design for data collection, estimation, and analysis for issues encompassing land, water, air, vegetation, animal, soil, and human/social variables.

ESPM 5241. Natural Resource and Environmental Policy. (3 cr.; Student Option; Every Spring) Political processes at play in management of environment and how disagreements are addressed by different stakeholders, private-sector interests, government agencies and institutions, communities, and nonprofit organizations. prereq: Grad student or instr consent

ESPM 5242. Methods for Environmental and Natural Resource Policy Analysis. (3 cr.; A-F only; Fall Even Year) Methods, formal and informal, for analyzing environmental and natural resource policies. How to critically evaluate policies, using economic and non-economic decision-making criteria. Application of policy analysis principles/concepts to environmental/natural resource problems. Recognizing politically-charged environment in which decisions over use, management, and protection of these resources often occur. prereq: grad student

ESPM 5245. Sustainable Land Use Planning and Policy. (3 cr.; A-F or Audit; Every Fall) Planning theories, concepts, and constructs. Policies, processes, and tools for sustainable land use planning. Scientific/technical literature related to land use planning. Skills needed to participate in sustainable land use planning.

ESPM 5251. Natural Resources in Sustainable International Development. (3 cr.; A-F or Audit; Every Fall) International perspectives on resource use in developing countries. Integration of natural resource issues with social, economic, and policy considerations. Agriculture, forestry, agriculture, non-timber forest products, water resources, certification, development issues. Latin American case studies. prereq: Grad student or instr consent

ESPM 5256. Natural Resource Law and the Management of Public Lands and Waters. (3 cr.; A-F or Audit; Spring Odd Year) This course is intended to provide non-law students with an understanding of the role of the judiciary in the management of public lands and public waters. The course will examine Constitutional provisions affecting the management of public resources, the concept of property rights, major principles of water law, the role of the legal system in environmental review, the scope of legal authority granted to administrative agencies, and limitations of private property rights to protect public lands and public waters. The class will introduce students to the concepts of legal reasoning including case synthesis and analysis. The class will be taught using a combination of lecture, guest lectures, written exercises and class participation. prereq: grad student

ESPM 5261. Economics and Natural Resources Management. (4 cr.; A-F or Audit; Every Spring)

ESPM 5295. GIS in Environmental Science and Management. (4 cr.; A-F or Audit; Every Fall)
Application of geographic information science and technologies (GIS) in complex environmental problems. Students gain experience in spatial data collection, database development, and spatial analysis, including GNSS and field attribute collection, image interpretation, and existing data fusion, raster/vector data integration and analysis, information extraction from LIDAR data, DEM conditioning and hydrologic analysis, neighborhood analysis, bulk processing and automation, and scripting. Problems vary depending on topics, often with extra-University partners. *Please note that students should have completed a semester-long, introductory lab/lecture GIS course at the graduate or undergraduate level before enrolling in this course, e.g., FNRM 5131. We do not require any given course because students come from varied universities and backgrounds. That said, we assume a knowledge commensurate with a comprehensive introductory course. Students seeking a first course are directed to FNRM 5131. If you have questions regarding your capabilities, please contact the instructor prior to enrolling.

ESPM 5402. Biometeorology. (3 cr.; Student Option; Fall Even Year)
This course examines the interactions between the atmosphere and the Earth’s surface. We will discuss the principles of the surface energy and radiation balance, air motion in the atmospheric boundary layer, land surface parameterization for climate models, boundary layer budgets, and field research methods. The course aims to achieve exemplary learning through hands-on activities and examining recent field studies conducted in natural and managed ecosystems. prereq: MATH 1271, PHYS 1201, STAT 3011, [instructor consent]

ESPM 5480. Topics in Natural Resources. (1-4 cr.; max 6 cr.; Student Option; Every Fall, Spring & Summer)
Lectures by visiting scholar or regular staff member. Topics specified in class schedule.

ESPM 5555. Wetland Soils. (3 cr.; A-F or Audit; Every Fall)
Morphology, chemistry, hydrology, formation of mineral/organic soils in wet environments. Soil morphological indicators of wet conditions, field techniques of identifying hydric soils for wetland delineations. Peatlands. Wetland benefits, preservation, regulation, mitigation. Field trips, lab, field hydric soil delineation project. prereq: SOIL 1125 or 2125 or equiv or instr consent; concurrent registration is required (or allowed) in SOIL 4511 recommended

ESPM 5575. Wetlands. (3 cr.; Student Option; Every Spring)
Freshwater wetland classification, wetland biota, current/historic status of wetlands, value of wetlands. National, regional, Minnesota wetlands conservation strategies. Ecological principles used in wetland management. prereq: 3575, [or grad student or instr consent]

ESPM 5601. Principles of Waste Management. (3 cr.; A-F or Audit; Every Spring)

ESPM 5602. Regulations and Corporate Environmental Management. (3 cr.; A-F only; Every Spring)
Concepts, major issues relating to industrial ecology and industry as they are influenced by current standards/regulations at local, state, and national levels. prereq: APEC 1101 or ECON 1101

ESPM 5603. Environmental Life Cycle Analysis. (3 cr.; A-F only; Every Fall)
Concepts, major issues relating to inventory and subsequent analysis of production systems. Production system from holistic point of view, using term commonly used in industrial ecology: "the metabolic system." prereq: Math 1142 or [Math 1271, Math 1282], Econ 1101 or ApEc 1101

ESPM 5604. Environmental Management Systems and Strategy. (3 cr.; A-F only; Every Fall)
Environmental problems such as climate change, ozone depletion, and loss of biodiversity.

ESPM 5605. Recycling: Extending Raw Materials Supplies. (3 cr.; A-F only; Every Spring)

ESPM 5607. Industrial Biotechnology and the Environment. (3 cr.; A-F only; Every Spring)
Biotechnology pertaining to biobased products development and their environmental impact. prereq: BIOL 1009, CHEM 1021

ESPM 5703. Agroforestry in Watershed Management. (3 cr.; Student Option; Spring Even Year)
Biological, physical, and environmental attributes of agroforestry as pertains to watershed management. Coupling production with watershed protection benefits. Implications for policy, economics, and human dimensions in sustainable development. Examples/case studies from North America and developing countries. prereq: Grad student or instr consent

ESPM 5811. Environmental Interpretation. (3 cr.; A-F or Audit; Every Spring)

Experimental and Clinical Phar (ECP)

ECP 5220. Regulatory Issues in Drug Research. (2 cr.; Student Option; Every Fall)
Regulatory issues explored in conducting drug research trials. Performing different aspects of clinical trials. Lectures, readings, small group discussions, homework assignments. prereq: ECP grad student or Pharm.D. professional student or instr consent

ECP 5290. Clinical Clerkship. (1-8 cr.; max 16 cr.; Student Option; Every Fall)
Supervised study of pharmaceutical services at University of Minnesota Medical Center, Fairview or affiliated institutions. prereq: Grad experimental and clinical pharmacology

ECP 5620. Drug Metabolism and Disposition. (3 cr.; A-F or Audit; Spring Even Year)
Oxidative/conjugative enzymes systems involved in human drug metabolism/disposition. Various in vitro models used to evaluate drug metabolism or chemical entity, pros/cons of each. Factors involved in conducting in vivo studies. Components used to predict in vivo drug disposition from in vivo studies. prereq: Grad student or instr consent

ECP 5993. Directed Study in Experimental and Clinical Pharmacology. (1-4 cr.; max 8 cr.; Student Option; Every Fall & Spring)
Student working with faculty member designs a directed study course, including a complete syllabus, appropriate time commitment, and workload for number of credits.

ECP 5994. Directed Research in Experimental and Clinical Pharmacology. (1-4 cr.; Student Option; Every Fall & Spring)
Student works with faculty adviser to design a scientific research project.

ECP 8100. Seminar. (1-2 cr.; max 16 cr.; Student Option; Every Fall & Spring)
Selected topics in experimental/clinical pharmacology. prereq: ECP grad student or instr consent

ECP 8200. Research Problems. (1-8 cr.; max 16 cr.; Student Option; Every Fall, Spring & Summer)
Individually designed research experience directed at contemporary problems related to drug use. prereq: Grad SACP major (ECP Track) or instr consent

ECP 8210. Clinical Therapeutics. (3 cr.; Student Option; Periodic Fall)
Topics in clinical pharmacology that illustrate continuum of pathophysiology of a disease...
This course will develop computer skills to apply nonlinear regression models to describe the pharmacokinetics and pharmacodynamics of biologics. Prerequisite: A course in basic pharmacokinetics; enrollment in the Experimental & Clinical Pharmacology or Pharmaceutics graduate program, or instructor consent.

ECP 8444. FTE: Doctoral. (1 cr; No Grade Associated; Every Fall, Spring & Summer) FTE: doctoral. Prerequisite: Doctoral student, advisor, and DGS consent.

ECP 8666. Doctoral Pre-Thesis Credits. (1-6 cr; [max 12 cr]; No Grade Associated; Every Fall, Spring & Summer) Doctoral pre-thesis credits, prerequisite: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2005 may register up to four times, up to 60 combined cr.

ECP 8777. Thesis Credits: Master's. (1-18 cr; [max 50 cr]; No Grade Associated; Every Fall, Spring & Summer) Thesis credits: master's, prerequisite: Max 18 cr per semester or summer; 10 cr total required [Plan A only].

ECP 8888. Thesis Credit: Doctoral. (1-24 cr; [max 100 cr]; No Grade Associated; Every Fall, Spring & Summer) Thesis credit: doctoral, prerequisite: Max 18 cr per semester or summer; 24 cr required.

ECP 8900. Advanced Topics in Experimental and Clinical Pharmacology. (1-4 cr; [max 8 cr]; Student Option; Every Fall & Spring) Topic varies depending on faculty teaching course. Prerequisite: ECP grad program or instructor consent.

ECP 8992. Directed Readings in Experimental and Clinical Pharmacology. (1-4 cr; [max 8 cr]; Student Option; Every Fall & Spring) Instructor consent.

ECP 8993. Directed Study in Experimental and Clinical Pharmacology. (1-6 cr; [max 12 cr]; Student Option; Every Fall & Spring) Instructor consent.

Family Med & Community Health (FMCH)

FMCH 5345. Curriculum Design and Teaching Strategies for Medical Education I. (1 cr; A-F or Audit; Summer Even Year) Taken with 5345. Practicum of lecture, demonstration, small-group discussion, clinical teaching, and computer-assisted instruction. Academic ethics, policies, copyright issues, tenure, academic freedom, problem-based learning. Prerequisite: concurrent registration is required (or allowed) in 5345, instructor consent.

FMCH 5564. Family Practice Seminar. (1 cr; [max 9 cr]; O-N or Audit; Every Fall & Spring) Knowledge, skills, and attitudes in biomedical and behavioral sciences that form foundation for academic discipline of family medicine; medical decision making, common problems and procedures, family theory and assessment, clinical pharmacology, human sexuality. Prerequisite: MD or DO degree.

FMCH 5580. Clinical Issues in Human Sexuality. (2 cr; O-N or Audit; Every Fall & Spring) Assisted and treatment techniques pertaining to common sexual problems. Prerequisite: Enrollment in health sci grad programs in CSPP, Psy, PubH, SW or FSoS or instructor consent.

FMCH 5950. Clinical Issues in Human Sexuality. (2 cr; O-N or Audit; Every Fall & Spring) Assisted and treatment techniques pertaining to common sexual problems. Prerequisite: Enrollment in health sci grad programs in CSPP, Psy, PubH, SW or FSoS or instructor consent.

FMCH 7200. Introduction to Residency in Family Medicine. (2 cr; H-N only; Every Fall, Spring & Summer) This 2-week elective is offered at all of the University of Minnesota-affiliated Twin Cities residency programs in Family Medicine, and select other local programs. This elective provides students the opportunity to experience the full spectrum of Family Medicine and Community Health at that program. All efforts will be made to place the student at the program of their choice. The student will work with Family Medicine faculty physicians and residents in all the facets of Family Medicine care including: office, inpatient hospital service, labor and delivery, overnight call, procedures and, where applicable, nursing home rounds or home visits.

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
Program (RPAP): Pediatrics.

FMCH 7506. Rural Physician Associate Program (RPAP): Pediatrics. (6 cr.; H-N or Audit; Every Fall & Spring) Community-based elective with extensive pediatrics experience in a rural setting. prereq: 7501

FMCH 7507. Rural Physician Associate Program (RPAP): Otolaryngology. (2-4 cr.; P-N or Audit; Every Spring) Community-based elective with extensive otolaryngology experience in a rural setting.

FMCH 7508. Rural Physician Associate Program (RPAP): Urology. (2-4 cr.; P-N or Audit; Every Fall, Spring & Summer) Community-based elective with extensive urology experience in a rural setting.

FMCH 7509. Rural Physician Associate Program (RPAP): Primary Care Clerkship I. (4 cr.; H-N or Audit; Every Fall & Spring) Community-based elective with extensive primary care experience in a rural setting. prereq: 7501

FMCH 7510. Rural Physician Associate Program (RPAP): Primary Care Clerkship II. (4 cr.; H-N or Audit; Every Fall, Spring & Summer) Community-based elective with extensive primary care experience in a rural setting. prereq: 7509

FMCH 7511. Urban Community Ambulatory Medicine (UCAM). (4 cr.; H-N only; Every Fall, Spring & Summer) UCAM provides 12 weeks of ambulatory continuity experience in an underserved urban community Family Medicine Clinic. UCAM expands the Family Medicine Clerkship exposure to patient diversity, low income, multicultural urban medicine, and community health. Students are required to attend the Family Medicine Clerkship/Primary Care Selective seminars as well as 4 UCAM seminars. From a scheduling point of view, UCAM combines the 6 weeks of Family Medicine Clerkship/Primary Care Selective with 4 extra weeks of elective credit. The principles of urban medicine will be blended throughout the 12 weeks, as will the project. Each student will participate in a community health project and complete a journal about his/her experience. The community health project ideally combines the EBM focus of the Family Medicine clerkship project with a longitudinal project. Prereq: FMCH 7600 and FMCH 7700

FMCH 7512. Urban Community Ambulatory Medicine (UCAM). (4 cr.; H-N or Audit; Every Fall, Spring & Summer) Expands primary-care clerkship (PCC) into 16 weeks of primary care experience in one underserved urban clinic. Students attend PCC seminars during first eight weeks, followed by weekly seminars covering patient diversity, indigenous medicine, and community health. prereq: 7511, InMd 5508, InMd 7509

FMCH 7513. Rural Physician Associate Program (RPAP): Orthopaedic SurgeryRSU. (2-4 cr.; P-N or Audit; Periodic Fall & Spring) Community-based elective with extensive orthopaedic surgery experience in a rural setting. prereq: Accepted into RPAP

FMCH 7515. RPAP: Emergency Medicine. (4 cr.; H-N only; Every Fall, Spring & Summer) tbd

FMCH 7516. Research in Human Sexuality. (2-4 cr.; [max 8 cr.]; H-N only; Every Fall, Spring & Summer) This elective consists of clinical and/or laboratory research related to human sexuality in areas such as incest, rape, gender dysphoria, compulsive sexual behavior, sex offenses, and sexual dysfunction. It is adaptable to the specific interests of the student and faculty.

FMCH 7518. Inpatient Family Medicine. (2 cr.; H-N only; Every Fall, Spring & Summer) Students will participate in the family medicine residency inpatient teaching service. This service consists of a variety of patients including pediatric, obstetric, geriatric, and other adult patients. Supervision and teaching are provided by a family medicine faculty who participates daily in didactic teaching, x-ray rounds, and hospital rounds. Members of the team include a medical student, first and second year resident, and the chief resident. These individuals share responsibility for patients on the service and perform initial histories and physicals, write daily orders and progress notes, complete discharge summaries, and communicate with consultants and family members. Students will also attend daily noon conferences. Call is required at some sites. Prereq: FMCH 7600 or FMCH 7523; and MED 7500

FMCH 7519. Clinical Practice of Occupational Medicine. (2-4 cr.; H-N or Audit; Every Fall, Spring & Summer) Students perform complete occupational health history, set up basic problem-solving approaches to occupational health problems.

FMCH 7520. Rural Rotation in Family Medicine. (4 cr.; H-N only; Every Fall, Spring & Summer) This course is intended for students interested in observing and participating in Family Medicine in the rural setting. Students participate in patient care in the patient's home, in long-term facilities, in the doctor's office and in the hospital. Students observe close interrelationships between practicing physicians and the community.

FMCH 7521. Topics in Immigrant Health. (4 cr.; H-N only; Every Spring) Course is designed to offer an intensive multidimensional exploration of immigrant health using clinical, multimedia, academic and on-line learning. The course will include an individualized in-depth project and an individualized learning plan will be developed between each student and the course director after assessing the student's experience, background and interest. This course will combine clinical experiences at a variety of sites which serve immigrant patients with text-based and web-based reading, on-line research, group and individual community visits and on-line and class discussions to provide students with an opportunity to study in-depth the issues that communities and methods by which those barriers are being overcome.

FMCH 7524. Rotation in Palliative Medicine and Hospice. (2 cr.; H-N only; Every Fall, Spring & Summer)
Introduces students to the field of palliative care and hospice medicine. Students will participate in patient care with hospice staff and palliative care physicians and other practitioners in the hospital, nursing home, clinic, and patient's homes. Students will directly work with interdisciplinary teams in their daily work, and spend time with practitioners in social work, nursing, spiritual health, music therapy, and physicians.

**FMCH 7525. Cardiovascular Medicine.** (2 cr.; H-N only; Every Fall & Spring) Students will participate in daily cardiology inpatient rounds. They will work 1:1 with the rounding cardiologist for the week. Responsibilities include the initial cardiology consultation and daily rounds on patients in the hospital. prereq: Med 7500

**FMCH 7526. Medicine and the Arts.** (2 cr.; P-N only; Every Fall) Students will work with the course directors to tailor a course of study that will immerse them in forms of art and creative expression (such as literature, film, visual art, music, etc.) that reflect—and are inspired by—the practice of medicine.

**FMCH 7527. Lesbian, Gay, Bisexual, and Transgender (LGBT) Health.** (2 cr.; P-N only; Every Fall) In this course, students will gain an understanding of health risks experienced by LGBT individuals and will practice assessing sexual orientation, gender identity, sexual health, and discussing specific health concerns and treatment options in order to become comfortable working with this population. Students will also hear from LGBT individuals themselves about their healthcare experiences and how they wish to be treated. In addition, physicians who are LGB or transgender will talk about managing their professional and personal identities, as well as being “out” in the community and identifying as an LGBT-friendly healthcare provider.

**FMCH 7530. Preceptorship in Community Family Medicine.** (2 cr.; H-N only; Every Fall, Spring & Summer) This course is intended for students interested in pursuing family medicine as a career, or for students wishing to acquire a broadly-based medical background before training in another specialty. The student will usually participate in inpatient and outpatient care in the family medicine clinic and in the hospital.

**FMCH 7531. Introduction to Healthcare for the Underserved.** (2-6 cr.; H-N or Audit; Every Fall & Spring) Introduces students to the health care needs and challenges faced by special population groups served by Family Medicine. These include immigrant and refugee populations, minority populations, and various other underserved groups. During this rotation based in a clinic serving one or more of these population groups, the student will become familiar with the unique health needs of a population and the resources and methods used to address those needs. Issues such as communication, education, and traditional healing beliefs and systems will be addressed. Typically, 2.5 days per week will be spent in direct patient care, 1 day is reserved for students to perform independent learning around the population to be studied while the remaining 1.5 days may be spent in a variety of non-direct patient care or community-based activities, depending on the clinic site.

**FMCH 7535. Community Health in Family Medicine.** (3 cr.; H-N or Audit; Every Fall, Spring & Summer) Individually designed outpatient rotation. Combines clinical work in urban setting with a series of experiences in the community. preq: At least two six-week rotations in medicine or pediatrics or obstetrics or surgery

**FMCH 7537. Sports Medicine.** (4 cr.; H-N only; Every Fall & Spring) Students will gain experience in the field of sports medicine including exposure to the disciplines of primary care sports medicine, orthopedic sports medicine, sports physical therapy, and athletic training.

**FMCH 7538. Sports Medicine in Duluth.** (4 cr.; H-N only; Every Fall, Spring & Summer) This course is an opportunity for students interested in primary care or a musculo-skeletal specialty to develop an appreciation for the role of sports medicine in his/her practice. The student will work closely with full-time sports medicine physicians and allied health providers, including physical therapists and athletic trainers.

**FMCH 7540. Sports Medicine: USA Soccer Cup.** (2 cr.; H-N only; Every Summer) Course held immediately prior to the start of the USA Soccer Cup Tournaments every July. This course consists of didactic lectures and hands on workshops focusing on sports medicine topics with an emphasis on soccer.

**FMCH 7544. Outpatient-HIV Management in Family Medicine.** (2 cr.; H-N only; Every Fall, Spring & Summer) The overall goal of this course is to familiarize the student with the many illnesses and complications of HIV disease, current Hepatitis C treatment, and some travel medicine. This includes the medical, psychological, social and economic problems which the HIV patient faces. The student will become familiar with the many antiviral medications used in HIV disease.

**FMCH 7551. Rural Community Ambulatory Medicine PCC.** (12 cr. [max 24 cr.]; H-N only; Every Fall, Spring & Summer) Twelve-week course. Four weeks in a Twin Cities Family Residency clinic, eight weeks in a selected Rural Community. Exposure to patients from diverse backgrounds in an outpatient setting to rural medicine, delivery systems, and community health. Small-group seminars, one-day Hospice experience, project, final exam.

**FMCH 7560. Alcohol and Drug Addiction Treatment.** (2 cr.; H-N only; Every Fall, Spring & Summer) Intensive exposure to current approaches to therapy and rehabilitation of chemically dependent patients. For most of these patients, alcohol is the most abused drug. The course includes participant observation in group therapy sessions and lectures.

**FMCH 7577. An Introduction to Complementary and Alternative Therapies.** (3 cr.; O-N or Audit; Periodic Fall & Spring) Complementary therapies and their integration with allopathic treatments. Observation of complementary care providers in community. Examine culturally-based approaches to healthcare. Weekly seminars, special project, use of Internet, preq: Internet access, basic e-mail skills; Nurs 5609 recommended

**FMCH 7585. Sexual Problems in Clinical Practice.** (2 cr.; P-N only; Every Fall, Spring & Summer) This course requires a minimum commitment of 40 hours per week (some evening time possible) over a 2-4 week period. Students will have the opportunity for observation and practice of sex-related education and counseling through participation in intake and assessment sessions, individual and conjoint sessions, and group sex therapy. Each student will be supervised by a member of the Program in Human Sexuality staff. The student is expected to participate in several hours of staff conferences and seminars each week. Readings will be assigned.

**FMCH 7595. Family Medicine Research.** (2-8 cr.; H-N only; Every Fall, Spring & Summer) Academic research in collaboration with member of academic or clinical faculty. Identification of parameters/methodological components of family medicine research. Develops knowledge/skills essential for academic careers in family medicine.

**FMCH 7599. Family Medicine Independent Study.** (2-8 cr.; H-N only; Every Fall, Spring & Summer) This course is intended for a student interested in pursuing a Family Medicine project that does not fit well in one of the other Family Medicine elective descriptions. For any directed study project, there will be a written agreement between the student and Course Director.

**FMCH 7600. Family Medicine Four-Week Clerkship.** (4 cr.; H-N only; Every Fall, Spring & Summer) Ambulatory four-week clerkship.

**FMCH 7700. UCAM Family Medicine Selective.** (4 cr.; P-N only; Every Fall, Spring & Summer) Four-week ambulatory experience in family medicine clinic.

**FMCH 7701. RPAP: Family Medicine Clerkship.** (4 cr.; H-N only; Every Fall, Spring & Summer) Community-based elective. Extensive primary care experience in rural setting.

**FMCH 7702. RPAP: Primary Care Selective.** (4 cr.; P-N only; Every Fall, Spring & Summer) Community-based elective. Extensive primary care experience in rural setting.

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
FSOS 5426. Alcohol and Drugs: Families and Culture. (3 cr.; Student Option; Periodic Fall, Spring & Summer) Overview of psychology/sociology of drug use/abuse. Life-span, epidemiological, familial, cultural data regarding use. Fundamentals of licit/illicit drug use behavior. Gender, ethnicity, social class, sexuality, sexual orientation, disability.

FSOS 5429. Counseling Skills Practicum I. (3 cr.; Student Option; Periodic Fall, Spring & Summer) Basic counseling skills. Counselor needs/motivations, non-verbal communication, basic/advanced empathy, identifying strengths, maintaining focus, challenging discrepancies, use of self. Emphasizes building from client strengths, learning through role-playing.

FSOS 5702. Prevention Science Research Methodology. (3 cr.; A-F or Audit; Every Fall & Spring) This course is intended to provide students with broad exposure to topics in research methodology within the field of prevention science. Prevention science as a discipline focuses on the etiology and prevention of social, physical and mental health problems and the translation of that information to promote health and well-being. This course will emphasize research methodology as it pertains to preventive interventions in youth and family contexts. The course is intended to serve as a survey of a wide range of topics within these areas, with research design, measurement issues, and analytic methods representing the major foci. Topics will be covered with attention to the community contexts within which prevention research often occurs as well as the ethical and human subjects issues that may arise. Students who successfully complete the course are expected to be able to interpret and critically evaluate prevention research methodology as well as identify appropriate methodological strategies to address research questions within prevention science.

FSOS 5703. New Topics in Prevention: Implementation and Dissemination. (3 cr.; A-F or Audit; Every Spring) This is an interdisciplinary course focused on the new science of implementation and dissemination of evidence-based/empirically-supported family-focused psychosocial prevention programs. Course content will include an overview of conceptual and theoretical foundations of implementation research, key research questions, methods for evaluating implementation and dissemination efforts, and case examples from the empirical literature. The course will take an ecological perspective to the implementation of family-based prevention programs, addressing questions such as how widespread efforts to install programs in communities can ensure that programs create change in children and families.

FSOS 5900. Special Topics in Family, Youth, and Community. (1-4 cr. [max 20 cr.]; Student Option; Every Fall, Spring & Summer) Topics not dealt with in regular courses. Topics vary by offering.

FSOS 5902. Family Education Perspectives. (3 cr.; A-F only; Every Fall) Origines, evolution, and critique of alternative perspectives on family education. Implications for educators, programs, and participants. Online course that requires collaborative learning.

FSOS 5932. Introduction to Parent Education. (1 cr.; A-F only; Every Fall & Summer) Philosophy, history, and models of parent education. Ethical, critically reflective professional practice. Observation of parent and family education practice.

FSOS 5942. Everyday Experiences of Families. (3 cr.; A-F only; Every Spring & Summer) Culture and everyday experiences of diverse families. Relevance to parent education and to professional development of parent educators. Research/theoretical knowledge woven with observation/personal reflection.

FSOS 5944. Parent Education Curriculum. (3 cr.; A-F only; Every Fall) How parent learning and development, child development, and family systems theories influence curriculum approaches and materials in parent education. Student develop construct, critique curriculum on self-selected topics in parent and family education.

FSOS 5945. Teaching and Learning in Parent Education. (2 cr.; A-F only; Every Fall) Students select/use parent education teaching strategies/processes to meet needs of various populations of adult learners. Critical
FSOS 5946. Assessment and Evaluation in Parent Education. (3 cr.; A-F only; Every Spring) Theory, terminology, issues, and approaches in assessment and evaluation. Application to monitoring parent education program performance, assessing program quality, and measuring parent learning and development. Design of evaluation plan for self-designed curriculum. prereq: 5943, 5444, or instr consent

FSOS 5949. Student Teaching in Parent Education. (2 cr.; A-F only; Every Spring) Supervised parent education practice to meet individual student needs and interests. Online discussion, reflection, and cooperative learning. prereq: Application for student teaching; FSOS 5937, 5942, 5943, 5944, 5945.

FSOS 8001. Conceptual Frameworks in the Family. (3 cr.; A-F only; Every Fall) Major theoretical models about families, emphasizing sociohistorical context.

FSOS 8002. Advanced Family Conceptual Frameworks. (3 cr.; A-F only; Every Spring) Builds on FSOS 8001 by focusing specifically on family level research questions. Family development/critical theoretical perspectives that can be used to understand/study family processes/contemporary ecological issues. prereq: 8001 or instr consent

FSOS 8003. Current Issues in Family Science. (3 cr.; Student Option; Every Fall) Content, theories, and methodologies in family science. Emphasizes findings of recent/emerging areas of research. Readings covering a wide range of topics. Critical examination of research studies. Targeted class discussion.

FSOS 8007. Ethical Issues and Moral Dilemmas in Family Life. (5 cr.; Student Option; Periodic Fall) Multidisciplinary perspectives of ethics, social norms, family law, family policy, family economics, and family decision-making. Focuses on differing perspectives of individuals representing various ethnicities, socio-economic levels, religions, and sexual orientations.

FSOS 8013. Qualitative Family Research Methods. (3 cr.; A-F only; Periodic Fall & Spring) Approaches to qualitative family research evaluation. Phenomenological, feminist, grounded theory, content analytic, ethnemethodological, ethnographic, program evaluation. Theory, research examples, student projects.

FSOS 8014. Quantitative Family Research Methods II. (3 cr.; A-F only; Every Spring) Quantitative research process, from developing research question to putting findings to use. Major course project basis for class discussion. Family research. Applying research knowledge to study of families. prereq: [5014 or equiv], [8001 or equiv]. [two stat courses or instr consent]

FSOS 8015. Advanced Qualitative Family Research Methods. (3 cr.; A-F only; Every Fall) Applying qualitative research methods to understand individual/collective meaning, experience within/across diverse family systems. prereq: 8013 or instr consent

FSOS 8031. Family of Origin. (3 cr.; S-N or Audit; Periodic Fall & Spring) In-depth study of each student’s family of origin in a group of other students and a clinical faculty therapy supervisor. prereq: Preference given to marriage and fam therapy students

FSOS 8033. Problems in Families. (3 cr.; Student Option; Periodic Spring) Family therapy assessment/treatment approaches to problems such as depression, alcoholism, and sexual abuse, and to challenges of varying family structures, such as single-parent/remarried families. prereq: [8032 or equiv], instr consent

FSOS 8034. Marriage and Family Therapy Supervision. (3 cr.; Student Option; Periodic Fall) Theories of supervision, structures for supervision, methods of supervision, evaluation process, legal/ethical issues. Therapist-client-supervisor relationships, potential problems, contextual issues. prereq: FSOS doctoral student enrolled in Couple Family Therapy (CFT) or instr consent

FSOS 8035. Assessment of Couples and Families. (3 cr.; A-F or Audit; Periodic Fall) Issues in research and clinical assessment. Assumptions and values underlying assessment approaches. Specific assessment techniques discussed, evaluated, and administered. Ethical, legal, and practical issues. prereq: 8014 or equiv or instr consent

FSOS 8036. Couple/Marriage and Family Therapy Research. (3 cr.; A-F only; Periodic Fall & Spring) Historical/contemporary approaches to C/MFT research with emphasis on prevention, intervention, dissemination from variety of perspectives. prereq: FSOS doctoral student enrolled in Couple Family Therapy (CFT) or instr consent

FSOS 8037. Ethical, Legal, and Professional Issues in Mental Health Practice: Issues with Couples and Families. (2-10 cr.; A-F or Audit; Periodic Fall & Spring) Boundaries and triangles, gender inequities, family law, confidentiality and reporting requirements, dual roles, client diversity, and value clashes. prereq: [8032, practicum or internship exper] or [grad student in cooperating mental hlth practice prog who has completed 1 course on therapy with children

FSOS 8039. Clinical Interventions for Couples. (3 cr.; A-F or Audit; Periodic Fall) Interventions into problems faced by couples at various ages and stages of their relationship. Developing and implementing effective strategies for problem solving, relationship maintenance, and partner growth, including integration of sex therapy into ongoing couple therapy. prereq: 8032 or equiv or instr consent

FSOS 8043. Family Theory Development: A Systemic Perspective. (3 cr.; Student Option; Periodic Fall & Spring) Concepts and principles of systems and ecosystems and their applications in family science; emphasizes theoretical integration and development of research models with appropriate methodologies. prereq: 8001 or equiv or instr consent, FSOS PhD student beyond 1st yr

FSOS 8047. Integrative Research Seminar. (3 cr.; Student Option; Every Spring) For advanced doctoral students primarily in family social science who are working on independent research projects. Giving and receiving of constructive criticism and support in integrating theories, methods, and applications in order to create a totality that is logically coherent and conceptually and methodologically sound. prereq: 8001 or equiv, 8013 or equiv, 8014 or equiv

FSOS 8010. Family Stress, Coping, and Adaptation. (3 cr.; Student Option; Periodic Fall & Spring) Helping families become more resilient to stress by decreasing vulnerability to crises and traumatic stress disorders. Students develop research or intervention proposal on family stress, coping, adaptation, crisis, trauma, or resilience. prereq: 8001 or equiv, research methods course

FSOS 8014. Family Policy Seminar. (3 cr.; Student Option; Periodic Spring) Distinguishing family policy research from other family research. Conceptual frameworks, methods, and roles family policy research can play in policy-making and knowledge-building processes.

FSOS 8015. Family Gerontology. (3 cr.; Student Option; Periodic Spring) Integrates gerontology and family studies; new lines of inquiry, qualitative and quantitative, into aging families. Family gerontological research, family relationships, family and long-term care institutions, theoretical frameworks and research methods, and research and interventions. prereq: 4154 or equiv or instr consent

FSOS 8107. Family Values Research: Theories and Critical Methods. (3 cr.; Student Option; Periodic Fall)
Interdisciplinary seminar on critical modes of inquiry in the family domain that require designing studies using normative theories, examining values as units of observation, and solving practical problems by collaborative strategies designed to encourage change. prereq: 8013 or equiv, 8014 or equiv or instr consent; WCHE 8920 recommended

FSOS 8150. Topics in Family Social Science. (1-6 cr.; Student Option; Every Fall, Spring & Summer)
Special seminars on timely topics. prereq: FSOS grad student or instr consent

FSOS 8151. Preparation for Independent Teaching in Family Studies. (1 cr. [max 3 cr.]; S-N only; Every Fall & Spring)
Practicum. Skills to independently teach family sciences courses to undergrads. prereq: instr consent

FSOS 8160. Topics in Marriage and Family Therapy. (1-6 cr.; Student Option; Periodic Fall)
Special seminars on timely topics. prereq: MFT grad student or instr consent

FSOS 8193. Directed Study in Family Social Science. (1-6 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)
Directed study. prereq: Doctoral student in FSOS or related field

FSOS 8200. Orientation for Family Social Science. (1 cr.; S-N or Audit; Every Fall)
TBD

FSOS 8201. Teaching Family Courses in Higher Education I. (3 cr.; S-N or Audit; Periodic Fall & Spring)
Students cooperatively plan, administer, and evaluate (with a graduate faculty supervisor) an undergraduate core course. Improvement of teaching and evaluation methods, and conceptualization and presentation of research-based course in family studies. prereq: 12 FSOS grad cr; teaching assistant exper recommended

FSOS 8202. Teaching Family Courses in Higher Education II. (3 cr.; S-N or Audit; Periodic Fall & Spring)
Under faculty supervision, students teach an undergraduate course in family social science for which they have appropriate academic preparation and professional experience. prereq: 8201 or equiv

FSOS 8275. Clinical Consultation with Couples and Families. (3 cr.; S-N or Audit; Periodic Fall & Spring)
Supervised students serve as a consultation group working with community clinicians and their clients, utilizing a one-way window and observation room; opportunities for cotherapy. prereq: instr consent; required for grad FSOS majors in marriage and family therapy prog

FSOS 8295. Couple/Marriage Family Therapy Practicum. (1-6 cr. [max 24 cr.]; S-N only; Every Fall, Spring & Summer)

FSOS 8296. Couple/Marriage Family Therapy Internship. (1-12 cr.; S-N only; Every Fall, Spring & Summer)
Supervised clinical/other professional practical experiences in couple/marriage, family therapy. prereq: FSOS doctoral student enrolled in Couple Family Therapy (CFT) or instr consent

FSOS 8297. Supervision of Supervision. (1-3 cr. [max 12 cr.]; S-N or Audit; Every Fall, Spring & Summer)
Hands-on practicum to gain AAMFT-approved supervisor status. prereq: MFT student, instr consent

FSOS 8333. FTE: Masters. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

FSOS 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

FSOS 8550. Advanced Topics in Family Social Science. (1-6 cr.; A-F or Audit; Every Fall & Spring)
Special seminars on topics suited to student needs.

FSOS 8560. Advanced Clinical Topics in Marriage and Family Therapy. (1-6 cr. [max 36 cr.]; A-F or Audit; Periodic Spring)
Special advanced topics or seminars.

FSOS 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

FSOS 8755. Master's Paper: Plan B Project. (1-6 cr.; S-N or Audit; Every Fall, Spring & Summer)
Graduate faculty work with students on research for Plan B paper. prereq: FSOS MA student

FSOS 8777. Thesis Credits: Master's. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

FSOS 8794. Directed Research in Family Social Science. (1-6 cr.; S-N or Audit; Every Fall, Spring & Summer)
Student Option; Every Fall, Spring & Summer)
Directed research in family social science.

FSOS 8888. Thesis Credit: Doctoral. (1-24 cr.; S-N or Audit; Every Fall, Spring & Summer)
Max 18 cr per semester or summer; 24 cr required

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

Finance (FINA)

FINA 5422. Financial Econometrics and Computational Methods I. (2 cr.; A-F only; Every Fall)
This course provides an introduction to the methods used in empirical finance. A review of statistics is followed by intensive instruction on matrix algebra that culminates in a fundamental understanding of linear regression, the basic empirical tool. Asset pricing theories are discussed and developed and then methods are derived to test them. The course will emphasize estimation and inference using computer-based applications.

FINA 5423. Financial Econometrics and Computational Methods II. (2 cr.; A-F only; Every Fall)
This course builds on Financial Econometrics I and provides instruction on the econometrics used in empirical finance. Topics will include time series analysis, parametric models of volatility, evaluation of asset pricing theories, and models for risk management. The course will emphasize estimation and inference using computer-based applications.

FINA 6121. Debt Markets, Interest Rates, and Hedging. (2 cr.; A-F only; Every Fall & Spring)

FINA 6122. Financial Management of Depository Institutions. (2 cr.; A-F only; Every Spring)
Commercial banks, other depository institutions. Asset/liability management, risk management, geographic expansion, investment banking, public policy issues. Lectures, student presentations, project. prereq: MBA 6230, MBA student

FINA 6123. Financial Services Industry. (2 cr.; A-F only; Every Fall)
This course gives an overview of the U.S. financial services industry, emphasizing the overall environment, key institutional details, and underlying economic functions. After introducing financial markets and institutions and their functions, we look at the biggest sectors of this industry (banking, insurance, securities dealing, money management, etc.) in more depth. We conclude with a discussion of the impact of "fintech" on this sector.

FINA 6222. Mergers and Acquisitions. (2 cr.; A-F only; Every Spring)
How corporate managers achieve growth through mergers/acquisitions. Examine buyer/seller motivations in context of M&A
FINA 6241. Corporate Finance Analysis and Decisions. (4 cr.; A-F only; Every Fall & Spring)
Theory/applied understanding of corporate financial decisions. Adjusted present value, economic value added options. Impact of financing decisions on real asset valuation, managerial incentives, corporate strategy. prereq: MBA 6230, MBA student

FINA 6242. Advanced Corporate Finance Analysis and Decisions. (4 cr.; A-F only; Every Fall)
Theory/practice of efficiently managing working capital, fixed assets. Emphasizes mergers/ acquisitions, corporate restructuring, real options. Use of derivatives as financing tools, in deal structure. prereq: 6241, MBA student

FINA 6321. Portfolio Analysis and Management. (2 cr.; A-F only; Every Fall)

FINA 6322. Financial Modeling. (2 cr.; A-F only; Every Spring & Summer)
Financial modeling tools to build, maintain, and interpret comprehensive financial models that provide the framework for understanding businesses and their historical performance, plans estratégies, and market values. Financial analytics/modeling skills. prereq: MBA 6230, MBA student

FINA 6323. Advanced Financial Modeling. (2 cr.; A-F only; Every Fall)
Advanced financial modeling tools to build, operate, and understand business performance, and M&A, equity, and credit securities analysis models that have become central to sophisticated financial analysis of all operating businesses, transactions, and securities. How to analyze by way of financial models.

FINA 6324. Securitization Markets. (2 cr.; A-F only; Every Spring)
Splitting risks. Redirecting risks to investors able to analyze and take on those risks. Reasons for development of securitization. Products, the similarities in character. How to build simple models and analyze examples of actual securitized liabilities. prereq: 6121, MBA student

FINA 6325. Behavioral Finance. (2 cr.; A-F only; Every Spring)
Psychology/realistic settings that guide/develop alternative theories of financial market. How behavioral finance complements traditional paradigm on investors' trading patterns, behavior of asset prices, corporate finance, various Wall Street institutions/practices. prereq: MBA student

FINA 6329. Advanced Topics in Fixed Income and Derivatives. (2 cr.; A-F only; Periodic Fall & Spring)
Economics and mechanics of derivatives. First phase focuses on theoretical and institutional foundations for various derivatives instruments and markets. Second phase is practicum in which student groups build working models of derivatives. prereq: (credit will not be granted if already received for 6541)

FINA 6404. Industry Vertical: Finance. (2 cr.; A-F only; Every Spring)
Focus on firms engaged in three major sub areas of financial services including retail banking, investment, and international markets subsectors. Cases and live case studies to focus on firms ranging from Wells Fargo, Berkshire Hathaway, Cargill, and Piper Jaffray. Federal oversight focus includes the Security and Exchange Commission and the Department of Treasury.

FINA 6421. Topics in Corporate Finance. (2-4 cr.; A-F only; Periodic Fall)
Advanced-level coverage of topics in corporate finance. Analytical foundations reviewed/ expanded. Opportunities for applying concepts in complex settings. Major report or presentation. prereq: MBA 6230, MBA student

FINA 6422. Mergers and Acquisitions. (2-4 cr.; A-F only; Every Spring)
Various means for corporate managers to achieve growth through mergers/acquisitions. Leverage skills mastered in core curriculum. Examine both buyer/seller motivations in context of M&A transactions/strategic alliances. Private equity in M&A marketplace. prereq: 6241, MBA student

FINA 6529. Advanced Topics in Fixed Income and Derivatives. (2 cr.; A-F only; Periodic Fall & Spring)
Economics and mechanics of derivatives. First phase focuses on theoretical and institutional foundations for various derivatives instruments and markets. Second phase is practicum in which student groups build working models of derivatives. prereq: (credit will not be granted if already received for 6541)

FINA 6621. International Financial Management. (2 cr.; A-F only; Every Spring)

FINA 6801. Finance Independent Study. (1-6 cr.; max 12 cr.; A-F only; Periodic Fall & Spring)
Independent study. prereq: MBA student, instr consent

FINA 8802. Theory of Capital Markets I: Discrete Time. (2 cr.; Student Option; Every Spring)
Modern asset pricing theory. Static/discrete time frameworks. Fundamental asset pricing equation. Classical finance models: CAPM, consumption-based CAPM, APT. Complete markets, representative agent, Pareto optimality. Challenges to theories. Approaches such as habit formation, heterogeneous agents (incomplete markets) model. prereq: [Econ 8101, Econ 8102, business admin PhD student] or instr consent

FINA 8803. Theory of Capital Markets II: Continuous Time. (2 cr.; Student Option; Every Spring)
Continuous-time financial economics. Emphasizes mathematical/statistical tools. It processes, Girsanov?’s theorem, risk-neutral pricing. How to formulate/analyze continuous-time models. prereq: [Econ 8101, Econ 8102, Business admin PhD student] or instr consent

FINA 8810. Topics in Asset Pricing. (2 cr.; max 4 cr.; A-F or Audit; Fall Even Year)
Current topics in asset pricing literature. Students read papers on these topics, rederive the main results, identify the main assumptions and thus identify ideas on how to improve upon the current literature. prereq: Business admin PhD student or instr consent

FINA 8812. Corporate Finance I. (2 cr.; Student Option; Every Fall & Spring)
Corporate control, managerial incentives, corporate governance, capital structure. What assets are collected within firm. What determines boundaries of firm. Empirical evidence in support of theoretical models. Modern theories of firm, based on incomplete contracts. How corporate finance decisions expand/limit scope of firm. prereq: [Econ 8103, Econ 8104, business admin PhD student] or instr consent

FINA 8813. Corporate Finance II. (2 cr.; Student Option; Every Fall & Spring)

FINA 8820. Topics in Corporate Finance. (2 cr.; max 4 cr.; A-F or Audit; Fall Odd Year)
Current topics in corporate finance literature. Students read current papers, rederive the main results, identify the main assumptions and thus identify ideas on how to improve on the current literature. prereq: Business admin PhD student or instr consent
FINA 8822. Empirical Methods in Finance. (4 cr.; Student Option; Every Spring)
Empirical techniques in analysis of financial markets, how they are applied to actual market data. Statistical properties of asset returns, efficient markets hypothesis. Empirical tests of asset pricing models (CAPM, APT, Intertemporal CAPM, Consumption CAPM). Tests of conditional asset pricing models. prereq: 8802, 8803

FINA 8823. Empirical Corporate Finance. (4 cr.; Student Option; Every Spring)
Current empirical research on corporate finance. Mergers/acquisitions, equity offerings, event studies, tests of market efficiency, impact of corporate governance, compensation policies, initial public offerings. prereq: 8802, 8803

FINA 8890. Seminar: Finance Topics. (2-4 cr. [max 16 cr.]; A-F only; Every Fall & Spring) Current topics/problems of interest considered in depth. Topics vary. Prereq: [8802, 8812, 8822, 8823] or equiv; business admin student or instr consent

FINA 8892. Independent Study in Finance. (1-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer) Problems or developments of special interest to the student. prereq: Business admin PhD student or instr consent

FINA 8894. Directed Research in Finance. (1-8 cr. [max 16 cr.]; Student Option; Every Fall & Spring) Individualized directed research on a project of interest to the student, approved and advised by faculty. prereq: Business admin PhD student specializing in finance or instr consent

Financial Mathematics (FM)

FM 5001. Preparation for Financial Mathematics I. (3 cr.; Student Option; Every Fall) Mathematics needed for MFM program. prereq: Grad MFM major or MFM program director approval

FM 5002. Preparation for Financial Mathematics II. (3 cr.; Student Option; Every Spring) Mathematics needed for MFM program. prereq: 5001, program director approval

FM 5011. Mathematical Background for Finance I. (4 cr.; Student Option; Every Fall) Mathematics needed for MFM program. Focuses on finance. prereq: [5001, 5002] with grade of at least B or [MFM program director approval, grad MFM major]

FM 5012. Mathematical Background for Finance II. (4 cr.; Student Option; Every Spring) Mathematics needed for MFM program. Focuses on finance. prereq: 5011, grad MFM major, program director approval

FM 5021. Mathematical Theory Applied to Finance I. (4 cr.; Student Option; Every Fall) Bridge between theory and application. prereq: [5011 or concurrent registration is required (or allowed) in 5011], grad MFM major, program director approval

FM 5022. Mathematical Theory Applied to Finance II. (4 cr.; Student Option; Every Spring) Bridge between theory and application. prereq: 5021, [5012 or concurrent registration is required (or allowed) in 5012], grad MFM major, program director approval

FM 5031. A Practitioner's Course in Finance I. (4 cr.; Student Option; Every Fall) Practical course taught by industry professionals. Focuses on hands-on real-world problem solving. prereq: [5021 or concurrent registration is required (or allowed) in 5021], grad MFM major, program director approval

FM 5032. A Practitioner's Course in Finance II. (4 cr.; Student Option; Every Spring) Taught by industry professionals. Focuses on hands-on real-world problem solving. prereq: 5031, [5022 or concurrent registration is required (or allowed) in 5022], grad MFM major, program director approval

FM 5091. Computation, Algorithms, and Coding in Finance I. (4 cr.; Student Option; Every Fall) Implements popular finance models and numerical techniques using mainstream computational tools/languages. prereq: Grad MFM major, program director approval

FM 5092. Computation, Algorithms, and Coding in Finance II. (4 cr.; Student Option; Every Spring) Implements popular finance models and numerical techniques using mainstream computational tools/languages. prereq: 5091, grad MFM major, program director approval

FM 5090. Topics in Financial Mathematics. (1-2 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring) The course will focus on a special topic in quantitative finance that supplements the regular curriculum of the Master of Financial Mathematics program. The course features experts, often finance industry practitioners, who share their experience and knowledge. prereq: enrolled in the Master of Financial Mathematics program or instr consent

Fisheries and Wildlife (FW)

FW 5003. Human Dimensions of Biological Conservation. (3 cr.; Student Option; Every Fall) Survey of social, psychological, economic, policy aspects of managing/conserving wildlife, fisheries, and related resources. prereq: [Biol 1001 or Biol 1009], Biol 3407

FW 5051. Analysis of Populations. (4 cr.; Student Option; Every Spring) Regulation, growth, general dynamics of populations. Data needed to describe populations, population growth, population models, regulatory mechanisms. prereq: [4001 or STAT 3011 or ESPM 3012], [Biol 3407 or BIOL 3408W or BIOL 3807], Senior or grad student
Practical techniques to maximize human/animal safety and encourage effective operations. Preparation procedures, legal responsibilities, capture/drugs/delivery systems, safety measures, ethical issues, basic veterinary procedures for handling wildlife. Field course. Uses live animals. prereq: General biology. [grad student or vet med student or FW sr]

FW 8051. Statistical Modeling of Ecological Data using R and WinBugs/JAGS. (4 cr.; Student Option; Every Spring) Regression methods for modeling ecological data. Real world examples from ecology, as well as environmental/natural resource sciences/management. Computer-based solutions using R/Bayesian modeling software. prereq: Graduate-level statistics class. [working knowledge of program R or instr consent]

FW 8200. Seminar. (1-4 cr. [max 16 cr.]; S-N or Audit; Every Fall & Spring) Oral and written student reports on selected topics from current literature in fisheries biology and management and wildlife. Lectures by and discussions with faculty and visiting specialists.

FW 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

FW 8394. Research in Fisheries. (1-4 cr.; Student Option; Every Fall, Spring & Summer) Directed research.

FW 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

FW 8452. Conservation Biology. (3 cr.; A-F or Audit; Every Fall) Seminar examining population- to system-level biological issues (genetics; demographic processes; community, ecosystem, and landscape scale interaction; restoration ecology; ex situ strategies for restoration and recovery) and societal issues (social, economic, cultural perspectives; sustainable development strategies; roles of institutions; international and U.S. policies).

FW 8459. Stream and River Ecology. (3 cr.; Student Option; Fall Even Year) Structure/dynamics of running waters from ecosystem perspective. Historical perspective, basic hydrology/fluvial geomorphology, terrestrial-aquatic interactions, detrital dynamics, metabolism, drift, trophic relations, biotic/abiotic interactions, ecosystem experiments and natural alterations, stability/succession, ecosystem dynamics in a watershed. prereq: Limnology course or instr consent

FW 8461. Advanced Topics in Fish Physiology. (1 cr.; Student Option; Periodic Fall) Lectures, discussion, current literature. Complements 5459. prereq: Vertebrate physiology course or instr consent

FW 8462. Advanced Topics in Fish Behavior. (1 cr.; Student Option; Periodic Fall & Spring)

Current literature. Complements 5459. prereq: 5459 or behavior course or instr consent

FW 8465. Fish Habitats and Restoration. (3 cr.; Student Option; Fall Odd Year) Mechanisms underlying physiology/behavior that shape fish community structure in specific north temperate habitats. Techniques and planning procedures for restoring lakes/streams. prereq: Intro ecology course or instr consent

FW 8494. Research in Wildlife. (1-4 cr.; Student Option; Every Fall) Directed research. prereq: instr consent

FW 8576. Biology and Management of Large Mammals. (2 cr.; A-F or Audit; Every Fall) Ungulates. Ecology, population dynamics, energy, nutrition, predation, disease/parasites, social behavior. Research approaches, management implications/practices. Key information on North American species. prereq: [Ecology course, [wildlife, forestry, and ecology grad student]] or instr consent

FW 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

FW 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

FW 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

Food Science and Nutrition (FSCN)

FSCN 5122. Food Fermentations and Biotechnology. (2 cr.; A-F only; Every Fall) Major food fermentations important for today's food industry, with particular focus on microbiological components. Fermentations cover all major commodity food groups of dairy, cereal, meat, vegetables, fruits. prereq: MICB 3301, BIOL 4003

FSCN 5123. Molecular Biology for Applied Scientists. (1 cr.; A-F only; Every Fall) Half semester course. Two hours per week for 8 weeks. Basics of molecular biology/how it has been used for biotechnological applications. Origins of molecular biology from discovery of DNA as inheritance material within cells to advent of gene cloning/sequencing technologies. prereq: MicB 3301 or FScN 2021 or instr consent

FSCN 5123. Molecular Biology for Applied Scientists. (1 cr.; A-F only; Every Fall) Half semester course. Two hours per week for 8 weeks. Basics of molecular biology/how it has been used for biotechnological applications. Origins of molecular biology from discovery of DNA as inheritance material within cells to advent of gene cloning/sequencing technologies. prereq: MicB 3301 or FScN 2021 or instr consent

FSCN 5131. Food Quality for Graduate Credit. (3 cr.; Student Option; Every Fall) Management systems, statistical procedures, regulatory requirements involved with producing quality food/ingredients. Risk assessment/management, good manufacturing practices, hazard analysis critical control point (HACCP), statistical methods for process control, total quality management, food/drug laws. Prereq: Food Science Grad Student Student may select grading basis if instructor approves. A-F registration is required for class to count toward degree.

FSCN 5312. Food Analysis. (4 cr.; A-F or Audit; Every Fall) Analytical tools needed for investigation in Food Science/Technology, whether by food industry, governmental agencies, or universities. Application of quantitative/qualitative physical, chemical/instrumental methods used for analysis/examination of food constituents. Sensory evaluation techniques, evaluation of methods/interpretation of results. prereq: 4112, STAT 3011

FSCN 5441. Introduction to New Product Development. (2 cr.; Student Option; Fall Even, Spring Odd Year) This course is designed to give students an overview of the product development process including management systems, team dynamics, technical problem solving, idea generation, and differences between different categories of food R&D. Prerequisites: FSCN 4112

FSCN 5461. Food Packaging. (2 cr.; Student Option; Fall Odd Year) Materials, principles, and procedures of packaging as they apply to food products. Emphasis is on consumer products, but the principles also apply to bulk and institutional foods and ingredients. prereq: 1102, 3102, Phys 1102 or Phys 1302

FSCN 5481. Sensory Evaluation of Food Quality. (2 cr.; Student Option; Periodic Spring) Fundamentals of sensory perception. Test designs and methods in studying sensory qualities of foods. Issues in sensory evaluation. Group research project. prereq: 3102, STAT 3011

FSCN 5521. Flavor Technology. (2 cr.; Student Option; Spring Even Year) Overview of flavor chemistry/related technology. Analytical techniques, mechanisms of flavor development (chemical/biogenesis), off-flavors, industrial production/application of food flavorings. prereq: 4112

FSCN 5531. Grains: Introduction to Cereal Chemistry and Technology. (2 cr.; Student Option; Periodic Fall & Spring) Origins, structure, biochemistry, and cellular properties of major cereal grains as they relate to primary processing (milling) and secondary processing (production of cereal products). prereq: Biol 1009, Chem 1022

FSCN 5541. Dairy Product Chemistry and Technology. (2 cr.; Student Option; Fall Odd Year) Designed for upper division Food Science undergraduate/graduate students.

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
Physiology of milk production in ruminants. Resulting composition. Chemical, physical, microbiological properties of milk components. How milk products are manufactured. prereq: 3102, 4112. Food Science major, upper division undergraduate or graduate student

FSCN 5601. Management of Eating Disorders. (3 cr.; Student Option; Every Fall & Spring)

Etiology, occurrence, course, treatment, prevention of eating disorders from multidisciplinary perspective. Roles and responsibilities of eating disorder treatment team members of varying types across various treatment milieus. Prereq: Junior, senior or graduate student in nutrition or health related program or instructor consent.

FSCN 8310. General Seminar. (; 1 cr. [max 2 cr.]; S-N or Audit; Every Fall & Spring)

Presentations by faculty, graduate students, and outside speakers. prereq: instr consent

FSCN 8318. Current Issues in Food Science. (; 2 cr. [max 4 cr.]; A-F or Audit; Every Spring)

Current issues in Food Science and how they impact the food industry. Prerequisites: FSCN 4112, FSCN 4121, Department Consent.

FSCN 8320. Advanced Topics in Food Science. (; 1-3 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring)

Recent research or special topics.

FSCN 8330. Research Topics. (; 1 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)

Seminar in which faculty member or group of faculty/graduate students discuss research progress or review/discuss current research literature.

FSCN 8331. Food Proteins. (; 2 cr.; Student Option; Spring Even Year)

Protein biochemistry as applied to food systems/processing. Forces that determine protein structure. Isolation/characterization of food proteins. Structure/function relationships in handling/processing food protein systems. prereq: 4112, 4312

FSCN 8333. FTE: Master’s. (; 1 cr.; No Grade Associated; Every Fall, Spring & Summer)

No requirements. prereq: Master's student, adviser and DGS consent

FSCN 8335. Carbohydrate Chemistry in Food and Nutrition. (; 2 cr.; Student Option; Every Spring)

Carbohydrates as food components, their use as food ingredients. Reactions of mono/di/polysaccharides during food processing. Biosynthesis of carbohydrates, their metabolism. Methods in carbohydrate analysis. prereq: 4112

FSCN 8336. Lipid Chemistry and Rancidity of Foods. (; 2 cr.; Student Option; Periodic Fall)

Chemistry of food lipid oxidation/rancidification. Protective functions of antioxidants. prereq: 4112

FSCN 8337. Flavor Chemistry. (; 2 cr.; Student Option; Periodic Fall)

Chemistry involved in formation, analysis, and release of flavoring materials in foods. prereq: 4111

FSCN 8338. Antioxidants in Food: Practical Applications. (; 2 cr.; Student Option; Every Spring)

Mechanisms of antioxidant activities in food systems. Free radical scavengers, hydroperoxide stabilizers, synergists, metal chelators, singlet oxygen quenchers, substance reducing hydroperoxides. Practical applications of antioxidants in various food systems, effect of antioxidants on health/diseases. prereq: 4111, Bioc 3021, food chemistry, organic chemistry, biochemistry

FSCN 8391. Independent Study: Food Science. (; 1-4 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)

Includes written reports. prereq: instr consent

FSCN 8444. FTE: Doctoral. (; 1 cr.; No Grade Associated; Every Fall, Spring & Summer)

(No description) prereq: Doctoral student, adviser and DGS consent

FSCN 8666. Doctoral Pre-Thesis Credits. (; 1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)

tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

FSCN 8777. Thesis Credits: Master’s. (; 1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)

(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

FSCN 8888. Thesis Credit: Doctoral. (; 1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer)

(No description) prereq: Max 18 cr per semester or summer; 24 cr required

Foreign Study (FOST)

FOST 5000. Study Abroad. (0-18 cr. [max 40 cr.]; Student Option; Every Fall, Spring & Summer)

Study abroad registration. prereq: dept consent

FOST 5010. Study Abroad Directed Study. (0-10 cr. [max 20 cr.]; Student Option; Every Fall, Spring & Summer)

Study abroad course.

FOST 5020. Global Experience Program. (0-6 cr. [max 18 cr.]; Student Option; Every Fall & Summer)

The course is used to award credit for work successfully completed on the Global Experience Program study abroad internship program. Evaluation standards and work load are determined by the graduate faculty member who signs the Global Experience Program learning contract required of each participant. Number of contact hours varies from location to location. prereq: Must have graduate student status

Foreign Study - SPAN (FSSP)

FSSP 5960. Preparatory Seminar for SPAN Overseas Research. (4 cr.; A-F or Audit; Every Summer)

Preparatory seminar for SPAN overseas research. prereq: dept consent

FSSP 5970W. Seminar for SPAN Overseas Research. (WI; 4 cr.; A-F or Audit; Every Summer)

Seminar for SPAN overseas research. prereq: dept consent

Forest and Natural Res. Mgmt. (FNRM)

FNRM 5101. Park and Protected Area Tourism. (3 cr.; A-F or Audit; Fall Odd Year)

Tourism is a significant industry locally, nationally, and internationally. Park and protected area attractions are among the most visited but also the most vulnerable attractions. This course is designed to familiarize you with the basic concept of park and protected area tourism, including cultural and ecotourism, and then develop your expertise to plan and evaluate sustainable tourism development and operations. Accordingly, you will complete assignments that apply the knowledge gained to planning and evaluation activities. This course is offered partially online. COURSE OBJECTIVES By the end of the class you will be able to: 1. Differentiate and appreciate the complexities involved with defining and developing nature, eco, heritage, geo-, park and protected, cultural & "sustainable tourism." 2. Identify specific social, economic, and environmental impacts associated with park and protected area tourism, how to measure them, and methods to minimize the negative and maximize the positive impacts. 3. Analyze domestic and international case studies of park and protected area tourism. 4. Critically evaluate park and protected area tourism services and effective management and planning. 5. Create elements of a business plan for park and protected area tourism operations that emphasize sustainability.

FNRM 5104. Forest Ecology. (4 cr.; A-F or Audit; Every Fall)

Form and function of forests as ecological systems. Characteristics and dynamics of species, populations, communities, landscapes, and ecosystem processes. Examples applying ecology to forest management. Weekly discussions on research topics, exercises, and current issues in forest resource management. Required weekend field trip. Introductory biology course recommended.

FNRM 5114. Hydrology and Watershed Management. (3 cr.; Student Option; Every Fall)

Hydrologic cycle and water processes in upland/riparian systems. Applications of hydrological concepts to evaluate impacts of forest and land management activities on water yield, streamflow, groundwater
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

**FNRM 5131. Geographical Information Systems (GIS) for Natural Resources.** (4 cr.; A-F or Audit; Every Fall)  
Geographical information systems (GIS), focusing on spatial data development and analysis in the science and management of natural resources. Basic data structures, sources, collection, and quality; geodesy and map projections; spatial and tabular data analyses; digital elevation data and terrain analyses; cartographic modeling and layout. Lab exercises provide practical experiences complementing theory covered in lecture.  
prereq: Grad student or instr consent

**FNRM 5153. Forest Hydrology & Watershed Biogeochemistry.** (3 cr.; Student Option; Spring Odd Year)  
This rigorous course examines hydrology and biogeochemical cycling in forested watersheds. Topics include role of forests in hydrologic processes (precipitation, runoff generation, and streamflow) and exports (sediment, carbon, and nitrogen). Readings from primary literature, active discussion participation, research/review paper. prereq: [Basic hydrology course, one course in ecology, and one course in chemistry [upper div or grad student]] or instr consent

**FNRM 5161. Northern Forest Field Course.** (2 cr.; A-F or Audit; Every Summer)  
Field identification of common trees, shrubs, and nonwoody vascular plants. Plant communities and soil site relationships, wildlife values. Natural history of northern/boreal forests in terms of soils, ecological characteristics of trees, community-environment relationships, stand development, succession, and regeneration ecology. Land survey, tree/forest stand measurement, forest sampling techniques. Taught at the Cloquet Forestry Center.

**FNRM 5201. Introduction to Travel and Tourism.** (3 cr.; A-F only; Every Spring)  
Travel and tourism is called one of the largest industries in the world today. This course introduces students to the nature, structure and complexity of the travel and tourism system. Specific focus is placed on understanding the tourism system and its impact globally on economies, environments and people. Using a lens of sustainability, students will examine the functions and interconnectedness of the various sectors within the tourism system and the role of diverse and sometimes competing priorities of stakeholders in the creation, delivery and integration of tourism. The course uses readings, case studies, discussion, and applied projects to develop students’ understanding of tourism and how communities, businesses, and government can maximize benefits associated with the demand for tourism while protecting the natural and human resources upon which it depends.

**FNRM 5203. Forest Fire and Disturbance Ecology.** (3 cr.; A-F or Audit; Every Spring)  
Ecology, history, management, control of fire, wind, insect infestation, deer browsing, other disturbances in forests, including disturbance regimes of boreal, northern hardwood, savannas of North America. Influence of disturbance on wildlife habitat, urban/wildland interfaces, forest measurement, stand/landscape dynamics. Tree mortality in fires, successional patterns created by fires, interactions of life history traits of plants with disturbances. prereq: Grad student or instr consent

**FNRM 5204. Landscape Ecology and Management.** (3 cr.; A-F or Audit; Every Fall)  
Introduction to landscape ecology at different scales in time/space. Development/implications of broad-scale patterns of ecological phenomena, role of disturbance in ecosystems. Characteristic spatial/temporal scales of ecological events. Principles of landscape ecology as framework for landscape research, analysis, conservation, and management. prereq: Grad student or instr consent

**FNRM 5205. Productivity and Ecology of Forest Soils.** (3 cr.; A-F only; Fall Even Year)  
Forest soils are fundamental to the development and function of forested ecosystems. This course will focus on soil-site factors affecting plant and wildlife communities, site quality estimation, site modification and enhancement, and the effects of forest management and other human-related disturbances on forest soil functions. Prior coursework in introductory soils, silviculture, forest hydrology, biogeochemistry, and applied forest ecology are strongly recommended. prereq: grad student or instructor consent

**FNRM 5206. Park and Protected Area Management Field Studies.** (2 cr. [max 3 cr.]; A-F only; Every Summer)  
Directed field study of park/protected areas. Recreation planning and management, cultural/natural resource management, nature-based tourism management, resource interpretation/communication across local, state, federal tribal park/protected areas in northern Minnesota. prereq: Sophomore status or higher

**FNRM 5216. Geodesy, Coordinate, and Surveying Calculations for GIS Professionals.** (1 cr.; Student Option No Audit; Every Fall)  
Where exactly are we? How do we define and refine geographic locations on a lumpy, spinning, unstable planet? On course completion students will understand concepts and practices that are at the very foundation of GIS: geodesy and geographic projections. They will have a working knowledge of geodetic datums and datum evolution, be able to make common geodetic and coordinate geometry calculations, and solve common problems that arise during datum and coordinate system conversions while engaged in the practice of GIS.

**FNRM 5218. Measuring and Modeling Forests.** (3 cr.; A-F or Audit; Every Spring)  
General sampling design and survey techniques to assess current resource conditions. Application of metrics/sampling methods to forest vegetation. Calculation of tree/stand volume, selection of modeling approaches. Case studies of modeling to project future growth. Landscape processes, characterization, and modeling.

**FNRM 5228. Advanced Topics in Assessment and Modeling of Forests.** (3 cr.; A-F or Audit; Fall Even Year)  
Application of recently developed mathematics, computer science, and statistics methodologies to natural resource functioning, management, and use problems. Specific topics, software, and methodologies vary. prereq: 3218, Math 1272, Stat 5021

**FNRM 5232. Managing Recreational Lands.** (4 cr.; A-F or Audit; Every Spring)  
Most of us participate in some form of outdoor recreation: hiking, hunting, riding all-terrain vehicles, or simply enjoying nature. Managing for outdoor recreation on public lands is mandated by federal law and an integral part of natural resource management. In this class, we’ll learn why and how agencies manage recreation at the federal level, the management frameworks that guide this work, and apply management principles to an actual federal property in Minnesota. This course is designed to provide students with an understanding of the principles and practices of outdoor recreation management. Specific objectives are: 1) Compare and contrast federal recreation land management policies and organizations, 2) Develop and demonstrate an understanding of conceptual frameworks for recreation resource and visitor use management, 3) Evaluate visitor caused impacts to resources and to visitor experiences, 4) Understand and apply management tools designed to reduce recreation-related impacts and conflicts, and 5) Demonstrate an understanding of course material through exams and applied assignments. prereq: Grad student or instr consent

**FNRM 5259. Visitor Behavior Analysis.** (3 cr.; Student Option; Every Fall)  
Recreation, leisure, and tourism are significant parts of the world, national, and state economies. Understanding visitor behavior is important and has significant implications for organizations, agencies, and businesses related to parks, tourism destinations, and museums. In this class, you will learn to apply both social science theory and methods to understand consumers, with an emphasis on visitors to parks and protected areas. You will immediately apply your learning of survey development, interviewing, observation and content analysis to real-world situations in class projects. This is an online course.

**FNRM 5262. Remote Sensing and Geospatial Analysis of Natural Resources and Environment.** (3 cr.; Student Option; Every Fall)  
Introductory principles and techniques of remote sensing and geospatial analysis applied to mapping and monitoring land and water resources from local to global scales. Examples of applications include: Land cover mapping and change detection, forest and natural resource inventory, water quality
FNRM 5264. Advanced Forest Management Planning. (3 cr.; Student Option; Every Fall) Modeling tools for forest planning to better integrate forest conditions/uses and better understand trade-offs and potential management strategies. Analyzing facets of forest management that add complexity including multi-market interactions, temporal detail, spatial objectives, planning under uncertainty, and recourse strategies. Optimization models, decomposition and heuristic techniques designed to capitalize on characteristics of forestry problems. Case studies involving recent or ongoing large-scale applications. Student projects with opportunity to tailor to student interests or expertise.

FNRM 5411. Managing Forest Ecosystems: Silviculture. (3 cr.; A-F only; Every Fall) Management of forest ecosystems for sustaining ecological integrity, soil productivity, water quality, wildlife habitat, biological diversity, commodity production in landscape context. Silvics, forest dynamics, disturbances, regeneration, restoration, silvicultural systems. Ramifications of management choices. Weekend field trip. EMC track students should take FNRM 5413 concurrently. prereq: grad student

FNRM 5412. Advanced Remote Sensing and Geospatial Analysis. (3 cr.; Student Option; Every Spring) This course builds on the introductory remote sensing class, FNRM 3262/5262. It provides a detailed overview of advanced remote sensing and geospatial theory and methods including biophysics of remote sensing, measurements and sensors, data transforms, data fusion, lidar processing and derivatives, advanced classification algorithms (including Object-Based Image Analysis), multi-temporal analysis, and empirical modeling. Independent lab activities will be used to apply the course topics to real-world problems. Prior coursework in Geographic Information Systems, remote sensing, and statistics is necessary. prereq: 3262 or grad student or instr consent

FNRM 5413. Managing Forest Ecosystems: Silviculture Lab. (1 cr.; A-F only; Every Fall) Development of silvicultural prescriptions to achieve various landowner objectives. Timber cruise, growth/yield simulations, stand density management diagrams, thinning schedules, use of forest vegetation simulator. Field trips, computer labs, lectures. prereq: FNRM major or minor or grad student; FNRM-FEMC track students should take FNRM 3411/5411 concurrently or instructor consent

FNRM 5431. Timber Harvesting and Road Planning. (2 cr.; Student Option; Every Spring) Forest operations. Terminology, engineering, equipment/harvesting system options, productivity/costs. Relationship to forest management and silviculture. Road planning, forest management guidelines. Mitigating potential impacts to soil/water resources. Environmental implications of methods/ equipment choices. Selling timber. Sale design, layout, and administration. Two all-day field trips.

FNRM 5471. Forest Management Planning. (3 cr.; A-F or Audit; Every Fall) Management science as applied to forest decision-making to help develop better forest management plans. Helps students develop a basic understanding of common analytical tools from operations research and how they are applied to forestry problems to help explore many potential solutions. Also reviews traditional approaches based on simulation. Emphasizes trade-off information, interpretation of model results, and linkages between stand-level economic analysis and forest-wide planning. Reviews recent modeling efforts in Minnesota. Includes synthesis of information from multiple natural resource disciplines. Guest speakers demonstrate value of analyses in planning. Emphasizes homework assignments with some group work. An individual project requires an informal class presentation. prereq: Grad student

FNRM 5480. Topics in Natural Resources. (1-3 cr.; Student Option; Periodic Fall & Spring) Lectures in special fields of natural resources given by visiting scholar or faculty member. Topics specified in Class Schedule.

FNRM 5501. Urban Forest Management: Managing Greenspaces for People. (3 cr.; Student Option; Every Spring) Management concepts for green infrastructure of cities, towns, and communities. Urban forest as social/physical resource. Emphasizes management of urban forest ecosystem to maximize benefits. Tree selection, risk assessment, cost-benefit analysis, landscape planning, values, perceptions. How urban forestry can be a tool to improve community infrastructure.

FNRM 5611. Field Silviculture. (1 cr.; A-F only; Every Summer) Collection of field data to prepare/write silvicultural prescriptions for regeneration, thinning, and harvesting in context of landscape, watershed, and wildlife habitat issues. Field exercises in forest entomology, pathology, tree improvement, and non-timber forest products. Tree planting. Marking stands for harvest. Taught at Cloquet Forestry Center. Field trips to forests managed by state/industry.

FNRM 5615. Field Remote Sensing and Resource Survey. (1 cr.; Student Option; Every Summer) Field applications of remote sensing, sampling/ measurement methods to inventory/mapping of forest and other natural resources. Offered at the Cloquet Forestry Center.

FNRM 8101. Research Problems: Physiological Ecology. (1-5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance. prereq: instr consent

FNRM 8102. Research Problems: Forest-Tree Genetics. (1-5 cr.; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance.

FNRM 8103. Research Problems: Forest Hydrology. (1-5 cr.; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance.

FNRM 8104. Research Problems: Forest Ecology. (1-5 cr.; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance.

FNRM 8105. Research Problems: Silviculture. (1-5 cr.; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance.

FNRM 8106. Research Problems: Urban Forestry-Biology and Management. (1-5 cr.; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance.

FNRM 8108. Research Problems: Forest Ecosystem Health. (1-5 cr.; No Audit; Every Fall, Spring & Summer) Independent research under faculty guidance.

FNRM 8201. Research Problems: Forest Economics. (1-5 cr.; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance.

FNRM 8202. Research Problems: Forest Biometry and Measurements. (1-5 cr.; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance.

FNRM 8203. Research Problems: Forest Recreation. (1-5 cr.; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance.

FNRM 8204. Research Problems: Forest Policy. (1-5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance.

FNRM 8205. Research Problems: Spatial Data Analysis. (1-5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer) Independent research under faculty guidance. prereq: instr consent

FNRM 8206. Research Problems: Forest Management. (1-5 cr.; Student Option; Every Fall, Spring & Summer)
Independent research under faculty guidance.

**FNRM 8207. Economic Analysis of Natural Resource Projects.** (2 cr.; A-F or Audit; Every Fall, Spring & Summer)
Economics of public/private forestry/watershed management projects. Commercial profitability analysis, cost-benefit analysis, preparing feasibility studies. Case studies developed presented. prereq: instr consent

**FNRM 8208. Research Problems: Environmental Learning and Leadership.** (1-5 cr.; Student Option; Every Fall, Spring & Summer)
Independent research under faculty guidance. prereq: instr consent

---

**French (FREN)**

**FREN 5301. Critical Issues in French Studies.** (3 cr.; Student Option; Spring Even Year)
Introduces the methods of interpretation and critical debates that have shaped and continue to define the discipline of French studies. Provides a practical introduction to graduate-level literary research. prereq: Grad or instr consent

**FREN 5350. Topics in Literature and Culture.** (3 cr.; max 12 cr.; Student Option; Every Fall & Spring)
Problem, period, author, or topic of interest. See Class Schedule. prereq: 3101 or equiv

**FREN 5470. Post/Colonial Francophone Literatures.** (3 cr.; max 9 cr.; Student Option; Periodic Fall)
Francophone literature from North Africa, Africa, and the Caribbean of the colonial and/or post-colonial eras in the light of relevant literary and cultural theories. prereq: 3111 or above

**FREN 5531. Sociolinguistics of French.** (3 cr.; Student Option; Periodic Fall)
Explores variation in the use of French associated with factors such as medium (oral/ written), style (formal/informal), region, social and economic groups. prereq: Graduate student status and advanced proficiency in French

**FREN 5541. Oral Discourse of French.** (3 cr.; Student Option; Periodic Fall)
Nature of contemporary spoken French discourse. Focuses on spontaneous, multi-speaker discourse. Readings include examples of various linguistic approaches to such discourse. Emphasizes syntactic analysis. Phonological/lexical particularities. ‘Macro’ level analyses such as discourse analysis and conversation analysis. prereq: 3015, grad student; Ling 5001 recommended

**FREN 5571. Old French in Action: Medieval French Language through Songs, Tales, and Plays.** (3 cr.; A-F or Audit; Periodic Fall)
This course introduces students to Old French grammar, vocabulary, and phonetics through language exercises and the reading and performance of original texts. Along the way, students will learn about the genres of medieval French literature, how these texts originally circulated, and how artists today work from medieval manuscripts to create new performances. Coursework will alternate between language lessons, oral and written exercises, the reading, translation, and discussion of Old French texts, and recitation and interpretive performance. French 5571 is designed for graduate students, honors undergraduates, and other high-achieving juniors and seniors with particular interest in medieval language, literature, and culture. It covers the same material as French 3571 and also how to read and edit texts from medieval manuscripts. Class is conducted in modern French. No prior experience of the medieval language is expected. prereq: French 3016.

**FREN 5995. Directed Teaching.** (1 cr.; S-N or Audit; Every Fall)
Directed teaching. prereq: instr consent

**FREN 8110. Topics in Early Medieval French Literature.** (3 cr.; max 9 cr.; Student Option; Periodic Spring)
Introduction to epic, romance, allegory, and theater in Old French readings (12th-13th centuries). Specific topics/texts studied vary. Taught in French.

**FREN 8111. Introduction to Old French.** (3 cr.; Student Option; Periodic Fall & Spring)
Studies in medieval French: instruction in reading Old French, sources of bibliography, and topics in medieval studies (language and literature). Taught in French.

**FREN 8114. Troubadour Lyric and Old Occitan Language.** (3 cr.; Student Option; Periodic Fall & Spring)
Language and literature of Old Occitan (Old Provençal), chiefly troubadours' songs. Some language instruction, reading of lyrics, consideration of social context, introduction to scholarly tradition. Knowledge of French, Spanish, Italian, or Latin desirable. Taught in English.

**FREN 8120. Topics in Later Medieval French Literature.** (3 cr.; max 9 cr.; Student Option; Fall Odd Year)
Problems presented by texts written in France ca. 1300-1500. Evolution of Middle French language. Specific topics/texts vary. Taught in French.

**FREN 8125. Short Narrative in the Middle Ages.** (3 cr.; A-F only; Fall Odd Year)
Short forms of medieval narrative. Examples from French literary production within context of socioeconomic history from ca. 1100 to ca. 1550. prereq: French 8110 or instr consent

**FREN 8190. Old French Workshop.** (1 cr.; max 3 cr.; A-F only; Periodic Fall)
Workshop runs concurrently with seminars on Old French literature. Advanced practicum in reading Old French, with discussions of the particularities of seminar texts and formal, aesthetic, and hermeneutic issues directly related to the original language. Students read portions of texts in Old French and prepare an original translation. The workshop is not an introduction to Old French Students planning to make medieval French literature their research field should register for the workshop each time it is offered. prereq: French 5571 or other prior course on Old French language, concurrent registration in the related Ph.D. seminar.

**FREN 8210. Narrative, History, and Memory: Topics.** (3 cr. [max 9 cr.]; Student Option; Periodic Fall)
Significance of narrative paradigm in literature, history, and cultural memory. Specific topics/ texts treated vary. Taught in French.

**FREN 8220. Staging the Common.** (3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)

**FREN 8230. Critical Issues: Criticism and Thought.** (3-9 cr. [max 27 cr.]; Student Option; Fall Odd Year)
Critical issues relating to works in criticism/thought related to French/Francophone literature, philosophy or culture.

**FREN 8240. Critical Issues: French and Francophone Cinema.** (3-9 cr. [max 27 cr.]; A-F only; Fall Odd Year)
Critical issues relating to French/Francophone cinema.

**FREN 8250. Critical Issues: Poetry.** (3 cr.; max 12 cr.; Student Option; Periodic Fall & Spring)
Significant critical issues relating to poetic writing of selected authors or periods.

**FREN 8260. Critical Issues: Theatre.** (3 cr.; max 12 cr.; Student Option; Periodic Spring)
Significant critical issues relating to dramatic writing of selected authors or periods.

**FREN 8270. Critical Issues: Prose.** (3 cr.; max 12 cr.; Student Option; Every Fall & Spring)
Significant critical issues relating to prose writing of selected authors or periods.

**FREN 8271. The Novel of the Ancien Regime.** (3 cr.; Student Option; Periodic Fall & Spring)
Considers major novels of the 17th and 18th centuries in connection with developments in such areas as esthetic theory, intellectual currents, social transformations, and reading practices.

**FREN 8280. Ethics and Aesthetics in French and Francophone Writing.** (3 cr.; A-F only; Periodic Spring)
Explores the question of philosophy's engagement with literature in the twentieth century. Traces this from Greek Antiquity (Plato, Aristotle), especially the moment of differentiation between logos and mythos, rational speech and fiction. Focuses on the breakdown of the borders between these two regimes of discourse in modernity. Explores the limits of the porosity between the two disciplines, especially by examining, instead of philosophy's blind acquiescence to the discourse of fiction, its modalities of resistance to figurative language.
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

FREN 8290. Critical Issues: Perspectives on an Author. (; 3 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring) In-depth study of major author's writing, critical tradition this writing has occasioned, and theoretical issues upon which this writing may be brought to bear.

FREN 8291. Jean Genet's Writings and French Institutions. (; 3 cr.; Student Option; Periodic Fall & Spring) Jean Genet's writings at the crossroads of several disciplines (politics, psychoanalysis, religion, and law). Genet's novels, dramas, and political essays explore the power of institutional settings and strategies imagined by individuals to short-circuit their impact.

FREN 8333. FTE: Master's. (; 1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

FREN 8371. The Rule of Reason, The Reign of Madness: Readings in Early Modern France. (; 3 cr.; Student Option; Periodic Fall & Spring) Relationship between construction of reason and madness in philosophy, legitimation of political rule, and the institution of literature in early modern France.

FREN 8410. Topics in Quebecois Literature. (; 3 cr. [max 9 cr.]; Student Option; Periodic Spring) Quebecois in relation to other North American literatures and to Francophone literature produced elsewhere in the world. Specific topics/texts vary. Taught in French.

FREN 8420. Critical Issues: Francophone Literature. (; 3 cr. [max 9 cr.]; Student Option; Periodic Fall) Critical issues relating to literature of Francophone world. Specific topics/texts vary. Taught in French.

FREN 8444. FTE: Doctoral. (; 1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

FREN 8521. History of the French Language. (; 3 cr.; Student Option; Periodic Fall & Spring) History of French from its origins in Latin to the present day. Aspects of diachronic phonology (sound change), morphology, syntax. Taught in French.

FREN 8666. Doctoral Pre-Thesis Credits. (; 1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

FREN 8777. Thesis Credits: Master's. (; 1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
GWSS 8103. Feminist Theories of Knowledge. (3 cr.; Student Option; Periodic Fall)
Interdisciplinary seminar. Feminist approaches to knowledge and to criticism of paradigms of knowledge operative in the disciplines. Feminist use of concepts of subjectivity, objectivity, and intersubjectivity. Feminist empiricism, standpoint theory, and contextualism. Postmodern and postcolonial theorizing.

GWSS 8107. Feminist Pedagogies. (3 cr.; Student Option; Spring Odd Year)
Explore feminist theories/critical approaches to pedagogy. Develop teaching philosophy statement, design syllabus, practice teach/learn problem-solving strategies for classroom. Prereq: Feminist Studies grad student [Major] or Minor or instr consent

GWSS 8108. Genealogies of Feminist Theory. (3 cr.; Student Option; Every Fall)
Two-semester seminar. First term: debates in gender theory; intersections of gender theory with critical race theory, post-colonial theory, sexuality theory, social class analysis. Second term: inter/multi-disciplinary feminist research methodologies from humanities/social sciences, Prereq: Feminist studies PhD or grad minor student or instr consent

GWSS 8109. Feminist Knowledge Production. (3 cr.; Student Option; Every Spring)
Two-semester interdisciplinary seminar. First term: debates in gender theory; gender theory, critical race theory, post-colonial theory, sexuality theory, social class analysis. Second term: inter/multi-disciplinary feminist research methods from humanities/social sciences. Prereq: Feminist studies PhD or grad minor student or instr consent

GWSS 8201. Feminist Theory and Methods in the Social Sciences. (3 cr.; Student Option; Periodic Fall & Spring)
Seminar on recent theories, including feminist versions of positivist, interpretivist, critical theoretical, and postmodernists models of social science knowledge. Methodologies congenial to feminist practices of inquiry, including use of narrative in theory, feminist ethnography, discourse analysis, and comparative methods in history.

GWSS 8210. Seminar: Feminist Theory & Practice. (3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)
Topics in feminist theory.

GWSS 8220. Seminar: Science, Technology & Environmental Justice. (3 cr. [max 6 cr.]; Student Option; Periodic Spring)
Topics related to science, technology, environmental justice.

GWSS 8230. Seminar: Cultural Criticism and Media Studies. (3 cr. [max 6 cr.]; Student Option; Periodic Spring)
Topics in literature, film, art.

GWSS 8250. Seminar: Nation, State, and Citizenship. (1-3 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring)
Topics related to nation, state, citizenship.

GWSS 8260. Seminar: Race, Representation and Resistance. (3 cr. [max 6 cr.]; Student Option; Every Spring)
Race, racialization, racial justice as related to representation/struggles for social/economic justice. Intersectional analysis of power, politics, ideology/identity. Queer of color critique, women of color feminisms, critical sex/body positive approaches. Prereq: Grad student

GWSS 8270. Seminar: Theories of Body. (3 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring)
How body is configured in many social arenas. Legal decisions, policy making, medical research, cultural customs. Examine how attitudes toward male/female bodies influence social myths/discourses about social policy/change.

GWSS 8301. Feminist Literary Criticism. (3 cr.; Student Option; Periodic Fall & Spring)
Recent developments and major issues in feminist studies of literature. Introduction to array of scholars and scholarship in field of feminist literary theory and criticism, emphasizing broad range of feminist textual analysis taking place in various University departments.

GWSS 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) Prereq: Master’s student, adviser and DGS consent

GWSS 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) Prereq: Doctoral student, adviser and DGS consent

GWSS 8490. Seminar: Transnational, Postcolonial, Diaspora. (3 cr. [max 6 cr.]; Student Option; Every Fall & Spring)
Graduate topics in comparative/global studies.

GWSS 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
TBD Prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

GWSS 8888. Thesis Credit: Doctoral. (1-24 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) Prereq: Max 18 cr per semester or summer; 24 cr required

GWSS 8993. Directed Study. (1-6 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer)
TBD

GWSS 8994. Directed Instruction. (1-8 cr. [max 36 cr.]; Student Option; Every Fall, Spring & Summer)
TBD

GWSS 8995. Directed Research. (1-8 cr.; No Grade Associated; Every Fall & Spring)
TBD

GWSS 8996. Feminist Studies Colloquium. (1 cr. [max 4 cr.]; S-N or Audit; Every Fall & Spring)
TBD Prereq: Grad major or minor in feminist studies

GWSS 8997. Dissertation Seminar. (1-3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)
Conceptualizing the research problem for the dissertation and structuring the process of writing a chapter of it. Prereq: AmSt doctoral student beginning dissertation work

GWSS 8998. Professional Development. (1-3 cr. [max 6 cr.]; S-N only; Every Spring)
Workshop addressing one of a variety of professional development issues including, but not limited to, grant writing, book reviewing, revising term papers for publication, course development, writing and presenting conference papers, preparing to enter the job market (writing a c.v./application letter, preparing for interviews, job talk). Prereq: Grad student.

GWSS 8999. Professional Development. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)

GWSS 9151. Advanced General Dentistry Seminar I. (5-10 cr.; S-N or Audit; Every Fall & Summer)
Clinical seminars with emphasis on treatment planning, case presentation, techniques and materials, comprehensive oral healthcare and maintenance, and issues in practice management. Correlated with concurrent clinical experiences.

GWSS 9152. Advanced General Dentistry Seminar II. (5-10 cr.; S-N or Audit; Every Fall)
Clinical seminars with emphasis on treatment planning, case presentation, techniques and materials, comprehensive oral healthcare and maintenance, and issues in practice management. Correlated with concurrent clinical experiences.

GWSS 9153. Advanced General Dentistry Seminar III. (2-10 cr.; S-N or Audit; Every Fall & Spring)
Clinical seminars with emphasis on treatment planning, case presentation, techniques and materials, comprehensive oral healthcare and maintenance, and issues in practice management. Correlated with concurrent clinical experiences.

GWSS 9254. Advanced General Dentistry Clinic I. (5-15 cr.; S-N or Audit; Every Fall & Summer)
Comprehensive oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GWSS 9255. Advanced General Dentistry Clinic II. (5-15 cr.; S-N or Audit; Every Fall)
Comprehensive oral health care delivered in a variety of settings, emphasizing complex
restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GEND 5256. Advanced General Dentistry Clinic III. (2-10 cr. : S-N or Audit; Every Fall & Spring) Comprehensice oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GEND 5261. Advanced General Dentistry Clinical Administration I. (5-10 cr. : S-N or Audit; Periodic Fall & Spring) Field experience in community dental clinic practice and administration.

GEND 5262. Advanced General Dentistry Clinical Administration II. (5-10 cr. : S-N or Audit; Every Fall) Field experience in community dental clinic practice and administration.

GEND 5263. Advanced General Dentistry Clinical Administration III. (1-10 cr. : S-N or Audit; Every Fall & Spring) Field experience in community dental clinic practice and administration.

GEND 5264. Advanced General Dentistry Clinic IV. (1-15 cr. : S-N or Audit; Every Summer) Comprehensive oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GEND 5265. Advanced General Dentistry Clinic V. (1-15 cr. : S-N or Audit; Every Fall) Comprehensive oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GEND 5266. Advanced General Dentistry Clinic VI. (1-15 cr. : S-N or Audit; Every Fall & Spring) Comprehensive oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GEND 6151. General Practice Seminar I. (3 cr. : S-N or Audit; Every Fall & Summer) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

GEND 6152. General Practice Seminar II. (3 cr. : S-N or Audit; Every Fall & Spring) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

GEND 6153. General Practice Seminar III. (3 cr. : S-N or Audit; Every Fall & Spring) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

GEND 6154. General Practice Seminar IV. (3 cr. : S-N or Audit; Every Fall & Spring) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

GEND 6251. General Practice Clinical Administration I. (2-10 cr. : S-N or Audit; Every Fall & Spring) Field experience in hospital dental clinic administration for residents.

GEND 6252. General Practice Clinical Administration II. (2-10 cr. : S-N or Audit; Every Fall & Spring) Field experience in hospital dental clinic administration for residents.

GEND 6253. General Practice Clinical Administration III. (2-10 cr. : S-N or Audit; Every Fall & Spring) Field experience in hospital dental clinic administration for residents.

GEND 6254. General Practice Clinic I. (2-10 cr. : S-N or Audit; Every Fall & Summer) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

GEND 6255. General Practice Clinic II. (2-10 cr. : S-N or Audit; Every Fall & Summer) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

GEND 6256. General Practice Clinic III. (2-10 cr. : S-N or Audit; Every Fall & Spring) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

GEND 6257. General Practice Clinic IV. (2-10 cr. : S-N or Audit; Every Fall & Spring) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

GEND 6261. General Practice Clinical Administration I. (5-10 cr. : S-N or Audit; Periodic Fall & Spring) Field experience in hospital dental clinic administration for residents.

GEND 6262. General Practice Clinical Administration II. (5-10 cr. : S-N or Audit; Every Fall) Field experience in hospital dental clinic administration for residents.

GEND 6263. General Practice Clinical Administration III. (5-10 cr. : S-N or Audit; Every Fall & Spring) Field experience in hospital dental clinic administration for residents.

GEND 6264. General Practice Clinic IV. (10-15 cr. : S-N or Audit; Periodic Fall & Spring) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

GEND 6265. General Practice Clinic V. (10-15 cr. : S-N or Audit; Every Fall) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

GEND 6266. General Practice Clinic VI. (10-15 cr. : S-N or Audit; Every Fall & Spring) A series of planned experiences in the clinical disciplines of dentistry, with emphasis on patient care.

Genetics, Cell Biol/Developmnt (GCD)

GCD 5005. Computer Programming for Biology. (3 cr. : Student Option; Every Fall) Computer programming skills with applications in biology. Design/build new computer programs for applications in cell/developmental biology, including modeling of biological processes, advanced data analysis, automated image analysis. prereq: BIOL 4003 or GCD 3033, general statistics course

GCD 5036. Molecular Cell Biology. (3 cr. : Student Option; Every Fall) Modern, integrative approaches combining cell/molecular biology, biochemistry, and genetics to investigate cell organization/function. Membranes, signaling, extracellular matrix, secretion, endocytosis, cytokkeleton, nucleus. Analysis of scientific papers to illustrate new concepts and experimental approaches to cell organization/function. prereq: Biol 4004 or instr consent; [sr or grad student] recommended

GCD 6103. Human Histology. (3-8 cr. : P-N or Audit; Every Fall) Human histology is a lecture and laboratory class covering light and electron microscopic anatomy of tissues and their organization into human organs. The emphasis is on integrating structure and its relationship to function at levels from molecules to organs. prereq: Enrolled as medical or dental student or instr consent

GCD 6110. Science of Medical Practice. (3-6 cr. : A-F or Audit; Every Fall) Combines Biochemistry/Medical Genetics aimed toward Medical/Geneic Counseling students. Biochemistry content covers genome organization, transcription, metabolism, nutrition, stem cell biology, cell signaling, cancer. Genetics content covers inheritance, genetic/genomic conditions, inborn errors of metabolism, cancer genetics, complex inheritance/genetic susceptibility to disease, birth defects. Meets with INMD 6802. prereq: Medical student or MCDB concurrent registration is required (or allowed) in G MS student with genetic counseling specialization or instr consent

GCD 8001. Genetic Counseling Clinical Internship I. (3 cr. [max 6 cr.] : A-F only; Every Summer) This is a 10-week clinical internship in genetic counseling practice. Students in this course will be assigned to an appropriate clinic affiliated with the graduate program of study in genetic counseling. Students must be enrolled in the program in order to take this course. Students will be expected to attend clinic and under the supervision of a board certified genetic counselor or medical geneticist, students are expected to log a minimum case load as defined by the Accreditation Council for Genetic Counseling (ACGC), the American Board of Genetic Counseling and the graduate program in genetic counseling at the University of Minnesota. The actual days and hours of the assigned clinic will be set by the clinical supervisor on site.

GCD 8002. Genetic Counseling Clinical Internship II. (5 cr. [max 10 cr.] : A-F only; Every Fall) This is a 15-week clinical internship course in genetic counseling practice. Students in this course will be assigned two appropriate clinics affiliated with the graduate program of study in genetic counseling. Students must be enrolled in the program in order to take this course. Students will be expected to attend clinic and will provide genetic counseling services under the supervision of a board certified genetic counselor or medical geneticist. Students are expected to log a minimum caseload that meets the criteria for clinical training by the Accreditation Council for Genetic Counseling (ACGC), the American Board of Genetic Counseling and the graduate program in genetic counseling at the University of Minnesota. The actual days and hours of the assigned clinics will be set by the clinical supervisor on site.
GCD 8003. Genetic Counseling Clinical Internship III. (5 cr. [max 10 cr.] ; A-F only; Every Spring) This is a 15-week clinical internship course in genetic counseling practice. Students in this course will be assigned two appropriate clients affiliated with the graduate program of study in genetic counseling. Students must be enrolled in the program in order to take this course. Students will be expected to attend clinic and will provide genetic counseling services under the supervision of a board certified genetic counselor or medical geneticist. Students are expected to log a minimum caseload that meets the criteria for clinical training by the Accreditation Council for Genetic Counseling (ACGC), the American Board of Genetic Counseling and the graduate program in genetic counseling at the University of Minnesota. The actual days and hours of the assigned clinics will be set by the clinical supervisor on site.

GCD 8008. Mammalian Gene Transfer and Genome Engineering. (2 cr.; A-F or Audit; Every Spring) Current gene transfer and genome engineering technology. Applications of genetic modifications in animals, particularly transgenic animals and human gene therapy. prereq: instr consent

GCD 8014. Small RNA Biology. (2 cr.; A-F or Audit; Every Spring) Small RNAs as major regulators of gene and protein expression. MicroRNAs and their potential use in diagnosis and prognosis of various disease conditions including cancers. Biology of small RNAs and their role in health and disease. prereq: MICA 8004 or BIOL 8002 or equiv or instr consent

GCD 8073. Genetics & Genomics in Human Health. (3 cr.; Student Option; Every Spring) Application of molecular, biochemical, chromosomal, and population genetics to human variation and disease. Abnormal chromosome number and structure; abnormal enzyme, structural protein, receptor, and transport; analysis of inheritance patterns; behavioral genetics; genetic basis of common disease. Current research articles in human genetics. prereq: 8131 or BIOL 4003 or MCRP 4034 or instr consent

GCD 8103. Human Histology. (5 cr.; Student Option; Every Fall) Light/electron microscopic anatomy of tissues and their organization into human organs. Emphasizes integrating structure, its relationship to function at levels from molecules to organs. Lecture, lab. prereq: Undergraduate biology, chemistry, math, and physics course; instr consent

GCD 8131. Advanced Molecular Genetics and Genomics. (3 cr.; Student Option; Every Fall & Spring) Literature-based course in modern molecular genetic and genomic analysis. Students will gain a deep understanding of the fundamental molecular mechanisms controlling inheritance in biological systems. Students will gain a facility in thinking critically and creatively about how genes work at cellular, organismal, and transgenerational levels. Course instruction emphasizes active-learning approaches, student presentations, and group projects. prereq: [3022 or BIOL 4003], [BIOL 3021 or BIOL 4331] or instr consent

GCD 8151. Cellular Biochemistry and Cell Biology. (2-4 cr.; A-F only; Every Fall) This course introduces graduate students to fundamental concepts of Biochemical Unity (Part 1) and Cell Theory (Part 2). For Part 1, we will discuss matter of life, equilibrium, entropy & law of mass action, two state systems, random walks & diffusion, rate equations of chemical reactions, and explore how they relate to regulation of biological networks (gene regulation and signal transduction). For Part 2 we will focus on properties of biological membranes, membrane trafficking, protein import & degradation, nuclear structures and their function, as well as molecular motors, cytoskeletal dynamics, and mitosis. The course assumes students have had previous undergraduate courses in cell biology, biochemistry and genetics. prereq: [[4034 or 8121 or BIOC 8002], Biol 4004] or BMBB or MCDGB grad student or instr consent

GCD 8161. Advanced Cell Biology and Development. (3 cr.; A-F only; Every Spring) The advanced cell and developmental biology of embryos, taught through in-depth, comparative analysis of historical and current primary research articles that illustrate developmental mechanisms and experimental approaches in key invertebrate and vertebrate model organisms. prereq: [BMBB or MCDGB grad student] or [GCD 4161, [GCD 8131 or Biol 4003], Biol 4004, and GCD 4034] or instr consent

GCD 8171. Literature Analysis. (1-2 cr.; A-F only; Every Fall) Critical reading and evaluation of current literature. May include evaluation of both excellent and flawed papers. Intensive and in-depth discussions of selected papers in molecular biology, genetics, cell biology, and developmental biology. prereq: Grad MCDBG or BMBB major

GCD 8900. Seminar. (1-2 cr.; max 8 cr.;) S-N or Audit; Every Fall & Spring) Current scientific research. prereq: Grad MCDG major or instr consent

GCD 8911. Introduction to Genetic Counseling Skills and Practice. (3 cr.; A-F only; Every Fall) Course focuses on basic concepts used in clinical genetic counseling practice. Students learn the necessary skills to prepare for and implement a genetic counseling session. The class will cover a variety of areas in the genetic counseling sub-specialty of prenatal genetics as well as newborn screening. Students will practice communicating genetics and medical information in a patient-friendly manner. At the end of the semester, students will be equipped with tools to assess medical and family histories, present genetic cases, and role play genetic counseling sessions. prereq: This class is intended for Molecular, Cellular, Biology and Genetics M.S. students with genetic counseling specialization.

GCD 8912. Genetic Counseling in Practice. (4 cr.; A-F or Audit; Every Spring) Practical genetic counseling, communicating genetics and medical information to the family, helping families with decision making. prereq: MCDG MS student with genetic counseling specialization or instr consent

GCD 8913. Psychosocial Issues in Genetic Counseling I. (3 cr.; A-F only; Every Fall) This course is designed to introduce students to the psychosocial issues that commonly arise in genetic counseling, as well as develop their individual counseling skills to assist them in effectively counseling patients. prereq: MCDG MS student with genetic counseling specialization or instr consent

GCD 8914. Ethical and Legal Issues in Genetic Counseling. (3 cr.; A-F or Audit; Every Spring) Professional ethics; ethical and legal concerns with new genetic technologies. prereq: MCDG MS student with genetic counseling specialization or instr consent

GCD 8915. Psychosocial Issues in Genetic Counseling II. (3 cr. [max 5 cr.]; A-F only; Every Spring) This course is designed to introduce Genetic Counseling Masters students to the psychosocial issues that commonly arise in genetic counseling, as well as develop their individual counseling skills to assist them in effectively counseling patients.

GCD 8920. Special Topics. (1-4 cr.; Student Option; Every Fall & Spring) Special topic shell

GCD 8933. Directed Studies. (1-5 cr. [max 15 cr.]; Student Option; Every Fall, Spring & Summer) tbd prereq: MCDG MS student with genetic counseling specialization or instr consent

GCD 8994. Research. (1-5 cr. [max 20 cr.]; S-N or Audit; Every Fall, Spring & Summer) Independent research determined by student's interests, in consultation with faculty mentor. prereq: MCDG MS student with genetic counseling specialization or instr consent

Geographic Information Science (GIS)

GIS 5530. GIS Internship. (1-3 cr. [max 6 cr.]; S-N only; Every Fall & Spring) Practical hands-on experience using GIS to solve problems in a real-world work environment. prereq: instr consent, strong GIS/ mapping skills

GIS 5555. Basic Spatial Analysis. (3 cr.; Student Option; Every Fall) How to use spatial data to answer questions on a wide array of social, natural, and information science issues. Exploratory data analysis/ visualization. Spatial autocorrelation analysis/ regression. prereq: [STAT 3001 or equiv, MGIS student] or instr consent
GIS 5571. ArcGIS I. (3 cr.; Student Option; Every Fall)
First of a two-course series focusing on ArcGIS Desktop. Overview of ArcGIS system and its use for spatial data processing. Data capture, editing, geometric transformations, map projections, topology, Python scripting, and map production. prereq: [GEOG 5561 or equiv, status in MGIS program, familiarity with computer operating systems] or instr consent

GIS 5572. ArcGIS II. (3 cr.; Student Option; Every Spring)
Continues GIS 5571. Raster analysis, dynamic segmentation, geometric networks, geocoding, Python scripting, and data interoperability. Substantial projects include map and poster design and production. prereq: [GEOG 5561 or equiv, in MGIS program] or instr consent

GIS 5573. Introduction to Digital Mapping: ArcGIS Basics. (2 cr.; A-F only; Every Fall)
Desktop mapping functions using ArcGIS software. Application of systems to display/analyse geographical data. prereq: [GEOG 5561 or equiv, in MGIS program] or instr consent

GIS 5574. Web GIS and Services. (3 cr.; Student Option; Every Fall)
Plan, design, develop, publish web-based GIS solution. Build websites, prepare data for web. Commercial software, Open Source software, volunteer geographic information, open GIS standards/developing web GIS application. Hands-on experience with variety of web GIS technologies/software. prereq: [GEOG 5561 or equiv, in MGIS program] or instr consent

GIS 5575. Practical Surveying for GIS. (2 cr.; Student Option; Every Spring)
Surveying techniques/relationship of GPS to GIS professionals. Geodesy, data adjustment, datums, ellipsoids, coordinate systems, transformations. prereq: GEOG 5561 or equiv in MGIS program or instr consent

GIS 5576. Spatial Digital Humanities. (3 cr.; Student Option; Every Spring)
Introduction to Spatial Digital Humanities GIS 5576 is a basic overview of desktop GIS (both Esri and open source), as well as an introduction to a number of other mapping techniques (such as Esri Maps for Office, ArcGIS Online, web mapping basics, georeferencing historical maps, etc) in addition to digital scholarship techniques. Course objectives include: understanding the basics of mapping and geospatial information using GIS; documenting and managing spatial data using coherent/standardized methods; understanding several spatial analysis methods that are relevant to student research area; and applying spatial research methods into student research.

GIS 5577. Spatial Database Design and Administration. (3 cr.; Student Option; Every Spring)
Spatial database design, development planning/management, maintenance, security, access/distribution, and documentation. prereq: instr consent

GIS 5578. GIS Programming. (3 cr.; Student Option; Every Spring)
Programming techniques using Python and other languages specifically relating to GIS technologies. prereq: instr consent

GIS 5590. Special Topics in GIS. (3 cr. [max 6 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Topics vary according to curricular needs, technological developments in field.

GIS 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall & Spring)
(No description) prereq: Master's student, adviser and DGS consent

GIS 8501. GIS Project Management and Professional Development. (3 cr.; A-F only; Every Fall)
Project management/professional development. Portfolio creation, career exploration, degree program planning. GIS project management through lectures, class exercises, guest speakers. prereq: MGIS student or instr consent

GIS 8990. Research Problems in GIS. (1-6 cr.; A-F only; Every Fall, Spring & Summer)
Project of sufficient scope/complexity to document student's ability to apply spatial analysis and visualization techniques to real-world problems. Supervised by faculty member. prereq: MGIS student, instr consent

Geography (GEOG)

GEOG 5361. Geography and Real Estate. (4 cr.; Student Option; Every Spring)
Origins and evolution of land ownership in the United States.

GEOG 5374. The City in Film. (WI; 4 cr.; Student Option; Every Spring)
Cinematic portrayal of changes in 20th-century cities worldwide. Social/cultural conflict, political/economic processes, changing gender relationships, rural versus urban areas, population/development issues (especially as they affect women/children). Meets concurrently with 3374. Additional weekly meeting discusses films, readings. Project on a topic selected in consultation with instructor. prereq: grad student or instr consent

GEOG 5385. Globalization and Development: Political Economy. (4 cr.; Student Option; Periodic Fall & Spring)
Nature/scope of modern world system (capitalism), its impact on regional development processes. Roles of state and of international financial institutions. prereq: Sr or grad or instr consent

GEOG 5393. Rural Landscapes and Environments. (4 cr.; Student Option; Every Spring)
Analysis of three principal components of rural landscape (form of land surface, plant life that cloaks it, structures that people have placed upon it). Structures associated with agriculture, including mining, forestry, resort areas, and small towns.

GEOG 5401. Geography of Environmental Systems and Global Change. (4 cr.; Student Option; Periodic Fall)
Processes that create/change the spatial patterns of climate, vegetation, and soils. Potential of humans to alter climate, vegetation, and soil processes. Possible impacts of human-altered environmental conditions. prereq: grad student or instr consent

GEOG 5426. Climatic Variations. (3 cr.; Student Option; Periodic Fall)
Theories of climatic fluctuations and change at decadal to centuries time scales; analysis of temporal and spatial fluctuations especially during the period of instrumental record. prereq: 1425 or 3401 or instr consent

GEOG 5431. Plant and Animal Geography. (3 cr.; Student Option; Periodic Fall)
Introduction to biogeography. Focuses on patterns of plant/animal distributions at different scales over time/space. Evolutionary, ecological, and applied biogeography. Paleoecobiogeography, vegetation-environment relationships, vegetation dynamics/disturbance ecology, human impact on plants/animals, nature conservation. Discussions, group/individual projects, local field trips.

GEOG 5511. Principles of Cartography. (4 cr.; Student Option; Every Spring)

GEOG 5530. Cartography Internship. (2-7 cr. [max 10 cr.]; S-N or Audit; Every Fall & Spring)
Provides intensive hands-on experience in contemporary map production and design, ranging from GIS applications to digital prepress. Strong computer skills essential. prereq: instr consent

GEOG 5531. Numerical Spatial Analysis. (4 cr.; Student Option; Every Fall)
Applied/theoretical aspects of geographical quantitative methods for spatial analysis. Emphasizes analysis of geographical data for spatial problem solving in human/physical areas.

GEOG 5541. Principles of Geocomputing. (3 cr.; A-F or Audit; Every Spring)
The availability of computing infrastructures such as high-performance and cloud computing, high-speed networks, and rich data has led to a new scientific paradigm using computational science. Geocomputation is the "application of a computational science paradigm to study a wide range of problems in geographical and earth systems (the geo) contexts" (Openshaw, 2014). This course will introduce students to geocomputation as well as related areas including big spatial data, and cyberinfrastructure. Students will engage in hands-on-exercises learning principles and best-practices in geocomputing. The ability to program is an essential skill for GIScientists. Learning to program takes time and a lost program is an essential skill for GIScientists. The ability to program is an essential skill for GIScientists.
Programming language to solve geospatial problems.

**GEOG 5543. Advanced Geocomputing.** (3 cr.; Student Option; Every Fall)

The availability of computing infrastructures such as high-performance and cloud computing, high-speed networks, and rich data has led to a new scientific paradigm using computational approaches, termed computational science. Geocomputation is the 'application of a computational science paradigm to study a wide range of problems in geographical and earth systems (the geo contexts’ (Odenhaw, 2014). This course will delve into advanced topics in geocomputation as well as related areas ranging from geographic information and spatial big data to cyberinfrastructure and parallel computation. Students will engage in hands-on exercises learning principles and best practices in geocomputing while using cutting-edge computational infrastructures.

**GEOG 5561. Principles of Geographic Information Science.** (4 cr.; Student Option; Every Fall & Spring)

Introduction to the study of geographic information systems (GIS) for geography and non-geography students. Topics include GIS application domains, data models and sources, analysis methods and output techniques. Lectures, reading, and hands-on experience with GIS software. prereq: grad

**GEOG 5562. GIS Development Practicum.** (3 cr.; Student Option; Periodic Fall)

Algorithms/data structures for digital cartographic data, topological relationships, surface modeling, and interpolation. Map projections, geometric transformations, numerical generalization, raster/vector processing. Hands-on experience with software packages. prereq: GIS 5571 or instr consent

**GEOG 5563. Advanced Geographic Information Science.** (3 cr.; Student Option; Every Fall & Spring)

Advanced study of geographic information systems (GIS). Topics include spatial data models, topology, data encoding, data quality, database management, spatial analysis tools and visualization techniques. Hands-on experience using an advanced vector GIS package. prereq: B or better in 3561 or 5561 or instr consent

**GEOG 5564. Urban Geographic Information Science and Analysis.** (3 cr.; Student Option; Periodic Fall)

Core concepts in urban geographic information science including sources for urban geographical and attribute data (including census data), urban data structures (focusing on the TIGER data structure), urban spatial analyses (including location-allocation models), geodemographic analysis, network analysis, and the display of urban data. prereq: 3561 or 5561

**GEOG 5588. Advanced Geovisualization.** (3 cr.; Student Option; Every Fall)

The generation and use of geographic information has become an integral part of our daily life, science, and technology. This has led to increasing interest in the design and development of interactive maps and dynamic geographic visualizations in 2D, 3D, and Web environments. The Advanced Geovisualization course intends to equip students with the knowledge and advanced technical skills needed to design and implement effective maps and create dynamic and interactive visualizations using geospatial data sets.

**GEOG 5589. Introduction to Dendrochronology.** (3 cr.; Student Option; Every Fall)

Introduction to dendrochronology, including the application of tree-ring data to investigate environmental change and past cultures. prereq: [1403, [BIOL 1001 or BIOL 1009 or equiv]] or instr consent

**GEOG 5900. Topics in Geography.** (3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)

Special topics and regions. Course offered by visiting professors in their research fields.

**GEOG 8001. Problems in Geographic Thought.** (3 cr.; A-F or Audit; Periodic Fall)

Currents of geographic thought in biophysical, GIS, human, cultural, and urban-environment subfields. Focuses on concepts/paradigms through which geographers have attempted to unify/codify the discipline, around which debate has flourished, and about which interdisciplinary histories can be traced.

**GEOG 8002. Research Methods in Geography.** (3 cr.; Student Option; Every Spring)

Seminar. Overview of research designs/methods in geography. Relationships between different research paradigms (modes of inquiry), research designs, and methods. Critical readings. Analyses of research projects.

**GEOG 8005. Proseminar: Population Geography.** (3 cr.; Student Option; Periodic Fall & Spring)

Conceptual literature and empirical studies on fertility, mortality, and migrations in different parts of the world. prereq: instr consent

**GEOG 8006. Proseminar: Research Methods in Geography.** (3 cr.; Student Option; Periodic Fall & Spring)

Introduction to research design, strategies, methods of data collection, analysis, interpretation, and representation in contemporary geographic research. prereq: instr consent

**GEOG 8007. Proseminar: Theories of Development and Change.** (3 cr.; Student Option; Periodic Fall & Spring)

Recent research themes and questions in geography and related social sciences on Third World development; development theories, conceptually grounded case studies, and grassroots-based research. prereq: instr consent

**GEOG 8020. Research Seminar: Economic Geography.** (3 cr.; Student Option; Periodic Fall & Spring)

Contemporary research. Advanced topics, which vary with interests of faculty offering course. prereq: instr consent

**GEOG 8010. Proseminar: Nature and Society.** (3 cr.; Student Option; Periodic Fall & Spring)

Interconnectedness of environment and people, nature and society. Conceptual literature and empirical studies in human/cultural/political ecology. prereq: instr consent

**GEOG 8012. Proseminar: The State, the Economy, and Spatial Development.** (3 cr.; Student Option; Periodic Fall & Spring)

Introduction to research in economic, political, and urban geography: conceptual research addressing interrelationship between political and economic processes and spatial dynamics of urban and regional development; empirical research documenting nature and extent of this interrelationship at different spatial scales. prereq: instr consent

**GEOG 8013. Proseminar: Physical Geography.** (3 cr.; Student Option; Periodic Fall & Spring)

Historical development of research in physical geography, current research trends, and transfer of current research to undergraduate education. prereq: instr consent

**GEOG 8105. Proseminar: Historical Geography.** (3 cr.; Student Option; Periodic Fall & Spring)

Introduction to conceptual research and empirical studies. prereq: instr consent

**GEOG 8106. Seminar: Social and Cultural Geography.** (3 cr.; Student Option; Periodic Fall & Spring)

Role of space and place in constitution of social and cultural life, social relations, and social identities; class, space, and place; geography of race and racism; environmental racism; geography of gender and sexuality; nationalism, national identity, and territory. prereq: instr consent

**GEOG 8107. Geographic Writing.** (3 cr.; S-N or Audit; Every Fall)

Analysis of organization and presentation of geographic research. Critiques of selected examples of geographic writing. prereq: instr consent

**GEOG 8200. Seminar: Urban Geography.** (2-3 cr.; A-F or Audit; Periodic Spring)

Contemporary research. Topics vary with the interests of faculty.

**GEOG 8201. Explorations in the Geography of Minnesota.** (3 cr.; S-N or Audit; Periodic Fall & Spring)

Physical environment, agriculture, forestry, mining, land survey, population, recreation, cities/towns, transportation. Sources of information about the state. Students make short oral/written reports. Might provide springboard for a Plan B paper, thesis, or dissertation. Two or three Saturday field trips. prereq: instr consent

**GEOG 8211. Federal Policy Research.** (3 cr.; Student Option; Every Fall)

U.S. environmental policies at federal/state level. Policy formulation, implementation, and
evaluation. This seminar provides students with the necessary information to carry out independent research into public policy and will add unfamiliar sources to their research bibliographies. Descriptive and analytical rather than theoretical, and illustrative rather than comprehensive, it gives both social scientists and biophysical scientists additional perspective to their personal research and adds an important dimension to their analysis. It will allow them to find, describe, critically review, and communicate those aspects of federal policy of concern. Students are encouraged to choose areas of policy coinciding with their areas of research. prereq: instr consent

GEOG 8290. Seminar in GIS and Cartography. (3 cr.; Student Option; Periodic Fall & Spring)
Selected concepts/methods. Topics, which vary yearly, include spatial analysis methods in GIS; advanced visualization methods; data quality and error propagation in GIS; generalization methods in GIS and cartography; role of time in GIS; interactive/animated cartography; incorporation of uncertainty. prereq: instr consent

GEOG 8291. Seminar in GIS, Technology, and Society. (3 cr.; Student Option; Periodic Fall & Spring)

GEOG 8292. Seminar in GIS: Spatial Analysis and Modeling. (3 cr.; Student Option; Spring Every Year)
Overview of Geographic Information Systems (GIS) and spatial analysis/modeling of human/environmental systems. Spatial statistics, modeling spatiotemporal processes, simulation techniques, visualization, complex systems/complexity. Guidance in thesis/dissertation research. prereq: 3511 or equiv statistics course, or 5561 or equiv intro GIS course or instr consent

GEOG 8293. CyberGIS. (3 cr.; Student Option; Every Spring)
Just as physical infrastructure provides services such as electricity, plumbing, and road networks to communities across the world, cyberinfrastructure has emerged to provide computational services and capabilities to scientific communities. Cyberinfrastructure integrates high-performance computing, digital sensors, virtual organizations, and software tools and services to facilitate computationally-intensive and collaborative scientific research. CyberGIS, broadly defined as cyberinfrastructure-based geographic information systems, integrates cyberinfrastructure, geographic information systems (GIS), and spatial analysis to enable collaborative geographic problem solving. This course will delve into advanced topics within the context of cyberGIS and related technologies. Particular emphasis will be placed on raster data processing including a broad introduction to raster data, cartographic modeling, and raster data manipulation. We will situate raster data processing in the broader context of advanced information science and cyberGIS focusing on the how synthesizing computational thinking and spatial thinking influence methodological approaches. Students will be expected to draw on their own experiences and backgrounds to enhance discussions, labs, and research projects. Students will gain hands-on experience developing methods to analyze and manipulate raster data.

GEOG 8294. Spatiotemporal Modeling and Simulation. (3 cr.; Student Option; Periodic Spring)
Many geographic, societal, and environmental phenomena as well as biological and ecological systems involve dynamic processes that are changing in space and time. Examples include hurricanes, animal migrations, spread of diseases, human mobility and population dynamics. Movement is a key to understanding the underlying mechanisms of these dynamic processes. Today, the availability of an unprecedented amount of movement observations at ne spatial and temporal granularities has resulted in substantial advances in GIScience approaches for the analysis, modeling, and simulation of movement and its patterns. Spatiotemporal models and simulation techniques are often used to analyze and better understand the patterns of spatiotemporal processes, and to assess their behavioral responses in varying environmental conditions. This seminar introduces students to the concepts of spatiotemporal processes and patterns. We review existing methods for modeling and simulation of spatiotemporal phenomena, especially movement. Students will develop computational skills to model a phenomena of their choice and create simulations.

GEOG 8301. Advanced Qualitative Methods. (3 cr.; A-F or Audit; Periodic Fall & Spring)

GEOG 8302. Research Development. (3 cr.; S-N or Audit; Periodic Fall)
Students in geography and related social sciences are guided in key steps to effective research proposal writing. prereq: instr consent

GEOG 8333. FTE: Masters. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent.

GEOG 8336. Development Theory and the State. (3 cr.; A-F or Audit; Every Spring)
Why certain interventionist states in third world countries have been able to guide their economies to overcome legacy of underdevelopment while most have failed to induce development. Internal/external conditions that facilitated such departure from underdevelopment. Comparative national/provincial case studies: Taiwan, South Korea, Botswana, Brazil, India. Applying theoretical approaches to policy issues.

GEOG 8350. Seminar: World Population. (3 cr.; Student Option; Periodic Fall & Spring)
Contemporary research in world population development and problems. Topics vary with interests of faculty offering course. prereq: instr consent

GEOG 8405. Seminar: Graduate Student Professional Development. (1 cr.; S-N or Audit; Periodic Fall & Spring)
Strategies for success in graduate program. Preparation for a career as a geographer.
Completing/defending the dissertation. Publishing, job search, tenure process, oral presentations, non-academic career paths. prereq: Geography grad student

** GEOG 8420. Teaching Practicum. ** (1 cr. [max 3 cr.]; S-N or Audit; Every Fall & Spring) Teaching methodologies, learning objectives, course content, classroom techniques, student/ course evaluation. Specific application to instruction in Geography. prereq: [Geog or MGIS] grad student or inst consent

** GEOG 8444. FTE: Doctoral. ** (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

** GEOG 8666. Doctoral Pre-Thesis Credits. ** (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

** GEOG 8777. Thesis Credits: Master’s. ** (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

** GEOG 8800. Seminar: Development of Geographic Thought. ** (3 cr.; Student Option; Periodic Fall & Spring) Topics vary with interests of faculty offering course. prereq: inst consent

** GEOG 8888. Thesis Credit: Doctoral. ** (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

** GEOG 8970. Directed Readings. ** (1-5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer) tbd prereq: dept consent

** GEOG 8980. Topics in Geography. ** (1-3 cr. [max 30 cr.]; Student Option; Every Fall & Spring) Seminar offered by visiting or regular faculty. Topics vary with interests of faculty. prereq: instr consent

** GEOG 8990. Research Problems in Geography. ** (1-5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer) Individual research projects. prereq: dept consent

** Geriatrics (GER) **

** GERI 7100. Oral Health Services for Older Adults Seminar. ** (2 cr.; Student Option; Every Fall & Spring) A seminar for graduate students on a broad variety of topics related to aging, oral health of older adults, and delivery of oral health services to older adults. Students present articles, complex clinical cases, and ongoing research projects for group discussion.

** GERI 7200. Advanced Clinical Geriatric Dentistry. ** (1-10 cr.; A-F or Audit; Every Fall, Spring & Summer) Practical clinical experience in examination, diagnosis, treatment planning, and treatment of older adult patients in the dental clinic at the Amherst H. Wilder Senior Health Center.

** GERI 7210. Geriatric Hospital Dentistry. ** (1-6 cr.; Student Option; Every Fall, Spring & Summer) Rotations at University of Minnesota Hospital Dental Clinic and/or Minneapolis V.A. Medical Center Dental Clinic. Management of elderly patients in acute care settings. Dental management of patients compromised by medical therapies such as radiation treatment or chemotherapy, as well as those with acute illnesses.

** German (GER) **

** GER 5011. Advanced Conversation and Composition. ** (3 cr.; Student Option; Fall Odd Year) Achieving high proficiency in writing/speaking professional/academic German, prereq: 3012; [grad student or adv undergrad]

** GER 5410. Topics in German Literature. ** (3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring) Topic may focus on a specific author, group of authors, genre, period, or subject matter. Topics specified in Class Schedule.

** GER 5610. German Literature in Translation. ** (3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring) Study in depth of authors or topics from various periods in German literature. Requires no knowledge of German, prereq: No knowledge of German required; or toward major or minor requires reading in German

** GER 5630. Topics in German Cinema. ** (3 cr. [max 9 cr.]; Student Option; Periodic Spring) Topics chosen may focus on specific directors, genres, film production or reception, and/or other formal, theoretical, historical, or political issues. prereq: 3xxx film course or instr consent

** GER 5651. Thinking Environment: Green Culture, German Literature and Global Debates. ** (ENV,LITR; 3 cr.; Student Option; Fall Odd, Spring Even Year) How environmental thinking became social-political force through German literature/ culture, with comparisons to global or U.S. developments. Authors include Goethe, Christa Wolf, Enzensberger.

** GER 5711. History of the German Language I. ** (3 cr.; Student Option; Fall Even Year) Historical development of German, from beginnings to 1450; prereq: 3011

** GER 5712. History of the German Language II. ** (3 cr.; Student Option; Spring Odd Year) Historical development of German from 1450 to 2000; prereq: 5711

** GER 5721. Introduction to Middle High German. ** (3 cr.; Student Option; Fall Odd Year) Introduction to Middle High German language and literature. Study of grammar through formal description of Middle High German phonology, morphology, and syntax. Normalized MHG texts read.

** GER 5722. Middle High German: Advanced Readings. ** (3 cr.; Student Option; Spring Even Year) Acquisition of fluency in reading Middle High German normalized as well as non-normalized texts, both poetry and prose. prereq: 5721

** GER 5734. Old Saxon. ** (3 cr.; Student Option; Periodic Fall) Study of the poetry of Old Saxon. Detailed investigation of Old Saxon in comparison with the other Old Germanic languages.

** GER 5740. Topics in Germanic Medieval Studies. ** (3 cr. [max 9 cr.] ; Student Option; Periodic Spring) Topics specified in Class Schedule.

** GER 5993. Directed Studies. ** (1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Guided individual reading or study. Prereq inst consent, dept consent, college consent.

** GER 8010. Current Debates in Literary and Cultural Theory. ** (3 cr. [max 12 cr.]; Student Option; Every Spring) Seminar. Close readings of theoretical constellations in texts. Topic such as text/image, history/memory/time, oral culture/literacy, public/private, authority/crisis. Draws on literary, philosophical, and theoretical work.

** GER 8020. Problems in Literary and Cultural History. ** (3 cr. [max 12 cr.]; Student Option; Every Spring) Historiographic texts as literature and literary or filmic texts as historical documents. Homogenizing/constructive elements in historiography. Strategies of writing historical syntheses.

** GER 8200. Seminar in Medieval German Literature and Culture. ** (3 cr. [max 9 cr.]; Student Option; Spring Even Year) Topics on specific author, group of authors, genre, or subject matter in German literature, ca. 800-1450. prereq: 5721

** GER 8210. Seminar in Early Modern German Literature and Culture. ** (3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring) Topics on specific author, group of authors, genre, or subject matter in German literature, 1450-1750.

** GER 8220. Seminar in 18th-Century German Literature and Culture. ** (3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring) Literary, philosophical, and aesthetic texts emerging from major 18th-century literary trends, 1720-1810. Cultural and historical contexts of Enlightenment and Weimar Classicism.
GER 8230. Seminar in 19th-Century German Literature and Culture. (.3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring) Examination of an author, issue, or movement, using a variety of critical approaches.

GER 8240. Seminar in 20th-Century German Literature and Culture. (.3 cr. [max 9 cr.]; A-F or Audit; Periodic Fall & Spring) Topics on literature, film, or other forms of "high" and popular culture.

GER 8300. Topics in Literature and Cultural Theory. (.3 cr. [max 18 cr.]; Student Option; Periodic Fall & Spring) Authors, themes, movements, and social issues from 1700 to present. Focus varies each semester.

GER 8741. Gothic and Methods of Comparative Reconstruction I. (.3 cr.; Student Option) The oldest extant Germanic language and the prehistory of Germanic group of languages.

GER 8742. Gothic and Methods of Comparative Reconstruction II. (.3 cr.; Student Option; Periodic Fall) Continuation of study of the oldest extant Germanic language and the prehistory of Germanic group of languages. prereq: 8741

GER 8751. Paleography: Medieval Manuscript Readings. (.3 cr.; A-F or Audit; Periodic Spring) Introduction to techniques of reading and transcribing medieval German and Latin manuscripts.

GER 8752. Medieval Text Editing. (.3 cr.; Student Option; Periodic Spring) Introduction to techniques of historical text-critical editing of medieval Germanic and Latin manuscripts.

GER 8820. Seminar: Advanced Theory. (.3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring) Topic in critical thought, e.g., the Frankfurt School, hermeneutics, reception theory.

GER 8994. Directed Research. (.1-3 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Tbd prereq: instr consent, dept consent; may be taken as tutorial with instr consent

GER 5100. Topics in Gerontology. (.0.5-4 cr. [max 10 cr.]; Student Option; Periodic Fall, Spring & Summer) Timely topics related to the biology, sociology, and psychology of aging and applied aging services.

GER 5102. Hot Topics in the Biology of Aging. (.1 cr.; S-N only; Fall Even Year) The goals of the course include providing the students with an essential understanding of the contemporary issues in biogerontology, including analysis of ethics issues in the field. This course is open to graduate students and post-doctoral fellows involved in the NIA training grant Functional Proteomics of Aging. others may enroll with instr permission.

GER 5103. Aging and Society. (.2 cr.; Student Option; Every Fall) An examination of the broad range of topics and issues related to aging. Consideration of how the processes of aging affect individuals, groups, cohorts, and societies by drawing from research in sociology, psychology, gerontology, and health sciences. Comparisons are made of the processes of aging in US and other countries.

GER 5111. Studying Aging and Chronic Illness. (.2 cr.; Student Option; Every Fall) Methodological issues unique to studies of older populations. Focuses on measurement of epidemiological characteristics. Health conditions/disorders of older Americans. prereq: Introductory course in epidemiology or inst consent

GER 5125. Gerontology Service Learning. (.3 cr.; Student Option; Every Fall, Spring & Summer) At least 100 hours of service to seniors or organizations serving seniors required. Longitudinal one-on-one relationship with at least two seniors. Service activities may include: friendly visiting, escorting seniors to medical appointments, chore services, teaching health education to groups of seniors and staff, participating in social or recreational activities with seniors, assisting with immunization and screening programs, assisting seniors with selection of health plans, or providing volunteer home health aide or nursing assistant services or emergency non-medical response under the supervision of a nurse. Students may use up to 25 percent of their service time for project that benefits the campus as a whole. Reading, monthly class discussions, a term paper and weekly self-reflection.

GER 5191. Independent Study: Gerontology. (.1-4 cr. [max 16 cr.]; Student Option; No Audit; Periodic Fall, Spring & Summer) Independent study: gerontology. prereq: Approval of [adviser, DGS] for gerontology minor

GER 8020. Seminar in Gerontology. (.2 cr.; Student Option; Every Fall & Spring) Meets weekly. Students present and discuss new or completed research projects on aging; conduct formal reviews using NIH formats; critique published papers using formal review criteria employed by gerontologic journals; become familiar with large database in aging and describe how that database has been used in research for secondary analyses. prereq: instr consent

GER 8021. Application of Proteomics to Aging. (.1 cr.; Student Option; Fall Odd Year) Proteomic technology in aging research. Faculty/students led discussions on topics relevant to proteomics research. Overview of special techniques/analytical approaches complementary to proteomics, hands-on experience with data analysis, discussion of literature. prereq: [Grad students, post-doctoral fellows involved in National Institutes on Aging training grant Functional Proteomics of Aging] or grad students or post-doctoral fellows with instr consent

GER 8022. Fostering a Career in Aging Research. (.1 cr.; Student Option; Spring Odd Year)
The course will mainly elaborate on the relationship between politics and economic development in Chinese and World history. Instruction will focus on the implications of historical events and received wisdom on modern management, and the evaluation skills needed to manage complex organizations. The course combines both Western thought and Chinese traditional philosophy to help students develop a deeper understanding of history and its implications for modern business administration.

GDBA 7107. Sinology Wisdom and Management Innovation. (2 cr.; A-F only; Every Fall, Spring & Summer)

This course provides an introduction to the research and theory of management, leadership, logical thinking, and governance within organizations based on the wisdom and knowledge learned from classic historical events and modern management cases in China. The course will improve students' abilities in theoretical thinking and historical and cultural knowledge accumulation. The course is intended to sharpen their strategic vision, decision-making methods and leadership, based on a comprehensive understanding of Chinese and global historical management wisdom.

GDBA 7108. The Macroeconomic Situation and Policy. (2 cr.; A-F only; Every Fall, Spring & Summer)

This course uses the perspectives and methods of modern economics to analyze problems and systematically investigate the process of China's economic reform, opening-up, and development since 1979. It draws lessons from other countries and regions through comparison, so as to obtain an overall understanding of China's economic achievements in the past, its current problems, and its challenges for the future.

GDBA 7201. Global Strategic Alliances. (2 cr.; A-F only; Every Fall, Spring & Summer)

This course helps the students understand the strategic rationale for strategic alliances, how to choose the right alliance partner, structure and negotiate alliances, how alliances can be best managed, and learn alliance termination and restructuring, and understand alliances in the Chinese context.
GDBA 7202. Innovation through Emerging Technologies. (2 cr.; A-F only; Every Fall, Spring & Summer)  
This course helps top executives and leaders become tech savvy and prepare their organizations for the rapidly changing technological and social environments. The course covers current IT trends such as social media, business analytics, sharing economy, mobile, and platform economy. It also covers next generation technologies that will define and shape our future such as Internet of things, 3D printing, artificial intelligence, and augmented reality. Students will learn about the technical principles, benefits, and tools of each technology, collectively envision the implications of these technologies for business operations and innovations.

GDBA 7203. Marketing Strategies for Firms in the Era of Globalization. (1 cr.; A-F only; Every Fall, Spring & Summer)  
The course focuses on and explores the marketing strategies for firms in the new era of globalization. During the past decades, firms of western countries have been very successful in expanding their business in the global market, including in the emerging markets such as Brazil, Russia, India, China, and South Africa (BRICS) that hold great potentials. For instance, China’s economy has been growing rapidly to become the world’s second largest economy by nominal GDP, and many western firms have successfully gained a foothold in it. One key factor that helps the western firms to be successful in the global market is the long-term accumulated wisdom of business administration, both academically and practically. Examples include Coca-Cola and Apple that have been using brilliant branding management and other marketing tactics to help boom their business across continents.

GDBA 7204. Qualitative Research Methods. (1 cr.; A-F only; Every Fall, Spring & Summer)  
The course focuses on important methodologies that are helpful for students to do qualitative research in business administration. The course will focus on problem formulation and building theories for your study, designing appropriate case studies, collecting and analyzing primary data, and obtaining managerial insights to help improve your business decisions. In addition, the course will expose students to a new and useful research method—field experiments for studying business decision making in the field.

GDBA 7205. Global Accounting. (1 cr.; A-F only; Every Fall, Spring & Summer)  
This course aims to enhance students’ understanding of contemporary issues in accounting and corporate disclosures, with particular emphasis on issues arising in the process of globalization. Building on discussions of practical reporting issues, this course also exposes students to scholarly accounting research in the context of agency and contracting theory that has practical implications. Topics addressed include the role of accounting in capital markets and contracting, real effects of accounting, recent development in accounting in the global market place, cross-country comparisons of regulatory frameworks, corporate governance and accounting, and transfer pricing in multinational corporations.

GDBA 7206. Mergers and Acquisitions. (1 cr.; A-F only; Every Fall, Spring & Summer)  
Mergers and acquisitions (M&A) is an important way to achieve corporate growth. In this course, we will explore various means for corporate managers to achieve growth through M&A. The objective of the course is to help students develop a good understanding of the four principal areas related to M&A transactions (our four “learning pillars”): fit and strategy, M&A process, valuation, and post-merger integration. For each “learning pillar”, we not only discuss the general principles and practices, but also emphasize the advantages and challenges of acquiring a business in a foreign country. This course uses a balanced mix of lectures and case studies to deliver key insights from theories and real-world practices.

GDBA 7207. Family Wealth Management. (1 cr.; A-F only; Every Fall, Spring & Summer)  
This course offers an integrated and strategic approach to family wealth management. Wealthy individuals or families wish to protect and grow the wealth, enjoy financial security, and build a lasting legacy. Effective wealth management is critical to achieve these goals. A successful wealth management is an integrated and strategic discipline that includes investment strategy, risk management, taxes, financial planning, philanthropy, governance, and family culture. This course will help wealthy families to understand fundamentals of family wealth management, importance of diversification and risk management in family wealth, strategies that can help to achieve tax-efficient and cost-effective diversification, comprehensive family financial planning, and effective oversight of the wealth management process.

GDBA 7208. Management of Headquarters. (1 cr.; A-F only; Every Fall)  
This course is experiential in that it provides an opportunity for the students to visit multinational companies whose headquarters are based in the Twin Cities. During the visits the students will learn about the processes and structures in place, which enable global outreach. They will also observe a variety of managerial practices that facilitate these companies’ success on the world stage. Each visit will be followed by a content-driven reflection session during which the students will process their observations within established frameworks from the International business literature.

GDBA 7209. Service Operations Management. (1 cr.; A-F only; Every Fall, Spring & Summer)  
Services represent the largest segment of most industrial economies and an important growing segment of most global regions. China is experiencing tremendous growth in its service economy, with a near doubling in its service economy during the past two decades. The focus of executive attention is strongly shifting toward services, with increasing importance of service industries such as travel, finance, health care, media, and publishing. Despite its importance in the economy, service sector productivity growth generally lags that of manufacturing. A stronger focus on managing service operations is necessary to maintain local and globally competitive businesses. In addition, the effects of increasingly sophisticated consumers, deregulation, technology changes, and expanding global services combine to create new challenges. To succeed, business executives must have the skills to lead their service managers to allocate resources, design effective processes, analyze and improve operating practices, and apply new technologies. This course examines these opportunities.

GDBA 7210. Fundamental Data Analysis. (1 cr.; A-F only; Every Fall, Spring & Summer)  
The course begins with an overview of descriptive statistics, which includes both graphical and numerical methods for summarizing data. Then we provide a review of essential steps of inferential statistics, which include random variables, estimation, and hypothesis testing. The second half of the course is devoted to predictive analytics, including simple linear regression, multiple linear regression, and a brief introduction of experimental design. Throughout, we focus on basic concepts and the practical use of these methods in management environments. This course provides the background in statistical methods that is required for conducting research in a doctoral program in business.

GDBA 7211. Global Branding. (2 cr.; A-F only; Every Fall, Spring & Summer)  
This course will combine critical current perspectives from information economics, psychology, sociology, behavioral decision theory and neuro-science to inform students about how brand information is acquired, processed and employed in decision-making, across segments and cultures. Students are expected to be familiar with basic marketing concepts to allow for a discussion of strategic issues related to global branding. The course will involve multiple pedagogies including lecture, case discussion and class exercises.

GDBA 7212. Global Talent Management. (2 cr.; A-F only; Every Fall, Spring & Summer)  
Global talent challenges are increasingly prevalent as organizations increasingly compete on a worldwide stage. Global talent management reflects an individual’s and/or organizations capacity to influence others and work with people from other countries and manage international operations and to the use of human resource practices designed to ensure needed access to talent for multinational enterprises competing in a global environment. In this course, we will put particular attention on the development of global competencies and a “global mindset” in individuals and organizations. We will also explore how to effectively manage talent in the context of increasing globalization. In the course, we will focus upon identifying best practices for recruiting, developing and retaining global talent and managing high performance global work systems. More
specifically, we will consider how one should organize the processes and systems of hiring, rewarding, evaluating, developing, and motivating talent in today's global context.

**GDBA 7888. Thesis.** (12 cr. [max 24 cr.]: S-N only; Every Fall, Spring & Summer) Students have to complete and defend a thesis in order to be granted with the DBA degree.

**Global Studies (GLOS)**

**GLOS 5104. Crime and Human Rights.** (3 cr. : A-F or Audit; Periodic Fall & Spring) This course addresses serious violations of humanitarian and human rights law, efforts to criminalize those violations (laws and institutions), and consequences of these efforts. Special attention will be paid to the impact interventions have on representations and memories of atrocities on responses and the future of cycles of violence. Case studies on Holocaust, Balkan wars, Darfur, My Lai massacre, etc. Criminal justice, truth commissions, vetting, compensation programs. prereq; at least one 3xxx SOC or GLOS course recommended

**GLOS 5152. Global Avant-Gardes: Theatre, Music, Modernity.** (HIS; 3 cr. ; Student Option; Every Spring) What does it mean to be an avant-garde artist in the Global South? In postcolonial Africa and Asia, where arts were linked to national modernization projects, artists have played a key role in shaping citizens' identity, alongside schools and universities. While participating in modernizing projects, avant-garde artists maintained independence from state institutions and voiced criticism of dictators. This course examines avant-garde performances in several locations of the Global South, analyzing dramas of national history, modernist music, activist theater, cosmopolitan dance, transnational cultural circuits, and politically radical performances. Reading historical, social, and performance studies, we will develop methods for analyzing performances that aim to make transformative social interventions. These include textual analysis, ethnography, performance analysis, and tracking transnational cultural exchange. You will apply select methods in your final research paper, which centers on an artist in the Global South.

**GLOS 5104. Other Worlds: Globality and Culture.** (3 cr. : A-F or Audit; Periodic Fall) Interconnectedness of world. Considering not one world, but many. Colonialism, consumption, diasporic conditions, global media, nationalism, supra-national governance. How globality is experienced/contested locally/spatially. prereq: [3101, 3144, grad student] or instr consent

**GLOS 5900. Topics in Global Studies.** (1-4 cr. [max 12 cr.]: Student Option; Every Fall, Spring & Summer) Proseminar. Selected issues in global studies. Topics specified in Class Schedule.

**GLOS 5993. Directed Studies.** (1-4 cr. [max 12 cr.]: Student Option; Every Fall & Spring) Guided individual reading or study. Open to qualified students for one or more semesters.

**GLOS 5994. Directed Research.** (1-4 cr. [max 12 cr.]: Student Option; Every Fall & Spring) Qualified students work on a tutorial basis. Prereq instr consent, dept consent, college consent.

**Graduate School (GRAD)**

**GRAD 5102. Preparation for University Teaching for Nonnative English Speakers.** (2 cr. : S-N or Audit; Every Fall & Spring) Theory/practice of teaching in higher education in the United States. Emphasizes clear oral classroom communication and development of presentation skills. Skills practice in a simulated instructional setting. prereq; English Language Proficiency Rating of 4; Contact instructor for permission number.

**GRAD 5105. Practicum in University Teaching for Nonnative English Speakers.** (1-2 cr. : S-N or Audit; Every Fall & Spring) Theory, advanced practice in teaching in higher education for nonnative speakers of English. Emphasizes interactive teaching strategies, awareness of cross-cultural classroom issues, oral classroom presentation skills, and legal/policy issues. prereq: 5102 or English Language Proficiency Rating of 2; Contact instructor for permission number.

**GRAD 8101. Teaching in Higher Education.** (3 cr. : Student Option No Audit; Every Fall, Spring & Summer) Teaching methods/techniques. Active learning, critical thinking, practice teaching, and preparing a portfolio to document/reflect upon teaching. Readings, discussion, peer teaching, e-mail dialog, reflective writing, co-facilitation of course. prereq: Non-Degree Students: contact pfcollege consentumn.edu with questions about registration. If adding a section after first class meeting, contact your instructor as soon as you enroll.

**GRAD 8102. Practicum for Future Faculty.** (3 cr. : Student Option No Audit; Every Fall & Spring) Collegial support for teaching, faculty mentorship at regional college or university. Faculty role at various institutions. Classroom observation/feedback, preparation for academic job search. prereq: [8101 or equiv], [native English speaker or [ibt TOEFL score of 27-30] or [ELP score of 1 from CTL]]

**GRAD 8200. Teaching and Learning Topics in Higher Education.** (1-3 cr. [max 4 cr.]: A-F only; Every Fall & Spring) Create course materials for context/discipline. Assess student learning. Write action plan. Topics may include active learning in sciences, teaching with technology, multicultural education, teaching in clinical settings, learning-community course design.

**GRAD 8400. Interdisciplinary Dissertation Writing Seminar.** (1-3 cr. [max 6 cr.]: Student Option; Every Fall & Spring) Led by graduate faculty. For course description, see sponsoring program(s). prereq; PhD student, instr consent

**GRAD 8401. Dissertation Proposal Development Seminar.** (3 cr. : S-N only; Every Fall) This seminar is the culminating component of intensive work on dissertation proposal development. The program involves a five-day spring workshop, independent summer research, a five-day fall workshop, and opportunities for on-going interactions with the cohort and with faculty instructors. The work is designed to help participants develop cogent and fundable dissertation research proposals. The main goal of the spring workshop is to help clarify students’ research questions and scope as well as to better prepare them for a productive dissertation summer research experience. The fall workshop is intended to help students build on their spring workshop efforts and summer research experiences to prepare full dissertation research proposals. These proposals are intended to serve as the foundation for department prospectus requirements and for internal and external dissertation research and completion grants. All components of the program are required

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
though registration is only for the fall seminar. Admission will be based on application in the prior year and requires a commitment to participate in all components of the program. A grade of D or better will be awarded upon attendance at and satisfactory performance in all of the spring and fall workshops, demonstrated completion of independent research over the summer, and the submission of a dissertation research proposal as part of the fall workshop. Students must be enrolled in a doctoral degree program, must be pre-ABD (may not have passed the prelim oral exam), and have advisor approval. prerequisite: PhD student who has not passed prelim oral exams

Grand Challenge Curriculum (GCC)

GCC 5001. Can We Feed the World Without Destroying It?. (ENV; 3 cr.; A-F only; Periodic Fall)
In this course, we will seek solutions to the challenge of achieving global food security and sustainability. Together, we will work to answer the question, "Can we feed the world without destroying it?" The course begins with lectures and skills workshops, followed by a series of interactive panels with guest experts. We will also prepare group projects that are focused on finding innovative solutions to this grand challenge. We will learn about the fundamental changes occurring in the global food system, the environment, and our civilization as a whole. We will explore how to approach inherently interdisciplinary problems, how to identify solutions that are truly sustainable in the long term, and how science and technology can inform decision-making.

GCC 5003. Seeking Solutions to Global Health Issues. (GP; 3 cr.; A-F only; Periodic Fall)
Complex global health problems can often only be addressed through approaches that go beyond traditional health science disciplines. Whether responding to emerging pandemics, food insecurity, maternal mortality, or civil society collapse during conflict, solutions often lie at the interface of animal, environmental, and human health. In this course, students will examine the fundamental challenges to addressing complex global health problems in the world's poorest countries. Together, we will seek practical solutions at the nexus of human, animal, and ecological health. While there isn't a single "right" solution to grand challenges, progress can be made through an interdisciplinary perspective with emphasis on ethical and cultural sensitivity, and on understanding their complexities. This exploration will help students propose realistic actions that could be taken to resolve these issues. This course will help students gain the understanding and skills necessary for beginning to develop solutions to this grand challenge.

GCC 5005. Global Venture Design: What Impact Will You Make?. (GP; 3 cr.; A-F only; Periodic Fall)
Students will work in teams developing sustainable business and technical solutions to address an environmental or social challenge in India. Teams may address a challenge related to water supply, energy availability, food/agriculture production, waste management, public health or a topic mutually agreed upon by the instructor and student teams. During the semester, a product or service must be designed, and a sustainable business model must be created around it. Technical and business development professionals based in the US and India will act as mentors to provide advice to each team. Each team will have one US-based mentor and one India-based mentor. The teams are expected to use a discovery process, design thinking, ideation and input from field research in solving the challenge. A primary focus of the course is up-front work to identify the "right" problem to solve. The model should be built around the customer's needs and wants, as they will need to pay for the product or service to achieve a scalable model. prerequisite: sophomore, junior, senior, graduate student

GCC 5007. Toward Conquest of Disease. (ENV; 3 cr.; A-F only; Every Spring)
Since the rise of civilization, the large predators of humans have been subdued and the most dangerous predators remaining are those unseen--vastly smaller than our bodies. They are the microbial predators that cause disease. Infectious disease has devastated human populations and even caused global population declines. Subduing and managing disease is one of the grand challenges of our time. Through an enormous global effort, we have driven smallpox in humans and Rinderpest in livestock extinct from the natural world, and guinea worm is expected to follow. Other infectious diseases are in continual decline. In this course we will combine ecological thought and ecological models with historical and future perspectives to understand the fundamental dynamics of our miniscule predators, and relate this to similar miniscule predators of wild and domestic animals, to crops, and to other plants. prerequisite: sophomore, junior, senior, graduate student

GCC 5008. Policy and Science of Global Environmental Change. (ENV; 3 cr.; A-F only; Periodic Spring)
Through readings, lectures, discussions, written assignments, and presentations this course introduces the critical issues underpinning global change and its environmental and social implications. The course examines current literature in exploring evidence for human-induced global change and its potential effects on a wide range of biological processes and examines the social and economic drivers, social and economic consequences, and political processes at local, national, and international scales related to global change.

GCC 5010. Grand Challenge: The Global Climate Challenge: Creating an Empowered Movement for Change. (CIV; 3 cr.; A-F only; Periodic Spring)
Students will explore ecological and human health consequences of climate change, the psychology of climate inaction, and will be invited to join us in the radical work of discovering not only their own leadership potential but that of others. We will unpack the old story of domination and hierarchy and invite the class to become part of a vibrant new story of human partnership that will not only help humanity deal with the physical threat of climate change but will help us create a world where we have the necessary skills and attitudes to engage the many other grand challenges facing us. Using a strategy of grassroots empowerment, the course will be organized to help us connect to the heart of what we really value; to understand the threat of climate change; to examine how we feel in the light of that threat; and to take powerful action together. Students will work in groups throughout the course to assess the global ecological threat posed by climate change, and they will be part of designing and executing an activity where they empower a community to take action. For:so,jr, sr, grad

GCC 5011. Pathways to Renewable Energy. (TS; 3 cr.; A-F only; Periodic Spring)
This interdisciplinary course will examine obstacles to energy transitions at different scales. It will explore the role of energy in society, the physics of energy, how energy systems were created and how they function, and how the markets, policies, and regulatory frameworks for energy systems in the US developed. The course will closely examine the Realpolitik of energy and the technical, legal, regulatory, and policy underpinnings of renewable energy in the US and Minnesota. Students will learn the drivers that can lead global systems to change despite powerful constraints and how local and institutional action enables broader reform. Students will put their learning into action by developing proposals for addressing a particular challenge: What would it take to get the University of Minnesota to invest significantly in solar energy?

GCC 5012. Structural Violence & The Medication Experience. (DSJ; 3 cr.; A-F only; Periodic Fall)
The course will use a social justice framework for learning and communicating about structural violence and the intersection of culture, the medication experience, and community health. Utilizing principles of community engagement, we will focus on examining how broader Community Health and the individual Medication Experience are impacted by the overcoming of structural violence experienced by communities locally as well as globally. Using Critical Race Theory and Social Ecological frameworks, we will come to a more complex understanding of our own social locations and the interplay of power and privilege while exploring the root causes of health disparities and the development of solutions that address inequities in health education, housing, employment, and access to respectful health care. Students will learn to critically analyze these lived experiences while developing interactive storytelling, digital documentaries, digital essays and narratives to advance knowledge on health inequities in our community.
The overarching theme of the course is the role of artistic/humanistic ways of knowing as tools for making sense and meaning in the face of "grand challenges." Our culture tends to privilege science, and to isolate it from the "purposive" disciplines—arts and humanities—that help humanity ask and answer difficult questions about what should be done about our grand challenges. In this course, we will examine climate change science, with a particular focus on how climate change is expected to affect key ecological systems such as forests and farms and resources for vital biodiversity such as pollinators. We will study the work of artists who have responded to climate change through their artistic practice to make sense and meaning of climate change. Finally, students create collaborative public art projects that will become part of local community festivals/events late in the semester.

GCC 5014. The Future of Work and Life in the 21st Century. (TS; 3 cr.; A-F only; Periodic Fall) This course seeks solutions to the technological, demographic, and economic forces that challenge taken-for-granted mindsets and existing policies around work, careers, and life. Students will consider positive and negative impacts of the forces that render the conventional education/work/retirement lockstep obsolete. What do these changes mean for men and women of different ages and backgrounds? What are alternative, sustainable ways of working and living in the 21st century? These questions reflect global challenges that touch the lives of people everywhere. Students will work in teams to begin to address these realities and formulate innovative solutions to better transform learning, working, caring, and community-building in the 21st century.

GCC 5015. Bioinspired Approaches to Sustainability: Greening Technologies and Lives. (TS; 3 cr.; A-F only; Periodic Spring) How can we build a sustainable society? From designing cities and technologies that use green energy, to health care and agriculture that can sustain billions, the sustainability challenges that face us today are immense. The field of biomimicry seeks solutions to such problems by learning from the diverse ways in which organisms have adapted to varied and sometimes extreme environments. With over 1.3 million described species (and likely over 8 million in existence), chances are a species out there has evolved some solution to a particular problem. But how do we go about figuring out which species this might be? And which trait holds the adaptation to a particular problem. But how do we go about figuring out which species this might be? What might be some limitations associated with copying this adaptation? How might we build on it instead?

This course teaches bioinspired approaches to sustainability solutions. Throughout the course, students work in teams of complementary expertise to identify a sustainability problem, research a relevant biological system, and build a prototype bio-inspired solution to their focal problem.

GCC 5016. Grand Challenge: Science and Society: Working Together to Avoid the Antibiotic Resistance Apocalypse. (TS; 3 cr.; A-F only; Periodic Spring) Before the discovery of antibiotics, even a simple thorn prick could lead to life threatening infection. Antibiotics are truly miracle drugs, making most bacterial infections relatively easy to cure. However, this landscape is rapidly changing with the advent of microbes that are resistant to antibiotics. This course will provide an overview of how antibiotic use invoked antibiotic resistance, including in depth discussions of antibiotic resistant microorganisms and the impact of globalization on this exploding problem. Societal and ethical implications associated with antibiotic use and restriction in humans and animals will be discussed, along with global issues of antibiotic regulation and population surveillance. The class will conclude with discussions of alternative therapeutic approaches that are essential to avoid "antibiotic apocalypse."

The course will include lectures by world-renowned experts in various topics, and students will leverage this knowledge with their own presentations on important topics related to issues of personal freedom versus societal needs.

GCC 5017. World Food Problems: Agronomics, Economics and Hunger. (GP; 3 cr.; A-F only; Periodic Fall) This course provides a multi-disciplinary look at problems (and some of the possible solutions) affecting food production, distribution and requirements for the seven plus billion inhabitants of this planet. It is co-taught by an agronomist (Porter) and an economist (Runge) who together have worked on international food production and policy issues for the past 40 years. Historical context, the present situation and future scenarios related to the human population and food production are examined. Presentations and discussions cover sometimes conflicting views from multiple perspectives on population growth, use of technology, as well as the ethical and cultural values of people in various parts of the world. The global challenge perspective is reflected in attention to issues of poverty, inequality, gender, the legacy of colonialism, and racial and ethnic prejudice. Emphasis is placed on the needs of the environment, international assistance agencies, international research and extension centers, as well as the private sector to assist in solving the complex problems associated with malnutrition, undernutrition, obesity and sustainable food production. Through a better understanding of world food problems, this course enables students to reflect on the shared sense of responsibility that they might embrace for the environment, community and ourselves to build and maintain a stronger sense of our roles as historical agents. Throughout the semester students are exposed to issues related to world food problems through the lenses of two instructors from different disciplinary backgrounds. The core issues of malnutrition and food production are approached simultaneously from a production perspective as well as an economic and policy perspective throughout the semester.

GCC 5020. Ecosystem Health: Challenges at the interface of humans, animals and the environment. (ENV; 3 cr.; A-F only; Periodic Spring) What are the effects of climate change, disease emergence, food and water security, gender, conflict and poverty, and sustainability of ecosystem services on health? Unfortunately, these large-scale problems often become overwhelming, making single solution-based progress seem daunting and difficult to implement in policy. Fortunately, the emerging discipline of ecosystem health provides an approach to these problems grounded in trans-disciplinary science. Ecosystem health recognizes the interdependence of human, animal and environmental health, and merges theories and methods of ecological, health and political sciences. It poses that health threats can be prevented, monitored and controlled via a variety of approaches and technologies that guide management action as well as policy. Thus, balancing human and animal health with management of our ecosystems. In this class, we will focus on the emerging discipline of ecosystem health, and how these theories, methods and computational technologies set the stage for solutions to grand challenges of health at the interface of humans, animals and the environment. We will focus not only on the creation and evaluation of solutions, but on their feasibility and implementation in the real world through policy and real time decision making. This will be taught in the active learning style classroom, requiring pre class readings to support didactic theory and case-based learning in class. Participation and both individual and group projects (written and oral presentation) will comprise most of the student evaluation. These projects may reflect innovative solutions, discoveries about unknowns, or development of methods useful for ecosystem health challenges. We envision that some of them will lead to peer-review publications, technical reports or other forms of publication.

GCC 5022. The human experience of sensory loss: Seeking equitable and effective solutions. (TS; 3 cr.; A-F only; Periodic Spring) This course focuses on the visual, auditory, and other sensory pathways that convey information about the world to mind and brain. Millions of people worldwide experience deficits in sensory function that affect their quality of life. We will focus on the characteristics of healthy sensory functioning as well as how sensory disorders can affect personal identity, impede information processing, and alter brain structure and function. The course will address the demographics and risk factors for sensory disabilities, the implications of these disabilities for activities of daily living, the history of society’s response to sensory disability, as well as societal, ethical, and personal attitudes toward sensory disabilities. The course will also explore translational and applied approaches.
for addressing sensory disabilities. Each class session will be co-taught by a pair of instructors, representing multiple scientific and social perspectives. A major goal of the course is to view sensory function and impairment from multiple perspectives: cognitive science, neuroscience, medicine, engineering, society, consumers, ethics, and social justice. The course will combine lectures, discussions, and student-led presentations of research papers. The course will include hands-on demonstrations of assistive technology and panel discussions with people with visual and hearing disabilities. During the semester, each student (or group of students) will develop a mini research proposal to address a real-world issue related to sensory impairment. The proposal must be translational in nature, and must include consultation with consumers of the proposed project. The final class session will be devoted to poster presentations of the mini proposals. The proposal report must include consideration of potentially opposing viewpoints about the proposed research. This course addresses two of our University’s grand challenges: Advancing Health Through Tailored Solutions, and Just and Equitable Communities.

GCC 5023. Grand Challenge: Leading Across Sectors to Address Grand Challenges. (CIV; 3 cr.; A-F only; Periodic Spring)

“The critical challenges society faces, such as water scarcity, access to education, and the rising cost of healthcare, increasingly require the involvement and collaboration of government and nonprofit sectors to work together to create lasting solutions.” - Nick Lovegrove and Matthew Thomas, “Why the World Needs Cross-Sector Leaders,” Harvard Business Review, February 13, 2013 Numerous universities, including the University of Minnesota; business leaders; non-profit organizations and policy makers have increasingly emphasized the value and necessity of multisector leadership to address current scientific challenges. Such collaborative initiatives take place in broader social contexts; have key individual and organizational inputs; and can take many forms, from community task forces to organized collective impact initiatives to social enterprise organizations that blend private-sector incentives with public-service goals. Because they involve a conscious focus on what we pursue, and operate largely apart from well-established processes or mission statements, they force us to examine civic life through a new lens and to (re)consider ethical questions related to it. This course explores multisector leadership from a variety of perspectives and provides an opportunity for students to work together to apply what they are learning individually and in teams through in-class exercises, peer coaching, and a final team grant proposal project. After an introductory session where students analyze and present answers related to specific case studies, we begin with an overview of relevant shared leadership theories and practice fields — including collective, participatory and integrative leadership and an overview of relevant ethical questions and themes. We then consider relevant individual inputs into multisector leadership, including through having students assess their own leadership strengths, what they bring to the collaborative table, and contract with assigned interdisciplinary teams for peer coaching throughout the semester. The lens of the course moves to the collaboration itself after this focus on the individual, looking at techniques and qualities of successful teams, including those composed of diverse individuals or organizations. Finally, we move to considering different contexts, forms and specific examples of multisector leadership before concluding with an external panel of each student team’s grant proposal for a particular multisectoral initiative of their choosing that they believe will enable transformative action to tackle a significant societal issue and achieve lasting change. Throughout the course, we consider the ethical questions that arise from focusing on multisector leadership. These questions relate, for example, to the role of trust and truth-telling in individual efforts to lead and collaborate, how and when it is appropriate to engage with others to address challenges that extend beyond the communities to which we belong; who defines priority problems to be addressed, and why; the role and potential of business to contribute to broader efforts to achieve public good; how equity and justice relate to collective leadership; and whether and how society is better off from the joining of organizational efforts across sectors.

GCC 5024. 1 Billion People: How long can the planet sustain humanity?. (ENV; 3 cr.; A-F only; Every Fall)

As an evolved animal, humanity has always interacted with its environment, both through the ecology of its food web and through its modification of its geological surroundings. Yet the human ecological niche, and the breadth of its impact on the environment, has changed enormously through the biological and cultural evolution of our lineage, from our first two-legged ancestor; to the appearance of our own species, Homo sapiens; to the diversification of the hunter-gatherer adaptation at the end of the Pleistocene; to the invention of agriculture and animal husbandry in the Holocene; to the rise of craft specialization, social inequalities, and urbanism with the first state-level societies; and now the globalization of our food, diseases, and culture. Students in this course will explore how the cumulative effects of our biocultural evolution are putting the sustainability of our current population, now approaching 11 billion, at risk, mostly due to the unprecedented scale of humanity’s impact on the Earth’s ecosystems. This course investigates the origins, development, and predictions for humanity’s ecological niche on the planet through a novel interdisciplinary fusion of the social and environmental sciences. To sociologists, students i) the ability to see the environmental context of the present in an evolutionary light, as well as ii) the tools to evaluate possible remediation and sustainability approaches to control these problems at the local and global scale. The course provides an interdisciplinary immersion in these issues through combined instruction by anthropologists, archaeologists, historians, environmental scientists, ecologists, toxicologists, and sociologists. By focusing on multiple vectors of inquiry (i.e., society, economy, technology, environment) which can be considered at different scales (i.e., from past to present, local to global, individual to societal, temporary to long term), students’ progress through the course will give them powerful tools to confront the Grand Challenges of our age, the Anthropocene.

GCC 5501. Knowledge to Impact: Creating Action with Your Grand Challenge Project Idea. (3 cr.; A-F only; Periodic Spring)

Do you want to learn how to design viable solutions to address a complex social or environmental challenge? Are you interested in taking a course with other motivated students from across the university who care about being changemakers and being mentored by 15 UMN faculty who will be supporting the students in the course? This hands-on course will help you learn the skills to develop solutions to a specific problem that you have worked on in a previous GCC course or a similar project-based class. By the end of the course, you will work with a team of students to create a design and implementation plan for a solution that could take many forms, depending on student interest and the nature of the problem (business or nonprofit plans, policy and advocacy plans, media and awareness campaigns and activism plans are all possible). Resources (funding, training and mentors) will be available for students who wish to pursue their project beyond the classroom into implementation. Learn more at gcc.umn.edu. Students should enroll in a class with a problem statement that is broadly defined Grand Challenge; examples of applicable areas include water, immigration and refugees, energy, housing, achievement gap, public health, food and sustainable agriculture. While it is important to have a broad idea to be placed into the appropriate COP, the first part of the class is an examination of student ideas and possible modification of ideas and possible student teams. By the end of class, students will create a plausable design and implementation plan for a solution that addresses their self-created Grand Challenge problem statement. This solution or intervention could take many forms, depending on student interest and problem statement. Business or non-profit plans, policy and advocacy plans, media and awareness, activism plans are all possible. Determining the correct path(s) is part of the learning objectives for the course. preq: Prior completion of a GCC course.

GDES 5193. Directed Study in Graphic Design. (1-4 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Experience in Graphic Design research strategies and methods. Applied, theoretical, and human-centered aspects directed at project development. Design prototyping, testing, analysis. prereq: Graphic design major or grad student or instr consent

GDES 8170. Topics in Graphic Design. (. ; 1-3 cr. ; max 6 cr. ; A-F or Audit; Every Fall & Spring)
In-depth investigation of topic, announced in advance.

GDES 8180. Professional Seminar. (. ; 1-2 cr. ; max 4 cr. ; A-F or Audit; Every Fall & Spring)
Professional development issues/trends.

GDES 8192. Readings in Graphic Design. (. ; 1-3 cr. ; max 8 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Independent study, review of books/periodicals under tutorial guidance. prereq: instr consent

GDES 8193. Directed Study. (. ; 1-3 cr. ; max 8 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Directed study in graphic design. prereq: instr consent

GDES 8222. Plan B Master's Project. (. ; 3 cr. ; S-N or Audit; Every Fall & Spring)
Plan B master's project. prereq: [Design or DHA master's student], instr consent

GDES 8361. Color, Design, and Human Perception. (. ; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
Perceptual and psychological aspects of color and design. Human factors of color variables and design strategies that can enhance human experience of, and interaction with, color. prereq: Basic color theory course or instr consent

GDES 8362. The Nature of Representation in Visual Communication. (. ; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
Theories of representation and studio production (digital, non-digital) centered around representation in culture. MFA project. prereq: Completed coursework requirements for MFA in DHA w/multimedia emphasis, instr consent

GDES 8390. MFA Creative Thesis. (. ; 6 cr. ; max 12 cr. ; A-F or Audit; Every Fall, Spring & Summer)
MFA project. prereq: Completed coursework requirements for MFA in DHA w/multimedia emphasis, instr consent

GDES 8888. Graphic Design Research. (. ; 3 cr. ; A-F or Audit; Periodic Spring)

Introduction to Greek epic poetry. Readings of selections from Homer's Iliad and Odyssey. Quantitative meter and poetic devices. Discussion of major themes and issues as developed in Homer's poetry. prereq: dept consent

GRK 5100. Advanced Reading. (. ; 3 cr. ; max 18 cr. ; Student Option; Every Fall & Spring)
Reading in Greek texts/authors. Texts/authors vary. prereq: [GRK 3004 or equiv], at least two yrs of college level Greek. Must contact Classical and Near Eastern Studies department for permission to register.

GRK 5200. Biblical Greek. (. ; 3 cr. ; max 6 cr. ; Student Option; Fall Even Year)
Readings from Gospels, epistles of Paul, related literature. Emphasizes proficiency in reading Greek New Testament. Selections vary, prereq: [GRK 3004 or equiv], at least two yrs of college level Greek. Must contact Classical and Near Eastern Studies department for permission to register.

GRK 5701. Prose Composition. (. ; 3 cr. ; Student Option; Spring Odd Year)
Moving step by step through Ancient Greek grammar, starting with simple sentences and progressing to complex ones. Course ends with students translating short passages of modern English prose into Greek. prereq: Grad student or instr consent

GRK 5705. Introduction to the Historical-Comparative Grammar of Greek and Latin. (. ; 3 cr. ; Student Option; Periodic Fall & Spring)
Historical/comparative grammar of Greek and Latin from their Proto-Indo-European origins to classical norms.

GRK 5800. Sight Reading for Graduate Students. (. ; 1 cr. ; max 6 cr. ; S-N only; Every Fall & Spring)
Practice in reading Greek texts at sight. prereq: Enrollment in a grad program in Department of Classical/Near Eastern Studies

GRK 5993. Directed Studies. (. ; 1-4 cr. ; max 18 cr. ; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. Prereq Grad student or instr consent

GRK 5994. Directed Research. (. ; 1-12 cr. ; max 18 cr. ; Student Option; Every Fall & Spring)
Supervised original research on topic chosen by student. Prereq Grad student or instr consent

GRK 5996. Directed Instruction. (. ; 1-12 cr. ; max 20 cr. ; Student Option; Every Fall & Spring)
Supervised teaching internship. Prereq Grad student or instr consent.

GRK 8100. Readings in Greek Prose. (. ; 3 cr. ; max 18 cr. ; Student Option; Every Fall & Spring)
Reading and discussion of ancient Greek prose texts. prereq: Advanced grad student

GRK 8120. Greek Text Course. (. ; 3 cr. ; max 15 cr. ; Student Option; Every Fall & Spring)
Students attend 3xxx Greek courses. Supplementary work at discretion of instructor.
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

An introductory survey of health informatics, focusing on applications of informatics concepts and technologies. Topics covered include: health informatics research, literature, and evaluation; precision medicine; decision models; computerized decision support systems; data mining, natural language processing, social media, rule-based system, and other emerging technologies for supporting ‘Big Data’ applications; security for health care information handling. Lectures, readings, and exercises highlight the intersections of these topics with current information technology for clinical care and research. prereq: Junior, senior, grad student, professional student, or instr consent

Final opportunity to apply newly acquired knowledge/skills to project involving practical problem in health informatics. Submit written project report in lieu of final examination. prereq: second semester MHI student or instr consent

HINF 5501. US Health Care System: Information Challenges in Clinical Care. (1 cr.; S-N or Audit; Every Fall & Spring) Health care system/its unique interaction between key health system stakeholders. Relationship between patients, providers, payers, regulatory bodies. Role of information management/challenges of information standardization/exchange. prereq: Junior or senior or professional student or grad student or instr consent

HINF 5502. Python Programming Essentials for the Health Sciences. (1 cr.; S-N or Audit; Every Fall & Spring) Computer programming essentials for health sciences/health care applications using Python 3. Intended for students with limited programming background, or students wishing to obtain proficiency in Python programming language. prereq: Junior or senior or grad student or professional student or instr consent

HINF 5510. Applied Health Care Databases: Database Principles and Data Evaluation. (3 cr.; A-F or Audit; Every Fall) Principles of database theory, modeling, design, and manipulation of databases will be introduced, taught with a healthcare applications emphasis. Students will gain experience using a relational database management system (RDBMS), and database manipulation will be explored using Structured Query Language (SQL) to compose and execute queries. Students will be able to critically evaluate database query methods and results, and understand their implications for health care. prereq: Junior or senior or grad student or professional student or instr consent

HINF 5520. Informatics Methods for Health Care Quality, Outcomes, and Patient Safety. (2 cr.; A-F or Audit; Every Fall & Spring) Application/operation of clinical information systems, electronic health records, decision support/application in health care system. Use of clinical information systems/association with health care delivery, payment, quality, outcomes. prereq: Junior or senior or grad student or professional student or instr consent

HINF 5530. Health Care Software Management. (2 cr.; A-F or Audit; Every Spring) Health care software and unique interaction between key stakeholders in health care software development and implementation. Systems analysis, software development, and software life cycle management for health care applications. prereq: HINF student or instr consent

HINF 5531. Health Data Analytics and Data Science. (3 cr.; A-F or Audit; Every Spring) Data science methods and techniques for the extraction, preparation, and use of health data in decision making. prereq: Junior or senior or
HINF 5540. Interprofessional Health Informatics. (2 cr.; A-F only; Every Spring) Informatics applications in various healthcare professions. Clinical specialties. Informatics tools to improve healthcare services/outcomes through lectures/presentations.

HINF 5610. Foundations of Biomedical Natural Language Processing. (3 cr.; Student Option; Periodic Fall) The course will provide a systematic introduction to basic knowledge and methods used in natural language processing (NLP) research. It will introduce biomedical NLP tasks and methods as well as their resources and applications in the biomedical domain. The course will also provide hands-on experience with existing NLP tools and systems. Students will gain basic knowledge and skills in handling with main biomedical NLP tasks. Prerequisites graduate student or instructor consent; Experience with at least one programming language (Python or Perl preferred) Recommended: basic understanding of data mining concepts, basic knowledge of computational linguistics.

HINF 5620. Data Visualization for the Health Sciences. (3 cr.; A-F or Audit; Periodic Spring) An advanced health informatics course, focusing on theoretical and practical aspects of data and information visualization for health care and the health sciences. Topics include classic and novel visualization types; models of human visual perception and cognition; color, text and typography; maps and diagrams; evaluation and testing; and the aesthetic and cultural aspects of visualization. Examples emphasize health sciences applications for clinicians, patients, researchers, and analysts. Modern programming and commercial tools are discussed, including D3, ggplot2, and Tableau. Students will report on and discuss visualization methods, published studies and books, culminating in a final visualization project of the student's choosing.

HINF 5630. Clinical Data Mining. (3 cr.; A-F or Audit; Every Fall) This is a hands-on introductory data mining course specifically focusing on health care applications. Analogously to the relationship between biostatistics and statistics, the data and computational challenges, the experiment design and the model performance requirements towards data mining in the clinical domain differ from those in general applications. This course aims to teach the students the most common data mining techniques and elaborate on the differences between general and clinical data mining. Specifically, the course will focus on (i) clinical data challenges and preprocessing; (ii) survey of the most common techniques in the clinical domain; (iii) clinical application touching up on experimental design and collaborations with physicians. The class will meet twice a week, one day dedicated to lectures and one day to a hands-on lab component, where students are expected to apply the techniques to health-related data. Some of the models will be evaluated with the involvement of a physician collaborator. Prerequisites: Basic linear algebra (matrix notation), basic optimization (gradient descent) Graduate level introductory statistics (e.g. STAT 5101-5102) or equivalent or instructor consent.

HINF 5640. Advanced Translational Bioinformatics Methods. (3 cr.; A-F or Audit; Every Fall) This course is designed to introduce the high throughput platforms to students who are interested in the genomics research and genomics data analysis in the basic and clinical medical science field. The course covers history of the genomics platforms, its revolution and the specifics of the data generated by all existing different platforms. The course will also introduce all existing sequencing platforms and applications to biological science, as well the current trends in this field.

HINF 5650. Integrative Genomics and Computational Methods. (3 cr.; A-F or Audit; Every Spring) Genome-scale high throughput data sets are a central feature of modern biological research and translational clinical study. Experimental, computational biologists and clinical researchers who want to get the most from their data sets need to have a firm grasp and understanding of genomic data structure characteristics, analytical methodology and the intrinsic connection to integrate. This course is designed to build competence in quantitative methods for the analysis of high-throughput genomic data and data integration.

HINF 6220. Computational Causal Analytics. (3 cr.; A-F or Audit; Every Fall) Identifying causal relationships and mechanisms is the ultimate goal of natural sciences. This course will introduce concepts and techniques underlying computational causal discovery and causal inference utilizing both observational and experimental data. Example applications of the above mentioned techniques in the domain of health sciences include reconstructing the molecular pathways underlying a particular disease, identifying the complex and interacting factors influencing a mental health disorder, and evaluating the potential impact of a public health policy. The course emphasizes both on the theoretical foundations and the practical aspects of causal discovery and causal inference. Students will gain hands-on experience with applying major causal discovery algorithms on simulated and real data.

HINF 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

HINF 8405. Advanced Topics in Health Informatics I. (1-4 cr. [max 12 cr.]; Student Option; Every Fall) Topics may include computer systems design for health sciences, small computer concepts/use, computers for clinical services, computer-aided medical decision making, biomedical image processing, pattern recognition, data mining. Case studies from health sciences. prereq: Professional student or grad student or instr consent

HINF 8406. Advanced Topics in Health Informatics II. (1-4 cr. [max 12 cr.]; Student Option; Every Spring) This is a topics course. Topics may include, computational causal discovery for health sciences, computer systems design for health sciences, small computer concepts and use, computers for clinical services, computer-aided medical decision making, biomedical image processing, and pattern recognition. Case studies from health sciences.

HINF 8430. Foundations of Health Informatics I Lab. (2 cr.; A-F or Audit; Every Fall) The PhD-level lab complement for an introductory survey of health informatics, focusing on foundational concepts. Topics covered include: conceptualizations of data, information, and knowledge; current terminologies, coding, and classification systems for medical information; ethics, privacy, and security; systems analysis, process and data modeling; human-computer interaction and data visualization. Lectures, readings, and exercises highlight the intersections of these topics with electronic health record systems and other health information technology.

HINF 8431. Foundations of Health Informatics II Lab. (2 cr.; Student Option; Every Spring) The PhD-level lab complement for an introductory survey of health informatics, focusing on applications of informatics concepts and technologies. Topics covered include: health informatics research, literature, and evaluation; precision medicine; decision models; computerized decision support systems; data mining, natural language processing, social media, rule-based system, and other emerging technologies for supporting ‘Big Data’ applications; security for health care information handling. Lectures, readings, and exercises highlight the intersections of these topics with current information technology for clinical care and research.

HINF 8434. Medical Decision Support Techniques. (3 cr.; A-F or Audit; Every Fall & Spring) Examines systems based on statistical and logical approaches to decision making that include statistical prediction, rule-based systems, case-based reasoning, quantitative reasoning, and neural networks, and issues related to their use. prereq: 5432 or instr consent

HINF 8440. Foundations of Translational Bioinformatics Lab. (2 cr.; A-F or Audit; Every Fall) Translational bioinformatics deals with the assaying, computational analysis and knowledge-based interpretation of complex molecular data to better understand, prevent, diagnose and treat disease. This course emphasizes deep DNA sequencing methods that have persistent impact on research related to disease diagnosis and treatment.
The course covers sequence analysis, applications to genome sequences, and sequence-function analysis, analysis of modern genomic data, sequence analysis for gene expression/transitional genomics analysis, and gene mapping/applied population genetics. Prerequisites: MS, PhD, or MD/PhD student interested in translational bioinformatics

HINF 8444. FTE: Doctoral. ([1-1 cr. ; No Grade Associated; Every Fall, Spring & Summer] (No description) prereq: Doctoral student, adviser and DGS consent

HINF 8446. Professional Studies in Health Informatics. ([1-2 cr. ; A-F or Audit; Every Fall & Spring) Health informatics as a profession, including discipline, responsibilities, resources, and job opportunities. Directed experiences in consulting, teaching, writing, conducting research, and managing facilities. prereq: 5431, PubH 5452 or instr consent, grad hist int major

HINF 8492. Advanced Readings or Research in Health Informatics. ([1-6 cr. ; max 24 cr. ; Student Option No Audit; Every Fall, Spring & Summer) Directed readings or research in topics of current or theoretical interest in health informatics. prereq: HINF student or instr consent

HINF 8494. Research in Health Informatics. ([1-6 cr. ; A-F or Audit; Every Fall, Spring & Summer) Directed research under faculty guidance. prereq: instr consent

HINF 8525. Health Informatics Teaching. ([2 cr. ; A-F only; Spring Even Year) Use selected teaching techniques to assist in the delivery of course content in health informatics curriculum. Work with a professor who is the course director. From evaluation and feedback on their teaching technique, students develop a teaching philosophy as a final course project. prereq: HINF student or instr consent prereq: HINF student or instr consent

HINF 8535. Advanced Health Informatics Research Methods. ([3 cr. ; A-F only; Spring Even Year) Application of research methods, evaluation. Design, data collection, and data analysis in the context of health informatics, including computational and health data challenges. prereq: HINF student or instr consent

HINF 8666. Doctoral Pre-Thesis Credits. ([1-6 cr. ; max 12 cr. ; No Grade Associated; Every Fall, Spring & Summer) TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

HINF 8770. Plan B Project. ([4 cr. ; No Grade Associated; Every Fall, Spring & Summer) Research project. Topic arranged between student/instructor. Written report required. prereq: Advanced plan B MS student

HINF 8777. Thesis Credits: Master's. ([1-18 cr. ; max 50 cr. ; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

HINF 8888. Thesis Credit: Doctoral. ([1-24 cr. ; max 100 cr. ; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: PhD candidate or department consent. Max 18 credits per semester; 24 credits required

**Hebrew (HEBR)**

**HEBR 5090. Advanced Modern Hebrew.** ([3 cr. ; A-F only; Student Option; Every Fall) Various authentic Hebrew texts. Comprehension/speaking. Conducted entirely in Hebrew, Emphasizes Modern Israeli Hebrew. Grammar, widening vocabulary. Contemporary short fiction, essays, articles on cultural topics, films, Hebrew Internet sites, TV.

**HEBR 5200. Advanced Classical Hebrew.** ([3 cr. ; max 12 cr. ; Student Option; Periodic Fall & Spring) In-depth reading, analysis, and discussion of classical Hebrew texts. Grammar, syntax. Introduction to text-criticism, history of scholarship, and scholarly tools. Format varies between survey of themes (e.g., law, wisdom, poetry) and extended concentration upon specific classical texts.

**HEBR 5300. Post-Biblical Hebrew: Second Temple Period.** ([3 cr. ; max 18 cr. ; Student Option; Periodic Spring) Readings in late-/post-biblical Hebrew literature of Persian, Hellenistic, and early Roman periods (e.g., Chronicles, Ezra-Nehemiah, Ecclesiastes, Daniel, Dead Sea Scrolls, apocrypha, pseudepigrapha). Focuses on historical development of Hebrew language and literature in relation to earlier biblical sources. prereq: Grad student or instr consent

**HEBR 5990. Topics in Hebrew Studies.** ([1-4 cr. ; max 12 cr. ; Student Option; Periodic Fall) Historical, linguistic, literary, religious, or humanistic study of Hebrew society/culture. Approach/method of study varies with topic. prereq: Grad student or instr consent

**HEBR 5992. Directed Readings.** ([1-4 cr. ; max 12 cr. ; Student Option; Every Fall, Spring & Summer) Guided individual reading or study. Prereq instr consent, dept consent, college consent

**Heritage Studies & Public Hist (HSPH)**

**HSPH 8001. Who Owns the Past? Common Concerns and Big Questions in Heritage and Public History.** ([3 cr. ; A-F or Audit; Every Fall) Course offers a survey through case studies of the common concerns, concepts and ethics of heritage and public history. Students will learn about the history and social contexts of heritage studies and public history, the stakes and stakeholders, and the conflicts and positive interventions that can be made through the work of these affiliated professions.

**HSPH 8002. Core Practices in Heritage Studies and Public History.** ([3 cr. ; A-F or Audit; Every Fall) Course is open to all Heritage Studies and Public History (HSPH) graduate students. DGS or Instructor permission required for others. Course offers a survey of how heritage and public history concern and ethics are embedded into practice. Through illustrated lectures, case studies, field trips, readings and class discussion, students will learn about the professional practice of heritage studies and public history, how approaches to practice are aligned to institutional mission, customization of programs for diverse audiences, and professional evaluation and management of financial resources.

**HSPH 8003. Race and Indigeneity in Heritage Representation.** ([3 cr. ; A-F or Audit; Every Spring) This seminar will explore the changes in how diversity has been represented in historical interpretations in the past, and how practice is changing in response to the contemporary and anticipated social context of the United States. “Diversity” has historically been assumed to derive from categories such as race or culture, concepts constructed in the discipline of anthropology but taken up as the foundation for typologies in other arenas such as art history, architectural history, museums, and public policy. What is problematic in such an approach? What happens to communities defined by shared history, political sovereignty, and disenfranchisement? What are the implications beyond museums for those communities? Finally, how can we think differently about diversity without re-inscribing harmful constructions of difference?

**HSPH 8004. Capstone in Heritage Studies and Public History.** ([3 cr. ; A-F or Audit; Every Spring) This course will operate as a workshop, drawing together a cohort of students, working individually or as part of a team, to craft independent heritage studies and public history research projects under the supervision of a faculty instructor. Projects may be based in archival research, public exhibitions, archaeology, material culture studies and preservation, architecture and preservation, or landscape studies. Consistent with the values of the program, projects shall have multidisciplinary perspectives, broadly consider aspects of diversity, and will be accountable to some stakeholder(s) identified by the students.

**HSPH 8005. Leadership and Future of Historical Organizations.** ([1 cr. ; max 5 cr. ; S-N only; Every Fall & Spring) This course will operate as a series of lectures and discussions in which leaders of historical organizations explain how they are navigating major changes and challenges associated with their professional practice. Speakers in this course will be invited and organized by the

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
instructor in coordination with HSPH faculty and colleagues at the Minnesota Historical Society. Topics to be presented by speakers may include: making history accessible and meaningful to increasingly diverse audiences; interpreting difficult or traumatic histories; gathering, storing, and providing access to physical collections in a digital age; engaging the public in historical research and interpretation; the financial management and leadership of historical organizations. The course has several objectives: students will learn from and have the opportunity to meet, leaders of historical organizations located throughout Minnesota and the United States; it will also be a cohort-building opportunity as students in the first and second years of the program meet regularly in this course to hear from professional practitioners and discuss presentations and readings.

HSPH 8006. Digital Methods for Heritage Studies & Public History. (3 cr.; Student Option; Every Fall) Digital technologies are significantly altering the speed and scale of the foundational methodologies of archeology, history, and preservation. Moreover, they are shifting the way the public engages with the past in cultural institutions and across the myriad screens that pervade their daily life. In this course, students will not only learn how emerging digital technologies can enhance their research, but also how those technologies are fundamentally transforming the possibilities for the public presentation of that research. This course privileges hands-on learning and balances deeping essential methodological skills with exposure to a breadth of field-altering technologies. It is structured around five core methodologies—excavation, documentation, reconstruction, interpretation, and exhibition. In each unit, students will be first be tasked with identifying the underlying principles of these methodological approaches. They will then use class time to explore technologies that extend those methods such as high-resolution imaging, relational databases, text mining programs, virtual environments, and content management systems for website building. Bookending the course is a focus on effective management systems for website building. It is structured around five core methodologies—excavation, documentation, reconstruction, interpretation, and exhibition. In each unit, students will be first be tasked with identifying the underlying principles of these methodological approaches. They will then use class time to explore technologies that extend those methods such as high-resolution imaging, relational databases, text mining programs, virtual environments, and content management systems for website building. Bookending the course is a focus on effective management systems for website building.

Hindi (HNDI)

HNDI 5040. Readings in Hindi Texts. (3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring) Read authentic materials of various types to improve reading/speaking ability.

Hindi-Urdu (HNUR)

HNUR 5993. Directed Readings. (1-5 cr.; max 15 cr.; Student Option; Every Fall & Spring) Guided individual reading or study of modern Hindi-Urdu texts. Prereq instr consent, dept consent, college consent.

History (HIST)

HIST 5011. Measuring the Past: Quantitative Methods for Historical Research. (4 cr.; Student Option; Periodic Fall & Spring) Basics of quantitative historical data collection, measurement, and analysis. Prereq: Primarily for 1st-yr grad students

HIST 5053. Doing Roman History: Sources, Methods, and Trends. (3 cr.; Student Option; Fall Even, Spring Odd Year) Survey of major scholarship in field of Roman history since Mommsen. Political, cultural, social, military, and economic history. Focuses on methodological problems posed by evidence. Wys in which these issues shape research. Prereq: Grad student or instr consent

HIST 5111. Proseminar in the History of Medieval Europe. (3 cr.; A-F or Audit; Periodic Fall & Spring) Examination of basic scholarly bibliography for medieval Western European history. Aim is to help students to prepare for M.A. and Ph.D. examinations. Prereq: Advanced undergrads of exceptional ability or grads, instr consent

HIST 5115. Medieval Latin Historians. (3 cr.; Student Option; Periodic Fall & Spring) Writing of history in Western Europe during the Middle Ages. Focus on idea of history, philosophy of various historians, techniques of research by medieval historians and chroniclers, history as literature, and value of medieval histories to modern research scholars. Latin texts only. Prereq: Reading knowledge of Latin

HIST 5264. Imperial Russia: Formation and Expansion of the Russian Empire in the 18th and 19th Centuries. (3 cr. [max 4 cr.]; Student Option; Every Fall & Spring) Interaction with Europe and Asia; attempts at modernization and reform; emancipation of the serfs and rise of revolutionary movements.

HIST 5265. 20th-Century Russia: The Collapse of Imperial Russia, the Revolutions, and the Soviet Regime. (3 cr.; Student Option; Every Spring) Analysis of the factors that led to the collapse of the tsarist regime; discussion of the 1917 revolution, the evolution of the Soviet regime and the collapse of Soviet communism. Emphasis on the role of nationalities and the rise of the Commonwealth of independent states.

HIST 5271. The Viking World: Story, History, and Archaeology. (3 cr.; A-F or Audit; Periodic Fall & Spring) Viking society and expansion of Viking influence abroad. Viking impact on Western Europe, interactions with Slavic lands, settlement of North Atlantic islands, Western Europe's impact on Scandinavian lands. Analyzes archaeological, historical, linguistic, and numismatic evidence.

HIST 5281. European Intellectual History: The Early Modern Period, Antiquity to 1750. (3 cr.; A-F or Audit; Periodic Fall) First of a two-semester course. European thought in its historical/cultural context. Emphasizes development of philosophical/scientific thought, its relation to thinking about the individual and the community. Readings from original sources. Prereq: Grad student or instr consent

HIST 5282. European Intellectual History: The Modern Period, 1750-Present. (3 cr.; A-F or Audit; Periodic Spring) Second of a two-semester course. European thought in its historical/cultural context. Emphasizes development of philosophical/scientific thought, its relation to thinking about the individual and the community. Readings are from original sources. Prereq: Grad student or instr consent

HIST 5283. Marx, Capital and History: An Introduction to Marxist Theory and History. (3 cr.; Student Option; Spring Even Year) Explore Marx's understanding of capitalism and its history. Marx's argument regarding historical specificity of capitalism as economic/social condition

HIST 5286. Galileo and the Beginnings of Modern Science. (3 cr.; A-F only; Periodic Fall) The life and work of Galileo Galilei (1564-1642), often called the ?founder of modern science.? Topics: the Renaissance Italian context for Galileo's work; the arrangements of authoritative knowledge that prevailed in 16th-century Tuscany and Venice; the role that universities, the Catholic church, learned academicians, and the state played in disciplining knowledge. We consider the episodes of Galileo's career and read his seminal texts with secondary commentaries upon them. His telescopic observations of 1609-10; his battles with Aristotelian natural philosophy; his experiments and arguments on behalf of experimental and mathematical physics; his defense of Copernican heliocentric cosmology and his trial and condemnation by the Roman Catholic Church for heresy; and his work in mathematics and mathematical physics that paved the way for Newton and Einstein. The goal will be to understand the achievements of Galileo in their specific historical and cultural context and to use these reflections for thinking
about the nature of the modern science that he helped to initiate.

**HIST 5295. Social History of Russia and Eastern Europe From the Late 19th Century to the Present.** (3 cr.; Student Option; Periodic Fall & Spring)
Social movements (revolutionary, nationalist, women's); communist and post-communist societies.

**HIST 5379. Problems in Early American History.** (3 cr.; Student Option; Periodic Fall & Spring)
Intensive consideration of topics in early American history. Topics may include readings in race, class, and gender; comparative colonialism; slavery; demography; economic history; religion; and regions in the colonial world.

**HIST 5381. Minnesota History Workshop.** (3 cr.; Student Option; Periodic Fall & Spring)
A case study and seminar approach to historical research and interpretation. It offers teachers and other scholars a chance to survey a particular topic in Minnesota history and to write their own historical narrative based on primary source research. prereq: 1301, 1302

**HIST 5439. Environment and Society in Africa.** (3 cr.; Student Option; Periodic Fall & Spring)
Major historiographical, theoretical, and methodological debates concerning people-environment relations in Africa, from rise of human societies to present. Environment and the rise of civilizations. Demography, colonial environmental policies, conservation, disease, indigenous knowledge, water management, food. prereq: instr consent

**HIST 5468. Social Change in Modern China.** (3 cr.; Student Option; Every Fall)
Opium War and opening of Treaty Ports in 19th century; missionary activity and cultural influence; changes in education system; women's movement; early industrialization; socialism and collectivization after 1949; industrialization of Taiwan; PRC's entry into the world trading system.

**HIST 5469. Historiographies of China, 1000-1700.** (3 cr.; A-F or Audit; Periodic Fall & Spring)
Important recent English-language work on Chinese culture during the Song, Yuan, and Ming dynasties. Topics include religion, family structure, ethnicity, commerce/ economics, and political structures/events. prereq: Grad student or instr consent

**HIST 5478. Tigers and Dragons: The Rise of the East Asian Economies, 1930-Present.** (3 cr.; Student Option; Spring Odd Year)
Rise of East Asian Economies, 1930-Present. prereq: Grad student

**HIST 5479. History of Chinese Cities and Urban Life.** (3 cr.; A-F or Audit; Periodic Fall & Spring)
Introduction to traditional Chinese cities, their modern transformation. Ideal city plan in Confucian classics compared with physical layout of some major cities. Models about Chinese cities, influence of the models on our understanding of Chinese history/society.

**HIST 5513. North Africa since 1500: Islam, Colonialism, and Independence.** (3 cr.; Student Option; Spring Odd Year)
History of the Maghrib (Morocco, Algeria, Tunisia, Libya and disputed territories of Western Sahara from time of Ottoman expansion/Sharifian dynasties [Saidan/Alawid] in 16th/17th Centuries to end of 20th century. Focus on encounter of Islamic cultures/societies of Maghrib and Africa/Europe

**HIST 5540. Topics in Mediterranean Studies.** (1-4 cr. [max 15 cr.]; A-F or Audit; Every Fall & Spring)
Medieval history, from Middle Ages to present. Taught as staffing permits. prereq: Grad student or advanced undergrad with instr consent

**HIST 5547. Empire and Nations in the Middle East.** (3 cr.; Student Option; Periodic Fall & Spring)
Modernity in non-Western imperial context. Identity, ideology, economy, environment, language. prereq: Grad student or instr consent

**HIST 5611. New Directions in the Middle Ages, ca. 300-1100.** (3 cr.; A-F or Audit; Periodic Fall & Spring)
Basic scholarly bibliography for medieval Western European history during early Middle Ages. Foundation for teaching courses in medieval history, preparing for general doctoral exam. prereq: Grad student or instr consent

**HIST 5612. New Directions in the Middle Ages, ca. 1100-1500.** (3 cr.; A-F or Audit; Periodic Fall & Spring)
Basic scholarly bibliography for medieval Western European history during central/late Middle Ages. Foundation for teaching courses in medieval history, preparing for general doctoral exam. prereq: [5611, grad student] or instr consent

**HIST 5614. The Medieval Church.** (3 cr.; Student Option; Periodic Fall & Spring)
Introduction to history of western church in Middle Ages. Emphasizes church teachings and institutional structures, beliefs/practices of lay people, medieval Christian encounter with non-Christian world. prereq: Grad student or instr consent

**HIST 5615. Readings in European Women's History: 1450-1750.** (3 cr.; A-F or Audit; Periodic Fall & Spring)
Selected themes in modern European women's history. Topics include historical approaches to class/gender relations, state formation as social/political process, family history, evolution of public life, popular culture.

**HIST 5715. Readings in European Women's History: 1450-1750.** (3 cr.; A-F or Audit; Periodic Fall & Spring)
Introduction to current historical research on European women's history, 1450-1750. Topics include gender roles and form of family structure, women's participation in religious movements, legal status of women.

**HIST 5720. Society/Politics: Modern Europe.** (3 cr.; A-F or Audit; Every Fall & Spring)
Introduction to literature in English on problems of modern European social, cultural, political history. Thematic/geographic focus varies year to year. Topics include historical approaches to class/gender relations, state formation as social/political process, family history, evolution of public life, popular culture.

**HIST 5777. Proseminar in Habsburg Central Europe.** (3 cr.; A-F or Audit; Periodic Fall & Spring)
Central Europe under Habsburg rule from the reforms of Maria Theresa to imperial collapse. Continuity and change in society: economic and political modernization; the rise of national consciousness and anti-Semitism; politics and culture in the Fin de Siecle; the Empire and World War I. prereq: instr consent

**HIST 5797. Methods of Population History.** (3 cr.; A-F or Audit; Periodic Fall & Spring)
Standard methods of population analysis. Focuses on methods widely used for historical population research.

**HIST 5801. Seminar in Early American History.** (3 cr.; A-F or Audit; Periodic Fall & Spring)
Introduction to literature of early American history. Readings selected from some of best scholarship in field. Questions of colonial historians. Theories, methods, sources used in pursuit of those questions.

**HIST 5802. Readings in American History, 1848-Present.** (3 cr.; A-F or Audit; Every Fall & Spring)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
paper to become part of their portfolio, or a chapter of an MA thesis or dissertation). In either case, students will focus on the process of rigorously conceptualizing their research by writing a proposal using a format that is suggested by the Graduate School’s Doctoral Dissertation Fellowship application’s “Statement of Research” as a model.

HIST 8025. Politics of Historical Memory. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

HIST 8031. Digital Methods for Heritage Studies & Public History. (3 cr.; Student Option; Every Fall)
Digital technologies are significantly altering the speed and scale of the foundational methodologies of archeology, history, and preservation. Moreover, they are shifting the way the public engages with the past in cultural institutions and across the myriad screens that pervade their daily life. In this course, students will not only learn how emerging digital technologies can enhance their research, but also how those technologies are fundamentally transforming the possibilities for the public presentation of that research. This course privileges hands-on learning and balances deepening essential methodological skills with exposure to a breadth of field-altering technologies. It is structured around five core methodologies—excavation, documentation, reconstruction, interpretation, and exhibition. In each unit, students will be first be tasked with identifying the underlying principles of these methodological approaches. They will then use class time to explore technologies that extend these methods such as high-resolution imaging, relics, text mining programs, virtual environments, and content management systems for website building. Bookending the course is a focus on effective collaboration—the foundation of successful digital projects—and public engagement in an increasingly connected yet fractured society.

HIST 8110. Medieval History: Research Seminar. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Research in medieval European history, using primary source material. prereq: instr consent, good reading knowledge of Latin, French, one other European language

HIST 8122. Public Histories. (3 cr.; A-F or Audit; Every Fall)
This seminar examines the variety of ways that “public history” is produced both within and outside the academy and explores interdisciplinary approaches to the making and critical analysis of public histories. Students will discuss recent scholarship by historians as well as scholars and practitioners in allied fields. Through discussion and collaborative project work, the seminar will also provide a hands-on introduction to the theory, methods, practice and politics of public history.

HIST 8232. Cultural Fallout: The Cold War and Its Legacy: Research. (3 cr.; A-F or Audit; Every Fall & Spring)
Student produce research paper on history/culture of Cold War era as it developed in United States after World War II. Research project builds upon readings from 8231.

HIST 8239. Readings in Gender, Race, Class, and/or Ethnicity in the United States. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Dynamics of gender, racial, and ethnic relations in U.S. history; intersections of these forces. prereq: instr consent

HIST 8240. Topics in Research in Gender, Race, Class, or Ethnicity in the United States. (3 cr.; max 6 cr.; A-F or Audit; Periodic Fall & Spring)
Dynamics of gender, racial, and ethnic relations in U.S. history. Intersections of these forces. Topics vary by instructor. prereq: instr consent

HIST 8245. Human Rights: A Global History. (3 cr.; A-F or Audit; Periodic Fall & Spring)
This course will focus on debates and social movements concerning human rights in the broadest sense, beginning with the seventeenth century and ending in the 1950s. Topics include colonization, slavery, torture, war crimes, rights to land, women's rights, sexual rights, and indigenous self-determination. The seminar will require a research or historiographical paper.

HIST 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master’s student, adviser and DGS consent

HIST 8390. Research in American Indian History. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Research/writing skills in American Indian history. Identify research questions, locate sources, conduct original research, produce substantial research paper.

HIST 8434. Health and Healing in African History. (3 cr.; Student Option; Periodic Fall & Spring)

HIST 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

HIST 8464. Research in Yuan, Ming, and Qing History. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Basic skills and resources for doing research in history of late imperial China. Bibliographic exercises; reading and translating primary documents. prereq: Good working knowledge of classical Chinese, background in history of late imperial China

HIST 8465. Research in Yuan, Ming, and Qing History. (3 cr.; Student Option; Periodic Fall & Spring)
Basic skills and resources for doing research in history of late imperial China. Students select, translate, and annotate texts appropriate to their research interests and write a research paper centering on these texts. prereq: Good working knowledge of classical Chinese, background in history of late imperial China

HIST 8540. Topics in Mediterranean Studies. (1-4 cr.; max 15 cr.; A-F or Audit; Every Fall & Spring)
Mediterranean history from Middle Ages to present. Taught as staffing permits. prereq: Grad student or advanced undergrad with instr consent

HIST 8630. Seminar in World History. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Critical examination of historical literature dealing with theoretical approaches to world history and teaching of world history. prereq: instr consent

HIST 8640. Topics in Legal History Research. (3 cr.; max 9 cr.; A-F or Audit; Periodic Fall & Spring)
Comparative, methodological, theoretical, and topical courses in legal historical research, from ancient world to present. Offerings rotate.

HIST 8644. Legal History Workshop. (3 cr.; A-F or Audit; Every Fall & Spring)
Introduction to legal history and professional socialization. Work-in-progress of leading scholars working in field of legal history. Students can undertake original research. prereq: instr consent

HIST 8645. American Legal History. (3 cr.; A-F only; Periodic Spring)
This course explores the interaction between law, politics, and culture in American society, concentrating on the period from the Revolution through the New Deal. Topics include: democracy and the rule of law; slavery; the public-private distinction; Civil War and Reconstruction; industrialization; expansion of the federal administrative state; law and the human sciences; crime and punishment; legal education and the role of the law in the American polity. Readings will include primary legal sources, such as treatises, statutes, constitutions, and landmark cases, as well as contemporary religious, scientific, and literary works, which will help to situate the legal materials in broader cultural context. Several secondary sources will also be considered, both for insights into the topics covered, and to illustrate various approaches to legal-historical analysis. The course will encourage critical examination of these sources with the aim of clarifying how law has figured in the history and historiography of the United States. No previous background in American history is assumed.

HIST 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer)
TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr;
HIST 8709. Seminar: History of Sexuality. (3 cr.; A-F or Audit; Periodic Fall & Spring) Theories of sexuality (by, e.g., Foucault, Butler, deLauretis), their application in history. Topics may include: feminist critique of Foucault and the classics, psychoanalytic approaches to religious transformations such as the Reformation, varying forms of gender transgression, sexuality in colonial encounters, operation of sexual metaphors in political conflict, and AIDS and the writing of history.

HIST 8715. Research on European Women's History, 1450-1750. (3 cr.; Student Option; Periodic Fall & Spring) Research techniques for completing a major research paper based on primary sources. Prereq: P5715

HIST 8720. Research Seminar on Central European History. (1-4 cr. [max 16 cr.]; A-F or Audit; Every Fall, Spring & Summer) Broad research theme/problem: in most cases preparation for dissertation. Students identify primary/secondary sources, conduct research, write paper, and read/comment upon each other's drafts. Geographic focus varies with instructor, may include Germany or lands of former Habsburg Austrian empire.

HIST 8777. Thesis Credits: Master's. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) No description) Prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

HIST 8801. Seminar in Early American History. (3 cr.; A-F or Audit; Periodic Fall & Spring) Introduction to literature of early American history. Readings selected from some of best scholarship in field. Questions of colonial historians. Theories, methods, sources used in pursuit of those questions.

HIST 8802. Readings in American History, 1848-Present. (3 cr.; A-F or Audit; Periodic Fall & Spring) Readings-intensive course. U.S. history from Mexican-American War to present.

HIST 8832. Cultural Fallout: The Cold War and Its Legacy: Research. (3 cr.; A-F or Audit; Every Fall & Spring) Introduction to the literature of the Cold War era. Readings selected from some of best scholarship in field. Questions of historians, including cultural historians. Theories, methods, sources used in pursuit of those questions.

HIST 8858. Research in Early American History. (3 cr.; A-F or Audit; Periodic Fall & Spring) Research and writing skills. With instructor and other participants, students identify their research questions, locate the sources with which to answer these questions, conduct original research, and produce a substantial research paper. Prereq: P5801 or instr consent

HIST 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) Prereq: Max 14 cr per semester or summer, 24 cr required

HIST 8900. Topics in European/Medieval History. (1-4 cr. [max 20 cr.]; A-F or Audit; Every Fall & Spring) Topics not covered in regular courses.

HIST 8905. Topics in European Medieval History. (1-4 cr. [max 16 cr.]; Student Option; Every Fall & Spring) Selected topics in Medieval European history, up to 1500ce.

HIST 8910. Topics in U.S. History. (1-4 cr. [max 16 cr.]; A-F or Audit; Every Fall & Spring) Topics not covered in regular courses.

HIST 8920. Topics in African History. (1-4 cr. [max 20 cr.]; A-F or Audit; Periodic Fall) Topics not covered in regular courses.

HIST 8930. Topics in Ancient History. (1-4 cr. [max 16 cr.]; A-F or Audit; Periodic Fall & Spring) Topics not covered in regular courses.

HIST 8940. Topics in Asian History. (1-4 cr. [max 16 cr.]; A-F or Audit; Periodic Fall) Topics not covered in regular courses.

HIST 8944. Research Seminar: New Directions in African Social History I. (3 cr.; A-F or Audit; Periodic Fall & Spring) First of two-part course. Radical transformation in field of African social history during past two decades. Students select major research topic and begin preliminary investigation. Prereq: instr consent

HIST 8945. Research Seminar: New Directions in African Social History II. (3 cr.; S-N or Audit; Periodic Fall & Spring) Second of two-part course. Students conceptualize and write major research paper. Prereq: 8944, instr consent

HIST 8950. Topics in Latin American History. (1-4 cr. [max 16 cr.]; A-F or Audit; Every Spring) Topics not covered in regular courses.

HIST 8960. Topics in History. (1-4 cr. [max 20 cr.]; A-F or Audit; Every Fall & Spring) Topics not covered in regular courses.

HIST 8961. Research Seminar: Intellectual History. (3 cr.; A-F or Audit; Periodic Fall & Spring) Approaches/methods. Readings on or exemplifying intellectual history. Intellectual history as something broader than history of philosophical thought: a set of approaches of broad cross-disciplinary applicability. Each student prepares a research paper on a topic of intellectual history and present it to class for critique.

HIST 8970. Advanced Research in Quantitative History. (3 cr. [max 12 cr.]; A-F or Audit; Periodic Fall & Spring) Students carry out publishable-quality research on quantitative history topic. Prereq: Grad student

HIST 8990. Topics in Comparative History-Research. (3 cr. [max 15 cr.]; Student Option; Every Fall & Spring) Topics vary. Students read/discuss historical works from different geographic areas, develop proposals for comparative research, or pursue comparative research projects. Prereq: instr consent

HIST 8993. Directed Study. (1-16 cr.; A-F or Audit; Every Fall, Spring & Summer) Students work on tutorial basis. Guided individual reading or study. Prereq: Grad student, instr consent

HIST 8994. Directed Research. (1-16 cr.; A-F or Audit; Every Fall, Spring & Summer) Work on a tutorial basis. Prereq: instr consent

History of Medicine (HMED)

HMED 5075. Technology and Medicine in Modern America. (3 cr.; A-F or Audit; Fall Odd, Spring Even Year) How technology came to medicine's center-stage. Impact on medical practice, institutions, consumers; production of medical knowledge, professionalization, health policy, gender/race disparities in health care. Prereq: instr consent

HMED 7500. Historical Research for Medical Students. (4 cr. [max 8 cr.]; H-N only; Every Fall, Spring & Summer) This course is designed to acquaint third and fourth year medical students with the sources and the methods of historical research in medical topics and to allow them to undertake a short research project on a topic which they help design.

HMED 8001. Foundations in the History of Early Medicine. (3 cr.; A-F only; Every Fall) History of Western medicine, from professionalization of healing in Greco-Egyptian antiquity to association of postmortem pathology with disease and clinical movement of early 19th-century Paris.

HMED 8002. Foundations in the History of Modern Medicine, 1800-present. (3 cr.; A-F only; Every Spring) History of Western medicine in Europe and America, from the Paris School and pathological anatomy in early 19c France through germ theories of disease, bacteriological revolution, reform of medical education, pharmaceutical revolution, growth of biomed research establishment, and comparative health care delivery systems.

HMED 8112. Historiography of Science, Technology, and Medicine. (3 cr.; A-F only; Every Fall)
Changing conceptions of life and aims and methods of biology; changing relationships between biology and the physical and social sciences; broader intellectual and cultural dimensions of developments in biology.

HSCI 5242. Navigating a Darwinian World. (3 cr.; Student Option; Every Spring)
In this course we grapple with the impact of Darwin's theory of evolution in the scientific community and beyond. We'll examine and engage the controversies that have surrounded this theory from its inception in the 19th century through its applications in the 21st. What made Darwin a Victorian celebrity, a religious scourge, an economic sage and a scientific hero? We'll look closely at the early intellectual influences on theory development; study the changing and dynamic relationship between science and religion; and critically analyze the application of Darwin's theory to questions of human nature and behavior.

HSCI 5244. Nature's History: Science, Humans, and the Environment. (3 cr.; Student Option; Every Fall)
We examine environmental ideas, sustainability, conservation history; critique of the human impact on nature; empire and power in the Anthropocene; how the science of ecology has developed; and modern environmental movements around the globe. Case studies include repatriation of endangered species; ecology and evolutionary theory; ecology of disease; and climate change.

HSCI 5246. History of (Un)Natural Disasters. (3 cr.; Student Option; Periodic Spring)
Earthquakes, hurricanes, tsunamis, wildfires, epidemic disease, and technological failures. This course will examine large scale natural events in American and world history, the social, technological, and environmental conditions that underlie them, and their historical consequences. Human societies have long been embedded in physical landscapes where they are subject to specific environmental conditions and physical risks: eight thousand-year-old wall paintings in Turkey depict the eruption of Hasan Dag volcano over the city of Catal Huyuk, for example. But then and now, it takes a certain combination of social conditions and environmental events to create a natural disaster. In this course, we will use historical natural disasters to explore the interconnections between the structures and ideas of human society and environmental forces. Humans have not been simply the random victims of natural disasters; rather, and how they chose to live influenced the impact of any disastrous event. Examining these events in a historical context will help us see the social, technological, scientific, and environmental systems that have been constantly interacting, but which are normally taken for granted until they break down.

HSCI 5331. Technology and American Culture. (3 cr.; Student Option; Periodic Fall & Spring)

HSCI 5332. Science in the Shaping of America. (3 cr.; Student Option; Periodic Spring)
The British colonies of North America were founded in precisely the same centuries as a revolution in European's understanding of nature, transformed by the ideas of Galileo, Newton, and Linnaeus and by the technologies of the industrial revolution. Native Americans and African Americans had their own knowledge of nature, and their close understanding intersected with the increasingly scientific techniques brought with European settlers and enhanced the survival and intellectual capacities of the newcomers. By demonstrating the diversity of scientists in the ever changing demographics of an immigrant nation, the course argues that this diversity and the capacities of newcomers contributed to the national success in science and engineering. The engagement with science at points was used to try to limit access by women or African-Americans, but sciences was also used to discredit false theories through ever expanding emphasis on empiricism as well as attention to the social and economic consequences of innovation. The goal is to demonstrate those historical linkages in particular places and institutions as they influenced and reinforced specific scientific work, while, at the same time, being attentive to how scientific ideas and practices were shaped by American culture.

HSCI 5401. Ethics in Science and Technology. (3 cr.; Student Option; Periodic Fall & Spring)
Historical issues involving ethics in science. Ethical problems posed by modern science/technology, including nuclear energy, chemical industry, and information technologies.

HSCI 5421. Engineering Ethics. (3 cr.; Student Option; Every Fall & Spring)
Engineering ethics in historical context, including the rise of professional engineering societies; ethical problems in engineering research and engineers' public responsibility; ethical implications of advanced engineering systems such as the production of nuclear weapons; development of codes of ethics in engineering.

HSCI 5511. Biology and Culture in the 19th and 20th Centuries. (CIV: 3 cr.; Student Option; Every Fall & Spring)
Understanding the origins of our own culture of Modern Science in the Enlightenment of the eighteenth century. Newton's ambiguous legacy; science as wonder and spectacle; automata and monsters; early theories of sex and gender; empire and scientific expeditions; reshaping the environment; inventing human sciences; Franklinstein and the limits of science and reason.

HSCI 5877. Thesis Credits: Master's. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

HSCI 5880. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall & Spring)
(No description) prereq: Max 18 cr per semester or summer; 24 cr required

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
HSCI 5994. Directed Research. (1-15 cr.; Student Option; Every Fall & Spring) TBD prereq; instr consent

HSCI 8112. Historiography of Science, Technology, and Medicine. (3 cr.; A-F only; Every Fall) Models of practice, different schools. Work of representative historians of science, technology, and medicine.

HSCI 8113. Research Methods in the History of Science, Technology, and Medicine. (3 cr.; A-F only; Every Spring) Introduction to sources, methods, and problems of research in history of science, technology, and medicine. Preparation of major research paper under faculty supervision.

HSCI 8124. Foundations for Research in Ancient Science. (3 cr.; A-F or Audit; Periodic Fall) Development of natural/mathematical science in ancient Near East and Classical Greece. prereq: Grad HSci major or minor or instr consent

HSCI 8125. Foundations for Research in the Scientific Revolution. (3 cr.; A-F or Audit; Fall Even, Spring Odd Year) Development of sciences/natural philosophy, 1500-1725. prereq: Grad HSci major or minor or instr consent

HSCI 8131. Industrial Revolutions. (3 cr.; A-F only; Spring Even Year) Development of industrial society, from 1700 through 1850. Emphasizes developments in mechanical/engineering sciences. Scientific, economic, political, and social dimensions of industrialization.

HSCI 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

HSCI 8421. Social and Cultural Studies of Science. (3 cr.; Student Option; Periodic Fall & Spring) Review of recent work; theoretical and methodological differences among practitioners; selected responses from historians and philosophers of science.

HSCI 8441. Women in Science: Historical Perspectives. (3 cr.; Student Option; Periodic Fall & Spring) Key literature dealing with patterns of participation in science and medicine since the 18th century. The ways in which modern science is perceived to be gendered, particularly in its practice and in ways that seem to influence theory and applications. prereq: instr consent

HSCI 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

HSCI 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

HSCI 8777. Thesis Credits: Master's. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required (Plan A only)

HSCI 8830. Topics in the History of Science, Technology, and Medicine. (3 cr. [max 9 cr.]; A-F or Audit; Periodic Fall & Spring) Historical literature of topics common to history of science, technology, and medicine. prereq: instr consent

HSCI 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

HSCI 8900. Seminar: History of Early Physical Science. (3 cr.; Student Option; Periodic Fall & Spring) For advanced graduate students; topics in development of natural and mathematical science before 1800. prereq: instr consent

HSCI 8910. Seminar: History of Modern Physical Sciences. (3 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring) For advanced graduate students; topics in development of physical sciences since 1800. prereq: instr consent

HSCI 8920. Seminar: History of Biological Sciences. (3 cr. [max 6 cr.]; Student Option; Every Fall & Spring) For advanced graduate students; topics in development of natural, biological, and medical sciences from Aristotle to the present. prereq: instr consent

HSCI 8930. Seminar: History of Technology. (3 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring) For advanced graduate students; topics in development of technology from ancient times to the present. prereq: instr consent

HSCI 8940. Seminar: History of Science and Technology in the Americas. (3 cr.; Student Option; Every Fall & Spring) For advanced graduate students; topics in development of science and technology, emphasizing the United States and Canada. prereq: instr consent

HSCI 8950. Seminar: Science and Technology in Cultural Settings. (3 cr.; Student Option; Every Fall) For advanced graduate students; topics in development of science and technology in or across specific geographic regions or particular cultures. prereq: instr consent

HSCI 8993. Directed Studies. (1-5 cr. [max 15 cr.]; Student Option; Every Fall, Spring & Summer) TBD prereq: instr consent

HSCI 8994. Directed Research. (1-5 cr. [max 15 cr.]; Student Option; Every Fall & Spring) TBD

Horticulural Science (HORT)

HORT 5011. Common Medicinal Plants: Classification, Identification, and Application. (3 cr.; Student Option; Fall Odd Year) More than 200 common medicinal plants from 80 plant families. Medicinal plant identification/classification. Methods/philosophy of applying herbs for health and disease prevention. Practice with about 90 herb samples.

HORT 5012. Common Medicinal Plants: Growing and Processing. (3 cr.; Student Option; Fall Even Year) How to grow, process, store 40 common herbs/herbal products.

HORT 5031. Fruit Production and Viticulture for Local and Organic Markets. (3 cr.; A-F or Audit; Fall Odd Year) Principles of fruit production. Temperature fruit crops. Integrated management of fruit cropping systems. Site selection, cultural management practices, taxonomic classification, physiological/environmental control of plant development. Writing. prereq: [1001, 3005] or instr consent

HORT 5032. Organic Vegetable Production. (3 cr.; A-F or Audit; Spring Odd Year) Integrated management of vegetable cropping. Site selection/environment, seed/stand establishment, cultural management, commodity use, handling. Types of vegetable cultivars. Breeding, physiological/environmental control.
COURSES LISTED IN THIS CATALOG ARE CURRENT AS OF 2018-08-30. FOR UP-TO-DATE INFORMATION, VISIT WWW.CATALOGS.umn.EDU.

HORT 5059. Plant Cytogenetics Lab. (1 cr.; Student Option; Spring Odd Year) Consolidate knowledge of plant cytogenetics by practicing series of microscopy/computational technologies. Examine number, movement, structure/structure modification of chromosomes. Application in plant improvement. prereq: [HORT/AGRO 4401, BIOL 4004] or instr consent

HORT 5061. Advanced Turfgrass Science. (2 cr.; Student Option; Every Spring) For advanced students in turf with career objectives in turf management. Emphasis on ecology, physiology, theory of turf population dynamics and specialized management situations such as golf course, commercial sod production, and fine turf athletic settings. prereq: 4061

HORT 5071. Ecological Restoration. (4 cr.; Student Option; Every Fall) Ecological/physiological concepts for revegetation of grasslands, wetlands, forests, and landscapes. Plant selection, stand establishment/evaluation. State/federal programs that administer restoration/reclamation. Field trips. prereq: [One college course in ecology, one college course in [plant science or botany]] or instr consent

HORT 5090. Directed Studies. (1-3 cr.; max 6 cr.; Student Option; Every Fall, Spring & Summer) In-depth exploration of concepts, technology, materials, or programs in specific area to expand professional competency/self-confidence. Planning, organizing, implementing, and evaluating knowledge obtained from formal education and from experience. prereq: 8 cr upper div Hort courses, instr consent

HORT 5131. Student Organic Farm Planning, Growing, and Marketing. (3 cr.; Student Option; Every Spring) Students plan/implement cropping/marketing strategies for organic produce/flowers from Student Organic Farm on St. Paul campus. prereq: 1001 or AGRO 1101 or AGRO 1103 or BIOL 1001 or BIOL 1009 or instr consent

HORT 6002. Problem Solving in Horticulture. (3 cr.; max 4 cr.; S-N only; Every Fall) Collaborative problem-solving experience designed/completed by students with guidance from faculty instructor. prereq: Completion of 18 cr in master of agriculture in horticulture program or instr consent

HORT 6003. Masters of Professional Studies in Horticulture Professional Experience Program: Internship. (1-3 cr.; max 6 cr.; S-N only; Every Fall, Spring & Summer) Professional experience in horticulture firms or government agencies attained through supervised practical experience. Students evaluate reports, consult with faculty advisers and with employers. prereq: Masters of professional studies in horticulture student, completed internship contract, instr consent

HORT 6011. Plant Propagation. (4 cr.; A-F only; Every Fall) Principles/techniques of propagating plants by seeds, cuttings, grafts, buds, layers, and division. Lectures on principles, labs on practice of various propagating techniques. Reading/discussion of related primary literature. prereq: Master of Professional Studies or instr consent

HORT 8005. Supervised Classroom or Extension Teaching Experience. (2 cr.; S-N or Audit; Fall Even Year) Classroom or extension teaching experience in one of the following departments: Agronomy and Plant Genetics; Biosystems and Agricultural Engineering; Horticultural Science; Plant Pathology; or Soil, Water, and Climate. Participation in discussions about effective teaching to strengthen skills and develop personal teaching philosophy. prereq: instr consent

HORT 8007. Extension Horticulture Practicum. (1-5 cr.; Student Option; Every Fall, Spring & Summer) Selected activities that may include development of an extension fact sheet, assistance in Dial-U Clinic, or preparation of a workshop or short course. prereq: 9 grad cr in [ag or bio] science, instr consent

HORT 8023. Evolution of Crop Plants. (3 cr.; A-F only; Spring Even Year) Origin, distribution, and evolution of cultivated plants; implication of the effects of evolutionary processes on crop breeding for needs of people today. prereq: 9 grad cr in ag or bio sciences

HORT 8044. Manipulation of Plant Growth and Reproduction. (2 cr.; Student Option; Periodic Fall & Spring) Impact of environmental and genetic factors on crop growth, development, and reproduction. Emphasis on whole plant physiology and plant response to the environment as determined by genotype and its manipulation for the purpose of producing a crop. Lectures, discussion of current literature, and projects. prereq: PBio 5412

HORT 8090. Graduate Horticultural Research. (1-12 cr.; max 18 cr.; Student Option; Every Fall, Spring & Summer) Conduct literature, lab, and/or field research with horticultural plants and cropping systems. prereq: instr consent

HORT 8201. Advanced Plant Breeding. (3 cr.; A-F only; Fall Odd Year) Principles/methods in breeding agronomic/horticultural crops. Use of genotype/environment data to increase genetic gain, population improvement, parent building, alternative selection strategies, breeding for special traits, new approaches. prereq: STAT 5301 or equiv

HORT 8270. Graduate Seminar. (1 cr.; A-F or Audit; Every Fall & Spring) Reports/discussions on problems, investigation work. prereq: Grad major in [hort or applied plant sciences or ent or agro or plant bredg or pint path or soil] or instr consent

HORT 8280. Current Topics in Applied Plant Sciences. (1 cr.; S-N or Audit; Every Fall & Spring) Topics presented by faculty or visiting scientists. prereq: Grad major in [hort or applied plant sciences or ent or agro or plant bredg or pint path or soil] or instr consent

HORT 8900. Advanced Discussions. (1-3 cr.; max 36 cr.; Student Option; Every Fall & Spring) Special workshops or courses in applied plant sciences. prereq: instr consent

HOUSING STUDIES (HSG)

HSG 5170. Topics in Housing Studies. (1-4 cr.; max 32 cr.; A-F only; Every Fall, Spring & Summer) In-depth investigation of a single specific topic, announced in advance.

HSG 5193. Directed Study in Housing Studies. (1-4 cr.; max 8 cr.; A-F or Audit; Every Fall, Spring & Summer) Independent study in Housing Studies under tutorial guidance. prereq: Jr or sr or grad student

HSG 5463. Housing Policy. (3 cr.; A-F or Audit; Every Spring) Institutional/environmental settings that make up housing policy in the United States. Competing ideas about solving housing problems through public intervention in the market. Federal/local public sector responses to housing problems. prereq: [(2401 or DHA 2401), [2463 or DHA 2463]] or instr consent

HSG 5467. Housing and the Social Environment. (4 cr.; A-F or Audit; Every Fall) Housing choices in context of social environment. Emphasizes special needs of elderly, disabled, minorities, large families, female-headed households, and low-income households. Students conduct a post-occupancy evaluation of housing.

HSG 5471. Housing Studies Certificate Seminar. (2 cr.; A-F or Audit; Spring Odd Year) Integrative seminar and "capstone" to Certificate program. Students prepare an individual career plan that focuses on application of housing studies to community/workplace. prereq: Admitted to Housing Studies Certificate Program

HSG 5481. Promoting Independence in Housing and Community. (3 cr.; A-F or Audit; Fall Odd Year) Housing, work, and community environments as they relate to aging and managing disabilities. Principles of home modification, universal design, livable communities, and assistive technology to support individuals/families.
HSG 8170. Topics in Housing Studies. (3 cr. [max 6 cr.]; A-F or Audit; Every Fall & Spring) In-depth investigation of topic announced in advance.

HSG 8180. Professional Seminar. (1-2 cr. [max 4 cr.]; A-F or Audit; Every Fall, Spring & Summer) Professional development issues/trends.

HSG 8192. Readings in Housing Studies. (1-3 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer) Independent study, review of books, and periodicals under tutorial guidance. prereq: instr consent

HSG 8193. Directed Study. (1-3 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer) Directed study in housing studies. prereq: instr consent

HSG 8222. Plan B Master's Project. (3 cr.; S-N or Audit; Every Fall & Spring) Plan B master's project. prereq: [DHA or design master's] student, instr consent

HSG 8463. Housing: Race and Class. (3 cr.; A-F or Audit, Fall Even Year) Intersections between housing, race, and class. How housing reflects and helps to constitute racial/class difference. Housing as spatial expression of race/class. Case studies.

HSG 8467. Theoretical Perspectives in Housing Studies. (3 cr.; A-F or Audit, Every Spring) Investigation/evaluation of theories applied to housing. Levels of analysis. Links between theory, research questions, and methodological approaches. prereq: 5467 or DHA 5467 or instr consent

Human Factors (HUMF)

HUMF 5001. Foundations of Human Factors/Ergonomics. (3 cr.; A-F or Audit; Periodic Fall) Variability in human performance influenced by interaction with designs of machines/tools, computers/software, complex technological systems, jobs/working conditions, organizations, sociotechnical institutions. Conceptual, empirical, practical aspects of human factors/ergonomics. prereq: Grad HumF major or minor or instr consent

HUMF 5193. Directed Study in Human Factors and Ergonomics. (1-4 cr. [max 8 cr.]; A-F only; Every Fall, Spring & Summer) Independent study in human factors/ergonomics under tutorial guidance. prereq: instr consent

HUMF 5874. Service Design: Designing complex systems to improve service delivery. (4 cr.; A-F only; Every Spring) Real world service delivery problems. Perceptual/cognitive strengths/weaknesses addressed when designing systems. prereq: Grad student or instr consent

HUMF 8001. Special Topics: Human Factors/Ergonomics. (2-3 cr.; Student Option; Every Fall & Spring) Survey course in human factors/ergonomics. Interaction of performance/behavior with design factors in performance environment. Concepts, methods, empirical findings, different systems applications, current research. Topics vary. prereq: Grad HumF major or minor or instr consent

HUMF 8002. Proseminar in Human Factors/Ergonomics. (1 cr. [max 2 cr.]; A-F or Audit; Every Fall & Spring) Issues/concerns tailored to interests of faculty/students regarding human factors/ergonomics. Interdisciplinary science concerned with interaction of performance/behavior with design factors in performance environment. prereq: Grad HumF major or minor or instr consent

HUMF 8333. FTE: Master's. (1 cr. ; No Grade Associated; Every Fall, Spring & Summer) FTE: master's. prereq: Master's student, adviser consent, DGS consent

HUMF 8444. FTE: Doctoral. (1 cr. ; No Grade Associated; Every Fall, Spring & Summer) FTE: doctoral, prereq: Doctoral student, adviser consent, DGS consent

HUMF 8541. Decision Support Systems. (4 cr.; A-F or Audit; Every Fall & Spring) Students build a decision support system for a problem of their choice. How to identify appropriate problems. Styles of DSSs, evaluating their effectiveness. prereq: Undergrad-level computer programming course or instr consent; programming skills recommended

HUMF 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) Doctoral pre-thesis credits. prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr

HUMF 8777. Thesis Credits: Master's. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) Thesis credits: master's. prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

HUMF 8794. Human Factors Research. (1-4 cr.; S-N only; Every Fall, Spring & Summer) Human factors research.

HUMF 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) Thesis credit: doctoral. prereq: Max 18 cr per semester or summer; 24 cr required

Human Resources/Indus Rel (HRIR)

HRIR 5000. Topics in HRIR. (2 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer) Topics in human resources/industrial relations.

HRIR 5222. Managing Diversity. (2 cr.; Student Option; Every Fall & Spring) How to manage diverse workforce. Human resource practices examined with respect to diversity. How to incorporate diversity into decision making to enhance organizational performance. prereq: HRIR MA student must register A-F, 3021. [CSOM or HRD junior or senior or dept consent]

HRIR 5252. Employment and Labor Law for the HRIR Professional. (2 cr.; Student Option; Every Fall & Spring) Application of statutes/case law to work settings. Civil rights/equal opportunity, Discrimination/harassment. Compensation/benefits. Employee protection/privacy. Labor relations. Emphasizes application/ability to recognize legal aspects of HRIR issues. prereq: HRIR MA student must register A-F, 3021. [CSOM or HRD junior or senior or dept consent]

HRIR 5442. Employee Performance Management: Strategies, Systems, and Skills. (2 cr.; Student Option; Every Fall) Performance management strategies. Components of effective performance management systems. Alignment with HR strategy. Integration with HR practices. Measurement/appraisal. Feedback, coaching. Legal issues. prereq: HRIR MA student must register A-F, 3021. [CSOM or HRD junior or senior or dept consent]

HRIR 5443. Principles of Effective Coaching. (2 cr.; Student Option; Every Fall) Skills/competencies required to coach, mentor, develop employees/leaders. Managing coaching process. Planning coaching relationship. Coaching as leadership development strategy. Coaching executives. prereq: HRIR MA student must register A-F, 3021. [CSOM or HRD junior or senior or dept consent]

HRIR 5555. Public Policies on Work and Pay. (3 cr.; Student Option; Every Spring) Analysis of public policies regarding employment, unions, labor markets. Public programs affecting wages, unemployment, training, worker mobility, security, quality of work life. Policy implications of changing nature of work. prereq: HRIR MA student must register A-F, ECON 1101, [CSOM or HRD junior or senior or dept consent]

HRIR 5662. Personnel Economics. (2 cr.; Student Option; Every Fall & Spring) Application of economic tools to issues in human resources/industrial relations. Incentives/imperfect information. Incentive-based pay. Promotions/tournaments. Human capital/training. Screening/signaling. Applications/limitations. prereq: Prereq-
HRIR MA student must register A-F, ECON 1101, [CSOM or HRD junior or senior or dept consent]

HRIR 5992. Independent Study in Human Resources and Industrial Relations. (1-8 cr.; Student Option; Every Fall, Spring & Summer)
Individual readings or research topics. prereq: dept consent or instr consent

HRIR 6000. Graduate Topics in Human Resources and Industrial Relations. (1-8 cr.; A-F only; Every Fall & Spring)
Selected graduate topics of current relevance to human resource management/industrial relations. prereq: HRIR MA student or dept consent

HRIR 6001. Business Principles for the HRIR Professional. (4 cr.; A-F only; Every Fall)

HRIR 6009. Introduction to Human Resources and Industrial Relations. (3 cr.; A-F only; Every Fall)

HRIR 6111. Using Data and Metrics in Human Resources and Industrial Relations. (4 cr.; A-F only; Every Fall & Spring)
Theory/applications of methods of data analysis for using data in HRIR decision-making. Descriptive/inferential statistics, especially hypothesis tests/confidence intervals. Regression analysis. Identification of appropriate techniques. Avoiding unreliable inferences. Introduction to HRIR metrics. prereq: HRIR MA student or dept consent

HRIR 6114. Human Resource Information Systems. (2 cr.; A-F only; Every Fall & Spring)
Integrating human resources practices with information technology to effectively support organizational needs. Determining HRIS needs. HRIS implementation/acceptance. HRIS applications in HR administration/operations, recruitment/selection, talent management, other HR areas. Emerging trends. prereq: HRIR MA student or dept consent

HRIR 6145. Organizational Development, HR Metrics, and the Balanced Scorecard. (2 cr.; A-F only; Every Spring)

HR professional as consultant. prereq: HRIR 6441 or dept consent

HRIR 6223. International Human Resource Management. (2 cr.; A-F only; Every Fall)
Strategies for effective management. Analysis of cross-cultural differences in values, norms, practices. How they affect organizational behavior/performance. Implications for designing HR practices in multinational organizations/international contexts. prereq: HRIR MA student or dept consent

HRIR 6301. Staffing, Training, and Development. (4 cr.; A-F only; Every Fall)
Developing plans for hiring to facilitate strategic goals, attracting talent, selecting best candidates, helping new employees onboard, developing knowledge/skills over time, keeping talented people. Evaluation of staffing, training, development effectiveness. prereq: HRIR MA student or dept consent

HRIR 6302. Staffing and Selection: Strategic and Operational Concerns. (2 cr.; A-F only; Every Fall & Spring)
Theory/practice related to staffing decisions. Recruitment, selection, promotion, transfer, dismissal, layoff, retirement in organizations. Legal environment in which staffing decisions are made. Staffing from strategic/organizational perspectives. prereq: HRIR 6301 or dept consent

HRIR 6303. Employee Training: Creating a Learning Organization. (2 cr.; A-F only; Every Fall)
Theory, research, practice related to design/implementation of employee training programs. Needs analysis. Training outcomes. Instructional design/training techniques. Program evaluation/costing. Role of employees, firm policies/practices in training. prereq: HRIR 6301 or dept consent

HRIR 6304. Employee Development: Creating a Competitive Advantage. (2 cr.; A-F only; Every Spring)
Career development/planning. Employee/management development techniques, organizational/employee concerns related to socialization, cross-cultural assignments, change, engagement, performance management. prereq: HRIR 6301 or dept consent

HRIR 6401. Organizational Theory Foundations of High-Impact HRIR. (2 cr.; A-F only; Every Fall & Spring)
Economic aspects of individual and group behavior in organizations. Individual and collective rationality, information, incentives, coordination problems, and contracts. Impacts on HRIR decisions and outcomes. Solutions and approaches to problems in organizations at micro and macro levels. prereq: dept consent

HRIR 6402. HR Practices, HRM Strategy, and Organizational Performance. (2 cr.; A-F only; Every Fall)
Analysis of how different organizational practices/combinations thereof affect organizations in competitiveness, profitability, workplace safety, employment stability, wages. Coherence/consistency of system of organizational practices in relation to various contingencies. prereq: HRIR 6401 or dept consent

HRIR 6403. Comparative Organizations and HRM Systems. (2 cr.; A-F only; Every Spring)
Variations in organizational practices related to variations in ownership. Profit, nonprofit, government, international, economic systems, culture, technology, market structure. Organizational practices. Employee empowerment, job enrichment, profit sharing, employee stock ownership, individual incentives, international comparisons. prereq: HRIR 6401 or dept consent

HRIR 6441. Organizational Behavior Foundations of High-Impact HRIR. (2 cr.; A-F only; Every Fall & Spring)
Psychological aspects of individual/group behavior in organizations. Individual motivation, attitudes/job satisfaction. Leadership. Organization design/culture. Impacts on HRIR decisions/outcomes. Solutions/approaches to problems in organizations at micro/macro levels. prereq: HRIR MA student or dept consent

HRIR 6444. Employee Motivation, Engagement, and Well-being. (2 cr.; A-F only; Every Spring)
Employee motivation, behavior, job attitudes. How they can be channeled into productive/unproductive behaviors/employee well-being. How work behavior is influenced by individuals, groups, features of organizations. prereq: HRIR 6441 or MBA 6110 or dept consent

HRIR 6465. Leadership and Personal Development. (2 cr.; A-F only; Every Fall & Spring)
Understanding effective leadership. Identifying personal leadership strengths/vulnerabilities through feedback. Developing leadership skills through practice as informed by theory/evidence. Exercises, role play. Creating customized leadership development plan. prereq: MBA or HRIR MA student or dept consent

HRIR 6484. Management of Groups. (2 cr.; A-F only; Every Fall, Spring & Summer)

HRIR 6501. Compensation and Benefits. (4 cr.; A-F only; Every Spring)
Pay/benefit determination by labor markets, internal structures, individual performance. Alignment of business strategies with HRIR decisions/compensation practices. Performance evaluation, technical skills, compensation analytics, pay negotiations. Illustrates concepts from labor economics, behavioral economics, psychology with routine interactive case studies. prereq: HRIR MA student or dept consent

HRIR 6502. Compensation Theory and Applications. (2 cr.; A-F only; Every Fall)
Relationship between economic/psychological theories, design/operation of compensation programs. Demographic influences on compensation program outcomes. Statistical
HRIR 6503. Employer-Sponsored Employee Benefit Programs. (2 cr.; A-F only: Every Spring)
Design, administration, management of non-mandatory compensation benefit programs, including health/dental care plans/insurance, retirement plans, disability benefits, paid time off, accommodation benefits. Effects of providing benefits on workers' incentives for performance. Psychological foundations of employee benefits. Role of benefits in employee recruitment/retention. prereq: 6501 or dept consent

HRIR 6504. Executive Compensation. (2 cr.; A-F only: Every Spring)
Course emphasizes understanding and appreciation of the complexities of executive compensation. Course will develop your knowledge of analysis and design of executive compensation, teach you to read and understand executive compensation disclosures, develop an awareness of trends, issues and challenges and give you an idea of how accounting, tax regulations, and other regulations shape executive compensation. Through the use of cases, class discussions and interactive experiential activities this course will develop your intellectual ability to critically examine, analyze, and deal with the complexity and ambiguity of executive compensation. prereq: A-F only; prereq MBA or HRIR MA student

HRIR 6664. Topics in Labor Market Analysis. (1-2 cr.; A-F only: Periodic Fall & Spring)
May include micro aspects of unemployment, implicit contracts/efficiency wages, investment in human capital, occupational choice, job search, job matching/turnover, migration, labor force participation, government program evaluation. prereq: 6001, 6111, [Business Admin PhD student or dept consent]

HRIR 6701. Labor Relations and Collective Bargaining. (4 cr.; A-F only; Every Spring)
Evolution of U.S. labor unions/public policy, bargaining environment/structure, goals/negotiations, contract administration/results. International comparisons, labor-management cooperation, newly emerging issues. prereq: HRIR MA student or dept consent

HRIR 6702. Contemporary Issues in Labor Relations. (2 cr.; A-F only; Every Fall)
Focused on the particular concern to various actors in contemporary labor relations. Topics vary. prereq: 6701 or dept consent

HRIR 6703. Dispute Resolution: Labor Arbitration. (2 cr.; A-F only; Every Fall)
Arbitration to resolve grievances/impasses arising out of collective bargaining agreement's administration/negotiation. Arbitration law/legal issues, procedures/practices, case presentation, management rights, discipline/discharge, evidence, contract language interpretation, remedies. Newly emerging approaches, prereq: 6701 or dept consent

HRIR 6801. HRIR in Practice: Strategy, Execution, and Ethics. (2 cr.; A-F only; Every Spring)
Types of strategies. Developing/executing HRIR strategies. Project management in HRIR. prereq: [6001, 6111, 6301, 6401, 6441, 6501, 6701] or dept consent

HRIR 6802. Capstone Project. (2 cr.; A-F only; Every Spring)
Application of related knowledge, concepts, methods to practical problem in human resources/industrial relations. Benchmarking of related best practices in research/practice. Full development, analysis, proposed recommendations for implementation or improvement of selected problem. prereq: [6001, 6111, 6301, 6401, 6441, 6501, 6701] or dept consent

HRIR 6822. Field Project. (4 cr.; Student Option; Every Fall & Spring)
Teams formulate/executes study of actual business problem faced by business, non-profit, or governmental organization, generally in Twin Cities. prereq: [6001, 6111, 6301, 6401, 6441, 6501, 6701] or dept consent

HRIR 6992. Independent Study in Applied Human Resources and Industrial Relations. (1-8 cr.; S-N only; Every Fall, Spring & Summer)
Individual readings, research projects, research in applied settings. prereq: dept consent

HRIR 8041. Design and Management of Organizations. (4 cr.; Student Option; Every Fall)
Introduction to micro through macro organizational issues at individual, dyadic, group, organizational, and environmental levels; their implications for organizational design, control, coordination, and development. prereq: Econ 1101, Econ 1102, Psy 1001 or instr consent, grad HRIR major or dept consent; grad majors must enroll A-F only

HRIR 8063. Human Resources and Organizational Performance. (4 cr.; Student Option; Every Fall)
Impact of human resource policies and practices on organizational productivity and effectiveness. Role of government, unions, and private sector institutions on organizational effectiveness. prereq: 8061 or instr consent, grad HRIR major or dept consent; grad majors must enroll A-F only

HRIR 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: HRIR MA student, dept consent

HRIR 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

HRIR 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

HRIR 8801. Core Seminar: Fundamentals of Economic Analysis for Work and Organizations. (4 cr.; Student Option; Periodic Fall & Spring)
Theoretical/empirical approaches in labor/organizational economics. Labor supply/demand. Monopoly/institutional features of labor markets. Compensation, incentives, sorting, training. Approaching topics/questions in work/organizations from economic perspective. prereq: [Business Admin PhD student or dept consent], grad majors must enroll A-F

HRIR 8802. Core Seminar: Organizational Behavior. (4 cr.; Student Option; Periodic Fall)

HRIR 8803. Core Seminar: Fundamentals of HR Research. (4 cr.; Student Option; Periodic Fall & Spring)
Major theories/current research on human resources/industrial relations practices/institutions. Recruitment, selection, job performance. Training/development. Compensation. Other practices/institutions. prereq: [Business Admin PhD student or dept consent], grad majors must enroll A-F

HRIR 8812. Core Seminar: Research Methods in Work and Organizations. (4 cr.; Student Option; Periodic Spring)
Application in research projects. prereq: [Business Admin PhD student or dept consent], grad majors must enroll A-F

HRIR 8820. Seminar: Special Topics in Work and Organizations Research. (2 cr.; [max 12 cr.]; Student Option; Every Spring) Contemporary theories/research on specific topics in work/organizations. Topics vary. prereq: [Business Admin student or dept consent], grad majors must enroll A-F

HRIR 8825. Research Practicum/Workshop. (1 cr. [max 4 cr.]; S-N only; Every Fall & Spring)
Experience in conducting research/other doctoral student activities.

HRIR 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

HRIR 8891. Independent Study in Human Resources and Industrial Relations. (1-8 cr.; A-F or Audit; Every Fall, Spring & Summer)
Individual readings and/or research projects. prereq: instr consent

HSEX 6001. Foundations of Human Sexuality. (3 cr.; A-F or Audit; Every Fall)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

**Industrial Engineering (IE)**

IE 5080. Topics in Industrial Engineering. (1-4 cr.; Student Option; Periodic Fall & Spring) Topics vary each semester.

IE 5111. Systems Engineering I. (2 cr.; A-F or Audit; Every Fall) Overview of systems-level thinking/techniques in context of an integrated, design-oriented framework. Elements of systems engineering process, including lifecycle, concurrent, and global engineering. Framework for engineering large-scale, complex systems. How specific techniques fit into framework. prereq: CSE upper div or grad student

IE 5113. Systems Engineering II. (4 cr.; A-F or Audit; Every Spring) Systems engineering thinking/techniques presented in 5111. Hands-on techniques applied to specific problems. Topics pertinent to effectiveness of design process. Practices and organizational/reward structure to support collaborative, globally distributed design team.

IE 5441. Financial Decision Making. (4 cr.; A-F only; Every Fall, Spring & Summer) Cash flow streams, interest rates, fixed income securities. Evaluating investment alternatives, capital budgeting, dynamic cash flow process. Mean-variance portfolio selection, Capital Asset Pricing Model, utility maximization, risk aversion. Derivative securities, asset dynamics, basic option pricing theory. prereq: CSE upper div or grad student

IE 5511. Human Factors and Work Analysis. (4 cr.; A-F or Audit; Every Fall & Spring) Human factors engineering (ergonomics), methods engineering, and work measurement. Human-machine interface: displays, controls, instrument layout, and supervisory control. Anthropometry, work physiology and biomechanics. Work environmental factors: noise, illumination, toxicology. Methods engineering, including operations analysis, motion study, and time standards. prereq: Upper div CSE or grad student

IE 5513. Engineering Safety. (4 cr.; A-F or Audit; Every Fall & Spring) Occupational, health, and product safety. Standards, laws, and regulations. Hazards and their engineering control, including general principles, tools and machines, mechanics and structures, electrical safety, materials handling, fire safety, and chemicals. Human behavior and safety, procedures and training, warnings and instructions. prereq: Upper div CSE or grad student

IE 5522. Quality Engineering and Reliability. (4 cr.; Student Option; Periodic Fall & Spring) Quality engineering/management, economics of quality, statistical process control design of experiments, reliability, maintainability, availability. prereq: [4521 or equiv]. [upper div or grad student or CNR]

IE 5531. Engineering Optimization I. (4 cr.; Student Option; Every Fall) Linear programming, simplex method, duality theory, sensitivity analysis, interior point methods, integer programming, branch and bound/dynamic programming. Emphasizes applications in production/logistics, including resource allocation, transportation, facility location, networks/flows, scheduling, production planning. prereq: Upper div or grad student or CNR

IE 5532. Stochastic Models. (4 cr.; Student Option; Every Fall) Introduction to stochastic modeling and stochastic processes. Probability review, random variables, discrete and continuous-time Markov chains, queueing systems, simulation. Applications to industrial and systems engineering including production and inventory control. prereq: Undergraduate probability and statistics. Familiarity with computer programming in a high level language.

IE 5541. Project Management. (4 cr.; A-F only; Every Fall & Spring) Introduction to engineering project management. Analytical methods of selecting, organizing, budgeting, scheduling, and controlling projects, including risk management, team leadership, and program management. prereq: Upper div or grad student

IE 5545. Decision Analysis. (4 cr.; Student Option; Periodic Fall & Spring) Single-person and group decision problems. Structuring of decision problems arising in personal, business, and public policy contexts. Decision-making under uncertainty, value of information, games of complete information and Nash equilibrium, Bayesian games, group decision-making and distributed consensus, basics of mechanism design. prereq: 3521 or equiv

IE 5551. Production Planning and Inventory Control. (4 cr.; Student Option; Every Fall & Spring) Inventory control, supply chain management, demand forecasting, capacity planning, aggregate production and material requirement planning, operations scheduling, and shop floor control. Quantitative models used to support decisions. Implications of emerging information technologies and of electronic commerce for supply chain management and factory operation. prereq: CNR or upper div or grad student

IE 5553. Simulation. (4 cr.; Student Option; Periodic Fall & Spring) Discrete event simulation. Using integrated simulation/animation environment to create, analyze, and evaluate realistic models for various industry settings, including manufacturing/service operations and systems engineering. Experimental design for simulation. Selecting input distributions, evaluating simulation output. prereq: Upper div or grad student; familiarity with probability/statistics recommended

IE 5561. Analytics and Data-Driven Decision Making. (4 cr.; Student Option; Every Spring) Hands-on experience with modern methods for analytics and data-driven decision making. Methodologies such as linear and integer optimization and supervised and unsupervised learning will be brought together to address problems in a variety of areas such as healthcare, agriculture, sports, energy, and finance. Students will learn how to manipulate data, build and solve models, and interpret and visualize results using a high-level, dynamic programming language. Prerequisites: IE 3521 or equivalent; IE 3011 or IE 5531 or equivalent; proficiency with a programming language such as R, Python, or C.

IE 5773. Practice-focused Seminar. (1 cr.; S-N or Audit; Every Fall) Industry and academic speakers, topics relevant to analytics practice.

IE 5801. Capstone Project. (4 cr.; A-F only; Every Fall)
Students work on ISYE Analytics Track capstone project in small teams of two or three. Projects are supervised by industry mentor and faculty advisor. Projects involve application and techniques from Analytics Track curriculum. Prerequisites: ISYE Analytics Track MS Student; IE 5531; IE 5561; Stat 5302; CSci 5521 or 5523.

IE 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

IE 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

IE 8532. Stochastic Processes and Queuing Systems. (4 cr.; Student Option; Every Fall) Introduction to stochastic modeling and processes. Random variables, discrete and continuous Markov chains, renewal processes, queuing systems, Brownian motion, and elements of reliability and stochastic simulation. Applications to design, planning, and control of manufacturing and production systems. prereq: 4521 or equiv

IE 8533. Advanced Stochastic Processes and Queuing Systems. (4 cr.; Student Option; Periodic Spring) Renewal and generative processes, Markov and semi-Markov processes, martingales, queuing theory, queuing networks, computational methods, fluid models, Brownian motion, prereq: 8532 or instr consent

IE 8534. Advanced Topics in Operations Research. (4 cr.; [max 8 cr.]; Student Option; Every Fall & Spring) Special topics determined by instructor. Examples include Markov decision processes, stochastic programming, integer/combinatorial optimization, and queuing networks. prereq: 5531, 8532

IE 8536. Advanced Topics in Engineering Management. (4 cr.; [max 8 cr.]; A-F or Audit; Periodic Spring) Areas such as financial engineering, revenue management, management of health systems, service operations, management of technology, and public policy.

IE 8552. Advanced Topics in Production, Inventory, and Distribution Systems. (4 cr. [max 8 cr.]; Student Option; Periodic Fall & Spring) Cutting edge research issues in production, inventory, distribution systems. Stochastic models of manufacturing systems, stochastic inventory theory, multi-echelon inventory systems/supply chains, supplier-retailer/supplier-manufacturer coordination, supplier/warehouse networks, business logistics, transportation. prereq: 5551

IE 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

IE 8773. Graduate Seminar. (1 cr.; S-N or Audit; Every Fall & Spring) Recent developments.

IE 8774. Graduate Seminar. (1 cr.; S-N or Audit; Every Fall & Spring) Recent developments. prereq: 8773

IE 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required (Plan A only)

IE 8794. Industrial Engineering Research. (1-6 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer) Directed research. prereq: instr consent

IE 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

IE 8951. Plan B Course. (1 cr.; S-N or Audit; Every Fall) Structured environment in which students can complete M.S. Plan B project.

IE 8953. Plan B. (2 cr.; A-F or Audit; Every Spring) Structured environment in which students can complete M.S. Plan B project. prereq: 8951

IE 8991. Curricular Practical Training. (1-2 cr. [max 6 cr.]; S-N only; Every Fall, Spring & Summer) Industrial work assignment involving advanced mechanical engineering. Review/approval by faculty member/director of graduate studies. Final report covering work assignment.

Industry MBA (IMBA)

IMBA 6004. Negotiations. (3 cr.; A-F only; Every Fall) Art and science of securing agreements between two or more parties who are interdependent and seek to maximize their own outcomes. Individual, group, and organizational behavior. Theory and process of negotiations applied to problems faced by managers/professionals.

IMBA 6030. Financial Accounting. (3 cr.; A-F only; Every Summer) Students learn about the accounting system used by firms to measure and report their economic performance and financial position to external parties. Students analyze corporate financial reports to discover the impact of significant economic events. Discussions and cases focus on the role of financial reporting standards in informing financial intermediaries and contributing to the efficient allocation of capital in a modern economy.

IMBA 6110. Leading Others. (2 cr.; A-F only; Every Spring) Achieving organizational goals by leading in ways that create motivation, engagement, commitment, positive social interactions, and job performance. Understanding and managing the characteristics of organizations, work groups, and individuals. The role of group dynamics, decision making, cooperation, conflict, and power in leading others.

IMBA 6120. Data Analysis & Statistics. (3 cr.; A-F only; Every Summer) Concepts and principles of business statistics, data analysis and presentation of results. Topics: exploratory data analysis, basic inferential procedures, statistical process control, time series and regression analysis, and analysis of variance. These methods are selected for their relevance to managerial decision making and problem solving.

IMBA 6140. Managerial Economics. (3 cr.; A-F only; Every Summer) How markets work, how positive economic rents (profits) are made, and how strategic behavior affects profits. Four major topical areas include market micro-structure, industrial structure, uncertainty, and incentives and firm governance.

IMBA 6210. Marketing Management. (3 cr.; A-F only; Every Summer) Management of the marketing function; understanding the basic foundational marketing concepts and skills in strategy development and planning of operational and
strategic levels pertaining to product offering decisions, distribution channels, pricing and communication.

**IMBA 6220. Supply Chain Management.** (3 cr.; A-F only; Every Fall) An orientation to a supply chain paradigm. Domestic and global perspectives will be examined. Tools used in operations and optimization will be discussed in the context of linking consumers to technology providers and manufacturers on rapid and distributed global platforms.

**IMBA 6230. Financial Management.** (3 cr.; A-F only; Every Summer) Tools and concepts of financial management. Emphasizes use by financial and non-financial managers to measure creation of value within an organization. Evaluating businesses and business opportunities, identifying financial requirements and sources. Prereq: 6030

**IMBA 6240. Data Analytics.** (3 cr.; A-F only; Every Fall) It is critical for contemporary managers to understand how the convergence of mobility, analytics, social media, cloud computing, and embedded devices are transforming firms, industries, markets and society. Using the foundation of data-driven business analytics this course provides the tools and frameworks for competing in the digital age. Students will learn general state-of-the-art analytics skills in the context of new platform-based business models, digital search, big-data, social networks, social media, and open innovation that pervade competition in the digital age. Includes fundamentals of predictive modeling, large scale A/B testing, social networks analysis, and an exposure to the work-horse tools of data-driven classification and prediction to explore patterns in rich datasets (e.g., k-nearest neighbors, classification trees, design of recommendation systems). Using case studies in the digital domain, the methods taught have a wide range of applicability across functions and verticals in modern business environments. Prereq: IMBA student.

**IMBA 6300. Strategic Management.** (3 cr.; A-F only; Every Summer) Introduction to the concepts and techniques used to create and implement a sense of corporate direction; choices about products and markets that involve the integration of different functional areas; positioning a business to increase returns for shareholders and stakeholders; the skills involved in identifying issues, evaluating options, and implementing business plans.

**IMBA 6315. The Ethical Environment of Business.** (2 cr.; A-F only; Every Spring) Analysis of ethical dilemmas and development of appropriate responses; relationship of ethical management to the law; implications for corporate profitability; managing shareholders vs. managing stakeholders; issues such as protection of the environment, workplace safety, product liability, regulation, and fiduciary obligations.

**IMBA 6401. Industry Overview & Business Law.** (2 cr.; A-F only; Every Fall) A comprehensive survey of the major U.S.-regulated and highly profitable industries including but not exclusive to the technology, energy, finance and healthcare industries. The course will focus on the legislative and regulatory process that provide oversight to major verticals. Antitrust and competition policy enforced by the Department of Justice and the Federal Trade Commission will be explored. Prereq: Industry MBA Student

**IMBA 6402. Industry Vertical: Technology.** (2 cr.; max 3 cr.; A-F only; Every Fall) This course focuses on firms engaged in three major sub areas of technology including e-commerce, defense, and manufacturing subsectors. Cases and live case studies to focus on firms ranging from 3M, Lockheed, Amazon, and Google. Federal agency oversight focus includes the Departments of Defense, Transportation, Commerce, and Education.

**IMBA 6403. Industry Vertical: Energy.** (2 cr.; A-F only; Every Fall) Focus on firms engaged in three major sub areas of financial services including retail banking, investment, and international markets subsectors. Cases and live case studies to focus on firms ranging from Wells Fargo, Berkshire Hathaway, Cargill, and Piper Jaffray. Federal oversight focus includes the Security and Exchange Commission and the Department of Treasury.

**IMBA 6404. Industry Vertical: Finance.** (2 cr.; max 3 cr.; A-F only; Every Spring) Focus on firms engaged in three major sub areas of financial services including retail banking, investment, and international markets subsectors. Cases and live case studies to focus on firms ranging from Wells Fargo, Berkshire Hathaway, Cargill, and Piper Jaffray. Federal oversight focus includes the Security and Exchange Commission and the Department of Treasury.

**IMBA 6405. Industry Vertical: Health.** (2 cr.; max 3 cr.; A-F only; Every Spring) Focus on firms engaged in three major sub areas of health including health care delivery, medical technology, and health insurance. Cases and live case studies to focus on firms ranging from United Health Group, Pfizer, Medtronic, and the Mayo Clinic. Federal oversight focus includes the Department of Health and Human Services, the Veteran Administration, and Office of Personal Management.

**IMBA 6500. Virtual Team Project.** (4 cr.; A-F only; Every Spring) The Virtual Team Project (VTP) provides Carlson School MBA students with the unique opportunity to work in a collaborative team environment across professions, industries, and markets. As participants in the VTP, students develop advanced skills in teamwork, cross-cultural collaboration, and business plan development within a dynamic environment shaped by academic rigor and the demands of real-world international business.

**IMBA 6501. Industry MBA Capstone.** (4 cr.; A-F only; Every Spring) Tying together foundational concepts of business with deep knowledge of specific industry, students will collaborate across teams, faculty, and a selected corporate partner and enter in to ?War Games? scenarios. Teams will represent corporate decision makers and act as stakeholders for an all out, winner take all, strategic battle comprised within each of the industry verticals.

**Information and Decision Sci (IDSC)**

**IDSC 6040. Information Technology Management.** (2 cr.; A-F only; Every Fall, Spring & Summer) Management of information systems, information technology (IT) in global organization. Strategic uses of IT. Alignment of IT, organizational strategy, internet/Web technologies, e-commerce customer services. Integration of e-business applications, interorganizational systems, systems implementation. Management of information as resource. Lecture, case analysis, classroom discussion. Prereq MBA student.

**IDSC 6050. Information Technologies and Solutions.** (2 cr.; A-F only; Every Fall & Spring) Current/emerging technologies in modern Net-enhanced organizations. Internet/Web technologies, including Internet fundamentals, Web communications, Web 2.0/social media, information security, cloud computing, IT-driven innovation, emerging IT trends.

**IDSC 6423. Enterprise Systems.** (2 cr.; A-F only; Every Fall & Spring) Requirements of architectures of information systems that help integrate business processes and optimize performance across diverse organizations/divisions. Capabilities of information systems in enterprise integration and supply chain management. Linkages necessary between information systems and business processes.
IDSC 6442. E-Sourcing and E-Auctions. (2 cr.; A-F only; Every Fall & Spring)

IDSC 6444. Business Analytics for Managers I. (2 cr.; A-F only; Every Spring)
Use of information technologies to gather, store, analyze, and access data to help managers make decisions about their business and the way they serve customers. Data mining, personalization, recommender systems. prereq: [6040 or 6050 or MBA 6240], MBA student

IDSC 6446. Business Analytics for Managers II. (2 cr.; A-F only; Every Spring)

IDSC 6455. Web 2.0: The Business of Social Media. (2 cr.; A-F only; Every Fall)
Business use of social media. Web 2.0/driving forces, social media marketing/advertising, engaging customers, peer production/open innovation. Ways businesses can leverage social media to foster collaboration, engage customers, build brand loyalty. prereq: MBA student

IDSC 6465. Global Sourcing of IT and IT Enabled Services. (3 cr.; A-F only; Every Spring)
Outsourcing IT and IT enabled services. Sourcing business/knowledge processes: finance/accounting, human resources, engineering services, data analytics. Strategic global sourcing planning/implementation. Managing offshore service relationships. prereq: [6040 or 6050 or MBA 6240], MBA student

IDSC 6471. Knowledge Management. (2 cr.; A-F only; Every Fall)
Design, evaluation, use of knowledge in organizations. Leveraging knowledge in workers, structures, processes, Assessment of knowledge needs. Evaluation of key decision processes, information demands, usage patterns, content requirements. Behavioral/cultural barriers. Use of technology for knowledge management. prereq: MBA student

IDSC 6481. Managerial Decision Making. (2 cr.; A-F only; Every Fall)
Frameworks for making decisions as a manager, knowledge worker, or individual. How policies area adopted. Poor decision making. Learning from mistakes. Bounded rationality, system thinking, concepts of learning. prereq: MBA student

IDSC 6490. Advanced Topics in MIS. (3 cr. [max 15 cr.]; A-F only; Periodic Fall & Spring)
Discussion and analysis of topics and developments in managing information systems.

IDSC 6491. Independent Study in Information Systems. (1-4 cr. [max 8 cr.]; A-F only; Periodic Fall, Spring & Summer)
Independent study in Information Systems. prereq: instr consent

IDSC 8003. Accounting and Information Systems. (4 cr.; A-F only; Every Fall)

IDSC 8511. Conceptual Topics and Research Methods in Information and Decision Sciences. (3 cr.; Student Option; Every Fall)
Relationships to underlying disciplines; major research streams; seminal articles, survey literature, and major researchers. Provides framework for organizing knowledge about information and decision sciences. prereq: instr consent

IDSC 8521. System Development. (3 cr.; Student Option; Spring Even Year)
Why it is hard to develop efficient/effective information systems. What can be done to improve situation. Defining efficiency/effectiveness in development process and in systems. Producing/evaluating artifacts (constructs, models, methods, tools) that enable more efficient/effective information systems to be developed. prereq: Business admin PhD student or instr consent

IDSC 8531. Organizational Theory and Research in Information Systems. (3 cr.; A-F only; Spring Even Year)
Introduction, adoption, use/exploitation of information systems in organizations. Critically examine empirical work. Formulate research questions. Conduct research. prereq: PhD student in Business Administration

IDSC 8541. Introduction to Economics of Information Systems. (3 cr.; A-F only; Spring Odd Year)
Classical research questions. Methods/findings that form backbone of economics of IS. Online auctions, electronic markets, offshoring, human capital issues. prereq: PhD student in Business Administration or instr consent

IDSC 8620. Data Mining and Personalization. (3 cr.; A-F only; Spring Even Year)
Data mining is intended primarily for research-oriented graduate students who are interested in learning about current data mining / machine learning methodologies and how to use them in research. The course will provide a comprehensive overview of the exploratory and predictive analytics techniques, focusing on the fundamentals but covering a number of advanced issues as well, and will demonstrate how these techniques can be applied various application areas (including the increasingly important area of text analytics and recommender systems). The course puts significant emphasis on practical, hands-on experience applying data mining techniques in different settings using real-world datasets, but will also discuss the use and value of data mining in a variety of research contexts.

IDSC 8721. Behavioral Decision Theory. (3 cr.; Student Option; Periodic Fall & Spring)
Traditional/current research. Major models/methodologies. Issues of preference, judgment, and choice under conditions of certainty/uncertainty. Seminar format. prereq: Business admin PhD student or instr consent; offered alt yrs

IDSC 8722. Heuristic Decision Making. (2 cr.; Student Option; Periodic Fall)
How decisions are made, how knowledge is stored/used, how knowledge of variability/feedback influence decisions. Decisions at strategic, operational, individual level. Exceptional performance, pathologies of decision making. Basis for “best practice.” How knowledge is managed in decisions, decision failure. Folly, normal accidents, decision problems in which individuals manipulate information to influence/deceive others. prereq: Business Admin PhD student or instr consent; offered alt yrs

IDSC 8800. Research Seminar in Information and Decision Sciences. (4 cr. [max 20 cr.]; Student Option; Periodic Fall & Spring)
Topics, which vary by semester, are selected from new areas of research, research methods, and significant issues. prereq: Business admin PhD student or instr consent

IDSC 8801. Research Seminar in Information and Decision Sciences. (2 cr. [max 20 cr.]; Student Option; Every Spring)
New areas of research, research methods, issues. prereq: Business Admin PhD student or instr consent

IDSC 8892. Readings in Information and Decision Sciences. (1-8 cr. [max 16 cr.]; S-N only; Every Fall, Spring & Summer)
Readings useful to a student’s individual program and objectives that are not available through regular courses. prereq: Business admin PhD student or instr consent

IDSC 8894. Graduate Research in Information and Decision Sciences. (1-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer)
Individual research on an approved topic appropriate to student’s program and objectives. prereq: Business admin PhD student or instr consent

Infrastructure Sys Mgmt Eng (ISME)

ISME 5101. Project Management. (3 cr.; A-F or Audit; Every Fall)

ISME 5105. Computer Applications II. (1 cr.; A-F or Audit; Periodic Fall) Application features in Excel, Visual Basic, and Web Authoring. Data reduction, data presentation, interactive Web calculations. Student projects. prereq: ISE grad student

ISME 5112. Infrastructure Systems Engineering Management. (2 cr.; A-F or Audit; Every Fall & Spring) Managing public works infrastructure. Case studies of decision making in environment of conflicting interests. prereq: Open to advanced master's students

ISME 5113. Computer Applications in Infrastructure Systems Engineering. (2 cr.; A-F or Audit; Every Fall & Spring) Advanced application of computer tools/methods in infrastructure engineering problems. Spreadsheet Visual Basic programming, HTML, JAVA script. prereq: ISE grad student

ISME 5302. Critical Infrastructure Security and Protection. (2 cr.; A-F only; Every Spring) Security challenges of protecting critical infrastructure, facilities, and built environment. Security, agility, and robustness survivability of large-scale critical infrastructure that face new threats and unanticipated conditions. Systems risk analysis, engineering, economics, and public policy approaches to infrastructure security. Design/content of complex civil infrastructure systems. prereq: ISE grad student or insr consent

ISME 5401. Water Distribution Systems. (1 cr.; A-F or Audit; Periodic Fall) Components/design of water distribution systems. Methods of evaluation/management. Maintenance/rehabilitation techniques. prereq: ISE grad student

ISME 5403. Water Treatment Systems. (2 cr.; A-F or Audit; Periodic Fall) Components/design of water treatment systems. Evaluation/management methods. Maintenance/rehabilitation techniques. prereq: ISE student

ISME 5500. Public Interactions. (1 cr. [max 2 cr.]; A-F or Audit; Every Fall) Techniques for effective public communication. How to run public hearing. Resources for publishing public notices. Sequence course in three parts. prereq: Advanced grad student or open to general grad students with instr consent

ISME 5501. Geographic Information Systems. (2 cr.; A-F or Audit; Every Spring) Introduction to geographic information systems (GIS) for infrastructure. GIS application domains, data models/sources, analysis methods, and output techniques. Lectures, readings, hands-on experience with GIS software. prereq: ISE student

ISME 5504. Construction Law and Ethics. (2 cr.; A-F or Audit; Every Fall) Ethical framework for responsible management of public works projects. Moral leadership, trust in public/private organizations, quality control. prereq: ISE student

ISME 8105. Capstone Project. (1-2 cr. [max 3 cr.]; A-F or Audit; Every Fall & Spring) Integrates knowledge from courses in Master's program with job experience. Students prepare proposal, conduct project, and report results in written and oral form. Project involves aspect of design, management, or operation of some feature of infrastructure. prereq: ISE student

IBH 6022. Foundations of Psychological Assessment. (2 cr.; A-F only; Every Fall & Spring) Course focuses on major concepts and principles of educational and psychological assessment and the use of standardized instruments with differing populations.

IBH 6031. Methods and Models IV: Trauma and Anxiety, Assessment and Treatment Intervention. (2 cr.; A-F only; Every Fall & Summer) Basic/applied research on trauma/anxiety. Assessing/treating anxiety/post-trauma reactions in adults. Definition of anxiety, traumatic events. Assessment methods, PTSD assessment interview. Theory/techniques of evidence-based treatments. Field placement component. Note: This class is a required precursor to IBH 6041 Prolonged Exposure Therapy for PTSD.

IBH 6032. Advanced Multicultural Practice. (1 cr.; A-F only; Every Fall & Summer) Incorporate various sources of knowledge/content to provide deeper penetrating perspective on multiple layers of diversity/counseling individuals with substance use/co-occurring mental health disorders. Aspects of various cultural experiences (i.e., race/ethnicity, class status, sexual/affectional orientation, gender, religion) as they impinge upon client, counselor, counseling relationship. prereq: ADDS 5081 or equivalent

IBH 6041. Prolonged Exposure Therapy for PTSD. (2 cr.; A-F only; Every Spring)
Advanced practice methods and interventions for working with trauma and co-occurring disorders. Emerging and evidence-based practices presented, practiced, and applied.

IBH 6051. Advanced Group Practice. (2 cr.; A-F only; Every Fall, Spring & Summer) Trends/developments in group counseling. Evidence-based group processes/techniques for individuals with chronic/persistent mental illness, substance use disorders, co-occurring disorders. Field placement component.

IBH 6061. Applied Advanced Diagnostics I. (2 cr. [max 3 cr.]; A-F only; Every Fall & Spring) Diagnosing individuals with chronic/persistent mental health disorders, personality disorders, associated substance use disorders. Case studies, field placement with multidisciplinary team. Prerequisites: IBH student, ADDS 5091 and IBH 6011

IBH 6062. Applied Advanced Diagnostics II. (2 cr.; A-F only; Summer Even Year) Applied Advanced Diagnostics II. Prerequisites: 6061, must be admitted IBH student

IBH 6071. Advanced Professional Issues. (3 cr.; A-F only; Every Fall & Spring) Develop ethical decision model that incorporates five moral principles. ACA/NAADAC codes of ethics/statutes/regulations that apply to mental health/substance abuse counseling. Case studies.

IBH 6091. Intersection of Career and Mental Health. (2 cr.; A-F only; Every Fall, Spring & Summer) Vocational choice theory, lifestyle choices, occupational/educational information, career exploration, assessment tools. Diverse populations/ethical standards. Employment/career concerns for persons with mental health, substance use, previously incarcerated.

IBH 6101. Family Dynamics and Therapy. (3 cr.; A-F only; Every Fall & Spring) Family dynamics/life cycle, communication patterns, multi-generational patterns. Systems theory/interventions for appropriate use of family resources to enhance intervention, treatment, family/individual functioning/maintenance processes.

IBH 6111. Research and Evaluation Methods. (3 cr.; A-F only; Every Fall, Spring & Summer) Models of program evaluation. Use of research findings for program modification. Elements of research process, types of designs, program evaluation. Ethical considerations of research. Measurement concepts.

IBH 6112. Mental Health and Addiction Management and Administration. (2 cr.; A-F only; Periodic Summer) State/regulatory standards rules/statutes. Health care financing/reimbursement. Prerequisites: ADDS 5091 or ADDS 4001

IBH 6121. Professional Seminar 2. (1 cr.; S-N only; Every Fall, Spring & Summer) The purpose of this seminar is to provide the groundwork for the development of the professional portfolio and should be taken 1 to 2 semesters before you plan to register for the IBH 8002 portfolio. Discussion and practice will focus on the main components to be included in the student's professional portfolio such as professional statements and clinical competencies. IBH 6121 should be taken after completion of 50 credits.

IBH 6222. Adolescents and Co-occurring Substance Use and Mental Health Disorders. (1 cr.; A-F only; Every Fall) Adolescents differ from adults physiologically, cognitively, and emotionally. Therefore, it is important for professionals who come into regular contact with this population to be familiar with the developmental issues and current trends in adolescent substance use. It is also essential to be able to recognize the risk and protective factors, biopsychosocial effects, and signs of potential substance use problems in adolescents.

IBH 6227. Supervision Models and Methods in Integrated Behavioral Health. (3 cr.; A-F only; Every Spring & Summer) Supervision Models/Methods in Integrated Behavioral Health. Prerequisites: Must be admitted IBH student

IBH 6228. Mental Health and Addiction Program Administration. (2 cr.; A-F only; Periodic Spring) Most often, good employees or strong counselors are promoted into leadership positions with an assumption that a good clinician is a good leader. This course will review strategies to develop strong leaders along with understanding of the importance of regulations and accreditation standards in creating consistent practice and consistency across all treatment programs. Students will obtain an introductory understanding of leadership skills and begin using evidence-based leadership. Students will review and apply Department of Human Service Statutes and Joint Commission Standards. Students will learn how to read budgets and complete a review and analysis of assigned budgets.

IBH 6230. Clinical Application in Prolonged Exposure Therapy. (3 cr.; A-F only; Every Summer) Clinical Application in Prolonged Exposure Therapy. Prerequisites: 6031, 6041, must be admitted IBH student, dept consent

IBH 6232. Introduction to Navigating Issues of Sexual Health and Gender in the Therapy Session. (2 cr.; A-F only; Every Fall) This is a graduate level course that is meant to broaden your understanding of issues regarding sexual health and gender that you may encounter in the therapy session. A large part of this course is focused on increasing your comfort and competence in having conversations about sexual health and gender with your clients, as well as knowing when to intervene and when to refer. Additional attention will be given to developing and keeping appropriate boundaries with clients when addressing issues of sexual health and gender. Theoretical frameworks regarding human sexuality, sexual disorders, normative vs. non-normative sexual behavior, issues of gender identity and expression, and applicable therapeutic interventions will be discussed. Specific focus will also be given to the co-occurrence of sexual and gender concerns with mental health and substance use disorders, including discussions regarding prevalence and potential presentations. Please be aware that in the process of this course, you will be asked to engage in dialogue about and reflect upon your own beliefs and values around issues of sex, sexuality, relationships, gender identity, etc. It is expected that you be willing to challenge yourself to critically examine course discussions and materials, particularly as they may apply to your future work as a counselor. This course combines the use of lectures, group discourse, group presentations, clinical role-plays, readings, self-reflective activities, and additional experiential exercises to aid you in expanding your knowledge base and competence in managing these issues as they may arise in the therapy session.

IBH 6233. DBT Skills Training: Group Practices and Treatment Modalities. (2 cr.; A-F only; Every Summer) This course focuses on teaching the delivery of Dialectical Behavior Therapy (DBT) Treatment: Skills Training in a group format. This opportunity allows students to learn the skills taught in a DBT Program as well as learn how to incorporate these skills into a behavioral therapy orientation. Students will explore the core skill of mindfulness, behavioral therapy, dialectics and cognitive behavioral therapy in a group and experiential format. Students will be expected to participate in weekly group discussion and assignments. Discussion will assist students with learning how this treatment is delivered to clients. Weekly assignments will provide experiential learning of skills group and mindfulness, the foundation skill in a DBT Program.

IBH 6234. Counseling Grief and Loss. (2 cr.; A-F only; Every Fall & Summer) This course will provide students with an overview of current conceptualizations of grief and loss. It will prepare students with specialized knowledge and skills for understanding and identifying the process/progress of how people deal with loss. Special attention will be given to theoretical foundations of grief and loss, different types of loss, impact of loss, and cultural considerations. Additional
Interdisciplinary Medicine (INMD)

INMD 6001. Directed Study I. (1-6 cr.; max 12 cr.; P-N only; Every Fall, Spring & Summer) Directed study, directed readings and directed research courses are opportunities for students to work individually with a faculty member to earn credit for individually designed content. The Medical School Directed Study course is available only for medical students during their foundational curriculum (years 1 and 2). To register for a directed study course the student and faculty member must complete and sign this contract prior to submitting to the Medical School Registrar for processing.

INMD 6002. Directed Study II. (0-6 cr.; P-N or Audit; Every Fall, Spring & Summer) tbd

INMD 6120. Foundations of Preventive Medicine. (2 cr.; P-N or Audit; Every Summer) An introduction to the determinants and distribution of disease, the prevention of disease and promotion of health, medical research design and statistical analysis of data, and important aspects of health care delivery and public health. prereq; enroll med

INMD 6555. The Healer's Art: Awakening the Heart of Medicine. (1 cr.; P-N only; Every Spring) Developing a sense of personal/professional satisfaction from and ongoing commitment to the profession. prereq; Registered medical student

INMD 6755. Volunteer Community Outreach Experience. (0 cr.; No Grade Associated; Every Fall, Spring & Summer) The purpose of volunteer community outreach experiences are to provide medical trainees an opportunity to observe and/or assist in the provision of health care services to populations that are diverse in age, ethnicity, social environment, and need, as well as to experience unique clinical settings outside of the Medical School.

INMD 6802. Science of Medical Practice. (6 cr.; max 7 cr.; P-N only; Every Fall) Genetic and biochemistry workings of the human body as they relate to normal daily function, including nutritional aspects.

INMD 6803. Essentials of Clinical Medicine Part 1. (5 cr.; P-N only; Every Fall) Introduction to clinical medicine, including basic patient interview and hypothesis-driven physical exam. Basics of “doctoring.” Students’ first clinical experiences.

INMD 6804. Essentials of Clinical Medicine Part 2. (3 cr.; P-N only; Every Spring) Clinical medicine, including basic patient interview and hypothesis-driven physical exam. Basics of “doctoring.” Students’ first clinical experiences.

INMD 6805. Essentials of Clinical Medicine Part 3A. (5 cr.; P-N only; Every Summer) Clinical medicine, including basic patient interview and hypothesis-driven physical exam. Basics of “doctoring.” Students first clinical experiences.

INMD 6806. Essentials of Clinical Medicine Part 3B. (5 cr.; P-N only; Every Fall) Clinical medicine, including basic patient interview and hypothesis-driven physical exam. Basics of “doctoring.” Students first clinical experiences.

INMD 6807. Essentials of Clinical Medicine Part 3C. (5 cr.; P-N only; Every Spring) Clinical medicine, including basic patient interview and hypothesis-driven physical exam. Basics of “doctoring.” Students first clinical experiences.

INMD 6808. Human Health & Disease - Cardio & Resp. (4 cr.; P-N only; Every Fall) Pathophysiology of cardio-respiratory system, including infectious disease, pathologic/pharmacologic principles.

INMD 6809. Human Health & Disease - Rheum, Derm & Opth, Ortho & Otol. (4 cr.; P-N only; Every Spring) Pathophysiology of rheumatology, dermatology, ophthalmology, orthopaedics/otolaryngology disciplines, including infectious disease. Pathologic/pharmacologic principles.

INMD 6810. Human Health & Disease - Renal & Endo/Repro. (5 cr.; P-N only; Every Spring) Pathophysiology of endocrine/reproductive systems, including laboratory medicine/infectious disease. Pathologic/pharmacologic principles.

INMD 6811. Human Health & Disease - GI & Heme. (4 cr.; P-N only; Every Fall) Pathophysiology of circulatory/gastrointestinal systems, including laboratory medicine/infectious disease. Pathologic/pharmacologic principles.

INMD 6812. Micro Biology and Immunology. (5 cr.; P-N only; Every Spring) Major bacterial, viral, fungal, and parasitic diseases, including their life cycles and transmission, virulence factors, types of associated illnesses and diagnosis, general principles of treatment, and methods of prevention. Innate and acquired immunity, including cellular interactions, mechanisms, derangements, and serological use in diagnosis.

INMD 6813. Neuroscience. (3 cr.; P-N only; Every Spring) Human neuroscience. Survey of molecular cellular systems neuroscience as related to medicine.

INMD 6814. Physiology. (3 cr.; P-N only; Every Spring)

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

INMD 6815. Human Behavior. (1 cr.; P-N only; Every Summer) Human activities, including those hidden from view such as cognition, feelings, and decision making. Focus on being a patient or a physician.

INMD 6816. Human Sexuality. (1 cr.; P-N only; Every Summer) Basic and clinical skills. Teaching students the process of how to help provide patients with information and helpful suggestions concerning sexuality and referring patients who require more specialized forms of health care.

INMD 6817. Principles of Pathology. (1 cr.; P-N only; Every Summer) General principles of human pathology.

INMD 6818. Principles of Pharmacology. (1 cr.; P-N only; Every Summer) General principles of pharmacology.

INMD 6819. Human Health & Disease - Neuro & Psych. (3 cr.; P-N only; Every Fall) Pathophysiology of neurology/psychiatry disciplines, including infectious disease, along with pathologic/pharmacologic principles.

INMD 6820. Medical Gross Anatomy & Embryology. (3 cr.; P-N only; Every Fall) This course is a study of human gross anatomy with emphasis upon the anatomical structure (and a bit of function) of the components of the human body. It relies heavily on laboratory dissection in the approach to learning anatomy.

INMD 6821. Human Histology. (2 cr. [max 3 cr.]; P-N only; Every Fall) Histology puts biochemistry, molecular biology and physiology in the context of cell structure and function. This lecture and laboratory course covers the microscopic structure of the body, using light and electron microscopic techniques, with an emphasis on the relationship of structure to function.

INMD 6822. Human Health & Disease - Dermatology, Orthopedics, Rheumatology. (3 cr.; P-N only; Every Fall) Pathophysiology of dermatology/orthopedics/rheumatology disciplines, including infectious disease, along with pathologic/pharmacologic principles.

INMD 6823. Human Health & Disease - Neurology, Psychiatry, Otolaryngology, Ophthalmology. (4 cr.; P-N only; Every Fall) Pathophysiology of neurology/psychiatry/otolaryngology/ophthalmology disciplines, including infectious disease, along with pathologic/pharmacologic principles.

INMD 6824. Foundations of Critical Thinking 1A. (1 cr.; P-N only; Every Fall) A case-based course that links clinical scenarios and scientific foundations components of the curriculum through small group, facilitator supported sessions. Students develop a patient-centered approach to analyzing clinical situations, one that is informed by the literature and considers multiple perspectives and issues across the biopsychosocial-cultural continuum. Students develop reflective practices and comfort with the ambiguity that exists in clinical practice. The course enhances students’ ability to work together in teams and highlights the importance of teamwork throughout their medical career.

INMD 7000. Interdisciplinary Research. (2-12 cr. [max 24 cr.]; H-N only; Every Fall, Spring & Summer) Clinical or basic science research.

INMD 7002. Interdisciplinary Research-3. (2-6 cr.; H-N only; Every Fall, Spring & Summer) Clinical or basic science research. prerequisite: 3rd or 4th year medical student

INMD 7050. Research in Health Care Management I. (4 cr.; P-N or Audit; Periodic Fall) Students select a topic of importance in health care management, formulate a problem, and carry out research. prerequisite: Registered in MD/MBA dual degree program

INMD 7051. Research in Health Care Management II. (2-4 cr. [max 2 cr.]; P-N or Audit; Periodic Fall) Students select a topic of importance in health care management, formulate a problem, and carry out research. prerequisite: Registered in MD/MBA dual degree program

INMD 7100. Development of Clinical Skills. (0-6 cr. [max 12 cr.]; H-N only; Every Fall, Spring & Summer) History, physical exam, assessment, and management skills related to patient care.

INMD 7101. Becoming a Doctor I. (1 cr.; P-N only; Every Fall) Opportunity to provide standard curriculum across school now grounded in substantial clinical experience (e.g., integrated basic science curriculum). Opportunity for new or existing institutional assessments to happen in short time frame for all students (not interfering with clinical rotations). Opportunity for co-curricular activities (Service Learning, FA group reflections, etc.) to become curricular and standard in timing, again, not interfering with clinical rotations. Transition into role of professional.

INMD 7103. Becoming a Doctor III. (1 cr.; P-N only; Every Fall) Opportunity to provide standard curriculum across school now grounded in substantial clinical experience (e.g., integrated basic science curriculum). Opportunity for new or existing institutional assessments to happen in short time frame for all students (not interfering with clinical rotations). Opportunity for co-curricular activities (Service Learning, FA group reflections, etc.) to become curricular and standard in timing, again, not interfering with clinical rotations. Transition into role of professional.

INMD 7104. Becoming a Doctor IV. (1 cr.; P-N only; Every Spring) Opportunity to provide standard curriculum across school now grounded in substantial clinical experience (e.g., integrated basic science curriculum). Opportunity for new or existing institutional assessments to happen in short time frame for all students (not interfering with clinical rotations). Opportunity for co-curricular activities (Service Learning, FA group reflections, etc.) to become curricular and standard in timing, again, not interfering with clinical rotations. Transition into role of professional.

INMD 7110. REACH LIC Medicine. (8 cr.; H-N only; Every Fall, Spring & Summer) Regions-based internal medicine clerkship with experiences in both inpatient and outpatient internal medicine. The course will emphasize diagnostic approaches to patient problems and acquisition of knowledge and skills while working with internal medicine hospitalists in the inpatient setting and attending physicians in the primary care clinics.

INMD 7111. REACH LIC Surgery. (8 cr.; H-N only; Every Fall, Spring & Summer) Regions-based General Surgery Clerkship in which students will work directly with attending physicians while learning various responsibilities of surgical care and achieve competency in core surgical areas.

INMD 7112. REACH LIC Psychiatry. (4 cr.; H-N only; Every Fall, Spring & Summer) Regions-based psychiatry clerkship that will prepare medical students to recognize, diagnose and care for patients with psychiatric disorders encountered in most medical practices. Students will be working one-on-one with a psychiatrist in the outpatient setting and will follow patients to the inpatient setting.

INMD 7113. REACH LIC Neurology. (4 cr.; H-N only; Every Fall, Spring & Summer) Region-based neurology clerkship that will increase clinical skills in diagnosing and treating neurologic illnesses. This will occur in the clinic and on the inpatient neurology consult service.

INMD 7114. REACH LIC Ob/Gyn. (4 cr.; H-N only; Every Fall, Spring & Summer) Regions-based ob/gyn clerkship in which students will work with attending physicians while learning various responsibilities of ob/gyn care.

INMD 7116. REACH LIC Pediatrics. (0 cr.; H-N only; Every Fall, Spring & Summer)
INMD 7117. REACH LIC Emergency Medicine. (4 cr.; H-N only; Every Fall, Spring & Summer)
Regions-based rotation provides first-hand experience in dealing with emergency problems in a Level I trauma center. Students work with emergency medicine residents under supervision by board certified attending staff.

INMD 7204. Rural Physician Associate Program (RPAP): Surgery. (8 cr.; H-N only; Every Fall, Spring & Summer)
Community-based required course with extensive primary care (surgery) experience in a rural setting. Student works with family physicians and local or visiting specialists. Problem-based learning, hands-on clinical experience, one-to-one teaching.

INMD 7205. Rural Physician Associate Program (RPAP): Obstetrics and Gynecology. (4 cr.; H-N only; Every Fall, Spring & Summer)
Community-based required course with extensive obstetrics/gynecology experience in a rural setting. Student works with family physicians and local or visiting specialists. Problem-based learning, hands-on clinical experience, one-to-one teaching.

INMD 7206. Rural Physician Associate Program (RPAP): Pediatrics. (4 cr.; H-N only; Every Fall, Spring & Summer)
Community-based required course with extensive pediatrics experience in a rural setting.

INMD 7208. RPAP: Emergency Medicine. (5 cr.; H-N only; Every Fall, Spring & Summer)
Community-based required course with extensive emergency medicine experience in a rural setting.

INMD 7213. MetroPAP: Surgery. (8 cr.; H-N only; Every Fall, Spring & Summer)
Community-based required course with extensive surgery experience in a metropolitan setting.

INMD 7214. MetroPAP: OB/Gyn. (4 cr.; H-N only; Every Fall, Spring & Summer)
Community-based required course with extensive obstetrics and gynecology experience in a metropolitan setting.

INMD 7217. MetroPAP: Emergency Medicine. (4 cr.; H-N only; Every Fall, Spring & Summer)
Community-based required course with extensive emergency medicine experience in a metropolitan setting.

INMD 7218. MetroPAP: Psychiatry Externship. (4 cr.; H-N only; Every Fall, Spring & Summer)
To prepare the medical student to recognize, diagnose, and care for patients with psychiatric disorders encountered in most medical practices. This experience is set up in two parts: a 2-week experience of inpatient pediatric care at a site near the Duluth or Twin Cities campus prior to the MetroPAP orientation, and a 2-week experience in ambulatory behavioral health completed during the 9-mo LICexperience in a rural setting.

INMD 7219. Metropolitan Physician Associate Program: Pediatrics. (4 cr.; H-N only; Every Fall, Spring & Summer)
This experience is set up in two parts: a 2-week experience of inpatient pediatric care at a traditional Twin Cities or Duluth clinical site prior to the orientation, and a 2-week experience in ambulatory behavioral health completed during the 9-month LIC experience in an urban setting.

INMD 7220. MetroPAP Primary Care Introduction Clerkship. (5 cr.; P-N only; Every Fall, Spring & Summer)
This portion of the overall LIC curriculum occurs during the first three months of MetroPAP and is integrated with the other core disciplines encompassed within the LIC.

INMD 7221. MetroPAP Primary Care Intermediate Clerkship. (5 cr.; P-N only; Every Fall, Spring & Summer)
This portion of the overall LIC curriculum occurs during the second three months of MetroPAP and is integrated with the other core disciplines encompassed within the LIC.

INMD 7222. MetroPAP Primary Care Advanced Clerkship. (8 cr.; H-N only; Every Fall, Spring & Summer)
This portion of the overall LIC curriculum occurs during the final three months of MetroPAP and is integrated with the other core disciplines encompassed within the LIC.

INMD 7223. RPAP Primary Care Introduction Clerkship. (5 cr.; P-N only; Every Fall, Spring & Summer)
This portion of the overall LIC curriculum occurs during the first 3 months of RPAP and is integrated with the other core disciplines encompassed within the LIC.

INMD 7224. RPAP Primary Care Intermediate Clerkship. (5 cr.; P-N only; Every Fall, Spring & Summer)
This portion of the overall LIC curriculum occurs during the second three months of RPAP and is integrated with the other core disciplines encompassed within the LIC.

INMD 7225. RPAP Primary Care Advanced Clerkship. (8 cr.; H-N only; Every Fall, Spring & Summer)
This portion of the overall LIC curriculum occurs during the final three months of RPAP and is integrated with the other core disciplines encompassed within the LIC.

INMD 7228. Rural Physicians Associate Program: Psychiatry. (4 cr.; H-N only; Every Fall, Spring & Summer)
To prepare the medical student to recognize, diagnose, and care for patients with psychiatric disorders encountered in most medical practices. This experience is set up in two parts: a 2-week experience of inpatient pediatric care at a site near the Duluth or Twin Cities campuses prior to the RPAP orientation, and a 2-week experience in ambulatory behavioral health completed during the 9-mo LIC experience in a rural setting.

INMD 7301. Medical Anthropology I: The Normal and the Pathological. (1 cr.; P-N or Audit)
Beliefs/practices concerning human affliction, health, and healing in cross cultural perspective. Body as biologically given and culturally/historically located. Meanings that individuals and social groups attach to health, sickness, suffering, and healing. The normal and the pathological in comparative perspective.

INMD 7302. Medical Anthropology II: International Health, Colonialism, and Emerging Diseases. (2 cr.; P-N or Audit)
Beliefs/practices concerning human affliction, health, and healing in cross cultural perspective. Body as biologically given and culturally/historically located. Meanings that individuals and social groups attach to health, sickness, suffering, and healing.

INMD 7303. Medical Anthropology III: Comprehending Human Affliction and Healing Cross Cultural Anthropology III. (4 cr.; P-N or Audit)
Beliefs/practices concerning human affliction, health, and healing in cross cultural perspective. Body as biologically given and culturally/historically located. Meanings that individuals and social groups attach to health, sickness, suffering, and healing. Ways in which diverse social groups cope with human affliction and seek to achieve health.

INMD 7310. VAMC LIC - Medicine I (VALUE). (8 cr.; H-N only; Every Fall, Spring & Summer)
VA based Internal Medicine clerkship with experiences in both inpatient and outpatient Internal Medicine. The course will emphasize diagnostic approaches to patient problems and acquisition of knowledge and skills while working with internal medicine hospitalists in the inpatient setting and attending physicians in the primary care clinics.

INMD 7311. VAMC LIC - Surgery (VALUE). (8 cr.; H-N only; Every Fall, Spring & Summer)
VA based General Surgery Clerkship in which students will work directly with attending physicians while learning various responsibilities of surgical care and achieve competency in core surgical areas.

INMD 7312. VAMC LIC - Psychiatry (VALUE). (4 cr.; H-N only; Every Fall, Spring & Summer)
VA based Psychiatry clerkship that will prepare medical students to recognize, diagnose and care for patients with psychiatric disorders encountered in most medical practices. Students will be working one-on-one with a psychiatrist in the outpatient setting and will follow patients in the inpatient setting.

INMD 7313. VAMC LIC - Neurology (VALUE). (4 cr.; H-N only; Every Fall, Spring & Summer)
VA based Neurology clerkship that will increase clinical skills in diagnosing and treating neurologic illnesses. This will occur in the clinic and on the inpatient neurology consult service.

INMD 7314. VAMC LIC - Primary Care Selective - Internal Medicine (VALUE). (4 cr.; H-N only; Every Fall, Spring & Summer)
Internal Medicine ambulatory setting based in VA Patient Aligned Care Teams (PACTs)
with students taking primary responsibility for care of a patient. Students will learn chronic disease management, population-based management of medical problems as well as routine preventive medicine.

INMD 7317. VAMC LIC - QU Interprofessional Patient Care (VALUE). (4-5 cr.; H-N only; Every Fall, Spring & Summer) VALUE elective that will train medical students in patient-centered and inter-professional care that will lead to improved patient care and satisfaction. The experience will prepare students to meet the contemporary requirements of residency programs and future practice in a rapidly changing health care environment.

INMD 7319. VAMC LIC Radiology. (2 cr.; H-N only; Every Fall, Spring & Summer) This clerkship presents an overview of the various imaging modalities and image interpretation. Lectures cover fundamentals of image interpretation, nuclear medicine, computerized tomography, ultrasound, and magnetic resonance imaging. This is an opportunity to observe the procedures and read films with staff and residents. Emphasis is on normal anatomy and basic pathologic patterns. There are also multiple opportunities to follow longitudinal patients through the radiology department. The clerkship will also focus on how radiology interfaces with other disciplines but attendance at multidisciplinary conferences; Morbidity and Mortality, Gastroenterology Multidisciplinary Conference, Pulmonary Tumor Board, ENT tumor Board, Liver Tumor Board, Breast Conference, and Vascular and Neurology/Neuroradiology conference.

INMD 7350. HCMC LIC Internal Medicine. (8 cr.; H-N only; Every Fall, Spring & Summer) HCMC based Internal Medicine clerkship with experiences in both inpatient and outpatient Internal Medicine. The course will emphasize diagnostic approaches to patient problems and acquisition of knowledge and skills while working with internal medicine hospitalists in the inpatient setting and attending physicians in the primary care clinics.

INMD 7351. HCMC LIC Surgery. (8 cr.; H-N only; Every Fall, Spring & Summer) HCMC based General Surgery Clerkship in which students will work directly with attending physicians while learning various responsibilities of surgical care and achieve competency in core surgical areas.

INMD 7352. HCMC LIC Psychiatry. (4 cr.; H-N only; Every Fall, Spring & Summer) HCMC based Psychiatry clerkship that will prepare medical students to recognize, diagnose and care for patients with psychiatric disorders encountered in most medical practices. Students will be working one-on-one with a psychiatrist in the outpatient setting and will follow patients to the inpatient setting.

INMD 7354. HCMC LIC Primary Care Selective - Internal Medicine. (4 cr.; P-N only; Every Fall, Spring & Summer) Internal Medicine ambulatory setting based HCMC with students taking primary responsibility for care of a panel of patients. Students will learn chronic disease management, population-based management of medical problems as well as routine preventative medicine.

INMD 7355. HCMC LIC Obstetrics & Gynecology. (4 cr.; H-N only; Every Fall, Spring & Summer) HCMC based Ob/Gyn clerkship in which students will work with attending physicians while learning various responsibilities of Ob/Gyn care.

INMD 7356. HCMC LIC Pediatrics. (4 cr.; H-N only; Every Fall, Spring & Summer) HCMC based Pediatric Clerkship which provides basic pediatric skills and knowledge necessary for each student, no matter what field of medicine they select.

INMD 7357. HCMC LIC Health Disparities/Social Determinants. (4 cr.; P-N only; Every Fall, Spring & Summer) Students will have didactic sessions which emphasize the underpinnings of health disparities, social determinants of health, and utilizing public policy to address those issues. In addition, students will participate in a multidisciplinary project addressing one specific issue/goal and present their work and results in some form (poster, publication, etc).

INMD 7358. HCMC LIC Emergency Medicine. (4 cr.; H-N only; Every Fall, Spring & Summer) HCMC based rotation provides first-hand experience in dealing with emergency problems in a Level I trauma center. Students work with emergency medicine residents under supervision by board certified attending staff. Students act as primary physician, including initial assessment, minor procedures, interpretation of lab/x-ray, and preparation for admission to inpatient services. Opportunities to observe critical resuscitation.

INMD 7401. Hospitalist Rotation. (1-8 cr.; max 12 cr.; P-N only; Every Fall, Spring & Summer) One on one clinical educational experience with an internal medicine or medicine/pediatric hospitalist.

INMD 7410. Education in Pediatrics Across the Continuum LIC - Medicine I. (8 cr.; P-N only; Every Fall, Spring & Summer) A longitudinal Internal Medicine clerkship based at the University of Minnesota Medical Center as a part of the Education in Pediatrics Across the Continuum Longitudinal Integrated Clerkship (EPAC LIC). The course emphasizes the acquisition of knowledge, skills and attitudes in general pediatric surgery while working with a continuity preceptor in outpatient surgery and tracking patients to inpatient, subspecialty, or interdisciplinary arenas.

INMD 7411. Education in Pediatrics Across the Continuum LIC ? Surgery. (8 cr.; P-N only; Every Fall, Spring & Summer) A longitudinal surgery clerkship based at the University of Minnesota Masonic Medical Center as a part of the Education in Pediatrics Across the Continuum Longitudinal Integrated Clerkship (EPAC LIC). The course emphasizes the acquisition of knowledge, skills and attitudes in general pediatric surgery while working with a continuity preceptor in outpatient surgery and tracking patients to inpatient, subspecialty, or interdisciplinary arenas.

INMD 7412. Education in Pediatrics Across the Continuum LIC ? Neurology. (4 cr.; P-N only; Every Fall, Spring & Summer) A longitudinal neurology clerkship based at the University of Minnesota Medical Center as a part of the Education in Pediatrics Across the Continuum Longitudinal Integrated Clerkship (EPAC LIC). The course emphasizes the acquisition of knowledge, skills and attitudes in neurology while working with a continuity preceptor in outpatient neurology and tracking patients to inpatient, subspecialty, or interdisciplinary arenas.

INMD 7413. Education in Pediatrics Across the Continuum LIC ? Psychology. (4 cr.; P-N only; Every Fall, Spring & Summer) A longitudinal psychology clerkship based at the University of Minnesota Medical Center as a part of the Education in Pediatrics Across the Continuum Longitudinal Integrated Clerkship (EPAC LIC). The course emphasizes the acquisition of knowledge, skills and attitudes in psychology while working with a continuity preceptor in outpatient psychology and tracking patients to inpatient, subspecialty, or interdisciplinary arenas.

INMD 7414. Education in Pediatrics Across the Continuum LIC ? Primary Care Selective. (4 cr.; P-N only; Every Fall, Spring & Summer) Through continuity clinics as a part of the Education in Pediatrics Across the Continuum Longitudinal Integrated Clerkship (EPAC LIC) at the University of Minnesota Medical Center, as well as online curriculum and weekly EPAC team meetings, the learner will get clinical exposure to primary care and acquire knowledge, skills and attitudes in the process of care and how to improve it.

INMD 7415. Education in Pediatrics Across the Continuum LIC ? Family Medicine. (4 cr.; P-N only; Every Fall, Spring & Summer) A longitudinal Family Medicine clerkship based at Smiley?s Family Medicine Clinic/University of Minnesota Medical Center as a part of the Education in Pediatrics Across the Continuum Longitudinal Integrated Clerkship (EPAC LIC). The course emphasizes the acquisition of knowledge, skills and attitudes in Family Medicine while working with a continuity preceptor in Family Medicine, tracking with them for both inpatient and outpatient experience, and by tracking patients to inpatient, subspecialty, or interdisciplinary arenas.

INMD 7416. Education in Pediatrics Across the Continuum LIC: Obstetrics/Gynecology. (4 cr.; P-N only; Every Fall, Spring & Summer) A longitudinal Obstetrics and Gynecology clerkship based at the University of Minnesota Medical Center as a part of the Education in Pediatrics Across the Continuum Longitudinal Integrated Clerkship (EPAC LIC). The course emphasizes the acquisition of knowledge, skills and attitudes in general pediatric surgery while working with a continuity preceptor in outpatient surgery and tracking patients to inpatient, subspecialty, or interdisciplinary arenas.

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
INMD 7417. Education in Pediatrics Across the Continuum LIC: Pediatrics. (4 cr.; P-N only; Every Fall, Spring & Summer) A longitudinal pediatrics clerkship based at the University of Minnesota Masonic Children’s Hospital and Fairview Children’s Clinic as a part of the Education in Pediatrics Across the Continuum Longitudinal Integrated Clerkship (EPAC LIC). The course emphasizes the acquisition of knowledge, skills and attitudes in Pediatrics while working with a continuity preceptor in outpatient pediatrics; and tracking patients to inpatient, subspecialty, or interdisciplinary arenas.

INMD 7418. Education in Pediatrics Across the Continuum LIC ? Emergency Medicine. (4 cr.; P-N only; Every Fall, Spring & Summer) A longitudinal Emergency Medicine clerkship based at the University of Minnesota Masonic Children’s Hospital as a part of the Education in Pediatrics Across the Continuum Longitudinal Integrated Clerkship (EPAC LIC). The course emphasizes the acquisition of knowledge, skills and attitudes in Emergency Medicine while working with a continuity preceptor in Emergency Medicine; tracking patients to inpatient, surgical or outpatient arenas as able; and through simulation experiences.

INMD 7421. Education in Pediatrics Across the Continuum LIC - Enrichment Elective. (2-8 cr. [max 24 cr.]; P-N only; Every Fall, Spring & Summer) The EPAC enrichment elective is a focused experience with the goal of furthering a student’s developmental progress towards entrustment without direct supervision in one or more areas of professional development. In general the assessment framework are the Core Entrustable Professional Activities for Entering Residency (CEPAER). The student will work with the Course Director and EPAC leadership team to identify and assign an experience that is likely to facilitate the developmental goals. This could include direct patient care or not. The student and course director must sign an agreement prior to the start of the experience as to the final elective expectations.

INMD 7422. Education in Pediatrics Across the Continuum - Independent Study. (2-8 cr. [max 24 cr.]; P-N only; Every Fall, Spring & Summer) The EPAC independent study elective is a semester long experience meant to complement patient care in pediatric medicine by developing a student’s non-direct patient care knowledge, skills and attitudes. The student will work with the course director to plan an independent study project; examples include a quality improvement project, drafting/submitting for presentation a case report, etc. They will identify a supervising preceptor. The student, course director and the supervising preceptor will sign an agreement prior to the start of the experience as to the final elective expectations. This elective may be repeated up to a total of three times, to move on to the next phase in a project in progress or to do a new project.

INMD 7423. Education in Pediatrics Across the Continuum - Medical Education Independent Study. (12 cr.; P-N only; Every Fall, Spring & Summer) As a part of participation in the EPAC undergraduate medical education curricular experience, EPAC students will, in the EPAC Medical Education Independent Study: ? Actively participate in educational quality improvement of the local EPAC program ? Contribute to the national data used to evaluate the national EPAC project and test feasibility ? Actively participate in formal, documented self-assessment and feedback beyond that explicitly required for traditionally tracked medical students at the University of Minnesota Medical School To this end, EPAC students will, at a minimum, attend weekly meetings during the EPAC LIC curriculum, complete all required local and national assessments, and keep their diagnosis and procedure tracker up to date.

INMD 7450. Hospice & Palliative Care. (; 4 cr.; H-N only; Every Fall, Spring & Summer) Interdisciplinary course. Hospice, palliative medicine.

INMD 7500. ICU Translational Science. (; 4 cr.; H-N only; Every Fall, Spring & Summer) Year 4 students who want to experience how basic science concepts can be translated to quality care of patients requiring intensive care.

INMD 7508. Clerkship: Primary Care Medicine. (; 4 cr.; H-N or Audit; Every Fall, Spring & Summer) Participation in patient care in outpatient primary care settings located at internal medicine, family practice, pediatric, and geriatric clinics. prereq: 6104

INMD 7509. Clerkship II: Primary Care Medicine. (; 4 cr.; H-N or Audit; Every Fall, Spring & Summer) N/A prereq: 6508

INMD 7510. Health Systems Science. (4 cr.; P-N only; Every Fall) Health Systems Science (HSS) is a new and evolving term in medical education. It is considered the new 3rd science (where the other two are Basic Science and Clinical Science). All three are considered at least equally important for successful future clinical practice. It encompasses a wide range of topics including: patient safety, quality improvement, evidence-based medicine, value in health care, inter-professional teamwork, stewardship of health care resources, population management, clinical informatics, care coordination, leadership, and health care financing and reform.

INMD 7520. Interdisciplinary Health Education in a Community Setting. (; 4 cr.; P-N or Audit; Periodic Fall) Students work with instructor and coordinator at one of three community sites. prereq: Health science student

INMD 7522. Migrant Health Elective. (4 cr.; H-N only; Every Summer) This rotation is an interprofessional, community-engaged medical rotation that focuses on the social determinants of health of the most marginalized population in the state, rural Latino hired agricultural workers. The clinical experience will be caring for patients on mobile medical units that travel to farms in rural, southern Minnesota. Learners will follow a curriculum that includes readings, documentaries, films, medical literature, discussions/workshops, tours of workplaces, and lectures by leading experts around the nation in the health of agricultural workers. We also have meetings with the local Mexican Consulate, community health centers, legal experts, occupational health physicians, and labor organizers. This rotation includes the opportunity to work with residents in internal medicine, pediatrics, emergency medicine, and pharmacy and professionals from other disciplines including pharmacy, dentistry, and vet medicine. We also work directly with Centro Campesino, an organization that pairs AHC students with promising Latino youth from rural farmworker families.

INMD 7523. Occupational and Environmental Medicine Elective. (4 cr.; H-N only; Every Fall, Spring & Summer) By the end of this rotation, students will be able to: 1) identify unique problems associated with occupationally and environmentally-related illness and injury; 2) obtain and organize a thorough occupational or environmental history; 3) formulate appropriate work/activity restrictions based on a specific illness or injury; 4) describe the role of preventive medicine, both patient-focused & programmatic, in individual wellness and overall population health.

INMD 7540. Ambulatory Clinic for the Physician-Scientist. (; 1-6 cr.; [max 12 cr.]; H-N or Audit; Every Fall, Spring & Summer) Students develop/refine ambulatory patient evaluation and management skills. prereq: Med student

INMD 7542. Clinical Continuity Experience for Physician Scientists I. (3 cr. [max 6 cr.]; H-N only; Every Fall) Students paired with active physician scientist who serves as MSTP Clinical Mentor. One-on-one meetings between student/MSTP clinical mentor averaging one-half day per month. Mentors provide ongoing clinical opportunities/teach clinical care skills.

INMD 7545. Clinical Continuity Experience for Physician Scientists II. (3 cr. [max 6 cr.]; H-N only; Every Fall) Students paired with active physician scientist who will serve as MSTP Clinical Mentor. One-on-one meetings between student/MSTP clinical mentor. Mentors provide ongoing
INMD 7548. Clinical Foundations for the Physician Scientist. (4 cr.; max 8 cr.; H-N only; Every Fall, Spring & Summer)
Students paired with active physician scientist who serves as MSTP Clinical Mentor. One-on-one meetings between student/MSTP clinical mentor in clinic averaging one day per week for 9 weeks. Hands-on clinical experience.

INMD 7549. MSTP Directed Study. (3-6 cr.; P-N only; Every Fall, Spring & Summer)
This course is for MD/PhD students to pursue independent research under the directed supervision of a research faculty mentor. The student must have a research mentor prearranged and approved by the MD/PhD program prior to taking the course.

INMD 7552. Traditional Indian Medicine Clerkship. (2-6 cr.; max 2 cr.; H-N or Audit; Every Fall, Spring & Summer)
Clinical experience in a major hospital/center in approved (through Medical School Curriculum Affairs) Indian Health Service area. prereq: Med student, dept consent

INMD 7553. Elective Away at Centers for Disease Control (CDC). (2-8 cr.; H-N or Audit; Every Fall, Spring & Summer)
Full-time experience in section of CDC. prereq: Med student, dept consent

INMD 7555. Elective Away for Credit. (2-8 cr. max 32 cr.; H-N only; Every Fall, Spring & Summer)
A rotation that students take at another institution to fulfill elective credits.

INMD 7565. Global Health Abroad. (4-8 cr. max 24 cr.; P-N only; Every Fall, Spring & Summer)
Student-arranged, structured, approved (through Medical School Global Health Abroad Office) clinical experience in foreign medical institution.

INMD 7568. Clinical Experience in International Medicine II. (2-6 cr.; H-N or Audit; Every Fall, Spring & Summer)
Student-arranged, structured, approved (through Medical School Curriculum Affairs) clinical experience in foreign medical institution. prereq: Med student, dept consent

INMD 7579. Rural Hawaii Public Health Elective. (2-6 cr.; H-N only; Every Fall, Spring & Summer)
Six week rotation. Public health issues, multicultural focus. Students participate in North Hawaii Outcomes Project. Design of outcome measures, data collection, data analysis, program development/implementation. Stroke prevention, chemical use, motor vehicle accidents, teenage pregnancy.

INMD 7580. Integrative Healing in Hawaii. (2 cr.; H-N only; Every Spring)
This course is a two-week elective rotation designed to provide medical students with the opportunity to gain knowledge and exposure to Integrated Healing modalities.

INMD 7650. Flex 5 Individualized Sub-Internship. (4-8 cr. max 24 cr.; H-N only; Every Fall & Summer)
Students accepted into the Flex 5 program may need additional sub-internship experiences for their portfolio. In the case where there is not another specialty-specific course in the medical school catalog for which the Flex 5 student can enroll, the Interdisciplinary Flex 5 Individualized Sub-internship will provide an option for an additional experience in the student's chosen specialty. Experiences under this course will build upon the knowledge and skills learned during their core clerkships and previous advanced experiences, and further improve their clinical skills in their specialty of choice.

INMD 7700. Primary Care Clinic: Minnesota Community Engagement Program (MNCEP). (4 cr.; P-N only; Every Fall, Spring & Summer)
One month clerkship in rural or urban underserved community (initially will pilot in rural settings) Clinical experience with community physician. Participation in projects to address community health outcomes.

INMD 7900. Flexible MD Independent Study. (3-6 cr. max 18 cr.; P-N only; Every Fall, Spring & Summer)
Independent exploration of path toward doctorate of medicine Serving the needs of patients/communities. prereq: Registered medical student accepted into FlexMD Program

INMD 7901. Flexible MD Independent Study. (3-6 cr.; P-N only; Every Fall, Spring & Summer)
Exploration of path toward doctorate of medicine, serving needs of patients/communities. prereq: Registered medical student accepted into FlexMD Program

INMD 7902. Flexible MD Independent Study. (3-6 cr.; P-N only; Every Fall, Spring & Summer)
Exploration of path toward doctorate of medicine, serving needs of patients/communities. prereq: Registered medical student accepted into FlexMD Program

INMD 7910. ICU Sub-Internship - MICU. (4 cr.; H-N only; Every Fall, Spring & Summer)
Goal is to prepare medical students for internship and residency, through a clinically-focused experience focusing on higher acuity patients (ICU, IMC), clinical care, and emphasizing tasks necessary for internship. Students will use knowledge of pathophysiology and clinical epidemiology in order to develop a reasoned differential diagnosis. Finally, students will plan a logical and practical diagnostic evaluation, using the principles of evidence-based medicine.

INMD 7913. ICU Sub-Internship - NICU. (4 cr.; max 8 cr.; H-N only; Every Fall, Spring & Summer)
Goal is to prepare medical students for internship and residency, through a clinically-focused experience focusing on higher acuity patients (ICU, IMC), clinical care, and emphasizing tasks necessary for internship. Students will use knowledge of pathophysiology and clinical epidemiology in order to develop a reasoned differential diagnosis. Finally, students will plan a logical and practical diagnostic evaluation, using the principles of evidence-based medicine.

INMD 7914. ICU Sub-Internship - Med Wards. (4 cr.; H-N only; Every Fall, Spring & Summer)
Goal is to prepare medical students for internship and residency, through a clinically-focused experience focusing on higher acuity patients (ICU, IMC), clinical care, and emphasizing tasks necessary for internship. Students will use knowledge of pathophysiology and clinical epidemiology in order to develop a reasoned differential diagnosis. Finally, students will plan a logical and practical diagnostic evaluation, using the principles of evidence-based medicine.

IDS 5193. Directed Study in Interior Design. (1-4 cr.; max 8 cr.; A-F or Audit; Every Fall, Spring & Summer)
Independent study in interior design under tutorial guidance. prereq: Jr or sr or grad student

IDS 8170. Topics in Interior Design. (1-3 cr.; max 6 cr.; A-F or Audit; Every Fall & Spring)
In-depth investigation of topic, announced in advance.

IDS 8180. Professional Seminar. (1-2 cr.; max 4 cr.; A-F or Audit; Every Fall & Spring)
Professional development issues/trends.

IDS 8192. Readings in Interior Design. (1-3 cr.; max 8 cr.; A-F or Audit; Every Fall, Spring & Summer)
Independent study, review of books/periodicals under tutorial guidance. prereq: instr consent
IBUS 5090. Study Abroad Independent Study. (1-4 cr. [max 6 cr.]; A-F only; Every Fall & Spring)
Independent study coordinated by faculty member.

IBUS 5091. Shanghai Summer Program in International Business (Graduate). (0-18 cr.; S-N only; Every Summer)
Summer study abroad at one of Carlson School's international exchange partner universities, Antai College of Economics and Management. This is a three week summer program integrating intense business education in China context with corporate experience.

IBUS 5110. Business and the Environment in Costa Rica. (4 cr.; A-F only; Every Fall & Spring)
How businesses maintain/increase profits by taking care of environment. Sustainable development, environmental strategy. Travel to Costa Rica to join students from INCAE (partner school) for series of courses. Case studies, site visits, field trips. Taught in English. prereq: Sr or grad student

IBUS 5120. Global Business Practicum in Central and Eastern Europe. (4 cr.; A-F only; Every Spring & Summer)
Rapidly changing business environment of Central/Eastern Europe. Students work in teams with students from WU-Vienna University of Economics/Business for two weeks in May/June in Central/Eastern Europe. prereq: Carlson grad student

IBUS 5122. Global Banking in China. (4 cr.; A-F only; Every Spring)
This course will explore the banking and finance industry in Hong Kong, Shenzhen, and Shanghai with a comparative perspective between these locations and the United States. Program has site visits, business meetings, and guest lectures overseas. Spring B term classes followed by two weeks in China.

IBUS 5130. France Seminar: Doing Business in the European Union (Graduate). (4 cr.; S-N only; Every Fall, Spring & Summer)
Two-week study abroad program at Universite Jean-Moulin Lyon 3 in Lyon, France. Includes courses taught by international faculty, site visits, cultural excursions. prereq: Carlson grad student

IBUS 5140. Vienna Summer Program in International Business (Graduate). (0-18 cr.; S-N only; Every Summer)
Summer study abroad program at Europe's largest business school (WU-Vienna). Students take three business classes, plus German language. Program participants from Europe, Asia, Latin America, United States. prereq: Carlson grad student

IBUS 5150. IBUS 5150: Building on Frugal Innovations to Complete a Global Environment. (4 cr. [max 8 cr.]; A-F only; Every Fall)
On this program, students will be exposed to concepts related to developing a global managerial mindset, with a particular focus on understanding global product/market innovation. A variety of successful examples highlight the potential of frugal innovation - the term used to describe of cost-effective innovations devised to solve local problems in resource constrained markets - as being a very powerful source of ideas for new products and services. Products of frugal innovation, once proven locally, can be subsequently integrated into the broader R&D and product innovation processes within firms and become the base platforms for global products targeted at markets across the world. Students will choose an industry or domain of focus in class sessions and be exposed to global R&D practices in large local firms and then interact with startups and innovators working on frugal innovation projects on the ground in India. This is an education abroad program. Contact the Carlson Global Institute at cgi@umn.edu with questions. prereq: approved application

IBUS 5160. Cologne Summer Program: European Management (Grad). (8 cr. [max 24 cr.]; S-N only; Every Summer)
Summer study abroad at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interest. prereq: Carlson grad student

IBUS 5170. Global Business Practicum in Northern China. (4 cr.; A-F only; Every Spring)
Collaboration with corporate partner/business school in China. Students work in multicultural teams to analyze real-life business problems that corporations face in China. Examine cultural, social, economic differences surrounding global business. prereq: Grad student

IBUS 5171. Global Business Practicum in Southern China. (4 cr.; A-F only; Every Spring)
Collaboration with corporate partner/business school in China. Work in multicultural teams to analyze real-life business problems that corporations face in China. prereq: Grad student

IBUS 5172. IBUS 5172: Global Business Practicum Brazil. (4 cr. [max 8 cr.]; A-F only; Every Summer)
Study abroad course. Short-term global enrichment program traveling to Brazil in May.

IBUS 5175. India Seminar: Doing Business in India. (4 cr.; A-F only; Every Summer)
Live consulting project for international Dairy Queen in India market. prereq: Grad student

IBUS 5190. Brazil Seminar: Doing Business in Brazil. (4 cr.; A-F only; Every Spring)
Two-week study abroad at Escola de Administracao de Empresas de Sao Paulo da Fundacao Getulio Vargas (FGV). Full class days, cultural tours, field trips, site visits. prereq: Carlson grad student

IBUS 5200. International Business: Undergraduate Exchange. (0-16 cr. [max 160 cr.]; S-N or Audit; Every Fall & Spring)
Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5201. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.]; S-N or Audit; Every Fall & Spring)
Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5202. International Business: Undergraduate Exchange. (0.5-6 cr. [max 60 cr.]; S-N or Audit; Every Fall & Spring)
Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5203. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.]; S-N or Audit; Every Fall & Spring)
Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5204. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.]; S-N or Audit; Every Fall & Spring)
Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5205. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.]; S-N or Audit; Every Fall & Spring)
Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5206. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.]; S-N or Audit; Every Fall & Spring)
Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5207. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.]; S-N or Audit; Every Fall & Spring)
Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5208. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.]; S-N or Audit; Every Fall & Spring)
Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
IBUS 5209. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: 60 cr

IBUS 5260. Sustainability: The New Management Paradigm. (4 cr.; A-F only; Every Spring) View of integrated reporting (sustainability reporting) as it relates to various fields of business. Site visits, meetings with business executives/governmental agencies. Two weeks in the United Kingdom following commencement week, preceded by Spring B Term classes.

IBUS 5300. International Business: Graduate Exchange BLOCK. (0-18 cr. [max 54 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. For current offerings, contact Carlson International Programs. Prereq: Carlson grad student

IBUS 5301. Graduate Exchange in International Business - BLOCK. (0-18 cr. [max 54 cr.]; S-N only; Every Summer) Summer study abroad at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Contact Carlson International Programs. Prereq: Carlson grad student

IBUS 5302. International Business: Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5303. International Business: Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5304. International Business: Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5305. International Business: Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5306. International Business: Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5307. International Business: Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5308. International Business: Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5309. International Business: Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5310. International Business: Graduate Exchange. (0-18 cr. [max 72 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5311. International Business: Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5312. International Business: Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. Prereq: Carlson grad student

IBUS 5315. Ethical Environment of International Business (Graduate). (4 cr.; A-F only; Every Spring & Summer) Current international business ethics. Students spend two weeks in Europe meeting with leaders of multinational firms, governmental agencies, NGOs. Ethical challenges faced by individuals/organizations in era of globalization. Taught in English. Prereq: Carlson grad student

IBUS 5316. Sustainability & Cooperative Advantage in Scandinavia. (4 cr.; A-F or Audit; Every Summer) Corporate responsibility through exploration of successful Scandinavian approach. Prereq: Carlson grad student

IBUS 5600. Graduate Summer Exchange. (0-4 cr.; S-N only; Every Summer) Summer study abroad exchange to one of Carlson Global Institute's partner universities. Prereq: Carlson grad student

IBUS 5601. Graduate Summer Exchange. (0-4 cr.; S-N only; Every Summer) Summer study abroad exchange to one of Carlson Global Institute's partner universities. Prereq: Carlson grad student

IBUS 5602. Graduate Summer Exchange. (0-4 cr.; S-N only; Every Summer) Summer study abroad exchange to one of Carlson Global Institute's partner universities. Prereq: Carlson grad student

IBUS 5603. Graduate Summer Exchange. (0-4 cr.; S-N only; Every Summer) Summer study abroad exchange to one of Carlson Global Institute's partner universities. Prereq: Carlson grad student

IBUS 5604. Graduate Summer Exchange. (0-4 cr.; S-N only; Every Summer) Summer study abroad exchange to one of Carlson Global Institute's partner universities. Prereq: Carlson grad student

IBUS 5605. Shanghai Summer Program in International Business (Graduate). (0-18 cr.; S-N only; Every Summer) Summer study abroad at one of Carlson School's international exchange partner universities, Antai College of Economics and Management. This is a three week summer program integrating intense business education in China context with corporate experience.

IBUS 6041. IBUS 6041: Global Strategy and Modes of Entry. (4 cr.; A-F or Audit; Every Spring) Course explores issues related to target market analysis, modes of entry, decision making in international business to comprehend complexity of crafting global strategy. Prereq: Carlson grad student

IBUS 6313. Ethical Environment of International Business (Graduate). (4 cr.; A-F only; Every Spring & Summer) Current international business ethics. Students spend two weeks in Europe meeting with leaders of multinational firms, governmental agencies, NGOs. Ethical challenges faced by individuals/organizations in era of globalization. Taught in English. Prereq: Carlson grad student

IBUS 6400. Carlson MBA Global Discovery. (1-3 cr.; A-F only; Every Fall & Spring) How companies/public agencies operate effectively in emerging-market economies. How emerging-market politics, law, social trends are shaping current Minnesota business/agency strategies. Classroom/2-week international visit/symposium following return to United States. Prereq: 2nd yr full-time Carlson MBA student

IBUS 6401. Marketing in the Mayhem: Why Chile Thrives and How Argentina Tries. (4 cr.; [max 8 cr.]; A-F only; Every Fall, Spring & Summer) This course will explore the use of the Marketing Management Process by firms and governments as they seek to grow and will use the comparative perspectives of Argentina and Chile as case studies. This is an education abroad program. Contact the Carlson Global Institute at cgi@umn.edu with questions. Prereq: approved application

IBUS 6402. Economic Diversification: Moving Beyond Oil in UAE and Oman. (4 cr.; max 8 cr.; A-F only; Every Fall, Spring & Summer) This course will explore ways countries in the Arab Gulf are expanding their economies beyond a reliance on oil and consider the impact of culture, history and religion play in business development in the region. This is an education abroad program. Contact the Carlson Global Institute at cgi@umn.edu with questions. Prereq: approved application

IBUS 6500. Mergers and Acquisitions in a Global Context. (1-4 cr.; A-F only; Periodic Fall & Spring) Challenges/strategies for success in mergers/acquisitions. Prereq: Carlson grad student

IBUS 6997. MILI Global Valuation Lab. (4 cr.; [max 8 cr.]; A-F only; Periodic Fall, Spring & Summer)
Forum for presentation of dissertation proposals, results from ISG practica, discussion of environmental risk assessment topics. Focuses on ongoing research or key publications on introduced species/genotypes.

**ISG 8021. Problem Solving Practicum in Risk Analysis.** (3 cr. [max 6 cr.]; A-F only; Every Summer)
Students address real-world problems in environmental risk analysis of introduced species and genotypes, with faculty guidance and in consultation with public/private partner, and apply societal deliberation and scientific/policy analysis. prereq: 5010, 5020

**ISG 8031. Cooperative Learning Practicum.** (1 cr.; A-F only; Every Spring)
Cooperative learning techniques. Scenario planning, decision cases. Students develop/test cooperative learning exercises for environmental risk assessment based on their research experience in 8021. Linking research to teaching. prereq: 8021

**Italian (ITAL)**

**ITAL 5201. Reading Italian Texts: Poetics, Rhetoric, Theory.** (3 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring)
Rhetorical/poetic aspects of language and literature. Interpretive methods, theoretical concepts. prereq: grad student or instr consent

**ITAL 5203. Italian Travelers: From the Enlightenment to the Present.** (3 cr. [max 12 cr.]; Student Option; Periodic Fall)
Examines literary representations of travel, migration, immigration, exile, and tourism in Italy, from Enlightenment to present. prereq: grad student or instr consent

**ITAL 5305. Staging the Self: Theater and Drama in Modern Italy.** (3 cr. [max 12 cr.]; Student Option; Periodic Fall)
Theatrical representations of the self in modern Italy. Focuses on issues of identity, gender, and class in theatrical works ranging from Alfieri’s Mirra, Pirandello’s Enrico IV to Dacia Maraini’s Clytemnestra. prereq: grad student or instr consent

**ITAL 5401. Mondo di Dante.** (4 cr. [max 16 cr.]; Student Option; Periodic Fall)
Intensive reading of Dante’s Inferno, Purgatorio, and Vita Nuova with emphasis on Dante’s linguistic and cultural contributions. prereq: 3015, 3201 or instr consent

**ITAL 5502. Making of Modern Italy: From the Enlightenment to the Present.** (3 cr. [max 12 cr.]; Student Option; Periodic Spring)
Italian literary, cultural, and symbolic practices, from Enlightenment to present. prereq: grad student or instr consent

**ITAL 5609. World of Dante.** (4 cr. [max 8 cr.]; Student Option;)
Taught in English. Intensive reading of Dante’s Inferno, Purgatorio and Vita Nuova with emphasis on the personal, poetic, and political stakes of the journey of Dante’s pilgrim through hell to the earthly paradise.

**ITAL 5640. Topics in Italian Studies.** (3 cr. [max 12 cr.]; Student Option; Every Fall)
Topics of interest in studies of Italian and/or Italian American culture of the 20th century. Topics and readings may include literary, critical, cultural, historical, and/or social issues, a specific author, a genre, or other topics. Content varies by instructor. Specific content posted in the department and in the Course Guide. prereq: Ital 3015

**ITAL 5970. Directed Readings.** (1-4 cr. [max 16 cr.]; Student Option; Every Fall & Spring)
Meets unique requirements decided on by faculty member and student. Individual contracts list contact hours, number of credits, written and other work required. prereq: instr consent

**ITAL 8333. FTE: Masters.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master’s student, adviser and DGS consent

**ITAL 8777. Thesis Credits: Master’s.** (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required (Plan A only)

**Japanese (JPN)**

**JPN 5040. Readings in Japanese Texts.** (3 cr. [max 9 cr.]; A-F or Audit; Every Fall)
Students read authentic materials of various types to increase reading and speaking ability. Topics specified in Class Schedule. prereq: 4042 or equiv or instr consent

**JPN 5041. Reading Japanese Texts: Literature and Culture.** (3 cr. [A-F or Audit; Periodic Fall & Spring)
This course is conducted 100% in modern Japanese, including course materials, lectures, and discussions. Close reading of texts written in modern Japanese, including a recent novel, essays on social phenomena, critical essays on Japanese society, and/or academic papers. Read and translate these texts accurately and critically; discuss them in Japanese, and/or compose an essay entirely in modern Japanese. Pre-requisite: JPN 4042 or equivalent or instructor consent.

**JPN 5071. Communicative Competence for Japan-Oriented Careers.** (4 cr.; Student Option; Periodic Fall)
Effective communication using spoken and written Japanese in contexts likely to be encountered by a career-oriented professional in Japan. prereq: 4041 or 4042 or instr consent

**JPN 5211. Introductory Classical Chinese I.** (3 cr.; Student Option; Periodic Fall)
Reading excerpts from canonical Chinese texts. Transnational nature of Classical Chinese/its importance in study of East Asian cultures. Taught in English. prereq: Two years of an East Asian language (Chinese, Japanese, Korean) or equivalent or instr consent
JPN 5212. Introductory Classical Chinese II. (3 cr.; Student Option; Periodic Fall & Spring) Reading excerpts from canonical Chinese texts. Transnational nature of Classical Chinese/its importance in study of East Asian cultures. Taught in English. prereq: 5211 and two years of an East Asian language (Chinese, Japanese, Korean) or equivalent or instr consent.

JPN 5993. Directed Studies in Japanese. (1-15 cr.; Student Option; Every Fall & Spring) Individual study with guidance of a faculty member. Prereq instr consent, dept consent, college consent.

JPN 8333. FTE: Master's. (; 1 cr.; No Grade Associated; Every Fall, Spring & Summer) No description prereq: Master's student, adviser and DGS consent.

JPN 8444. FTE: Doctoral. (; 1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent.

JPN 8666. Doctoral Pre-Thesis Credits. (; 1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required (Plan A only).

JPN 8888. Thesis Credit: Doctoral. (; 1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required.

JWST 5013W. Scripture and Interpretation in Israelite Religion and Judaism. (WI; 3 cr.; A-F or Audit; Spring Odd Year) Idea of divine revelation. Impact on religion/ literature. Knowledge of 3rd millennium BC textual traditions, interpretation help us think critically about role of revelation in religious traditions. prereq: At least one upper level course (3xxx or higher) in academic biblical or religious studies.

JWST 5992. Directed Readings. (; 1-12 cr.; Student Option; Every Fall, Spring & Summer) Guided individual reading or study. prereq: instr consent.

Jewish Studies (JWST)

JWST 5013W. Scripture and Interpretation in Israelite Religion and Judaism. (WI; 3 cr.; A-F or Audit; Spring Odd Year) Idea of divine revelation. Impact on religion/literature. Knowledge of 3rd millennium BC textual traditions, interpretation help us think critically about role of revelation in religious traditions. prereq: At least one upper level course (3xxx or higher) in academic biblical or religious studies.

JOUR 5001. Introduction to Mass Communication Theory and Research. (3 cr.; A-F only; Every Fall) Course is designed to provide an overview of the evolution and content of the major intellectual perspectives, theories, and methodological approaches that serve as the basis for the mass communication discipline. Provides the intellectual base for first-year master's students' graduate work in mass communication, as well introduces advanced undergraduate students to graduate study in the discipline. prereq: Grad students enrolled in Mass Communication MA or PhD program.

JOUR 5131. In-Depth Reporting. (3 cr.; A-F only; Every Fall) Techniques/issues of special project stories. Explanatory, investigative, civic, literary, or ethnographic journalism. Topics (e.g., civil rights, governmental malfeasance, health care problems) typically involved in stories. prereq: [3004V or 3004W], [3101 or 3101H], [3121]. [major or approved BIS/IDIM/ICP program]

JOUR 5155. Database Reporting. (3 cr.; A-F only; Every Spring) Obtaining and analyzing digital data for computer-assisted reporting that can be published on various media platforms. Using spreadsheets and databases to manage information, find news stories, produce maps and graphics. prereq: [Jour 3004W or 3004V], [3101], [3103 or 3121]; [major or approved BIS/IDIM/ICP program]

JOUR 5174. Magazine Editing and Production. (3 cr.; A-F only; Every Fall & Spring) Writing, editing, illustration, design, layout, photo-composition of print or web magazine. Emphasizes reporting, telling substantive stories. Work in groups with varying specializations. prereq: [3004W or 3004V], [3155 or 3173W or 3279W or 3321 or 4302]. [major or approved BIS/IDIM/ICP program]

JOUR 5251. Strategic Communication Theory. (3 cr.; Student Option; Every Spring) This course is designed to provide an introduction to psychologically-grounded concepts, theories and their applications for strategic communication. The course objectives include comprehension and application of a range of psychological concepts and theories related to attitude development, susceptibility to message influence, and opinion formation and change. The course will provide opportunities to apply theoretical concepts to critically evaluate strategic communications (advertising, public relations, brand marketing, etc.) and to use psychological theory and research to inform the development of communication strategies. The course will examine how these theories help us understand communication processes in digital media environments, as well as how they inform relationship-building areas of strategic communication such as reputation and crisis management. The course will provide opportunities for students to apply concepts and theories to potential research for graduate degree capstone projects.

JOUR 5501. Communication, Public Opinion, and Social Media. (3 cr.; Student Option; Every Fall) Sharpen your understanding of public opinion and its role in political and civic life: What does it mean? Where does it come from? How is it measured? What impact does it have? How are the public’s preferences shaped by the larger communications environment and the strategic messages of politicians, interest groups, and other actors in society? What are polls really measuring, and why do they seem so unreliable sometimes? How are social media technologies giving voice to new segments and dimensions of public opinion? But how are they vulnerable to manipulation from bots and other efforts designed to alter perceptions of collective opinions? Examine the theories of communication, psychology, political science, and sociology that underlie these dynamic questions. We’ll consider cutting edge approaches used by market researchers, political analysts, and data scientists to harness new forms of data about what the public thinks. We investigate theories that explain how people form their opinions, deliberate with others, change their minds, and reveal their preferences, and we apply these frameworks to understand contemporary public opinion issues and campaigns.

JOUR 5541. Mass Communication and Public Health. (3 cr.; Student Option; Every Fall) This course provides an overview of theory and research that lies at the intersection of mass communication and public health. We examine the potential for media exposure to influence public health outcomes, both as a product of people’s everyday interactions with media and the strategic use of media messages to accomplish public health goals. To this end, we will explore large-scale public health campaigns in the context of tobacco, obesity, and cancer screening. We will also explore news media coverage of controversial health issues, such as the human papillomavirus (HPV) vaccine, and how entertainment media, such as smoking in movies. This course seeks to understand whether media messages have had intended and/or unintended effects on public attitudes and behavior. Although our focus is on mass media, interpersonal, medical, and digital media sources will be considered as well.

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
JOUR 5542. Theory-based Health Message Design. (3 cr.; Student Option; Every Spring)
This course is designed to provide an overview of theory and research relevant for the design of health messages, and specifically focuses on how such theory and research informs message design. It builds on social and behavioral science approaches to public health communication and media effects with the primary objective to better understand issues and strategies related to the design of media health messages. Prerequisites: Jour 3005 or Jour 3757 or Jour 5541

JOUR 5543. Public Health Campaign Evaluation. (3 cr.; A-F or Audit; Every Fall) Evaluate process and outcomes of message-based health interventions. Utilize campaign evaluation literature. Develop recommendations for evaluation research design based on cross-sectional, experimental, and time-based designs. Focus on evaluation options within constraints.

JOUR 5552. Law of Internet Communications. (3 cr.; A-F or Audit; Every Spring) Digital communication technologies continue to raise a variety of legal issues, including whether and how (and which) traditional media and regulatory laws will apply, and how policy should be applied through regulatory law to enhance and regulate that communication. This course is conducted as a seminar, with an open discussion of legal precedent and the influence of policy on internet and digital communications. This course covers the First Amendment as it applies in a digital era as well as regulatory topics like net neutrality, broadband access, privacy, and copyright.

JOUR 5601W. History of Journalism. (WI; 3 cr.; Student Option; Every Spring) What is (real/fake) news? Who’s a journalist? What is journalism? How did we get to where we are today regarding journalism both as a profession and as an essential tool of democracy? Learn the fundamental chronology of the development of journalism in the United States from the Revolution to today, and then delve into the big quandaries: How free has journalism been? What have been its professional standards? How has journalism affected a diverse audience? What are the challenges of international journalism? And how have new communication technologies interacted with journalism?

JOUR 5606W. Literary Aspects of Journalism. (WI; 3 cr.; Student Option; Every Spring) Journalism isn’t fiction. Yet the relationship between what is true and what is artfully constructed toward a “larger truth” -- beyond the facts -- has a complex and intriguing history. This writing-intensive course explores that relationship through close readings of some the best writers of long-form nonfiction, starting with the birth of the novel from journalistic roots in the 18th century and ending with postmodern forms that challenge the notion of what we can ever know. Discover the literary devices used by Stephen Crane’s reported street scenes or Nellie Bly’s first-hand investigations into conditions for the mentally ill in the 19th century, and, later, Truman Capote’s nonfiction novel about a Kansas farm family’s murder. Readings include works by pivotal 20th-century writers such as John Hersey, Joseph Mitchell, Lillian Ross, Michael Herr, Norman Mailer, Gay Talese, Joan Didion, Tom Wolfe, and Hunter S. Thompson, and will trace how their pioneering methods influenced contemporary journalism as well as the documentary films of Errol Morris and contemporary nonfiction writers expanding into new forms.

JOUR 5725. Management of Media Organizations. (3 cr.; Student Option; Every Fall) Introduction to concepts/principles of media management. Strategic planning, leadership, organizational strategies, ethical/legal issues. Working in teams. Balance sheets, income statements. Motivating/promoting people.

JOUR 5777. Contemporary Problems in Freedom of Speech and Press. (3 cr.; A-F only; Every Fall) Most of us use devices like Smartphones, GPS, streaming services, or hands-free speakers like Amazon’s Echo that connect to online voice services like Alexa without thinking about them very much. But, what kind of information are they collecting? Are merchants allowed to gather your shopping history and use it to send you targeted advertising, or to sell it to other companies for profit? Should other people be able to post your personal information or photos online without your consent? Can the government read your text messages, track your online browsing, or intercept your text messages? This course considers how growing concerns about privacy and national security affect the First Amendment and the rights of journalists to gather and report the news. We will read significant court decisions and take a look at current statutory and regulatory initiatives both in the United States and abroad. You can expect lively debates and discussion, and the opportunity to explore a privacy or national security issue in depth in a substantial research paper.

JOUR 5993. Directed Study. (1-3 cr. [max 6 cr.]; A-F or Audit; Every Fall, Spring & Summer) Directed study/projects. Prereq [Jour major or jour minor or approved IDIM major or ICP major or BSS major], GPA of at least 3.00, college consent, dept consent, instr consent.

JOUR 8001. Studies and Theories of Mass Communication. (3 cr.; A-F or Audit; Every Fall) Introduction to key concepts, theories, methods in study of mass communication from social sciences perspective. Survey of research literature using individualistic/structural approaches.

JOUR 8002. Studies in Mass Communication II. (3 cr.; A-F or Audit; Every Spring) Literature on history of the field, cultural and humanistic approaches to its study, and legal and ethical issues. prereq: 8001

JOUR 8003. Digital Media Issues and Theories. (3 cr.; A-F or Audit; Periodic Fall & Spring) Nonprofessional skills course. Prepares entering graduate students to work in changing media environment. Political, social, economic, legal, ethical, technological implications nationally/globally. Produce scholarly research about changing media. prereq: Journalism grad student

JOUR 8009. Pro-seminar in Mass Communication. (1 cr.; S-N only; Every Fall) Introduction/socialization to scholarly discipline of mass communication, mass communication pedagogy, pathways to successful career. Develop action plan for completing graduate school starters career in academy or relevant communication industries. prereq: Grad students enrolled in Mass Communication MA or PhD program

JOUR 8191. Health Journalism: Introduction to Health and Medical Journalism. (3 cr.; A-F or Audit; Every Fall) Best practices in health/medical reporting in different formats/media. Story ideas that challenge conventional wisdom about health care. Elements of health beat. Narrative/ investigative styles of journalism. Students do semester-long project. prereq: Enrolled in MA in health journalism or instr consent

JOUR 8192. Advanced Health Journalism: Computer-Assisted Reporting on Health. (3 cr.; A-F or Audit; Every Spring) How to use data/databases to tell health news stories or help with health campaigns. Databases, how to access them. How to mine data for effective communication to consumer audience. prereq: Enrolled in MA in health journalism or instr consent

JOUR 8193. Health Communication Capstone. (3 cr.; A-F or Audit; Every Spring) Focus on different aspects of a health issue, audience, context, and message mix that is central to the Health Communication M.A. program. Develop a final project focusing on a health communication topic of interest. Projects would be a publishable article, research paper, multimedia production, or any other format relevant for the chosen topic. Project is accompanied by a reflection paper.

JOUR 8194. Health Communication Practicum. (3 cr.; A-F only; Every Summer) Field-based practicum for students enrolled in the Health Communication M.A. program. Work with a local non-profit or for-profit organization in the health care domain. Participatory observation study: work with organization staff on a strategic communication project and use experiences to analyze how message, audience, and context design processes take place in professional health communication settings.

JOUR 8200. Strategic Communication Research Methods. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Concepts, analytical techniques, and methods to analyze audiences, target markets, and social trends affecting communication strategy...
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
setting, priming, and framing, networked communications, micro-targeting, and mobile technology.

JOUR 8671. Seminar: Communication Ethics—Public/Civic Journalism. (3 cr.; A-F or Audit; Periodic Fall & Spring) Historical underpinnings, philosophical debate, theoretical dynamics, legal concerns, ethical implications.

JOUR 8672. Seminar: Media Management. (3 cr.; A-F or Audit; Periodic Fall & Spring) Management issues in media organizations. Relation to dynamics of organization structure, employees, markets, economics/finances. preq: 5725 recommended

JOUR 8675. Seminar: Issues in Information Access and Communication. (3 cr.; A-F or Audit; Periodic Fall) Societal, industry, technological, and policy aspects/developments that affect information access, particularly through mass media. preq: Grad students enrolled in Mass Communication MA or PhD program or instr consent

JOUR 8676. Seminar: Constitutional Law—Theories of Freedom of Expression. (3 cr.; A-F or Audit; Every Spring) Problems of constitutional/tort law affecting the press. Underlying theories. preq: 8777 or instr consent or law student

JOUR 8679. Seminar: Research Methods in Media Ethics and Law. (3 cr.; A-F or Audit; Periodic Fall & Spring) Research at intersection of first amendment and media ethics.

JOUR 8681. Seminar: International Media Perspectives. (3 cr.; A-F or Audit; Periodic Fall & Spring) Main problems/currents. Concepts, research, policy relevant to global development. Issues of freedom/constraint, media technology, role of journalism in world affairs.

JOUR 8720. Seminar: Mass Media and Health. (3 cr.; A-F only; Periodic Fall & Spring) Theories, methods, research that characterize field of health communication. Mass media influence on health, including use of mass media to promote health behaviors. Theoretical frameworks that inform health communication scholarship, as well as methodological approaches to studying health communication issues. preq: Grad students enrolled in Mass Communication MA or PhD program or instr consent

JOUR 8721. Seminar: Communication Agencies as Social Institutions. (3 cr.; A-F or Audit; Every Fall & Spring) Influence/effects of mass communication, internal dynamics of media organizations, criticism/modes of reform. Theoretical frameworks for analysis.

JOUR 8777. Thesis Credits: Master's. (3-18 cr.; no grade associated) Thesis work. Topics specified in Class Schedule. preq: Grad student or MEd student

KIN 5001. Foundations of Human Factors/Ergonomics. (3 cr.; A-F or Audit; Every Fall) Variability in human performance as influenced by interaction with designs of machines and tools, computers and software, complex technological systems, jobs and working conditions, organizations, and sociotechnical institutions. Emphasizes conceptual, empirical, practical aspects of human factors/ergonomic science.

KIN 5104. Physical Activities for Persons with Disabilities. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Different approaches to providing physical education service and related movement interventions for persons with disabilities. Topics: movement behavior foundations, movement skill progressions, unique considerations for specific impairments, and sport for persons with disabilities

KIN 5111. Sports Facilities. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Steps in planning/building facilities for athletics, physical education, and sport for college, professional, and public use. preq: Kin or Rec grad student or MEd student

KIN 5115. Event Management in Sport. (3 cr.; A-F or Audit; Every Spring & Summer) Techniques/principles of planning, funding, and managing sport events. Collegiate championships, non-profit events, benefits, professional events. preq: Grad student, instr consent

KIN 5122. Applied Exercise Physiology. (3 cr.; A-F or Audit; Periodic Fall) Mechanisms of cardiorespiratory and muscular responses to exercise; application of exercise physiology to assessment of work capacity, athletic conditioning, and requirements of human powered vehicles; low to moderate exercise as an intervention in lowering risk for common health problems. preq: 4385 or equiv or instr consent

KIN 5123. Motivational Interventions in Physical Activity. (3 cr.; A-F only; Every Fall & Spring) Psychological principles related to physical activity (PA). Delivery of motivational interventions for physical activity. Motivational PA interventions. Two papers, oral presentation, two exams. preq: 3126W or grad student

KIN 5125. Advances in Physical Activity and Health. (3 cr.; A-F only; Periodic Spring) This course exposes students with accurate and up-to-date information regarding physical activity as it relates to health in the United States. It is intended to enhance students' ability to identify important issues pertinent to physical activity and health, as well as develop and maintain a physically active lifestyle. Credits will not be given if taken as KIN 5720 with the same title.

KIN 5126. Social Psychology of Sport & Physical Activity. (3 cr.; A-F only; Every Fall & Spring) Theory/research on social influences, individual differences, motivational processes. How sport/physical activity contribute to psycho-social development. Social psychological factors influencing physical activity beliefs/behaviors. preq: 3126W or equiv or grad student or instr consent

KIN 5136. Psychology of Coaching. (3 cr.; Student Option; Every Fall, Spring & Summer) Psychological dimensions of coaching across age levels, including coaching philosophy, leadership, communication skills, motivation, and mental skills training for performance enhancement.

KIN 5141. Nutrition and Exercise for Health Promotion and Disease Prevention. (3 cr.; A-F only; Every Fall) Requirements/physiologic roles of nutrients/physical activity in promotion of health. Assessment of energy requirements. RDAs, food composition/safety, weight management. Prevention of chronic diseases. Coronary heart disease. preq: FSN 1112 or equiv
KIN 5142. Applied Nutrition for Sport Performance and Optimal Health. (3 cr.; A-F only; Every Spring)
This course is designed for students interested in nutrition as it relates to health, exercise and athletic training. Evidenced based information is used to apply current nutrition concepts to improve health, physical and athletic performance. Case studies as well as personal data are employed throughout course to support concepts of lecture.

KIN 5152. Curriculum Development in Physical Education. (2 cr.; A-F or Audit; Every Spring)
Trends, issues, and challenges in early childhood/K-12 physical education. Potential effect on curriculum. prereq: initial licensure/MEd phys ed student

KIN 5181. Understanding Kinesiology Research. (3 cr.; A-F only; Every Fall)
Prepares students to critically analyze research specific to kinesiology. prereq: Intro statistics recommended

KIN 5196. Practicum: Developmental/Adapted Physical Education. (1-4 cr.; S-N only; Every Fall & Spring)
Observation of, participation in physical education instruction for students with disabilities. Current issues in developmental/adapted physical education. Exchange of ideas/problems. prereq: [5103 or 5104], instr consent

KIN 5201. Health Education Foundations. (3 cr.; A-F only; Every Summer)

KIN 5202. Current Issues in Health. (2 cr.; A-F only; Every Summer)
Critical thinking for health issues in research/media. Issues specific to conflict, stress, public policy, and communication. Projects, debates.

KIN 5203. Health Media, Consumerism, and Communication. (2 cr.; A-F only; Every Spring)
Effects of media, consumerism, technology, and health related issues. Students form/defend opinions on positive/negative aspects of how health information is disseminated and how individual health decisions are made.

KIN 5204. Methods in Health Education. (3 cr.; A-F only; Every Fall)
Background knowledge/skills to deliver comprehensive health education program. Techniques, skills, and methods for teaching active learning projects. Lessons/units in health curriculum discussed/demonstrated. Focuses on grades 5-12. prereq: Health licensure student or instr consent

KIN 5205. Health Education Curriculum. (3 cr.; A-F only; Every Fall)
Curriculum development in health education. Trends in society. How they impact teaching of health curriculum. Culminates in written curriculum for grades 5-12. prereq: Health licensure student or instr consent

KIN 5235. Advanced Biomechanics II: Kinetics. (3 cr.; A-F or Audit; Spring Odd Year)
Kinetic aspects of human movement (single/multi-joint torques, simple inverted-pendulum models, mass-spring systems). Analysis of experimental data and of computer simulations. Lectures, seminars, lab. prereq: [3112 or equiv], PMed 5135, undergrad college physics, intro calculus

KIN 5237. Sport and Society. (3 cr.; A-F or Audit; Every Spring)
Sport, sporting processes, social influences, systems. Structures that have effected and exist within/among societies, nations, and cultures. Contemporary issues such as social differentiation, violence, and honesty. prereq: [3126W, grad student] or instr consent

KIN 5275. Youth Sport Science. (3 cr.; A-F only; Every Spring)
Cognitive, behavioral, and biological factors having important implications for competitive sport participants from early childhood through high school age. Emphasis on translating sport science research into practical implications for youth sport coaches, teachers, and administrators.

KIN 5285. Exercise for Healthy Aging & Disease Prevention and Management. (3 cr.; A-F only; Every Spring)
Exercise testing/prescription with modifications required because of special considerations associated with aging, gender differences, or presence of medical conditions. prereq: Physiology or biology undergrad

KIN 5421. Sport Finance. (3 cr.; A-F or Audit; Every Fall)
Introduction to financial analysis in sport. Cash flow statements, budgeting issues, traditional/innovative revenue producing strategies available to sport organizations. Discussion, practical analysis of current market. prereq: Grad student or instr consent

KIN 5435. Advanced Theory and Techniques of Exercise Science. (3 cr.; A-F only; Every Spring)
Theoretical constructs, in-depth description of procedures used in exercise science research and clinical settings. Laboratory exercises, lectures. prereq: [3385, 4385, Kin major] or instr consent

KIN 5441. Applied Sport Science Research. (3 cr.; A-F only; Every Fall, Spring & Summer)
Introduction to varied contributions of sport sciences to athletic performance. Evaluation of historical research’s contributions toward modern day research questions.

KIN 5461. Issues in the Sport Industry. (3 cr.; A-F only; Every Fall)
Critical analysis of management issues within sport industry. Strategic management, corporate social responsibility, human resource management/diversity, governance, sport globalization, sport development. prereq: postbac or grad student or instr consent

KIN 5485. Advanced Electrocardiogram Interpretation. (3 cr.; A-F only; Every Fall)
Placement and interpretation. Clinical exercise testing hands-on experience in electrocardiogram for resting and exercise testing situations. prereq: [3385, 4385] or instr consent

KIN 5505. Human-Centered Design - Principles and Applications. (3 cr.; A-F only; Every Fall)
Application of design to meet human needs. Design of fabricated products, tools/machines, software/hardware interfaces, art/culture, living environments, and complex sociotechnical systems.

KIN 5511. Sport and Gender. (3 cr.; A-F only; Every Fall)
Critically examines women’s involvement in/contributions to sport, physical activity, and leisure.

KIN 5585. Pediatric Physiology and Health: Concepts and Applications. (3 cr.; A-F only; Every Summer)
Current understanding of pediatric medicine and exercise physiology. Use of physical activity and weight management in the treatment of various diseases (i.e. obesity) that affect children and adolescents. prereq: 3385 or 4385

KIN 5501. Sport Management Ethics and Policy. (3 cr.; A-F or Audit; Every Spring)
How to critically analyze ethical concepts that underpin or inform sport policies and evaluate sport policies from a normative point of view. Selected sport policy issues are used to illustrate relevance of ethical considerations in policy development and to explore the ethical implications of sport policy. prereq: MEd or grad student or instr consent

KIN 5631. Programming and Promotion in Sport. (3 cr.; A-F or Audit; Every Fall & Spring)
Introduction to marketing concepts as they apply to sport industry. Consumer behavior, market research, marketing mix, corporate sponsorship, licensing. Discussion, practical application. prereq: Kin or Rec grad student or instr consent

KIN 5641. Scientific Theory and Application of Training and Conditioning in Sport. (3 cr.; A-F only; Every Spring & Summer)
Current scientific literature on physiological adaptation through training/conditioning for sport. Applying methods in research journals to improve physiological adaptation through training/conditioning with sport specificity. prereq: 4385 or SPST 3641 or SPST 4641 or exercise physiology course or instr consent

KIN 5643. Applied Motion Capture and Movement Analysis Technology. (3 cr.; A-F only; Every Fall)
Course provides students with the knowledge and tools to effectively analyze human movement patterns in a wide variety of field-based settings, such as assessing sport skill performance or measuring movement deficits after injury. Students will comprehend the basic, underlying components of movement and movement deficits. It is strongly suggested students have taken Physics, Biomechanics, and Human Anatomy. Credit will not be
KIN 5981. Research Methodology in Kinesiology. (3 cr.; A-F only; Every Fall) Defines/reviews various types of research in exercise/sport science, and physical education. Qualitative research, field studies, and methods of introspection as alternative research strategies to traditional scientific paradigm.

KIN 5987. Professional Skills and Grant Writing for Health Sciences. (2 cr.; Student Option No Audit; Spring Odd Year) Introduction to structure/function of different organizations (e.g., NIH, AHA). Writing/reviewing grants/manuscripts. Preparing for a job in academia. prereq: Grad student

KIN 5992. Readings in Kinesiology. (1-9 cr.; A-F only; Every Fall, Spring & Summer) Independent study under tutorial guidance. prereq: [KIN upper div undergrad or MEd or grad student], instr consent

KIN 5995. Research Problems in Applied Kinesiology. (1-6 cr.; A-F only; Every Fall, Spring & Summer) Selected topics in physical activity and human performance. prereq: [KIN upper div undergrad or MEd or grad student], 15 cr of major coursework [including 4981 or 5981], instr consent

KIN 6151. Theoretical Foundations of Curriculum and Instruction in Physical Education. (2 cr.; A-F or Audit; Every Fall & Spring) Selection of effective instructional strategies/assessment. Design, progression, and presentation of tasks in physical education curriculum. prereq: initial licensure/MEd phys ed student

KIN 6201. Clinical Experience I: Health Education. (1-4 cr.; A-F only; Every Spring) Half-day supervised teaching in urban or suburban middle or high school health education setting.

KIN 6202. Clinical Experience II: Health Education. (2-6 cr.; A-F only; Every Spring) Full-day supervised teaching in urban or suburban middle or high school health education setting. prereq: Health licensure student or instr consent

KIN 6251. Pedagogy I: Elementary Physical Education. (4 cr.; A-F or Audit; Every Summer) Instructional components/knowledge structures for teaching/learning process of K-6 physical educator in diverse settings. prereq: initial licensure/MEd phys ed student

KIN 6252. Pedagogy II: Secondary Physical Education. (4 cr.; A-F or Audit; Every Summer) Instructional components for teaching/learning process of grades 6-12 physical educator in diverse settings. prereq: initial licensure/MEd phys ed student

KIN 6596. Clinical Experience I: Physical Education. (4 cr.; S-N or Audit; Every Fall) Half-day supervised teaching in an urban elementary school physical education setting. prereq: 6151, 6521, 6522, initial licensure/MEd phys ed student or instr consent

KIN 6597. Clinical Experience II: Physical Education. (1-4 cr.; A-F only; Every Spring) Half-day supervised teaching in urban or suburban elementary, middle, or high school physical education setting. prereq: 6596, initial licensure/MEd phys ed student or instr consent

KIN 6598. Clinical Experience III: Physical Education. (2-6 cr.; A-F only; Every Spring) Supervised teaching in urban or suburban elementary, middle, or high school physical education setting. prereq: 6597, initial licensure/MEd phys ed student or instr consent

KIN 8002. Proseminar in Human Factors/Ergonomics. (1 cr. [max 2 cr.]; A-F or Audit; Every Fall & Spring) Issues/concerns tailored to interests of faculty/students regarding human factors/ergonomics. Interaction of performance/behavior with design factors in performance environment. prereq: Enrollment in good standing, grad HumF minor

KIN 8121. Seminar: Exercise Physiology. (2 cr. [max 8 cr.]; A-F only; Every Fall & Spring) Classic/contemporary literature in exercise physiology/allied disciplines. Contributions of major leaders in field. Opportunities for interdisciplinary research. Spring semester students/faculty in exercise science present original research. prereq: 5122 or equiv or instr consent

KIN 8126. Sports Medicine Psychology. (3 cr.; A-F only; Periodic Fall) Advanced seminar course. Multidisciplinary contributors to sports medicine psychology. Theory, research, and practice in the behavioral/social aspects of injury prevention/experiences among physically active populations across the life span. prereq: Grad student or instr consent

KIN 8128. Doctoral Sport Management Seminar. (3 cr.; A-F only; Periodic Fall & Spring) Analysis of current literature, theoretical constructs, research methodology and design relative to sport management. Focuses on student-selected topics, research problems. prereq: PhD student, instr consent

KIN 8132. Seminar: Motor Development. (3 cr.; A-F or Audit; Periodic Spring) Contemporary research literature on motor skill development from birth to senescence. Emphasizes interaction between physical/environmental/performer constraints. Coordination/control of movement. prereq: grad student or instr consent

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
KIN 8135. Seminar: Motor Control and Learning. (3 cr.; A-F or Audit; Periodic Spring)
Advanced reading/discussion of research on motor control, motor learning, human performance. prereq: grad student or instr consent

KIN 8136. Developmental Sport and Exercise Psychology. (3 cr.; A-F only; Every Fall & Spring)
Sport and exercise psychology from a life span developmental perspective. Theoretical perspectives, self-perceptions, social influences, emotional development, motivational processes, self-regulation, development of expertise, moral development, sport injury, and gender and cultural diversity. prereq: Grad student or instr consent

KIN 8211. Seminar: Perception and Action. (3 cr.; A-F or Audit; Periodic Spring)
Survey of theory/research on use of perceptual information for control of action. Behavioral research on perceptual guidance of daily activities (e.g., standing, walking, driving). Perceptual control in context of expertise (e.g., sports). Perceptual-motor development. prereq: grad student or instr consent

KIN 8285. Cellular and Molecular Exercise Physiology. (3 cr.; A-F only; Periodic Fall & Spring)
This course emphasizes the cellular and molecular mechanisms in response to acute and chronic physical exercise. Biochemical pathways of regulating energy metabolism during exercise, change of gene expression as adaptation to altered diet, environmental factors and aging, and cellular oxidative-antioxidant homeostasis will be the main foci. The course will expose graduate students and advanced undergraduate students to current topics of biomedical issues affecting human health and wellbeing, modern techniques of exercise science research, and important research articles in literature. prereq: KIN 3385: Human Physiology and KIN 4385: Exercise Physiology; KIN 5122: Applied Exercise Physiology; college level chemistry. Suggested: organic chemistry, or instr consent Credits will not be given if taken as KIN 5720 with the same title.

KIN 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

KIN 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

KIN 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 24 cr.]; No Grade Associated; Every Fall, Spring & Summer)
tbd prereq: Doctoral student who has not passed prelim oral; Dept consent required; No grade associated; 4 completions allowed; up to 24 combined cr.

KIN 8696. Internship: Applied Sport Psychology. (3-6 cr.; S-N or Audit; Periodic Fall & Spring)
Supervised internship; emphasis on educational sport psychology approaches to athletic performance enhancement and psychological adjustment to sport injury. prereq: 5126, 8126, Kin PhD student, instr consent

KIN 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required (Plan A only)

KIN 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

KIN 8980. Graduate Research Seminar in Kinesiology. (1 cr. [max 9 cr.]; S-N only; Every Fall & Spring) Reporting/discussion of student/faculty research activity. prereq: KIN M.S. or Ph.D. or SMGT M.A. or instr consent

KIN 8995. Research Problems in Kinesiology. (1-12 cr.; S-N only; Every Fall, Spring & Summer) Individual scholarly research. prereq: Kin Ph.D. student or SMGT grad student or instr consent

Korean (KOR)

KOR 5040. Readings in Korean Texts: North Korean Dialect. (3 cr.; [max 9 cr.]; Student Option No Audit; Periodic Fall) Expose advanced students of Korean to various North Korean contexts. Improve ability to understand North Korean literary work. Various authentic texts from North Korea. Mostly taught in Korean. prereq: 3022 or intermediate level of Korean proficiency

KOR 5410. Readings in Sino-Korean Texts. (3 cr.; [max 9 cr.]; Student Option; Periodic Fall & Spring) Sino-Korean vocabulary/characters necessary for advanced and superior level of knowledge in Korean. Students conduct research projects based on specialized readings in their own fields of study. prereq: 3032 or equiv or instr consent

KOR 5211. Introductory Classical Chinese I. (3 cr.; Student Option; Periodic Fall) Reading excerpts from canonical Chinese texts. Transnational nature of Classical Chinese/its importance in study of East Asian cultures. Taught in English. prereq: Two years of an East Asian language (Chinese, Japanese, Korean) or equivalent or instr consent

KOR 5212. Introductory Classical Chinese II. (3 cr.; Student Option; Periodic Spring) Reading excerpts from canonical Chinese texts. Transnational nature of Classical Chinese/its importance in study of East Asian cultures. Taught in English. prereq: 5211 and two years of an East Asian language (Chinese, Japanese, Korean) or equivalent or instr consent

KOR 5993. Directed Studies. (1-5 cr. [max 15 cr.]; Student Option No Audit; Every Fall & Spring) Guided individual study of Korean language or linguistics. prereq: instr consent, dept consent, college consent

Laboratory Medicine and Path (LAMP)

LAMP 7114. Surgical Pathology. (4 cr.; H-N only; Every Fall, Spring & Summer) The student participates in all areas of surgical pathology activities.

LAMP 7119. Forensic Pathology. (4 cr.; H-N only; Every Fall, Spring & Summer) This course acquaints students with the field of forensic medicine. The student will become familiar with the function of a medical examiner's office in determining the various causes and manners of death that fall under the jurisdiction of such a public official.

LAMP 7120. Perinatal/Pediatric Pathology. (4 cr.; P-N only; Every Fall, Spring & Summer) This elective will expose medical students to pediatric pathology, a diagnostic subspecialty that ranges broadly across anatomic and clinical pathology as these relate to children and adolescents, fetuses and infants, and pregnant women. It should prove useful to medical students interested in pediatric medicine, pediatric surgery, obstetrics and gynecology, or pathology.

LAMP 7145. Neuropathology. (4 cr.; H-N only; Every Fall, Spring & Summer) The course is a practical introduction to neuropathology. The students will work with the attending neuropathologist and residents (from LMP, Neurology and/or Neurosurgery) performing diagnostic services in neuropathology.

LAMP 7150. Anatomic Pathology. (4 cr.; H-N only; Every Fall, Spring & Summer) The student will become acquainted with current basic concepts of anatomic pathology, especially in relation to morphological interpretation.

LAMP 7152. Anatomic Pathology-VA. (4 cr.; H-N only; Every Fall, Spring & Summer) The goal of this rotation is to familiarize the medical student with the role of pathology in the diagnosis, prognosis and treatment of patients through the activities of pathologist as members of the clinical team.

LAMP 7158. Cardiac Pathology. (2 cr.; H-N only; Every Fall, Spring & Summer) Students will observe examinations of existing and newly acquired cardiovascular specimens to identify variations of specific congenital and acquired disease entities and their functional significance.

LAMP 7181. Hematopathology. (4 cr.; H-N only; Every Fall, Spring & Summer) Over the course of the rotation, students will be fully integrated into the blood and bone marrow biopsy service, with ?ownship? of their cases and graduated responsibility for
LAMP 7184. Introduction to Transfusion Therapy. (3 cr.; H-N only; Every Fall, Spring & Summer) The student will address transfusion problems in patients with red cell, white cell, and platelet antibodies and coagulopathy.

LAMP 7186. Laboratory Medicine in a Community Hospital. (4 cr.; H-N only; Every Fall, Spring & Summer) The student will specialize in one or two areas of the clinical lab but will participate in all its general teaching activities. SPECIAL INSTRUCTIONS: Students must contact Dr. Apple at least one month prior to beginning elective.

LAMP 7187. Interpretation of Lab Data. (4 cr.; P-N only; Every Fall) This course is designed for 3rd and 4th year medical students who are faced with the challenge of bringing the extensive diagnostic capabilities of the clinical laboratory to bear on specific clinical problems. prereq: Med Student Yr 3 or 4/one previous rotation

LAMP 7195. Medical Informatics. (4 cr.; H-N only; Every Fall, Spring & Summer) Medical informatics uses computer and information science to solve problems in medicine, health care delivery, and medical research. The student works on a project under the supervision of faculty and/or fellows in medical informatics. The specific project depends on faculty availability and the student's background, interests, and experience. Projects have included computer assisted instruction for medical students or patients, computer-based medical decision support systems, creation of clinical database management systems, and statistical analysis of data from clinical research. As schedule permits, the student is expected to attend health informatics courses and seminars.

LAMP 7210. Surgical Pathology for Post-M.D.s. (1-10 cr.; H-N or Audit; Every Fall & Summer) Surgical Pathology for post MD's. prereq: Regis med fellow special

LAMP 7400. Pathology-Duluth. (2 cr. [max 6 cr.]; P-N only; Every Fall, Spring & Summer) Students experience practice of pathology in a tertiary care regional medical center. Clinical pathology disciplines of transfusion medicine, microbiology, chemistry, and hematology. Students spend time with medical directors and supervisors of each section. Directed self-study, case-based, didactic, and hands-on instruction. Laboratory medicine's role in ongoing patient care.

LAMP 7910. Laboratory Medicine and Pathology Medical Residency. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer) Laboratory medicine and pathology medical residency.

LAMP 7930. Laboratory Medicine and Pathology Medical Fellowship. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer) Laboratory medicine and pathology medical fellowship.

Land and Atmospheric Science (LAAS)

LAAS 5050. Integrated Topics in Land & Atmospheric Science. (5 cr.; A-F or Audit; Every Fall) Earth system science. Interactions between the land and atmosphere. Biogeochmistry, human-environment interactions, environmental biophysics, and global environmental change.

LAAS 5051. Thesis Proposal Writing for Land & Atmospheric Science. (2 cr.; A-F or Audit; Every Spring) Grant proposals, including proposal formats of various funding sources, how to develop a significant statement, hypotheses and objectives, background, methods, project summary, time line, and budget. Critique proposal samples/discuss other aspects of seeking funding for research. Discuss LAAS graduate program prelim exam process.

LAAS 5311. Soil Chemistry and Mineralogy. (3 cr.; Student Option; Every Fall & Spring) Structural chemistry, origin/identification of crystalline soil clay minerals. Structure of soil organic matter. Chemical processes in soil: solubility, adsorption/desorption, ion exchange, oxidation/reduction, acidity, alkalinity. Solution of problems related to environmental degradation, plant nutrition, and soil genesis. prereq: [Chem 1022 or equiv], Phys 1102, grad) or instr consent

LAAS 5425. Atmospheric Processes I: Thermodynamics and Dynamics of the Atmosphere. (3 cr.; A-F or Audit; Fall Odd Year) Basic laws governing atmospheric motion through analysis of atmospheric dynamics and thermodynamics at the micro, synoptic, and global scales. Fundamental thermodynamic and dynamical processes/equations governing the behavior of the atmosphere/apply to large-scale geophysical situations. prereq: One yr college-level [calculus, physics]

LAAS 5426. Atmospheric Processes II: Radiation, Composition, and Climate. (3 cr.; A-F or Audit; Spring Odd Year) Atmospheric radiation, composition/chemistry, climate change. Radiative transfer in Earth's atmosphere. Changing chemical makeup of troposphere/stratosphere. Interplay between natural processes and human activities in air pollution, stratospheric ozone depletion, and chemical forcing of climate. Anthropogenic contribution to climate change/role of land-atmosphere feedbacks affecting atmosphere's energy budget and cycling of greenhouse gases. Application to numerical modeling. prereq: [one yr college-level [calculus, physics, chemistry]]; LAAS 5425 recommended

LAAS 5480. Special Topics in Land and Atmospheric Science. (1-4 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Lectures by visiting scholar or regular staff member. Topics specified in Class Schedule. prereq: grad student or instr consent

LAAS 5621. Soil and Environmental Genomics. (3 cr.; Student Option; Every Fall) Molecular and genomic approaches to answer ecological questions related to soil and environmental sciences. Genomics/ transcriptomics/proteomics. Metagenomics and single cell genomics. Includes computer exercise to learn basic bioinformatics. No prior programming skills are required, prereq: basic microbiology courses (e.g., MicB 3301) recommended.

LAAS 8005. Supervised Classroom or Extension Teaching Experience. (2 cr.; S-N or Audit; Every Fall & Spring) Teaching experience in biosystems and agricultural engineering or agronomy and plant genetics or horticultural science or soil, water, and climate or plant pathology. Discussions about effective teaching to strengthen skills and develop a personal teaching philosophy. prereq: instr consent

LAAS 8128. Land and Atmospheric Science Seminar. (1.5 cr.; max 3 cr.; S-N or Audit; Every Fall & Spring) Students present an open seminar on an advanced topic and attend seminars presented by other graduate students.

LAAS 8195. Research Problems in Soils. (1-5 cr.; max 10 cr.; Student Option; Every Fall, Spring & Summer) Directed research on special topics of interest in soil science or climatology supervised by individual or small groups of faculty. prereq: [Grad major in soil sci or related field]; instr consent

LAAS 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

LAAS 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

LAAS 8550. Teaching Experience. (1 cr.; max 6 cr.; S-N or Audit; Every Fall & Spring) Provides students with practical experiences in instructional techniques in a university setting. prereq: Grad major in soil sci or related field; instr consent

LAAS 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer) Doctoral pre-thesis credits. prereq: Doctoral student who has not passed prelim oral; no
required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

LAAS 8777. Thesis Credits: Master’s. (; 1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

LAAS 8888. Thesis Credit: Doctoral. (; 1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

Landscape Architecture (LA)

LA 5001. Sustainable Landscape Design and Planning Practices. (; 3 cr.; Student Option; Every Fall) Systemic, formal and spatial relationships. Quantitative and qualitative changes in global biodiversity, quality of the earth’s air, soil, and water resources, development and consumption of energy resources and climate change. Development of design processes for selection, deployment, and management of sustainable practices. prereq: 5201, 5203

LA 5002. Implementation of Sustainable Landscape Design and Planning Practices. (; 3 cr.; Student Option; Every Spring) Design exploration of a complex urban site. Habitation patterns and sociocultural systems that slow and reverse environmental degradation and climate change. Researching/creating landscape patterns that address multi-scalar sustainability. prereq: 5201, 5203

LA 5003. Climate Change Adaptation. (; 3 cr.; Student Option; Every Fall) This course will study nations, regions, cities, and communities that have adapted or are undergoing adaptation to climate change. The course will examine different approaches in planning, policy, economics, infrastructure, and building design that increase the adaptive capacity of human settlements. These approaches will vary in scale from the construction of new neighborhoods to the implementation of storm water gardens. The course will emphasize multi-functional strategies which couple climate change adaptation with other urban improvements. Learning Objectives: To understand role of climate adaptation in the reconfiguration of human settlements. To apply design thinking to the issue of climate adaptation in the context of an urban society. To apply knowledge to challenge-based coursework on managing climate risk, decreasing climate vulnerability, and building resilience to climate change.

LA 5004. Regional Environmental Landscape Planning. (4 cr.; Student Option; Every Spring) An exploration of critical regional landscape parameters affecting the growth and development of metropolitan areas. Students assess these parameters and prepare a multifunctional land use plan for a defined locale. prereq: PA 5271 or LA 5131 or FR 3131 or GEOG 3561 or GEOG 5561 or equivalent

LA 5096. Internship for Master of Landscape Architecture Students. (1-3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Students will receive supervised professional experience in a landscape architectural design firm in order to gain employment experience related to the field as well as receiving graduate credit. As a requirement of the course, students will submit a reflection paper relating the professional experiences to their education. Must have director of graduate studies (DGS) approval of the internship to register.

LA 5131. Geospatial Data Analysis and Design. (3 cr.; A-F only; Every Fall) Introduction to geospatial data analysis/application in landscape architectural, environmental design research/practice. prereq: Master of Landscape Architecture Student or instr consent

LA 5201. Making Landscape Spaces and Types. (6 cr.; A-F or Audit; Every Fall) Design exploration using 3-D models and historical precedent studies to create outdoor spaces for human habitation and use. Application of the basic landscape palette of landform, plants, and structures to give physical, emotional, cognitive, and social definition to created places. prereq: B.E.D accelerated status or LA grad or instr consent

LA 5202. Landscape Analysis Workshop. (; 1 cr.; S-N only; Every Fall) Introduction to field techniques for site analysis, including vegetation, soil, and landform description. One-week session, before fall term, at lake Itasca Forestry and Biological Station.

LA 5203. Ecological Dimensions of Space Making. (; 6 cr.; A-F or Audit; Every Spring) Design studio experience drawing on ecological, cultural, aesthetic influences to explore development of design ideas responsive to ecological issues and human experience. prereq: LA major or instr consent; recommended for both BED and Grad students

LA 5204. Metropolitan Landscape Ecology. (; 3 cr.; A-F only; Every Fall & Spring) Theories/principles of holistic landscape ecology. People, nature, and environmental stewardship in metropolitan landscapes. Urban areas, rural areas that provide food, water, energy, and recreation. prereq: B.E.D accelerated status or LA grad student or instr consent

LA 5376. Representation I. (4 cr. [max 8 cr.]; A-F only; Every Fall) Strengthen freehand sketching ability. Develop observation skills. Develop ability to communicate ideas clearly through visual expression. Learn/explore conventions of landscape architectural drawing. Basic tools/techniques associated with Adobe Photoshop CS6. Promote fluidity between analog/digital media. Create drawing personality/graphic style. prereq: Master of Landscape Architecture (MLA) or Accelerated Bachelor of Environmental Design.

LA 5377. Representation II. (4 cr. [max 8 cr.]; A-F only; Every Spring) Explore multi-media rendering techniques. Increase knowledge of art materials/graphic programs. Increase hand-drawing ability. Color theory, contemporary graphic styles. Layout, grid systems/type. Increase speed of drawing/producing renderings. Create or strengthen graphic style. prereq: Master of Landscape Architecture (MLA) or Accelerated Bachelor of Environmental Design

LA 5378. Representation III. (3 cr.; A-F or Audit; Every Spring) Increase skills learned in Representation I and Representation II and develop 3-D modeling skills, distill complex information to visually explain a design concept while gaining skills that are valuable in the workplace and create portfolio quality work.

LA 5381. The City in Visual Culture. (3 cr.; A-F only; Every Spring) Visual culture is not just that we see the way we do because we are social animals, but also that our social arrangements take the forms they do because we are seeing animals. The social arrangements of the city, the buildings and public spaces, are concretized expressions of power and culture. The course will, through multiple drawings, attempt to critically examine these social arrangements as they have evolved over time (history) by re-presenting the city (as human experience and aesthetic form). The course will be structured around on-site work sessions, critical readings, on- and off-site lectures, and weekly drawing assignments.

LA 5400. Topics in Landscape Architecture. (; 1-3 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Current topics in landscape architecture. Taught by regular or visiting faculty in their areas of specialization. prereq: B.E.D., accelerated status or LA grad or instr consent

LA 5401. Directed Studies in Emerging Areas of Landscape Architecture. (; 1-3 cr. [max 12 cr.]; Student Option; Every Fall & Spring) tbd prereq: instr consent

LA 5402. Directed Studies in Landscape Architecture History and Theory. (; 1-6 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Independent studies under the direction of landscape architecture faculty. prereq: instr consent

LA 5403. Directed Studies in Landscape Architecture Technology. (; 1-6 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Independent studies under the direction of landscape architecture faculty. prereq: instr consent

LA 5404. Directed Studies in Landscape Architecture Design. (; 1-6 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Independent studies under the direction of landscape architecture faculty. prereq: instr consent

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
LA 5405. Interdisciplinary Studies in Landscape Architecture. (3-6 cr. [max 12 cr.]; A-F or Audit; Every Fall & Spring) Research, planning, or design projects. Topics vary. prereq: instr consent

LA 5408. Landscape Architecture, Architecture, and Planning. (3-4 cr.; A-F or Audit; Every Fall & Spring) Methods and theories in urban design and human behavior. Students develop urban design journal as tool for experiencing, analyzing, and recording the urban landscape, its fabric, spatial elements, and individual components, and for analyzing design solutions. prereq: Admitted to Denmark International Study Program co-sponsored by the University; given in Denmark

LA 5413. Introduction to Landscape Architectural History. (3 cr.; A-F or Audit; Every Fall) Introductory course examines the multiple roots of landscape architecture by examining the making of types of landscapes over time. Emphasis on environmental issues, and issues related to political, economic, and social contexts of landscape architectural works. prereq: One course in history at 1xxx or higher

LA 5414. Study Abroad: History and Culture. (0-3 cr.; A-F only; Every Spring) This is a history course aimed at investigating the rich urban, landscape and architectural legacy of Spain, tracing the multiple histories of the Spain through the ceremonial and quotidian spaces of Madrid as it developed as the capital city of the Catholic monarchy and the monuments of Al-Andalus, the Islamic caliphate in Southern Spain. The course is structured so that each week there will be an in-class lecture and a walking tour of Madrid. There will also be several field trips to historic sites.

LA 5514. Making the Mississippi. (3 cr.; A-F or Audit; Every Spring) Critical environmental parameters affecting growth/development of metropolitan areas. Students assess these parameters and prepare a multi-functional land use plan for a defined locale.

LA 5576. Ecological Restoration Project Planning and Management. (3 cr.; A-F only; Every Fall) Applied practice of ecological restoration of landscapes. Grasslands, wetlands, forests, disturbed agricultural sites, former industrial parcels. Restoration management, skills needed to lead successful projects. prereq: [MLA student, senior B.E.D.] or senior or grad with one college course in ecology/one college course in plant science or botany or instr consent

LA 5705. Regreening Minds, Cities, and Regions. (3 cr.; A-F; Every Fall) Emerging types of green spaces. Urban agriculture, urban wetscapes, urban wilderness. Politics, policies, metrics, planning of alternative visions of urban nature/sustainability in American cities. Role of social networks in creating emerging types of green spaces. prereq: Landscape Architecture graduate student or instr consent

LA 5755. Infrastructure, Natural Systems and the Space of Inhabited Landscapes. (3 cr.; A-F or Audit; Every Fall) Cross-disciplinary exploration of urban infrastructural solutions to mitigate/reverse anthropogenic impacts on Earth. Design of sustainable urban infrastructure systems, policy options, available technologies, criteria, design methods. prereq: Grad student

LA 5761. Infrastructure + Culture. (3 cr.; A-F only; Every Spring) As attitudes about ecology and nature are shifting and as the threats from climate change are becoming more pronounced, new infrastructure works in the Netherlands are caught in a double bind of responding to ecological concerns and protection of the land. This course will explore both historic and modern water management infrastructures as cultural and engineering constructs through visual representation as a form of critique. The course will be structured around study trips, preparatory readings, on-site lectures, and will be supplemented by the participation of several guest speakers.

LA 5771. Landscape Infrastructure and Systems I. (3 cr. [max 6 cr.]; A-F only; Every Fall) Basic principles, techniques, skills of creating infrastructures of built landscapes. Basic concepts of simple plant taxonomy, plant community structure, earthwork, water management, landscape structures. Small site scale design development. prereq: Master of Landscape Architecture Student, [Accelerated Track B.E.D or instr consent]

LA 5772. Landscape Infrastructure Systems II. (3 cr. [max 6 cr.]; A-F only; Every Spring) Principles, techniques, skills of creating ecological infrastructures of built landscapes systems. Builds on basic concepts taught in LA 5771. Focuses on ecological connections among plants, landscape structure, earthwork techniques, water management, landscape structural systems. prereq: Master of Landscape Architecture Student, [Accelerated BED Student or instr consent]

LA 8201. Designing Landscapes for Dwelling and Settlement. (6 cr.; A-F or Audit; Every Fall) Professional design studio. Hypothetical projects include development of schematic master plans for site layout, grading, and planting. Design for residential, commercial, and civic uses with attention to zoning and other controls, environmental quality, human behavior, markets, project finance, and technics. Requires concurrent registration in LA 8202. prereq: 5203, 5571, grad LA major, concurrent registration is required (or allowed) in 8202 or instr consent

LA 8202. Design of Planned Developments. (2-3 cr.; Student Option; Every Fall & Spring) Issues related to planned community developments: historical precedents; design for residential, commercial, and civic uses; role of zoning and other controls; deed restrictions; preparation of design brief; environmental quality; human behavior; market; project finance; and techniques of site development. prereq: Grad LA major or instr consent

LA 8204. Regional Landscape Space. (3 cr.; A-F or Audit; Periodic Fall & Spring) Theoretical investigations and current advances in use of landscape ecology, landscape perception, regional economies, and public policy as informants of design decision making in regional landscapes at or exceeding township level. Geographic information systems as design tools. prereq: Grad LA major or instr consent

LA 8205. Urban Form Options: Landscape Architecture Studio. (6 cr.; max 8 cr.; Student Option; Every Fall & Spring) Urban landscape design issues, theories, and problems explored via formal/spatial inquiry in studio, reading, and the exposition of ideas in paired seminar. Urban systems, gathering spaces, ecology, infrastructure, recreation, and public space. prereq: 2 yrs of studio, grad LA major or instr consent

LA 8206. Making Urban Landscape Space. (6 cr.; A-F only; Every Fall) Studio course focusing on the restoration and reuse of urban brownfield (former industrial) sites. Biological and mechanical remediation processes and the development of hard and soft site infrastructures to deal with storm water, energy generation, and the handling of waste. Re-design sites in terms of new uses and economies, and to re-integrate sites into existing and future urban systems of transportation. prereq: MLA grad student

LA 8207. Cities on Water International Workshop. (6 cr.; max 16 cr.; A-F only; Every Spring) Intensive studio course on international applications of sustainable urban design. prereq: Grad LA or ARCH major or instr consent

LA 8301. Landscape Architecture: Research Issues and Methods. (3 cr.; A-F or Audit; Every Fall & Spring) Alternative methodological approaches to landscape architectural research and consideration of their appropriateness for contemporary research topics. prereq: 8201 or concurrent registration is required (or allowed) in 8201, grad LA major or instr consent

LA 8302. Professional Practice. (3 cr.; A-F or Audit; Every Spring) Office and project management case studies. Organizational behavior, marketing, sales, strategic planning, financial and cost accounting, insurance, legal issues and contracts. prereq: 8205, grad LA major or instr consent

LA 8333. FTE: Masters. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

LA 8400. Topics in Landscape Architecture. (1-8 cr.; max 96 cr.; Student Option; Every Fall, Spring & Summer)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
Guided individual reading or study. prereq: instr consent, dept consent

LAT 5994. Directed Research. (1-12 cr. ; Student Option; Every Fall & Spring)
Guided research on original topic chosen by student. prereq: Grad student or instr consent

LAT 5996. Directed Instruction. (1-12 cr. ; Student Option; Every Fall & Spring)
Supervised teaching internship. prereq: Grad student or instr consent

LAT 8100. Readings in Latin Prose. (3 cr. ; Student Option; Every Fall & Spring)
Reading/discussion of Latin prose texts.

LAT 8120. Latin Text Course. (3 cr. ; student or instr consent)
Students attend 3xxx Latin courses. Supplementary work at discretion of instructor. prereq: 3111 or dept consent; not for students in dept of Classical and Near Eastern Studies

LAT 8200. Readings in Latin Verse. (3 cr. ; Student Option; Every Fall & Spring)
Reading/discussion of Latin poetic texts. prereq: Advanced grad student

LAT 8262. Survey of Latin Literature I. (3 cr. ; Student Option; )
Extensive readings in variety of works from republican and early Augustan period.

LAT 8263. Survey of Latin Literature II. (3 cr. ; Student Option; )
Variety of works from Augustan and imperial periods.

LAT 8267. Graduate Survey of Latin Literature of Late Antiquity. (3 cr. ; Student Option; Periodic Spring)
Latin literature of 3rd to 6th centuries A.D., including Ammianus and Augustine. prereq: instr consent, dept consent

LAT 8300. Readings in Latin Texts. (3 cr. ; Student Option; Every Fall & Spring)
Reading/discussion of literary or documentary texts from Roman antiquity. Topics may include subjects that draw on various sources, genres, or methods. prereq: Advanced grad student

LAT 8910. Seminar. (3 cr. ; max 30 cr.) ; Student Option; Periodic Fall & Spring)
Topics in Latin literature examined in depth. Emphasizes current scholarship, original student research.

Law School (LAW)

LAW 5000. Introduction to American Law and Legal Reasoning. (3 cr. ; A-F only; Every Fall)
Law pervades all areas of modern life. Yet it remains mysterious to those without legal training. This course will equip you to better answer such questions by exploring the tools that lawyers use to interpret and apply the law. Students will learn to think like lawyers through a series of contemporary case studies that require reading, writing, thinking, and problem solving like a lawyer. Cases will be drawn from topics such as contracts, torts, civil procedure, property, business law, criminal law, sports law, privacy, and law and science.

LAW 5001. Introduction to the American Legal System. (2 cr. ; A-F only; Every Fall)
This is an introductory course in American law, providing an overview of a wide variety of constitutional, statutory, and common law legal issues. A primary focus will be on American constitutional law: legislative, judicial, and executive powers; the legal structure of checks and balances? among the three national governmental powers; the distribution of powers between the national government and state governments (federalism); and the constitutional rights of individuals (including rights of free speech, freedom of religion, due process, and equal protection). We will also examine the American system of litigation: the structure of the court system, the jurisdiction of federal (national) and state courts, and the litigation process. We will also address some common law substantive topics in American law including torts and contracts. Students will have the opportunity to learn how to read and interpret American legal materials, to do legal research within the legal system, and to write an analytical legal memorandum.

LAW 5002. MSPL Legal Research and Writing. (1 cr. ; S-N only; Every Fall)
This course covers the process of communicating about the law. Our goal is to teach students the building blocks of legal communication through multiple practice exercises so that students can repeat the process on their own after completion of the course. In the fall (one credit), we begin at orientation with a short exercise, then move on to email, letter, and office memorandum exercises written in an objective/predictive mode.

LAW 5025. Patent Law Proseminar. (1 cr. ; S-N only; Every Spring)
The field of patent law extends across the boundaries of business, technology, innovation, and law. In this course, students will be introduced to current topics and compelling issues in patent law presented by leading patent and intellectual property law professionals. Students will gain real-world insights from in-house and private practice attorneys and agents, with a focus on patent prosecution and patent litigation.

LAW 5026. Intellectual Property and Technology Proseminar. (1 cr. ; S-N only; Every Fall)
The field of intellectual property extends across the boundaries of business, technology, innovation, and law. In this course, students will be introduced to a broad range of IP related topics presented by leading practitioners working at the intersection of law and technology. Topics may include trade secrets, copyrights, trademarks, patents, IP transactions, IP litigation, emerging technologies, intellectual asset management, IP valuation and commercialization. Lecturers may include corporate general counsels, firm lawyers, transactional lawyers, litigators,
LAW 5050. Law of Business Organizations.  (3 cr.; A-F only; Every Spring)
This course surveys the leading forms of legal business association governing the formation of business entities, including the laws of agency, partnerships, limited liability companies, and corporations. Emphasis is put on the methods lawyers use to interpret statutes and cases.

LAW 5051. Business Associations/Corporations.  (4 cr.; Student Option; Every Fall & Spring)
The initial part of this course is an introduction to the general law of multi-person unincorporated business organizations, principally partnerships, limited partnerships, and limited liability companies. Matters covered include the procedures for forming such organizations and the rights and obligations of the participants as among themselves and with respect to third persons. The remaining class hours constitute the first portion of the basic Corporations course, and will cover such matters as corporate organization; the distribution of powers among the corporate board of directors, its officers and its stockholders; the proxy system; control devices in the close corporation; and the fiduciary duties of directors, officers and controlling shareholders. Matters dealing with corporate finance? (issuance of shares, payment of dividends, and corporate reorganizations) are covered in Advanced Corporate Law.

LAW 5061. Financial Regulation.  (3 cr.; Student Option; Periodic Fall & Spring)
This course will be a high-level overview of several different areas of financial regulation: banking regulation, insurance regulation, and elements of securities regulation (particularly broker-dealer and investment company regulation).

LAW 5062. Energy Law.  (3 cr.; Student Option; Periodic Fall & Spring)
This course provides an introduction to US energy law. The first portion of the course introduces the nation's primary sources of energy: coal, oil, biofuels, natural gas, hydropower, nuclear, wind, solar, and geothermal energy. In doing so, it explores the physical, market, and legal structures within which these energy sources are extracted, transported, and converted into energy. The second portion of the course turns to the two major sectors of our energy economy--electricity and transportation--and the full range of federal and state regulation of each sector. The third portion of the course explores case studies of hot topics in energy law and policy that highlight the complex transitions taking place in the energy system. These topics include electric grid modernization, electric vehicles, risks and benefits associated with hydraulic fracturing and deepwater drilling for oil and gas, and the continued role of nuclear energy. In addition to traditional textbook reading and class discussion, the course will include industry, government, and nonprofit guest speaker presentations. Grading will be based on a final exam given at the end of the semester as well as class discussion and weekly written postings on the TWEN site for the course.

LAW 5075. Ethics for Patent Agents.  (1 cr.; A-F only; Every Spring)
This course is designed to provide students with an introduction and understanding of the ethics and rules of professional responsibility and the unauthorized practice of law. Scope: This course covers ethics and professional responsibility for lawyers, ethics and professional responsibility for patent agents and patent attorney?s and the unauthorized practice of law. Goals: This course will provide students with the framework that will guide their actions and conduct as future patent professionals by introducing them to various scenarios that they are likely to encounter in their professional career. By the end of the course, students will understand the principles behind the ethics and rules of professional responsibility and the unauthorized practice of law as it applies to nonlawyers. prereq: Master of Science Patent Law Students.

LAW 5076. Essentials of Business for Lawyers.  (3 cr.; Student Option; Every Fall & Spring)
This course will teach you how to: (1) Understand basic accounting principles; (2) Read an annual report and analyze financial statements; (3) Look beyond numbers to gauge the financial performance and strength of an entity; (4) Employ cash flow analysis to value a business or determine the potential financial rewards of an investment opportunity; and (5) Understand the strategic questions that business managers must confront in governing their companies. The course surveys foundational concepts, analytical techniques and practices related to finance, accounting and strategic management issues lawyers confront when working with business executives either as an outside consulting attorney or as an inside corporate counsel. It may also consider other concepts used by business executives, including organizational behavior, marketing and quantitative analysis. The aim of the course is to help law students better appreciate the broader business context of legal decision-making so that they can contribute more effectively as a member of a firm's top management team or as outside counsel.

LAW 5078. Legislation and Regulation.  (3 cr.; Student Option; Every Fall)
This course explores lawmaking in the administrative state. Topics include: the legislative process, delegation of legislative authority to administrative agencies, the rulemaking process, statutory interpretation by courts and agencies, and judicial review of agency decisions. The course will focus on how statutes structure and constrain judicial and administrative decisionmaking.

LAW 5100. Taxation I.  (3 cr.; A-F only; Periodic Fall & Spring)
This basic course in federal income taxation introduces the student to the Internal Revenue Code and the income taxation of individuals through the following topics: definition of income, relevant accounting concepts, exclusions, deductions, income splitting, sales and dispositions of property, amortization, capital losses, and current issues of tax policy.

LAW 5102. Mergers and Acquisitions.  (3 cr.; Student Option; Every Fall)
This class will cover the theory behind, the Federal and state law governing, and the practice of, mergers and acquisitions. Our main focus will be what a transactional lawyer would want and need to know as to why mergers and acquisitions might occur and how and why companies or shareholders would embrace or disfavor them, how the transactions are documented and how disclosure requirements are met, and what the present cases say.

LAW 5103. Data Privacy Law.  (3 cr.; A-F only; Periodic Fall & Spring)
Every single day, the newspaper contains stories?plural intended?about data privacy and security. Whether they concern the National Security Agency, Facebook, or a data breach at a small business, the handling of personal information has become a central concern of our time. In response, a complex law of data privacy has emerged, and now it is a fast growing area of legal practice. This course will equip students to counsel clients about an array of federal, state, and international legal requirements?while also analyzing them critically and thinking about the societal challenges posed by new information technology. Assessment will include group projects and a take-home final.

LAW 5112. Essentials of Business.  (3 cr.; A-F only; Periodic Fall & Spring)
This course will teach you how to: (1) Understand basic accounting principles; (2) Read an annual report and analyze financial statements; (3) Look beyond numbers to gauge the financial performance and strength of an entity; (4) Employ cash flow analysis to value a business or determine the potential financial rewards of an investment opportunity; and (5) Understand the strategic questions that business managers must confront in governing their companies. The course surveys foundational concepts, analytical techniques and practices related to finance, accounting and strategic management issues lawyers confront when working with business executives either as an outside consulting attorney or as an inside corporate counsel. It may also consider other concepts used by business executives, including organizational behavior, marketing and quantitative analysis. The aim of the course is to help law students better appreciate the broader business context of legal decision-making so that they can contribute more effectively as a member of a firm's top management team or as outside counsel.

LAW 5214. Insurance Law.  (3 cr.; Student Option; Every Fall)
Insurance is omnipresent in the practice of law because insurance is the primary means by which companies and individuals deal with risks. Lawyers, of course, often make a living either by counseling clients about
how to plan for risks or by serving clients whose risks have developed into losses. This course will introduce students to fundamental principles of insurance law and regulation. It will survey the nature and function of insurance, insurance contract formation and meanings, and insurance regulation. We will also look at specific legal issues relating to different lines of insurance, such as property, life, health, and liability insurance.

LAW 5224. Patents. (3 cr.; A-F only; Every Fall)
This course offers an overview of patent law for both those students intending to specialize in patent prosecution and those whose general practice may include patent litigation and licensing. Topics to be covered include the requirements for patentable subject matter; standards of novelty, utility, and non-obviousness; statutory bars; conception, priority, enablement, and written description requirements in patent procurement; direct and vicarious patent infringement; claims interpretation.

LAW 5231. Patent Prosecution Practice I. (2 cr.; A-F only; Every Fall)
Patent Prosecution Practice I is recommended for all students interested in intellectual property and patent law, including students considering practicing in the areas of patent prosecution, litigation, licensing, technology commercialization, and patent portfolio management. The course focuses on US patent practice and is designed to extensively develop the student’s skills. Throughout the semester each student will complete two projects: (1) formulate and draft patent claims for a number of different inventions in view of prior art. (2) develop strategies for responding to a patent examiner according to rules of the U.S. Patent Office, arguing patentability and allowance of a patent application over cited prior art. Each student will be paired with a senior practicing attorney who will act as a mentor, including reviewing drafts and providing candid feedback to the student. Lectures and discussion topics include: organization and structure of the U.S. Patent Office, the US patent process including the entire life cycle of a patent from application preparation and filing through examination and grant, formulating patent claims in view of prior art and potential infringers, architecting patent portfolios including all types of US patent applications, such as provisional, utilities, continuations and divisions, examination of patent applications including responding to Office Actions issued by the US Patent Office, invention and ownership determination and legal ramifications flowing therefrom, and US law and regulations governing patent prosecution practice. A technical background is not required to take this course.

LAW 5232. Patent Prosecution Practice II. (3 cr.; A-F only; Every Spring)
Patent Prosecution Practice II is recommended for all students interested in intellectual property and, in particular, students interested in advancing their skills and understanding of patent law and practice. Throughout the semester each student will complete three practical and diverse assignments designed to develop the student’s skills. Each student will be paired with a senior practicing attorney who will act as a mentor, including reviewing drafts and providing candid feedback to the student. Specifically, in this class, each student will: (1) prepare a complete US Patent Application based on a real invention, (2) write an appeal brief according to rules of the US Patent Trial and Appeal Board, arguing patentability and reversal of the patent examiner in view of an examination history by the US Patent Office, and (3) provide counseling to a client about to launch a new product, including reviewing issued US patents and developing a full non-infringement / invalidity opinion for the client. The course grade is primarily based on these three projects in lieu of a final exam. Lectures and discussion topics throughout the semester include: -skills and strategies for writing patent applications, -appeal practice including brief writing before the Patent Trial and Appeal Board (PTAB) at the US Patent Office, -clearance analysis including invalidity and non-infringement counseling and opinions, -foreign practice including national filings in foreign countries and international filings using the Patent Cooperation Treaty (PCT), including leveraging patent prosecution highways for accelerated examination, -eligible subject matter issues including recent case law and claim drafting tips, -accelerated examination procedures within the US Patent and Trademark Office, -legal and practical considerations of infringement counseling including formulating invalidity and non-infringement opinions, - post grant review and other mechanisms for challenging issued patents before the US Patent and Trademark Office, -patent prosecution related considerations that arise in relation to participation in industry standards organizations, -patent prosecution related considerations that arise in the context of universities and technology licensing organizations, and -design patents, prerequisite: Master of Science Patent Law Students only.

LAW 5242. Patent Application Drafting. (1 cr.; A-F only; Every Spring)
Patent Application Drafting. Students must also be enrolled in Law 5232 Patent Prosecution Practice II to take this course.

LAW 5243. Patent Research and Writing. (2 cr.; A-F only; Every Fall)
Patent lawyers and agents spend their entire professional careers communicating (with clients, patent examiners, judges, colleagues) no matter what their individual career paths may be. This course is about the process of research and communicating about patents. In other words, the goal of the course is to teach the building blocks of patent research and communication through multiple practice exercises so the student may repeat the process independently after successful completion of this course. This course leverages free, patent office, and commercial research tools. Deliverables and works include: patent landscape search and report, patentability search and opinion, patent risk search and assessment, patent invalidity search and opinion. Recommended prereq: Patents (5224), Patent Prosecution Practice I (5231) or Patent Portfolio Management (5250)

LAW 5250. Patent Portfolio Management. (2 cr.; A-F only; Every Fall)
Patent portfolio management is the art of aligning patent strategy with business objectives. In general, the successful portfolio manager must have the ability to transform complex patent information into actionable insights that provide decision-making value to a wide variety of stakeholders. This course introduces students to the various practices and skills that go into building, implementing, and managing a patent portfolio whether from the point of view of a small, innovative, start-up company or a Fortune 500 company in a highly competitive market space.

LAW 5290. Patent Law Capstone: Innovation. (3 cr.; A-F only; Every Spring)
This capstone course introduces students to the principles of successful innovation and the integral role of patents in this process. This is a course in innovation. There are no right or wrong answers. Large companies with very smart people often launch products that fail. Venture capitalists seeking to invest in winners more-often-than-not end up investing in losers. Innovation is an art not a science. There is no ?secret formula? that guarantees success. There are simply different tools, skills, methods of analysis and approaches that may or may not work better than others. We will explore the art of innovation and the integral role that patents play in turning an idea into an innovation. Goals: Students will learn how to research complex subject matter across the intersecting domains of business, finance, marketing, science, technology and intellectual property. Students will then develop the ability to present their findings in a clear and concise manner that is understandable to and can be acted upon by a cross-functional audience of high-level decision makers.

LAW 5601. International Business Transactions. (3 cr.; Student Option; Periodic Fall & Spring)
International Business Transactions is a three-credit course whose main focus of discussion and study is the private law aspects pertaining to international business transactions, rather than issues of national and international trade regulation. Thus, the course is primarily concerned with private international business law. We examine three basic methods of doing business abroad, namely, the sales of goods (export) transaction, licensing and franchising, and foreign direct investment. The course materials touch upon substantive law in areas as diverse as commercial transactions and the uniform commercial code, antitrust, intellectual property, conflict of laws, civil procedure, contracts, bankruptcy, taxation, and international law. While knowledge or background in these areas is certainly helpful it is not necessary for success in the course and for dealing with the issues raised in the readings or in class.
LAW 5603. Intellectual Property Survey. (3 cr.; Student Option; Periodic Fall & Spring) The intellectual property survey course presents an overview of patent, copyright, and trademark law. The course also will include some coverage of trade secrets, unfair competition, or federal preemption of state intellectual property laws. The course provides an opportunity for students to acquaint themselves with the major branches of intellectual property law, and may be most useful for students who intend to pursue careers in general business law or civil litigation; intend to specialize in one of the major branches of intellectual property law but want to develop a basic understanding of the other branches as well; or are interested in learning something about the field before committing to further in-depth study of one or more of its branches. Students should not enroll in this course if they already have taken, or will have taken by the end of the semester in which they plan to enroll in this course, two or more of the following courses: Patent Law, Copyright Law, Trademark Law, or Unfair Competition Law.

LAW 5608. Trademarks. (3 cr.; Student Option; Periodic Fall & Spring) This course will consider how marketers secure and enforce trademark rights. Trademarks are the indicators that consumers rely upon to determine the origin of goods and services. The course will focus on U.S. federal trademark law, but will also look at state and international trademark law as well as related areas such as false advertising, publicity rights, and cybersquatting. This course will provide a solid foundation for students interested in practicing trademark law (application, enforcement, licensing, or litigation) or more general intellectual property law. It will also be useful to attorneys who do any work with trademark-dependent industries such as retail sales, advertising, or media and entertainment. Finally, and more generally, trademark law offers excellent case studies of the interaction between law, culture, and technology, and of the evolution of traditional doctrine under pressure from rapid changes in surrounding circumstances.

LAW 5613. Copyright. (3 cr.; Student Option; Periodic Fall & Spring) This course provides a detailed introduction to the basic law of copyright/traditional copyright subject matter, the concept of originality and authorship, copyright transfers (and terminations of transfers), infringement, and fair use. The course coverage excludes patent law, except in brief overview, and only touches briefly upon related areas of intellectual property law. Copyright (and copyright-like schemes) have increasingly become a necessary tool of the general practitioner, used to protect the explosive growth in economic value of information-based products, like computer software and digital networks and databases. The lawyer ignorant of basic copyright principles will be increasingly handicapped in many areas of practice, such as negotiating technology transfers, drafting contractual rights, developing schemes of protection and privacy, distinguishing criminal from non-criminal behavior, and in litigation.

LAW 5624. Strategic Management of Intellectual Property. (3 cr.; Student Option; Periodic Fall & Spring) Firms competing in a knowledge economy depend increasingly on intellectual property (IP): patents, trademarks, copyrights, trade secrets, and copyrights. Adroit firms understand that IP-based competition demands close coordination between legal and strategic management executives. This course introduces you to fundamental IP concepts, competitive strategies, and public policy challenges from legal and strategic management perspectives. Learn how the scope of IP protection and legal weaponry to vindicate IP rights has changed substantially in the past 15 years. Learn how IP management integrates within a broader strategy for sustained profitability in high-tech industries. Learn how firm IP strategy to limit competitors is reconciled with antitrust policies promoting competition. Learn how managers price IP-protected products and services differently in developed versus developing economies. Come away with legal and managerial tools for applying IP-based strategies that will advance your firm and career.

LAW 5707. Intellectual Property Transactions. (2 cr.; A-F only; Every Spring) Intellectual property rights have been described as a ?sword and shield.? Rights holders are thought to act offensively by suing or threatening to sue infringers and seeking money damages, irrespective of the holders? marketing and product sales programs. Or they act defensively to protect their current or future market positions by having federal courts enjoin competitors. This course considers a third way: intellectual property rights are also valuable intangible assets that may be bought and sold. In this course, we will explore the principal theories and practices of intellectual property transactions. We will be considering closely the doctrines regulating the assigning and licensing of patent, copyright, trademark and other intellectual property rights, and we will be questioning critically whether these laws and practices encourage or inhibit commercial activity and innovation. While studying specific transactions in the course, we will be examining the practical uses of intellectual property law to meet commercial objectives.

LAW 5908. Independent Research and Writing. (1-2 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer) Students may earn 1 or 2 credits (and in exceptional circumstances, 3 credits) for researching and writing a note, article, memo, or other paper on a legal topic. At least 3,750 words are required for one credit, at least 7,500 for two credits, and at least 11,250 for three credits. To register, the student should confer with a supervising faculty member, draft a description of the proposed project, and complete the online Independent Research form. LAW 5908 is for students who are not enrolled in the Law School, as well as MSPL candidates. Other law school degree candidates should enroll in LAW 7606 or LAW 7608 instead of LAW 5908.

LAW 5909. Independent Field Placement. (1-3 cr.; S-N only; Every Fall, Spring & Summer) Students may earn up to three credits in a semester for work in a patent practice setting under the supervision of a qualified field supervisor and a faculty advisor. At least 50 hours of patent-related activities are required per credit. The student is responsible for identifying a field placement setting and supervisor, finding a faculty advisor, and submitting the Independent Field Placement Enrollment Form for approval by the Associate Dean of Academic Affairs prior to enrollment.

LAW 6000. First Year Law Coursework. (13-16 cr. [max 32 cr.]; A-F only; Every Fall & Spring) First year Law Students have 16-credits of required coursework in fall and 13-credits of required coursework in spring. Registration in Law 6000 represents registration in these courses.

LAW 6001. Contracts. (4 cr.; A-F only; Every Fall) Basic course in contract and promissory obligation; formation of contracts; legal validity and construction; breach; legal and equitable remedies for breach; conditions; third-party rights.

LAW 6002. Legal Research & Writing. (1 cr.; P-F only; Every Fall) This year-long course covers the process of communicating about the law. Our goal is to teach students the building blocks of legal communication through multiple practice exercises so that students can repeat the process on their own after successful completion of the course. In the fall (one credit), we begin at orientation with a short exercise, then move on to email, letter, and office memorandum exercises written in an objective/predictive mode. In the spring (two credits), we proceed gradually to a persuasive trial court brief and delivery of formal oral arguments. The spring also includes a Statutory Interpretation module (one credit).

LAW 6003. Legal Research & Writing. (3 cr.; P-F only; Every Spring) The course continues in the spring (Fall Law 6002 - 1 credit; Spring Law 6003 - 3 credits) with a focus on statutory law. Students learn the basic doctrines of statutory interpretation while preparing a trial court (persuasive) brief. Students work through building block assignments in researching and drafting the brief. Students also learn the basic guidelines for formal oral argument, and the semester concludes with two rounds of oral argument. The semester also includes: additional research training focused on statutes, legislative history, and administrative law; individual conferences with instructors; peer review; a writing workshop; and an observation of oral argument before the Minnesota Supreme Court.

LAW 6004. Property. (4 cr.; A-F only; Every Spring)
The law’s protection of possession and ownership of real and personal property.

**LAW 6005. Torts.** (4 cr.; A-F only; Every Fall)
Civil liability for infliction of harm, including assault, battery, false imprisonment, infliction of mental distress, negligence, and their respective defenses; function of torts process.

**LAW 6006. Civil Procedure.** (4 cr.; A-F only; Every Fall & Spring)
This course addresses rules governing civil litigation, with emphasis on rules applicable in federal district courts. Topics may include due process, pleading, joinder, discovery, case management, the relationship between judges and juries, settlement, alternative dispute resolution, summary judgment, post-trial motions, finality, and preclusion. The course will also provide a brief survey of the topics covered in Civil Procedure I.

**LAW 6007. Constitutional Law.** (3 cr.; A-F only; Every Fall & Spring)
Judicial review authority; problems of government structure (federalism, intergovernmental relations, separation of powers); and individual rights and limitations on government power (protection of economic and property claims, equality under the law, personal liberties, freedom of speech and of religion).

**LAW 6009. Criminal Law.** (3 cr.; A-F only; Every Fall & Spring)
Purposes/functions of criminal processes and of several deprivations they impose. Requisites for official designation of acts and persons as “crimes” and “criminals.” Justifications for acts otherwise designated “criminal.” Emphasizes concepts of criminal responsibility. Nature/limits of criminal sentencing process; pretrial: dept consent

**LAW 6010. Perspectives: 1L.** (3 cr.; A-F only; Every Spring)
This course, offered in first-year and upper-year sections, is team-taught by faculty who approach the law from three different disciplinary perspectives. The disciplines presented will vary from year to year.

**LAW 6011. International Law: 1L.** (3 cr.; A-F only; Every Spring)
The course is an introduction to public international law. It will examine the sources and history of the law of nations, and how international law is formed, interpreted and (sometimes) enforced. It will also provide a brief introduction to the law of international organizations (specifically the United Nations), concepts of jurisdiction and conflicts of jurisdiction among nation states, international protection of human rights, the law of war, international criminal law, and the control of the use of force (including peacekeeping and related topics).

**LAW 6013. Law In Practice: 1L.** (3 cr.; P-F only; Every Spring)
This course introduces first-year students to the skills needed to apply emerging knowledge of legal doctrine and reasoning in the actual practice of law. The course involves a series of simulation experiences related to two case files?one litigation case and one transactional matter. Students attend ?Law Firm? classes taught by Law School faculty that explore the doctrinal and strategic issues in the simulated cases. Students also perform simulations in ? Practice Groups? of eight students led by local practicing attorneys. Each student individually takes and defends a deposition. Groups of two students engage in client or witness interviews, client counseling and negotiation simulations. Students also complete either a simulated conference in the chambers of a local judge or engage in a simulated mediation conducted by a qualified neutral.

**LAW 6015. Civil Procedure II: 1L.** (3 cr.; A-F only; Every Spring)
This course builds on Civil Procedure I by examining additional facets of civil litigation. Topics may include personal jurisdiction, subject matter jurisdiction, venue, preliminary injunctions and temporary restraining orders, the Erie doctrine, appeals, and class actions.

**LAW 6016. Essentials of Business for Lawyers.** (3 cr.; A-F only; Every Spring)
This course will teach you how to:
1. Understand basic accounting principles; (2) Read an annual report and analyze financial statements; (3) Look beyond numbers to gauge the financial performance and strength of an entity; (4) Employ cash flow analysis to value a business or determine the potential financial rewards of an investment opportunity; and (5) Understand the strategic questions that business managers must consider in governing their companies. The course surveys foundational concepts, analytical techniques and practices related to finance, accounting and strategic management issues lawyers confront when working with business executives either as an outside consulting attorney or as an inside corporate counsel. It may also consider other concepts used by business executives, including organizational behavior, marketing and quantitative analysis. The aim of the course is to help law students better appreciate the broader business context of legal decision-making so that they can contribute more effectively as a member of a firm?s top management team or as outside counsel.

**LAW 6018. Legislation and Regulation.** (3 cr.; A-F only; Every Spring)
This course explores lawmaking in the administrative state. Topics include: the legislative process, delegation of legislative authority to administrative agencies, the rulemaking process, statutory interpretation by courts and agencies, and judicial review of agency decisions. The course will focus on how statutes structure and constrain judicial and administrative decision making.

**LAW 6019. Leadership and Law - LL.M.s.** (2 cr.; A-F only; Periodic Spring)
In this age of globalization, leadership and professionalism within the legal profession takes on new and complex meanings. Research has demonstrated that introducing legal practitioners to emotional intelligence competencies impacts their professionalism and professional identity by increasing their ability to persuade, advocate, influence, and communicate. In this course students will begin to develop their personal leadership identity and explore how that identity is influenced by culture. Students will explore what it means for the lawyer to be a leader. They will be challenged to: determine their professional strengths and developmental points; consider how individual personality and cultural traits affect group processes in legal institutions; explore the contextual nature of professionalism and how to adjust techniques based upon cultural cues (especially in international settings); navigate professional, legal settings to maximize their organizational impact; and discover and develop various leadership skills.

**LAW 6020. LL.M. Introduction to American Law.** (2 cr.; A-F only; Every Fall)
This course introduces law students and lawyers from other legal systems to the basics of the U.S. legal system and its legal institutions. The course will include legal research exercises designed to develop legal research skills.

**LAW 6021. LL.M. Legal Writing and Legal Skills I.** (3 cr.; A-F only; Every Fall)
The fall course introduces legal writing and focuses on legal analysis. Students will draft and edit letters and office memoranda and engage in exercises such as mock client meetings and professional presentations. The focus of the fall semester is predictive legal writing. Some time will also be spent discussing how to prepare for and take law school exams.

**LAW 6022. LL.M. Legal Writing and Legal Skills II.** (3 cr.; A-F only; Every Spring)
The spring semester course continues to build upon the foundation presented in the fall semester and to examine the fundamentals of U.S. legal analysis and legal writing. The focus of the second semester is persuasive legal writing and students will draft and edit a legal memorandum for motion practice in litigation as well as professional correspondence. To accomplish these goals, students act as attorneys in fictitious law firms, representing either the plaintiff or the defendant in a litigation matter. Students will also engage in simulated oral exercises such as mock client meetings and mock oral arguments. We will also spend time examining how to improve legal writing by doing editing and revising exercises and by analyzing samples of good (and bad) legal writing.

**LAW 6023. LL.M. Contract Drafting.** (2 cr. [max 3 cr.]; A-F only; Every Fall)
This seminar will cover general contract principles and build upon them in a practical way. Students will review and revise contracts, draft sample provisions, draft contracts from “scratch” and discuss options for managing risk through effective drafting.

**LAW 6024. LL.M. Trial Practice.** (3 cr.; A-F only; Periodic Spring)
Selected problems in litigation. Exercises in jury selection, introduction of evidence, expert testimony, direct and cross examination and impeachment of witnesses, opening statements.
and closing arguments. Prerequisite: LL.M. student

LAW 6025. Wrongful Convictions. (2 cr.; A-F only; Every Fall)
Wrongful Convictions is run in conjunction with the Innocence Project of Minnesota. Its purpose is to educate students about the causes of wrongful convictions as well as provide students with an opportunity to work on hypothetical courtroom situations in a classroom setting. The reading materials and classroom discussion will cover such topics as unreliable eyewitness identifications, false confessions, jailhouse informant testimony, ineffective assistance of counsel, government misconduct, problematic forensic science, and racial bias in the court system. We will also discuss how DNA testing works and its application in the courtroom. Students are expected to perform in-class exercises such as examination of witnesses making eyewitness identification, challenging confessions, cross-examine a cooperating witness and conduct voir dire on racial bias. Finally, students will be required to evaluate inmate applications for assistance submitted to the Innocence Project of Minnesota as part of their midterm sample assignment and final assignment.

LAW 6026. Gaming Law. (3 cr.; A-F only; Periodic Spring)
This course covers the law related to one of the fastest growing and most regulated industries in the United States. It will focus on the $28 billion a year industry of Indian gaming and the issues tribes frequently face. The core of the course will develop an understanding of the relationship between federal, tribal, and state gaming regulatory schemes. It also reaches several substantive law fields, including administrative law, constitutional law, contracts, federal Indian law, labor law, and tribal law. Students do not need a background in federal Indian law or tribal law to successfully complete this course.

LAW 6027. Law of the Sea. (2 cr.; A-F only; Periodic Fall)
This course will examine the United Nations Convention on the Law of the Sea (UNCLOS). UNCLOS has been established as arguably the most comprehensive expression of multilateral treaty negotiation and practical application since it entered into force in 1994. The Convention is the definitive word on the use of seas and oceans as well as the innovations that have ushered in, which include: the high seas as well as the rights of innocent passage; archipelagic states; the exclusive economic zone; the continental shelf; access by landlocked states to the resources of the sea; geographically disadvantaged states; protection of the environment; the high seas and the resources thereof for the common heritage of mankind; the international seabed authority; maritime delimitation and the dispute settlement arrangements through the International Tribunal of the Law of the Sea, among others. The course will also study the wealth of case law affecting the development of international law of the sea. The course will adopt a practical approach to enhance skills in the drafting of treaties pursuant to UNCLOS, such as arrangements between coastal states and landlocked states for the sharing of EEZ resources. Students will be exposed to "mock" maritime boundary delimitations and guest lecturers/visiting professors will facilitate this simulation.

LAW 6028. LL.M. Judicial Observation. (1-2 cr.; S-N only; Every Spring)
Students work with a judge and observe how our court systems work in the United States. Prerequisite: LL.M. student

LAW 6029. Introduction to Roman Law. (3 cr.; A-F only; Periodic Spring)
Introduction to Roman private law, focusing particularly on the law of property. The initial part of the semester will be spent introducing the sources of Roman law, Roman legal procedure, and the post-antique reception(s) of Roman law.

LAW 6030. Contemporary Problems in Freedom of Speech and Press. (3 cr.; A-F only; Every Fall)
Most of us use devices like Smartphones, GPS, streaming services, or hands-free speakers like Amazon's Echo that connect to online voice services like Alexa without thinking about them very much. But, what kind of information are they collecting? Are merchants allowed to gather your shopping history and use it to send you targeted advertising, or to sell it to other companies for profit? Should other people be able to post your personal information or photos online without your consent? Can the government read your emails, track your online browsing, or intercept your text messages? This course considers how growing concerns about privacy and national security after the First Amendment and the rights of journalists to gather and report the news. We will read significant court decisions and take a look at current statutory and regulatory initiatives both in the United States and abroad. You can expect lively debates and discussion, and the opportunity to explore a privacy or national security issue in depth in a substantial research paper.

LAW 6031. Smart Growth. (2 cr. [max 3 cr.]; A-F only; Periodic Spring)
This class examines emerging legal strategies to address the fiscal, environmental, and social impacts of urban sprawl. Topics include: inequalities in access to housing, jobs, and educational opportunities; local fiscal competition; local, state, and regional regulatory responses to metropolitan development; environmental impacts of metropolitan development; and evolving legal structure of regional governance in America's large metropolitan areas.

LAW 6034. Sem: Women's Legal History. (2-3 cr.; A-F only; Periodic Spring)
Passage of National Historic Preservation Act (NHPA) as watershed in cultural property law. NHPA direction of federal government to protect/preserve cultural property.

LAW 6035. Corporate Externship. (3 cr.; P-F only; Periodic Summer)
In this program, students are placed in company law departments to experience the work of in-house counsel. The student will receive 3 credits for 150 hours, to be completed over a 6 to 8 week period, working on substantive areas of law such as corporate policies and codes of conduct, employment law, vendor and supplier agreements, SEC filings and documents, international and comparative law, finance, and intellectual property. Students will also participate in or sit in on meetings, telephone or video conferences, and company events to experience day-to-day work of in house counsel and the flow of work and life in the corporate world. The instructor matches students and companies using a questionnaire. Students also attend up to two on-campus workshops and complete written assignments, including journals of their experiences. There is a required orientation meeting at the beginning of the semester.

LAW 6036. Reproductive Rights. (3 cr.; A-F only; Every Fall)
The age-old debate on the rights of individuals to sexual determination and reproductive autonomy rages on. It grows more contentious as new technology and heated political confrontations alter the playing field. This course, using cases, statutes, and ancient and contemporary critical writings, examines the legal foundations and social implications of regulating contraception, abortion, pregnancy, childbirth, and assisted reproduction. It addresses access, funding, the rights of men, women, minors, fetuses, and government. It also explores ethical considerations and international perspectives.

LAW 6037. Emerging Sciences and Technologies: Law, Ethics and Policy. (3 cr.; A-F only; Periodic Fall)
This interdisciplinary course will examine issues at the nexus of law, ethics, public policy, and emerging sciences and technologies (ES&T) including nanotechnology, genetic and biomedical engineering, cognitive science, synthetic biology, and robotics. Topics will explore include the role of science and technology as both a tool for and the subject of law and policy; the legal, ethical, economic, and policy implications of ES&T research and development; environmental and human health risk analysis and regulation (e.g., EPA, FDA, OSHA, and state and local regulatory mechanisms); intellectual property issues; liability issues; and global impacts. Topics will be approached from the perspective of different stakeholder (e.g., federal agencies, industry, academic researchers, the environment, international organizations, and the public) and in the context of different application areas (e.g., drugs, devices, food, agriculture, energy, environmental remediation) using a variety of interdisciplinary approaches. Students with a
broad range of interests are encouraged to enroll.

**LAW 6038. Biomedical Ethics.** (3 cr.; A-F only; Periodic Fall)
Topics in biomedical ethics. Patients' rights/duties, informed consent, confidentiality, ethical issues in medical research, initiation/termination of medical treatment, euthanasia, abortion, allocation of medical resources.

**LAW 6039. Great Cases.** (3 cr.; A-F only; Periodic Spring)
Eighteen U.S. Supreme Court cases that have shaped our nation. Five nationally publicized trial court cases. Historical, political, and legal context.

**LAW 6040. Perspectives on the Law.** (3 cr.; A-F only; Every Spring)
This course, offered in first-year and upper-year sections, is team-taught by faculty who approach the law from three different disciplinary perspectives. The disciplines presented will vary from year to year.

**LAW 6041. Investment Management Law.** (2 cr.; A-F only; Periodic Spring)
This course will cover policy and regulation governing pooled investment vehicles and their managers. We will engage in a close study of the Investment Company Act of 1940 and its companion statute, the Investment Advisers Act of 1940. The primary focus will be the regulation of mutual funds, but attention will also be given to alternative investment vehicles, such as hedge funds, private equity funds and exchange-traded funds.

**LAW 6042. Nonprofits and Public Sectors Externships.** (3 cr.; A-F only; Periodic Summer)
Legal experience in nonprofit and public sectors. Under supervision of practicing attorneys. With classroom seminar.

**LAW 6043. Nonprofit and Public Sector Externship.** (2 cr.; P-F only; Periodic Summer)
Externships for nonprofit/public sectors.

**LAW 6043. Nonprofit and Public Sector Externship.** (2 cr.; P-F only; Periodic Summer)
Externships for nonprofit/public sectors.

**LAW 6044. Immigration Law Externship - Center for New Americans.** (2-3 cr. [max 6 cr.]; P-F only; Every Fall & Spring)
Externship in immigration law with Center for New Americans.

**LAW 6046. Human Trafficking.** (2 cr.; A-F only; Periodic Spring)
Seminar will examine the breadth and depth of efforts to combat and raise awareness about human trafficking, a form of modern-day slavery in which people are compelled through force, fraud, coercion, or other means to engage in commercial sexual exploitation or forced labor. An optional two-credit externship, Law 6047, is available.

**LAW 6047. Human Trafficking Externship.** (2 cr.; A-F only; Periodic Spring)
Registration in the Law 6046 Sem: Human Trafficking is required to enroll in this externship. Students gain a practical experience by participating in an externship at a human trafficking-related placement and apply the classroom lessons in the legal work place.

**LAW 6048. Unincorporated Business Associations.** (3 cr.; A-F only; Every Fall)
This course introduces students to the main features of leading forms of unincorporated business associations, including limited liability companies (LLCs), partnerships, limited partnerships, and limited liability partnerships. Topics covered include authority and management structure, fiduciary duty, financial rights, transfer rights, and dissolution and dissolution. The course is structured around a series of exercises in which students negotiate, draft, and analyze the governing agreement for LLC. This course is strongly recommended for students who have taken the 1L Corporations elective.

**LAW 6050. Commercial Paper.** (2-3 cr.; A-F or Audit; Every Fall & Spring)
Commercial payments and credit devices, such as checks, drafts, and promissory notes, and applicable commercial and banking practices. Articles 3 and 4 of the Uniform Commercial Code.

**LAW 6051. Business Associations/Corporations.** (4 cr.; A-F only; Every Fall)
The initial part of this course is an introduction to the general law of multi-person unincorporated business organizations, principally partnerships, limited partnerships and limited liability companies. Matters covered include the procedures for forming such organizations and the rights and obligations of the participants as among themselves and with respect to third persons. The remaining class hours constitute the first portion of the basic Corporations course, and will cover such matters as corporate organization; the distribution of powers among the corporate board of directors, its officers and its stockholders; the proxy system; control devices in the close corporation; and the fiduciary duties of directors, officers and controlling shareholders. Matters dealing with corporate finance? (issuance of shares, payment of dividends, and corporate reorganizations) are covered in Advanced Corporate Law.

**LAW 6052. Sales Law.** (3 cr.; A-F only; Periodic Spring)

**LAW 6053. Analytical Methods for Lawyers: An Introduction.** (3 cr.; A-F only; Periodic Spring)
The course provides the analytical foundations for legal practice in the modern world: a world in which sound legal advice requires the mastery of the techniques and language of disciplines such as economics, decision theory and game theory. After a brief review of the methodology of law and economics, this course exposes students to a broad survey of microeconomics, decision-theory, and game-theory concepts. These analytical methods play a crucial role in the design and understanding of legal rules. The second part of the course builds on these premises to study the economic structure of several areas of law. Through this course students will develop a framework for the analysis of legal rules that will aid them in the remainder of their legal studies and professional life.

**LAW 6055. Advanced Corporate Law.** (3 cr.; A-F only; Every Spring)
This course will focus on corporate finance and reorganization. Specifically, the course will explore: methods of financing the corporate enterprise including capital stock structures with preferred and common stock, as well as debt types and obligations; payments to stockholders by way of dividends, redemptions, purchase of shares or spin offs; and reorganizations including mergers, sales of assets, and recapitalizations. The evaluation is by way of final essay exam.

**LAW 6057. Judicial Externship.** (2-3 cr. [max 6 cr.]; P-F only; Every Fall, Spring & Summer)
The Judicial Externship class provides an opportunity for students to learn about both lawyering and judging by observing and participating in the work of a judge and his or her staff. Which judges and courts participate varies each term, but externships are typically available with federal magistrate-judges and with judges at the federal district court, federal court of appeals, federal bankruptcy court, state trial court, state court of appeals, state tax court, and American Indian tribal courts. State trial court placements are with judges handling criminal, civil, family, or juvenile court matters and with problem-solving courts (e.g., drug court). Externships may also be available at the Office of Administrative Hearings and with the federal Immigration Court. Separate application to those courts is required; watch for notice about placement possibilities through the Career Office. Federal court placements (Federal District Court, Federal Magistrate-Judges, and Federal Court of Appeals) are made using an application process that occurs a few months before the start of the term. Notification will be sent to all students about deadlines for applying. For the rest of the placements, students registered for the class will be asked to complete a form specifying their preferences and to submit a resume, transcript, and cover letter to be used in the placement process. Students will be assigned based on their requests and the judges' needs. After placement, each student arranges a work schedule with the assigned judge and his or her staff. Students are encouraged to arrange their schedules to have several large blocks of time available for fieldwork; free mornings are especially important for attending court hearings. Fieldwork in chambers generally includes both substantive assignments in research and writing and observation of court proceedings.
proceedings. Substantive assignments will depend upon the nature of the court’s calendar and may include such work as preparing a memorandum or proposed order and decision on a summary judgment motion, summarizing and evaluating deposition testimony, or researching substantive legal issues raised in a motion, trial, or appeal. Students may observe a variety of proceedings, ranging from settlement conferences to motions hearings to trials to appellate arguments. They may be proceedings conducted in cases for which the student is performing research or they may be part of unrelated cases. The precise nature of the assignments and observation opportunities in chambers is at the discretion of the judge and the judge’s staff.

**LAW 6058. Human Rights Advocacy.** (3 cr.; A-F only; Every Fall)

This course will study the histories, philosophies and activities of human rights activists and organizations. The course examines the theoretical basis of the human rights movement, the principles underlying key organizations in the human rights field, as well as their strategies, tactics, and programs. The class will use case studies and other active methods to understand and to evaluate the work of human rights activists. Topics to be considered include fact-finding and documentation, campaigns on human rights issues, cultural relativism, economic rights, and corporate responsibility for human rights. Students will consider the basic organizational structure and fundraising needs of NGOs. Students will design and present a research project based on their selection of in-class topics. Readings include material on the history of NGOs; roots and development of the human rights movement; analysis of key NGOs; and reports and publications from NGOs working in the field.

**LAW 6059. Constitutional Law - Theories of Freedom of Expression.** (3 cr.; A-F only; Periodic Spring)

This course will survey the evolution of First Amendment law as it affects the legal rights and privileges of the print and electronic media. Topics will include prior restraints, libel, privacy, reporter’s privilege, access to courts (including free press/fair trial), commercial speech, and obscenity/incest. The course will examine the statutory and common law rights of access to information and will consider the constitutional implications of government regulation of media content, including the new media. We will read court opinions as well as seminal scholarly articles on the historical origins and philosophical foundations of freedom of press and speech and review doctrinal themes.

**LAW 6060. Assisted Reproduction and the Family.** (3 cr.; A-F only; Every Fall)

Study of Assisted Reproduction/how laws work for family.

**LAW 6061. Financial Regulation.** (3 cr.; A-F only; Periodic Spring)

This course will be a high-level overview of several different areas of financial regulation: banking regulation, insurance regulation, and elements of securities regulation (particularly broker-dealer and investment company regulation).

**LAW 6062. Energy Law.** (3 cr.; A-F only; Every Spring)

This course provides an introduction to U.S. energy law. The first portion of the course introduces the nation’s primary sources of energy: coal, oil, biofuels, natural gas, hydropower, nuclear, wind, solar, and geothermal energy. In doing so, it explores the physical, market, and legal structures within which these energy sources are extracted, transported, and converted into energy. The second portion of the course turns to the two major sectors of our energy economy--electricity and transportation--and the full range of federal and state regulation of each sector. The third portion of the course explores case studies of hot topics in energy law and policy that highlight the complex transitions taking place in the energy system. These topics include electric grid modernization, electric vehicles, risks and benefits associated with hydraulic fracturing and deepwater drilling for oil and gas, and the continued role of nuclear energy. In addition to traditional textbook reading and class discussion, the course will include industry, government, and nonprofit guest speaker presentations. Grading will be based on a final exam given at the end of the semester as well as class discussion and weekly written postings on the TWEN site for the course.

**LAW 6063. Law and Neuroscience.** (2 cr.; A-F only; Every Fall)

What are adolescents, psychopaths, and white-collar fraud artists thinking? Why does emotional trauma for victims of abuse last so long? Why is eye-witness memory so poor? Do violent video games lead to violent children? How can you get into the heads of the judge and jury? Lawyers and courts, including the US Supreme Court, are already integrating neuroscience research into their arguments and opinions on questions such as these. This Law and Neuroscience course will introduce the exciting new field of ?neurolaw? by covering issues such as the neuroscience of criminal culpability, brain-based lie detection, cognitive enhancement, emotions, decision making, and much more. Along the way we’ll discuss how the legal system can and should respond to new insights on topics such as adolescent brain development, addiction, psychopathy, Alzheimer’s, the effects of combat on soldiers? brains, and concussions from sports injuries. New in the 2017 version of the course is a ?Bridge to Practice? track, which emphasizes the real-world brief writing related to the use of neuroscientific evidence in practice. (Note that all scientific material in the class will be presented in an accessible manner, so no previous science background is required.)

**LAW 6066. Saeks Public Interest Residency.** (2 cr. [max 4 cr.]; A-F only; Every Fall)

The Saeks Public Interest Residency Program is a new program established by Allen (56) and Linda Saeks that connects leading public interest and government organizations with high-achieving 3L students. Students work full-time during their third year of law school for a nonprofit or government agency and have a guaranteed, full-time, paid legal position with the same organization the year following graduation. This innovative model provides students with valuable legal training while providing the organizations with much-needed legal work. This classroom component will complement the externship. Residents will meet as a group, weekly to discuss lawyering skills, learn from public interest speakers, and gain insight into their work. prerequisite: JD Students only; 6219 prereq or coreq; concurrent enrollment in 6067 required

**LAW 6067. Saeks Public Interest Residency Externship.** (8 cr. [max 16 cr.]; P-F only; Every Fall)

The Saeks Public Interest Residency Program is a new program established by Allen (56) and Linda Saeks that connects leading public interest and government organizations with high-achieving 3L students. Students work full-time during their third year of law school for a nonprofit or government agency and have a guaranteed, full-time, paid legal position with the same organization the year following graduation. This innovative model provides students with valuable legal training while providing the organizations with much-needed legal work. prerequisite: JD Students only; 6219 prereq or coreq; concurrent enrollment in 6066 required

**LAW 6068. Information Access Practicum.** (3 cr.; P-F only; Periodic Spring)

This course will expose students to the theory and practice of government secrecy law at the state and federal levels. The heart of the course will be practice-based. Students will be paired with non-governmental organizations to assist those organizations with government secrecy related legal, policy, and public education work. The exact work and mix of organizations may change somewhat from year to year. The organizations most likely will include the Minnesota Coalition for Government Information and Public Record Media. Students will assist the groups on projects ranging from litigation appealing the denial of information under the Minnesota Data Practices Act or the federal Freedom of Information Act, lobbying the Minnesota state legislature regarding amendments to the Data Practices Act, and preparing white papers or other public education and advocacy materials.

**LAW 6071. International Law.** (3 cr.; A-F only; Every Spring)

The course is an introduction to public international law. It will examine the sources and history of the law of nations and how international law is formed, interpreted, and (sometimes) enforced. It will also provide a brief introduction to the law of international organizations (specifically the United Nations), concepts of jurisdiction and conflicts of jurisdiction among nation states, international protection of human rights, the law of war, international criminal law, and the control of
the use of force (including peacekeeping and related topics). prerequisite: Upper division students only

LAW 6075. Civil Procedure II. (3 cr.; A-F only; Every Spring) This course builds on Civil Procedure I by examining additional facets of civil litigation. Topics may include personal jurisdiction, subject matter jurisdiction, venue, preliminary injunctions and temporary restraining orders, the Erie doctrine, appeals, and class actions. prerequisite: Upper division students only

LAW 6076. Essentials of Business for Lawyers. (3 cr.; A-F only; Every Fall & Spring) This course will teach you how to: (1) Understand basic accounting principles; (2) Read an annual report and analyze financial statements; (3) Look beyond numbers to gauge the financial performance and strength of an entity; (4) Employ cash flow analysis to value a business or determine the potential financial rewards of an investment opportunity; and (5) Understand the strategic questions that business managers must confront in governing their companies. The course surveys foundational concepts, analytical techniques and practices related to finance, accounting and strategic management issues lawyers confront when working with business executives either as an outside consulting attorney or as an inside corporate counsel. It may also consider other concepts used by business executives, including organizational behavior, marketing and quantitative analysis. The aim of the course is to help law students better appreciate the broader business context of legal decision-making so that they can contribute more effectively as a member of a firm's top management team or as outside counsel.

LAW 6078. Legislation and Regulation. (3 cr.; A-F only; Every Fall & Spring) This course explores lawmaking in the administrative state. Topics include: the legislative process, delegation of legislative authority to administrative agencies, the rulemaking process, statutory interpretation by courts and agencies, and judicial review of agency decisions. The course will focus on how statutes structure and constrain judicial and administrative decisionmaking.

LAW 6081. Constitutional Law: 14th Amendment. (3 cr.; A-F only; Every Fall & Spring) This course offers an overview of civil liberties and civil rights under the United States Constitution. It will cover First Amendment freedoms, including freedom of speech and of the press, freedom of assembly and association, and religious freedoms (prohibition on establishment of religion and protection of the free exercise of religion). It will also cover rights protected by the Fourteenth Amendment, including due process of law and equal protection of the laws. A few other individual rights and liberties guaranteed by the Constitution will be briefly discussed (taking, contract clause, Second Amendment gun rights, Ninth Amendment ?privacy? rights). It does not cover constitutional rights in criminal law matters, which are covered in the Criminal Procedure course.

LAW 6082. Constitutional Law: Civil Rights and Liberties Survey. (3 cr.; A-F only; Periodic Fall & Spring) This course includes coverage both of civil rights (Fourteenth Amendment protection of due process and of equal protection) and of civil liberties (First Amendment protection of speech and of religion), as well as limited coverage of other constitutionally protected rights and liberties. The First Amendment portion of this course includes an examination of freedom of speech and the press, as well as the Establishment Clause and Free Exercise Clause protections of freedom of religion. The Fourteenth Amendment portion deals with due process of law (procedural due process, substantive due process, the incorporation of the Bill of Rights protections to limit the powers of states and municipalities) and with equal protection of the laws (examining racial discrimination, gender discrimination, other classifications). Rights of privacy and personal autonomy will also be considered. The course will also examine other constitutional rights, including the right to keep and bear arms (Second Amendment), the protection of private property (Fifth and Fourteenth Amendments), and other provisions.

LAW 6083. First Amendment. (3 cr.; A-F only; Every Fall) An in-depth inquiry into the First Amendment, including both the doctrine and theory of free expression. Topics may include political incitement, commercial speech, hate speech, school prayer, parochial school vouchers and religious exemptions.

LAW 6084. Equal Protection and Civil Rights Acts. (3 cr.; A-F only; Periodic Fall & Spring) The course will cover the equal protection clause of the 14th Amendment and the three major civil rights acts passed in the 1960s to give content to that clause. The Choper casebook will be used for the equal protection clause and provide materials about the legislative histories and regulatory and statutory constructions of the major provisions of the 1964, 65, and 68 Civil Rights Acts.

LAW 6085. Criminal Procedure. (3 cr.; A-F only; Every Fall & Spring) This course explores key Supreme Court cases interpreting the 4th, 5th and 6th Amendments that form our constitutional criminal procedure law defining the boundary between the individual and the state. Topics include: search and seizure, stop and frisk, self-incrimination, involuntary confessions, line-ups, the right to counsel, and the role of defense counsel and prosecutors in an adversarial system. To bring our criminal into the 21st Century, we will consider three important progressions that the Supreme Court is slowly acknowledging: the steady transformation of our adversarial system into an inquisitorial one focused on guilty pleas; the rapid rise in technology that has exponentially increased the possibilities for criminal law violation and detection; and the explosion of social science literature that informs the fundamentally human processes and interactions at the heart of encounters between citizens and police. The course will invite several guest speakers who, through their work in the trenches, have developed expertise in specific criminal justice areas.

LAW 6100. Taxation I. (3 cr.; A-F only; Every Fall, Spring & Summer) This basic course in federal income taxation introduces the student to the Internal Revenue Code and the income taxation of individuals through the following topics: definition of income, relevant accounting concepts, exclusions, deductions, income splitting, sales and dispositions of property, amortization, capital losses, and current issues of tax policy.

LAW 6102. Mergers and Acquisitions. (3 cr.; A-F only; Periodic Spring) This class will cover the theory behind, the Federal and state law governing, and the practice of, mergers and acquisitions. Our main focus will be what a transactional lawyer would want and need to know as to why mergers and acquisitions might occur and how and why companies or shareholders would embrace or disfavor them, how the transactions are documented and how disclosure requirements are met, and what the present cases say.

LAW 6103. Data Privacy Law. (3 cr.; A-F only; Periodic Spring) Every single day, the newspaper contains stories?plural intended?about data privacy and security. Whether they concern the National Security Agency, Facebook, or a data breach at a small business, the handling of personal information has become a central concern of our time. In response, a complex law of data privacy has emerged and now it is a fast growing area of legal practice. This course will equip students to counsel clients about an array of federal, state, and international legal requirements while also analyzing them critically and thinking about the societal challenges posed by new information technology. Assessment will include group projects and a take-home final.

LAW 6104. Legal Writing II. (1 cr.; A-F only; Every Fall) This course provides additional instruction in the legal analysis and legal writing concepts covered in the first-year legal research and writing course. Students will meet individually and in groups with the instructor and will have multiple short assignments.

LAW 6105. Advanced Statutory Interpretation. (2-3 cr.; A-F only; Every Spring) General principles that courts/lawyers use in interpreting statutes. Canons that refer to statutory text, legislative history, administrative agency interpretation, various sources of public policy.

LAW 6106. Federal Tax Procedure. (2 cr.; A-F only; Every Fall & Spring) Overview of all major IRS functions including returns selection, examinations, administrative appeals, tax litigation, collection activities
(liens and levies), bankruptcy, and criminal tax enforcement. Effective representation of clients in all phases of IRS encounters.

**LAW 6107. Bankruptcy.** (3 cr.; A-F only; Every Spring) After surveying the rights of creditors and debtors under state law, this course will consider the impact of bankruptcy upon secured and unsecured creditors and stockholders. The bankruptcy trustee's avoiding powers will be studied. Chapters 7, 11, and 13 liquidations and reorganizations will be surveyed with selected topics considered in-depth. The negotiated settlements and ? workout agreements? which characterize this area of practice will be emphasized.

**LAW 6109. Creditors' Remedies/Secured Transactions.** (3 cr.; A-F only; Every Fall & Spring) This three-hour course examines the full array of state-law remedies available to secured and unsecured creditors in the collection of debts and also examines the correlative procedural and substantive rights of debtors in shielding their assets from creditors? claims. The course focuses, however, on the rights and duties of parties to secured transactions under Article 9 of the Uniform Commercial Code. Primary attention is given to the ordering of claims when the debtor has insufficient assets to satisfy all of her debts and also when she files, or is forced into, bankruptcy. Throughout the course students will practice statutory interpretation; consider the relationship among sources of law (including the law of the parties? agreement, enacted law, and common law); argue about the proper roles of the legislator and judge in making law; and debate a variety of other jurisprudential issues (and some social/policy issues, too) that transcend the substance of the law of creditors? rights.

**LAW 6111. Lawyers in Film.** (2 cr.; A-F only; Periodic Spring) Influence Hollywood has had on how society perceives lawyers, legal profession, ethical standards of the legal profession. Critically evaluate films/television programs, identify ethical issues, gain increased understanding of role in society played by lawyers/legal system.

**LAW 6113. Construction Law.** (2 cr.; A-F only; Periodic Fall) The construction industry, comprised of owners, lenders, architects and engineers, contractors and subcontractors, material suppliers, sureties and insurers, by many measures is the largest production industry in the U.S. This industry-oriented course will address (1) the complex world of construction, (2) the climate that leads to controversies, (3) the application of legal principles to the complex factual contexts of the construction process, (4) contract formation and administration issues involved in the process, including project delivery methods, contract types, allocation of risk, implied warranties, competitive bidding and contractor selection procedures, changes and extras, differing site conditions, schedule delay and disruption, bonds and suretyship, insurance, and claims of many types, and (5) how disputes are resolved through mediation, litigation, and arbitration.

**LAW 6114. Partnership Taxation.** (3 cr.; A-F only; Every Spring) Federal income taxation of partnerships and limited liability companies including formation, operation and management, distributions, allocations, sales and liquidations of entity interests, and terminations.

**LAW 6115. Civil Litigation: Case Development and Discovery.** (2 cr.; A-F only; Periodic Spring) Much of what civil litigators do involves case development. Case development is a form of storytelling. The story, of course, should be persuasive, but it must also satisfy the requirements of applicable law, and it must be based upon admissible evidence. An integral part of case development is discovery. The Rules of Civil Procedure, specifically Rules 26 through 37, set forth the scope and types of discovery that may be conducted. Yet, depending upon the nature of the case, questions relating to what forms of discovery are appropriate, in what order, and for what purposes cannot be found in the rules. The goal of this course is to teach the student how to think both strategically and tactically with regard to case development and discovery. You will be introduced to basic (and some advanced) concepts and skills relating to ? designing? and ?building? the case, including through discovery practice. In addition, you will participate in a number of skills-related exercises.

**LAW 6116. Pretrial Skills.** (2 cr.; A-F only; Every Spring) This course focuses on pre-trial advocacy skills. Practically every lawyer interviews and counsels clients and engages in negotiation of transactions or resolution of disputes. Theoretical and practical exploration of these topics and other topics including fact development and case planning, alternative dispute resolution, discovery and motion practice form the basis for this course. Each topic will be explored with readings and simulated exercises. Specific topics may vary from year to year.

**LAW 6119. Sem: Criminal Prosecution Appeals.** (2-3 cr.; A-F only; Every Fall) Basics of appellate practice pursuant to MN Rules of Criminal/Appellate Procedure. Present oral arguments to panel of experienced appellate practitioners. Course taught by County Attorney representing state of MN in criminal appeal pending before MN Court of Appeals.

**LAW 6126. Water Law.** (3 cr.; A-F only; Periodic Spring) This course examines the legal mechanisms by which society allocates and protects its most vital natural resource: water. The primary emphasis is on current legal and policy issues, but the course also addresses the historical development of water policy and water law in the United States. Topics include: the riparian and prior appropriation doctrines and modern administrative permitting schemes governing private uses of surface water and groundwater; public rights in water resources; federal and state water resource development, allocation, and control; alternative means of responding to the growing scarcity of fresh water and adapting to changes in the hydrological cycle due to climate change; the appropriate role for market-based approaches; allocation and protection of groundwater resources; environmental limits on water development, including the Endangered Species Act, Clean Water Act, and public trust doctrine; tribal water rights; the doctrine of federal reserved water rights; mechanisms for resolving or avoiding conflicts over transboundary water resources.

**LAW 6133. Data Compliance Practicum.** (1 cr.; S-N only; Periodic Spring) The enormous growth in the importance of data privacy law over the past ten years has created opportunities for attorneys with expertise in this fascinating and fast-moving field. The Data Privacy Practicum aims to prepare students who may wish to specialize in the area with real-world exposure to practice and credentials that demonstrate readiness for its challenges. Students will 1) study for and take an exam overseen by the International Association of Privacy Professionals that will entitle them to become Certified Information Privacy Professionals?many attorneys working in this area display the ?CIPP? credential proudly on their business cards and bios, demonstrating its reputational value; 2) shadow a privacy professional in the Twin Cities working in organizations such as Target, 3M, US Bank, Cargill, Optum Health, and major law firms; 3) attend six proseminar sessions with guest speakers practicing in the field; and 4) research and write a short paper tackling an important problem in current data privacy law.

**LAW 6151. Estate Planning.** (3 cr.; A-F only; Periodic Fall & Spring) This course will cover both tax and non-tax considerations in estate planning. In light of the doubling of the federal estate tax exemption to $11,180,000 in the 2017 tax reform act, the course will cover the changes that may need to be made in many existing estate plans to adapt to the new provisions. Other topics covered include use of revocable trusts, retirement benefit planning, life insurance planning, charitable gift planning, and ethical considerations in estate planning.

**LAW 6152. Federal Jurisdiction.** (3 cr.; A-F only; Periodic Fall & Spring) This three-credit course will cover approximately half of a traditional five- or six-credit "Federal Courts? curriculum; the other half is covered in LAW 6120 Federal and State Courts. Students may take either course or both courses, in any order. This course will explore issues that were raised in Constitutional Law and Civil Procedure regarding federal courts and the interactions
between the federal and state judicial systems. Topics discussed may include Congressional power over jurisdiction, legislative courts, justiciability, appellate jurisdiction, Supreme Court review over state court decisions, and general principles of federal subject matter jurisdiction. This course is important for anyone planning a judicial clerkship or a legal career that includes litigation in federal courts.

**LAW 6153. Wills and Trusts.** (3 cr.; A-F only; Every Fall)
This course is about people, living and dead, their relationships, and their property. More specifically, it is about the rights of property owners to pass their property on to others when they die. This is the law of succession. American law on this subject is based on the principle that you can’t take your property with you when you die, you are free to direct what happens to it thereafter. The course is a survey of the law and policy supporting that principle and the limits on it. It aims to acquaint you with the pleasures and pitfalls of practicing in this area and therefore we will be interested in drafting and professional responsibility as those issues arise throughout the course.

**LAW 6159. Education Law and Policy.** (3 cr.; A-F only; Periodic Fall)
The Supreme Court has famously said that education is perhaps the most important function of state and local governments. And Americans consistently rank K-12 education as one of the most important issues they want policymakers to address. Yet K-12 education is also one of the nation’s most contentious policy arenas. Education law stands at the center of these policy debates, and in this seminar students will be exposed to the many ways in which K-12 education is shaped by law and policy. Topics to be covered include: the structure of education law and governance; school finance; the interplay of federal, state, and local laws; and union and public schooling: charter schools and school choice vouchers; school boards; segregation; students’ rights; and teachers’ rights and teacher unions. In addition to case law, students will consider policy perspectives on school reform. Several guest speakers are planned. Students will be required to complete a paper (minimum 25 pages), as well as be active participants in course discussions.

**LAW 6200. Remedies.** (3 cr.; A-F only; Periodic Fall)
This is an extremely practical course. It is about what will make you, as a lawyer, valuable to your clients. Plaintiff litigates to get a remedy; defendant litigates to avoid having to provide one. Clients will consult you and pay for your services because of your ability to achieve results for them. This course tells you what a court can do for a client who wins and what the court can do to a client who loses. In it, we will explore the fundamental remedies -- damages, injunctions, restitution, and declaratory relief. The questions we will ask throughout are what can the plaintiff (or the defendant) get? Why that and not something else? Which of the available remedies or defenses is best? What are the strategic and practical ways to achieve the desired result? Remedies integrates threads from different parts of the law school curriculum and is a good vehicle for testing theories of what law is all about.

**LAW 6201. Land Use Planning.** (3 cr.; A-F only; Every Fall)
Public control of land use and development and its constitutional limitations.

**LAW 6202. Conflict of Laws.** (3 cr.; A-F only; Every Fall & Spring)
Suppose a company in Minnesota contracts with a company in California to do some work on a construction site in New York and the laws of the three states are different on a critical issue of contract law? How would a court decide which state’s law would govern? Does it matter in which state the lawsuit is brought? Would the considerations instead be different if the underlying issue was a matter of tort? Or property? These are issues of choice of law, the primary focus of the Conflicts course. The course also considers the circumstances under which an American court is required to enforce, without questioning the merits, a judicial decision given by another state or country. This is a vital course not only for prospective litigators but also for transactional lawyers. Lawyers who have not taken this course are unlikely even to be able to spot the critical issues.

**LAW 6203. Labor Law.** (2 cr.; A-F only; Every Fall)
This course focuses on the system of federal law regulating labor-management relations. The course examines the law and strategy of labor organizing, collective bargaining, and economic action in labor disputes as well as of contract enforcement. The course also considers emerging trends of labor law reform and the intersection with other bodies of law, including employment and international human rights law. The course further analyzes how a fundamental tension between collective rights and individual rights has shaped the evolution of doctrine as well as policy debates in labor law. The course includes simulations and experiential projects related to union elections, negotiations, and grievance arbitration.

**LAW 6207. Antitrust I.** (3 cr.; A-F only; Every Fall & Spring)
The course in Antitrust will focus on competition, how that term has been defined by the court and agencies, and the role that competition plays in society. We will study the federal antitrust statutes and the case interpretation and application of those statutes. To put antitrust in perspective, the historical debates, economic action in labor disputes as well as of contract enforcement. The course also considers emerging trends of labor law reform and the intersection with other bodies of law, including employment and international human rights law. The course further analyzes how a fundamental tension between collective rights and individual rights has shaped the evolution of doctrine as well as policy debates in labor law. The course includes simulations and experiential projects related to union elections, negotiations, and grievance arbitration.

**LAW 6212. Legal Malpractice.** (2 cr. [max 3 cr.]; A-F only; Periodic Spring)
Legal malpractice law is a specialized form of tort law that sometimes varies from classic negligence doctrine. This course will focus on teaching the substantive law and helping students recognize and avoid real life risks of legal malpractice exposure and liability.

**LAW 6213. Real Estate Transactions.** (3 cr.; A-F only; Every Fall & Summer)
The course examines the acquisition and development of real property. Topics include listing agreements, purchase agreements, conveyancing, real estate finance and security instruments, foreclosure, mechanics? liens, and forms of real estate development.

**LAW 6214. Insurance Law.** (3 cr.; A-F only; Every Fall)
Insurance is omnipresent in the practice of law because insurance is the primary means by which companies and individuals deal with risks. Lawyers, of course, often make a living either by counseling clients about how to plan for risks or by serving clients whose risks have developed into losses. This course will introduce students to fundamental principles of insurance law and regulation. It will survey the nature and function of insurance, insurance contract formation and meanings, and insurance regulation. We will also look at specific legal issues relating to different lines of insurance, such as property, life, health, and liability insurance.

**LAW 6215. Environmental Law.** (3 cr.; A-F only; Every Fall)

Legal aspects of major environmental problems with emphasis on issues that appear in various regulatory contexts, such as the degree to which environmental quality should be protected; who should bear the cost of enhancing environmental quality; allocation of responsibilities among courts, legislatures, and administrative agencies; the role of citizens; groups; and environmental litigation.

**LAW 6216. European Union Law.** (3 cr.; A-F only; Periodic Spring) International law/issues.

**LAW 6217. Securities Litigation.** (3 cr.; A-F only; Periodic Spring)
This course focuses on SEC enforcement of the federal securities laws and on the express and implied private rights of action under the federal securities laws, including the procedural rules for class action securities litigation. Students will read and critique federal cases, draft complaints, answers, motions to dismiss and other pleadings, and participate in a mock oral argument on their written pleadings. Evaluation will be based on class participation, written pleadings, the oral argument, and a final exam.

**LAW 6219. Evidence.** (3 cr.; A-F only; Every Fall, Spring & Summer)
This course provides an introduction to the use of evidence in litigation, with an emphasis on the Federal Rules of Evidence. Topics may include admission and exclusion of evidence, direct and cross examination, judicial notice, hearsay, expert testimony, burdens of proof and presumptions, and privileged communications.

**LAW 6220. Poverty Law.** (3 cr.; A-F only; Every Fall)
This course reviews constitutional, federal, state, and municipal law as they specifically affect low income persons. Poverty Law I and II cover complementary aspects of the subject. They may be taken independently or in any order. Poverty Law I focuses on government benefits programs and landlord-tenant law, with additional topics including consumer and elder law. Poverty Law II covers complementary areas including consumer and elder law. There will also be discussions about the law for both those students intending to specialize in poverty law and those whose general practice may include public housing law and legal aid office, or serving in public law.

**LAW 6224. Patents.** (3 cr.; A-F only; Every Fall)
This course offers an overview of patent law for both those students intending to specialize in patent prosecution and those whose general practice may include patent litigation and licensing. Topics to be covered include the requirements for patentable subject matter; standards of novelty, utility, and non-obviousness; statutory bars; conception, priority, enablement, and written description requirements in patent procurement; direct and vicarious patent infringement; claims interpretation.

**LAW 6225. Winning Patent Litigation.** (2 cr.; A-F only; Every Spring)
The course focuses on practical litigation strategy in the context of patent litigation. It uses patent litigation as a vehicle for seeing how parties develop a winning strategy for a variety of complex legal issues, including choice of law, personal jurisdiction, subject matter jurisdiction, venue, and certain patent-specific issues, such as claim construction. A general understanding of patent law is helpful but not mandatory.

**LAW 6226. Juvenile Justice.** (3 cr.; A-F only; Every Fall)
Legal, sociological, and philosophical bases of the principal agencies responsible for the control of youthful deviance. Emphasis on the juvenile courts, delinquency jurisdiction, and the procedural and substantive limitations on the courts’ authority to dispose of juvenile offenders.

**LAW 6227. Products Liability.** (2 cr.; A-F only; Every Spring)
This seminar will address all main areas of potential liability in the U.S. before and after the product is sold. This includes design defects, manufacturing defects, defects in warnings and instructions and post-sale negligence. There will also be discussions about product safety regulation in the U.S. and the development of product liability and product safety regulation around the world. Lastly, there will be discussions of liability prevention techniques throughout the course.

**LAW 6228. American Legal History.** (3 cr.; A-F only; Periodic Spring)
This course explores the interaction between law, politics, and culture in American society, concentrating on the period from the Revolution through the New Deal. Topics include: democracy and the rule of law; slavery; the public-private distinction; Civil War and Reconstruction; industrialization; expansion of the federal administrative state; law and the human sciences; crime and punishment; legal education and the role of the lawyer in the American polity. Readings will include primary legal sources, such as treatises, statutes, constitutions, and landmark cases, as well as contemporary religious, scientific, and literary works, which will help to situate the legal materials in broader cultural context. Several secondary sources will also be considered, both for insights into the topics covered, and to illustrate various approaches to legal-historical analysis. The course will encourage critical examination of these sources with the aim of clarifying how law has figured in the history and historiography of the United States. No previous background in American history is assumed.

**LAW 6229. Criminal Process: From Bail to Jail.** (3 cr.; A-F only; Periodic Spring)
Criminal Process examines a variety of procedures governing the prosecution of crime. It covers, in essence, criminal procedure from the time that the police have received a case over to the lawyers. Major topics include: prosecutorial charging discretion, judicial screening, the grand jury, discovery, speedy trial, double jeopardy, plea bargaining, jury selection, jury deliberations, sentencing, appeals, and habeas. This class is sometimes known as ?Criminal Procedure II? because it picks up chronologically where Criminal Procedure ends. Criminal Procedure, however, is not a prerequisite. prereq: Criminal procedure recommended

**LAW 6230. Advanced Torts.** (3 cr.; A-F only; Every Fall)
Study of injuries to relational interests, including defamation, privacy (a relational interest in some contexts, not in others), misuse of legal procedure, business torts, interference with family relations, wrongful death actions, and time permits, no-fault auto compensation system in Minnesota. prereq: Torts

**LAW 6231. Patent Prosecution Practice I.** (2 cr.; A-F only; Every Fall)
Patent Prosecution Practice I is recommended for all students interested in intellectual property and patent law, including students considering practicing in the areas of patent prosecution, litigation, licensing, technology commercialization, and patent portfolio management. The course focuses on U.S. patent practice and is designed to extend the student’s skills. Throughout the semester each student will complete two projects: (1) formulate and draft patent claims for a number of different inventions in view of prior art, (2) develop strategies for responding to a patent examiner according to rules of the U.S. Patent Office, arguing patentability and allowance of a patent application over cited prior art. Each student will be paired with a senior practicing attorney who will act as a mentor, including reviewing drafts and providing candid feedback to the student. Lectures and discussion topics include: Organization and structure of the U.S. Patent Office, - The U.S. patent process including the entire life cycle of a patent from application preparation and filing through examination and
grant, - Formulating patent claims in view of prior art and potential infringers, - Architecting patent portfolios including all types of U.S. patent applications, such as provisional, utilities, continuations and divisions, - Examination of patent applications including responding to Office Actions issued by the U.S. Patent Office, - Inventorship and ownership determination and legal ramifications flowing therefrom, and - U.S. law and regulations governing patent prosecution practice. A technical background is not required to take this course.

**LAW 6232. Patent Prosecution Practice II.** (3 cr.; A-F only; Every Spring)

Patent Prosecution Practice II is recommended for all students interested in intellectual property and, in particular, students interested in advancing their skills and understanding of patent law and practice. Throughout the semester each student will complete three practical and diverse assignments designed to develop the student's skills. Each student will be paired with a senior practicing attorney who will act as a mentor, including reviewing drafts and providing candid feedback to the student. Specifically, in this class, each student will: (1) prepare a complete U.S. Patent Application based on a real invention, (2) write an appeal brief according to rules of the U.S. Patent Trial and Appeal Board, arguing patentability and reversal of the patent examiner in view of an examination history by the U.S. Patent Office, and (3) provide clearance counseling to a client about to launch a new product, including reviewing issued U.S. patents and developing a full non-infringement / invalidity opinion for the client. The course grade is primarily based on these three projects in lieu of a final exam. Lectures and discussion topics throughout the semester include: - skills and strategies for writing patent applications, - appeal practice including brief writing before the Patent Trial and Appeals Board (PTAB) at the U.S. Patent Office, - clearance analysis including invalidity and non-infringement counseling and opinions, - foreign practice including national filings in foreign countries and international filings using the Patent Cooperation Treaty (PCT), including leveraging patent prosecution highways for accelerated examination, - eligible subject matter issues including recent case law and claim drafting tips, - accelerated examination procedures within the U.S. Patent and Trademark Office, - legal and practical considerations of infringement counseling including formulating invalidity and non-infringement opinions, - post grant review and other mechanisms for challenging issued patents before the U.S. Patent and Trademark Office, - patent prosecution related considerations that arise in relation to participation in industry standards organizations, - patent prosecution related considerations that arise in the context of universities and technology licensing organizations, and - design patents.

**LAW 6234. Public Lands and Natural Resources.** (3 cr.; A-F only; Periodic Spring)

Public Lands and Natural Resources studies the expansive body of federal and state constitutional provisions, statutes, rules, customs, and processes that govern the ways individuals, corporations, and federal, state, and local governments interact with federal public lands, state lands, private lands, water, air, wildlife, minerals, and other natural resources. We will study: (1) the history and statutes of U.S. federal public lands, and the past and present conflicts governing those lands; (2) the laws and regulations governing national parks, national monuments, national forests, grazing lands, energy resources, wildlife, and other natural resources; and (3) ownership interests and rights relating to public and private lands and resources. The course will help students gain an appreciation of our relationship with the natural environmental from cultural, historical, and economic perspectives, in addition to a legal perspective.

**LAW 6236. Indian Law.** (3 cr.; A-F only; Periodic Spring)

This course examines the evolution of Indian law from colonization onward as impacted by treaties, executive orders, congressional enactments, and the development of federal common law. Students will gain an understanding and appreciation of one of the more particularized areas of the law, and acquire the necessary tools to become able practitioners within the field. The course will also focus upon the unique historical experience of the Midwest tribal nations.

**LAW 6241. Patent Remedies.** (1 cr. [max 3 cr.]; A-F only; Periodic Spring)

This course provides in-depth coverage of issues relating to remedies for patent infringement. Specific topics may include permanent and preliminary injunctions, ITC proceedings, lost profits, reasonable royalties, FRAND royalties, enhanced damages, attorneys' fees, awards of infringer's profits for design patent infringement, patent marking, declaratory judgments of noninfringement or invalidity, and comparative remedies law.

**LAW 6243. Patent Research and Writing.** (2 cr.; A-F only; Every Fall)

Patent lawyers and agents spend their entire professional careers communicating with clients, patent examiners, judges, colleagues no matter what their individual career paths may be. This course is about the process of research and communicating about patents. In other words, the goal of the course is to teach the building blocks of patent research and communication through multiple practice exercises so the student may repeat the process independently after successful completion of this course. This course leverages free, patent office, and commercial research tools. Deliverables and works include: patent landscape search and report, patentability search and opinion, patent risk search and assessment, patent invalidity search and opinion. Recommended prerequisite: Patents (5224/6224), Patent Prosecution Practice I (5231/6231) or Patent Portfolio Management (5250/6250). Prereq: Law 6224 or 5224

**LAW 6244. Employee Benefits.** (3 cr.; A-F only; Periodic Fall & Spring)

Qualified pension and profit-sharing plans. Qualification, nondiscrimination, limitations on contributions/benefits, treatment of participants/beneficiaries. Emphasizes federal income tax aspects of qualified plans.

**LAW 6245. Interviewing, Counseling, and Negotiating.** (3 cr.; A-F only; Every Fall & Spring)

This course will focus on basic skills necessary for all lawyers. We will discuss and do simulated exercises in each of the skills, focusing on skill development and self-reflection to improve skills. The course will emphasize planning, performance and reflection over a range of civil and criminal cases.

**LAW 6247. Depositions.** (2 cr.; A-F only; Periodic Fall & Spring)

Skills necessary to prepare for, defend, and take depositions in civil litigation under federal rules of civil procedure. Learn-by-doing, skills simulation course.

**LAW 6248. Advanced Patents.** (2 cr.; A-F only; Periodic Spring)

This course will be a continuation of the three-credit Patent Law course. The course will provide in-depth coverage of topics such as remedies (injunctions, lost profits and reasonable royalties, enhanced damages, declaratory judgments, and issues relating to patent marking); appellate review of USPTO decisions; reissue and reexamination; inequitable conduct; inventorship and ownership; double patenting; and patent misuse and related antitrust claims.

**LAW 6249. Evidence Drafting.** (1 cr.; A-F only; Every Fall, Spring & Summer)

This one-credit course is an optional supplement to the 3-credit Evidence course offered as LAW 6219. Students may enroll in this course only if concurrently enrolled in LAW 6219 with the same instructor. The course will provide an opportunity for students to write about evidence issues in various formats (e.g., motions, memos). Prereq: concurrent registration in 6219.

**LAW 6250. Patent Portfolio Management.** (2 cr.; A-F only; Every Fall)

Patent portfolio management is the art of aligning patent strategy with business objectives. In general, the successful portfolio manager must have the ability to transform complex patent information into actionable insights that provide decision-making value to a wide variety of stakeholders. This course introduces students to the various practices and skills that go into building, implementing, and managing a patent portfolio whether from the point of view of a small, innovative, start-up company or a Fortune 500 company in a highly competitive market space.

**LAW 6400. International Environmental Law.** (2 cr.; A-F only; Every Spring)

This seminar will examine issues of international environmental law. Although there is a limited body of older law, most of the topic has emerged during the past half century.

**LAW 6402. Food and Drug Law.** (3 cr.; A-F only; Periodic Fall)
The primary focus of the class will be on the Food, Drug and Cosmetic Act and the FDA. In addition, time will be spent on specific food and drug aspects of other areas of the law. For example, the class will review the special rules and cases in the product liability field relating to food and drugs and the interface between food and drug regulation and subjects such as environmental law, the practice of medicine, and free choice in medical care.

**LAW 6403. Environmental Law Capstone: Brownfields Redevelopment and Litigation.** (4 cr.; A-F only; Periodic Spring)
Legal/practical issues surrounding redevelopment of and litigation over underutilized real property that has been subject to environmental contamination.

**LAW 6405. Labor and Employment Law Capstone.** (5 cr.; A-F only; Periodic Spring)
The course is largely simulation-based. It will provide students with experience integrating diverse areas of workplace law with practice skills and professional ethics. Students will work in teams representing a particular client. The roles of clients and witnesses will be played by a combination of actors and volunteers. Real arbitrators and mediators will play those roles. Claims may include unfair labor practice proceedings before the National Labor Relations Board, employment discrimination and sexual harassment charges before the EEOC, arbitration of employee discipline under a collective bargaining agreement, arbitration under non-union employment contracts, defamation, and claims under FMLA and ERISA. Students may experience interviewing and counseling clients, filing claims with administrative agencies, conducting research, drafting pleadings and legal memoranda, negotiations, discovery, and representing clients in arbitration, mediation and litigation motion practice.

**LAW 6408. Climate Change and Clean Energy Capstone.** (4-5 cr.; A-F only; Periodic Fall)

**LAW 6409. Twin Cities Regional Planning Capstone.** (4-5 cr.; A-F only; Periodic Spring)
Regional development challenges/legal regional regulatory frameworks in areas of housing, transportation, water, air, parks, airports.

**LAW 6411. Legislative Process Capstone.** (5 cr.; A-F only; Periodic Spring)
Field work course designed to teach law students about how the state legislature operates and makes law. It is good preparation for careers in government as legislative staff, agency lawyers, or as elected officials or for work in the private sector in fields where legislative relations are relevant.

**LAW 6412. Environmental and Energy Justice Capstone.** (4 cr.; A-F only; Periodic Spring)
Course focuses on the complex justice issues surrounding (1) environmental harms and benefits and (2) the production and use of energy. These two topics are considered individually, and how they are interrelated.

**LAW 6413. Family Law Capstone.** (3 cr.; A-F only; Periodic Spring)
This capstone course is designed to expose students to the ways in which family law concepts are implemented practically and procedurally. The course will touch on traditional family law topics such as premarital agreements, custody, and property divisions in the contexts that practicing attorneys are likely to encounter these topics. The course will accordingly focus on interviewing potential clients, retaining and using experts, incorporating financial planners and therapists in family dispute resolution, conducting a mediation, and drafting documents such as cohabitation agreements, divorce petitions, settlement decrees, and parenting plans. Assignments will be designed both to prepare students for practice and to capture the way that family law practice is changing to deal with the realities of modern families. The course will offer rigorous practical experience and advanced theoretical and policy discussion.

**LAW 6414. Civil Rights and Social Justice Capstone.** (4 cr.; A-F only; Periodic Spring)
The United States has made significant progress in addressing de facto discrimination, but persistent de facto discrimination and inequality remain. This class focuses on the role of law in making progress against both subtle and overt forms of discrimination in a variety of spheres and settings based on race, ethnicity, class, national origin, gender, sexual orientation, age, disability, and religion. Topics may include the segregation of neighborhoods and schools by race and class; encounters with the police and criminal justice system; how poverty limits access to crucial social goods; the location of environmental harms near low-income communities and communities of color; unequal pay and opportunities for advancement for women in the workplace; access to adequate child care for working parents; barriers to marriage; and treatment of migrants.

**LAW 6490. Patent Law Capstone: Innovation.** (3 cr.; A-F only; Every Spring)
This capstone course introduces students to the principles of successful innovation and the integral role of patents in this process. This is a course in innovation. There are no right or wrong answers. Large companies with very smart people often launch products that fail. Venture capitalists seeking to invest in winners more-often-than-not end up investing in losers. Innovation is an art not a science. There is no "secret formula" that guarantees success. There are simply different tools, skills, methods of analysis and approaches that may or may not work better than others. We will explore the art of innovation and the integral role that patents play in turning an idea into an innovation. Goals: Students will learn how to research complex subject matter across the intersecting domains of business, finance, marketing, science, technology and intellectual property. Students will then develop the ability to present their findings in a clear and concise manner that is understandable to and can be acted upon by a cross-functional audience of high-level decision makers.

**LAW 6601. International Business Transactions.** (3 cr.; A-F only; Periodic Fall & Spring)
International Business Transactions is a three-credit course whose main focus of discussion and study is the private law aspects pertaining to international business transactions, rather than issues of national and international trade regulation. Thus, the course is primarily concerned with private international business law. We examine three basic methods of doing business abroad, namely, the sales of goods (export) transaction, licensing and franchising, and foreign direct investment. The course materials touch upon substantive law in areas as diverse as commercial transactions and the uniform commercial code, antitrust, intellectual property, conflict of laws, civil procedure, contracts, bankruptcy, taxation, and international law. While knowledge or background in these areas is certainly helpful it is not necessary for success in the course and for dealing with the issues raised in the readings or in class.

**LAW 6603. Intellectual Property.** (3 cr.; A-F only; Every Fall)
The intellectual property survey course presents an overview of patent, copyright, and trademark law. At the professor's discretion, the course also may include some coverage of trade secrets, unfair competition, or federal preemption of state intellectual property laws. The course provides an opportunity for students to acquaint themselves with the major branches of intellectual property law, and may be most useful for students who intend to pursue careers in general business law or civil litigation; (2) to specialize in one of the major branches of intellectual property law, such as patents, but who want to develop a basic understanding of the other branches as well; or (3) are interested in learning something about the field before committing to further in-depth study of one or more of its branches.

**LAW 6604. Family Law.** (3 cr.; A-F only; Every Fall, Spring & Summer)
This course examines how the law creates family relationships, regulates their dissolution, and defines the rights and responsibilities of family members. Topics include: limits on who may marry and who may adopt children, divorce and its economic consequences, dissolution of nonmarital relationships, termination of parental rights, child custody and support, surrogate motherhood, domestic violence, and child abuse.

**LAW 6605. Health Law.** (3 cr.; A-F only; Periodic Fall)
This course is a comprehensive introduction to health law. We will investigate the organization of health care delivery in the United States; the nature of the physician-patient relationship;
methods of quality control; responses to harm and error, including through medical malpractice litigation; problems of access to health care; and approaches to cost control. We will also analyze proposals for health care reform.

LAW 6608. Trademarks. (3 cr.; A-F only; Periodic Fall)
The course will focus on U.S. federal trademark law, but will also look at state and international trademark law as well as related areas such as false advertising, publicity rights, and cybersquatting. This course will provide a solid foundation for students interested in practicing trademark law (application, enforcement, licensing, or litigation) or more general intellectual property law. It will also be useful to attorneys who do any work with trademark-dependent industries such as retail sales, advertising, or media and entertainment. Finally and more generally, trademark law offers excellent case studies of the interaction between law, culture, and technology, and of the evolution of traditional doctrine under pressure from rapid changes in surrounding circumstances.

LAW 6609. International Intellectual Property. (3 cr.; A-F only; Periodic Spring)
This course provides an overview of international intellectual property law. Likely topics include (1) a comparison of US and foreign law relating to patents, copyrights, and trademarks; (2) the principal multinational agreements relating to intellectual property, including the Paris Convention, Berne Convention, and the TRIPS Agreement, as well as the implementation of these agreements within the domestic law of the United States and other countries; and (3) other topics such as the protection of indigenous knowledge and the law of judgments, jurisdiction, and choice of law as it relates to intellectual property disputes. It is highly recommended that students enrolling in this course have taken, or be in the process of taking, at least one other intellectual property course. prerequisite: One prior or concurrent intellectual property course.

LAW 6610. Unfair Competition. (2 cr. [max 3 cr.]; A-F only; Every Spring)
This course provides an overview of false advertising and product disparagement under the Lanham Act; the right of publicity; and trade secret law. The course does not provide comprehensive coverage of antitrust, trademarks or trade dress, or consumer protection law.

LAW 6612. Antitrust and Intellectual Property. (2 cr.; A-F only; Every Spring)
This course will address the intersection of antitrust and intellectual property (IP) law, from the early twentieth century to the important disputes of the present day. Topics to be considered will include, among others, Walker Process and sham litigation claims involving IP; tying and bundling of IP rights; unilateral refusals to deal; deceptive conduct before standard setting organizations; patent pools and package licensing; and pharmaceutical patent settlements involving reverse payments. Students are strongly urged, though not required, to have taken or be in the process of taking, either antitrust or an intellectual property course, before enrolling in this course.

LAW 6613. Copyright. (3 cr.; A-F only; Periodic Spring)
This course provides a detailed introduction to the basic law of copyright—traditional copyright subject matter, the concept of originality and authorship, copyright transfers (and terminations of transfers), infringement, and fair use. Copyright law is now important well beyond the entertainment industry, although many of the decisions we study derive from that genre (Humphrey Bogart, George Harrison, J.D. Salinger, Superman, Mickey Mouse, and many other luminaries make cameo appearances in our cases). Copyright has increasingly become a necessary tool of the general practitioner due to the explosive growth in economic value of information-based products, such as computer software, digital networks, and databases. A lawyer ignorant of basic copyright principles will be increasingly handicapped in many areas of practice, such as negotiating technology transfers, drafting contractual rights, developing schemes of protection and privacy, distinguishing criminal from non-criminal behavior, and in litigation. But more important than all that, the cases and materials are lots of fun!

LAW 6614. American Legal Profession. (2-3 cr.; A-F only; Periodic Fall)
Study of American legal profession compared to legal profession in other countries.

LAW 6615. Jurisprudence. (3 cr.; A-F only; Every Fall & Spring)
This course will be a general survey course of the most important ideas, concepts, theorists, and schools of law in contemporary legal philosophy. The course will examine foundational legal questions relating to the nature of law, rights, justice, and punishment; questions relating to the connections between law and morality; and the proper understanding of legal reasoning, legal interpretation, and the role of judges. We will examine different schools of legal thought, including Natural Law Theory, Legal Positivism, Legal Realism, Feminist Legal Theory, and Critical Race Theory.

LAW 6616. Law and Entrepreneurship. (3 cr.; A-F only; Periodic Spring)
Life cycle of entrepreneurial start up business. Legal issues involved. Theoretical, statutory, common law elements. Case/statutory analysis, case studies, presentations, group exercises.

LAW 6617. Antitrust Mergers. (3 cr.; A-F only; Periodic Spring)
Antitrust merger analysis. 2010 Horizontal Merger Guidelines. Recent cases. Supermarkets, pharmaceuticals, health care, telecommunications, standard essential patents, software, insurance, airlines, financial institutions, internet.

LAW 6618. Trial Practice. (3 cr.; A-F only; Every Fall, Spring & Summer)
Selected problems in litigation. Exercises in jury selection, introduction of evidence, expert testimony, direct and cross examination and impeachment of witnesses, opening statements, and closing arguments.

LAW 6619. International Trade. (3 cr.; A-F only; Every Spring)
This course is designed to familiarize the students with the regulatory system of international trade. Through the materials discussed in the course, focusing on the case law and jurisprudence of the WTO/GATT, the course is aimed at understanding the institutional framework of that system and the ways in which it functions. In addition the course deals with a large number of substantive issues to be found on the agenda of international trade scholars and lawyers. While the course is focused on legal theory and doctrine of international trade, we will approach each and every topic from economic and social perspectives. Thus, the course is designed to follow a truly interdisciplinary tour of the relevant subject-matter.

LAW 6620. Community Policy Development. (2 cr.; A-F or Audit; Periodic Spring)
Role of lawyers in community. Complex interactions among legal service providers, nonprofit community-based organizations, community activists in addressing systemic problems.

LAW 6621. Civil Rights: Citizenship and Human Rights. (3 cr.; A-F only; Every Spring)
This course explores an emerging, interdisciplinary field of inquiry that focuses on the relationships between Civil Rights Law in the United States and International Human Rights Law in the global context. Although the two areas represent distinct bodies of law, they also share many important features, objectives, and impediments. By examining the historical emergence of (1) Civil Rights Law in the United States, and (2) International Human Rights Law in the global context, students will gain a better understanding of the critical relationships and intersections between these two important areas of public law. Through an examination of the seminal cases and controversies in these areas, this course will explore the differences between various categories of rights; America’s “exceptionalism” why the United States pursues a strong human rights agenda abroad that is rarely applied in the domestic context; the gains (and losses) that the domestic civil rights movement has experienced in recent decades, among other topics.

LAW 6622. International Business Operation and Negotiation. (3 cr.; A-F only; Periodic Spring)
The course surveys foundational concepts, analytical techniques and practices related to organization and strategic management of multinational firms and cross-border transactions they negotiate with host country governments, firms and non-governmental organizations. The overall aim of the course is to give law students basic proficiency in theories, practices and analytical techniques for understanding why and how multinational firms emerge and organize operations differently, negotiate cross-border transactions
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

**LAW 6623. Integrative Leadership: From Theory to Practice.** (3 cr.; A-F only; Periodic Spring)

Leaders with different skills and from different sectors need to be able to collaborate in new ways to meet challenges ranging from improving public education, to writing smarter and more consistent regulations for healthcare delivery, to humane and effective approaches to current migrant. Integrative leadership is shared leadership of public, private and nonprofit actors or approaches to address complex and significant issues that cannot be effectively addressed by a single entity or technique. This course focuses on key integrative leadership questions and the diverse theories, disciplines, experiences and techniques that can help us answer them. Learning occurs through reading foundational materials, personal leadership coaching, engaging with examples from guest speakers and case materials, and developing a final group project. You will learn to recognize and address integrative leadership challenges and opportunities, and build your own capacity to contribute to integrative leadership through group work and through being exposed to a range of boundary work practices.

**LAW 6624. Strategic Management of Intellectual Property.** (2-3 cr.; A-F only; Periodic Spring)

**LAW 6625. Disability in the Workplace.** (3 cr.; A-F only; Periodic Spring)

This class explores legal issues relating to physical and mental disabilities in the contexts of employment, governmental services, public accommodations, and education. The principal regulatory focus is on the Americans with Disabilities Act. Legal issues under that statute include determining who is disabled, proving discrimination, and the concepts of reasonable accommodation and undue hardship. Other statutes covered include the Family and Medical Leave Act, the Rehabilitation Act, and Individuals with Disabilities Education Act. This course has no written paper requirement, but will have a final examination. There is no prerequisite for taking this course.

**LAW 6626. Complex and Cross-Cultural Negotiations.** (2 cr.; A-F only; Periodic Spring)

Principles, role play of multi-party/-issue, team-based negotiations/conflicts. How to structure ambiguous situations, bridge national/organizational cultures (e.g., alliances, mergers), functions (R&D, finance), institutional contexts (regulators, interest groups).

**LAW 6627. International Tax.** (2 cr.; A-F only; Every Spring)

This course examines U.S. taxation of foreign individuals and corporations earning U.S. source income from activities in this country, taxation of U.S. citizens and residents abroad, taxation of business and investment activities of U.S. persons, companies and subsidiaries operating abroad, foreign tax credits, transfer pricing issues, the use and applicability of tax treaties, and the obligations under U.S. law for U.S. persons to report interests in and transactions with foreign accounts.

**LAW 6628. Advanced Trial Practice.** (3 cr.; A-F only; Every Spring)

This course will be to help students learn to recognize and anticipate a large number of important evidentiary issues which can arise during a trial and to help them learn how to deal with the issues when they arise. Students will perform direct and cross examinations, opening and closing statements, and voir dire. Students will be expected to write brief motions in limine and short memoranda on evidentiary issues to learn to present concise persuasive memoranda to a court before and during trial.

**LAW 6630. Health Care Decision-Making: Markets, Regulation and Bioethics.** (2 cr. [max 3 cr.]; A-F only; Periodic Spring)

This class will focus on health-care decision-making at the beginning and end of life, the role of informed consent, the influence of potential tort liability, the framework for the introduction of new technologies, and the growing impact of medical tourism. It explores the role of lawyers in shaping health care decisions and policy discussions.

**LAW 6631. Employment Discrimination.** (3 cr.; A-F only; Every Fall)

Employment Discrimination. This course considers the principal statutory and constitutional prohibitions on employment discrimination. It focuses most prominently on Title VII of the 1964 Civil Rights Act, which prohibits employment discrimination based on race, color, religion, sex, or national origin. The course considers the basic frameworks for proving discrimination under Title VII and the jurisprudence defining Title VII’s protected classes. The course also investigates newer Title VII fields, such as the law of sexual harassment and pregnancy discrimination. Using Title VII as a basis for comparison, the course then examines the constitutional law of employment discrimination, Title I of the Americans with Disabilities Act (ADA), the Age Discrimination in Employment Act (ADEA), and various state and local statutes addressing emerging issues in employment discrimination law, such as employment discrimination based on weight or attractiveness.

**LAW 6632. Employment Law.** (3 cr.; A-F only; Periodic Fall & Spring)

This course explores the rapidly expanding body of law governing the workplace. The Employment Law course goes beyond the traditional employment fields of Labor Law (union-management relations) and Employment Discrimination to focus on a number of recurring workplace issues. Topics include medical and drug screening, workplace privacy, the emerging exceptions to the employment-at-will doctrine, wage and hour regulation, and occupational safety and health.

**LAW 6633. Public Health Law & Ethics: From Prevention & Emergencies to Bioterrorism.** (3 cr.; A-F only; Periodic Fall)

This course will next focus on levels of implementation and varying points of intervention on BHR issues: a) internal corporate policies, b) socially responsible investment shareholder advocacy and divestment, c) disclosure and anti-corruption laws and sanctions, d) trade

**LAW 6634. Regulated Industries.** (2-3 cr.; A-F only; Periodic Fall)

**LAW 6635. European Union Tax Law.** (2 cr.; A-F only; Periodic Fall & Spring)

The main objective of the course is to explore the fundamentals of EU tax law, in order to give an understanding of the tensions between the objectives of the EU and the Member States’ fiscal sovereignty. Focus will be on the application of the EU law fundamental freedoms in direct tax cases. To some extent, we will also cover the legislative harmonization within the EU in the field of direct taxes. There will be a short introductory part where you will get acquainted with EU law. After that, we will have weekly discussion sessions where we closely study case law in tax matters by the European Court of Justice. You will study 40-50 of the most essential EU tax law cases. From these cases, we will examine how to conceive of EU tax law as a systematic whole.

**LAW 6636. European Human Rights Law.** (2 cr.; A-F only; Periodic Spring)

Introduction to international human rights. Law, policy, process.

**LAW 6637. Business and Human Rights.** (2 cr.; A-F only; Periodic Spring)

This seminar will explore the growing area of law and advocacy around corporate accountability and corporate social responsibility related to international human rights standards. The course has several goals: 1) We will examine the development and content of international human rights standards pertaining to corporations and corporate officers, including state, national and international and regional laws and principles including the UN Guiding Principles on Human Rights and Business. 2) We will next focus on levels of implementation and varying points of intervention on BHR issues: a) internal corporate policies, b) socially responsible investment shareholder advocacy and divestment, c) disclosure and anti-corruption laws and sanctions, d) trade
Feminist theories, critiques, and models for application. Feminist history. Legal issues of relevance to women. Impact of law upon women. Means by which law can be used to redress inequality in larger social arena.

**LAW 6646. Law, Technology, Inequality and Opportunity.** (3 cr.; A-F only; Periodic Spring)
Examine competing arguments followed by examination of particular technological developments/their impact on inequality.

**LAW 6648. International Criminal Law.** (3 cr.; A-F only; Periodic Spring)
This course will cover developments in the prosecution of mass atrocity by international and hybrid criminal tribunals. It will discuss the history and development of the field of international criminal law from Nuremberg to the ICC; the sources of international criminal law; and jurisdiction over the investigation and prosecution of international crimes. The course will examine the elements of the international crimes of genocide, war crimes, crimes against humanity, and aggression. It will also analyze recent developments in international criminal justice, including victim participation, sentencing, and reparations.

**LAW 6650. Advanced Administrative Law.** (3 cr.; A-F only; Every Spring)
This course will study laws and doctrines governing the administrative practices of federal government agencies and judicial review thereof. The course will cover topics including privatization of government functions, presidential supervision and control of agency officials, and various doctrines limiting judicial review of agency actions.

**LAW 6661. Professional Responsibility - General.** (3 cr.; A-F only; Periodic Fall, Spring & Summer)
This course examines the ethical issues that lawyers confront in diverse areas of practice. The primary focus will be on the Model Rules of Professional Conduct and state law. Students will also explore a broader set of ethical questions including how attorney ethics are defined, how they are depicted in pop culture, and what type of conduct lawyers should aspire to in their practice. The course will also consider strategies for reconciling personal values, the law, and the rules of lawyering.

**LAW 6662. Professional Responsibility - Business.** (3 cr.; A-F only; Periodic Fall)
This course is a survey of rules of professional responsibility for lawyers with an emphasis on the rules that apply to lawyers in corporate and transactional practice. Issues covered include client conflicts, representing close corporations and partnerships, representing venture capitalists and entrepreneurs in start-ups, taking stock in lieu of legal fees, representing public companies, Securities Exchange Commission rules of professional responsibility for lawyers under the Sarbanes-Oxley Act, representing banks and other regulated companies, the role of in-house counsel, the responsibility of lawyers for client conduct, and malpractice liability for business lawyers.

**LAW 6663. Professional Responsibility - Civil Trial Lawyer.** (3 cr.; A-F only; Periodic Fall & Spring)
The goal of this class is to learn the Model Rules of Professional Conduct and be able to apply them to situations involving ethical issues, with an emphasis on (but not completely limited to) civil litigation situations.

**LAW 6664. Professional Responsibility - Criminal Law Ethics.** (3 cr.; A-F only; Periodic Fall)
The primary objective of this course is to educate you about the ethical problems facing lawyers and judges in criminal investigations and lawsuits. You will study the lawyer’s morality, the adversary system and the duties of the criminal defense lawyer, client autonomy, the duty and limits of zealous representation, lawyer-client trust and confidence, perjury and the search for the truth, counseling and preparing witnesses, the ethics of cross-examination, judges’ Ethics, conflicts of interest, and prosecutors’ ethics.

**LAW 6665. Professional Responsibility - Government.** (3 cr.; A-F only; Periodic Fall)
Students in this course should become familiar with the ABA Model Code of Professional Conduct and other aspects of the law governing lawyers, as well as with selected statutes and regulations governing conflicts of interest and ethical obligations of United States government employees. Throughout the course, there will be an emphasis on ethics rules, other laws, and practical considerations of importance to government lawyers.

**LAW 6667. Professional Responsibility - Legal Malpractice.** (3 cr.; A-F only; Every Fall)
This course will survey ethics rules governing lawyers with a focus on the interrelationship between the Rules of Professional Conduct and legal malpractice law, a specialized form of tort law that varies in critical aspects from classic negligence doctrine. In addition to teaching the substantive law of legal ethics and legal malpractice, the course will focus on helping students recognize and avoid real-life risks of malpractice exposure and liability.

**LAW 6700. Consortium Study.** (0-12 cr.; A-F or Audit; Every Spring & Summer)
Study at another law school. Prereq: dept consent

**LAW 6701. Criminal Law and Literature: Examining Criminal Practice & Theory through Didactic Fiction.** (3 cr.; A-F only; Periodic Spring)
The aim of this seminar is to examine classic issues in criminal law practice, theory and jurisprudence through the prism of didactic fiction. Class readings are works of fiction and the primary work product is a short story.

**LAW 6702. Legal History Workshop.** (2 cr.; A-F only; Periodic Fall)
This seminar brings in leading scholars engaged in projects at the intersection of law and history. The goal of the seminar is to provide students with an introduction to the field of legal history and an opportunity to
engage with scholars working on innovative projects that span from the ancient to the modern world, covering a range of geographical regions as well. Workshop sessions will be devoted to the presentation and discussion of works-in-progress of the guest scholars. Collectively, their works will encourage students to think comparatively about the role of law in defining the nature and limits of state power, and more broadly about the historical dynamics of law and society, with particular attention to the ways in which law has served not only as a mode of governance, but also as a cultural resource, enabling individuals to contest conventional ideas about race, class, and gender difference, and the very meaning of social justice.

LAW 6704. Seminar: Mass Torts: What They Are and How To Resolve Them. (; 2 cr.; A-F only; Periodic Fall)
Legal dilemma of finding ways to compensate the truly injured while protecting legitimate business concerns.

LAW 6705. Information Governance. (; 2 cr.; A-F only; Every Fall)
Students will explore the values placed on information in the modern corporate enterprise, as well as the risks, costs and challenges associated with governing various forms of information, given the innumerable laws and regulations that apply to information. The purpose of the broad survey is to expose students to multiple disciplines that will undoubtedly affect their careers, and help them to develop a real-world sense of options to enhance risk avoidance, cost containment, and compliance. Students will be exposed to various disciplines related to the management of information, which have traditionally been siloed? or separate ? including e-discovery, privacy, records and information management, and security ? but which increasingly are seen as parts of a greater, integrated whole.

LAW 6706. Punishing Corporations and Governments. (3 cr.; A-F or Audit; Periodic Spring)
To what extent we can be punished or be made to pay compensation, for actions other than our own, but in which we are deemed complicit.

LAW 6707. Intellectual Property Transactions. (; 2 cr.; A-F only; Every Spring)
Intellectual property rights have been described as a "sword and shield." Rights holders are thought to act aggressively by suing or threatening to sue infringers and seeking money damages, irrespective of the holders' marketing and product sales programs. Or they act defensively to protect their current or future market positions by having federal courts enjoin competitors. This course considers a third way: intellectual property rights are also valuable intangible assets that may be bought and sold. In this course, we will explore the principal theories and practices of intellectual property transactions. We will be considering closely the doctrines regulating the assigning and licensing of patent, copyright, trademark, and other intellectual property rights, and we will be questioning critically whether these laws and practices encourage or inhibit commercial activity and innovation. While studying specific transactions in the course, we will be examining the practical uses of intellectual property law to meet commercial objectives.

LAW 6709. Current Agriculture-Environment Issues. (; 2 cr.; A-F only; Periodic Spring)
The seminar will cover selected legal environmental issues related to agriculture. Half the semester will explore the Des Moines Water Works litigation. Filed in 2015 by a water utility, this lawsuit has attracted wide attention, in the farming and environmental communities. It seeks to hold farming accountable for dramatically increased cost of treating water to meet public health standards. Legal issues center on water quality and lead to questions of drainage, fertilizers, pesticides, erosion, irrigation, genetically modified organisms, livestock manure, and antibiotics. Also the course will consider ag/environment/legal aspects of organic farming, air quality, global warming, endangered species, and state and federal farm programs. Attorneys, scholars, and public officials will be invited classroom guests. Students will present their research topics to the class. Readings will be selected portions of texts, articles, & cases.

LAW 6710. Federalism, the Intersection of Law and History. (; 2 cr.; A-F only; Spring Even Year)
Federalism: The relationship between 50 sovereign states and the United States. From the founding of the republic to the present day, federalism issues have vexed the American people, their political institutions, and their judiciaries. Federalism decisions are often driven as much by cultural, social, and political forces as they are by any discernible legal doctrine. This seminar will enable the student to explore how historical currents have shaped the law of federalism, and how the law, in turn, has influenced historical developments. Students will be assigned Supreme Court cases and legislative enactments to research, write about, and present to the class. The topics will look at the legal theories that have informed federalism from Chisholm v. Georgia, 2 US 419 (1793)(whether individual states enjoy sovereign immunity) to Franchise Tax Board of California v. Hyatt, 136 S.Ct. 1277 (2016) (whether Nevada state court, under Nevada v. Hall, 440 U.S. 410 (1979), had jurisdiction over California tax agency).

LAW 6711. National Security Cases in Federal Courts. (; 2 cr.; A-F only; Periodic Spring)
This two-credit seminar will impart to students a good understanding of the unique investigative tools used by federal law enforcement in the investigation of national security cases, and of the ways the federal courts have adapted to the challenges of terrorism and espionage cases. Moving in chronological succession through a national security case, from investigation, to charging and trial, the seminar will cover the Foreign Intelligence Surveillance Act, the Classified Information Procedures Act, the relationship between the intelligence services and law enforcement, overseas operations by United States law enforcement agencies, and custodial interrogation of suspects in the national security context. In the seminar's last two class sessions, students will participate in a simulation of a domestic terrorist incident, at times adopting the perspective of investigators, defense lawyers, prosecutors, or judges. The seminar has no prerequisites or co-requisites. However, in the section of the seminar on custodial interrogation, students who have not completed Criminal Procedure will have to read two additional cases that students who have completed Criminal Procedure will not have to read.

LAW 6712. Complex Criminal Investigations. (; 2 cr.; A-F only; Periodic Spring)
This course examines through experiential learning the law and conduct of modern criminal investigations. In a highly-technological and globalized world, we explore how today's criminal investigations utilize cutting edge investigative techniques, adapt to the huge storage footprint of individuals and corporations, and accommodate our competing interests in personal autonomy and effective law enforcement. We will use as our lens a series of high-profile, complex investigations in the news, including, for example, the internal and criminal investigations of alleged bribery at FIFA, alleged child-endangerment at the Arch Diocese of Minneapolis and St. Paul, insider trading on Wall Street, and the alleged recruitment of teenagers to join ISIS.

LAW 6713. Comparative Legal Professions. (; 2 cr.; A-F only; Periodic Spring)
Globalization has increasingly brought American lawyers in contact with legal professionals in other countries. Most American lawyers have little understanding of how legal training in other countries differs from their own experience as law students nor how much variation in how legal professions are organized from country to country. The purpose of this course is to equip future practitioners with the knowledge and understanding that will facilitate their interactions with legal professionals from other countries. The course will involve a combination of lectures by the instructor, visits by current LL.M students who have practice experience in their home countries, and readings about lawyers in other countries.

LAW 6714. E-Discovery. (; 2 cr.; A-F only; Periodic Spring)
Familiarity with all aspects of e-discovery is no longer optional for new attorneys and courts are increasingly penalizing attorneys who fail to satisfy their e-discovery obligations. The outcomes of many cases turn on a few key electronic documents that can be missed if the e-discovery process is not carefully pursued. This seminar will follow the life cycle of a case, covering topics such as document preservation, collection, search, review, and production. Students will participate in mock client interviews and meet and confers, receive lectures on important topics such as spoliation, and observe demonstrations of available document search and review technologies.
The seminar will also include guest speakers on topics such as an in-house counsel’s perspective on gathering electronic documents.

**LAW 6715. Student Speech: Rights and Regulations.** (; 2 cr.; P-F only; Periodic Spring)

Legal/policy issues around student expression. Hands-on development of course.

**LAW 6716. Magna Carta and the Evolution of Anglo-American Law.** (; 2 cr.; A-F only; Periodic Fall)

This seminar will examine the origins of Magna Carta in historical context, and study its influence and legacy in English and American law. The seminar will cover the underpinnings of Magna Carta and analyze the contents of the ‘Great Charter’, before studying its status as ‘fundamental’ law in early modern England, the role it played in conflicts between monarchy and Parliament, and its formative influence on documents like the English Bill of Rights. We will proceed to analyze the significance of Magna Carta in colonial and Revolutionary America, particularly in early state constitutions, the US Constitution and the development of federalism. Students will study English and American case law relevant to Magna Carta and work with key historical sources in original published form. A unique aspect of the course will be the integration of material from the Law Library’s Arthur C. Pulling Rare Books Collection. LL.M. students may request instructor permission to enroll.

**LAW 6717. U.S. Citizenship: A Legal History.** (; 2 cr.; A-F only; Periodic Spring)

This two-credit seminar is intended to provide students with a broad historical foundation in U.S. citizenship. We will focus on five broad questions: (1) how war, economic transformation, and territorial expansion have reshaped citizenship; (2) how the relationship between state and federal citizenship has changed over the course of U.S. history; (3) how the rights and obligations of citizenship have changed over the course of U.S. history; (3) how race, gender, sexuality, disability, marital status, birthplace, religion, and poverty have shaped access to or enjoyment of citizenship; (4) how refugees and guest workers fit into a nation in which rights rest largely on citizenship.

**LAW 6718. Immigration and Criminal Law: Immigration Consequences of Crimes and Criminalizing Migration.** (; 2 cr.; A-F only; Periodic Spring)

In the last decade, there has been an increased emphasis on using the criminal justice system to help determine who is and who is not suitable to live and work in the United States. This phenomenon has had some increasingly interesting effects as the immigration apparatus has been for most of the history of the United States a civil and agency system. The increased reliance on the criminal justice system has caused some overlap of criminal justice norms including concepts of right to counsel, detention and detention and warrants. At the same time, the prosecution of federal migration crimes has skyrocketed in the same period to the point where the majority of all federal prisoners are imprisoned because of migration crimes.

**LAW 6721. Corporate Bankruptcy.** (; 2 cr.; A-F only; Periodic Spring)

After surveying the rights of creditors and debtors under state law, this course will consider the impact of federal bankruptcy law upon secured and unsecured creditors and other interested parties. We will study the basics of the bankruptcy process from filing to discharge.

**LAW 6800. International Contracts.** (; 3 cr.; A-F only; Every Spring)

Simulated negotiation of complex international sale-of-goods contract, requiring mastery of issues such as choice of law, dispute settlement, payment terms and devices, quality control terms and devices, and shipment terms.

**LAW 6801. Death Penalty.** (; 2 cr.; A-F only; Every Spring)

This seminar focuses on the substantive law of capital punishment and on the procedural aspects of post-conviction proceedings. The course will include an examination of the history of death penalty jurisprudence, the Antiterrorism and Effective Death Penalty Act of 1996, habeas corpus, and state and federal death penalty statutes.

**LAW 6803. Health Insurance and Health Care Reform.** (; 2 cr.; A-F only; Periodic Spring)

This seminar explores the role that private and social insurance play in managing and responding to health-related problems. It focuses on these issues through the lens of the Patient Protection and Affordable Care Act (ACA). The seminar is split into three units. The first unit aims to appreciate the centrality of insurance to health care. It examines how insurance underpins issues regarding access to health care, the increasing cost of health care, and responsibility for one’s health. The second, and most substantial, unit then focuses attention on the ACA. It explores the ACA’s use of public and private insurance mechanisms to attempt to alter health care in the United States. Finally, the third unit of the seminar considers alternative approaches to health insurance reform, and their costs and benefits relative to the approach embodied in the ACA.

**LAW 6804. Government Secrecy.** (; 2 cr.; A-F only; Periodic Fall)

This course introduces students to major mechanisms by which the executive branch of the federal government keeps secrets, including the classification system, the doctrines of executive privilege and state secrets privilege, and prosecuting information leakers. The course also introduces students to some of the major means by which secrecy is challenged, including the Freedom of Information Act, first amendment access and news-gathering claims, and whistleblower protection laws. Throughout the semester, we will discuss a number of recurring themes including the connection between government secrecy and constitutional theories of presidential power, the politics of secrecy and transparency and the role of constitutional discourse in the same, and the costs and benefits of secrecy and transparency.

**LAW 6807. Cooperatives and Collective Entrepreneurship: Law, Policy and Practice.** (; 2 cr.; A-F only; Periodic Fall)

Cooperative and mutual business forms have been widely used for purposes of economic development, workforce development and social innovation. Historic examples include agricultural cooperatives, rural electric cooperatives, insurance mutuals and fraternals, credit unions, health maintenance organizations, housing cooperatives and mutually organized non-profits with significant earned income. This seminar will: 1) illuminate public policy considerations for cooperative forms Explore processes related to formation, governance, operations and distribution; 2) Consider several common and not-so-common practices of this business model; and 3) Discuss and debate the merits of both economic and social ? of coops as a ?double bottom line? business form.

**LAW 6808. Street Law.** (; 2 cr.; A-F only; Every Spring)

Build your understanding of various areas of law and the legal system as you prepare classroom presentations for area high school students. By polishing your ability to explain the law to non-lawyers, Street Law will prepare you to be engaged members of your communities and more effective lawyers. During the Street Law seminar, we will focus on legal topics of interest to teens (and the general public) such as criminal law and procedure, the First Amendment, Constitutional law, the court system, and practical law (juvenile, consumer, employment, cyber). You will also learn teaching strategies including deliberation, case studies, moot court, mini-mock trials, continuums, snap debate and other engaging methods that will transform boring old civics into experiences your students will remember. Equity issues in pedagogy will be examined and tools to address issues will be presented. Street Law students will develop lessons and practice teaching (student presentations) in the seminar’s collaborative learning environment. In addition to the weekly seminar, you will partner with area teachers to share your knowledge in a win-win experience using Street Law lessons developed by you, your classmates, and past Street Law participants. Course requirements are class participation, written work: lessons for each teaching session and one short research paper, 10 hours of teaching which usually occurs during the normal school days throughout the semester. Law students may work in teams. There are no exams. By the end of this seminar you will have discovered the meaning of the education phrase ‘to teach is to learn twice.’ No teaching experience is needed.

**LAW 6809. Seminar: Advanced Intellectual Property: Special Projects.** (; 2 cr.; A-F or Audit; Periodic Fall)

Special projects in intellectual property for students with prior IP coursework.

**LAW 6811. Seminar: Complex Litigation.** (; 2-3 cr.; A-F only; Periodic Spring)
Key concepts/tools required for managing large, complex litigation.

LAW 6812. Statistics for Legal Practice. [2 cr. [max 3 cr.]; A-F only; Periodic Fall] The goal of this course is to prepare students to be knowledgeable consumers of statistics as practicing lawyers. The course will draw on a wide range of cases and other legal issues as examples of where statistics have played a role. The course will cover most core statistical methods, but it does assume some prior familiarity with basic statistics. While the emphasis will not be on the mathematics underlying the various statistical methods covered, the course does presume a willingness to deal with basic algebra. After completing this course, students will be familiar with the broad range of areas of the law and legal process where statistics have played a role, and should be able (1) to understand the kinds of issues that arise in the use of statistics, (2) to read and understand expert reports using statistics, and (3) to ask intelligent questions of their own and opposing experts.

LAW 6813. Seminar: Social Science in Law. [2 cr.; A-F only; Periodic Spring] Relationship of social science to law.

LAW 6814. Racketeering and the RICO Act: Criminal & Civil Liability. [2 cr.; A-F only; Periodic Spring] This course will consider the Racketeer Influenced and Corrupt Organizations Act (RICO), which grabs more headlines and is more sweeping in its application than practically any other federal statute. Originally intended as a weapon against the Mafia, RICO has evolved into a statute used to fight a wide variety of corrupt practices. RICO is also increasingly becoming an important aspect of international business. In 2014, Chevron brought RICO claims against a U.S. lawyer who allegedly bribed foreign officials in order to obtain a multi-billion dollar judgment in a foreign tribunal. RICO, however, has its limits. Courts are beginning to weigh in heavily against RICO’s application to extraterritorial disputes. When RICO claims were alleged in the sex abuse cases against the Catholic Church, courts struck down the claims on the basis that the plaintiffs sought compensation for personal injuries, which are not within the scope of the statute. Enterprise, pattern and causation issues under RICO present some of the most complicated legal questions that any lawyer will ever confront.

LAW 6816. State Constitutional Law. [2 cr.; A-F only; Periodic Fall] Explores the important field of state constitutions and constitutional law in the United States. Topics addressed will include the politics of state supreme court systems and the role of these courts in protection of individual rights and the definition of the American political process. Of importance will be examination of the ways state courts and constitutions adjudicate differently from the United States Supreme Court on a variety of important issues including abortion and privacy, criminal due process, education, taxation, as well as the issues of state power and governmental organization. Please note that this class is taught in very few law schools. This means that this class is a unique experience in learning more about a body of law that will have a dramatic and direct impact upon a lawyer’s daily practice of law.

LAW 6817. Practical Estate Planning. [2 cr.; A-F only; Every Spring] This course will focus on the day to day life of the estate planning lawyer, from the initial client interview and analysis of financial data to the implementation of appropriate planning techniques based upon a client’s situation and assets. Subjects addressed will include: ethical considerations; probate and methods for avoiding it; use of trusts; gift, estate and generation-skipping transfer tax planning; planning with life insurance; planning with retirement assets; planning for charitable gifts and bequests; planning for lifetime gifting to individuals; post-mortem planning and premarital agreements.

LAW 6818. White Collar/Corporate Crime. [2 cr.; A-F only; Periodic Spring] This class will consider the theory and practice of white collar litigation in the criminal arena. We will begin with a survey of basic principles and theories and then turn to the main substantive areas of white collar criminal liability, examining the most common regulatory schemes encountered in the interface between corporations and criminal law: mail and wire fraud, money laundering, RICO, and obstruction of justice. Next, we will discuss practice in white collar defense and prosecution, looking at discovery, plea negotiation and trial challenges unique to allegations of criminal malfeasance in corporate settings. We will examine federal laws, sentencing regulations, and Supreme Court pronouncements that control punishment for common white collar offenses. Finally, we will return to overarching policy questions, considering the role of federal courts in the imposition of criminal liability, and the consequences of overlapping state and federal jurisdiction over white collar offenses, particularly as revealed in the investigation and prosecution of public corruption cases.

LAW 6819. Litigation Finance. [2 cr.; A-F only; Periodic Spring] Litigation financiers provide capital to a party involved in litigation in exchange for a portion of the financial recovery from the lawsuit. For example, a finance group may agree to cover $1mm in legal expenses in exchange for $5mm of the recovery if the lawsuit is successful. If the case loses, the finance group completely loses their $1mm case investment. Litigation finance is completely changing the way lawsuits are financed, yet it is still little understood by a large percentage of the legal world. By understanding this field as a law students, the practicing lawyers will put themselves at a huge advantage going into the practice of law - whether as a solo practitioner, in-house counsel, or working at a major law firm. Further, litigation finance groups are forming every year, and they are looking to hire lawyers that understand the field. This seminar will explore third-party litigation financing from a financial and legal perspective. We will analyze the field in practical terms and from the perspectives of economic theory, public policy, and legal ethics. For the group presentation, students will pitch litigation finance to a theoretical investor and explain how it works and why an investor should supply them with capital. For the final paper, students will prepare a memorandum analyzing a legal case and determine whether or not it is a good investment opportunity from a variety of different perspectives.

LAW 6822. Legislative Process. [2 cr.; A-F or Audit; Periodic Fall & Spring] Examines and tests academic and judicial assumptions and theories about the legislative process.

LAW 6823. Investment Banking. [2 cr.; A-F only; Periodic Spring] The objective of this seminar is to provide an introduction to investment banking and private equity. We will discuss the players, the industry, and how investment banking and private equity provide capital to public and private companies. Using case studies and examples of recent transactions, we will discuss the background, process and ? art? of deals involving investment bankers and private equity professionals. We will spend time discussing the intersection of investment banking, private equity, and corporate law in the context of transactions. What are the respective roles of the lawyers and bankers? How do lawyers and bankers work together with mutual clients on deals on issues like fiduciary duty, valuation, disclosure, and regulation? The seminar will require some interest ? though not necessarily a background ? in basic finance. We will spend time on financing, accounting, and valuation concepts that are helpful for both bankers and lawyers to know in the context of a transactional practice.

LAW 6824. Genetics: Law and Ethics. [2 cr.; A-F only; Periodic Spring] This interdisciplinary seminar will examine the legal, ethical, medical, and scientific issues posed at the cutting edge of biomedical science, focusing on genetics, genomics, and assisted reproductive technologies (ART) in human beings. Topics will include the human genome project; history of eugenics; issues posed by genetic and genomic research; commercialization of genetic research, including issues raised by gene patents; genetic testing, counseling, and screening; prenatal screening and preimplantation genetic diagnosis; the use of genetics in ART; human gene therapy; pharmacogenetics; the privacy of genetic information; and issues of discrimination. Together, the class will work through the scientific, medical, legal, and ethical issues. In each instance, we will evaluate the legal, ethical, and policy challenges posed, critique current approaches, and explore alternative recommendations.

LAW 6827. Women's International Human Rights. [2 cr.; A-F only; Every Spring] This seminar addresses the history and legal context of women's human rights; the UN
Constitution on the Elimination of All Forms of Discrimination against Women (CEDAW) and its impact; gender and human rights in the international system; specific topics such as property and other economic rights, reproductive rights, and violence against women; and the role of nongovernmental organizations in making CEDAW work for women.

**LAW 6828. Law and Cultural Property** (every Fall) Collectors, museums, countries, native cultures, religious groups. New stakeholders’ uneasy fit with traditional, scholarly caretakers. Archaeologists/historians.

**LAW 6830. Corporate Counsel.** (every Fall) Participants will learn the unique challenges of working in-house as corporate counsel with public, private, or nonprofit organizations, developing perspectives and skills to think like and be effective business lawyers and leaders. Students will work individually and in teams to address simulations of problems regularly encountered by corporate counsel, including in areas of risk, compliance and ethics management, governance and the board of directors, leading in crisis, business strategy and planning, international transactions, investigations, litigation management, employment, and intellectual property. Participants may conduct research, draft agreements and memoranda, conduct interviews, negotiate, and develop papers based on practical exercises that are the backbone of the course. Students will explore the three fundamental roles of corporate counsel: a technician, wise counselor, and lawyer as leader. This course involves questions beyond what is legal? and focuses on what is right, using specific illustrations drawn from the contemporary business world.

**LAW 6831. Law, Race, and Social Psychology.** (every Fall) Study of how the law affects race and social psychology.

**LAW 6832. Cybercrime and Cybersecurity.** (every Fall, Spring) This course will cover the key constitutional, statutory, technological, and policy issues regarding computer crime, electronic-evidence gathering (including electronic surveillance), and cybersecurity. The course grade will be determined by a final paper, a brief class presentation based on the final paper, and class participation. Criminal Procedure (LAW 6085) is recommended but not required as a prerequisite.

**LAW 6833. Alternative Dispute Resolution.** (every Fall, Spring) Alternative forms of dispute resolution techniques. Validity of critiques of traditional litigation and court-based responses to these problems.

**LAW 6834. Federal Habeas Corpus.** (every Fall) This course will study the evolution of habeas corpus and how the habeas remedy is utilized in the federal court system today. This study provides students an opportunity to observe how constitutional law, criminal law and procedure, civil procedure and even trial and appellate practice all bear upon the courts’ struggle to apply habeas corpus law to individual cases. The cases studied are representative of the detentions that may be challenged in federal habeas, e.g. enemy combatants in military custody, state prisoners on death row and immigrants in Homeland Security custody.

**LAW 6835. Supreme Courts in Comparative Perspectives.** (every Fall, Spring) This seminar will consider the differences in role and powers of courts in the United States, the European Court of Justice, and other Supreme Courts of more limited jurisdiction. The course will address topics such as agenda setting, case selection, and court procedure.

**LAW 6837. Contract Drafting.** (every Fall, Spring) This seminar will take the contract principles that students learned in their first year and build upon them in a practical way. Students will review and revise contracts, draft sample provisions, draft contracts from "scratch," and discuss options for managing risk through effective drafting.

**LAW 6838. American Indian Law.** (every Fall, Spring) Study of the law and punishment theory (many writers), and Bentham onwards, in contemporary criminal systems of punishment for crime. It examines this seminar concerns normative justifications for punishment, and explores the feasibility of using some of them as agenda setting, case selection, and court procedure.

**LAW 6839. Comparative Antitrust.** (every Fall) The seminar explores the similarities and differences between U.S. and EU antitrust law (usually called "competition law? in Europe), with a focus on the differences. Topics include: 1) An overview of the U.S. and EU antitrust systems. 2) Review of microeconomics. 3) Vertical restraints. 4) Monopolization in the U.S.; abuse of dominant position in the EU. 5) Merger law. 6) Efficiencies as a merger justification. 7) Predatory pricing. 8) Price discrimination. 9) Exclusive distributorships. 10) Loyalty discounts and rebates. 11) Bundled discounts and rebates. 12) Intellectual property related antitrust issues. 13) Microsoft related issues. 14) Dynamic competition (and the ? new economy?). 15) Other matters, including judicial review and orthodoxy. The seminar is designed to assist students in: (a) developing an ability to analyze court decisions involving economic issues; (b) developing an ability to anticipate when EU authorities will substitute noneconomic values for economic ones; and (c) improving their ability to articulate complex issues involving both law and economics.

**LAW 6840. Employment and Family-Based Immigration Law.** (every Fall) Students will learn how to use business, employment, and family-based immigration law procedures and strategies in private practice. These areas comprise more than 60% of the work performed by immigration lawyers, as measured by the 2011 and 2016 American Immigration Lawyers Association Practice Surveys. Students will explore the relationship between federal and state control of immigration and benefits associated with immigration status. They will also explore how to build an evidentiary record that will carry them through administrative and judicial appeals. Students will apply ethical rules to carry them through administrative and judicial appeals. Students will apply ethical rules to carry them through administrative and judicial appeals. Students will apply ethical rules to carry them through administrative and judicial appeals.

**LAW 6842. Advanced Criminal Procedure.** (Spring) This seminar will consider the substantive, procedural, and for systems of punishment for crime. It examines literature in the philosophy of punishment from the early 19th century (e.g., Kant, Hegel, Bentham) onwards, in contemporary criminal law and punishment theory (many writers), and in social theory (e.g., Durkheim, Weber, Marx, Foucault, Waquant), concerning justifications.
for punishing at all, and whom, and how much, and functional questions about the larger social purposes that punishment serves. A focus is on the usefulness of existing paradigms for understanding and justifying such recent developments as restorative justice, community justice, therapeutic jurisprudence, and specialized drug and domestic violence courts.

**LAW 6848. Appellate Advocacy.** (3 cr.; A-F only; Periodic Spring)
This experiential learning course will provide simulation experiences for all phases of appellate advocacy, from post-trial motions through cert. petitions. We will develop case studies based on trials that present numerous issues for appeal, then use these studies as the foundation for exploration of each step of the appellate process. Students will strategize appellate choices, learn the importance of issue preservation, become conversant with Federal Rules of Appellate Procedure, and apply their brief writing and oral advocacy skills. Experienced appellate advocates will work with the students and provide insight.

**LAW 6849. Comparative Theories of Ownership.** (2 cr.; A-F only; Every Spring)
This seminar will examine different philosophies concerning property ownership and the property laws of different countries.

**LAW 6851. Practice-Ready Legal Research.** (2 cr.; A-F only; Every Fall & Spring)
Practice-Ready Legal Research is a simulation course in which students apply legal research methods and techniques to scenarios involving a hypothetical client. Over the semester, students learn legal research concepts, sources, and tools through a combination of lectures, in-class activities, and writing assignments.

**LAW 6853. Law, Biomedicine and Bioethics.** (3 cr.; A-F only; Periodic Fall)

**LAW 6854. Seminar: Biotechnology and Law.** (2-3 cr.; A-F or Audit; Every Fall & Spring)
Private law aspects of the biotechnology industry. Legal/regulatory issues faced by commercial start-ups.

**LAW 6857. Corporate Tax.** (3 cr.; A-F only; Every Fall)
An introduction to Subchapter C of the Internal Revenue Code, the ?crown jewel? of the Tax Code, and the taxation of shareholders and corporations. The class will include an indepth study of Section 351 and corporate formations; the capital structure of a corporation; nonliquidating distributions including dividends and Section 301; redemptions of corporate stock including Section 302; both taxable and tax free acquisitions, including Section 368 reorganizations; and, corporate divisions such as spin-offs under Section 355. The course will not address international transactions, but will attempt to emphasize real world, current corporate tax problems.

**LAW 6858. Principles of Corporate Governance: The Role and Responsibilities of the Corporate Board.** (2 cr.; A-F only; Periodic Fall)
This course will provide students with the tools and understanding to better advise corporate and nonprofit board clients. This course will also help students in their roles as future corporate and nonprofit board members.

**LAW 6859. Conflict Resolution.** (2 cr.; A-F only; Periodic Fall)
Conflict resolution lies at the heart of the practice of law. The temptation for practitioners, however, is to rely on superior knowledge and understanding of a substantive body of law or superior presentation and argument skills to prevail in settling disputes. A more pragmatic approach is to examine why conflict arises and how it can be effectively addressed in both individual and group contexts. This course recognizes that as lawyers all will face conflict not only in their practice, but in how that practice is lived, understood, and refined through relationships with others. Practitioners who master the art of conflict competency, defined as the ability to identify and effectively respond to conflict, will find greater success in both professional and personal realms.

**LAW 6860. Advanced Topics in Labor and Employment Law.** (2 cr.; A-F only; Periodic Fall & Spring)
During the first two months of the semester, this class will examine eight cutting-edge topics in labor and employment law. For each topic, the instructor will first provide an overview of the topic with particular focus on some of the key difficulties and shortcomings of the current legal regime. One or two students will then guide the class through a discussion of possible options for law and policy reform. The students may work as a team or as individuals presenting competing visions. Students will have the opportunity to sign-up for the topic of their choice. Students also will be expected to prepare a research paper of approximately 25 pages in length on a selected labor and employment topic. The instructor will distribute a list of suggested paper topics. Students may select from this list or, with the instructor?s permission, design a topic of their own choosing. Students will present their respective papers during the last month of the semester. The research paper will satisfy both the senior writing requirement and the Labor & Employment Law Core requirement on writing. As a prerequisite for enrollment in this course, students must have taken at least one of the following courses: Employment Law, Employment Discrimination, or Labor Law.

**LAW 6861. International Law Workshop.** (2 cr.; A-F only; Periodic Fall & Spring)
This seminar brings in nationally recognized scholars to the law school to present their current work and provide students with the opportunity to engage with cutting edge scholarship in international law. Workshop sessions will be devoted to the presentation and discussion of works-in-progress of the guest scholars on various topics in international law. The seminar is aimed at exposing students to the world of international legal scholarship and the nature of scholarly debate. Students will be encouraged to develop a thoughtful and critical approach to scholarly work through guided discussions, so as to assist them in developing skills that are necessary to produce high quality scholarship with a view to publication. The course will be assessed on the basis of short reaction papers examining the work to be presented.

**LAW 6863. Public Choice and Regulation.** (2 cr.; A-F only; Periodic Spring)
This seminar uses the methods of law and economics to examine alternative sources of law and to provide some insights on the institutional theory of lawmaking. Part 1 of the course introduces the methodology for the course and some of the fundamental theorems in public choice theory. Part 2 presents the different economic theories of regulation and optimal allocation of regulatory power. Part 3 concludes examining four different methods of lawmaking, described respectively as: (1) lawmaking through legislation (codified law); (2) lawmaking through adjudication (judge-made law); (3) lawmaking through practice (customary law); and (4) lawmaking through agreement (treaty law). The readings and class analysis aim at providing a birds-eye view on public choice and regulation theory from an economic perspective. The readings will shed new light on the important issue of the institutional design of lawmaking, emphasizing the respective advantages and proper scope of application of legislation, judge-made law, customary law, and treaty law in the creation of a legal order.

**LAW 6864. Seminar: Law of Lobbying.** (2 cr.; A-F only; Periodic Spring)
This class is intended to provide students with an understanding of the legal regulations on federal and state lobbying, as well as provide them with practical experience with the profession of lobbying.

**LAW 6865. Law and Economics Workshop.** (2 cr.; max 4 cr.; A-F only; Periodic Fall & Spring)
This seminar primarily consists of presentations by leading law and economics scholars on major issues in law and economics, with a different focus each year. After an introductory session, the seminar will consist of paper presentations by prominent scholars in the field. Students will be required to write short critiques/commentaries on the papers. Students student?s grade will be based 75% on her papers, and 25% on her class participation. As the coverage of this seminar is different each year, students may take this seminar in both their 2nd and 3rd years.

**LAW 6866. Sex Discrimination.** (2 cr.; A-F only; Periodic Fall)
Sex discrimination/legal prohibitions. Modern/historical contexts. Women's legal status before/after rise of first organized women's rights movement. Rise of second women's movement/emergence of heightened
to use what may be the most important non-written tool a communicator can possess: the doctrine of visual design. In this course, we will review: - the principles of visual design, - the fundamental skills of graphic design, - the design cycle process, and - the application of these principles to the legal practice. This course will cover specific strategies for visualizing legal arguments and concepts, including the creation of case organization tools, argumentative graphics, and trial demonstratives. Class assignments will entail drafting and revising the types of documents that you might be asked to create in practice. We will also explore the tools to make a visual advocacy by questioning judges and first-chair lawyers on the most valuable and persuasive use of visual design. We expect you will learn that visual advocacy is not about making boring things look pretty. Rather, it provides a process for enhancing legal communication by improving comprehension and engagement.

LAW 6872. Immigration Law. (3 cr.; A-F only; Every Spring)
This course deals with the history of immigration to the United States, the role of the federal government in regulating immigration, visas for non-immigrants and immigrants, procedures and grounds for removal, asylum refuge status, citizenship, discrimination against aliens, the intersection between criminal law and immigration law, and ethical issues facing immigration lawyers. The course includes in-class lawyering skill exercises such as client interviewing and counseling, participating in an immigration court hearing, and legislative advocacy on immigration reform measures. These exercises are designed to train students in the skills necessary to become successful immigration lawyers.

LAW 6873. Nonprofit Law. (2 cr.; A-F only; Periodic Spring)
This seminar covers the legal requirements and policy implications for nonprofit organizations. Course topics include state law issues related to the formation of nonprofit organizations, nonprofit governance models, director fiduciary responsibilities, liability concerns for directors and volunteers, dissolution, state attorney general oversight, and regulation of fundraising. We will also study federal tax law governing nonprofit organizations, including tax exempt status, classification of charities as private foundations or public charities, deductibility of contributions, challenges and opportunities for charitable organizations to partner with for profit entities and otherwise engage in commercial activities, limits on compensation for executives, and the ability of nonprofit organizations to engage in advocacy. Students will consider best practices for operation and governance of nonprofit organizations and ways to demonstrate accountability to donors and other stakeholders. Prerequisite or Corequisite: Law 6085 Criminal Procedure or Law 6229 Criminal Process: From Bail to Jail.

LAW 6878. Regulating Personal Health Development and Finance. (2 cr.; A-F only; Periodic Fall)
This course is intended to focus largely on the practical aspects of how energy projects are developed, financed, and ultimately put into operation. Students will explore the legal frameworks that regulate how personal health information may or may not be shared and the competing policy goals that often underlie these frameworks: protecting individual privacy enhancing the quality of care. The seminar has three components. It will survey the myriad laws, regulations, and contractual arrangements
LAW 6879. Poverty and Human Rights. (2 cr.; A-F only; Periodic Fall)
This course focuses on how the international human rights legal framework addresses the symptoms and causes of systemic poverty with an emphasis on the practical application of those norms to real-life situations. We will explore what a rights-based approach to poverty eradication means for governments and other development actors and learn how communities and advocates are leveraging human rights law to combat poverty in a variety of contexts. The class will consider a wide range of topics spanning domestic and global poverty; urban and rural contexts; the gendered dimensions of poverty; environmental justice; privatization of public services; threats to the rights to food, water, education, and housing; collective rights of indigenous peoples and peasants; the situation of human rights defenders; and reparations. Students will study primary documents and interact with practitioners working in the U.S. and abroad on litigation, policy advocacy, mobilization, and governance. The coursework consists of simulated advocacy and advisory reports. Students will finish the seminar equipped to bring a working knowledge of the international human rights system to their future roles.

LAW 6880. Campaign Finance and Election Law. (2 cr.; A-F only; Periodic Fall & Spring)
This course will provide students with an in-depth review of federal and state campaign finance and election law. We will begin with a review of the Supreme Court decisions that have shaped the current status of federal election law, most notably Buckley v. Valeo. We will review the cases like McConnell, Austin, and Wisconsin Right to Life and will conclude with Citizens United. Also, the federal component will include an overview of the Federal Election Campaign Act and a review of the powers of the Federal Election Commission and a review of some of its notable advisory opinions. Additionally, a second portion of the class will be devoted to a review of other Supreme Court Chapters 10A and 200-212, the corpus of Minnesota campaign finance and election law. We will review decisions by the Minnesota Campaign Finance Board and review decisions by the Minnesota Supreme Court, as well as those of the Minnesota Federal District Court interpreting Minnesota election law.

LAW 6881. Comparative Laws. (2 cr.; A-F only; Periodic Fall)
The aim of this course is to introduce you to the largest legal system in the world, namely the Civil Law System, which is used by most countries where Common Law doesn’t apply. We will study the basics of Contracts and Torts in the two leading countries, through the French Code Civil (CC) and the German one (BGB). We will make a short introduction to civil procedure, in order to allow you to work on Court decisions in both systems and, by the same time, we will analyze, and discuss, as usual, some Court’s decisions (in English) to familiarize yourselves with the book, in the book, will give you an overview of the subject of each class, and the courts’ decisions will allow us to understand how judges make decisions in the two systems, by comparison to Anglo-American Common Law. The goals are to make you comfortable with the main aspects of contracts and torts laws as well as with Court decisions, their reasoning, how judges justify decisions on given articles of the code and not others.

LAW 6883. Contemporary Issues Facing Courts. (2 cr.; A-F only; Periodic Fall)
This seminar, led by a former Chief Judge of the 4th Judicial District of Minnesota, will address a broad range of challenges facing courts and the innovations in judicial administration and judging that seek to advance the cause of justice. Topics include: courts as organizations; therapeutic justice; understanding case management and its impact on judging and lawyering; court funding and its impact on the delivery of justice; judicial selection and retention; wrongful conviction and other court mistakes; and public satisfaction and dissatisfaction with the courts. Students will explore the topics in class discussion and write papers analyzing one or more court challenges or innovations.

LAW 6884. Seminar: Comparative Constitutional Law. (2 cr.; A-F only; Every Fall & Spring)
Historical background/changes of rule of law, democracy, human rights, market economy. Role that legal profession can play in development of these concepts.

LAW 6885. Advanced Environmental Law. (2 cr.; A-F only; Every Spring)
This seminar will examine current environmental issues through class discussion led by leading public, private, and nonprofit environmental lawyers. Students will prepare two 2,500 word papers during the semester relating to seminar topics. There is no exam. The course will provide students with in depth knowledge of current environmental issues and also introduce them to law and practice as an environmental lawyer.

LAW 6886. International Human Rights Law. (3 cr.; A-F only; Every Fall)
Role of lawyers using procedures of the United Nations, Organization of American States, State Department, Congress, U.S. Courts, and nongovernmental organizations to address international human rights problems. Is there a law of international human rights? How is that law made, changed, and invoked? Problem method used.

LAW 6887. Law of International Organizations. (2 cr.; A-F only; Periodic Spring)
This course will examine the principal issues regarding organizations whose membership is that of states. This examination will scrutinize the legal personality and powers of such institutions; the manner in which the states parties as members participate; enforce decisions through mechanisms; dispute settlement; peace and security undertakings.

LAW 6888. Creative Legal Reasoning. (1 cr.; P-F only; Periodic Spring)
This is a discussion based seminar in which the students decide from the facts of actual cases what the law should be. They use logic, instinct, experience, common sense, and all other mental and emotional processes that are the substance of the law and very much involved in its making. The only forbidden ingredient in the discussions is known or suspected law.

LAW 6889. Laws of War. (3 cr.; A-F only; Every Spring)
This course focuses on two interrelated bodies of law: rules pertaining to the use of force in international law (known as the jus ad bellum) and rules regulating the conduct of hostilities under the laws of international and non-international armed conflict (known as international humanitarian law, the laws of armed conflict, or the jus in bello). The course will cover such issues as the Just War theory, its history and its relevance in the modern world; the general prohibition on the use of force under Article 2(4) of the UN Charter; use of force by the UN: collective security and law enforcement actions; individual and collective self-defense; humanitarian intervention; and nuclear weapons in international law. The course will also consider regulation of the means and methods of warfare focusing on the Geneva and Hague laws: the four Geneva conventions protecting the wounded, sick, and shipwrecked, prisoners of war, and civilians; the means and methods of war, including lawful and unlawful weapons and targets; the law of internal armed conflicts; and asymmetric warfare.

LAW 6890. Rule by Law in China: An Advanced Seminar. (2 cr.; A-F only; Periodic Fall)
This course will take a comparative law approach in discussing the development of legal discourse, and the ever increasing influence of Western jurisprudence, in modern and contemporary China. We will discuss at length the formation of ?Rule by Law? as a ?grand narrative? in its historical context, the controversy around different interpretations of Human Rights, and the burgeoning civil rights movements in the Mainland.

LAW 6892. Comparative Criminal Procedure. (3 cr.; A-F only; Periodic Spring)
This course will study systems in several foreign countries for the investigation, adjudication, and punishment of criminal violations. Primary emphasis will be on civil law? systems in Germany and France, but some attention will also be given to...
University of Minnesota Twin Cities Catalog

Fall, 2018

requirements imposed under the European human rights convention. The seminar will analyze the major similarities and differences between American and foreign systems, with emphasis on differing foreign procedures which might be admissible to the American context, to address some of the perceived shortcomings of our system of criminal justice. Reading knowledge of a foreign language is helpful, but is not required; all course materials will be in English.

**LAW 6893. Transitional Justice.** (2 cr.; A-F only; Periodic Fall) This seminar explores many of the real-life dilemmas negotiated around the world in countries emerging from dictatorship and conflict.

**LAW 6894. Seminar: Sentencing Guidelines.** (2 cr.; A-F only; Every Fall) Sentencing purposes, structures (e.g., guidelines), and alternative forms of punishment. Emphasizes need to find effective but less costly alternatives to prison sentences.

**LAW 6895. Seminar: Offenses and Defenses.** (1-3 cr.; A-F only; Periodic Spring) Distinguishing offenses from defenses. Examine several existing criminal defenses.

**LAW 6896. Law and Artificial Intelligence.** (2 cr.; A-F only; Periodic Fall & Spring) Increasingly, the world, and even the law, is being run by self-learning algorithms, autonomous robots, and other technologies that have replaced tasks historically performed by human beings. Brain-machine interface is also on the rise, creating real-life cyborgs. This seminar will explore the many legal implications of this rise in algorithms, artificial intelligence (AI), robots, and brain-machine interface. Through assigned readings, weekly discussion, and engagement with local experts in AI, robotics, and neural engineering, students will explore the many promises and perils of AI. The course will include modules on: how AI is transforming legal practice in areas such as e-discovery; labor market impact of AI; the possibility of non-human adjudication of cases; use of AI to understand legal language; whether robots should have rights; legal and ethical dimensions of brain-machine interface; transhumanism; regulation of self-driving cars and drones; governance of autonomous weapons systems; and how law should address the risk of predictive analytics in determining liability.

**LAW 6897. Game Theory.** (2 cr.; A-F only; Periodic Fall & Spring) Game theory, the analysis of the logic of strategic behavior within interpersonal interactions, offers useful insights into how legal rules affect the way people behave. This seminar introduces what constitutes a game, payoffs, and basic solution concepts, such as the Nash Equilibrium. The seminar focuses on how various models, particularly the prisoner’s dilemma, coordination games, and chicken, can be used to study problems that arise in an array of legal fields, including but not limited to tort, contract, antitrust, bankruptcy, and environmental law.

**LAW 6898. International Bankruptcy.** (2 cr.; A-F only; Periodic Fall) Today's bankruptcy practice seldom centers around one debtor filing one case in a United States bankruptcy court. Most corporations of any size have operations and assets in more than one country. In addition, many troubled corporations are part of a corporation group that includes affiliated entities operating in numerous countries, many of which will file their own insolvency proceedings in their countries of incorporation. The most obvious example of this trend is the Lehman Brothers group of companies: approximately 80 Lehman affiliates commenced insolvency proceedings in 16 countries. International Bankruptcy is a course designed to deal with this world of multijurisdictional insolvency. The course consists of two modules, Comparative Insolvency Law and Managing Cross-Border Cases. The first module covers six cases sessions. After an introductory session explaining the role of insolvency law in national economies and setting out the framework for comparative insolvency law, the module covers insolvency laws of Canada, Brazil and Mexico, Japan and China, England and Western Europe. Common topics include prerequisites that must be satisfied before an insolvency case can be filed, whether an automatic stay of collection and other proceedings exists, how the case is administered (judicial, administrative, or other), and whether the system is focused on liquidation or permits reorganization. We will then turn to Managing Cross-Border Cases. We will devote two sessions to the European Union's insolvency regulation that co-ordinates insolvency proceedings pending in EU nations. Four sessions will analyze chapter 15 of the U.S. Bankruptcy Code. Chapter 15 facilitates cooperation among courts in countries in which related insolvency proceedings are pending. Our final session will focus on the use of chapter 11 by foreign entities.

**LAW 6904. Legal Scholarship for Equal Justice.** (3 cr.; A-F only; Periodic Spring) The Minnesota Justice Foundation (MUF) offers this seminar on applied research designed to address broad legal issues and problems of current importance to poverty lawyers and clients.

**LAW 6905. Military Law and Advocacy.** (2 cr.; A-F only; Periodic Spring) Gain practical knowledge in advocacy, argument and legal writing for civil law practice through application of federal law and regulation to selected military based client scenarios. Topics include Servicemembers Civil Relief Act (SCRA) protections, board of military corrections appeals, military line of duty determinations and appeals, special victims counsel program and client advocacy role. The course is highly practical and will include a number of drafting assignments. Military experience is not required to take this course.

**LAW 6906. Seminar: Public Law Workshop.** (2 cr.; A-F only; Periodic Fall) Public law workshop issues. Focuses on many different areas of public law.

**LAW 6909. Seminar: Criminalization.** (1-2 cr.; A-F only; Periodic Fall) Recent theoretical writings on overcriminalization. Does it exist? How can it be remedied? Douglas Husak’s Overcriminalization: The Limits of the Criminal Law. Twenty-page critical review of Husak’s book. One oral or written presentation.

**LAW 6910. Seminar: Islamic Law.** (2-3 cr.; A-F only; Periodic Fall) Islamic law if one of the oldest systems in the contemporary age. This course introduces the students to Islamic law. The origins of Islamic law, its sources, and major schools of jurisprudence.

**LAW 6911. International Commercial Arbitration.** (2 cr.; A-F only; Periodic Fall) International commercial arbitration is an increasingly important and common means of resolving disputes arising from contracts between citizens or companies from different countries. This course introduces students to the history, philosophy, advantages, process, and ethics of international commercial arbitration, with an emphasis on real cases and practical applications. The course covers differences between international arbitration and domestic arbitration/litigation, national arbitration statutes, agreements to arbitrate, arbitral jurisdiction, procedural rules, discovery/disclosure, hearings, evidence, arbitral awards, enforcement of awards, and ethical issues arising for both arbitrators and advocates in international commercial arbitration.

**LAW 6912. Law Firm Practice and Management.** (2 cr.; A-F only; Periodic Fall) The practice of law is a business as well as a profession. This seminar course provides an introduction to some of the important and developing issues in the business of practicing law, whether as a solo practitioner or in a larger law firm. The topics of study will include developing and retaining clients, finances and financial controls, trends in the legal profession, conflicts of interest and ethical compliance, case handling and administration, insurance and risk management, hiring and supervision of employees, business formation, and law firm governance. Prominent lawyers and law firm managers will serve as guest lecturers and panelists in presenting certain topics.

**LAW 6913. Seminar: Tribal Courts in the United States, an Introduction to Indigenous Peoples Law.** (2 cr.; A-F only; Periodic Summer) Facets of tribal courts in the United States, including their use of diverse legal justifications/sources.

**LAW 6918. Rule of Law.** (2 cr.; A-F only; Periodic Spring) This seminar will examine the concepts and core principles of the Rule of Law. Seminar sessions will be devoted to identifying the
meaning of the terms ?rule of law? and ?
independence of the judiciary.? The importance of a strong and independent legal profession to the rule of law will be discussed. Seminar sessions will focus on such issues as the problem of corruption and the rule of law, the relationship between human rights law and the rule of law, and the challenges of war crimes and genocide. The seminar will explore the relationship between the rule of law and economic development and alleviation of poverty. The seminar will include a discussion of the responsibility of lawyers to support and promote the rule of law within their own country and in other developing countries.

**LAW 6919. Health Care Fraud and Abuse. (; 2 cr. ; A-F only; Periodic Spring)**
Federal, state and local governments are projected to spend $2.4 trillion on health care in 2021. Total public and private healthcare expenditures currently represent approximately 17% of the US GDP. With such high spending levels, opportunities and concerns about health care fraud and abuse are understandably rampant. This course brings practitioner and academic perspectives together to focus on the major civil, administrative and criminal laws that have been used to contain health care fraud and abuse, broadly defined as actions by health care providers (e.g. physicians and physician practices, medical device and pharmaceutical manufacturers, clinical laboratories) that are inconsistent with accepted business and medical practices. These laws include the federal civil False Claims Act, the Stark Act, the federal Anti-kickback Statute and the remedies and civil and criminal penalties available to governmental entities and civil litigants. The seminar will also consider related compliance strategies and the practical compliance issues faced by healthcare providers.

**LAW 6921. Refugee and Asylum Law. (; 2 cr. ; A-F only; Periodic Spring)**
This course will introduce and explore the main concepts, laws, institutions and policies that form the international regime for the protection of refugees. In 2014 the United Nations High Commissioner for Refugees (UNHCR) estimated that there were 51.2 million forcibly displaced persons, including 16.7 million refugees and 33.3 million internally displaced persons (IDPs), a significant increase from 2013. The refugee crisis in Europe, which began in mid-2015 and continues unabated in 2016, has only increased those numbers. Human displacement continues to be one of the most important and intractable human rights issues facing the international community. The course objectives are to: - examine the assumptions, origins and evolution of refugee law and the refugee regime; - understand who is protected from serious harm by international, regional and domestic law; - explore the rights afforded refugees and other categories of forced migrants; - investigate various legal and policy impediments to asylum-seeking; - assess the scope, limits and potential of international co-operation regarding refugees. Overall, the course will examine the relationship between refugee law, international human rights law and domestic law, and will provide students with an understanding of how this relationship affects state obligations toward refugees, asylum-seekers and internally displaced persons. prereq; recommended Law 6011/6071 International Law and Law 6886 Intl Human Rights Law

**LAW 6922. Business Law Concentration. (; 1 cr. ; P-F only; Every Fall)**
This seminar is intended as an introduction and overview for students interested in completing the Business Law Concentration; students in the concentration are encouraged to take the seminar. The course will explore the careers, social roles, and professional obligations of business lawyers in a variety of specialties through readings and in panel sessions with practitioners as well as adjunct and full-time faculty at the Law School. Students will choose and meet with a mentor selected from a group of local business lawyers. Students will review the Law School's business law curriculum, both providing feedback on the courses available and receiving guidance that will help them shape their own trajectory within the concentration.

**LAW 6923. Federal Reserve System - Legal and Policy Perspectives. (; 2 cr. ; A-F only; Periodic Fall)**
The course will cover legal underpinnings of the Federal Reserve System's core responsibilities in monetary policy, supervision and regulation, financial services, and financial stability. The instructors, both lawyers from the Federal Reserve Bank of Minneapolis, will also invite senior officials and policymakers from the Federal Reserve in each of these areas to provide students current perspectives on these mission-critical functions of our central bank. The course will include review of the Federal Reserve Act, the Dodd Frank Act, and related matters, educating students on the nature and extent of Federal Reserve System authority, both as originally conceived and as it has evolved through the 100 years of the Federal Reserve's existence. There will be a particular emphasis on Federal Reserve actions taken in response to the financial crisis of 2007-08 and its aftermath. Following the course, students will have a strong understanding of the nature and extent of the Federal Reserve's authority and an enhanced perspective on banking and the national economy.

**LAW 6924. Creating Effective Legal Arguments in Litigation. (; 2 cr. ; A-F only; Periodic Fall)**
For most attorneys, the practice of law will involve the structuring of legal arguments. This course is intended to give participants the tools to make effective legal arguments by deconstructing the process through which legal arguments are developed and providing an understanding of the logical relationship between the law and the facts.

**LAW 6925. Patent Law Proseminar. (; 1 cr. ; S-N only; Every Spring)**
The field of patent law extends across the boundaries of business, technology, innovation, and law. In this course, students will be introduced to current topics and compelling issues in patent law presented by leading patent and intellectual property law professionals. Students will gain real-world insights from in-house and private practice attorneys and agents, with a focus on patent prosecution and patent litigation.

**LAW 6926. Intellectual Property and Technology Proseminar. (; 1 cr. ; S-N only; Every Fall)**
The field of intellectual property extends across the boundaries of business, technology, innovation, and law. In this course, students will be introduced to a broad range of IP related topics presented by leading practitioners working at the intersection of law and technology. Topics may include trade secrets, copyrights, trademarks, patents, IP transactions, IP litigation, emerging technologies, intellectual asset management, IP valuation and commercialization. Lecturers may include corporate and in-house counsel, firm lawyers, transactional lawyers, litigators, consultants, tech transfer officers, R&D Leaders, and CTO.

**LAW 6927. New Developments in Trust Law. (; 2 cr. ; A-F only; Periodic Spring)**
The traditional area of trust law has experienced a number of new and major developments in the last couple of years and the changes are continuing. The seminar will examine and analyze the effect of these new developments in traditional trust law, including: the New Minnesota Trust Code; the Uniform Trust Decanting Act; a Uniform Divided Trusteeships Act; the Uniform Fiduciary Access to Digital Assets Act; and the Interjurisdictional Recognition of Substitute Decision-Making Documents. This Seminar will enable students who intend to have an estate planning practice or a general practice that includes the drafting of wills and trusts to have an in-depth understanding of these new developments.

**LAW 6928. Cooperative Lawyering and Problem Solving Courts: Lawyers as Peacemakers. (; 2 cr. ; P-F only; Periodic Spring)**
This is a non-traditional seminar for students who are interested in exploring a manner of practicing law broader than the win/lose paradigm of the adversary system. The instructor is a Hennepin County judge with extensive experience in problem solving courts and with the benefits of collaborative law and restorative justice. The course will explore peacemaking opportunities for lawyers at several levels. Practicing lawyers engaged in several varieties of cooperative lawyering will make class presentations. In addition, because effective peacemaking requires personal awareness and self-control, the course will provide an introduction to mindfulness, a fundamental tool for mental health, as well as instruction in basic skills in peaceful communication. The course will examine how some of the lessons about peacemaking apply to political and religious conflict. The early class sessions will introduce students to some of the developments in neuroscience and evolutionary psychology that help explain
the dynamics of human conflict. In addition to background reading to prepare for class sessions, students in this seminar should be prepared to spend 10-15 minutes each day in mindfulness exercises, to observe two out-of-class peacemaking activities, and to participate in experiential exercises in class. Short written assignments are designed to promote growth of the student's peacemaking skills. The class requires an open mind and a willingness to share personal thoughts and experiences.

**LAW 6929. Social Enterprises.** (2 cr.; A-F only; Periodic Spring)

Is social enterprise? is a relatively new concept to describe organizations that sit somewhere between the extremes on a continuum between non-profit organizations and for-profit business corporations. The founders of and investors in social enterprises seek both to earn financial returns and also to advance particular social purposes. Many have argued that traditional legal forms of association, especially the business corporation and the non-profit corporation, do not provide good fits for the purpose of this emerging form. A variety of new legal forms are being developed, including the low-profit limited liability company (L3C), the benefit corporation, and the social purpose corporation. This course explores the challenges facing social enterprises, and how both traditional and new forms of legal associations respond to those challenges.

**LAW 6948. Sports Concussions and the Law: Neuroscience and Liability.** (2 cr.; A-F only; Periodic Spring)

As scientific knowledge about the effects of trauma on the brain has increased, the legal context surrounding brain injury in professional and youth sports has changed dramatically over the past decade. Legal action includes multiple federal class action lawsuits, new sports concussion statutes in all fifty states, new regulations in college and high school, new insurance markets, and a myriad of tort law suits in state and federal court. Many policy recommendations have been proposed, and many reforms have been enacted by sports leagues. The evolving legal landscape for sports concussions thus provides an exciting opportunity to see how law responds in response to scientific advances. This seminar? the first in the country to focus specifically on legal liability and sports concussions? will examine the emerging science, law, and policy of sports concussions. The seminar will feature a number of guest speakers, and will place an emphasis on developing students' legal research and writing skills. Students will be required to complete a 20 page research paper, and no prior knowledge of brain science or sports is required or presumed.

**LAW 6949. Biotechnology & Patent Law.** (2 cr.; A-F only; Periodic Spring)

This course emphasizes patent law principles and doctrines as applied to biotechnology, including pharmaceutical, patents. Although there will be some coverage of United States Patent and Trademark Office policies as well as biotechnology patent principles in non-U.S. jurisdictions, the focus will be on U.S. Federal Circuit and Supreme Court case law developments. Topics include patent eligibility of biotechnological inventions including diagnostics and "natural" products such as genes, claim strategies, written description, enablement, utility, best mode including requirements for biological deposits, inventorship, inherent anticipation, obviousness, infringement, and the intersection of patent and FDA regimes for small molecules and biologics.

**LAW 6960. Judicial Writing.** (3 cr.; A-F only; Every Spring)

This course focuses on developing the writing abilities and practical knowledge of prospective judicial law clerks. The class will center around six writing assignments, which will include a bench memo, jury instructions, trial court order, and several appellate opinions. Only one writing assignment will require a work product gain both 7 double-spaced pages. Most of the reading for the class will consist of materials relating to these six writing assignments, including attorneys? briefing, relevant portions of the record, key precedents, and samples of past materials. Class will also provide students with practical information about how to be an effective law clerk, drawing heavily on guest talks from local federal and state judges and law clerks. Topics will include how to rely on the case record, the importance of understanding local procedural rules, and the centrality of the standard of review.

**LAW 6999. Transfer.** (1-50 cr. [max 100 cr.]; P-F only; Every Fall, Spring & Summer)

Credits received from another law school.

**LAW 7000. CL: Civil Practice.** (3-4 cr. [max 8 cr.]; A-F only; Every Fall & Spring)

The Civil Practice Clinic offers second and third year students an opportunity to gain both practice experience and the satisfaction of representing real clients. The clinic introduces students to the practice of lawyering through a combination of instructional methods. Classroom sessions explore topics such as interviewing, negotiation, counseling, and motion practice. Simulated exercises allow students to apply classroom learning in a life-like setting. Each student handles approximately three cases involving topics such as family, employment, consumer, and administrative law. These cases provide student attorneys with the opportunity to participate in almost all aspects of the lawyering process, including court and administrative hearing appearances. The clinic course is a two semester program. The classroom portion is completed during the first semester. Students earn a total of seven credits allocated between the two semesters.

**LAW 7001. CL: Civil Practice Director.** (3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)

Director for civil practice clinic. prereq: dept consent

**LAW 7003. Seminar: Student Legal Writing Instructor.** (2 cr. [max 8 cr.]; A-F only; Every Fall & Spring)

Legal writing instructors for the first-year legal writing students.

**LAW 7004. Seminar: Structured Study Group Instructors.** (2 cr. [max 8 cr.]; S-N only; Every Fall & Spring)

Instructors are assigned to work with single first-year class.

**LAW 7006. ABA Negotiation Competition Team.** (1-2 cr.; P-F only; Every Fall)

ABA Negotiation team participants receive credit for participation in regional competition and one more credit if they advance to national competition.

**LAW 7007. International Humphrey Student Instructors.** (1 cr.; A-F only; Every Fall)

Student instructors help with Law School Humphrey Fellows.

**LAW 7008. CL: Insurance Law.** (2-3 cr. [max 6 cr.]; A-F only; Every Fall)

The Insurance Law Clinic offers students an excellent opportunity to learn litigation skills and insurance basics while effectively and confidently representing individuals during all stages of an insurance claim and/or dispute with an insurer. Work includes investigating, preparing and rendering an insurance claim, writing demand letters to insurers, drafting litigation pleadings, including complaints, discovery documents, motions, briefs, settlement agreements and other court documents, dealing with clients and opposing counsel, and courtroom litigation and ADR. The clinic's coverage cases deal with many types of insurance, including: auto liability, homeowner's property, health and disability, life, and commercial general liability (CGL). Through classroom instruction and case supervision, students learn the basic concepts and legal principles involved in property and liability insurance, and they will gain experience in a broad range of practice skills, such as negotiation, legal writing, case investigation, mediation, client counseling, and state court practice.

**LAW 7009. CL: Insurance Law Directors.** (2-3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)

Students work with Insurance Law Clinic

**LAW 7010. CL: Innocence.** (3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)

Students work side-by-side with staff attorneys from the Innocence Project of Minnesota (IPMN) as they investigate and litigate inmates' claims of actual innocence. These investigations go to the heart of current issues in the criminal justice system, such as the reliability of eyewitness identification, the problem of false confessions, the use of snitches and informants, government misconduct, ineffective assistance of counsel, and forensic sciences including DNA testing. Class time is devoted to training and case work. Students are assigned cases and expected to gather source materials such as police reports and transcripts. They will organize and summarize those materials. After educating themselves about their cases, students will design and implement an investigative plan with their supervisor and pursue that investigation. This may include locating evidence, experts and witnesses. If proof of innocence is developed they may
draft post-conviction motions. Interested students may also participate in policy work. This clinic puts students on the cutting edge of scientific and social science issues that affect the practice of law in the criminal justice system as well as hands-on experience in managing and analyzing large-scale cases for litigation.

LAW 7011. CL: Innocence Project Director. (3 cr. [max 6 cr.]; A-F or Audit; Every Fall) Student director for Innocence Clinic.

LAW 7012. CL: Environment and Energy Law. (3 cr. [max 6 cr.]; A-F only; Every Fall & Spring) The Environmental Law Clinic is a client-driven course based on representation of nongovernmental organizations. This Clinic will improve your skills in analyzing problems in environmental law and policy, and allow you to work directly with advocates on environmental issues. Our clients are typically nonprofits or other nongovernmental entities seeking legal advice on advocacy in the legislative or regulatory arenas related to a wide range of environmental issues, including clean water, renewable energy, utilities law and concentrated animal feeding operations. This year-long Clinic engages in projects related to achieving environmental and energy sustainability through the management of land, water and energy resources. Projects often include the following: (1) providing advice to local NGOs; (2) representation of NGOs before an administrative state body; (3) production of legal research reports; (4) support organizations participating in regulatory decision-making processes, such as the Public Utilities Commission; and (5) education or advocacy presentations to citizens and elected or appointed decision-makers. Client management skills and legal research methods are honed throughout the year-long projects.

LAW 7013. CL: Environment and Energy Law Directors. (2-3 cr. [max 6 cr.]; A-F only; Periodic Fall) Directors for environment and energy law clinic.

LAW 7015. CL: Employment Law. (2 cr. [max 3 cr.]; A-F only; Every Fall & Spring) The Employment Law Clinic provides student attorneys with a unique look at both sides of the employment relationship through litigation representation of individual employees and transactional counseling of nonprofit employers. Student attorneys are introduced to the employee's perspective through litigating unemployment insurance (UI) appeals. These appeals require full representation, including client interviewing, counseling, preparation and execution of direct and cross examination, as well as closing statements. Student attorneys interface with the DEED website on behalf of the client, represent the client in the telephonic appeal hearing, and manage every aspect of the lawyer/client relationship with the assistance of a supervising attorney well-versed in the management of these cases. Recommended course: Law 6632 Employment Law

LAW 7016. CL: Employment Law Directors. (2 cr. [max 4 cr.]; A-F only; Periodic Fall & Spring) Student directors with Employment Law Clinic and their cases.

LAW 7017. International Humphrey Fellow Student Instructor. (2 cr.; A-F only; Every Fall & Spring) Facilitate collaboration between international human rights professionals/U.S. law students. Provide students with human rights research, writing, networking. Humphrey Fellows assist twelve Hubert H. Humphrey Fellows hosted by University of Minnesota Law School/Human Rights Center.

LAW 7018. Intercollegiate Trial Team. (2 cr.; A-F only; Every Spring) Students compete in trial teams, prerequisite: Trial practice

LAW 7025. NAAC/ABA Competition Team. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring) The ABA/NAAC competition team is composed of four to six 3Ls, chosen from the participants in the Civil Rights/Civil Liberties Moot Court, based on performance in the Maynard Pirsig Honors Tournament. The ABA/NAAC holds regional competitions across the country and the national finals are in New York City.

LAW 7026. NAAC/ABA Competition Director. (1-2 cr. [max 4 cr.]; A-F only; Every Fall & Spring) Director for NAAC/ABA moot court competition. prerequisite: dept consent

LAW 7027. ABA Moot Court Competition Managing Director. (1-2 cr. [max 3 cr.]; A-F only; Every Fall & Spring) Managing director for ABA moot court. prerequisite: dept consent

LAW 7028. Thurgood Marshall Competition Team. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring) The Civil Rights/Civil Liberties Moot Court (formerly Maynard Pirsig) focuses on practical writing and oral argument exercises common in modern litigation. In the fall, student work on portions of, and then a full, appellate brief. This work is followed by oral arguments. In the spring, students continue to work with the same law and facts in an appellate venue. They rewrite the appellate brief and advocate in three rounds of oral arguments, including one round in front of a panel of skilled Twin Cities attorneys. Recent topics have included First Amendment rights in public schools, a gay-straight alliance's ability to organize under the Equal Access Act, constitutionality of law school affirmative action programs under the Fourteenth Amendment, and search and seizure of student cellphones. Students work in five to eight small sections of about 8-10 students, each taught by an experienced attorney and a third-year student director. After participants complete the required writing and oral arguments (usually by the first week in March), directors nominate the "Best Brief" from each section for the best brief tournament. Similarly, the "Best Oralist" is selected from each section for the Maynard Pirsig Honors Oral Competition, a bracket tournament that culminates in a final oral argument in front of justices of the Minnesota Supreme Court. The Thurgood Marshall Moot Court competition team is composed of two 3Ls and two 2Ls, chosen from the participants in the Maynard Pirsig Moot Court. The 2L participants are selected during the fall of their second year; the 3L participants are selected during the spring. The 2L participants compete on the team during their second year and then direct the Competition Team in their third year. The 3L team competes in the spring of their third year. The Thurgood Marshall Moot Court is unique in that every round takes place in a courtroom in Washington D.C., and it coincides with the midyear meeting of the Federal Bar Association. prerequisite: Students must be enrolled in LAW 7055 Civil Rights/Civil Liberties Moot Court.

LAW 7030. CL: Consumer Protection. (3 cr. [max 6 cr.]; A-F only; Every Fall & Spring) The Consumer Protection Clinic represents individuals who are victims of marketplace fraud or who have disputes regarding consumer credit, debt collection, motor vehicle fraud, predatory lending or similar matters. The Clinic also assists legislators, regulators, and advocacy groups in policy matters, such as drafting consumer protection legislation. The Clinic participates in impact legislation by initiating and acting as co-counsel in class action or related matters.

LAW 7031. CL: Consumer Protection Directors. (3 cr. [max 6 cr.]; A-F only; Every Fall & Spring) Student instructors for consumer protection clinic.

LAW 7035. Environmental Law Moot Court. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring) Introduction to appellate advocacy. Current topics in environmental law. Intramural competition leads to selection of team to represent University of Minnesota law students in the national finals are in New York City. The Clinic involves oral advocacy, writing, networking. Humphrey Fellows hosted by University of Minnesota Law School/Human Rights Center.

LAW 7036. Environmental Law Moot Court Director. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring) Director for environmental law moot court. prerequisite: dept consent

LAW 7037. Jeffrey G. Miller National Environmental Law Moot Court Competition. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring) Environmental law moot court competition team member. prerequisite: dept consent

LAW 7038. Environmental Law Moot Court Managing Director. (1-2 cr. [max 3 cr.]; A-F only; Every Fall & Spring) Environmental law moot court managing director. prerequisite: dept consent

LAW 7040. CL: Community Mediation. (3 cr. [max 6 cr.]; A-F only; Every Fall & Spring) The Community Mediation Clinic offers 2Ls and 3Ls the opportunity to learn from mediation practitioners and participate as civil mediators in community and court cases, to serve as facilitators in restorative justice conferences and to create and present trainings in community conflict resolution education programs. The U is one of only a handful of the...
nation's top law schools presently offering this type of clinical program. Conflict Resolution Center (CRC), one of Minnesota’s oldest non-profit mediation organizations, offers a comprehensive mediation clinic. Students who successfully complete the Fall course will be eligible for the Minnesota Rule 114 Roster of Qualified Neutrals and enroll in the Spring clinic. This course features classroom instruction and interactive exercises. It emphasizes the facilitative model of mediation while providing a survey of other mediation styles and models. Topics covered include: conflict theory, styles of conflict resolution, statutes and rules governing mediation, ethical considerations, cultural considerations in mediation and the applicability of facilitative mediation in housing, family, and harassment courts, schools, businesses, and employment work. Classroom time is split between lecture, discussion and interactive role plays and exercises with coach/instructor feedback.

**LAW 7041. CL:Community Mediation Directors. (2-3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)**

Student directors for Mediation Clinic. Fall 3 cr; Spring 2 cr.

**LAW 7042. CL: Federal Immigration Litigation. (3-4 cr. [max 8 cr.]; A-F only; Every Fall & Spring)**

The Federal Immigration Litigation Clinic is part of the James H. Binger Center for New Americans and will teach second and third year students to effectively represent clients in federal impact immigration litigation. The clinic lasts a full academic year. Cases may include appellate litigation before the U.S. Circuit Courts of Appeals, U.S. Supreme Court, and Board of Immigration Appeals, as well as litigation before U.S. District Courts and immigration courts. Cases may deal with asylum and related issues, challenges to the unlawful detention of immigrants, as well as the intersection of immigration and criminal law. Students will also learn about the substance and process of immigration policy making, at both the legislative and administrative levels, and may engage in immigration policy outreach and advocacy projects that advance the Binger Center’s priorities for systemic change in immigration law. Through classroom instruction and case supervision, and working in case teams, students will learn substantive immigration law, administrative and federal rules of procedure, and a broad range of skills important to the effective representation of clients in federal immigration litigation, including: client contact and communication, case management, legal writing and drafting, oral advocacy, courtroom skills, legal ethics, communications and negotiations with opposing counsel, case analysis / vehicle selection, and case strategy / coordination with co-counsel, allies, amici, and media.

**LAW 7043. CL: Federal Immigration Litigation Director. (3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)**

Director for Federal Immigration Litigation Clinic.

**LAW 7045. ABA Journal of Labor and Employment Law Editors. (2 cr. [max 4 cr.]; S-N only; Every Fall & Spring)**

Intensive instruction in brief writing, appellate advocacy in context of labor/employment law. Students direct work of second-year students and participate in national competition held annually in New York. prereq: 3rd yr, dept consent

**LAW 7046. ABA Journal of Labor & Employment Law: Research & Writing. (1 cr. [max 2 cr.]; S-N only; Every Fall & Spring)**

This course provides an opportunity to research and write a journal note under faculty supervision. Each student will write an outline and at least three drafts, and will also orally present and answer questions about their note. The course is required for and open only to staff members of ABA Journal of Labor & Employment Law.

**LAW 7047. Wagner Moot Court Competition Team. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)**

National Wagner Moot Court competition in New York Law School.

**LAW 7055. Civil Rights/Civil Liberties Moot Court. (1 cr. [max 2 cr.]; A-F only; Every Fall)**

Students prepare memoranda, briefs, and arguments in a moot court case. Tutorial instruction in legal analysis, legal writing, and oral argument. Intramural moot court competition judged by prominent members of bench/bar. Team of students selected to represent the University in ABA Moot Court Competition. prereq: JD student

**LAW 7056. Civil Rights/Civil Liberties Moot Court Directors. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)**

Director for Civil Rights/Civil Liberties Moot Court. prereq: dept consent

**LAW 7057. Civil Rights/Civil Liberties Moot Court Research Director. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)**

Research director for Civil Rights/Civil Liberties moot court. prereq: dept consent

**LAW 7058. Civil Rights/Civil Liberties Moot Court Managing Director. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)**

Director of Civil Rights/Civil Liberties Moot Court team.

**LAW 7065. National Moot Court. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)**

Preparation, substantial editing, and rewriting of appellate brief. Oral advocacy training with coaches. Intramural oral competition leads to selection of team to represent the University in National Moot Court Competition. prereq: dept consent

**LAW 7066. National Moot Court Director. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)**

Director for national moot court. prereq: dept consent

**LAW 7068. National Moot Court Competition Team. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)**

The competition team is a group of six 3Ls selected from the second year program. Team members research and write two briefs, and prepare oral arguments. They compete at the regional competition, and if successful they go on to the nationals in New York City in January. prereq: Law 6002/6003 and students must have completed or be enrolled in Law 7065

**LAW 7075. International Moot Court. (1 cr. [max 2 cr.]; A-F only; Every Fall)**

International law/policies. Preparation of brief in moot case before International Court of Justice. Substantial editing/rewriting. Oral advocacy training with coaches. Intramural oral argument competition leads to selection of team to represent the University in the Jessup International Law Moot Court Competition of the American Society of International Law. prereq: dept consent

**LAW 7076. International Moot Court Director. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)**

Director for international moot court.

**LAW 7077. International Moot Court Administrative Director. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)**

Administrative director for international moot court. prereq: dept consent

**LAW 7078. Philip C. Jessup International Moot Court Competition Team. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)**

Each year, one to three students carry over from the previous year’s Jessup team and one to two students are added from the previous year’s U-M International Moot Court competition to form the core of the current year’s Jessup team. Additional positions on the Jessup team are filled at the end of week five of the first semester. Prior to the finalization of the Jessup team, IMC students complete a legal memorandum on a matter with international legal implications and participate in two nights of oral arguments. Selection to the Jessup team is based, in large part, on student performance in these exercises. prereq: Law 6002/6003 and students must have completed or be enrolled in Law 7085

**LAW 7079. International Moot Court Competition Team. (1 cr. [max 2 cr.]; A-F only; Every Fall)**

Each year, the Law School fields a competition team that travels abroad. Competitions vary annually.

**LAW 7085. Intellectual Property Moot Court. (1 cr. [max 2 cr.]; A-F only; Every Fall)**

Preparation, substantial editing, and rewriting of an appellate brief on a case involving patents, copyrights, or trademarks. Preparation of oral arguments. Leads to participation on a University team in the Giles Sutherland Rich Intellectual Property Moot Court Competition. prereq: dept consent
LAW 7086. Intellectual Property Moot Court Competition Team. (; 1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)
The I.P. Moot Court Competition Team is composed of the two student directors who help run the I.P. Moot Court program. Students are selected based on their overall performance during their second year as well as a written statement as to why they want to be a director and on the competition team. They write the team briefs and attend the regional competition, usually in the third week of March. The top two teams at the regional competitions qualify for nationals in Washington D.C. held in early April. The team also participates in the Minnesota Intellectual Property Law Association Cup Competition. prereq: Law 6002/6003 and students must have completed or be enrolled in Law 7085

LAW 7087. Intellectual Property Moot Court Director. (; 1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)
Director for intellectual property moot court. prereq: dept consent

LAW 7088. CL: Intellectual Property and Entrepreneurship. (2 cr.; A-F only; Every Fall)
The IP and Entrepreneurship Clinic is a one-semester course (Fall Semester - 2 Credits). Students will attend class weekly and each class session involves a mixture of lecture, interviewing and counseling exercises, and writing exercises. The lectures cover core legal topics and questions frequently encountered in an IP and entrepreneurship related legal practice in order to prepare students for interactions with clients. At least three classes consist of drop-in workshops where student attorneys interview limited-representation clients, and engage in problem solving and counseling during the course of each workshop. Each workshop will be followed by in-class roundtable discussions of intellectual property issues encountered and the counseling given. Evaluation of student performance turns on classroom engagement, participation, performance in oral and written exercises, and attendance at workshops. The clinic will not take on cases or establish ongoing client relationships. Instead, students will meet with clients at workshops where the clients will sign an Acknowledgement of Limited Representation. Most of the work will occur at the workshop. Depending on the complexity of the matters presented, clients may opt to return to a later workshop or may be referred elsewhere for representation. Prereq: previous or concurrent registration in 6224, or 6603, or 6608, or 6613.

LAW 7092. CL: Bankruptcy Clinic. (; 3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)
This clinic is grounded in the development of practical skills necessary to effectively advise and represent individuals in serious financial difficulty. The Bankruptcy Clinic includes a classroom component, which prepares the students to counsel clients about consumer bankruptcy, introduces important portions of the Bankruptcy Code and Rules, and discusses the students’ cases in a group setting. This classroom component also features guest speakers, such as bankruptcy judges, panel trustees, and location practitioners. Students will receive training from Bankruptcy Court staff in electronic filing. Students in the Bankruptcy Clinic can expect to be advising clients of their options, communicating with their creditors, filing Chapter 7 bankruptcy cases, and representing clients at the meeting of creditors. Students may also have the opportunity to represent clients in adversary proceedings, including discovery and trial as well as settlement negotiations with both creditors and the U.S. Trustees. Occasionally, students represent individual creditors as well.

LAW 7093. CL: Bankruptcy Clinic Director. (; 2-3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)
Director for bankruptcy clinic. prereq: dept consent

LAW 7094. Civil Rights Moot Court Administrative Director. (; 1-2 cr.; A-F only; Every Fall & Spring)
Administrative director for civil rights moot court program.

LAW 7097. William McGee Civil Rights Moot Court Competition Team. (; 1 cr. [max 4 cr.]; A-F only; Every Fall & Spring)
The Law School reserves places on the McGee moot court competition team(s) for students on a law journal. Tryouts are typically held during the first week of school. Team members are selected on the basis of a writing sample, an oral argument tryout, and a recommendation from a writing instructor. The McGee coaches and the legal writing director will field up to two McGee teams of two or three students each (for a total of 6 students). We aim to select four 2L staffers and two 3L editors.

LAW 7098. CL: Indian Child Welfare Act. (; 2 cr. [max 4 cr.]; A-F only; Every Fall)
The Indian Child Welfare Act Clinic (the “ICWA Clinic”) is a full academic year, four credit program beginning in the fall semester. The casework focuses on litigation involving the Indian Child Welfare Act (ICWA) and Tribal Code. During the fall semester, class sessions will focus on the historical context, present day application and future implications of ICWA. This will include a focus on understanding ICWA in the broader context of Indian Law. Classes will include guest lecturers, who are leaders in the American Indian Community. The class will include guided discussion and analysis of the historical context and role of courts in the lives of American Indian families. The class will provide a context to consider the effectiveness and equity of the child protection system in the lives of American Indian families. Students will work through a federal civil rights investigation and litigation of cases in the U.S. District Court for the District of Minnesota. The clinical team is composed of the two student directors and the administrative director for civil rights moot court program.

LAW 7099. CL: Indian Child Welfare Clinic Director. (; 2 cr. [max 4 cr.]; A-F only; Every Fall)
Director for Indian child welfare clinic. prereq: dept consent

LAW 7100. Law Review Editors. (; 2 cr. [max 12 cr.]; S-N only; Every Fall & Spring)
Credit given without grade for satisfactory participation. prereq: instr consent

LAW 7101. Law Review Associate Editors. (; 3 cr. [max 6 cr.]; S-N only; Every Fall & Spring)
Associate editor for Minnesota Law Review.

LAW 7102. Law Review: Research & Writing. (1 cr. [max 2 cr.]; P-F only; Every Fall & Spring)
This course provides an opportunity to research and write a journal note under faculty supervision. Each student will write an outline and at least three drafts, and will also orally present and answer questions about their note. The course is required for and open only to staff members of Minnesota Law Review.

LAW 7117. CL: Civil Rights Enforcement. (2-3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)
The Civil Rights Enforcement Clinic offers students the opportunity to enforce the civil rights laws of the US by assisting in the investigation and litigation of cases in the US Attorney's Office for the District of Minnesota in Minneapolis. The clinic includes both classroom seminars and fieldwork. Classroom instruction focuses on the Civil Rights Act, the Fair Housing Act, the Americans with Disabilities Act, the Equal Educational Opportunities Act, the Uniformed Service Members Employment and Reemployment Rights Act and the Matthew Shepard and James Byrd Jr. Hate Crimes Prevention Act, along with statutory interpretation and federal investigation techniques and procedure. Following the initial class instruction in the fall, students will be assigned in the spring pending federal civil rights investigations and cases. They will work closely with assistant US attorneys, investigators and paralegals on investigation tactics, evidence gathering, pleading drafting, deposition preparation, document review, legal research, litigation strategy, and settlement negotiations.

LAW 7200. Law and Inequality Journal. (2 cr. [max 8 cr.]; S-N only; Every Fall & Spring)
Credit given without grade for satisfactory participation. prereq: instr consent

LAW 7201. Law and Inequality Journal Associate Editor. (; 2 cr. [max 4 cr.]; S-N only; Every Fall & Spring)
Associate editor for Law and Inequality Journal.

LAW 7202. Law & Inequality Journal: Research & Writing. (1 cr. [max 2 cr.]; P-F only; Every Fall & Spring)
This course provides an opportunity to research and write a journal note under faculty supervision. Each student will write an outline and at least three drafts, and will also orally present and answer questions about their note. The course is required for and open only to staff members of Law and Inequality: A Journal of Theory and Practice.

LAW 7246. CL: Housing Law. (; 3 cr.; A-F only; Every Fall & Spring)
The Housing Law Clinic is a one-semester clinic on landlord-tenant law. Housing attorneys from Mid-Minnesota Legal Aid supervise students in representing tenants facing housing repair problems, utility shutoff and lockouts, and eviction cases in their rental history in Hennepin County Housing Court. The clinic provides an opportunity to handle cases from beginning to end. The cases may include interviewing, investigation, drafting pleadings, discovery, motion and trial practice, and appeals. Some cases may involve the delicate act of advising a client that does not have a good case. Each student may handle two to five cases during the semester. The classroom component includes interviewing, conflict computer network training, professional responsibility, housing law topics concerning the types of actions handled in the clinic, and case simulations patterned after real housing cases. Students convene for staff meetings and round table discussions to discuss issues and cases, as well as for meetings with student directors and the supervising attorneys in preparation for cases.

LAW 7247. CL: Housing Clinic Director. (1-4 cr.; A-F only; Every Fall & Spring) Director for housing clinic. prereq: dept consent

LAW 7300. Minnesota Journal of International Law Editor. (2 cr.; max 8 cr.; S-N only; Every Fall & Spring) By selection only. Credit given without grade for satisfactory participation.

LAW 7302. Journal of International Law: Research & Writing. (1 cr.; max 2 cr.; P-F only; Every Fall & Spring) This course provides an opportunity to research and write a journal note under faculty supervision. Each student will write an outline and at least three drafts, and will also orally present and answer questions about their note. The course is required for and open only to staff members of Minnesota Journal of International Law.

LAW 7400. CL: Human Rights Litigation and International Legal Advocacy. (3-4 cr.; max 8 cr.; A-F only; Every Fall) This clinic provides students with experience in human rights advocacy which may include litigation in federal or state courts and advocacy before the United Nations, the federal and state legislative and executive branches, and working in coalitions of nongovernmental organizations. The clinic provides participation in clinical projects and skill-building exercises. The process will facilitate discussion of the pros and cons of various advocacy mechanisms, possible conflicting strategies among stakeholders, and how particular strategies are chosen and implemented. The clinic's class component includes core lawyering skills such as interviewing, counseling, negotiation, and legal ethics in practice, and subjects such as how to practice before international human rights systems, how to use international law sources in legal arguments before U.S. courts, working with clients with Post-Traumatic Stress Syndrome, the different types of oral advocacy and writing in human rights advocacy, and the use of education, outreach, and the media in advancing a strategy.

LAW 7401. CL: Human Rights Litigation and International Legal Advocacy Directors. (3 cr.; max 6 cr.; A-F only; Every Fall & Spring) Directors for Human Rights Litigation/International Legal Advocacy Clinic. prereq: dept consent

LAW 7420. CL: Family Law. (3-4 cr.; max 8 cr.; A-F only; Every Fall) This clinic is grounded in the development of practical skills necessary to effectively develop and move family law cases from initial client interview to Judgment and Decree. Of the twelve classes in fall semester, two classes consist of simulated learning and the other ten consist of lecture with in-class exercises, such as, calculating child support, answering paternity hypotheticals, and a class on professional responsibility. The two simulations include: client interview for a dissolution with children (which prepares students for their first client file); and a default hearing. The simulations are grounded in one fictional family law case file. The Family Law Clinic may or may not offer students an opportunity to participate in trial. To obtain trial advocacy skills applicable in any litigation setting, students are advised but not required to enroll in Evidence and Trial Practice.

LAW 7421. CL: Family Law Directors. (3 cr.; max 6 cr.; A-F only; Every Fall & Spring) Family Law clinic student directors.

LAW 7500. CL: Criminal Defense. (2 cr.; max 4 cr.; A-F only; Every Fall) In the Criminal Defense Clinic, you will have a challenging and rewarding experience working as a student-attorney defending clients in Hennepin County District Court. Through your classroom and courtroom work, you will develop client-centered trial skills that will serve you well as you embark on your career as a lawyer. You will also be challenged to think critically and creatively about the criminal justice system, the role of defense lawyers, legal ethics, and criminal law and procedure. The course will involve a combination of classroom work and supervised student representation of clients charged with petty misdemeanor offenses in Hennepin County District Court. Student lawyers will represent clients at all stages of the criminal process, including arraignments, pretrial conferences, and trials. The focus of the course will be to develop the skills to provide client-centered representation in criminal cases. Prereq: Law 6219

LAW 7501. CL: Criminal Defense Directors. (2 cr.; max 4 cr.; A-F only; Every Fall & Spring) Director for criminal defense clinic. prereq: dept consent

LAW 7550. CL: Misdemeanor Prosecution. (3 cr.; A-F only; Every Fall) The primary goal of the Prosecution Clinic is to provide students with the opportunity to develop the substantive and practical skills to function as an effective and ethical prosecutor in the criminal justice system. The prosecution clinic course will involve a combination of classroom work and supervised student prosecution of individuals charged with petty misdemeanor, misdemeanor, and gross misdemeanor offenses in Hennepin, Ramsey, and Anoka County District Courts. Students handle cases at all stages of the criminal process including arraignments, pre-trial conferences, and court trials. There is also a seminar component that includes lectures on substantive criminal law and procedure, criminal justice policy issues, simulation exercises, role playing, skills training exercises, and self-evaluation. prereq: Law 6219 Evidence (or co-reg)

LAW 7571. CL: Criminal Justice. (3 cr.; max 6 cr.; A-F only; Every Fall & Spring) The Criminal Justice Clinic is a year-long clinic in which students will have the unique opportunity to prosecute criminal cases during the fall semester and serve as a criminal defense attorney during the spring semester. Students in the Criminal Justice Clinic will have a challenging and rewarding experience working as student-attorneys practicing law in courts throughout the metro area. Through classroom and courtroom work, students will develop the fundamental litigation and legal skills that will serve them well as they embark on their careers as practicing attorneys. They also will be challenged to think critically and creatively about the criminal justice system, the role of prosecutors and defense attorneys, legal ethics, and criminal law and procedure.

LAW 7570. CL: Federal Prosecution. (2-3 cr.; A-F only; Periodic Fall & Spring) Students assist in prosecution of federal criminal cases under supervision of assistant U.S. attorneys and faculty supervisor.

LAW 7571. CL: Federal Prosecution Clinic Director. (2-3 cr.; A-F only; Periodic Spring) Director for federal prosecution clinic.

LAW 7572. CL: Federal Defense. (3 cr.; A-F only; Every Spring) In this clinical seminar, students assist in the defense of indigent persons charged with federal crimes, under the supervision of the Federal Public Defender for the District of Minnesota and assistant federal public defenders. Fieldwork includes assignments such as research and writing of Eighth Circuit appeal briefs, memoranda in support of or response to motions, and legal research on a wide variety of topics. When cases are available, students may also be given various second-chair assignments in the preparation for and conduct of court and jury trials. If consistent with assignment deadlines, students are encouraged to observe other trials and federal criminal court proceedings. In addition to regular conferences, students work about twelve hours per week on clinic assignments. Each student will arrange a regular weekly schedule for their clinic work at the Federal Public Defenders Office in Minneapolis. prereq: LAW 6085 Criminal Procedure (formerly LAW 6218) and LAW 6009 Criminal Law and LAW 6219 Evidence. LAW 6219 Evidence may be taken concurrently. NOTE: This course
requires certification pursuant to the student practice rule and is open to JD students only.

**LAW 7600. Minnesota Journal of Law, Science, and Technology Editor.** (2 cr. [max 8 cr.]; S-N only; Every Fall & Spring) Scholarly publication addressing legal issues that arise from emerging technologies in areas such as copyrights, trademarks, patents.

**LAW 7602. Journal of Law, Science & Technology: Research & Writing.** (1 cr. [max 2 cr.]; P-F only; Every Fall & Spring) This course provides an opportunity to research and write a journal note under faculty supervision. Each student will write an outline and at least three drafts, and will also orally present and answer questions about their note. The course is required for and open only to staff members of Minnesota Journal of Law, Science & Technology.

**LAW 7606. Independent Research and Writing.** (1-2 cr. [max 8 cr.]; A-F only; Every Fall, Spring & Summer) Note: Law 7606 and 7608 both provide credit for independent writing projects; the difference is that 7606 satisfies the J.D. Upper Division Writing Requirement, while 7608 does not (except on a case-by-case basis before fall 2016). The registrar will assign students to 7606 or 7608 based on whether the student seeks, and the supervisor approves, upper division writing credit. Students may earn 1 or 2 credits (and in exceptional circumstances, 3 credits) for researching and writing a note, article, memo, or other paper on a legal topic. At least 5,000 words are required for one credit, at least 7,500 for two credits, and at least 11,250 for three credits. Students must consult with their faculty supervisor on their topic and research plan and receive feedback from their supervisor on the drafting process. To register, the student should confer with a supervising faculty member, draft a description of the proposed project, and complete the online Independent Research form.

**LAW 7608. Independent Research and Writing.** (1-2 cr. [max 8 cr.]; A-F only; Every Fall, Spring & Summer) Law 7606 and 7608 provide credit for independent writing projects; the difference is that 7606 satisfies the J.D. upper division writing requirement, while 7608 does not (except on a case-by-case basis before fall 2016). The registrar will assign students to 7606 or 7608 based on whether the student seeks and the supervisor approves upper division writing credit. Students may earn 1 or 2 credits (and in exceptional circumstances 3 credits) for researching and writing a note, article, memo, or other paper on a legal topic. At least 3,750 words are required for one credit, at least 7,500 for two credits, and at least 11,250 for three credits. To register, the student should confer with a supervising faculty member, draft a description of the proposed project, and complete the online Independent Research form.

**LAW 7609. Independent Field Placement.** (1-3 cr.; S-N only; Every Fall, Spring & Summer) Note: Law 7607 and 7609 both provide credit for independent field placements; the difference is that 7607 satisfies the Experiential Learning Requirement, while 7609 does not. The registrar will assign students to 7607 or 7609 based on whether the student seeks and the supervisor approves experiential learning credit. Students may earn up to three credits in a semester for unpaid work in a legal practice setting under the supervision of a qualified field supervisor and a faculty advisor. At least 50 hours of law-related activities are required per credit. The student is responsible for identifying a field placement setting and supervisor, finding a faculty advisor, and completing the Independent Field Placement Enrollment and Independent Field Placement Supervisor Forms. The signed forms must be submitted by email to lawcurr@umn.edu for approval by the Associate Dean of Academic Affairs prior to enrollment.

**LAW 7620. Field Work: Clemency Project.** (2-3 cr.; P-F only; Periodic Fall, Spring & Summer) In early 2014, President Obama announced an initiative to grant clemency to long-term federal inmates meeting certain criteria: they had served at least 10 years in prison, their offense was low-level and non-violent, they had no history of violence or ties to organized crime, their conduct in prison was good, and their sentence would be lower today by operation of law or policy. He called on lawyers and law students across the country to volunteer to share and assess the experience. Prior to enrolling, students should contact the instructor directly to identify a potential host organization that would fit the student's background and interests. Recommended Prerequisite: Civil Rights Law.

**LAW 7621. Immigration Law Field Placement.** (1-3 cr.; S-N only; Periodic Fall & Spring) This course provides an opportunity for law students interested in Immigration Law to work alongside practitioners. The instructor and student will work together to find an appropriate placement that matches the student's interests and host's needs. Due to the limited number of placements available and the need to match students with available hosts, enrollment will occur through an application outside of the lottery process. If you are interested in applying, please contact the instructor. In some cases HP/P/LP/F grading may be possible. Previously taking LAW 6872 Immigration Law is not required, but preferred.

**LAW 7622. Public Interest Field Placement.** (2 cr.; P-F only; Every Fall) This course provides an opportunity for students to work with and learn from lawyers in government agencies, nonprofit organizations, and public interest law firms. The instructor and student will work together to find an appropriate placement that matches the student's interests and host's needs. Students who have already secured field placements in the public interest can also enroll.

**LAW 7632. Human Rights Law Field Placement.** (2 cr. [max 3 cr.]; P-F only; Every Fall & Spring) This course allows students to learn about human rights law in practice by working directly with organizations and practitioners in the field. In addition to the supervised placement work, students in this course will meet periodically throughout the semester to share and assess the experience. Prior to enrolling, students should contact the instructor directly to identify a potential host organization that would fit the student's background and interests. Recommended Prerequisite: Law 6886 International Human Rights Law or Law 6011/6071 International Law.

**LAW 7633. Immigration Law Field Placement.** (10 cr. ; P-F only; Every Fall & Spring) The Remote Semester Program gives students the opportunity to gain valuable experience in the legal profession and in public service while earning credits toward their law degree. Students will work for a government or nonprofit organization and earn 10 credits (H/P/LP/F) for work performed. Externship hours and assignments must be completed between the fall semester's first day of classes and the last day of final exams. Students will also be required to earn 2 additional credits by enrolling in the Independent Research & Writing Paper.

**LAW 7640. Remote Semester Field Placement.** (10 cr.; P-F only; Every Fall & Spring) The Remote Semester Program gives students the opportunity to gain valuable experience in the legal profession and in public service while earning credits toward their law degree. Students will work for a government or nonprofit organization and earn 10 credits (H/P/LP/F) for work performed. Externship hours and assignments must be completed between the semester's first day of classes and the last day of final exams. Students will also be required to earn 2 additional credits by enrolling in the Independent Research & Writing Paper.

**LAW 7675. CL: Child Advocacy and Juvenile Justice.** (3-4 cr. [max 8 cr.]; A-F only; Every Fall) The Child Advocacy and Juvenile Justice Clinic (the 'CAC') is a full academic year, seven-credit program beginning in the fall semester in which students represent indigent clients in juvenile delinquency and child welfare matters.
before the Hennepin County Juvenile Court and custody cases before the Hennepin County Family Court. Students have previously been actively involved in two cutting edge areas of the law: the defense of unaccompanied immigrant minors under the Special Immigrant Juvenile Status federal statute, and they have represented inmates serving life without parole (LWOP) in Minnesota prisons for offenses they committed as juveniles. In connection with their LWOP cases, students have represented clients in extensive proceedings before state and federal courts, including the District of Minnesota and the Eighth Circuit.

LAW 7676. CL: Child Advocacy Director. (3 cr. [max 6 cr.]; A-F only; Every Fall & Spring) Director for child advocacy clinic. prereq: dept consent

LAW 7700. Off-Campus Legal Studies. (3-0-18 cr. [max 36 cr.]; S-N only; Every Fall & Spring) Study at another law school. prereq: dept consent

LAW 7701. Off-Campus Legal Studies-Beijing, China. (5 cr.; A-F or Aud; Every Summer) Students attend Renmin University of China Law School in Beijing, China.

LAW 7702. Off-Campus Legal Studies in Europe: Barcelona, Florence, London or Paris. (4-6 cr.; P-F only; Every Summer) Law School/University of San Diego have partnered to offer summer program in Barcelona, Florence, London or Paris.

LAW 7750. CL: Community Legal Partnership for Health. (2-3 cr. [max 6 cr.]; A-F only; Every Fall) Students in this clinic will provide legal services at the Phillips Neighborhood Clinic, the Community University Health Care Clinic and Hope Lodge to help identify and resolve legal issues affecting patients care and wellbeing. Students will develop skills that can be used in any number of practice settings, including interviewing and counseling, case management, problem-solving, persuasive fact analysis, legal drafting, negotiation, effective oral communication, and interdisciplinary collaboration. Through participation in this course, students will be given the opportunity to change clients’ lives by helping them assert their rights and obtain necessary benefits and services. Students will learn about legal issues that affect people with health issues, the complex intersection of law and health, the medical-legal partnership (MLP) model of legal services delivery, and client-centered and holistic approaches to the lawyer-client relationship. Students will learn their own style of lawyering and ways to improve time management, client management, and communication and advocacy skills.

LAW 7751. CL: Community Legal Partnership for Health Directors. (2-3 cr. [max 6 cr.]; A-F only; Every Fall) Students in this clinic will work with various health service students at the Phillips Neighborhood Clinic to identify and resolve legal issues affecting patients care and wellbeing. Students will develop skills that can be used in any number of practice settings, including interviewing and counseling, case management, problem-solving, persuasive fact analysis, legal drafting, negotiation, effective oral communication, and interdisciplinary collaboration. Through participation in this course, students will be given the opportunity to change clients’ lives by helping them assert their rights and obtain necessary benefits and services. Students will learn about legal issues that affect people with health issues, the complex intersection of law and health, the medical-legal partnership (MLP) model of legal services delivery, and client-centered and holistic approaches to the lawyer-client relationship. Students will learn their own style of lawyering and ways to improve time management, client management, and communication and advocacy skills.
a tax controversy. Tax cases generally include audits of tax returns, filing and trying cases in Tax Court and Federal District Court, and bringing taxpayers into collection compliance. Since the Earned Income Credit and refundable Child Tax credits are now the major form of public welfare benefits for low-income workers and, thus, often an important component of tax controversies, the Clinic offers opportunities to work on these issues with clients. Clinic students do not generally prepare tax returns unless it is required to resolve the controversy. Clinic students participate in a clinic seminar during the fall semester, which provides training in clinic office procedures, lawyering skills and professional responsibility with an emphasis on those relevant to tax practice, and tax procedure and law relevant to representing low-income taxpayers. Guest speakers from the IRS, MN Department of Revenue and practicing bar provide useful information about the practice of tax law. Students who would benefit from enrollment include those that have an interest in tax, business or bankruptcy practice who will find it helpful to understand the workings of the tax administration authority (i.e. IRS/MNDOOR); who are interested in pursuing a career in public interest law; who have an interest in administrative and statutory law practice; have an interest in assisting immigrants meet the tax requirements for citizenship; or students who just want to make a difference in the lives of poor, immigrant or disabled individuals. Prereq or coreq Law 6106; Recommend Law 6100

reconstruction. Genetic relationship among languages. prereq: 3001 or 3011H or 5001
LING 5801. Introduction to Computational Linguistics. (3 cr.; Student Option; Spring Odd Year)
Methods/issues in computer understanding of natural language. Programming languages, their linguistic applications. Lab projects. prereq: [4201 or 5201] or programming experience or instr consent
LING 5900. Topics in Linguistics. (1-4 cr.; [max 12 cr.]; Student Option; Every Fall & Spring)
Topics vary. See Class Schedule.
LING 5993. Directed Study. (1-3 cr.; [max 10 cr.]; Student Option; Every Fall, Spring & Summer)
Directed study for Linguistics. Prereq instr consent, dept consent, college consent.
LING 8005. Research Paper Workshop. (3 cr.; [max 12 cr.]; S-N or Audit; Every Spring)
Workshop on research methodology/writing in linguistics. prereq: [5105, 5202, 5205, [4302W or 5302]] or [instr consent, grad ling major]
LING 8105. Field Methods in Linguistics I. (4 cr.; [max 8 cr.]; Student Option; Every Fall)
Techniques and practice in obtaining/analyzing linguistic data from an unfamiliar language through direct interaction with a native speaker. Study of a language by elicitation of speech samples/analysis of patterns that emerge. prereq: [5001, 5201, 5302, grad linguistics major] or instr consent
LING 8106. Field Methods in Linguistics II. (4 cr.; [max 8 cr.]; Student Option; Every Spring)
Continued analysis through work with a native speaker of language begun in 8105. Greater emphasis on analysis of recorded texts of various kinds. Some grammars of the language/contents compared with field notes from previous semester. prereq: 8105 (taken in same academic yr)
LING 8200. Topics in Syntax and Semantics. (3 cr.; [max 9 cr.]; Student Option; Periodic Fall)
Syntax and semantics of natural language, with particular emphasis on the interface between the two. prereq: 5202, 5205 or instr consent
LING 8210. Seminar in Syntax. (3 cr.; [max 9 cr.]; Student Option; Periodic Fall)
Current issues in syntactic theory. Topics vary. prereq: 5202, 5205 or instr consent
LING 8300. Topics in Phonetics and Phonology. (3 cr.; [max 9 cr.]; Student Option; Periodic Fall)
N/A prereq: 5303 or instr consent
LING 8333. FTE: Master’s. (1 cr.; [No Grade Associated; Every Fall, Spring & Summer])
No description) prereq: Master’s student, adviser and DGS consent
LING 8444. FTE: Doctoral. (1 cr.; [No Grade Associated; Every Fall, Spring & Summer])
(No description) prereq: Doctoral student, adviser and DGS consent
LING 8500. Topics in Second Language Acquisition. (3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)
tbd prereq: 5001, 5505
LING 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; [max 12 cr.]; No Grade Associated; Every Fall, Every Spring & Summer)
TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr
LING 8777. Thesis Credits: Master's. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]
LING 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 24 cr required
LING 8888W. Thesis Credit Dissertation Seminar. (1-3 cr. [max 24 cr.]; No Grade Associated; Every Fall & Spring)
A means for students to make progress on the dissertation in a structured setting. Brings together students writing on related topics. Credits are applied to doctoral thesis credits. Contact instructor for description. prereq: Doctoral student who has passed oral prelims
LING 8900. Seminar: Topics in Linguistics. (3 cr.; [max 9 cr.]; Student Option; Every Fall & Spring)
Topics vary. See Class Schedule. prereq: instr consent
LING 8921. Seminar in Language and Cognition. (3 cr.; [max 6 cr.]; Student Option; Every Fall & Spring)
Language-related issues in cognitive science from a linguistic perspective. Serves as elective for cognitive science minors; may be taken by ALP graduates. prereq: instr consent
LING 8991. Independent Study. (1-4 cr.; [max 15 cr.]; Student Option; Every Fall & Spring)
Independent Study prereq: instr consent

Logistics Management (LM)

LM 8892. Readings in Logistics Management. (1-8 cr.; [max 16 cr.]; Student Option; Every Fall & Spring)
Readings useful to student's individual program or objectives that are not available in regular courses. prereq: Adviser consent or instr consent

MSID 5001. International Development: Critical Perspectives on Theory and Practice. (3 cr.; [max 6 cr.]; A-F only; Every Fall & Spring)
Study abroad course.
MSID 5002. MSID Country Analysis. (3 cr.; [max 6 cr.]; A-F only; Every Fall & Spring)
Study abroad course.
MSID 5003. Community Engagement in the Global South. (3 cr.; [max 6 cr.]; A-F only; Every Fall & Spring)
Study abroad course.
MSID 5004. Case Studies in International Development. (3 cr.; [max 6 cr.]; A-F only; Every Fall & Spring)
Study abroad course.
MSID 5005. Advanced International Development Internship. (3 cr.; [max 6 cr.]; A-F only; Every Fall & Spring)
Study abroad course.
MSID 5006. Applied Field Methods. (3 cr.; [max 6 cr.]; A-F only; Every Fall & Spring)
Study abroad course.
MSID 5007. MSID Directed Research. (3 cr.; [max 6 cr.]; A-F only; Every Fall & Spring)
Study abroad course.

Management (MGMT)

MGMT 5102. StartUp: Customer Development and Testing. (2 cr.; A-F only; Every Fall & Spring)
Provides a structured process with faculty and mentor oversight for students at any level and from any college at the University to learn the initial process of customer development by testing market acceptance of a specific new business concept. Students primarily take this course individually and must have an idea or technology that they are interested in pursuing.
The goal of the course is to teach the process to quickly and efficiently test the value and market fit for a new concept.
MGMT 5480. Topics in Natural Resources. (3 cr.; A-F only; Periodic Spring)
Specific topic for each offering.
MGMT 6004. Negotiation Strategies. (2 cr.; A-F only; Every Fall, Spring & Summer)
Art/science of securing agreements between two or more parties who are interdependent and seek to maximize their own outcomes. Individual, group, organizational behavior. Theory/process of negotiations applied to problems faced by managers/professionals. prereq: MBA student
MGMT 6031. Industry Analysis and Competitive Strategy. (4 cr.; A-F only; Every Fall, Spring & Summer)
Processes by which firms maximize long-term returns in face of competition, uncertainty, changing market/technological conditions. Resource commitments to gain sustainable advantage. Choices to leverage resources. prereq: MBA 6300, MBA student
MGMT 6032. Strategic Alliances. (2 cr.; A-F only; Periodic Fall & Spring)

MGMT 6033. Managing the Strategy Process. (2 cr.; A-F only; Periodic Fall & Spring)
How successful strategy is shaped/implemented throughout organization. Leadership challenge of continually renewing strategy/leading change to meet competitive challenges. prereq: MBA student

MGMT 6034. Strategic Leadership. (2 cr.; A-F or Audit; Periodic Fall & Spring)
Role of leadership in making strategy a reality while maintaining learning/adaptive organization capable of meeting competitive challenges. Students prepare project set in an organization. Advanced materials, complex cases. prereq: 6033; MBA student

MGMT 6035. Complex and Cross-Cultural Negotiations. (2 cr.; A-F or Audit; Periodic Fall & Spring)
Principles, role play of multi-party/issue, team-based negotiation/conflicts. How to structure ambiguous situations, bridge national/organizational cultures (e.g., alliances, mergers), functions (R&D, finance), and institutional contexts (regulators, interest groups). prereq: [6004, MBA student] or instr consent

MGMT 6040. International Strategy and Organization. (2 cr.; A-F or Audit; Every Fall & Spring)
Dealing with enormous complexity in competitive environment, in strategy, and in organizations. Focuses on strategic/organizational issues in managing across borders. prereq: MBA student

MGMT 6050. Management of Innovation and Change. (2 cr.; A-F only; Periodic Fall & Spring)
How organizations innovate/change. Focuses on innovation in wide variety of new technology/innovation, programs, and services. What paths likely to lead to success/failure. prereq: MBA student

MGMT 6051. Managing Organizational Innovation and Change. (2 cr.; A-F or Audit; Periodic Fall)
How innovation typically unfolds in wide variety of new technologies, products, programs, and services. What paths are likely to lead to success/failure. Diagnostic skills/principles. prereq: Credit will not be granted if credit has been received for: 5051; 6050

MGMT 6070. Technology Strategy. (2 cr.; A-F only; Periodic Spring)
Evaluating short/long term competitive effects of e-business models using frameworks drawn from strategy, information economics. Strategies to establish, grow, manage e-business. Evaluating strategies of different firms. Lectures, cases, hands-on learning from Web. Grade based on written analyses of two cases, class participation, group project evaluating an existing or new e-business idea.

MGMT 6082. New Business Development. (4 cr.; A-F only;)
Understanding how to develop a new business; analyzing the opportunities and managing the constraints; structuring the venture, obtaining the resources, and writing the business plan; course covers main factors needed to start a successful business—the key operations, marketing, financial, legal, and competitive issues; topics covered are relevant to buyouts, franchises, and the family firm.

MGMT 6083. Consulting. (4 cr.; A-F only; Periodic Fall)
Management consulting. Engaging the client. Problem definition, proposal formulation. Establishing project schedules, work plans. Coordinating work, writing reports, doing presentations. Evaluating the product. Professional learning, career development, balancing work/family. Field projects. prereq: MBA student

MGMT 6084. Management of Groups. (2 cr.; A-F only; Every Fall, Spring & Summer)
Factors that influence performance and well-being of groups in organizations. Group dynamics, norms, culture, structure, leadership, decision-making, and problem-solving. Managing dynamics, learning, performance, and creativity of groups. Intergroup relations, incentives, and effect of environment.

MGMT 6085. Corporate Strategy. (4 cr.; A-F only; Periodic Fall)

MGMT 6086. Technology and Strategy. (4 cr.; A-F only; Periodic Fall)
Limitations/strengths of various strategy models in different technology contexts. Innovation vs. imitation. Vertical/horizontal integration in high tech industries. Aligning technology strategy with business strategy. Renewing, sharing, leveraging corporate technology competencies across business units. Roles of CEO/CTO in technology intensive businesses. prereq: MBA student

MGMT 6100. Topics in Management. (2-4 cr.; max 8 cr.; A-F only; Periodic Fall & Spring)
Topics vary. prereq: CSOM grad student or instr consent

MGMT 6101. Independent Study in Strategic Management and Organization. (1-8 cr.; max 16 cr.; A-F or Audit; Every Fall, Spring & Summer)
Students contract with faculty on independent studies. prereq: instr consent or dept consent

MGMT 6110. Managing People and Organizations. (2 cr.; A-F only; Every Fall & Spring)
Behavioral science theory of employee behavior in organizations. Theory applied to practical situations. Motivation, cultural differences in management, ethical dilemmas, decision-making, leadership, timing. prereq: MBA student

MGMT 6305. The International Environment of Business. (4 cr.; A-F only; Every Fall, Spring & Summer)
Introduction to international trade/finance theory and political economy. Institutional governance of international trade/monetary policy, differences in political-economic/sociocultural systems, implications for managerial decision-making. prereq: MBA student

MGMT 6310. Cross-Cultural Management: Developing Intercultural Competence. (2 cr.; A-F only; Every Spring)
The emphasis of this course is on people-related (i.e., psychological and behavioral) issues that arise when managing across cultures. Through the use of cases and interactive experiential activities, this course will develop your intellectual ability to critically examine, analyze, and deal with cross-cultural problems in business contexts, while also cultivating a tolerance for ambiguity that is necessary in the global workplace. The combination of materials and experiences will allow you to evaluate your cross-cultural savvy, understand and appreciate the nuances of cultural identities and the impact these have on work relationships, and create a plan to increase your intercultural competence.

MGMT 6402. Integrative Leadership: From Theory to Practice. (3 cr.; A-F only; Every Spring)
Seminar. Strategic challenges linking business, government, and society locally/globally. Co-led by faculty from Carlson and Humphrey Schools. International network of leaders/organizations participate. Case studies as part of capstone projects. prereq: MBA student

MGMT 6410. Corporate Responsibility. (2 cr.; A-F only; Every Fall)
Managing with appreciation for corporate responsibility. Corporate responsibility/how executives think about it. Factors that make assessing corporate responsibility complex. Need for business leaders to understand/make choices with respect to corporate responsibility issues. prereq: MBA 6300, CSOM grad student

MGMT 8101. Theory Building and Research Design. (4 cr.; Student Option; Periodic Spring)
Problem formulation, conceptual modeling, theory building, and research design in the social and behavioral sciences. prereq: Business admin PhD student or instr consent

MGMT 8202. Seminar in International Management. (4 cr.; Student Option; Periodic Fall & Spring)
Overview of the field of international management research. prereq: Business admin PhD student or instr consent

MGMT 8301. Seminar in Organizational Behavior. (4 cr.; Student Option; Periodic Fall & Spring)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
Major theories and current research on individual behavior and group processes in organizations from a micro perspective. prereq: Business admin PhD student or instr consent

MGMT 8302. Seminar in Organizations Theory. (1-4 cr.; Student Option; Periodic Fall & Spring)
Major theories and current research on organizational and interpersonal topics from a macro perspective. prereq: Business admin PhD student or instr consent

MGMT 8304. Topics in Organizations I. (1-2 cr.; A-F or Audit; Periodic Fall & Spring)
Topics vary. prereq: PhD student or instr consent

MGMT 8305. Topics in Organizations II. (1-2 cr.; A-F or Audit; Periodic Fall & Spring)
Topics vary. prereq: PhD student or instr consent

MGMT 8401. Seminar in Strategy Content. (2-4 cr.; Student Option; Periodic Fall & Spring)
Review of research in strategy formulation. prereq: Business admin PhD student or instr consent

MGMT 8402. Seminar in Behavioral Strategy. (2-4 cr.; Student Option; Periodic Fall & Spring)
Tickets vary with each offering. prereq: Business admin PhD student or instr consent

MGMT 8404. Topics in Strategy 1. (2-4 cr.; Student Option; Periodic Fall & Spring)
Tickets will vary with each offering, prereq: Business admin PhD student or instr consent

MGMT 8405. Topics in Strategy II. (2-4 cr. [max 8 cr.]; A-F or Audit; Spring Even Year)
Topics vary. prereq: PhD student or instr consent

MGMT 8501. Seminar in Entrepreneurship. (4 cr.; A-F only; Spring Even Year)
This seminar provides a broad introduction to the field of entrepreneurship. It helps students develop the skills and knowledge needed to conduct their own research within this domain. It introduces them to the theoretical and empirical foundations of the field of entrepreneurship as a scholarly discipline. It will familiarize students with key debates in the field. It will also sharpen students’ conceptual and analytical skills, and help them develop their research agenda.

MGMT 8892. Readings in Management Theory and Administration. (1-8 cr. [max 16 cr.]; Student Option; Every Fall & Spring)
Intensive research on a management topic; major term paper. prereq: Business admin PhD student or instr consent, adviser consent

MGMT 8894. Graduate Research in Management Theory and Administration. (1-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer)
Research project on a management problem of interest to student; may be completed in cooperation with a business firm. prereq: Business admin PhD student or instr consent, adviser consent

Management of Technology (MOT)

MOT 5001. Technological Business Fundamentals. (2 cr.; A-F only; Every Fall)
Basics of operations, strategy, decision-making in technology-driven business. Market opportunity assessment, finance/financial decision-making, organizational roles. Work in teams to analyze aspects of business opportunity. prereq: Degree seeking or non-degree graduate students

MOT 5002. Creating Technological Innovation. (2 cr.; A-F only; Every Spring)
Course provides students with techniques to create new ideas, and lead an organization to bring them successfully to market. It will include examples of the dynamics of technological industries, and technology strategies. Topics include effective practices to generate ideas, processes to move them to market, and intellectual property. Students will work in teams to develop a strategy to commercialize a new technology. prereq: Degree seeking or non-degree graduate students

MOT 5003. Technological Business Planning Workshop. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)
Applies lessons of 5001 or 5002 directly to technology of the student’s choosing, possibly thesis topic. Aspects of strategic technology plan or business plan, culminating in presentation of plan. Must be taken in parallel with 5001 or 5002. prereq: Degree seeking or non-degree graduate students. Student must also enroll for MOT 5001 or MOT 5002

MOT 5991. MOT Independent Study. (1-3 cr. [max 1 cr.]; S-N or Audit; Periodic Fall)
Independent study in MOT-related topic. prereq: MOT grad student

MOT 8111. Marketing Management for Technology-based Organizations. (2 cr.; A-F or Audit; Every Fall & Spring)
Function of marketing strategy in technology-based organizations. Emphasizes marketing industrial products. Issues in product strategy, including pricing, promotion, product mix, and sales/distribution decisions. prereq: Grad MOT major

MOT 8112. Accounting for Decision Making. (1.5 cr. [max 2 cr.]; A-F or Audit; Every Fall)
Introduction to methods for estimating/analyzing product costs and for using cost information to make product mix and pricing decisions. Cases from technology-oriented firms illustrate principles of activity-based costing. Uses of cost data in managerial decision making, budgeting/control, and financial statement analysis. prereq: Grad MOT major

MOT 8113. Operations Management for Competitive Advantage. (1.5 cr. [max 2 cr.]; A-F or Audit; Every Spring)
Overview of operations functions. Impact of operation management on a firm’s competitiveness and network of trading partners. Key relationships between operations and other value chain functions. Integrating operations decisions to achieve objectives. Product-process design, quality management, supply chain management, technology management, work force issues, prereq: Grad MOT major

General management principles for organizations, people, and business systems in technology-intensive industries. Application of managerial approaches to project, business, and corporate levels of organizations and to demands entrepreneurial/established technology firms. prereq: Grad MOT major

MOT 8122. Financial Management for Technology-based Organizations. (2 cr.; A-F or Audit; Every Spring)
Creating value within the organization. Financial methods important to managers of technology-based organizations. Budgeting capital, projecting financial needs, and managing working capital. prereq: Grad MOT major

MOT 8133. Managerial Communication for Technological Leaders: Persuasive Writing and Speaking. (2 cr.; A-F or Audit; Every Fall & Spring)
Oral and written communication. Introductory and specialized workshops on topics such as presentation skills, memo and report writing, listening skills, and visual aid design and integration. prereq: Grad MOT major

MOT 8212. Developing New Technology Products. (2 cr.; A-F or Audit; Every Fall & Spring)
Review of methods and organizational strategies for development of new technology products. Product development strategy. Necessary organizational interactions between research/development, operations, marketing, and intellectual property strategy in design/delivery. prereq: Grad MOT major

MOT 8213. Macroenvironment of Technology. (1.5 cr. [max 2 cr.]; A-F or Audit; Every Fall & Spring)
Development of scenarios of anticipated social, political, governmental, and economic forces affecting technological change. Use of scenarios to respond to institutional pressures, opportunities, and uncertainties. Corporate strategies, including building alliances for
University of Minnesota Twin Cities Catalog

Fall, 2018

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

global competitiveness. prereq: Grad MOT major

**MOT 8214. Technology Foresight and Forecasting.** (2 cr.; A-F; Every Fall) Tools/techniques for technology forecasting, assessment, and strategic foresight for decision making in business/government. Technology dynamics, R&D strategy, portfolio management, resource allocation. prereq: Grad MOT major

**MOT 8221. Project and Knowledge Management.** (1.5 cr. [max 2 cr.]; A-F or Audit; Every Spring) Survey/application of project and knowledge management in management of technology. Business/engineering project/knowledge management. Planning, scheduling, controlling, Budgeting, staffing, task/cost control. Communicating with, motivating, leading, and managing conflict among team members. Cross-functional development of concepts/processes. prereq: Grad MOT major

**MOT 8224. Pivotal Technologies.** (1 cr.; max 2 cr.; A-F or Audit; Every Fall) Technologies expected to play pivotal roles in future industrial development. State-of-the-art for each technology. Barriers/opportunities for commercialization. Guest expert lectures. Students analyze potential applications of technologies to industry. prereq: MOT grad major

**MOT 8231. Managing Information Resources in Technology-based Organizations.** (1 cr.; A-F or Audit; Every Fall & Spring) Managing information resources/technology in an organization where technology is a critical part of value chain. Database management systems, electronic commerce. Managerial issues: strategic planning for IT/IS, infrastructure, outsourcing, competitive value, implementation. prereq: Grad MOT major

**MOT 8232. Managing Technological Innovation.** (2 cr.; A-F or Audit; Every Spring) How technological innovation is important to business success, can be managed, and may drive business strategy. Organizational dynamics of innovation, how it may be enhanced. Bringing innovations to marketplace in existing businesses and new ventures.

**MOT 8233. Strategic Management of Technology.** (2 cr.; A-F or Audit; Every Fall & Spring) Identifying key issues, formulating strategies for situations involving business/technology. Industry dynamics, competitive challenges for improving corporate performance and leveraging technological competence. prereq: Grad MOT major

**MOT 8234. Capstone Project.** (0.5-2.5 cr.; A-F or Audit; Every Fall, Spring & Summer) Applied research activity, specifically related to management of technology, in cooperation with participant's home organization. Working with a faculty adviser and work mentor, students address an industry-based management of technology project, venture, process, or challenge. Formal presentation to capstone committee is required. prereq: Completion of two semesters, grad MOT major

**MOT 8333. FTE: Master's.** (1 cr.; No Grade Associated; Every Fall & Summer) (No description) prereq: Master's student, adviser and DGS consent

**MOT 8500. Innovation Leadership and Organizational Effectiveness.** (0.5-2 cr.; A-F only; Every Fall & Spring) Made up of four credits, this course is designed to provide students with the tools and techniques to successfully lead and manage innovation processes and programs in organizations. prereq: MOT major

**MOT 8501. Leading Individual & Team Performance.** (1.5 cr.; A-F only; Every Fall) Develop the context and capability innovation leaders need to optimize engagement and performance at the individual and team levels. Emphasis is placed on foundational principles, capabilities and practices that help leaders self-manage, engage and influence diverse team members, and generate shared commitment for team and project success. prereq: MOT grad major

**MOT 8502. Innovation Leadership and Organizational Effectiveness.** (1 cr.; A-F only; Every Spring) The MOT 8501 and 8502 sequence provides emerging and mid-career technology professionals with the leadership mindset, tool set, and skill set needed to focus, align, and engage multi-disciplinary individuals and teams in translating technology assets and foresight into customer solutions that generate profitable growth. MOT 8502 explores the role of outstanding leaders as developers of innovation strategy and architects of the organizational capability and team commitment needed to execute strategic choices. Emphasis is placed on principles and practices that help leaders focus on the right strategies, build the organizational capability required to execute a strategy, foster continuous improvement in individual and business performance, and lead change initiatives to sustain commitment versus compliance across diverse stakeholders. Students will practice improving their team effectiveness and develop a change leadership plan to support implementation of a key business initiative.

**MOT 8900. Conflict Management.** (0.5 cr.; Student Option; Every Fall) Theory and methods for applying conflict management techniques in organizations. Cooperative and competitive models of conflict, basics of bargaining, conflict strategies, communication styles, listening skills, dispute resolution, third-party mediation, and use of computers for conflict mediation. prereq: Grad MOT major

**MOT 8910. Corporate Responsibility.** (1 cr.; A-F or Audit; Every Fall & Spring) Principles of stakeholder management. Ethical framework for responsible management of investors, employees, suppliers, customers, and external community. Moral leadership, trust in organizations, and reputation control. New metaphors and techniques for managing the socially responsible organization. prereq: Grad MOT major

**MOT 8920. Science and Technology Policy.** (1.5 cr.; A-F or Audit; Every Fall) Role of government in science/technology. Impact of policy on economy/society. Ways companies/individuals may influence science/technology policy. Technology-related public policy in the United States, elsewhere. prereq: MOT grad student

**MOT 8921. Global Management of Technology.** (0.5 cr.; A-F only; Every Spring) Global management of technology. prereq: MOT student

**MOT 8930. Topics in Emerging Technologies.** (0.5 cr.; S-N or Audit; Every Spring) Invited speakers give half- or full-day seminars on special topics in emerging technologies (e.g., energy systems, tissue engineering, thermal spray coating technology). prereq: MOT grad student

**MOT 8940. Managing Intellectual Property.** (0.5-1 cr.; A-F only; Every Spring) Characteristics of Intellectual Property (IP), its role in technology enterprises. Law of patents, trade secrets, trademarks, copyrights, know-how and other IP. Effect of IP rights acquisition and asset valuation on company competitiveness. IP protection/licensing strategy. prereq: MOT grad student

**MOT 8950. International Management of Technology Project.** (2 cr.; A-F or Audit; Every Spring) On-site residency in international locations for up to two weeks. Visits to local, technology-intensive companies. Lectures/discussions with company executives, government officials, and university faculty. Comparative analysis of management of technology concepts/issues in an international business context: social, economic, cultural, and governmental perspectives. Written assignment required. prereq: MOT grad student

**MOT 8960. Seminars in Management of Technology (MOT) and Innovation.** (1 cr.; max 2 cr.; S-N only; Every Fall & Spring) Seminars on emerging topics in technology management and innovation. prereq: MOT grad major

**MCOM 5400. Managerial Communications (MCOM).** **MCOM 5500. Enhancing Your Executive Image in Business Communications.** (2 cr. [max 4 cr.]; A-F only; Every Fall) Techniques to project executive presence in all business communications. prereq: MBA student...
Marketing (MKTG)

MKTG 6020. Advanced Logistics and Supply Chain Management. (2 cr.; A-F only; Every Fall & Spring) Analyzes flow of physical product through channels of distribution. Linkages between process of controlling physical flows, major functions of firm (e.g., finance, marketing, operations). Managing logistical interactions between firms to develop integrative supply chain management strategy. Simulation exercise. prereq: MBA 6210, MBA student

MKTG 6050. Business Research Methods. (2 cr.; A-F only; Every Spring) Business Research Methods - The main goal of the course is to teach students both some fundamental business management concepts and methods of quantitative analytics. The course will focus on applications of analytic techniques, while the traditional MR will be analytics and/or modeling driven.

MKTG 6051. Marketing Research. (4 cr.; A-F only; Every Fall & Spring) Methods for collecting/analyzing data to solve marketing problems. Survey research techniques. Research design, secondary/primary data collection, sample design, data analysis. Application of techniques to marketing problems, marketing research projects. prereq: MBA 6210, MBA student

MKTG 6055. Buyer Behavior. (4 cr.; A-F only; Every Fall & Spring) Application of behavioral sciences to understanding buyer behavior. Perceptions, memory, affect, learning, persuasion, motivation, behavioral decision theory, social/cultural influences, managerial implications. Emphasizes class discussion. prereq: MBA 6210, MBA student

MKTG 6060. Marketing Channels. (2 cr.; max 4 cr.; A-F only; Every Fall) This class focuses on designing go-to-market routes that align with customer purchase journeys, including the selection of channel partners, and fashioning the right channel incentives. We will pay particular attention to contemporary challenges arising from channel fragmentation and addition of online routes-to-market. prereq: MBA 6210, MBA student

MKTG 6065. Strategic Supply Chain Management. (2 cr.; A-F only; Every Spring) Internal/inter-organizational design, strategic sourcing, alliances/partnerships, impact of technology on supply chain effectiveness. Managing flows, creating/sharing customer value, measuring competitive impact from supply chain excellence. prereq: [6060 or OMS 6056, or IDS 6442 or IDS 6423], 2nd yr MBA student

MKTG 6073. Marketing in High Tech Settings. (2 cr.; A-F only; Every Fall) This class will focus on contemporary markets where the products and services are built on a significant base of intellectual property. Using cases and readings, we will examine major issues such as a) diffusion of multiple generations (e.g., iPhone 7 8, 10, etc.), b) back-and-forth compatibility choices (e.g., Windows XP, 7, and 10), c) revenue model decisions (e.g., license a drug patent versus launching the realized drug) and d) user-centered design (e.g., Nest versus Honeywell thermostats). prereq: [MBA 6210 or equiv], MBA student or dept consent

MKTG 6075. Pricing Strategy. (4 cr.; A-F only; Every Fall & Spring) Framework for assessing pricing decisions. Pricing in business-to-business markets, consumer goods markets, services, and not-for-profit companies. prereq: MBA 6210, MBA student

MKTG 6078. Advertising & Promotion. (4 cr.; A-F only; Every Fall & Spring) Managing communication. Advertising, sales promotion, public relations, direct marketing. Setting communications objectives and budgets, media selection, creative strategy, sales promotion techniques. prereq: MBA 6210

MKTG 6080. Internet Marketing. (2 cr.; A-F only; Every Fall) Concepts, processes, decisions associated with marketing through the Internet. Emphasizes profitability. Customer persuasion, building a customer base digitally, pricing, customer retention, channel/distribution issues. prereq: MBA 6210, MBA student

MKTG 6084. Persuasion and Influence. (2 cr.; A-F only; Every Summer) Successful marketers, leaders and communicators must not only make the right decisions-they must also influence others. Successfully managing other people depends on managing the influence process. Doing this effectively requires understanding the psychology of persuasion. This course is about the science of influence & persuasion. Through deeper understanding of human psychology, you will learn scientifically-tested and practical tools to become more influential in your dealings with consumers, clients, coworkers, & managers. Through a mix of lecture, discussion, reading, reflection, and experiential exercises, you will master the tools to be able to mobilize others by strategically crafting your communications. prereq: MBA 6210, MBA student

MKTG 6085. Harnessing Consumer Irrationality. (2 cr.; A-F only; Periodic Fall, Spring & Summer) People do surprising and funny things. Business leaders, policy makers, and scientists long have been interested in why people do what they do, and for a long time that interest has fallen under the rubric of a ‘rational man’ model. It is now clear that the rational model is imperfect, at best. This course takes a look at the less rational side of life, studying the shortcuts, the low road, and the error-prone processes that enable people to feel, decide, and act efficiently? despite costs to rationality. For most of the past 200 years, most of what organizations, politicians, and well-meaning people did in order to make consumers change their behavior consisted of what might be called ?shoves??heavy-handed, choice-restricting, highly-incentivized, information-dense treatments that basically told consumers what to do (or else!). Those, by and large, do not work. Not only do they not work, they are costly and can even make the unwanted behavior emerge even more than before the shove by creating boomerang or counterproductive effects.

MKTG 6086. Digital Marketing. (2 cr.; A-F only; Periodic Fall & Spring) Marketing practices have dramatically shifted with the rise of social media and the proliferation of devices, platforms, and applications. This rapidly changing environment presents new opportunities and challenges for marketers. Through a combination of case studies, best practice examples, current news items, and assignments, students learn how the elements of a digital strategy work together with traditional media to attract prospective customers. Specifically, students learn best practices for social media marketing, content marketing, organic and paid search, search engine optimization, e-mail marketing, landing pages and display advertising. Students discuss strategies for reputation management in a world where information is disseminated virally and discover how social media monitoring and data analysis can be used to improve marketing and product development activities. The importance of establishing digital marketing goals and analytics is covered as well as how to measure return on investment for digital activities.

MKTG 6088. Strategic Marketing. (2 cr.; A-F only; Every Fall, Spring & Summer) Determining product-markets where organization should compete. Sustainable
competitive advantage. Matching marketing strategy with environment. Coordinating marketing, other business functions. Organizing marketing function/management. prereq: MBA 6210, MBA student

MKTG 6090. Marketing Topics. (1-4 cr. [max 8 cr.]; A-F only; Every Fall, Spring & Summer) Selected topics/problems of current interest considered in depth. prereq: MBA 6210, MBA students

MKTG 6101. Independent Study. (1-4 cr. [max 8 cr.]; A-F only; Periodic Fall & Spring) Independent directed reading/research.

MKTG 6801. Independent Study. (1-8 cr.; A-F or Audit; Every Fall, Spring & Summer)

MKTG 8809. Consumer Behavior Research Methods. (2 cr.; A-F or Audit; Periodic Fall & Spring) Seminar. Topics related to conceptual theories/arguments about experimental design and statistical analysis of experiments. How to design experimental research for testing hypotheses and drawing conclusions. prereq: Doctoral student or [master's program student, instr consent]

MKTG 8810. Consumer Behavior Special Topics. (2 cr.; max 8 cr.; A-F or Audit; Periodic Fall & Spring) Theories of consumer categorization. Literature on brand categories, category measurement, brand extensions/dilution/affect. Readings from branding literature. Theoretical analysis. prereq: Doctoral student or [master's program student, instr consent]

MKTG 8811. Consumer Attitudes and Persuasion I. (2 cr.; Student Option; Fall Odd, Spring Even Year) Reading, discussing, and evaluating theories of consumer attitudes and persuasion. Theoretical analysis, rather than practitioner focus. prereq: [MBA 6210 or equiv], business admin PhD student or instr consent

MKTG 8812. Consumer Attitudes and Persuasion II. (2 cr.; A-F or Audit; Fall Odd, Spring Even Year) Science of persuasion. Principles of stickiness--universal principles that lead messages to succeed rather than fail. Principles of influence--universal psychological principles that motivate a person to say "yes." prereq: Doctoral student or instr consent

MKTG 8813. Consumer Judgment and Decision Making I. (2 cr.; A-F or Audit; Periodic Fall & Spring) Different theoretical approaches taken in judgment and decision-making research. Heuristics/biases, affect in decision making, judgments/decisions over time. prereq: Doctoral student or [master's program student, instr consent]

MKTG 8814. Consumer Judgment and Decision Making II. (2 cr.; A-F or Audit; Periodic Fall & Spring) Draws from work on prospect theory and its derivatives. Anomalous choice. Emphasizes on applications to Marketing theory, from inter-temporal choice to regret and counterfactual thinking in consumers/managers. prereq: Doctoral student or [master's program student, instr consent]

MKTG 8831. Seminar: Inter-Organizational Relations. (4 cr.; Student Option; Periodic Fall & Spring) From an efficiency perspective, inter-organizational networks involved in task of moving goods and services from point of production to point of consumption. Literature covering the functional, institutional, analytical, and methodological traditions, as well as the behavioral school of thought and transaction cost and relational contracting. prereq: MBA 6210 or equiv, business admin PhD student or instr consent

MKTG 8842. Quantitative Modeling I. (2-4 cr. [max 8 cr.]; A-F or Audit; Periodic Fall & Spring) Advanced readings seminar. Quantitative research in marketing. Topics from theoretical/empirical research in marketing, econometrics, and industrial organization. Classic/contemporary articles. prereq: Doctoral student or [master's program student, instr consent]

MKTG 8843. Quantitative Modeling II. (2 cr.; A-F or Audit; Periodic Fall & Spring) Advanced readings seminar. Quantitative research in marketing. Topics from theoretical/empirical research streams in marketing, econometrics, and industrial organization. Classic/contemporary articles. prereq: Doctoral student or [master's program student, instr consent]

MKTG 8851. Seminar: Marketing Management and Strategy I. (2 cr.; Student Option; Periodic Fall & Spring) Topics in marketing management and formulation and implementation of marketing strategies. Diversity of thought, within marketing and strategic management literature. prereq: [MBA 6210 or equiv], business admin PhD student) or instr consent

MKTG 8852. Marketing Management & Strategy II. (2 cr.; Student Option; Periodic Fall & Spring) PhD seminar. Role of branding within the organization, its business strategy, and its success. Brand management. Critically evaluate fundamental ideas and more recent developments. prereq: Business admin PhD student or instr consent

MKTG 8894. Graduate Research in Marketing. (1-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer) Individual research on an approved topic appropriate to student's program and objectives. prereq: MBA 6210 or equiv, business admin PhD student or instr consent

MBA 5200. Directed Studies for Curricular Practical Training (International Full-Time MBA Students Only). (1-3 cr.; S-N only; Every Fall & Spring) CPT is work authorization which allows a student to work in a job directly related to the student's major area of study before degree completion. prereq: International FT MBA student with approval from the MBA Office

MBA 6030. Financial Accounting. (3 cr.; A-F only; Every Fall, Spring & Summer) Basic principles of financial accounting, involving the consecution/interpretation of corporate financial statements. prereq: MBA Student

MBA 6035. Managerial Accounting. (3 cr.; A-F only; Every Fall, Spring & Summer) Cost systems introduced as potential sources of sustainable competitive advantage. Focuses on designing cost systems to provide manager with accurate, relevant, and timely information. prereq: 6030, 6230, MBA student

MBA 6110. Leading Others. (2 cr.; A-F only; Every Fall, Spring & Summer) Achieving organizational goals by leading in ways that create motivation, engagement, commitment, positive social interactions, and job performance. Understanding and managing the characteristics of organizations, work groups, and individuals. The role of group dynamics, decision making, cooperation, conflict, and power in leading others.

MBA 6112. Leading Organizations. (0-1 cr. [max 3 cr.]; A-F only; Every Fall, Spring & Summer) Leverage leadership journey of full-time MBA program through Enterprise experience. Course integrated with work of MBA Enterprise teams as they set vision and strategy, translate strategy for optimal team functioning, and execute strategy for clients. Exercises, assessments, role-playing, discussions.

MBA 6120. Data Analysis and Statistics for Managers. (3 cr.; A-F only; Every Fall, Spring & Summer) Concepts/principles of business statistics, data analysis and presentation of results. Topics: exploratory data analysis, basic inferential procedures, statistical process control, time series/regression analysis, and analysis of
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

MBA 6140. Managerial Economics. (2 cr.; A-F only; Every Fall & Spring) How markets work, how positive economic rents (profits) are made, and how strategic behavior affects profits. Four major topical areas include market micro-structure, industrial structure, uncertainty, and incentives and firm governance. prereq: MBA student

MBA 6150. Managerial Communications. (1 cr.; A-F only; Every Fall) Thinking strategically about communication. Writing/presentation skills. Communications best practices, guidelines from research/experience. Opportunity to practice/strengthen skills. prereq: MBA student

MBA 6210. Marketing Management. (3 cr.; A-F only; Every Fall, Spring & Summer) Management of the marketing function including understanding the basic foundational marketing concepts and skills in strategy development and planning of operational and strategic levels pertaining to product offering decisions, distribution channels, pricing and communication. prereq: MBA student

MBA 6220. Supply Chain & Operations. (3 cr.; A-F only; Every Fall, Spring & Summer) Introduction to fundamental operations management principles and concepts. The course takes a strategic view of operations in both a manufacturing and service context and stresses linkages to other functional areas. Many of the cases in the course take an international perspective. prereq: MBA student

MBA 6235. Managerial Accounting. (2 cr.; max 3 cr.; A-F only; Every Fall, Spring & Summer) Cost systems introduced as potential sources of sustainable competitive advantage. Course focuses on designing cost systems to provide manager with accurate, relevant, and timely information. Taught as part of an integrated functional core. prereq: MBA student

MBA 6240. Competing in a Data-Driven Digital Age. (2 cr.; A-F only; Every Spring) Contemporary managers must understand how the convergence of mobility, analytics, social media, cloud computing, and embedded devices are transforming firms, industries, markets and society. Using the foundation of data-driven business analytics, this course provides tools and frameworks for competing in the digital age. Students will learn general state-of-the-art analytics skills in the context of new platform based business models, digital search, big-data, social networks, social media and open innovation that pervade competition in the digital age. These will include the fundamentals of predictive modeling, large scale A/B testing, social networks analysis and an exposure to the work-horse tools of data-driven classification and prediction to explore patterns in rich datasets (such as k-nearest neighbors, classification trees and the design of recommendation systems). While this course will use case studies in the digital domain, the methods taught here have a wide range of applicability across functions and verticals in modern business environments. prereq: FT MBA student

MBA 6300. Strategic Management. (3 cr.; A-F only; Every Fall & Spring) Introduction to the concepts and techniques used to create and implement a sense of corporate direction; choices about products and markets that involve the integration of different functional areas; positioning a business to increase returns for shareholders and stakeholders; the skills involved in identifying issues, evaluating options, and implementing business plans. prereq: MBA student

MBA 6315. The Ethical Environment of Business. (2 cr.; A-F only; Every Fall, Spring & Summer) Analysis of ethical dilemmas and development of appropriate responses; relationship of ethical management to the law; implications for corporate profitability; managing shareholders vs. managing stakeholders; issues such as protection of the environment, workplace safety, product liability, regulation, and fiduciary obligations. prereq: MBA student

MBA 6402. Technology Industry. (2 cr.; A-F only; Periodic Fall) This course focuses on firms engaged in three major sub-areas of technology including e-commerce, defense, and manufacturing subsectors. Cases and live case studies to focus on firms ranging from 3M, Lockheed, Amazon, and Google. Federal agency oversight focus includes the Departments of Defense, Transportation, Commerce, and Education.

MBA 6403. Energy Industry. (2 cr.; A-F only; Periodic Fall) Energy companies are in the midst of making a transition into an unknown future. They face disruption that arises from such factors as electric and autonomous vehicles, fracking for oil and natural gas, a growth in renewable power, and increasing global action on climate change. This course is about exercising foresight in this industry. How should managers make long term expensive capital intensive, and often irreversible investment decisions under conditions of great uncertainty?

MBA 6500. MBA Projects. (2-4 cr.; max 6 cr.; A-F only; Every Fall & Spring) Interdisciplinary team approach to formulation/execution of an actual business problem. Teams work on problems currently faced by business, nonprofit, and government organizations in the Twin Cities metropolitan area. prereq: MBA student, instr consent

MBA 6501. Carlson Funds Enterprise: Growth. (1-4 cr.; max 12 cr.; A-F only; Every Fall & Spring) Lectures, assignments, modules. Hands-on real-money experience through Golden Gopher Growth Fund. prereq: MBA student or [applied to or accepted in] spring of 1st yr; [6031, ACCT 6100, ACCT 6160, MBA student, emphasis in finance mgmt] recommended

MBA 6502. Carlson Funds Enterprise: Fixed Income. (1-4 cr.; max 12 cr.; A-F only; Every Fall & Spring) Lectures, assignments, modules. Hands-on real-money experience through Golden Gopher Fixed Income Fund. prereq: [Applied to or accepted in] spring-A of 1st yr to begin in spring-B; [6031, ACCT 6100, ACCT 6160, MBA student, emphasis in finance mgmt] recommended

MBA 6503. Carlson Ventures Enterprise. (2-4 cr.; max 12 cr.; Student Option No Audit; Every Fall & Spring) Modeled after early-stage venture capital funds. Due diligence process. Starting/growing high-growth ventures. Exposure to University-based technologies, start-up companies, and experts. Business analysis/development. Assistance to non-University-based start-up companies seeking initial equity capital. prereq: MBA student, approved application, interview

MBA 6504. Carlson Consulting Enterprise. (2-4 cr.; max 12 cr.; Student Option No Audit; Every Fall & Spring) Connects cutting-edge ideas/technologies from classroom to real problems presented by clients. Students work collaboratively with clients to integrate strategy/technology. How to lead complex change initiatives. prereq: MBA student, approved application, interview

MBA 6505. Carlson Brand Enterprise. (2-4 cr.; max 12 cr.; Student Option No Audit; Every Fall & Spring) Students assist companies/organizations with marketing/brand challenges; apply theory, industry best practices. Work collaboratively in real-world environment. Critical thinking, applied marketing skills. prereq: MBA student, approved application, interview

MBA 6990. MBA Topics. (2 cr.; max 8 cr.; A-F only; Periodic Fall, Spring & Summer) Various topics.

Master of Business Taxation (MBT)

MBT 5200. Tax Accounting Methods I. (2 cr.; A-F or Audit; Every Spring) This course covers the federal income tax rules for when income and expense should be recognized. The purpose of this course is to provide students the statutory and regulatory framework for analyzing and explaining the federal income tax consequences of tax accounting methods and periods issues. prereq: ACCT 5135, MBT student

MBT 5201. Tax Accounting Methods II. (A-F or Audit; Every Spring) This course covers special topics within the tax accounting methods area, including changes in accounting methods, accounting periods, installment sales and inventory concepts. The purpose of this course is to provide
Students statutory and regulatory framework for analyzing and explaining the federal income tax consequences of special tax accounting methods issues. Prereq: MBT 5220

MBT 5223. Tax-exempt Organizations. (2 cr.; A-F or Audit; Spring Odd Year) Tax laws/issues concerning Section 501(c)(3) and other tax-exempt organizations. Qualification, procedures. Unrelated business income, private foundations (including intermediate sanctions), joint ventures. Prereq: ACCT 5135

MBT 5233. Mergers and Acquisitions I. (2 cr.; A-F or Audit; Every Spring) Different types of acquisitions, disposessions, reorganizations, and spin-offs involving C corporations. Tax consequences of acquisition to corporations/shareholders involved. Use of 338 elections, limitations on acquired net operating losses/credits, use of covenants not to compete, consulting agreements, deferred payment terms, treatment of transaction costs. Prereq: MBT 5230

MBT 5335. Taxation of the Small Business Corporation. (2 cr.; A-F or Audit; Every Summer) Federal income taxation of S corporations. Election eligibility; termination of status; treatment of income and deduction items; distributions, basis of stock and debt. Compensation arrangements in closely held corporations; fiscal year issues; personal service corporations; advantages of C corporations vs. S corporations; corporation liquidation and redemption rules; S corporation's built-in gains tax. Prereq: 5230

MBT 5340. Taxation of Partners and Partnerships. (2 cr.; A-F or Audit; Every Spring) Reviews tax consequences associated with formation, operation, and dissolution of a partnership. Prereq: Acct 5135

MBT 5347. Tax Technology and Analytics Fundamentals. (2 cr.; A-F or Audit; Every Spring) Tax technology is transforming the way tax departments are doing business in many amazing ways. Both public accounting firms and businesses are investing in people, process, data, and technology at a rapid pace. This course provides the student with relevant background on current technologies and associated challenges, managerial approaches, systems design, process, data challenges and risk assessment methods that are specific to the tax technology arena. Additionally, it will focus on the fundamental concepts of project management, business requirements, data analytics, implementation choices, and the necessary business cases that are being conducted in both the public and private sector. Prereq: ACCT 5135

MBT 5348. Advanced ASC 740 Concepts. (2 cr.; A-F or Audit; Spring Even Year) Examination of topics under ASC 740 Accounting for Income Taxes. Share-based awards, uncertain tax positions, valuation allowances, business combinations, foreign operations, interim period tax calculations. Process design/perspective of stakeholders of income tax accounting. Prereq: 5346

MBT 5360. State and Local Taxation. (2 cr.; A-F or Audit; Every Spring) Examines state levying of individual income, corporate income, property, sales, and excise taxes. Tax problems of businesses with multistate operations. Prereq: Acct 5135, MBT student

MBT 5363. Compensation and Benefits. (2 cr.; A-F or Audit; Every Fall) Federal income taxation of executive compensation, relevant fringe benefit programs. Benefit programs other than qualified retirement plans. Salary continuation, stock options, non-profit organization plans, health/welfare plans. Prereq: ACCT 5135

MBT 5370. Taxation of Property Transactions. (2 cr.; A-F or Audit; Every Fall) Determining realized gain or loss and recognized gain or loss, and tax treatment of that gain or loss on property dispositions. Consequences of property transactions including depreciation, depletion, basis, and capital gains problems. Prereq: Acct 5135

MBT 5380. Tax Aspects of International Business I. (2 cr.; A-F or Audit; Every Fall) Multinational business operations/transactions involving foreign income. Tax consequences of transactions with/for foreign organizations/companies. Prereq: 5230

MBT 5381. Tax Aspects of International Business II. (2 cr.; A-F or Audit; Spring Even Year) Foreign tax credit, Subpart F planning opportunities, international structuring (joint ventures, use of entity classification regulations). Transfer pricing, foreign currency. Legislative, regulatory, and judicial developments. Prereq: MBT 5380

MBT 5382. Transfer Pricing. (2 cr.; A-F or Audit; Spring Odd Year) Transfer pricing requirements facing multinational companies. Tax requirements of the United States and other countries that have adopted the “arm’s-length standard” or the transfer pricing guidelines adopted by the Organization for Economic Cooperation and Development. Regulations, methods, economic models, pricing policies, transaction accounting, and management of audits of managing transfer prices within a multinational company. Prereq: ACCT 5135

MBT 5420. Current Topics in Taxation. (1-4 cr.; A-F or Audit; Every Fall, Spring & Summer) Tax research/compliance, other tasks. Students submit summary paper. Prereq: ACCT 5135, MBT student

finance, government expenditures in theory/practice. Specific taxes. prereq: MBT 5230

**MDT 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent**

### Master of Development Practice (MDP)

**MDP 5001. Ways of Knowing for Sustainable Development. (2 cr.; A-F or Audit; Every Fall)**
Complexities of interdisciplinary study of development and a range of ways of knowing the field of development studies and sustainability. Approaches practiced by physical, biological, social science, and humanities scholars. “Ways of knowing” in different cultures/groups and from a variety of situated perspectives. Key issues and concepts and key methodological challenges facing us as we engage in interdisciplinary and international development study and practice. Sustainable livelihoods. Team taught when possible by faculty from biological, social sciences, and humanities, or at minimum will include guest lecturers who can offer a range of disciplinary perspectives on questions of development. prereq: Grad MDP major or instr consent

**MDP 5002. Program Development Workshop. (3 cr. [max 4 cr.]; A-F only; Every Spring)**
Research/writing skills to support work in international development. Discussion of basic qualitative research methods/data analysis. Qualitative/quantitative data, collaborative research/analysis. Relationship between research/policy. prereq: MDP grad student or instr consent

**MDP 5004. International Field Experience. (3 cr.; S-N or Audit; Every Summer)**
International field experience. prereq: MDP grad student or instr consent

**MDP 5005. Qualitative Methods for Development Practice. (3 cr.; A-F only; Every Spring)**
Course introduces students to qualitative inquiry and analysis in the field of international and/or sustainable development practice. It provides students with first hand experience in research design for development practice applications, including data collection and analysis. The course includes lectures, discussions, presentations, and project based learning. It is considered introductory as a single semester is insufficient to introduce, design, and conduct a comprehensive qualitative inquiry and analysis.

**MDP 5100. Post-Field / Pre-Capstone Seminar. (1 cr.; A-F only; Every Fall)**
This project-focused seminar meets once at the beginning of the fall semester to collect observations, reflections and insights from the summer field placements. Then, throughout the fall semester, the seminar will meet periodically to stage the spring capstone course. Staging includes a capstone overview session, presentation of projects, team selection process and initial client engagements, the latter being particularly important for teams aspiring to travel during the winter or spring breaks.

**MDP 5200. Capstone Workshop in Development Practice. (3 cr. [max 6 cr.]; A-F or Audit; Every Fall & Spring)**
Learning from field experiences. Analytical/practical skills developed in academic training. Apply skill/experiences to “real world” problem provided by local or international development-focused organization. Reflective practice. prereq: MDP grad student or instr consent

### Master of Healthcare Admin (MHA)

**MHA 8763. External Forces Affecting Health Services Delivery. (2 cr.; A-F or Audit; Periodic Fall)**
Guidance in development of concepts, models, and principles of financing, social policy making, and organizing and human resource development for health services delivery. Written paper and teaching presentation required. prereq: PhD student

**MHA 8782. Research Practicum. (2 cr.; A-F or Audit; Every Fall & Spring)**
Field experience in healthcare research. Supervised independent and team research on selected topics and problems. prereq: PhD student

### Master of Science in Finance (MSF)

**MSF 6021. Communications for Finance. (2 cr.; A-F only; Every Fall)**
This course covers guidelines and practical skill development for writing well-organized, professional documents and delivering confident, credible, and dynamic presentations. Students will practice designing and delivering effective messages including reader-friendly documents and PowerPoint using a professional writing style and document design. Through discussion and practice, students will also learn to deliver poised, formal and informal presentations to small and large groups both individually and in teams. prereq: Summer Cohort Completion

**MSF 6022. Financial Statement Analysis. (2 cr.; A-F only; Every Fall)**
This course teaches how to analyze financial statements, and it covers the following topics: overview of business activities and financial statements; profitability analysis and interpretation; credit risk analysis and interpretation; revenue recognition and operating income; asset recognition and operating assets; and inter-corporate entities. prereq: Summer Cohort Completion

**MSF 6031. Financial Accounting. (3 cr.; A-F only; Every Summer)**
This course provides students with a deep understanding of financial accounting fundamentals so that they can make decisions based on reported financials. Students will learn how a firm’s operating activities, its investments, and financing transactions are recorded in the income statement, balance sheet, and statement of cash flows. Students will develop some skills needed to analyze financial statements that would later be used.

**MSF 6121. Fixed Income and Securities. (2 cr.; A-F only; Every Fall)**
This class provides an introduction to fixed income markets. Topics include the price/yield relation, no-arbitrage pricing of stripped coupon bonds, the duration/convexity approximation, the term structure of interest rates, defaultable bonds, mortgage-backed securities, inflation protected securities, bonds with embedded options, swap rates, the Fed Funds rate, repurchase agreements, and attribution analysis. prereq: Fall A Cohort Completion

**MSF 6221. Fundamentals of Finance I. (2 cr.; A-F only; Every Summer)**
This course is the first course in a three-course sequence to introduce the ideas of corporate finance. This course will focus on an overview of corporate finance in the firm, the valuation principle, the time value of money, interest rates, valuing bonds, risk and return, and estimating the cost of capital.

**MSF 6222. Fundamentals of Finance II. (2 cr.; A-F only; Every Fall)**
This course is the second course in a three-course sequence to introduce the ideas of corporate finance. Section I will introduce capital budgeting. Students will use the cost of capital learned at the end of the first course in conjunction with an introduction to the calculation of cash flows and the use of decision rules for project selection. Section II will move into stock valuation and company valuation based upon the dividend discount model and enterprise model of valuation; students will also be exposed to other valuation methods. Section III will introduce the effect of capital structure on company valuation, starting with perfect markets and introducing the opposing effects of taxation and financial distress on valuation. Students will complete a case to demonstrate understanding of the core concepts from the first three sections; the case is a continuing case with each week building on the prior week?'s work. Section IV will provide an introduction to financial options and option valuation.

**MSF 6223. Fundamentals of Finance III. (2 cr.; A-F only; Every Fall)**
This course is the last of a three-course sequence that introduces the ideas of corporate finance. It focuses on the three major decisions of a firm: the financing decision, the capital structure decision, and the payout decision. There is also an introduction to corporate valuation. This course uses a balanced mix of lectures and case studies, and emphasizes the use of real world data. prereq: Summer Cohort Completion

**MSF 6224. Corporate Finance Analysis and Decisions. (2 cr.; A-F only; Every Spring)**
Theoretical/applied understanding of corporate financial decisions. Adjusted present value, economic value added options. Impact of
MSF 6321. Quantitative Portfolio Analysis. (2 cr.; A-F only; Every Spring)
This course develops and examines models for portfolio decisions by investors and the pricing of securities in capital markets. We will develop portfolio theory along the way and also study the extensive empirical work that characterizes movements in security prices and evaluates alternative asset pricing models. Topics include the mean variance portfolio analysis, the capital asset pricing model, arbitrage pricing theory, the empirical performance of asset pricing model (market anomalies), multi-factor asset pricing models, time varying risk and returns, and portfolio performance evaluation, including style and attribution analysis. Extensive use of the computer will be required. prereq: Fall A Cohort Completion

MSF 6322. Corporate Valuation and Modeling. (2 cr.; A-F only; Every Fall)
This course develops the financial modeling principles and tools needed to build, operate, and understand the standard business performance, M&A, equity, and credit models that have become central to modern financial decision making. The course develops a deep understanding of financial models so they can be used to analyze a wide range of financial issues. Finance concepts introduced in other courses are reinforced by having students build them into models and by having students interpret the results produced by those models. Students build a financial model on their own, learn to use a fully developed financial model and use models repeatedly to evaluate and plan performance, to estimate value added from projects, operating strategies and financing proposals and to estimate the value of securities. This course extensively uses VBA macros, sensitivity tables and scenario analyses. prereq: Fall A Cohort Completion

MSF 6421. Computing for Finance: Excel/ VBA I & II. (2 cr. [max 4 cr.]; A-F only; Every Summer)
This course first introduces students to specific software (e.g., Excel VBA, ModelRisk Monte Carlo simulator) and databases (e.g., Bloomberg, Factset, CRSP, Compustat) that will be used throughout the MS program. It then focuses on the use of Excel for many topics in finance, including modern portfolio theory, optimal portfolio analysis and binomial option pricing. This course often takes the material being learned in the "Fundamentals of Finance" course to motivate specific examples.

MSF 6422. Financial Econometrics and Computational Methods I. (2 cr.; A-F only; Every Fall)
This course provides an introduction to the methods used in empirical finance. A review of statistics is followed by intensive instruction on matrix algebra that culminates in a fundamental understanding of linear regression, the basic empirical tool. Asset pricing theories are discussed and developed and then methods are derived to test them. The course will emphasize estimation and inference using computer-based applications. prereq: Summer Cohort Completion

MSF 6423. Financial Econometrics and Computational Methods II. (2 cr.; A-F only; Every Fall)
This course builds on Financial Econometrics I and provides instruction on the econometrics used in empirical finance. Topics will include time series analysis, parametric models of volatility, evaluation of asset pricing theories, and models for risk management. The course will emphasize estimation and inference using computer-based applications. prereq: Fall A Cohort Completion

MSF 6522. Derivatives and Risk Management. (2 cr.; A-F only; Every Spring)
This class provides an introduction to derivatives markets. This course is designed to achieve two main objectives. First, provide students with a rigorous framework used in valuing derivative contracts. This will include an in-depth treatment of the two work horses of the binomial model and the Black-Sholes-Merton model. Second, apply the framework to understand a wide variety of issues related to risk management and investment decisions. prereq: Fall A Cohort Completion

MSF 6621. Finance within the Macroeconomy. (2 cr.; A-F only; Every Fall)
This course is intended to provide you with an understanding of modern macroeconomics. We are particularly interested in how financial markets and institutions fit into the overall macro system. By the time that the term is over you will have a much stronger sense of the ongoing macroeconomic news and policy discussion. Having a sense of this material is often helpful in job interviews as well. prereq: Fall A Cohort Completion

MSF 6801. Finance Independent Study Masters Program. (1-6 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring) Independent Study. prereq: instr consent

MSF 6821. Experiential Learning. (4 cr.; A-F only; Every Spring)
This course is the first half of the experiential learning segment of this program. Students will be partitioned into groups to investigate a particular project. The students will identify the most crucial issues associated with the project, collect the necessary data that will be used to analyze the issue at hand, and determine the quantitative tools that will be required to analyze the relevant issues. prereq: completion of Fall Cohort.

MSF 6920. Introduction to Python. (2 cr.; A-F only; Every Summer)
This course is focused on analyzing economic and financial data using Python. You will learn how to access powerful and popular libraries for data access, analysis, and visualization. We will spend most of our class time completing practical, hands-on exercises.

MSBA 6210. Introduction to Statistics for Data Scientists. (3 cr.; A-F only; Every Summer)
This course is designed to develop statistical thinking, i.e., understanding variation and using data to identify possible sources of variation. Specific techniques include basic descriptive and inferential procedures and regression modeling. The emphasis is on understanding such analysis for their relevance to decision making.

MSBA 6250. Analytics for Competitive Advantage II. (3 cr.; A-F only; Every Summer)
Case/discussion-based introduction to variety of analytics-related issues/examples in business. Business value, impact, benefits/limitations, as well as ethical, legal, privacy issues. Use of case studies, examples, guest speakers.

MSBA 6255. Analytics for Competitive Advantage I. (3 cr.; A-F only; Every Fall & Summer)
Quantitative problem solving formulation and solving skills.

MSBA 6310. Programming for Data Science. (3 cr.; A-F only; Every Fall)
According to recent industry surveys, Python is one of the most popular tools used by organizations data analysis. We will explore the emerging popularity of Python for tasks such as general purpose computing, data analysis, website scraping, and data visualization. You will first learn the basics of the Python language. Participants will then learn how to apply functionality from powerful and popular data science-focused libraries. In addition, we will learn advanced programming techniques such as lambda functions and closures. We will spend most of our class time completing practical hands-on exercises.

MSBA 6320. Data Management, Databases, and Data Warehousing. (3 cr.; A-F only; Every Fall)

MSBA 6330. Big Data Analytics. (3 cr.; A-F only; Every Fall)
Big data infrastructure and ecosystem, ingesting and managing big data, analytics with big data; Hadoop, MapReduce, Sqoop, Pig, Hive, Spark, SOL for Big Data, Machine Learning for Big Data, Real-time Streaming for Big Data; cloud computing and other recent developments in big data.

MSBA 6345. Project Management of Analytics Projects. (1.5 cr.; A-F only; Every Fall)
Project Management of full-stack analytics projects: identifying deliverables and a methodology; gathering requirements (use cases, user stories); estimating and staffing the project; monitoring project status (earned value and visual methods); team roles in an agile project. prereq: MSBA student

MSBA 6355. Building and Managing Teams. (0-1.5 cr.; A-F only; Every Fall)
Examine individual, group and organizational aspects of team effectiveness; learn and practice basic skills central to team management; develop appreciation for team leadership function; learn the tools for effective team decision making and conflict management; develop general diagnostic skills for assessment of team issues within and across organizations and national boundaries.

MSBA 6420. Predictive Analytics. (3 cr.; A-F only; Every Fall) Fundamentals of predictive modeling and data mining, assessing performance of predictive models, machine learning and statistical classification and prediction, logistic regression, decision trees, naïve Bayesian classifiers, support vector machine, ensemble learning, deep neural network, and their applications in structured and unstructured data.

MSBA 6440. Data-Driven Experimentation and Measurement. (3 cr.; A-F only; Every Fall) Controlled experiments in business settings, experiment design, A/B testing. Specialized statistical methodologies. Fundamentals of econometrics, instrument variable regression, propensity score matching.

MSBA 6510. Business Analytics Experiential Learning. (6 cr.; A-F only; Every Spring) This course involves hands-on application of the analytics methodologies, techniques, and tools learned throughout the program to a real-world business client in the area of marketing, strategy, operation/supply chain, information technology, finance, accounting, or human resources as well as the development and presentation of results, interpretations, insights, and recommendations.

MSBA 6515. Capstone Project in Analytics. (0-3 cr.; A-F only; Every Spring) Hands-on, integrative application of analytics methodologies, techniques, and tools learned throughout the program in the context of a specific analytics problem. Experience with the entire data analytics cycle, starting from business and data understanding as well as data cleaning and integration and ending with the development and presentation of results, interpretations, insights, and recommendations.

Materials Science (MATS)

MATS 5353. Electron Microprobe Theory and Practice. (3 cr.; Student Option; Periodic Spring) Characterizing solid materials with electron beam instrumentation, including reduction of X-ray data to chemical compositions. prereq: [One yr chem, one yr physics] or instr consent

MATS 5517. Electron Microscopy. (3 cr.; A-F or Audit; Periodic Spring) Transmission electron microscope, scattering and diffraction, electron sources, lenses, apertures and resolution, specimen preparation, diffraction patterns, kikuchi diffraction, planar defects, strain fields, high resolution imaging, X-ray spectrometry.

MATS 5531. Electrochemical Engineering. (3 cr.; Student Option; Periodic Fall) Fundamentals of electrochemical engineering. Topics include electrochemical mass transfer, electrokinetics, thermodynamics of cells, modern sensors, formation of thin films and microstructured materials. Computer-based problems will be assigned. prereq: MatS 3011 or instr consent, upper div CSE or grad

MATS 5771. Colloids and Dispersions. (3 cr.; A-F or Audit; Every Fall) Preparation, stability, coagulation kinetics, or colloidal solutions. DLVO theory, electrokinetic phenomena. Properties of micelles, other microstructures. prereq: Physical chemistry

MATS 8001. Structure and Symmetry of Materials. (3 cr.; Student Option; Every Fall) Comprehensive description of structure of materials, including metals, semiconductors, organic crystals, polymers, and liquid crystals. Atomic and molecular ordering, influence of intermolecular forces on symmetry and structure. Principles of scattering and use of X-ray, neutron, and electron diffraction. prereq: MatS and ChEn majors must take this course for a grade

MATS 8002. Thermodynamics and Kinetics. (3 cr.; A-F or Audit; Every Fall) First three laws of thermodynamics, free energy, equilibrium constants, fugacity and activity relationships, solution models, order-disorder transitions, phase transitions. Elementary statistical mechanics. Applications to materials systems, including surface energies, multicomponent equilibria, reaction kinetics, mass transport, diffusion.

MATS 8004. Mechanical Properties. (3 cr.; A-F or Audit; Every Spring) Defects in crystalline materials, including point defects, dislocations, and grain boundaries. Structure and movement of defects related to mechanical behavior of materials. Tools used to understand crystals and crystallography.

MATS 8201. Applied Math. (3 cr.; A-F or Audit; Every Fall) Integrated approach to solving linear mathematical problems. Linear algebraic equations. Linear ordinary and partial differential equations using theoretical/numerical analysis based on linear operator theory. prereq: Materials science grad student or instructor consent.

MATS 8204. Computational Methods and Applications to Problems in Materials Science and Engineering. (2 cr.; A-F or Audit; Every Spring) Implementation of computational methods/applications to numerical problems in materials science and engineering. Emphasizes implementation to applications. prereq: Grad student, knowledge of programming languages such as Fortran

MATS 8211. Physical Chemistry of Polymers. (4 cr.; Student Option; Every Spring) Introduction to polymer physical chemistry. Chain conformations; thermodynamics of polymer solutions, blends, and copolymers; light, neutron, and X-ray scattering; dynamics in dilute solutions and polymer characterization; dynamics of melts and viscoelasticity; rubber elasticity, networks, and gels; glass transitions; crystallization. prereq: Undergrad physical chem or instr consent

MATS 8221. Synthetic Polymer Chemistry. (4 cr.; A-F or Audit; Every Fall) Condensation, radical, ionic, emulsion, ring-opening, metal-catalyzed polymerizations. Chain conformation, solution thermodynamics, molecular weight characterization, physical properties. prereq: Undergrad organic chemistry course, undergrad physical chemistry course) or instr consent

MATS 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

MATS 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
MATH 5067. Actuarial Mathematics I. (4 cr.; Student Option; Every Fall) Future lifetime random variable, survival function. Insurance, life annuities, future loss random variables. Net single premium, actuarial present value, net premium, net reserves. prereq: 4065, [one sem [4xxx or 5xxx] [probability or statistics] course]

MATH 5068. Actuarial Mathematics II. (4 cr.; Student Option; Every Spring) Multiple decrement insurance, pension valuation. Expense analysis, gross premium, reserves. Problem of withdrawals. Regulatory reserves systems. Minimum cash values. Additional topics at instructor's discretion. prereq: 5067

MATH 5075. Mathematics of Options, Futures, and Derivative Securities I. (4 cr.; Student Option; Every Fall) Mathematical background such as partial differential equations, Fourier series, computational methods, Black-Scholes theory, numerical methods--including Monte Carlo simulation. Interest-rate derivative securities, exotic options, risk theory. First course of two-course sequence. prereq: Two yrs calculus, basic computer skills

MATH 5076. Mathematics of Options, Futures, and Derivative Securities II. (4 cr.; A-F or Audit; Every Spring) Mathematical background such as partial differential equations, Fourier series, computational methods, Black-Scholes theory, numerical methods (including Monte Carlo simulation), interest-rate derivative securities, exotic options, risk theory. prereq: 5075

MATH 5165. Mathematical Logic I. (4 cr.; Student Option; Every Fall) Theory of computability: notion of algorithm, Turing machines, primitive recursive functions, recursive functions, Kleene normal form, recursion theorem. Propositional logic. prereq: 2283 or 3283 or Phil 5201 or CSci course in theory of algorithms or instr consent

MATH 5166. Mathematical Logic II. (4 cr.; Student Option; Every Spring) First-order logic: provability/truth in formal systems, models of axiom systems, Gödel's completeness theorem. Gödel's incompleteness theorem: decidable theories, representability of recursive functions in formal theories, undecidable theories, models of arithmetic. prereq: 5165

MATH 5285H. Honors: Fundamental Structures of Algebra I. (4 cr.; Student Option; Every Fall) Review of matrix theory, linear algebra. Vector spaces, linear transformations over abstract fields. Group theory, including normal subgroups, quotient groups, homomorphisms, class equation, Sylow's theorems. Specific examples: permutation groups, symmetry groups of geometric figures, matrix groups. prereq: [2243 or 2373 or 2573], [2283 or 2574 or 3283]

MATH 5286H. Honors: Fundamental Structures of Algebra II. (4 cr.; Student Option; Every Fall & Spring) Ring/module theory, including ideals, quotients, homomorphisms, domains (unique factorization, euclidean, principal ideal), fundamental theorem for finitely generated modules over euclidean domains. Jordan canonical form. Introduction to field theory, including finite fields, algebraic/transcendental extensions. Galois theory. prereq: 5285

MATH 5335. Geometry I. (4 cr.; Student Option; Every Fall) Advanced two-dimensional Euclidean geometry from a vector viewpoint. Theorems/problems about triangles/circles, isometries, connections with Euclid's axioms. Hyperbolic geometry, how it compares with Euclidean geometry. prereq: [2243 or 2373 or 2573], [concurrence registration is required (or allowed) in 2263 or concurrent registration is required (or allowed) in 2374 or concurrent registration is required (or allowed) in 2574]

MATH 5336. Geometry II. (4 cr.; Student Option; Every Spring) Projective geometry, including: relation to Euclidean geometry, finite geometries, fundamental theorem of projective geometry. N-dimensional Euclidean geometry from a vector viewpoint. Emphasizes N=3, including: polyhedra, spheres, isometries. prereq: 5335

MATH 5345H. Honors: Introduction to Topology. (4 cr.; A-F only; Every Fall) Rigorous introduction to general topology. Set theory, Euclidean/metric spaces, compactness/connectedness. May include Urysohn metrization, Tychonoff theorem or fundamental group/covers spaces. prereq: [2263 or 2374 or 2573], [concurrence registration is required (or allowed) in 2283 or concurrent registration is required (or allowed) in 2374 or concurrent registration is required (or allowed) in 3283]

MATH 5378. Differential Geometry. (4 cr.; Student Option; Every Spring) Basic geometry of curves in plane and in space, including Frenet formula, theory of surfaces, differential forms, Riemannian geometry. prereq: [2283 or 2374 or 2573], [2243 or 2373 or 2574]; [2283 or 3283] recommended

MATH 5385. Introduction to Computational Algebraic Geometry. (4 cr.; Student Option; Every Fall) Geometry of curves/surfaces defined by polynomial equations. Emphasizes concrete computations with polynomials using computer packages, interplay between algebra and geometry. Abstract algebra presented as needed. prereq: [2263 or 2374 or 2573], [2243 or 2373 or 2574]

MATH 5447. Theoretical Neuroscience. (4 cr.; Student Option; Every Fall)
MATH 5467. Introduction to the Mathematics of Image and Data Analysis. (4 cr.; Student Option; Every Fall) Background theory/experience in wavelets. Inner product spaces, operator theory, Fourier transforms applied to Gabor transforms, multi-scale analysis, discrete wavelets, self-similarity. Computing techniques. prereq: [2243 or 2373 or 2573], [2283 or 2574 or 3283] or instr consent; [2263 or 2374], 4567 recommended

MATH 5485. Introduction to Numerical Methods I. (4 cr.; Student Option; Every Fall) Solution of nonlinear equations in one variable. Interpolation, polynomial approximation. Methods for solving linear systems, eigenvalue problems, systems of nonlinear equations. prereq: [2243 or 2373 or 2573], familiarity with some programming language

MATH 5490. Topics in Applied Mathematics. (1-3 cr.; max 12 cr.; Student Option; Periodic Fall & Spring) Topics vary by instructor. See class schedule.

MATH 5525. Introduction to Ordinary Differential Equations. (4 cr.; Student Option; Periodic Fall & Spring) Ordinary differential equations, solution of linear homogeneous/nonhomogeneous methods for nonlinear systems. Linear algebra background, fundamental matrix solutions, variation of parameters, existence/uniqueness theorems, phase space. Rest points, their stability. Periodic orbits, Poincare-Bendixon theory, strange attractors. prereq: [2243 or 2373 or 2573], [2283 or 2574 or 3283]

MATH 5535. Dynamical Systems and Chaos. (3-4 cr.; Student Option; Every Fall & Spring) Dynamical systems theory. Emphasizes iteration of one-dimensional mappings. Fixed points, periodic points, stability, bifurcations, symbolic dynamics, chaos, fractals, Julia/ Mandelbrot sets. prereq: [2243 or 2373 or 2573], [2263 or 2374 or 2574]

MATH 5587. Elementary Partial Differential Equations I. (4 cr.; Student Option; Every Fall) Emphasizes partial differential equations w/physical applications, including heat, wave, Laplace’s equations. Interpretations of boundary conditions. Characteristics, Fourier series, transforms, Green’s functions, images, computational methods. Applications include wave propagation, diffusions, electrostatics, shocks. prereq: [2243 or 2373 or 2573], [2263 or 2374 or 2574]

MATH 5588. Elementary Partial Differential Equations II. (4 cr.; A-F or Audit; Every Spring) Heat, wave, Laplace’s equations in higher dimensions. Green’s functions, Fourier series, transforms. Asymptotic methods, boundary layer theory, bifurcation theory for linear/nonlinear PDEs. Variational methods. Free boundary problems. Additional topics as time permits. prereq: [2243 or 2373 or 2573], [2263 or 2374 or 2574], 5587 or instr consent

MATH 5615H. Honors: Introduction to Analysis I. (4 cr.; Student Option; Every Fall) Axiomatic treatment of real/complex number systems. Introduction to metric spaces: convergence, connectedness, compactness. Convergence of sequences/series of real/complex numbers, Cauchy criterion, root/ratio tests. Continuity in metric spaces. Rigorous treatment of differentiation of single-variable functions, Taylor’s Theorem. prereq: [2243 or 2373], [2263 or 2374], [2283 or 3283]] or 2574

MATH 5651. Basic Theory of Probability and Statistics. (4 cr.; Student Option; Every Fall & Spring) Logical development of probability, basic issues in statistics. Probability spaces, random variables, their distributions/expected values. Law of large numbers, central limit theorem, generating functions, sampling, sufficiency, estimation, prereq: [2263 or 2374 or 2573], [2243 or 2373]; [2283 or 2574 or 3283] recommended.

MATH 5652. Introduction to Stochastic Processes. (4 cr.; Student Option; Every Fall & Spring) Random walks, Markov chains, branching processes, martingales, queuing theory, Brownian motion. prereq: 5651 or Stat 5101

MATH 5654. Prediction and Filtering. (4 cr.; Student Option; Every Spring) Prediction of future values of partially observable processes. prereq: 5651 or Stat 5101

MATH 5705. Enumerative Combinatorics. (4 cr.; Student Option; Every Fall & Spring) Basic enumeration, bijections, inclusion-exclusion, recurrence relations, ordinary/exponential generating functions, partitions, Polya theory. Optional topics include trees, asymptotics, listing algorithms, rook theory, involutions, tableaux, permutation statistics. prereq: [2243 or 2373 or 2573], [2263 or 2374 or 2574 or 3283]

MATH 5707. Graph Theory and Non-enumerative Combinatorics. (4 cr.; Student Option; Every Fall & Spring) Basic topics in graph theory: connectedness, Eulerian/Hamiltonian properties, trees, colorings, planar graphs, matchings, flows in networks. Optional topics include graph algorithms, Latin squares, block designs, Ramsey theory. prereq: [2243 or 2373 or 2573], [2263 or 2374 or 2574] or [2283 or 3283 or experience in writing proofs] highly recommended; Credit will not be granted if credit has been received for: 4707

MATH 5711. Linear Programming and Combinatorial Optimization. (4 cr.; Student Option; Every Fall & Spring) Simplex method, connections to geometry, duality theory, sensitivity analysis. Applications to cutting stock, allocation of resources, scheduling problems. Flows, matching/transportation problems, spanning trees, distance in graphs, integer programs, branch/bound, cutting planes, heuristics. Applications to traveling salesman, knapsack problems. prereq: 2 sems soph math [including [2243 or 2373 or 2573]

MATH 5900. Tutorial in Advanced Mathematics. (1-6 cr.; max 120 cr.; A-F or Audit; Every Fall, Spring & Summer) Individually directed study.

MATH 5990. Topics in Mathematics. (3-4 cr.; max 12 cr.; Student Option; Periodic Fall & Spring) Topics vary by instructor. See class schedule.

MATH 8001. Preparation for College Teaching. (1 cr.; S-N or Audit; Every Fall & Spring) New approaches to teaching/learning, issues in mathematics education, components/expectations of a college mathematics professor. prereq: Math grad student in good standing or instr consent

MATH 8141. Applied Logic. (3 cr.; A-F or Audit; Periodic Fall & Spring) Applying techniques of mathematical logic to other areas of mathematics and computer science. Sample topics: complexity of computation, computable analysis, unsolvability of diophantine problems, program verification, database theory.

MATH 8142. Applied Logic. (3 cr.; A-F or Audit; Periodic Spring) Applying techniques of mathematical logic to other areas of mathematics, computer science.
Complexity of computation, computable analysis, unsolvability of diophantine problems, program verification, database theory.

MATH 8151. Axiomatic Set Theory. (3 cr.; A-F or Audit; Periodic Fall)
Axiomatic development of basic properties of ordinal/cardinal numbers, infinitary combinatorics, well founded sets, consistency of axiom of foundation, constructible sets, consistency of axiom of choice and of generalized continuum hypothesis. prereq: 5166 or inst consent

MATH 8152. Axiomatic Set Theory. (3 cr.; A-F or Audit; Periodic Fall)
Notion of forcing, generic extensions, forcing with finite partial functions, independence of continuum hypothesis, forcing with partial functions of infinite cardinalities, relationship between partial orderings and Boolean algebras, Boolean-valued models, independence of axiom of choice. prereq: 8151 or inst consent

MATH 8166. Recursion Theory. (3 cr.; A-F or Audit; Periodic Fall)
Analysis of concept of computability, including various equivalent definitions. Primitive recursive, recursive, partial recursive functions. Oracle Turing machines. Kleene Normal Form Theorem. Recursive, recursively enumerable sets. Degrees of unsolvability. Arithmetic hierarchy. prereq: Math grad student or inst consent

MATH 8167. Recursion Theory. (3 cr.; A-F or Audit; Periodic Spring)
Sample topics: computability theory, recursion analysis, generalized recursion theory, analytical hierarchy, constructive ordinals. prereq: 8166

MATH 8172. Model Theory. (3 cr.; A-F or Audit; Periodic Fall)
Interplay of formal theories, their models. Elementary equivalence, elementary extensions, partial isomorphisms. Lowenheim-Skolem theorems, compactness theorems, preservation theorems. Ultraproducts. prereq: Math grad student or inst consent

MATH 8173. Model Theory. (3 cr.; A-F or Audit; Periodic Fall)
Types of elements. Prime models, homogeneity, saturation, categoricity in power. Forking. prereq: 8172 or inst consent

MATH 8190. Topics in Logic. (1-3 cr.; max 12 cr.; A-F or Audit; Periodic Fall & Spring)
Offered for one year or one semester as circumstances warrant.

MATH 8201. Commutative and Homological Algebra. (3 cr.; A-F or Audit; Periodic Fall)
Selected topics. prereq: 8202 or inst consent

MATH 8202. Axiomatic Set Theory. (3 cr.; A-F or Audit; Periodic Fall)
Notion of forcing, generic extensions, forcing with finite partial functions, independence of continuum hypothesis, forcing with partial functions of infinite cardinalities, relationship between partial orderings and Boolean algebras, Boolean-valued models, independence of axiom of choice. prereq: 8151 or inst consent

MATH 8207. Theory of Modular Forms and L-Functions. (3 cr.; A-F or Audit; Periodic Fall)
Zeta and L-functions, prime number theorem, Dirichlet's theorem on primes in arithmetic progressions, class number formulas; Riemann hypothesis; modular forms and associated L-function; Eisenstein series; Hecke operators, Poincaré series, Euler products; Ramanujan conjectures; Theta series and quadratic forms; waveforms and L-functions.

MATH 8208. Theory of Modular Forms and L-Functions. (3 cr.; A-F or Audit; Periodic Fall)
Applications of Eisenstein series: special values and analytic continuation and functional equations of L-functions. Trace formulas. Applications of representation theory. Computations. prereq: 8207 or inst consent

MATH 8211. Commutative and Homological Algebra. (3 cr.; A-F or Audit; Periodic Fall)
Selected topics. prereq: 8202 or inst consent

MATH 8212. Commutative and Homological Algebra. (3 cr.; A-F or Audit; Periodic Fall)
Selected topics. prereq: 8211 or inst consent

MATH 8245. Group Theory. (3 cr.; A-F or Audit; Every Fall)
Permutations, Sylow's theorems, representations of groups on groups, semi-direct products, solvable and nilpotent groups, generalized Fitting subgroups, p-groups, co-prime action on p-groups, prereq: 8202 or inst consent

MATH 8246. Group Theory. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Representation and character theory, simple groups, free groups and products, presentations, extensions, Schur multipliers. prereq: 8245 or inst consent

MATH 8251. Algebraic Number Theory. (3 cr.; A-F or Audit; Periodic Fall)
Algebraic number fields and algebraic curves. Basic commutative algebra. Completions: p-adic fields, formal power series, Puiseux series. Ramification, discriminant, different. Finiteness of class number and units theorem. prereq: 8202 or inst consent

MATH 8252. Algebraic Number Theory. (3 cr.; A-F or Audit; Periodic Fall)

MATH 8253. Algebraic Geometry. (3 cr.; A-F or Audit; Periodic Fall)

MATH 8254. Algebraic Geometry. (3 cr.; A-F or Audit; Periodic Spring)

MATH 8270. Topics in Algebraic Geometry. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Selected topics. prereq: Math 8201, Math 8202; offered for one year or one semester as circumstances warrant

MATH 8271. Lie Groups and Lie Algebras. (3 cr.; A-F or Audit; Periodic Fall)
Definitions and basic properties of Lie groups and Lie algebras; classical matrix Lie groups; Lie subgroups and their corresponding Lie subalgebras; covering groups; Maurer-Cartan forms; exponential map; correspondence between Lie algebras and simply connected Lie groups; Baker-Campbell-Hausdorff formula; homogeneous spaces. prereq: 8302 or inst consent

MATH 8272. Lie Groups and Lie Algebras. (3 cr.; A-F or Audit; Periodic Spring)
Solvable and nilpotent Lie algebras and Lie groups; Lie's and Engel's theorems; semisimple Lie algebras; cohomology of Lie algebras; Whitehead's lemmas and Levi's theorem; classification of complex semisimple Lie algebras and compact Lie groups; representation theory. prereq: 8271 or inst consent

MATH 8280. Topics in Number Theory. (1-3 cr.; max 12 cr.; A-F or Audit; Periodic Fall & Spring)
Various topics in Number Theory.

MATH 8300. Topics in Algebra. (1-3 cr.; max 12 cr.; A-F or Audit; Every Fall & Spring)
Selected topics. prereq: Grad math major or inst consent; offered as one yr or one sem crse as circumstances warrant

MATH 8301. Manifolds and Topology. (3 cr.; A-F or Audit; Every Fall)
Classification of compact surfaces, fundamental group/covering spaces. Homology group, basic cohomology. Application to degree of a map, invariance of domain/dimension. prereq: [Some point-set topology, algebra] or inst consent

MATH 8302. Manifolds and Topology. (3 cr.; A-F or Audit; Every Spring)

MATH 8306. Algebraic Topology. (3 cr.; A-F or Audit; Periodic Fall)
Singular homology, cohomology theory with coefficients. Eilenberg-Steenrod axioms, Mayer-Vietoris theorem. prereq: 8301 or inst consent

MATH 8307. Algebraic Topology. (3 cr.; A-F or Audit;)
Basic homotopy theory, cohomology rings with applications. Time permitting: fibre
spaces, cohomology operations, extra-ordinary cohomology theories. prereq: 8306 or instr consent
MATH 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

MATH 8360. Topics in Topology. (; 1-3 cr. [max 12 cr.]; A-F or Audit; Periodic Fall & Spring)
Selected topics. prereq: 8301 or instr consent; offered as one yr or one sem cr as circumstances warrant
MATH 8365. Riemannian Geometry. (; 3 cr.; A-F or Audit; Every Fall)
Riemannian metrics, curvature. Bianchi identities, Gauss-Bonnet theorem, Meyers's theorem, Cartan-Hadamard theorem. prereq: 8301 or basic point-set topology or instr consent

MATH 8366. Riemannian Geometry. (; 3 cr.; A-F or Audit; Every Spring)
Gauss, Codazzi equations. Tensor calculus, Hodge theory, spinors, global differential geometry, applications. prereq: 8365 or instr consent

MATH 8370. Topics in Differential Geometry. (; 1-3 cr. [max 12 cr.]; A-F or Audit; Every Fall & Spring)
Current research in Differential Geometry. prereq: 8301 or 8365; offered for one yr or one sem as circumstances warrant

MATH 8380. Topics in Advanced Geometry. (; 1-3 cr. [max 12 cr.]; A-F or Audit; Periodic Fall & Spring)
Current research. prereq: 8301, 8365

MATH 8385. Riemannian Geometry. (; 3 cr.; A-F or Audit; Every Fall)
Minimal Surfaces.
MATH 8386. Calculus of Variations and Applications. Modeling of deterministic/
probabilistic, discrete/continuous processes; methods for analysis/computation. prereq: [5xxx numerical analysis, some computer experience] or instr consent
MATH 8388. Mathematical Modeling of Industrial Problems. (; 3 cr.; A-F or Audit; Periodic Fall)
Techniques for analysis of mathematical models. Asymptotic methods; design of simulation and visualization techniques. Specific computation for models arising in industrial problems. prereq: 8597 or instr consent

MATH 8390. Topics in Mathematical Physics. (; 1-3 cr. [max 12 cr.]; A-F or Audit; Periodic Fall)
Current research. prereq: 8601; offered for one yr or one sem as circumstances warrant
MATH 8401. Mathematical Modeling and Methods of Applied Mathematics. (; 3 cr.; A-F or Audit; Every Fall)
Dimension analysis, similarity solutions, linearization, stability theory, well-posedness, and characterization of type. Fourier series and integrals, wavelets, Green's functions, weak solutions and distributions. prereq: 4xxx numerical analysis and applied linear algebra or instr consent

MATH 8402. Mathematical Modeling and Methods of Applied Mathematics. (; 3 cr.; A-F or Audit; Every Spring)
Calculus of variations, integral equations, eigenvalue problems, spectral theory. Perturbation, asymptotic methods. Artificial boundary conditions, conformal mapping, coordinate transformations. Applications to specific modeling problems. prereq: 8401 or instr consent

MATH 8431. Mathematical Fluid Mechanics. (; 3 cr.; A-F or Audit; Periodic Fall)
Equations of continuity/motion. Kinematics. Bernoulli's theorem, stream function, velocity potential. Applications of conformal mapping. prereq: 4xxx numerical analysis of partial differential equations or instr consent

MATH 8432. Mathematical Fluid Mechanics. (; 3 cr.; Student Option; Periodic Fall)

MATH 8441. Numerical Analysis and Scientific Computing. (; 3 cr.; Student Option; Every Fall)
MATH 8442. Numerical Analysis and Scientific Computing. (; 3 cr.; Student Option; Every Spring)

5477-5478 recommended for engineering and science grad students
MATH 8444. FTE: Doctoral. (; 1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

MATH 8445. Numerical Analysis of Differential Equations. (; 3 cr.; A-F or Audit; Every Fall)
Finite element and finite difference methods for elliptic boundary value problems (e.g., Laplace's equation) and solution of resulting linear systems by direct and iterative methods. prereq: 4xxx numerical analysis, 4xx partial differential equations or instr consent

MATH 8446. Numerical Analysis of Differential Equations. (; 3 cr.; A-F or Audit; Every Spring)
Numerical methods for parabolic equations (e.g., heat equations). Methods for elasticity, fluid mechanics, electromagnetics. Applications to specific computations. prereq: 8445 or instr consent

MATH 8450. Topics in Numerical Analysis. (; 1-3 cr. [max 12 cr.]; A-F or Audit; Every Fall & Spring)
Selected topics. prereq: Grad math major or instr consent; offered as one year or one semester course as circumstances warrant

MATH 8470. Topics in Mathematical Theory of Continuum Mechanics. (; 1-3 cr. [max 12 cr.]; A-F or Audit; Periodic Fall & Spring)
Offered for one year or one semester as circumstances warrant.

MATH 8501. Differential Equations and Dynamical Systems I. (; 3 cr.; A-F or Audit; Every Fall)
Existence, uniqueness, continuity, and differentiability of solutions. Linear theory and hyperbolicity. Basics of dynamical systems. Local behavior near a fixed point, a periodic orbit, and a homoclinic or heteroclinic orbit. Perturbation theory. prereq: 4xxx ODE or instr consent

MATH 8502. Differential Equations and Dynamical Systems II. (; 3 cr.; A-F or Audit; Every Spring)

MATH 8503. Bifurcation Theory in Ordinary Differential Equations. (; 3 cr.; A-F or Audit; Periodic Fall)

MATH 8505. Applied Dynamical Systems and Bifurcation Theory I. (; 3 cr.; A-F or Audit; Periodic Fall)
MATH 8506. Applied Dynamical Systems and Bifurcation Theory II.  (3 cr.; A-F or Audit; Periodic Fall) Background on analysis in Banach spaces, linear operator theory. Lyapunov-Schmidt reduction, static bifurcation, stability at a simple eigenvalue, Hopf bifurcation in infinite dimensions invariant manifold theory. Applications to hydrodynamic stability problems, reaction-diffusion equations, pattern formation, and elasticity. prereq: 5587 or instr consent

MATH 8580. Applications of Linear Operator Theory.  (3 cr.; A-F or Audit; Periodic Fall) Fourier theory. Self-adjoint, compact, unbounded linear operators. Spectral analysis, eigenvalue-eigenvector problem, spectral theorem, operational calculus. prereq: 8581 or instr consent

MATH 8583. Theory of Partial Differential Equations.  (3 cr.; A-F or Audit; Every Fall) Classification of partial differential equations/characteristics. Laplace, wave, heat equations. Some mixed problems. prereq: [Some 5xxx PDE, 8601] or instr consent

MATH 8584. Theory of Partial Differential Equations.  (3 cr.; A-F or Audit; Every Fall) Fundamental solutions/distributions, Sobolev spaces, regularity, Advanced elliptic theory (Schauder estimates, Garding's inequality). Hyperbolic systems. prereq: 8583 or instr consent

MATH 8589. Topics in Dynamic Systems.  (1-3 cr.; max 12 cr.; A-F or Audit; Periodic Fall & Spring) Current research. prereq: 8502

MATH 8530. Topics in Ordinary Differential Equations.  (1-3 cr.; A-F or Audit; Periodic Fall & Spring) Offered for one year or one semester as circumstances warrant. prereq: 8502

MATH 8540. Topics in Mathematical Biology.  (1-3 cr.; max 12 cr.; A-F or Audit; Every Fall & Spring) Offered for one year or one semester as circumstances warrant.

MATH 8571. Theory of Evolutionary Equations.  (3 cr.; A-F or Audit; Every Fall) Infinite dimensional dynamical systems, global attractors, existence and robustness. Linear semigroups, analytic semigroups. Linear and nonlinear reaction diffusion equations, strong and weak solutions, well-posedness of solutions. prereq: 8502 or instr consent

MATH 8572. Theory of Evolutionary Equations.  (3 cr.; A-F or Audit; Periodic Spring) Dynamics of Navier-Stokes equations, strong/weak solutions, global attractors. Chemically reacting fluid flows. Dynamics in infinite dimensions, unstable manifolds, center manifolds perturbation theory. Inertial manifolds, finite dimensional structures. Dynamical theories of turbulence. prereq: 8571 or instr consent

MATH 8580. Topics in Evolutionary Equations.  (1-3 cr.; max 12 cr.; A-F or Audit; Periodic Fall) N/A prereq: 8572 or instr consent; offered for one yr or one semester as circumstances warrant

MATH 8581. Applications of Linear Operator Theory.  (3 cr.; A-F or Audit; Periodic Fall) Metric spaces, continuity, completeness, contraction mappings, compactness. Normed linear spaces, continuous linear transformations. Hilbert spaces, orthogonality, projections. prereq: 4xxx applied mathematics or instr consent

MATH 8582. Applications of Linear Operator Theory.  (3 cr.; A-F or Audit; Periodic Fall) Fourier theory. Self-adjoint, compact, unbounded linear operators. Spectral analysis, eigenvalue-eigenvector problem, spectral theorem, operational calculus. prereq: 8581 or instr consent

MATH 8583. Theory of Partial Differential Equations.  (3 cr.; A-F or Audit; Every Fall) Classification of partial differential equations/characteristics. Laplace, wave, heat equations. Some mixed problems. prereq: [Some 5xxx PDE, 8601] or instr consent

MATH 8584. Theory of Partial Differential Equations.  (3 cr.; A-F or Audit; Every Spring) Fundamental solutions/distributions, Sobolev spaces, regularity. Advanced elliptic theory (Schauder estimates, Garding's inequality). Hyperbolic systems. prereq: 8583 or instr consent

MATH 8590. Topics in Partial Differential Equations.  (1-3 cr.; A-F or Audit; Every Fall & Spring) Research topics. prereq: 8602; offered for one yr or one sem as circumstances warrant

MATH 8600. Topics in Advanced Applied Mathematics.  (1-3 cr.; max 12 cr.; Student Option; Every Fall & Spring) Offered for one yr or one semester as circumstances warrant. Topics vary. For details, contact instructor.

MATH 8601. Real Analysis.  (3 cr.; A-F or Audit; Every Fall) Set theory/fundamentals. Axiom of choice, measures, measure spaces, Borel/Lebesgue measure, integration, fundamental convergence theorems, Riesz representation.

MATH 8640. Topics in Real Analysis.  (3 cr.; max 12 cr.; A-F or Audit; Periodic Fall) Current research. prereq: 8602 or instr consent; offered for one year or one semester as circumstances warrant

MATH 8641. Spatial Ecology.  (3 cr.; S-N or Audit; Periodic Fall) Introduction: role of space in population dynamics and interspecific interaction; includes single species and multispecies models, deterministic and stochastic theory, different modeling approaches, effects of implicit/explicit space on competition, pattern formation, stability diversity and invasion. Recent literature. Computer lab. prereq: Two semesters calculus, theoretical population ecology or four semesters more robust calculus, course in statistics or probability or instr consent

MATH 8652. Theory of Probability Including Measure Theory.  (3 cr.; Student Option; Periodic Spring) Conditional distributions and expectations, convergence of sequences of distributions on real line and on Polish spaces, central limit theorem and related limit theorems, Brownian motion, martingales and introduction to other stochastic sequences. prereq: 8651 or instr consent

MATH 8654. Fundamentals of Probability Theory and Stochastic Processes.  (3 cr.; Student Option; Periodic Spring) Review of basic theorems of probability for independent random variables; introductions to Brownian motion process, Poisson process, conditioning, Markov processes, stationary processes, martingales, super- and sub-martingales, Doob-Meyer decomposition. prereq: 8651 or 8602 or instr consent

MATH 8655. Stochastic Calculus with Applications.  (3 cr.; Student Option; Every Fall) Stochastic integration with respect to martingales, Ito's formula, applications to business models, filtering, and stochastic control theory. prereq: 8654 or 8659 or instr consent

MATH 8659. Stochastic Processes.  (3 cr.; Student Option; Every Fall) In-depth coverage of various stochastic processes and related concepts, such as Markov sequences and processes, renewal sequences, exchangeable sequences, stationary sequences, Poisson point processes, Levy processes, interacting particle systems, diffusions, and stochastic integrals. prereq: 8652 or instr consent

MATH 8660. Topics in Probability.  (1-3 cr.; max 12 cr.; Student Option; Every Fall & Spring) Offered for one year or one semester as circumstances warrant.

MATH 8666. Doctoral Pre-Thesis Credits.  (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer) TBD prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

MATH 8668. Combinatorial Theory.  (3 cr.; A-F or Audit; Periodic Fall) Basic enumeration, including sets and multisets, permutation statistics, inclusion-exclusion, integer/set partitions, involutions and Polya theory. Partially ordered sets, including lattices, incidence algebras, and Mobius inversion. Generating functions.
MATH 8669. Combinatorial Theory. (3 cr.; A-F or Audit; Spring Even Year)
Further topics in enumeration, including symmetric functions, Schensted correspondence, and standard tableaux; non-enumarative combinators, including graph theory and coloring, matching theory, connectivity, flows in networks, codes, and extremal set theory. prereq: 8668 or instr consent

MATH 8680. Topics in Combinatorics. (1-3 cr.; max 12 cr.; A-F or Audit; Every Fall & Spring)
Selected topics. prereq: Grad math major or instr consent; offered as one yr or one sem crse as circumstances warrant

MATH 8701. Complex Analysis. (3 cr.; A-F or Audit; Every Fall)

MATH 8702. Complex Analysis. (3 cr.; A-F or Audit; Every Spring)

MATH 8777. Thesis Credits: Master's. (1-18 cr.; max 50 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

MATH 8790. Topics in Complex Analysis. (1-3 cr.; max 12 cr.; A-F or Audit; Periodic Fall)
Current research. prereq: 8702 or instr consent; offered for one yr or one sem as circumstances warrant

MATH 8801. Functional Analysis. (3 cr.; A-F or Audit; Every Fall)
Motivation in terms of specific problems (e.g., Fourier series, eigentfunctions). Theory of compact operators. Basic theory of Banach spaces (Hahn-Banach, open mapping, closed graph theorems). Frechet spaces. prereq: 8602 or instr consent

MATH 8802. Functional Analysis. (3 cr.; A-F or Audit; Periodic Spring)
Spectral theory of operators, theory of distributions (generalized functions), Fourier transformations and applications. Sobolev spaces and pseudo-differential operators. C-star algebras (Gelland-Naimark theory) and introduction to von Neumann algebras. prereq: 8801 or instr consent

MATH 8888. Thesis Credit: Doctoral. (1-24 cr.; max 100 cr.; No Grade Associated; Every Fall & Spring)
(No description) prereq: Max 18 cr per semester or summer; 24 cr required

MATH 8990. Topics in Mathematics. (1-6 cr. [max 24 cr.]; S-N or Audit; Every Fall & Spring)
Readings, research. prereq: instr consent

MATH 8991. Independent Study. (1-6 cr. [max 24 cr.]; Student Option; Every Fall, Spring & Summer)
Individually directed study. prereq: instr consent

MATH 8992. Directed Reading. (1-6 cr. [max 24 cr.]; S-N or Audit; Every Fall & Spring)
Individually directed reading. prereq: instr consent

MATH 8993. Directed Study. (1-6 cr. [max 24 cr.]; S-N or Audit; Every Spring)
Individually directed study. prereq: instr consent

MATH 8994. Topics at the IMA. (1-3 cr. [max 6 cr.]; S-N or Audit; Every Fall & Spring)
Current research at IMA.

Mathematics Education (MTHE)

MTHE 5011. Arithmetic Structures in School Mathematics. (3 cr.; Student Option; Every Summer)
Pedagogy, content, and instructional strategies for teaching arithmetic. Content and issues relevant to the K-8 mathematics curriculum. Instructional materials and technology appropriate for elementary or middle school arithmetic. Credit hours and targeted level vary with particular classes. prereq: Enrollment in math initial licensure program or tchg exper

MTHE 5021. Algebraic Structures in School Mathematics. (3 cr.; Student Option; Every Fall)
Pedagogy, content, and instructional strategies for teaching arithmetic. Content and issues relevant to the algebra curriculum. Instructional materials and technology appropriate for arithmetic. Each offering of the course will focus on either elementary/middle or middle/secondary grade levels. prereq: Tchg exper or instr consent

MTHE 5031. Geometric Structures in School Mathematics. (3 cr.; Student Option; Every Spring)
Pedagogy, content, and instructional strategies for teaching school geometry. Content and issues relevant to the geometry curriculum. Instructional materials and technology appropriate for geometry. Each offering will focus on either elementary/middle or middle/secondary grade levels. prereq: Tchg exper or instr consent

MTHE 5041. Statistics. (3 cr.; Student Option; Every Fall)
Pedagogy, content, and instructional strategies for teaching statistics. Content and issues relevant to the statistics curriculum. Instructional materials and technology appropriate for statistics. Each offering will focus on either elementary/middle or middle/secondary grade levels. prereq: Tchg exper or instr consent

MTHE 5314. Teaching Mathematics. (3 cr.; Student Option; Every Fall)
Methods, materials, and curriculum development. Principles of learning. Review of research. Preparation/evaluation of tests, units, and materials of instruction. Recent developments in mathematics curriculum and in instructional alternatives. Issues in teaching/learning. Program planning/evaluation. prereq: Math Ed or MEd or CI MEd or grad student or instr consent

MTHE 5366. Technology-Assisted Mathematics Instruction. (3 cr.; Student Option; Every Spring)
Technology—including computers, programmable and graphing calculators, and video—as instructional tools in mathematics; design and evaluation of technology-based mathematics lessons; the effect of technology on the mathematics curriculum; managing the technology-enriched classroom.

MTHE 5696. Student Teaching in Mathematics. (1-8 cr.; S-N only; Every Spring) Student teaching in secondary school mathematics classes. prereq: MED/initial licensure student or instr consent

MTHE 5993. Directed Studies in Mathematics Education. (2 cr.; S-N or Audit; Every Fall, Spring & Summer) Secondary school classroom teaching project to improve specific teaching skills, planned by student, approved/directed by student’s adviser. prereq: Math ed MEd student, instr consent

MTHE 8561. School Mathematics Curricula - 1850 to Present. (1-3 cr.; A-F only; Every Fall) Historical antecedents of present day school mathematics curricula. Examine primary source materials by reviewing early mathematics texts from curriculum library.

MTHE 8571. Research in Mathematics Education. (3 cr.; Student Option; Periodic Fall) Designed for advanced graduate students in mathematics education. Presentation and discussion of Ph.D. thesis proposals and other contemporary research. prereq: 5313, 8501

MTHE 8591. Seminar: Mathematics Education. (1-3 cr.; Student Option; Fall Even Year) Problems of mathematics instruction from kindergarten through junior college; opportunity to develop proposals and design models for empirical research. prereq: Math educ PhD student

MTHE 8995. Problems: Mathematics Education. (1-6 cr. [max 18 cr.]; Student Option; Every Fall, Spring & Summer) Students survey most recent literature and design and prepare research reports on special topics.

Mechanical Engineering (ME)

ME 5101. Vapor Power Cycles. (4 cr.; A-F or Audit; Periodic Spring) Vapor power cycle analysis, regeneration, reheat, compound cycle modifications, combined gas turbine--vapor cycle systems, components, fuels and combustion, heat sources -- solar, nuclear, geothermal, low T cycles, bottoming cycles, environmental concerns. EES software used extensively for cycle analysis. prereq: CSE upper div or grad student

ME 5103. Thermal Environmental Engineering. (4 cr.; A-F or Audit; Every Fall) Thermodynamic properties of moist air; psychrometric charts; HVAC systems; solar energy; human thermal comfort; indoor air quality; heating and cooling loads in buildings. prereq: 3331 or 3332, 3333, CSE upper div or grad

ME 5113. Aerosol/Particle Engineering. (4 cr.; A-F or Audit; Every Fall) Kinetic theory, definition, theory and measurement of particle properties, elementary particle mechanics, particle statistics; Brownian motion and diffusion, coagulation, evaporation and condensation, sampling and transport. prereq: CSE upper div or grad student

ME 5222. Materials in Design. (4 cr.; Student Option; Every Fall) Fundamental properties of engineering materials. Fabrication, treatment. Physical/corrosive properties. Failure mechanism, cost/value analysis as related to material selection/specification. prereq: 3221, ME upper division or grad student

ME 5228. Introduction to Finite Element Modeling, Analysis, and Design. (4 cr.; A-F or Audit; Every Fall) Finite elements as principal analysis tool in computer-aided design (CAD); theoretical issues and implementation aspects for modeling and analyzing engineering problems encompassing stress analysis, heat transfer, and flow problems for linear situations. One-, two-, and three-dimensional practical engineering applications. prereq: CSE upper div or grad, 3221, AEM 3031, CSci 1113, MatS 2001

ME 5241. Computer-Aided Engineering. (4 cr.; A-F or Audit; Every Fall & Spring) Apply computer-aided engineering to mechanical design. Engineering design projects and case studies using computer-aided design and finite element analysis software; design optimization and computer graphical presentation of results. prereq: 3222, CSci 1113 or equiv, CSE upper div or grad

ME 5243. Advanced Mechanism Design. (4 cr.; A-F or Audit; Periodic Summer) Analytical methods of kinematic, dynamic, and kinetostatically analysis and synthesis of mechanisms. Computerized design for function, path, and motion generation based on Burmester theory. prereq: CSE upper div or grad, 3222 or equiv, basic kinematics and dynamics of machines; knowledge of CAD packages such as Pro-E recommended

ME 5281. Analog and Digital Control. (4 cr.; Student Option; Periodic Summer) Apply vibration theory to design: optimize isolators, detuning mechanisms, viscoelastic suspensions and structures. Use modal analysis methods to describe free vibration of complex systems, relating to both theoretical and test procedures. prereq: CSE upper div or grad, 3281

ME 5286. Robotics. (4 cr.; A-F or Audit; Every Spring) The course deals with two major components: robot manipulators (more commonly known as the robot arm) and image processing. Lecture topics covered under robot manipulators include their forward and inverse kinematics, the mathematics of homogeneous transformations and coordinate frames, the Jacobian and velocity control, task programming, computational issues related to robot control, determining path trajectories, reaction forces, manipulator dynamics and control. Topics under computer vision include: image sensors, digitization, preprocessing, thresholding, edge detection, segmentation, feature extraction, and classification techniques. A weekly laboratory lasting for 8-9 weeks, will provide students with practical experience using and programming robots: students will work in pairs and perform a series of experiments using a collaborative robot. prereq: [3281 or equiv]. [upper div ME or AEM or CSci or grad student]

applications. Concentrating solar energy, including solar thermo-chemical processes, to produce hydrogen/solar power systems and photovoltaics. Solar design project. prereq: [3333, CSE upper Div] or grad student

ME 5332. Intermediate Fluid Mechanics. (3 cr.; Student Option; Every Fall) Bridge between introductory fluid mechanics and advanced graduate level course. Principles of incompressible and compressible flows, boundary layer theory, and analysis using differential formulations of the governing conservation equations. Analysis of phenomena relevant to the practice of engineering is emphasized through problem solving. Prereq: 3332 or equiv, CSE upper division or graduate student.

ME 5351. Computational Heat Transfer. (4 cr.; A-F or Audit; Every Fall & Spring) Numerical solution of heat conduction/analogous physical processes. Develop/use computer program to solve complex problems involving steady/unsteady heat conduction, flow/heat transfer in ducts, flow in porous media. prereq: 3333, CSE upper div or grad student

ME 5446. Introduction to Combustion. (4 cr.; A-F or Audit; Every Fall) Thermodynamics, kinetics, energy and mass transport, pollutants in reacting systems. Reactors, laminar and turbulent flames. Ignition, quenching, and flame stability. Diffusion flames. Combustion in reciprocating engines, furnaces, and turbines, with emphasis on internal combustion engine performance and emissions. prereq: 3331, 3332, 3333, CSE upper div or grad student

ME 5461. Internal Combustion Engines. (4 cr.; A-F or Audit; Every Spring) Basic spark ignition and diesel engine principles, air, fuel-air and actual engine cycles, cycle modeling, combustion and emissions, knock phenomena, air flow and volumetric efficiency, mixture requirements, ignition requirements and performance. Lectures/complementary labs. prereq: CSE upper div or grad student, C or better in [3332, 3333] or 3324

ME 5462. Gas Turbines. (4 cr.; A-F or Audit; Periodic Fall & Spring) Gas turbine cycles, regeneration, recuperation, reheat, intercooling, combined cycle plants, and thermochemical regeneration. Axial and radial flow compressors and turbines; combustor designs, energy analysis, emissions, and noise. Turbojet, fanjet, turboprop engine performance. Stationary power plants, vehicular propulsion, hybrid vehicles. prereq: 3331, 3332, 3333, CSE upper div or grad student

ME 5566. Modern Thermodynamics. (4 cr.; A-F only; Every Fall & Spring) Applications of thermodynamics to natural phenomena. Multiscale approach. Student group projects, with undergrads and grad students in same group. Three hours/week classroom instruction, one hour/week project discussion. Project presentations at weeks 8 and 14 are webcast, prereq: 3331 or equiv

ME 8001. Research Ethics and Professional Practice. (0 cr.; No Grade Associated; Every Fall, Spring & Summer) Intellectual property, data management, social responsibility, authorship, and plagiarism, conflict of interest, and reporting misconduct. Case studies. Recent newspaper articles.

ME 8113. Advanced Aerosol/Particle Engineering. (3 cr.; A-F or Audit; Periodic Spring) Introduction to kinetic theory, definition, theory, and measurement of particle properties; elementary particle mechanics, particle statistics; Brownian motion and diffusion, coagulation, evaporation and condensation, sampling, and transport. prereq: CSE grad student or instr consent

ME 8221. New Product Design and Business Development I. (4 cr.; A-F or Audit; Every Fall) Students and faculty work with company representatives to develop a product concept, a working physical prototype, and an extensive business plan. Concept design, detail design, manufacturing, marketing, introduction strategy, and profit forecasting. Sponsoring company intends to bring product to market. ME 8222 must be taken in sequence the same year. prereq: CSE grad student, some design experience

ME 8222. New Product Design and Business Development II. (4 cr.; A-F or Audit; Every Spring) Students and faculty work with company representatives to develop a product concept, a working physical prototype, and an extensive business plan. Concept design, detail design, manufacturing, marketing, introduction strategy, and profit forecasting. Sponsoring company intends to bring product to market. Must be taken in sequence with 8221 the same year. prereq: 8221

ME 8229. Finite Element Methods for Computational Mechanics: Transient/Dynamic Problems. (4 cr.; A-F or Audit; Every Spring) Computational mechanics involving transient or dynamic situations; development and analysis of computational algorithms. Stability and accuracy of algorithms, convergence issues; linear/nonlinear situations. Implicit, explicit, mixed, and variable time discretization approaches; modal-based methods for engineering problems prereq: 5228 or equiv, 5341, AEM 3031, CSci 1113

ME 8243. Topics in Design. (4 cr. [max 12 cr.]; A-F or Audit; Periodic Fall & Spring) Topics vary with each offering.

ME 8253. Computational Nanomechanics. (3 cr.; Student Option; Every Spring) Fundamentals of mechanical properties in nanometer scale. Role of discrete structure and underlying atomic, molecular, and interfacial forces are illustrated with modern examples. Overview of computational atomistic methods. Lectures, hands-on computing using publicly available or personally developed scientific software packages. prereq: CSE grad student
part characteristics. Part production/testing. Processes, technologies, and topics vary with each offering. prereq: 3221, AEM 3016

ME 8281. Advanced Control System Design. (4 cr.; A-F or Audit; Periodic Fall)

ME 8282. Control of Nonlinear Systems. (4 cr.; A-F or Audit; Periodic Fall)

ME 8283. Design of Mechatronic Products. (4 cr.; A-F or Audit; Fall Odd Year)
The purpose of this course is for advanced mechanical engineering students to gain additional mechatronic skills by learning how to use microcontrollers to implement control systems in the context of a practical product or device. Embedded microcontrollers are ubiquitous in modern products from washing machines to cell phones to automobiles to space rockets. Knowing how to design and program microcontrollers, how to interface microcontrollers to sensors and actuators, and how to implement control algorithms on a microcontroller is an important skill for the modern control system design engineer. The course is hands-on and follows a learn by doing approach. Students spend 1/3 the course in a microcontroller boot camp and 2/3 on a substantial microcontroller project. The lectures cover didactic material related to microcontrollers, sensors, actuators, electronics circuit design and fabrication and control algorithm implementation, prereq: An introductory system dynamics and controls course or permission of instructor.

ME 8285. Advanced Control System Design, with Applications to Smart Vehicles. (3 cr.; A-F or Audit; Every Fall)
This course focuses on a study of several advanced control design techniques and their applications to smart vehicles. The control systems studied include lead and lag compensator design, loop shaping, analysis of system norms, H2-optimal control, feedback linearization, sliding surface control, and observer design. The vehicle application topics studied include cruise control, adaptive cruise control, automated lane keeping, automated highway systems, yaw stability control, active rollover prevention, engine control, and active and semi-active suspensions. In each application, a dynamic model is developed that is simple enough for control system design, but at the same time, rich enough for capturing the essential features of the dynamics. The control design for each application is studied in-depth during lecture and further analyzed during hands-on homework. prereq: 5281 or EE 5231 or equiv

ME 8287. Topics in Dynamics and Control. (2-4 cr.; max 12 cr.; A-F or Audit; Periodic Fall & Spring)
Topics Course in Dynamics and Control

ME 8322. Advanced Fluid Dynamics in Mechanical Engineering. (3 cr.; A-F or Audit; Every Spring)
Advanced fluid dynamics course addressing the theory and applications of fluid flows pertinent to mechanical engineering. The course focuses on the physical phenomena, mathematical formulations, and advanced problem-solving techniques for flows ranging from microscale flows to turbulence, with examples from mechanical engineering practice. Prerequisite an intermediate fluid mechanics course or permission of instructor.

ME 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

ME 8337. Experimental Methods in the Thermal Sciences. (3 cr.; A-F or Audit; Periodic Fall)
The course will provide fundamentals on optics theory and optical instruments for students to understand and implement cutting-edge optical diagnostic tools, and to design optical methods for measurements in fluid and thermal sciences. The course will cover commonly used optical measurement techniques including particle image/tracking velocimetry, laser induced fluorescence, Schlieren photography, and digital holography.

ME 8341. Conduction. (3 cr.; A-F or Audit; Every Fall)
Advanced understanding/application of conduction/diffusion to heat/mass transfer problems. Solving ordinary/partial differential equations related to fluid diffusion. Special topics in numerical microscale heat transfer. prereq: Undergrad class in heat transfer or inst consent

ME 8342. Convection. (3 cr.; A-F or Audit; Every Spring)
Heat transfer in fluids flowing around bodies and in tubes/ducts. Forced/natural convection. Laminar/turbulent flow regimes. Turbulent transport and modeling. High-speed flows, viscous dissipation, variable property effects. Application to heat exchange devices. Convective mass transfer. prereq: Grad level course on fundamentals of fluid mechanics that has a substantial component on viscous flows or inst consent

ME 8343. Radiation. (3 cr.; A-F or Audit; Every Spring)

ME 8345. Computational Heat Transfer and Fluid Flow. (3 cr.; Student Option; Every Fall & Spring)

ME 8350. Heat Transfer Physics. (3 cr.; A-F only; Spring Odd Year)

ME 8361. Molecular Gas Dynamics. (3 cr.; A-F or Audit; Periodic Fall)

ME 8362. Introduction to Plasma Technology. (3 cr.; A-F or Audit; Periodic Spring)

ME 8381. Bioheat and Mass Transfer. (3 cr.; Student Option; Periodic Summer)
Analytical/numerical tools to analyze heat/mass transfer phenomenon in cryobiological, hyperthermic, other biomedically relevant applications. prereq: CSE grad student, upper-division transport/fluids course; [physics, biology] recommended

ME 8390. Advanced Topics in the Thermal Sciences. (1-3 cr.; max 18 cr.; A-F or Audit; Every Spring)
Topics vary according to instructor.

ME 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

ME 8446. Advanced Combustion. (3 cr.; A-F or Audit; Periodic Fall)
Fundamental understanding of linkage between thermodynamics, chemical kinetics, and transport phenomena in combustion systems. Heat release rate, flame stability, and emissions. How those issues arise in furnaces, internal combustion engines, and rockets. prereq: Undergrad courses in thermodynamics, fluid mechanics, heat transfer, IT grad student; 5446 or 8641 highly recommended

ME 8462. Turbomachinery. (3 cr.; A-F or Audit; Periodic Summer)
Thermodynamic analysis of energy transfer between fluid and rotor; dimensional analysis; principles of axial, mixed, and radial flow
pumps, fans, compressors, and turbines; cascade performance; computer flow simulations; applications to propulsion systems and power plants. prerequisite CSE grad student, 3321, 3322 or equiv or instr consent

ME 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
TBD prerequisite: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

ME 8772. Advanced Transportation Technologies Seminar. (1 cr.; S-N or Audit; Every Fall)
Advanced technologies specifically related to transportation. Topics draw from core science/technology areas of human factors, intelligent vehicles, traffic modeling/management, sensing, communications, and controls.

ME 8773. Graduate Seminar. (1 cr.; S-N or Audit; Every Fall & Spring)
Recent developments. prerequisite: CSE grad student

ME 8774. Graduate Seminar. (1 cr.; S-N or Audit; Every Fall & Spring)
Recent developments. prerequisite: 8773

ME 8775. Technical Communication. (1 cr.; S-N or Audit; Periodic Fall)
One-day workshop on presenting a seminar. Students deliver one-hour seminar on technical topic and attend nine other technical seminars.

ME 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prerequisite: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

ME 8794. Mechanical Engineering Research. (1-4 cr.; S-N only; Every Fall, Spring & Summer)
Directed research. prerequisite: instr consent

ME 8800. Modern Developments in Mechanical Engineering. (1 cr. [max 2 cr.]; S-N or Audit; Periodic Fall & Spring)
Seminars on topics in engineering science of importance to mechanical engineers. Invited scholars deliver five-lecture series on each topic; two to five topics each semester. prerequisite: CSE grad student

ME 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) prerequisite: Max 18 cr per semester or summer; 24 cr required

ME 8990. Curricular Practical Training. (1-2 cr. [max 6 cr.]; S-N only; Every Fall, Spring & Summer)
Industrial work assignment involving advanced mechanical engineering. Review/approval by faculty member and director of graduate studies. Final report covering work assignment.

Medical Device Innovation (MDI)

MDI 5001. Technical Writing Essentials. (0-1 cr.; A-F only; Every Fall)
This new core course focuses on the important skill to train MedTech professionals to communicate technical information to a broad audience in an effective manner. prerequisite: grad MDI major

MDI 5002. Technology Foresight and Forecasting. (3 cr.; A-F only; Every Fall, Spring & Summer)
Tools and techniques for technology forecasting, assessment, foresight for decision making in medical device industry. Topics include technology dynamics, research and development, portfolio management, and resource allocation. prerequisite: grad MDI major

MDI 5003. Technology Foresight & Forecasting: Analytical Lab. (1 cr.; A-F only; Every Fall)
This course is a continuation of MDI 5002: Technology Foresight & Forecasting and will afford students an opportunity to complete the therapeutic area analysis they began in the summer semester, prepare a Powerpoint presentation in consultation with the instructor, and then present the results of their analysis to a group of MDI faculty. prerequisite: grad MDI major

MDI 5004. Clinical Foundations of Medical Device Innovation. (3 cr.; A-F only; Every Fall, Spring & Summer)
Master essential topics to deepen knowledge of Clinical Environment in which products will be conceived, tested, used. Topics include surgical protocols, physician, surgeon, nursing, technical support functions. Medical terminology, anatomy/physiology, ethnology research, Healthcare Law, Medicare/Medicaid, HIPAA requirements. prerequisite: MDI grad student. Non-MDI graduate students and non-degree graduate students may register for this course with permission of the MDI program.

MDI 5006. Finance, Valuation, and Entrepreneurship. (3 cr.; A-F only; Every Summer)
Course provides students the opportunity to develop the entrepreneurial skills important in managing development, design, and commercialization of medical devices. Focuses on creating value within the organization, financial methods important to managers in technology-based organizations, and business plan development. Topics include budgeting capital, projecting financial needs, and managing working capital. Registration is limited to MDI students only.

MDI 5008. Quality, Regulatory and Manufacturing Management. (2 cr.; A-F only; Every Spring)
Course provides students with understanding of the global regulatory environment in which the medical device industry operates. Students gain a fundamental understanding of critical quality systems regulations including ISO13485/ISO14971 and their relationship to the FDA’s cGMP regulations. Students gain practical experience using tools that are essential to both product development and continuation/sustaining engineering including; design control procedures, FMEA, verification and validation, internal and external (supplier) management and audit methods. prerequisite: MDI graduate student only

MDI 5010. Product Innovation & Development Management. (3 cr.; A-F only; Every Fall, Spring & Summer)
Framework for conceptualization, design, development, commercialization process for medical products. Survey of key steps in innovation, from engineering/business perspective. Cross-functional development of concepts/processes. prerequisite: Grad MDI student. Non-MDI graduate students and non-degree graduate students may register for this course with permission of the MDI program.

MDI 5012. Medical Industry Macro Environment. (3 cr.; A-F only; Every Fall, Spring & Summer)
Application of macro environmental analysis to medical device industry. Methods reviewed. Industry-relevant case studies/macro environmental analysis of firms of interest. Political, economic, social, technological, legal, ecological factors that impact medical innovation. prerequisite: MDI grad student. Non-MDI graduate students and non-degree graduate students may register for this course with permission of the MDI program.

MDI 5013. Medical Device Center Practicum I. (2 cr.; A-F only; Every Fall, Spring & Summer)
First of three part series of practicum courses for MDI program. Focus on teaching innovation steps/process using known/pre-assigned clinical needs as examples in collaboration with Medical Device Center. Essential steps in BioDesign process. Apply knowledge to specific real-world examples. prerequisite: Grad MDI student

MDI 5014. Medical Device Center Practicum II. (2 cr.; A-F only; Every Fall, Spring & Summer)
Second of three part series of practicum courses for MDI program. Clinical environment, including research tools/methods, filtering/translating needs, ideation/prototype development, communication with functional managers, corporate executives/investors. prerequisite: Grad MDI student

MDI 5015. Medical Device Center Practicum III. (2 cr.; A-F only; Every Spring)
Medical Device Innovation Practicum III is the third of a three part series. Students will gain a high-level understanding of essential steps in the BioDesign process related to ideation. The steps of the ideation process will include brainstorming and prototyping of potential solutions, risk assessment, and business strategy development. Students will prepare and present a technical evaluation that articulates the value of their new technology or device to functional managers, corporate executives, and/or investors. prerequisite: Grad MDI student

MDI 5020. Medical Device Innovation Capstone. (1-2 cr.; A-F only; Every Spring & Summer)
The MDI capstone is an independent, original, and applied investigation on a relevant subject, problem, or issue in areas of medical device technologies, policy, business, and innovation. All students in the MDI program are required to complete a capstone project as part of the program. Registration is open to MDI students only.

MDI 5050. Interpersonal & Team Effectiveness. (1 cr.; A-F only; Every Summer)

MDI 5050 builds the context and capability innovation leaders need to manage effective interpersonal relationships and develop high performance teams. Emphasis is placed on foundational principles and practices that help leaders self-manage, engage and influence key stakeholders, and generate shared commitment for team and project success. Students will increase their self-awareness through self and peer feedback and develop an action plan to enhance their leadership effectiveness in both their current work role and their MDI practicum teams. prereq: Grad MDI student

MDI 5051. Leading Innovation & Change. (1 cr.; A-F only; Every Fall)

MDI 5051 explores the role and differentiating capabilities of outstanding innovation leaders in complex and dynamic environments. Emphasis is placed on principles and practices that help leaders focus on the right strategies, build the organizational capability required to execute a strategy, lead change initiatives and sustain commitment versus compliance among diverse stakeholders. Students will practice improving their team effectiveness and develop a change leadership plan to support implementation of either a current work initiative or their upcoming Capstone Project. prereq: Grad MDI Student and completion of MDI 5050.

MDI 5060. MDI Independent Study. (1-3 cr.; A-F only; Periodic Fall, Spring & Summer)

Independent study in MDI-related topic. prereq: Grad MDI student

MDI 5585. The Healthcare Marketplace. (2 cr. [max 3 cr.]; A-F only; Every Fall & Spring)
The healthcare marketplace constitutes nearly three trillion dollars in the United States and several trillion spent throughout the world. With growing demand for medical technology and the aging of the population, the scale and complexity of the healthcare supply chain is expected to dramatically increase over the next two decades. The healthcare sector is comprised of several markets for goods and services, including physician services, hospital services, insurance, pharmaceuticals and medical devices, and information technology. This course aims to provide a survey of the health sector to understand the scale, market opportunities, as well as barriers to this expanding and global industry.

MDI 5589. Medical Technology Evaluation and Market Research. (2 cr.; A-F only; Every Spring)

This course, with the insight of industry leaders, addresses public-private sector interactions and the business, public policy, regulatory, and technology management issues that concern medical device and biotechnology companies.

MILI 5995. Medical Industry Valuation Laboratory. (2 cr.; A-F only; Every Fall, Spring & Summer)

Interdisciplinary student teams create rapid production market analysis of promising medical technologies/services to determine potential for success in market. Exposure to University innovations, venture firms, inventors. prereq: consent

MILI 5999. Independent Study. (1-8 cr. [max 16 cr.]; A-F only; Every Fall, Spring & Summer)

Independent study.

MILI 6235. Pharmaceutical Industry: Business and Policy. (2 cr.; A-F only; Every Spring)

Business/policy issues specific to pharmaceutical industry. Interdisciplinary perspectives, active involvement by industry leaders.

MILI 6421. Healthcare Law: Strategic and Business Implications. (2 cr.; A-F only; Every Fall)

This course will survey fundamental healthcare laws that apply to a wide variety of healthcare businesses, and will examine their impact on business strategy and operations. The goal is to enable current and prospective managers and leaders in the healthcare space to understand compliance requirements and how healthcare law impacts business strategy and decisions. In the end, healthcare law can be a competitive advantage. In addition, the course will address key current healthcare policy challenges and how these impact business environment and strategy.

MILI 6562. Information Technology in Healthcare Care. (2 cr.; A-F only; Every Fall)

Theoretical/conceptual base for health care information technology. Applications of current/developing health IT. Approaches to evaluate effectiveness of health IT systems. Information technology, computer technology, and data structures commonly found in health care information systems. Information system design/evaluation. prereq: MBA student

MILI 6589. Medical Technology Evaluation and Market Research. (2 cr.; A-F only; Every Spring)

Hands-on experience in creating a value proposition for new medical technologies. Leadership pathways in medical technology, insurance, and delivery industries. Personal input from industry leaders: United Health Group, Medtronic, and Mayo Clinic.

MILI 6726. Medical Device Industry: Business and Public Policy. (2 cr.; A-F only; Every Fall)

This course, with the insight of industry leaders, addresses public-private sector interactions and the business, public policy, regulatory, and innovation leaders.

MILI 6991. Anatomy and Physiology for Managers. (2 cr.; A-F only; Every Spring)

Survey of medical vocabulary/physiology of major body systems. Understanding current clinical practice. Market opportunities of major body systems, Medical technology innovation.

MILI 6992. Healthcare Delivery Innovations: Optimizing Cost and Quality. (2 cr.; A-F only; Every Fall)

Healthcare delivery. Analyze value for population.

MILI 6995. Medical Industry Valuation Laboratory II. (2-4 cr. [max 10 cr.]; A-F only; Every Fall & Spring)

Interdisciplinary student teams create rapid production market analysis of promising medical technologies/services to determine potential for success in market. Exposure to University innovations, venture firms, inventors. prereq: Approved application

MILI 6997. MILI Global Valuation Lab. (4 cr. [max 12 cr.]; A-F only; Periodic Summer)

Global version of medical industry leadership institute valuation lab. Assess value of proprietary inventions.

MILI 6998. MILI Fellows. (0-2 cr. [max 6 cr.]; A-F only; Every Fall & Spring)

Fellows will apply the knowledge they have acquired in the MILI Valuation Lab course to assess the commercial viability of innovations developed by the Medical Device Center’s Innovation Fellows.

MILI 6999. Independent Study. (0-8 cr. [max 16 cr.]; A-F only; Every Fall, Spring & Summer)

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

**Medical Laboratory Sciences Pr (MLSP)**

**MLSP 5011W. Professional Issues in the Health Care Community.** (WI; 2 cr.; A-F only; Every Spring & Summer) Current literature and written discussion to explore the laboratory profession: healthcare systems, professional scope of practice, regulatory and licensure issues, medical ethics, Interprofessional practice models and current topics impacting health care delivery. Focus is on the medical laboratory's crucial role in patient care.

**MLSP 5012. Foundations in Interprofessional Communication and Collaboration.** (1 cr.; A-F only; Every Fall) Interprofessional approach to health care. Online discussion topics. Directed group activities. Personal/professional image, teamwork, self/peer assessment, health professions, professional identity and integrity, relationships between professions and those they serve. Introduction to basic education theory, instructional design for laboratory practitioners. prereq: Admission into MLS Program

**MLSP 5013. Scholarly Inquiry and Analysis in Medical Laboratory Sciences.** (1 cr.; A-F only; Every Fall & Summer) Review concepts of scientific inquiry. Major steps of research project. How to select topics, evaluate literature, and construct and test working hypothesis. Analyze and interpret data, report results. Quantitative, qualitative, and mixed methods research designs.

**MLSP 5014W. Laboratory Operations and Management in Health Care Systems.** (WI; 2 cr.; A-F only; Every Fall & Summer) Theory/practice of fiscal/personnel management for laboratory professionals. Includes introduction to laboratory information systems, legal aspects of test reporting. Government regulatory, certification, licensure, medical ethics of health care, accreditation policies. prereq: Admission into MLS program or instr consent

**MLSP 5111. Concepts of Diagnostic Microbiology.** (3 cr.; A-F only; Every Fall) Presentation of medically significant human bacterial and yeast diseases. Epidemiology, physiology, and pathogenic interactions between man and microorganism. Laboratory regulations, morphological characteristics, laboratory testing, and mechanisms of antimicrobial therapy and resistance. prereq: [MICB 3301 or equivalent], [BIOL 3021, Biochemistry or equivalent] or instr consent

**MLSP 5112. Application of Diagnostic Microbiology Principles.** (2 cr.; A-F only; Every Fall) Application in identification and treatment of microorganisms causing human diseases. Emphasis on aerobic and anaerobic bacteria, mycobacteria, and yeast from various body sites. Specimen processing, culture workup, conventional microscopy, and molecular and immunological techniques.

**MLSP 5113. Advanced Concepts in Diagnostic Microbiology.** (3 cr.; A-F only; Every Spring) Physiology and pathogenic interactions between man and microorganism. Epidemiology, prevention, recovery, conventional, immunological, molecular identification, and methods and treatment of microorganisms involved in human diseases. prereq: 5111 or instr consent

**MLSP 5211. Fundamentals in Hematology and Hemositosis.** (3 cr.; A-F only; Every Fall) Anatomy and physiology of hematopoietic and coagulation systems. Basic blood cell morphology and common hematology and hemoitis tests. Clinical implications for health and disease. prereq: PHSL 3051 or instr consent

**MLSP 5212. Application of Hematology & Hemositosis Principles.** (1 cr.; A-F only; Every Fall) Theory, performance, and application of common hematologic and hemoitis diagnostic procedures. Interpretation and correlation of laboratory findings. Venipuncture, cell counting, white blood cell differential, red and white blood cell morphology interpretation, and coagulation studies. prereq: concurrent registration is required (or allowed) in 5211

**MLSP 5213. Diagnostic Hematology.** (3 cr.; A-F only; Every Spring) Blood and bone marrow in assessment of hematologic function and disease. Major focus on normal development and differentiation, abnormal changes found in disease. Cytochemical stains, flow cytometry, cytogentic, molecular diagnostics. prereq: [5211, 5212] or instr consent

**MLSP 5214. Advanced Hematology Morphology.** (1 cr.; A-F only; Every Spring) Blood and bone marrow in assessment of hematologic function and presence of disease. Major focus on normal development and differentiation, abnormal changes in pathologic conditions. Cytochemical stains, flow cytometry, cytogentic, molecular diagnostics. prereq: [5211, 5212], concurrent registration is required (or allowed) in 5213 or instr consent

**MLSP 5311. Fundamental Biomedical Laboratory Techniques.** (4 cr.; A-F only; Every Spring & Summer) Principles of good laboratory practice, experimental design/standard operating procedures, laboratory technical skills, safety, process control. Analytical techniques include colorimetry, chromatography, electrochemical, immunologic, nucleic acid techniques. prereq: 8 credits General Chemistry, 6 credits Organic Chemistry, 3 credits Biochemistry

**MLSP 5312. Body Fluid Analysis.** (2 cr.; A-F only; Every Spring) Formation of urine and body fluids, changes that occur in disease, testing used for diagnosis and treatment. Correlation of test results with clinical information discussed. Laboratory skills in body fluid analysis introduced. prereq: 8 credits General Chemistry, 6 credits Organic Chemistry, 3 credits Biochemistry. Successful completion of MLSP 5311 with grade of C or higher

**MLSP 5313. Chemical Analysis in Health and Disease.** (3 cr.; A-F only; Every Fall) Pathophysiology of organ systems and metabolic disorders. Liver, heart, kidney, lungs, diabetes. Health and disease states evaluated in context of clinical chemistry. prereq: 8 credits General Chemistry, 6 credits Organic Chemistry, 3 credits Biochemistry

**MLSP 5511. Principles of Immunobiology.** (3 cr.; A-F only; Every Fall & Summer) Immune system function, immunologic and serologic testing. Immunologic techniques utilized in various clinical laboratory settings. prereq: PHSL 3051 or instr consent

**MLSP 5513. Transfusion Medicine Principles and Methods.** (3 cr.; A-F only; Every Spring) Didactic material covering genetics, detection, significance of human blood group antigens and antibodies. Donor and compatibility testing. Component therapy, transfusion reactions. Hemolytic disease of fetus and newborn. Immune hemolytic anemias. Quality systems. Alternate technologies. prereq: [5511, upper level genetics course] or instr consent

**MLSP 5701. Clinical Experience in Microbiology.** (2 cr.; S-N only; Every Fall, Spring & Summer) Gain practical experience, apply technical competencies learned on campus to microbiology laboratory. Develop entry-level competencies and assist in making transition to clinical practitioner. Guided by clinical preceptors and university faculty. prereq: Advanced standing in MLS program

**MLSP 5702. Clinical Experience in Hematology and Hemositosis.** (2 cr.; S-N only; Every Fall, Spring & Summer) Gain practical experience and apply technical competencies learned on campus to hematology laboratory. Designed to develop entry-level competencies and assist students in making transition to clinical practitioner. Course guided by clinical preceptors and university faculty. prereq: Advanced standing in MLS program

**MLSP 5703. Clinical Experience in Clinical Chemistry and Urinalysis.** (2 cr.; S-N only; Every Fall, Spring & Summer) Gain practical experience and apply technical competencies learned on campus to Chemistry laboratory. Designed to develop entry-level competencies and assist student in making
transition to clinical practitioner. Course guided by clinical preceptors and university faculty. 

**MLSP 5704. Clinical Experience in Transfusion Medicine.** (2 cr. ; S-N only; Every Fall, Spring & Summer) 

Gain practical experience and apply technical competencies learned on campus to transfusion medicine lab. Designed to develop entry-level competencies and assist in making transition to clinical practitioner. Course guided by clinical preceptors and university faculty. 

**MLSP 5801. Advanced Practicum Experience in Specialty Disciplines.** (1 cr. ; S-N only; Every Fall, Spring & Summer) 

Advanced practicum experience. Restricted enrollment. Students can select variety of specialty sub-disciplines of MLS including cytogenetics, flow cytometry, molecular diagnostics, toxicology, virology, education, management, research, public health, bone marrow, tissue transplantation. 

**MLSP 6024. Advanced Laboratory Operations and Management.** (3 cr. ; A-F only; Every Fall, Spring & Summer) Principles of quality management, process improvement in laboratory and health care systems. Project based application of human resources and financial management, informatics, leadership, marketing and quality improvement. Includes professional development, ethics, and strategic planning.

**MLSP 6111. Concepts in Diagnostic Microbiology.** (3 cr. ; A-F only; Every Fall) 

Presentation of medically significant bacteria and yeast - normal and pathogenic flora in the human body. Includes clinical presentation, pathophysiology, medical diagnosis, laboratory regulations, morphological characteristics, laboratory testing, and mechanisms of antimicrobial therapy and resistance. Case study and journal discussions.

**MLSP 6113. Advanced Diagnostic Microbiology.** (3 cr. ; A-F only; Every Spring) 

Epidemiology, prevention, recovery, conventional, immunological, molecular identification, and methods and treatment of microorganisms involved in human disease. Emphasis on fungal, parasitic, and viral diseases including specimen processing, detection, identification, and therapy. Case studies and journal reviews included.

**MLSP 6211. Advanced Principles in Hematology and Hemostasis.** (3 cr. ; A-F only; Every Fall) 

This course introduces anatomy and physiology of the hematopoietic and coagulation systems including basic blood cell morphology, common hematology and hemostasis tests, non-malignant alterations and their etiologies, current therapeutic regimens, and their clinical implications for health and disease.

**MLSP 6213. Advanced Diagnostic Hematology.** (3 cr. ; A-F only; Every Spring) 

This course explores blood and bone marrow in the assessment of hematologic function and disease. Major focus is on normal development and differentiation and abnormal changes found in disease. Cytochemical stains, flow cytometry, cytogenetics, and molecular diagnostics, along with their clinical implications for health and disease are discussed.

**MLSP 6313. Advanced Chemical Analysis in Health and Disease.** (3 cr. ; A-F only; Every Fall) 

Pathophysiology of organ systems and metabolic disorders. Liver, heart, kidney, lungs, and diabetes. Advanced concepts in special chemistry, laboratory methods, quality assurance and clinical chemistry research will be discussed.

**MLSP 6401. Fundamentals of Molecular Diagnostics.** (3 cr. ; A-F only; Every Fall) 

Fundamental concepts of molecular science as it relates to molecular diagnostics. Principles of molecular technologies used for diagnostic purposes. Students will be introduced to the unique operation considerations applicable to molecular diagnostic methods and laboratories including design, quality assurance and regulatory issues.

**MLSP 6402. Application of Molecular Diagnostics Techniques.** (2 cr. ; A-F only; Every Fall, Spring & Summer) 

Fundamental techniques in molecular science related to molecular diagnostics. Principles of molecular technologies used for diagnostic purposes and obtain the technical skills to perform those techniques. Unique operational considerations applicable to a molecular diagnostics laboratory including design, quality assurance and regulatory issues.

**MLSP 6410. Diagnostic Molecular Science.** (3 cr. ; A-F only; Every Fall, Spring & Summer) 

This course presents the role of genetics in medicine and related molecular testing methodologies, and highlights the importance of genetics by linking disease diagnosis, prognosis, prevention and treatment with molecular testing applications. Specimen procurement, patient education, quality assurance, ethics and consent are discussed.

**MLSP 6411. Diagnostic Molecular Science Laboratory.** (2 cr. ; A-F only; Every Fall, Spring & Summer) 

Presentation of the role of genetics in medicine with emphasis on related molecular testing methodologies. Addresses performance of laboratory techniques in genetics, cancer medicine and microbiology. Focus on topics unique to molecular diagnostics in specimen procurement, patient education, quality assurance, ethics and consent.

**MLSP 6513. Advanced Principles in Transfusion Medicine.** (3 cr. ; A-F only; Every Spring) 

Topics covered in this course include detection of human blood group antigens, donor selection, hemolytic diseases, platelet and granulocyte immunology and stem cell transplantation. Application of quality assurance, process controls, alternate technologies and molecular techniques to the practice of transfusion medicine will be discussed.

**MLSP 6610. Integrated Concepts in Medical Laboratory Science.** (3 cr. ; A-F only; Every Fall, Spring & Summer) 

Interpretation of routine laboratory testing ordered for patient care. Case study discussions, reference ranges and common laboratory tests performed for health assessment, diabetes, cholesterol, anemia, urinalysis, cardiac function, blood typing, common infections and more. Course supports preparation for the Board of Certification exam.

**MLSP 6620. Advanced Concepts in Medical Laboratory Science.** (3 cr. ; A-F only; Every Fall, Spring & Summer) 

Case studies and journal exploration of advanced diagnostic testing, method development and validation, pathophysiology, and future directions of the field of laboratory medicine. Relationships among research, theory/theoretical formulations, and practice.

**MLSP 6801. Advanced Practicum in Medical Laboratory Science.** (2 cr. [max 6 cr.]; S-N only; Every Fall, Spring & Summer) 

Advanced practicum experience. Students can select variety of specialty sub-disciplines of MLS including cytogenetics, flow cytometry, molecular diagnostics, toxicology, virology, education, management, research, public health, bone marrow, tissue transplantation.

**MLSP 6905. Research Methods and Capstone Project.** (3 cr. ; A-F only; Every Fall, Spring & Summer) 

Overall review of important concepts of research design, data collection, statistical and interpretative analysis, and final report presentation. The course will develop ability to use the following tasks: Development of a hypothesis, outlining the research problem, related questions, quantitative, qualitative, and mixed methods designs.

**Medical Physics (MPHY)**

**MPHY 5040. Introduction to Medical Physics.** (3 cr. ; A-F only; Every Spring) 

Interactions and energy deposition by ionizing radiation in matter; medical imaging; radiation therapy physics and related radiation safety topics.

**MPHY 5138. Research Seminar.** (1-5 cr. ; S-N or Audit; Every Fall) 

**MPHY 5139. Seminar and Journal Club.** (1 cr. [max 2 cr.]; S-N or Audit; Every Spring) 

Current research topics related to goals/methods of biophysical sciences and medical physics. Lectures/discussions.

**MPHY 5160. Advanced Radiation Physics and Dosimetry.** (3 cr. ; A-F only; Every Fall) 

Interactions and energy deposition by ionizing radiation in matter; concepts, quantities and units in radiological physics; principles and methods of radiation dosimetry.

**MPHY 5170. Basic Radiological Physics.** (3 cr. ; Student Option; Every Fall)
Theoretical/experimental aspects of radiological physics. Physical properties of various ionizing radiations, interactions of ionizing radiations with matter, methods of radiation dose measurement. prereq: instr consent

**MPHY 5171. Medical and Health Physics of Imaging I.** (3 cr.; Student Option; Every Fall) Physics of diagnostic imaging: specification/quantification of image quality, X-ray production, image receptors, magnetic resonance imaging, radiation exposure and protection. Special imaging techniques, including mammography, computed tomography, and direct digital image capture. prereq: 5170 or instr consent

**MPHY 5172. Radiation Biology.** (3 cr.; Student Option; Every Fall & Spring) Effects of ionizing radiation on cells, tissues, and organisms. Biochemical/physiological bases of radiation effects. Biological rationale for radiation therapy practices. prereq: 5170 or instr consent

**MPHY 5173. Medical and Health Physics of Radiation Therapy.** (3 cr.; Student Option; Every Spring) Measurements of radiation quality, output, and depth dose distributions for clinical use. Treatment parameter calculation. Beam modification and shaping. Treatment planning for fixed field and rotational therapy in external beam, intracavitary, and interstitial therapy. Computer applications in treatment planning. Principles/criteria for radiation protection. prereq: 5170 or instr consent

**MPHY 5174. Medical and Health Physics of Imaging II.** (3 cr.; Student Option; Every Spring) Physics of diagnostic imaging. Ultrasound, theoretical/experimental applications of radionuclides in medicine and biology. Counting statistics and imaging systems associated with radiopharmaceuticals, radiation dosimetry, and safety in nuclear medicine. prereq: 5170 or instr consent

**MPHY 5177. Radiation Therapy Physics Lab: Radiation Physics Basics.** (3 cr.; A-F only; Every Spring) This course provides students hands-on experience with equipment and software used in radiation therapy clinic for physics measurements. prereq: 5170 or concurrent registration is required (or allowed) in 5173 or instr consent

**MPHY 5178. Physical Principles of Magnetic Resonance Imaging.** (3 cr.; A-F only; Spring Even Year) Magnetic resonance imaging physics, spatial selection and encoding, imaging hardware and system engineering. Imaging sequences, signal-to-noise, and contrast.

**MPHY 8147. Advanced Physics of Magnetic Resonance Imaging (MRI).** (3 cr.; Student Option; Every Spring) NMR (nuclear magnetic resonance) and MRI physics, spatial selection and encoding, imaging hardware and system engineering. Imaging sequences, associated contrast/resolution. Recent developments in MRI. prereq: 5174 or instr consent

**MPHY 8148. Advanced Digital Imaging Science.** (3 cr.; Student Option; Every Fall & Spring) Role of digital image science in medical imaging. Measurement of image quality, digital radiography. Image reconstruction for CT, SPECT, PET, and MRI. 3D image processing, image registration/visualization. Picture archiving, communications systems. prereq: 5171 or instr consent

**MPHY 8149. Advanced Topics in Radiation Therapy Physics.** (2 cr.; A-F only; Every Fall) Special procedures. Total body irradiation, intensity-modulated radiation therapy, stereotactic radiosurgery/radiotherapy, image-guided radiation therapy. Treatment planning algorithms/techniques. Brachytherapy. prereq: [5170, 5173] or instr consent

**MPHY 8293. Directed Study in Biophysical Sciences and Medical Physics.** (1-12 cr.; Student Option; Every Fall, Spring & Summer) Individualized study under faculty direction. prereq: instr consent

**MPHY 8294. Directed Research in Biophysical Sciences and Medical Physics.** (1-12 cr.; Student Option; Every Fall, Spring & Summer) Individualized research under faculty direction. prereq: instr consent

**MPHY 8333. FTE: Master's.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

**MPHY 8444. FTE: Doctoral.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

**MPHY 8666. Doctoral Pre-Thesis Credits.** (1-6 cr.; max 12 cr.) No Grade Associated; Every Fall, Spring & Summer) tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

**MPHY 8777. Thesis Credits: Master's.** (1-18 cr.; max 50 cr.) No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

**MPHY 8888. Thesis Credit: Doctoral.** (1-24 cr.; max 100 cr.) No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

---

**MEDC 5185. Principles of Biomolecular Simulation.** (3 cr.; Student Option; Periodic Fall) Molecular simulation for students in medicinal chemistry, pharmacology, biochemistry, and chemical physics prereq: Chem 3502 or instr consent

**MEDC 5245. Introduction to Drug Design.** (3 cr.; A-F or Audit; Every Fall) Concepts that govern design/discovery of drugs. Physical, bioorganic, medicinal chemical principles applied to explain rational design, mechanism of action drugs. prereq: Chem

**MEDC 5494. Advanced Methods in Quantitative Drug Analysis.** (2 cr.; A-F or Audit; Periodic Fall & Spring) Quantitative methods (HPLC, GC, TLC, immunoassays) for analysis of drugs/metabolites in biological fluids. Advanced techniques such as capillary electrophoresis, supercritical fluid chromatography, GC-MS, LC-MS, tandem mass spectrometry. Chromatographic theory/statistical approaches to method validation.

**MEDC 5495. Vistas in Medicinal Chemistry Research.** (1 cr.; S-N or Audit; Every Fall) Selected topics of contemporary interest in medicinal chemistry

**MEDC 5710. General Principles of Medicinal Chemistry.** (2 cr.; A-F or Audit; Periodic Fall) Fundamental principles of enzyme inhibitors, combinatorial chemistry and library design, drug receptor interactions and signal transduction mechanisms, and molecular modeling. prereq: Med C grad student or instr consent

**MEDC 6001. General Principles of Medicinal Chemistry.** (3 cr.; A-F or Audit; Every Fall) Fundamental principles of molecular recognition, physicochemical properties of drugs, drug metabolism and disposition, interaction of molecules with DNA/RNA. prereq: Med chem grad student or instr consent

**MEDC 6002. General Principles of Medicinal Chemistry.** (3 cr.; A-F or Audit; Every Spring) Fundamental principles of molecular recognition, physicochemical properties of drugs, drug metabolism and disposition, interaction of molecules with DNA/RNA. prereq: Med chem grad student or instr consent

**MEDC 8050. Physical and Mechanistic Organic Chemistry.** (2 cr.; A-F only; Every Fall) Didactic instruction in foundational principles of physical and mechanistic organic chemistry. Recitation component in which students actively solve organic chemistry reaction mechanisms and related problems in organic and medicinal chemistry during course meeting times with faculty guidance. prereq: First-year Medicinal Chemistry grad students or by permission.

**MEDC 8070. The Chemistry and Biology of Infectious Diseases.** (3 cr.; A-F only; Periodic Fall & Spring)
The objectives of this course are to provide a comprehensive overview of antimicrobial agents used in infectious diseases with an emphasis on the underlying foundational principles in chemotherapy and pharmacology. Antibiotic, antifungal, and antiprotozoal agents will be covered. For each antimicrobial agent, the history, discovery, synthesis, structure-activity relationships, spectrum of activity, clinical uses, mechanism(s) of action, resistance, drug disposition properties, and adverse reactions will be discussed in great detail.

MEDC 8100. Medicinal Chemistry Seminar. (1 cr. [max 6 cr.]; A-F only; Every Fall & Spring) Current topics. prereq: Grad major or instr consent

MEDC 8333. FTE: Master’s. (; 1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

MEDC 8413. Chemistry of Nucleic Acids. (; 4 cr.; A-F only; Spring Even Year) Chemical aspects of nucleic acid structure and function, synthesis, and functional variants. prereq: [Medical chem or chem or biochem] grad student

MEDC 8420. Natural Products Chemistry. (; 3 cr.; A-F only; Spring Odd Year) Biosynthesis of natural products with an emphasis on how these biochemical principles can be used in drug discovery and design through metabolic engineering and combinatorial biosynthesis. Natural product isolation, structure determination, target identification, and the role of synthetic organic chemistry. prereq: [CHEM 8321, biochemistry] or equiv or course director approval

MEDC 8435. BioAssay & Data Analysis. (1 cr.; A-F or Audit; Spring Even Year) Emphasis is on an intro to bioassay & rodent experimental design approaches, data analysis & basic statistical analysis of corresponding data. Concepts of what instrumentation resources are available within the Department of Medicinal Chemistry & the Institute for Therapeutics Discovery & Development (ITDD), what the corresponding bioassays that can be measured on those resources, consideration & criteria for the development of a new bioassay, how to design basic rodent (mouse & rat) animal experiments including power-analysis (how to predict the number of animals needed for the experiment), as well as data analysis [mean, standard error of the mean (SEM), standard deviation of the mean (SD)] & statistical analysis [student t-test, one-way ANOVA, two-way ANOVA, & appropriate post-hoc tests]. prereq: MEDC 8001 or instructor permission

MEDC 8444. FTE: Doctoral. (; 1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

MEDC 8461. Design of Cancer Therapeutics. (3 cr.; A-F only; Spring Even Year) Cancer Drug Therapy is a relatively new field of medicine that has undergone many medical and societal changes over the course of the last 100 years and in particular the last 60 years. The emphasis in this course will be to familiarize the student with the basic concepts of cancer biology and to survey current advanced approaches for the development and design of small molecule, protein and cell based therapeutics for the treatment of cancer.

MEDC 8471. High Throughput Drug Discovery. (3 cr.; A-F only; Spring Even Year) Combinatorial chemistry, multi-compound based technologies, their use in screening bioassays to discover lead compounds. Solidphase synthesis, designing compound libraries, pharmaceutical assay design, data interpretation, biological target selection, compound lead optimization. prereq: Undergraduate [chemistry or biochemistry] or instr consent

MEDC 8500. Design of Chemotherapeutic Agents. (; 2 cr.; A-F or Audit; Periodic Fall) Modern aspects of designing chemotherapeutic agents. Strategies for enzyme inhibition and metabolic blocks in development of anticancer, antimicrobial, and antiviral agents. prereq: 5600 or instr consent

MEDC 8600. Chemical Aspects of Drug Metabolism and Bioactivation. (; 2 cr.; A-F or Audit; Periodic Fall) Chemical and enzymatic mechanisms of biotransformation and bioactivation of drugs and other xenobiotics. Reactivity and fate of bioactivated metabolites. prereq: 5600 or instr consent

MEDC 8666. Doctoral Pre-Thesis Credits. (; 1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer) tbd prereq: Doctoral student who has not passed prelim oral: no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 must register up to four times, up to 60 combined cr

MEDC 8700. Advanced Concepts in Drug Design. (; 2 cr.; A-F or Audit; Periodic Spring) Current approaches to rational design of drugs. prereq: 5600 or instr consent

MEDC 8753. MOLECULAR TARGETS OF DRUG DISCOVERY. (; 3 cr.; A-F only; Fall Even Year) Structure of biological macromolecules that are targets of drugs. Techniques to accelerate directed drug discovery. Protein structure/interactions. Popular target classes. Computational tools for visualizing/analyzing protein-ligand and protein-protein interactions. Structural characterization at a level sufficient to underpin critical data evaluation. Biophysical techniques to assess weak ligand binding and suitable for fragment-based lead discovery. prereq: 5710 or 8002 or CHEM 5412 or structural biochemistry or instr consent

MEDC 8760. Design of Peptidomimetics. (; 2 cr.; A-F or Audit; Periodic Fall) Current approaches to design and synthesis of mimetics of biologically active peptides. Structural and conformational rationale used in peptidomimetic design. prereq: 5600 or instr consent

MEDC 8777. Thesis Credits: Master’s. (; 1-18 cr.; max 50 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

MEDC 8800. Medicinal Chemistry Laboratory Techniques. (; 1-2 cr.; max 4 cr.; S-N or Audit; Every Fall & Spring) Experiential rotations in medicinal chemistry research laboratories. prereq: Grad med chem major or instr consent

MEDC 8888. Thesis Credit: Doctoral. (; 1-24 cr.; max 100 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

MEDC 8900. Research in Medicinal Chemistry. (; 1-4 cr.; max 8 cr.; A-F or Audit; Every Fall & Spring) Study and experimental investigation. prereq: Grad med chem major or instr consent

Medicine (MED)

MED 7300. Global Health. (; 0.5-8 cr.; max 16 cr.; A-F only; Every Summer) Global nature of health and health care. Global health by systems (cardiology, GI, oncology, etc.). Tropical infectious diseases, public health. Refugee/migrant health, cross cultural health care, travel medicine. All core required topics for ASTMH certification. Case-based lectures. Lab component during modules 4-7. prereq: instr consent

MED 7500. Medicine Externship I. (; 6-8 cr.; H-N only; Every Fall, Spring & Summer) Med 7500 emphasizes diagnostic approach to patient problems and acquisition of core knowledge and skills. The student is part of a patient care team and evaluates and follows at least two new patients per week. Required conferences and tutorial sessions related to the student’s patients and to basic problems in internal medicine are organized for the student at each site.

MED 7507. Research in Oncology. (; 6 cr.; H-N or Audit; Periodic Fall) The student is involved in ongoing laboratory studies in an area under active investigation by a faculty member in oncology. Topics may include, but are not limited to, studies of cell differentiation, cell signaling and G-proteins, neutrophil membrane biochemistry and function, molecular biology of gene expression in hematopoietic and tumor cells, regulation of cellular genes by CMV, mechanisms of action by interferones, biology of breast carcinoma, chromatin structure, and regulation of histo-compatibility antigen gene expression in tumor cells. In addition to hands-on laboratory research, the student participates in research of relevant scientific literature and
is encouraged to participate in regular research conferences.

MED 7511. Gastroenterology Research. (4-8 cr. [max 16 cr.]; H-N only; Every Fall, Spring & Summer)
The student works with a staff member in the gastroenterology section and carries on an active research program under the direction of the staff. Time will be available to attend various clinical functions of the GI section.

MED 7512. Hematology/Oncology/Transplantation Research (H.O.T. Research). (4-8 cr. [max 16 cr.]; H-N only; Every Fall, Spring & Summer)
The student will plan and execute a project under the supervision of a faculty member in H.O.T. Division of Medicine. Cancer biology, stem cell, endothelial cell cancer, and sickle cell biology, coagulation abnormalities, and gene regulation are areas of opportunity. This course may also include shadowing a faculty member in clinic and production of a case report.

MED 7518. Diabetes & Endocrinology Research. (6 cr. [max 16 cr.]; H-N only; Every Fall, Spring & Summer)
The student plans and executes a research project under the supervision of a faculty member in the section of diabetes, endocrinology, and metabolism.

MED 7521. Infectious Disease. (4 cr.; H-N only; Every Fall, Spring & Summer)
The student functions as an integral member of the clinical infectious diseases team during this elective. They will evaluate patients, participate in all discussions, and explore the literature on problems relating to patients they have seen.

MED 7522. Gastroenterology. (4 cr.; H-N only; Every Fall, Spring & Summer)
The student, as a member of the G.I. consult team, does work ups and attends teaching rounds on patients with gastrointestinal disease, attends gastrointestinal conferences (clinic, x-ray, pathology), gain outpatient clinical experience, and becomes familiar with special diagnostic techniques, such as endoscopy, liver biopsy, and small intestinal biopsy. Night call is not required.

MED 7523. Diabetes, Endocrinology, & Metabolism. (4 cr.; H-N only; Every Fall, Spring & Summer)
This elective rotation is a four (4) week introductory, structured clinical experience under direct supervision designed to provide the student experience diagnosing, treating, and caring for patients with endocrine disorders.

MED 7525. Cardiovascular Medicine. (4 cr.; H-N only; Every Fall, Spring & Summer)
The student participates in the evaluation and management of the acute and chronic cardiovascular disease problems as they occur in both the inpatient consultation service and the outpatient setting. Supervised electrocardiographic interpretation sessions are available to allow development of skills in electrocardiography. The student attends cardiovascular clinical conferences as well as informal didactic teaching conferences. prereq: Med Student Yr 3 or 4/at least one other medicine elective

MED 7526. Oncology. (4 cr.; H-N or Audit; Every Fall, Spring & Summer)
As members of the oncology clinic team, students will do patient evaluations and followups in the oncology clinics, and participate in oncology conferences. Emphasis is on the clinical evaluation and management of new cancer patients.

MED 7528. Hematology. (4 cr.; H-N only; Every Fall, Spring & Summer)
This rotation will involve the opportunity to directly learn about diagnosis and management of classical and malignant hematology disorders in both inpatient and outpatient setting. The student will act as a subintern with initial responsibility to conduct history and physical exams on hospitalized patients for whom hematology consultations have been requested.

MED 7531. Rheumatology. (4 cr.; H-N only; Every Fall, Spring & Summer)
Musculoskeletal complaints are among the most common problems that present to primary care physicians and arthritis and related diseases are a major cause of disability and loss of work in our society. It is thus essential that physicians involved in primary care develop skill in recognition and treatment of common rheumatologic diseases and ability to recognize and refer rare or more complicated problems.

MED 7532. Pulmonary Disease. (4 cr.; H-N only; Every Fall, Spring & Summer)
This elective is designed to expand students' understanding of respiratory pathophysiology as they acquire new skills in the diagnosis and management of pulmonary diseases.

MED 7533. Clinical Allergy. (3-6 cr.; H-N or Audit; Every Fall, Spring & Summer)
Practical aspects of allergic/immunologic work ups, treatments. Content modified depending upon individual student needs; special programs (e.g., laboratory methods) arranged depending upon student needs. Clinical material provided through Fairview-University, Regions, VA Hospitals, inpatient consultations, offices of practicing allergists in Twin Cities area. Lectures, seminars, discussions.

MED 7534. Research in Allergy. (6 cr.; H-N or Audit; Every Fall, Spring & Summer)
The student works with a staff member. He/she may choose to participate in an ongoing research within our program or in an original investigative project of the student's design. He/she is expected to review the subject area of the investigation as well as plan, perform, interpret his/her studies, and make a presentation as well as a written report on the project.

MED 7535. Clinical Allergy, Asthma and Immunology Elective Rotation. (3 cr.; H-N or Audit; Every Fall & Summer)
Manage adults/children with atopic dermatitis, contact dermatitis, urticaria, angioedema, food allergies, asthma, chronic cough, dysfunctional breathing, hypersensitivity pneumonias, allergic bronchopulmonary aspergillosis allergic rhinoconjunctivitis, nonallergic rhinitis, nasal polyps, sinusitis, eosinophilic esophagitis, gastritis, food protein intolerances, anaphylaxis, recurrent infections, venom allergy. prereq: It is recommended but not required that third and fourth year medical students have at least one primary care rotation finished. Knowledge of how to perform full medical history and exam is required.

MED 7548. Clinical Genetics. (6 cr.; H-N or Audit; Every Fall, Spring & Summer)
Designed for students interested in clinical pediatrics and medicine as well as academic genetics. The student builds basic genetic skills by participating as a member of the combined medicine/pediatrics clinical genetics group at the Fairview-University Medical Center. The activities include weekly hospital rounds, genetics clinic and genetics conference, and hospital consultations when requested. The student evaluates patients with different types of genetic problems and discusses these cases fully. During the second three weeks of the rotation, the student is expected to prepare one topic for genetics conference.

MED 7555. Medicine Rural Ambulatory Elective. (3-4 cr. [max 8 cr.]; H-N only; Every Fall, Spring & Summer)
Out-patient practice of primary care internal medicine.

MED 7556. Renal Consultation. (4 cr.; H-N only; Every Fall, Spring & Summer)
The course offers a unique opportunity to see a large number of acutely ill patients with disturbed renal function. There will be ample opportunities for study of the physiological impact of severe renal failure in both medical and surgical patients. Students will be part of the consultation service, where the nephrology consult team and the primary service physician manage patients with severe electrolyte problems and renal failure.

MED 7561. Outpatient & Clinical Nephrology. (4 cr.; H-N only; Every Fall, Spring & Summer)
Focus is on renal problems common to a community clinic and hospital practice. Renal clinics are held four days a week. Inpatient consultation is done daily. Didactic lectures are given. This experience is appropriate for the student interested in primary care.

MED 7562. Nephrology. (4 cr.; H-N only; Every Fall, Spring & Summer)
The student spends four weeks on the renal consult service. They attend the departmental teaching conferences, including the renal pathology and clinical nephrology conferences held every week. They work closely with the medicine residents and fellows. They are expected to present the cases for their patients, including clinical and lab data, and assessment of problems to the attending physician on rounds.

MED 7573. Acute Care Internal Medicine. (2-4 cr.; H-N or Audit; Every Fall & Spring)
This course provides an opportunity to acquire skills in the diagnosis and treatment of acute conditions encountered in internal medicine. The student works with attending physicians and medical residents to evaluate patients (including many with undiagnosed illnesses) in both the ER and urgent care on Monday through Friday (8:30 A.M. to 5:00 PM). Learning is enhanced by a daily didactic curriculum. prereq: 7500, Med 7501

MED 759. Critical Care/MICU. (4 cr.; H-N or Audit; Every Fall, Spring & Summer) Evaluation of performance is based on abilities in eliciting a history, conducting an appropriate physical exam, use of lab and imaging studies, breadth and depth of knowledge base, differential diagnosis, formulation of a treatment program, verbal and written presentation, patient relationship, interaction with colleagues and other hospital staff, and on overall professionalism. prereq: 7501 or instr consent

MED 7582. Medical Intensive Care Unit--Regions Medical Center. (3-4 cr.; H-N or Audit; Every Fall, Spring & Summer) Key principles of diagnosis/management of critical illness. Emphasizes cardiopulmonary assessment/management. Using mechanical ventilation, hemodynamic monitoring as focal points. One-month clinical rotation.

MED 7583. Fundamentals of Clinical Oncology. (4 cr.; H-N or Audit; Every Fall, Spring & Summer) This multidisciplinary course provides an introduction to the fundamentals of clinical oncology (adult and pediatric) and is designed for the medical student interested in entering any specialty. Emphasis is placed on understanding important concepts of oncology, acquiring practical skills relevant to the diagnosis and treatment of the common malignancies, and gaining confidence in providing psychosocial support to patients and families. The student follows newly diagnosed patients as they go through their initial evaluation/staging tests for malignancy and participate in planning treatments. Approximately two hours a day is devoted to conferences and tutorial sessions developed specifically for the student enrolled in this course. prereq: 7500 or Ped 7501

MED 7595. Musculoskeletal Problems in Primary Care Practice. (3 cr.; H-N or Audit; Every Fall, Spring & Summer) The focus of this course is on the evaluation of various common musculoskeletal problems likely to be encountered in a primary care practice. Emphasis is placed on the proper musculoskeletal examination, basic joint aspiration and injection techniques, as well as developing better interpretive skills in reviewing laboratory values and bone/joint radiographs. In addition to attending patient clinics daily, the student is part of interactive conferences and didactic sessions covering various rheumatologic/medical orthopedic topics. Teaching methods include the use of patient instructors, videotapes, polarized microscopy, labeled skeleton, and computer teaching programs. The student works with full-time staff including Drs. Thomas Bloss, David Rhude, Peter Schlesinger, and the course director, Tom Stillman. prereq: 7500

MED 7596. Occupational Health. (3-6 cr.; H-N or Audit; Every Fall, Spring & Summer) This course consists of conferences, clinical experience in occupational health, and optional visits to local workplaces. The conferences include a review of common occupational diseases and an introduction to occupational health law and policy through case presentations by students, and discussion with faculty and residents in occupational medicine.

MED 7598. Bioethics Theory. (3-6 cr.; H-N or Audit; Every Fall & Spring) In this independent study course, the student is expected to attend interdisciplinary seminars on basic issues in bioethics, and to write one substantive paper on a bioethical topic. Students must meet with instructor prior to enrolling in course

MED 7602. Advanced Physical Diagnosis and Medical Decision Making. (4 cr.; H-N only; Every Spring) This course focuses on building upon the clinical skills learned in the first three years of medical school and incorporating an evidence-based approach to making high-value, patient-centered medical decisions. Students work with a variety of expert faculty to hone physical examination skills and learn critical article appraisal and presentation skills through small group work. Students will also gain an introduction to the use of point-of-care ultrasound as part of the physical examination.

MED 7603. Palliative Medicine. (4 cr.; H-N only; Every Fall, Spring & Summer) This hospital-based elective offers the opportunity to learn the scope of practice of Internal Medicine's newest subspecialty: palliative medicine. The student will function as a sub-intern under the direct supervision of board-certified hospice and palliative medicine physicians, caring for the broad range of problems managed by palliative medicine consultants.

MED 7604. Hospitalist and Palliative Medicine. (4 cr.; H-N only; Every Fall, Spring & Summer) Students function as sub-interns under supervision of experienced hospitalists in caring for problems as primary caregivers. Care of hospitalized patients with broad mix of medical problems, in ICU/non- ICU settings. Students work with palliative medicine consult team in managing patients with advanced illness, care focused on pain management and complex medical decision making. Faculty present core topics in hospitalist/palliative medicine. Periodic topic presentations by students.

MED 7605. Regions Hospital Hospital Medicine Elective. (4-8 cr.; H-N only; Every Fall, Spring & Summer) Students work alongside staff. Students choose from medicine inpatient service, surgical co-management service, hospital medicine palliative care team, progressive care unit, and evening admission team. prereq: 7500

MED 7666. Medicine Pediatrics Ambulatory Elective. (3-4 cr. [max 8 cr.]; H-N or Audit; Every Fall, Spring & Summer) Out-patient practice of primary care internal medicine and pediatrics.

MED 7700. Primary Care Selective - Medicine. (4 cr.; P-N only; Every Fall, Spring & Summer) Four-week ambulatory experience. Focuses on both specialty-specific areas and process-of-care in ambulatory setting.

MED 7701. Primary Care Selective - Medicine/Pediatrics. (4 cr.; P-N only; Every Fall, Spring & Summer) Four-week ambulatory experience. Focuses on both specialty-specific areas and process-of-care in ambulatory setting.

MED 7703. Patient Safety. (2 cr.; H-N only; Every Fall, Spring & Summer) Two-week long elective incorporating reading, case analysis, consultation, simulation, presentations, projects in patient safety. Educate medical students at University of Minnesota in multidisciplinary patient safety principles/practices.

MED 7800. Internal Medicine: Primary Care and Beyond. (4 cr.; P-N only; Every Fall, Spring & Summer) The Internal Medicine-Primary Care and Beyond ?PCB? elective centers around 4 main areas: Patient Care, Quality Improvement, Advocacy and Self-Reflection. PCB offers students the opportunity to hone their clinical skills via direct patient encounters in the outpatient setting.

MED 7900. Sub-internship in Critical Care. (4 cr.; H-N only; Every Fall, Spring & Summer) Second part of the required 12 weeks of experience in internal medicine started in Medicine 7500. Medicine 7900 is a "sub-internship" in which the student takes direct responsibility for patient care. Therapeutic decision making and care planning are emphasized. The student is part of a patient care team and assumes responsibility for the evaluation and care of three new patients per week. Acute care tutorials with learning objectives and suggested readings are an important part of the course. Self-directed learning tools are available.

MED 7910. Internal Medicine Residency. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer) Internal medicine residency.

MED 7920. Medicine-Pediatric Residency. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Medieval Studies (MEST)

MEST 5610. Advanced Topics in Medieval Studies. (3 cr.; max 15 cr.; Student Option; Every Fall & Spring) From late antiquity through end of Middle Ages (circa 300-1500 A.D.). Topics specified in Class Schedule. prereq: One yr work in some area of Middle Ages, reading knowledge of appropriate language, instr consent

MEST 5993. Directed Studies in Medieval Studies. (1-3 cr.; max 6 cr.; Student Option; Every Fall & Spring) Directed study with one of the core faculty of medieval studies program. prereq: One yr work in some area of Middle Ages, reading knowledge of appropriate language, instr consent

MEST 8010. Medieval Studies Colloquium. (3 cr.; max 9 cr.; Student Option; Every Fall & Spring) Lectures by and discussions with faculty and visiting speakers.

MEST 8110. Seminar in Medieval Studies. (3-4 cr.; max 48 cr.; A-F or Audit; Every Fall & Spring) Offered when feasible. prereq: Appropriate language, instr consent

Microbial Engineering (MICE)

MICE 5035. Personal Microbiome Analysis. (3 cr.; Student Option; Every Spring) Personal Microbiome Analysis, an introduction to the computational exploration and analysis of your inner microbial community, also known as your microbiome. In this course, you will have the opportunity to explore your own microbiome using visualization and analysis tools. Sequencing your own microbiome is encouraged but not required for the course. Introductory biology or genetics is recommended: BIOL 1009, GCD 3022 or BIOL 4003.

MICE 5355. Advanced Fermentation and Biocatalysis Laboratory. (1 cr.; S-N only; Every Spring) Methods in industrial microbiology, lab, and pilot scale fermentation/biocatalysis engineering. Lab experiments carried out in fermentation pilot plant. Operation of bench/pilot scale bioreactors. Designing bioreactors. Process optimization, monitoring, and control. Scale-up experiments, data analysis. prereq: [3301 or BIOL 3301], [grad student in microbial engineering or upper-div major in [microbiology or chem engineering or biochemistry]], instr consent

MICE 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

MICE 8777. Thesis Credits: Master’s. (1-18 cr.; max 50 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A-F or Audit]

MICE 8920. Teaching Practicum. (1 cr.; max 4 cr.; Student Option; Every Fall, Spring & Summer) Supervised experience in classroom, laboratory, and/or recitation instruction; develops skills in effective use of instructional techniques, materials, tests, and measurements. prereq: Grad MIE major

MICE 8990. Biotechnology Seminar. (1-3 cr.; max 6 cr.; Student Option; Every Fall & Spring) Student presentations of thesis research and presentations by invited speakers. prereq: Prereq-First-yr MICE students enroll S-N, as they do not make a presentation. Second-yr MICE students enroll A-F, as they present a seminar; fall, spring, every year). Student presentations of thesis research and presentations by invited speakers or designated lecturers.

MICA 5000. Practicum: Teaching. (0 cr.; No Grade Associated; Every Fall & Spring) Supervised experience in lab instruction. Use of instructional materials, tests/measurement.

MICA 8002. Structure, Function, and Genetics of Bacteria and Viruses. (4 cr.; A-F or Audit; Every Fall) Structure, function, and metabolism of microorganisms. Microbial genetics. Molecular virology. prereq: [One undergrad or grad course each in [microbiology, genetics, biochemistry]] or instr consent

MICA 8003. Immunity and Immunopathology. (4 cr.; Student Option; Every Fall) Lymphocyte activation, signal transduction in lymphocytes, antigen receptor genetics, antigen presentation, lymphoid anatomy, adaptive immune responses to microbes, immunodeficiency, immunopathology, cytokines, transplantation, autoimmunity. prereq: Upper level undergraduate immunology course or inst consent

MICA 8005. Topics in Microbiology, Immunology, and Cancer Biology. (1-4 cr.; A-F or Audit; Every Fall & Spring) Colloquium format. Readings/discussion on specialized topic. prereq: 8012, [8002 or 8003 or 8004] or instr consent

MICA 8006. Protein Sequence Analysis. (3 cr.; Student Option; Fall Even Year) DNA and protein sequence and protein structure databases; protein sequence analysis; methods for display of sequence comparison and prediction results; Genetics Computer Group (GCG) sequence analysis programs; and current literature and research problems. prereq: Biochem course, knowledge of UNIX operating system recommended

MICA 8007. Cell Biology and Biochemistry of the Extracellular Matrix. (3 cr.; A-F or Audit; Every Fall & Spring) Concepts in cell adhesion and tissue composition and importance of cell adhesion in tissue function and disease. Topics range from structure/function/assembly of tissue components to cellular adhesion mechanisms. prereq: 8002 or 8004 or instr consent

MICA 8009. Biochemical Aspects of Normal and Abnormal Cell Growth and Cell Death. (2 cr.; Student Option; Every Spring) Aspects of mechanisms involved in growth control at level of nuclear function. Neoplasia in hormonal cancers (such as prostate cancer) and role of protein phosphorylation in normal and abnormal growth. Mechanisms of cell death via apoptosis and its implications in normal and abnormal proliferation. prereq: 8004 or [BioC 3021, Biol 4004] or instr consent

MICA 8010. Microbial Pathogenesis. (3 cr.; A-F or Audit; Fall Even Year) Molecular mechanisms of bacterial/viral pathogenesis. Strategies of disease causation/interaction with host, regulation of virulence factors, mechanism of virulence factor transmission to other microbes. prereq: MICA grad student or inst

MICA 8011. Current Topics in Immunology. (3 cr.; A-F or Audit; Every Spring) Colloquium format. In-depth reading, discussion prereq: MICA 8003 or instr consent

MICA 8012. Writing and Reviewing a Research Proposal. (2 cr.; A-F only; Every Fall) Assist first/second year graduate students to prepare research proposals for funding. prereq: First or second year MICA grad student

MICA 8013. Translational Cancer Research. (2 cr.; A-F or Audit; Every Spring) Clinical issues in cancer research. Discuss translational research projects as they pertain to a variety of cancers. prereq: 8004 or instr consent

MICA 8014. Small RNA Biology. (2 cr.; A-F or Audit; Every Spring) Small RNAs as major regulators of gene/protein expression. MicroRNAs and their potential use in diagnosis/prognosis of various disease conditions, including cancers. Biology of small RNAs and their role in health and disease. prereq: BIOL 8002 or MICA 8004 or equiv or instr consent

MICA 8094. Research in Microbiology, Immunology, and Cancer Biology. (1 cr.; max 5 cr.; S-N or Audit; Every Fall, Spring & Summer)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

Special topics in moving image studies.

MIMS 8001. Theories of the Moving Image. (3 cr.; A-F only; Every Fall) Study of the moving image as the intersection between critical media studies and film studies. Not a historical overview, but rather current discussions in these areas contextualized with relevant readings in classical film and media theory.

MIMS 8003. Historiography of the Moving Image. (3 cr.; A-F only; Every Spring) Genealogies of the moving image. “Crisis” of film in debates about “old” and “new” media; Hollywood’s role in defining commercial and oppositional forms of moving images; approaches to the writing of history in relation to media historiography.

**Museum Studies (MST)**

| MST 5011. Museum History and Philosophy. | (3 cr.; A-F or Audit; Every Fall) Historical and philosophical roots of museums and emerging philosophical issues faced by museums today - from art, history, science, and youth to living collections, living history sites, and historic houses. Field trips to area museums. |
| MST 5012. Museum Practices. | (3 cr.; A-F or Audit; Every Spring) Practical aspects of museum work. Standards, practices, responsibilities, issues, all set in greater museum context. Curatorial/educational duties, collections management, security, funding, boards, public relations, installation, budgeting, prereq: Grad student or instructor consent |
| MST 5020. Internship. | (1-6 cr. [max 32 cr.]; S-N or Audit; Every Fall, Spring & Summer) Students arrange to perform a professional-level task in a museum of good standing under close supervision of a member of the museum’s professional staff. Instructor must approve a work plan and report. prereq: 5011, 5012, dept consent |
| MST 5170. Topics in Museum Studies. | (1-4 cr.; A-F only; Periodic Fall & Spring) In-depth investigation of specific topic, announced in advance. prereq: grad student consent |
| MST 8993. Directed Study in Museum Studies. | (1-4 cr. [max 16 cr.]; A-F or Audit; Every Spring & Summer) Study by a student, largely self directed with consultation of a faculty member, on a topic not covered (or not covered in depth) by another course. Program of study is determined jointly by student and advising faculty member. prereq: [5012 or concurrent registration is required (or allowed) in 5012], inst consent, dept consent |

**Music (MUS)**

| MUS 5101. Piano Pedagogy I. | (2 cr.; Student Option; Periodic Fall) Demonstration and discussion of teaching techniques, methods, and materials for group and individual instruction at the elementary, |

One-on-one research training from faculty adviser during laboratory rotation. prereq: 1st yr MICA grad student
MUS 5102. Piano Pedagogy II. (2 cr.; Student Option; Periodic Fall & Spring) Demonstration and discussion of teaching techniques, methods, and materials for group and individual instruction at the elementary, early intermediate, and late intermediate levels.

MUS 5150. Body Awareness in Activity: The Alexander Technique for Musicians. (2 cr. [max 8 cr.]; Student Option; Every Fall & Spring) Alexander technique with specific applications to music performance. Emphasis on body/mind awareness to promote technical ease and freedom.

MUS 5151. Organ Literature I. (3 cr.; A-F or Audit; Periodic Fall) Organ literature from the 14th century to the mid-18th century. Influence of organ design of various periods and national schools on the literature and its performance. prereq: 3502, 3603, sr or grad or instr consent

MUS 5152. Organ Literature II. (3 cr.; A-F or Audit; Periodic Fall) Organ literature of J. S. Bach and of other 19th- and 20th-century composers. Influence of organ design of various periods and national schools on the literature and its performance. prereq: 3502, 3603, sr or grad or instr consent

MUS 5153. Organ Pedagogy. (2 cr.; A-F or Audit; Spring Odd Year) Familiarization with materials and techniques for teaching playing the pipe organ. Through their study, students are to gain knowledge of organ methods and various aspects of teaching and learning to play the King of Instruments.

MUS 5181. Advanced Piano Literature I. (2 cr.; A-F or Audit; Fall Even, Spring Odd Year) Literature for piano from late Baroque period to mid-20th century. prereq: grad piano major or instr consent

MUS 5182. Advanced Piano Literature II. (2 cr.; A-F or Audit; Periodic Spring) Literature for piano from late Baroque period to mid-20th century. prereq: grad piano major or instr consent

MUS 5230. Chorus. (1-2 cr. [max 16 cr.]; Student Option; Every Fall & Spring) University Women’s Chorus, Men’s Chorus, Concert Choir and Choral Union. Choirs participate in a variety of programs exploring both Western and non-Western repertoire from the Middle Ages through the 20th century. Concerts include touring, and collaborative campus and community performances. prereq: Choral and/or instrumental music background; audition, instr consent

MUS 5240. University Singers. (1 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) Mixed choir with members of former chamber singers and concert choir. Programs exploring Western/non-Western repertoire from Middle Ages through 20th century. Concerts include touring and collaborative campus/community performances. prereq: Audition, instr consent

MUS 5241. Vocal Literature I. (3 cr.; A-F or Audit) Vocal literature of major/minor composers from 17th century to present. Structure, style, performance practice. prereq: [12 cr in MUS 1304, grad music student] or instr consent

MUS 5242. Vocal Literature II. (3 cr.; A-F or Audit; Periodic Spring) Vocal literature of major and minor composers from 17th century to present; structure, style, and performance practice. prereq: 12 cr in MUS 1104 or MUS 1304, grad music major or instr consent

MUS 5250. Opera Workshop and Ensemble. (2 cr. [max 16 cr.]; A-F or Audit; Every Fall & Spring) Preparation and performance of operatic arias, choruses, and scenes. Participation in fully staged or workshop productions of music theatre repertoire. prereq: audition, instr consent

MUS 5271. Diction for Singers I. (2 cr.; A-F or Audit; Every Fall) Principles and techniques of singing in English, Italian, Spanish, German, and French. International Phonetic Association alphabet used. prereq: 12 cr MusA 1304 or grad music major or instr consent

MUS 5272. Diction for Singers II. (2 cr.; A-F or Audit; Periodic Spring) Principles and techniques of singing in English, Italian, Spanish, German, and French. International Phonetic Association alphabet used. prereq: 12 cr MusA 1304 or grad music major or instr consent

MUS 5275. Vocal Pedagogy I. (3 cr.; Student Option; Every Spring) Advanced study of mind/body preparations for singing, anatomy, and physiology of the vocal mechanism. Voice use and care, historical and comparative pedagogy, learning theories, models and guidelines for teaching, instructional techniques, and diagnosing and solving vocal problems. prereq: Sr vocal major or instr consent

MUS 5276. Vocal Pedagogy II. (3 cr.; A-F or Audit; Periodic Spring) History of solo vocal performance; selection and preparation of beginning level solo vocal repertoire; development of vocal performance skills (interpretation, expression, artistry), vocal career counseling. prereq: Sr vocal major or instr consent

MUS 5280. Opera Theatre. (2 cr. [max 16 cr.]; A-F or Audit; Every Fall & Spring) Preparation and performance of fully-staged operatic production. Major involvement in singing, acting, and technical aspects of opera. prereq: audition, instr consent

MUS 5331. Jazz Improvisation I. (2 cr.; A-F or Audit; Periodic Summer) Rudiments, analysis. Improvisation on blues in three major keys and on standard American popular jazz compositions from swing era to early bebop. Applications of major/minor scales. Ear training. prereq: Music major or instr consent

MUS 5333. Post-tonal Theory and Analysis II. (3 cr.; A-F only; Spring Even Year) Art music composed since 1945. Develop skills in analyzing and interpreting this literature.

MUS 5336. Jazz Arranging. (3 cr.; A-F or Audit; Every Fall & Spring) Beginning techniques of arranging for jazz combo and jazz ensemble; vocal and instrumental. prereq: 3502 or instr consent

MUS 5340. Jazz Ensemble. (1 cr. [max 6 cr.]; A-F or Audit; Every Fall & Spring) A 20-member performing organization covering significant jazz compositions and arrangements written specifically for this medium. prereq: audition, instr consent

MUS 5400. University and Campus Bands. (1 cr. [max 10 cr.]; Student Option; Every Fall & Spring) Lab course.

MUS 5410. University Wind Bands. (1 cr. [max 14 cr.]; A-F or Audit; Every Fall & Spring) Wind ensemble and symphony bands perform standard and contemporary literature; concerts and tour appearances. Players from all colleges may participate. prereq: audition, instr consent

MUS 5420. Orchestra. (1 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) Symphony orchestra performs standard repertory and major works with chorus; concerts and tour appearances. Players from all colleges may participate. prereq: audition, instr consent

MUS 5423. Suzuki Pedagogy Practicum. (1 cr. [max 2 cr.]; A-F or Audit; Every Fall & Spring) Supervised teaching of both individual and group lessons. Instructor provides periodic critiques from observation of live or videotaped lessons. Prereq [(& 5424 or & 5425), grad music student] or instr consent, grad consent.

MUS 5426. Final project Suzuki Pedagogy. (1 cr.; A-F or Audit; Periodic Spring) Research project.

MUS 5427. Violin Pedagogy I. (2 cr.; A-F or Audit; Periodic Fall) Private teaching of violin students at beginning, intermediate, and advanced levels. Discussion and demonstrations of pedagogical techniques. prereq: Violin or viola major or instr consent

MUS 5430. Contemporary Music Workshop. (1 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) Generation/performance of new chamber works set within context to situate musical works within dynamic field of historical, philosophical, and expressive import. prereq: instr consent

MUS 5440. Chamber Ensemble. (1 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) Performance of chamber music; duos, trios, quartets, quintets, and other ensemble combinations for instruments and/or voices. prereq: audition, instr consent

MUS 5450. Orchestral Repertoire. (1-3 cr. [max 9 cr.]; A-F or Audit; Every Fall & Spring)
MUS 5460. World Music Ensemble. (1-2 cr. [max 16 cr.]; Student Option; Every Fall & Spring) Afro-Brazilian/Afro-Caribbean popular repertoires. Samba, bossa nova, salsa, merengue, mambo. Planned master classes/clinics with local artists to complement regularly scheduled rehearsals/performances. No audition required.

MUS 5461. Guitar Literature. (2 cr.; Student Option; Fall Odd Year) This course is principally intended for guitar majors (graduate and undergraduate students). The main focus of this course is to introduce students to guitar literature, through the historical overview of the repertoire, classical guitar composers, and performers. It will also introduce students to method books, in chronological order (through an examination of specific styles and "performance practices") and teaching methods through the history of guitar and guitar literature intended for technique development (studies, exercises, etc.).

MUS 5464. Cello Pedagogy. (2 cr.; A-F or Audit) Concentrated study of cello teaching methods. Provides students with the strategies for teaching cello privately, develops analytical skills, and increases knowledge of cello repertoire. Designed for practical application in conjunction with the string technique class.

MUS 5466. Guitar Pedagogy. (2 cr.; A-F or Audit; Fall Even Year) Intended for guitar performance majors. This course will introduce basic teaching concepts/methods/philosophies and examine method books, studies, and methodology through the history of classical guitar. Other topics (e.g., starting a studio, developing promotional material/website, contemporary teaching methods) will be addressed. Prereq: Guitar performance major or instr consent

MUS 5480. University Brass Choir. (1 cr. [max 8 cr.]; Student Option; Every Fall & Spring) The University Brass Choir is an ensemble of 16 brass and percussion players exploring unique literature that spans 400 years. From the rich antiphonal music of Giovanni Gabrieli (1557-1612) to the works of the 20th century. The Brass Choir performs in Twin Cities churches and concert halls. Prereq: audition, instr consent

MUS 5481. Trumpet Pedagogy. (2 cr.; Student Option; Fall Odd, Spring Even Year) Principles of trumpet pedagogy. Discussion of literature, history, and current teaching aids. Prereq: Sr or grad in music or instr consent

MUS 5485. Transcription for Winds. (2 cr.; Student Option; Periodic Fall) Principles of music manuscript and examination of transcription examples. Transcription projects with score and parts. Smaller projects that involve arrangements and original compositions. Prereq: 3502 or instr consent

MUS 5490. Percussion Ensemble. (1 cr. [max 10 cr.]; A-F or Audit; Every Fall & Spring) Practice and performance of standard and contemporary compositions for percussion instruments in various combinations. Prereq: instr consent

MUS 5491. Percussion Literature I. (2 cr.; A-F or Audit; Periodic Fall) Repertoire derived from orchestral and band literature for snare drum, timpani, mallet instruments, and various percussion accessories. Major works of the 20th century written for solo percussion, percussion ensemble, and chamber groups of percussion and non-percussion instruments. Prereq: Jr or Sr or grad or instr consent

MUS 5493. Javanese Gamelan Music Ensemble. (1 cr. [max 8 cr.]; Student Option; Periodic Fall & Spring) Hands-on experience in learning to play Javanese gamelan music, one of the great non-western musical traditions that is readily accessible to beginners. Related insights into the role of this tradition in Javanese culture. Open to all students - no musical background needed!

MUS 5494. West African Music Ensemble. (1 cr. [max 8 cr.]; Student Option; Periodic Fall & Spring) Hands-on experience in learning to play West African music, one of the great non-western musical traditions that is readily accessible to beginners. Also, insights into function, context, structure, gender roles, politics, instruments, life-cycle rites, genres, musical organizations, traditional musicians, and contemporary popular music. Open to all students - no musical background needed!

MUS 5534. Musical Minimalisms. (3 cr.; A-F or Audit; Periodic Fall & Spring) This course provides an introduction to the various music associated with the label "minimalism," including musical trajectories emerging from them. Numerous artists and compositions will be covered, spanning from 1958 to the present, though the focus is on music composed during the 1960s and 1970s, including that by Young, Riley, Reich, Glass, Monk, the Velvet Underground, Andriessen, P?rt, Eno, Feldman, and others. The class blends analysis, historical and analytical secondary readings, and in-class performance. Students must contribute informed comments to discussion, which in turn requires the completion of reading and listening assignments. Prereq: Undergraduates-Mus 4504/4514 or equivalent; Graduates-Mus 3508/3518 or passing of the Theory Entrance Exam

MUS 5511. 16th-Century Counterpoint. (3 cr.; A-F or Audit; Periodic Fall & Spring) Polyphonic counterpoint in modal style of Renaissance. Writing exercises in species counterpoint and in two, three, and four parts. Cantus firmus techniques, mixed values, invertible counterpoint, canon. Representative works by Josquin, Lassus, Palestina, Victoria, and others. Renaissance treatises by Artusi, Banchieri, Diruta, Morley, Zarlino, and others. Prereq: [3501, 3508] or pass basic skills exam

MUS 5550. Class Composition. (2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) Original works in various forms. Development of individual compositional style in a post-tonal idiom. Various forms, performing forces, techniques. Prereq: [4504, 4514 [with C- or better]] or instr consent

MUS 5561. Orchestration I. (3 cr.; A-F or Audit; Every Fall) Scoring techniques for ensembles in combination and full orchestra; year-long sequence. Score study of representative works from 18th through 20th centuries. Prereq: 3502

MUS 5571. Schenkerian Analysis for Performers. (3 cr.; A-F or Audit; Periodic Fall & Summer) Theory/analysis of tonal music using principles developed by Heinrich Schenker. Basic concepts/notation, their application to excerpts/short pieces from 18th/19th centuries. Prereq: 3502

MUS 5573. Analysis of Late-Romantic Orchestral Literature. (3 cr.; A-F or Audit; Periodic Spring) Advanced tonal analysis. Dramatic orchestral music by Wagner, Strauss, Tchaikovsky, Rimsky-Korsakov, Moussorgsky, and Rachmaninoff as focus for projects/discussions related to chromatic harmony, form, and orchestration. Prereq: 3502 or Theory IV Exam or instr consent; [4504 or equiv] recommended

MUS 5574. Wagner's Ring: Conception, Coherence, Consequence. (3 cr.; A-F or Audit; Spring Even Year) Enrich process of listening to Wagner's Ring by providing analytic insight into Wagner's compositional technique and the dramatic, tonal, and motivic structure of the work. Analytic approach broadened with a number of interdisciplinary forays. Prereq: 3502 or equiv

MUS 5591. Introduction to Music Information Technology. (3 cr.; A-F or Audit; Every Fall) Principles of acoustics, electronic sound generation/manipulation, digital signal processing techniques. Programming languages for digital sound synthesis. Editing software, MIDI applications. Prereq: Music grad student or instr consent

MUS 5592. Music Informatics Seminar. (3 cr.; A-F or Audit; Every Spring) Filtering, formant synthesis, reverberation techniques, additive synthesis. Interactive MIDI applications. Prereq: 5591 or instr consent

MUS 5597. Music and Text. (3 cr.; A-F or Audit; Every Fall) Designed for music majors only. Introduction to analysis of music with texts. Song/opera

MUS 5611. Resources for Music Research. (3 cr.; A-F or Audit; Every Fall, Spring & Summer)
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
Aesthetic and professional issues in composition. Survey of professional activities, including research, and grant writing and concert production. Prereq: Composition emphasis or instr consent

MUS 8571. Composers’ Laboratory. (3 cr. [max 12 cr.]; A-F or Audit; Periodic Fall & Spring)
Preparing original music composition to specification for possible radio/TV/theatre/film use. Analytic projects based on research into current practice of music criticism/music journalism. Philosophical and sociological research into creative process. Prereq: 8570

MUS 8580. Topics in Tonal Analysis. (3 cr. [max 12 cr.]; A-F or Audit; Periodic Fall & Spring)
Seminar. Sample topics: string quartets of Beethoven, chamber music of Brahms, significant works by tonal composers. Prereq: instr consent

MUS 8581. Schenkerian Theory and Analysis I. (3 cr.; A-F or Audit; Periodic Fall)
Analysis and critical readings pertaining to theory of tonal music developed by Heinrich Schenker. Application of his method to representative repertoire from 18th and 19th centuries. Contrapuntal writing modeled after presentation in Schenker’s [Counterpoint]. Prereq: instr consent

MUS 8582. Schenkerian Theory and Analysis II. (3 cr.; A-F or Audit; Spring Even Year)
Application of Schenkerian theory to 18th-/19th-century music, coordinated with critical study of major music traditions from that era. Prereq: 8581 or instr consent

MUS 8584. Current Issues in the Analysis of 19th-Century Music. (3 cr.; A-F or Audit; Spring Even Year)
Recent analytic approaches to 19th-century music. Students demonstrate fluency with methods and current issues. In-class discussions, short written analytical projects, two longer papers. Prereq: [3502, 3512] or equiv placement exam, instr consent; grad-level Schenkerian analysis recommended

MUS 8590. Topics in 20th-Century Analysis. (3 cr. [max 12 cr.]; A-F or Audit; Every Fall & Spring)
Seminar explores literatures of 20th-century art music.

MUS 8631. Seminar: Music in Medieval Europe. (3 cr.; A-F or Audit; Periodic Fall)
Selected genres of polyphonic and monophonic music, 9th-14th centuries, for analysis and cultural criticism. Social roles of music and performance traditions; current musicological issues. Prereq: Undergrad music degree

MUS 8632. Seminar: Music in Early Modern Europe. (3 cr.; A-F or Audit; Periodic Fall)
Transformation of chanson, madrigal, mass, and motet from 1400 to 1580. Analysis and cultural criticism; social roles of music and performance traditions; current musicological issues. Prereq: Undergrad music degree

MUS 8640. Seminar in Musicology. (3 cr. [max 12 cr.]; A-F or Audit; Every Fall & Spring)
Topics vary; readings, research, strategies, and methods. Prereq: Musicology or theory emphasis or instr consent

MUS 8644. Seminar: Advanced Research in Historical Musicology. (3 cr.; A-F or Audit; Periodic Fall)
Major reference and research materials in musicology and related disciplines, including databases. Historical methods and historiography. Locating and interpreting primary sources of music and archival documents. Developing research strategies for degree papers and theses. Forms of documentation and historical writing. Prereq: Undergrad music degree

MUS 8647. Seminar: The Critical Editing of Early Music—Method and Practice. (3 cr.; A-F or Audit; Periodic Fall)
Preparation of critical editions from primary sources of vocal and instrumental music (partbooks and tablatures). Nature of musical sources, both manuscripts and prints. Stemmatics, critical judgment and method, presentation of text. Prereq: Undergrad music degree

MUS 8651. Sonata Theory. (3 cr.; A-F or Audit; Periodic Fall)
Principles of the classic sonata: norms, types, and deformations. Structural analysis, analytical methodologies, and fundamentals of sonata hermeneutics. Prereq: instr consent

MUS 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Tbd Prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

MUS 8711. Performance Theory. (3 cr.; A-F only; Spring Odd Year)
Investigate transformation process from score to its sounding instrumental realization. Discuss most important scholarly publications by B. Repp, Th. W. Adorno, et al. Theory first describes structure of such transformations, then investigates analytical, emotional, gestural rationales for expressive performance. Prereq: Grad student in music or instr consent

MUS 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Fall, Spring & Summer)
(No description) Prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

MUS 8864. Current Issues in Ethnomusicology. (3 cr.; A-F or Audit; Every Fall)
Ethnomusicological methods, theorizing, and research practice. Current issues in monographs, journals, and anthologies. Fieldwork practicum. Prereq: instr consent

MUS 8888. Thesis Credit: Doctoral. (1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Music Applied (MUSA)

MUSA 5101. Piano: Elective (graduate non-major in music). (2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5103. Organ: Elective (graduate non-major in music). (2 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5104. Voice: Elective (graduate non-major in music). (2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5105. Violin: Elective (graduate non-major in music). (2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5106. Viola: Elective (graduate non-major in music). (2 cr. [max 8 cr.]; A-F or Audit; Periodic Fall & Spring) Private instruction. prereq: consent

MUSA 5112. Clarinet: Elective (graduate non-major in music). (2 cr. [max 8 cr.]; A-F or Audit; Periodic Fall & Spring) Private instruction. prereq: consent

MUSA 5113. Saxophone: Elective (graduate non-major in music). (2 cr. [max 8 cr.]; A-F or Audit; Periodic Fall & Spring) Private instruction. prereq: consent

MUSA 5116. Trumpet: Elective Individual Lessons (graduate non-major in music). (2 cr. [max 8 cr.]; A-F or Audit; Periodic Fall, Spring & Summer) Individualized trumpet instruction. prereq: consent

MUSA 5121. Percussion: Elective (graduate non-major in music). (2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5123. Guitar: Elective (graduate non-major in music). (2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5401. Piano: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5402. Harpsichord: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5403. Organ: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5404. Voice: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5405. Violin: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5406. Cello: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5407. French Horn: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5408. Double Bass: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5409. Flute: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5410. Bassoon: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5411. Oboe: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5412. Clarinet: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5413. Saxophone: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5414. Bassoon: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5415. French Horn: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5416. Trumpet: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5417. Trombone: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5418. Baritone: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 5421. Percussion: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 5423. Guitar: Music Major Secondary (graduate). (2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring) Private instruction. prereq: consent

MUSA 8301. Piano: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8302. Harpsichord: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8303. Organ: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8304. Voice: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8305. Violin: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8306. Viola: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8307. Cello: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8308. Double Bass: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8309. Flute: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8311. Oboe: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8312. Clarinet: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8313. Saxophone: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8314. Bassoon: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent

MUSA 8315. French Horn: Music Major (graduate). (2-4 cr. [max 48 cr.]; A-F or Audit; Every Fall, Spring & Summer) Private instruction. prereq: consent
MUED 5301. General Music I. (3 cr.; A-F or Audit; Every Spring) Materials, strategies and the field experience for planning and implementing instruction for global arts understanding among early childhood and lower elementary school children. Experiential learning, for integrating international music and culture perspectives while planning and implementing sequential elementary music instruction. prereq: MUED 1201, MUS 4504, MUS 4514, [music education major or inst consent], successful completion of soph proficiency exam

MUED 5302. General Music II. (3 cr.; A-F only; Every Fall) Materials, strategies and an extensive field experience with expert general music teachers for planning and implementing sequential upper elementary, middle and high school music instruction for global arts understanding. Includes integration of music and technology. First of two required semesters. 25 hours of practicum at the middle school level. Applications of technology. First of two required semesters. prereq: MUED 1201, MUS 4504, and MUS 4514 with a grade of at least C-

MUED 5350. Student Teaching in Classroom Music. (4-8 cr.; A-F or Audit; Every Fall & Spring) Supervised teaching and observing of classroom and general music in elementary, junior high, and senior high schools. Weekly seminar emphasizing classroom management, curriculum development, and administration of music programs.

MUED 5517. Instrumental Methods and Materials II. (3 cr.; A-F only; Every Fall) Instrumental methods and materials as part of licensure to work in K-12 settings per legislated standards. Sight-singing, classroom management, adolescent development, instrumental conducting skills, repertoire, and rehearsal techniques. 25 hours of practicum at the middle school level. Applications of technology. Second of two required semesters. prereq: MUED 5516, MUED 1201, MUS 4504, and MUS 4514 with a grade of C- or better, music education major, successful completion of Music Education sophomore proficiency exam

MUED 5519. Advanced Conducting and Repertoire (Choral). (2 cr.; A-F only; Every Fall) Conducting/baton technique, non-verbal communication skills, rehearsal techniques, score study habits. Aural/diagnostic skills necessary to effectively rehearse an instrumental ensemble. Selection of quality, age-appropriate repertoire. prereq: 3517, MUS 3502, MUS 3512, music education major, dept consent

MUED 5550. Student Teaching in Instrumental Music. (4-8 cr.; A-F or Audit; Every Fall & Spring) Supervised teaching and observing of instrumental music in elementary, junior high, and senior high schools. Weekly seminar emphasizing classroom management, curriculum development, and administration of music programs.

MUED 5650. Student Teaching Seminar. (2 cr.; A-F or Audit; Every Fall & Spring) Reflective practice during student teaching. Developing materials for professional employment (e.g., resume, portfolio). prereq: At least C- in all required [music, music education, professional education] courses
MUED 5669. Psychology of Music. (3 cr.; A-F or Audit; Every Fall)
Basic study of the psychology and psychoacoustics of music including hearing, music perception and cognition, values and preferences, musical abilities, musical systems, media music effects, the influence of music on human behavior, and psycho-socio-physiological processes involved in musical behavior. prereq: Psy 1001 or Psy 3604 or instr consent

MUED 5750. Topics in Music Education. (1-4 cr.; max 16 cr.; A-F or Audit; Every Fall, Spring & Summer)
Focuses on single topic, specified in Class Schedule.

MUED 5800. Group Music Leadership Skills. (3 cr.; A-F or Audit; Every Spring)
Role of group music experiences in human development. Relations specific to music therapy. Students develop repertoire of music applications/techniques for various age groups/populations. Standards for group leadership. Precision teaching skills. prereq: [Completion of [MUS 1151, MUS 1152] or MUS 1155], music therapy major or instr consent

MUED 5803. Therapeutic Music in Music Settings. (4 cr.; A-F only; Every Fall)
Cognitive behavioral methodology related to music therapy and music education settings. Prepares students to complete case studies mandated for internship completion set forth by American Music Therapy Association. prereq: [5804, 5805] or instr consent

MUED 5804. Music Therapy Methods and Procedures I. (4 cr.; A-F or Audit; Every Fall)
Methods/procedures for developing basic music therapy competencies/professionalism. Music therapy populations, their clinical needs. How to use music therapy in an evidence-based approach to meet client objectives. prereq: 5800 or instr consent

MUED 5805. Music Therapy Methods and Procedures II. (4 cr.; A-F only; Every Spring)
Second course in professional sequence for music therapy. Topics include psychotherapy techniques and other music therapy approaches. Practicum in the community, in-class lab. prereq: 5804 or instr consent

MUED 5806. Career Preparation. (4 cr.; A-F or Audit; Every Spring)
Ethics, grant writing, resume/CV preparation, supervision, board certification, professional responsibilities. Students design evidence-based music therapy program, present their proposals to class/community. prereq: 5805 or instr consent

MUED 5807. Psychiatric Music Therapy. (3-4 cr.; A-F only; Every Fall)
Psychiatric populations. How music therapy can be implemented as evidence-based practice. Students design original research and role-play music therapy interventions for psychiatric populations. Practicum component on designing music therapy interventions. Graduate students registering for this course should enroll for 4 credits. Undergraduate students registering for this course should enroll for 3 credits. prereq: Grad music therapy student or instr consent

MUED 5808. Medical Music Therapy. (3-4 cr.; A-F only; Every Spring)
Role/scope of music therapy in medical treatment. Medical diagnoses. How to program appropriate music therapy interventions to address patient needs. prereq: Grad music therapy major or instr consent

MUED 5855. Music Therapy Internship. (1-13 cr.; S-N or Audit; Every Fall & Spring)
Six-month resident internship in music therapy at an affiliated, approved hospital or clinic. prereq: Music therapy major, instr consent

MUED 5991. Independent Study. (1-4 cr.; max 8 cr.; A-F or Audit; Every Fall, Spring & Summer)
Independent study project organized by the student in consultation with the appropriate instructor. prereq: Music ed or music therapy major or grad, instr consent, dept consent

MUED 8112. Introduction to Research Methods and Design in Arts Education. (3 cr.; A-F or Audit; Fall Odd, Spring Even Year)
Methods and research designs employed in investigating education issues in the arts. Reporting results. Proposal development. Bibliographic skills for conducting a review of related research literature. Common analytical techniques. prereq: Grad student in [music or music education], dept consent

MUED 8115. Assessment in Arts Education. (3 cr.; A-F or Audit; Fall Odd, Spring Even Year)
Methods for assessing unique challenges in artistic achievement: performances, products, and other artistic achievements. Assessment design. Interpretation for large-/small-scale assessments in performance, classroom, and clinical settings. prereq: Grad student in [music or music education], dept consent

MUED 8118. Qualitative Research in Arts Education. (3 cr.; A-F or Audit; Fall Even, Spring Odd Year)
A theoretical, practical and systematic approach to qualitative research in arts education. Students participate in a joint field exploration or work in a setting relevant to their long-term research interests, prereq: Grad student in [arts or education], dept consent

MUED 8119. Advanced Applications of Research Methods. (3 cr.; A-F or Audit; Spring Even Year)
Application of research methods/design. Emphasizes both quantitative and qualitative methods. Contemporary procedures/theories of data collection, management, analysis, and interpretation. prereq: Grad music education student or instr consent

MUED 8210. Advanced Music Teaching Seminar. (1 cr.; max 3 cr.; A-F only; Every Fall & Spring)
Advanced music teaching techniques. Assessment, comprehensive musicianship, action research, international education. Readings/assignments vary depending on topic. Focus on promising practices with immediate application in music classroom. prereq: Grad student in music education or with music teaching license

MUED 8211. Foundations of Music Education. (3 cr.; A-F or Audit; Every Fall & Summer)
Major historical, philosophical, sociological, and psychological foundations of music education. Primary literature in the field. Role and current state of music education. prereq: Grad student in [music or music education] or instr consent

MUED 8212. Curriculum Design in Music Education. (3 cr.; A-F only; Every Fall & Spring)
Examine/critically analyze curricular models from multiple perspectives, consider influence on music teaching/learning. Design/construct curricula with view towards promoting musical growth. prereq: Grad student in music education or instr consent

MUED 8280. Seminar: Current Trends in Music Education. (3 cr.; max 30 cr.; A-F only; Periodic Fall, Spring & Summer)
Current issues/trends in music education: philosophical, historical, psychological, and pedagogical. Course's focus varies, reflecting the dynamic nature of the field. prereq: dept consent

MUED 8284. Seminar: Research and Scholarly Issues. (3 cr.; A-F or Audit; Spring Even Year)
Scholarly/professional expectations of music educators and music therapists in academia and other positions of leadership. Writing for a variety of professional purposes/publications. prereq: Doctoral student in music or music education or instr consent

MUED 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

MUED 8809. Advanced Music Therapy Competencies. (3-4 cr.; max 8 cr.; A-F only; Fall Even Year)
Enter to the music therapy profession requires basic competencies that are acquired through graduate music therapy coursework. This course is designed to provide graduate music therapy students with advanced music therapy competencies related to ethics, supervision, diversity, social justice, counseling, and higher education in a seminar style format. prereq: Music Therapy 4th-year undergraduates with instructor consent; Music Therapy MA or PhD

MUED 8880. Master's Research Project. (3-6 cr.; max 12 cr.; A-F only; Every Fall, Spring & Summer)
Individual projects for MM in Music Education emphases (Research/Pedagogical). prereq: Grad music ed major, instr consent

MUED 8900. Seminar: Music Education Doctoral Seminar. (3 cr.; max 8 cr.; A-F only; Every Fall & Spring)
Research-oriented collaboration between students and faculty. Models the manner in
which research is conceived, primary literature evaluated, methods designed, and research projects carried through to completion. prereq: dept consent

**MUED 8994. Directed Research.** (1-8 cr.; A-F or Audit; Every Fall, Spring & Summer) tbl prereq: instr consent

**Nanoparticle Science and Eng (NPSE)**

**NPSE 8001. Introduction to Nanoparticle Science and Engineering.** (3 cr.; A-F or Audit; Periodic Summer) A broad, interdisciplinary overview of the emerging field of nanoparticle science and engineering. This introductory course, designed for students with diverse backgrounds in science and engineering, covers a wide spectrum of topics—from the synthesis of nanoparticles, to nanoparticle growth and transport, to characterization methods for nanoparticles, to novel nanoparticle-based materials and devices.

**NPSE 8002. Nanoparticle Science and Engineering Laboratory.** (3 cr.; A-F or Audit; Periodic Summer) Practical exposure to computational and experimental techniques in nanoparticle research. Required for Ph.D. students minoring in nanoparticle science and engineering. prereq: 8001, [CSE grad student or instr consent]

**NPSE 8101. Nanoparticle Science and Engineering Seminar.** (1 cr.; S-N or Audit; Every Fall & Spring) Broad overview of current research in nanoparticle science and engineering. Topics include areas of nanoparticle synthesis, nanoparticles characterization, nanoparticle-based materials and devices, environmental impact of nanoparticles, and instrumentation for nanoparticle research. Speakers from the University of Minnesota as well as external experts. prereq: CSE grad student or

**Natural Resources Sci and Mgmt (NR)**

**NR 5021. Statistics for Agricultural and Natural Resource Professionals.** (3 cr.; Student Option; Every Fall) The primary audience for this course is graduate students in the agricultural, environmental, natural resources, and other related programs that need competence in statistics. The subject matter will be approaches and applications involving analysis of data using common statistical methods, e.g., describing and visualizing data, the design of single factor experiments, linear modeling, and the ability to examine journal articles in their field and assess their content in a critical manner. prereq: College algebra

**NR 8107. Seminar: Natural Resources Science and Management.** (1 cr.; Student Option; Every Fall & Spring) Assigned topics, student presentations, student presentation evaluations.

**NR 8333. FTE: Master's.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master’s student, adviser and DGS consent

**NR 8444. FTE: Doctoral.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Doctoral student, adviser and DGS consent

**NR 8666. Doctoral Pre-Thesis Credits.** (1-6 cr. [max 12 cr.]) No Grade Associated; Every Fall, Spring & Summer tbl prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

**NR 8777. Thesis Credits: Master's.** (1-18 cr. [max 50 cr.]) No Grade Associated; Every Fall, Spring, Summer (no description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

**NR 8888. Thesis Credit: Doctoral.** (1-24 cr. [max 100 cr.]) No Grade Associated; Every Fall, Spring, Summer (no description) prereq: Max 18 cr per semester or summer; 24 cr required. Must be doctoral student with advisor's consent to register.

**Neurology (NEUR)**

**NEUR 5121. Descriptive Neurology.** (2 cr.; O-N or Audit; Every Spring) Central and peripheral nervous system. Correlation of neuroanatomy, neuropathology, clinical neurology, and pathology of the nervous system. prereq: enrolled OT or PT

**NEUR 5230. Cerebrovascular Hemodynamics and Diseases I.** (4 cr.; A-F only; Every Fall) Principles of cerebrovascular disease/pathophysiology, hemodynamics, diagnostic imaging, and endovascular devices. Bench-to-bedside experiments. Clinical trials, including design constraints and biostatistics. prereq: [PHSL 3063 or PHSL 3065] [MATH 1271 or MATH 1272] [PHYS 1201W or PHYS 1301W or instr consent] or [grad student, PHSL 5061 or instr consent]

**NEUR 5240. Cerebrovascular Hemodynamics and Diseases II.** (4 cr.; A-F only; Every Spring) Principles of cerebrovascular disease/pathophysiology, hemodynamics, diagnostic imaging, and endovascular devices. Bench-to-bedside experiments. Clinical trials, including design constraints and biostatistics. Treatment options, endovascular devices, design of new clinical studies. prereq: 5230, instr consent

**NEUR 7120. Neurology Research.** (2-8 cr.; H-N only; Every Fall, Spring & Summer) Students are eligible to participate in clinical or basic science research programs conducted by members of the Department of Neurology at the Fairview-University Medical Center or affiliated hospitals. The specific nature of the project is decided upon by the student and the faculty member. The student is responsible for making their own arrangements with the faculty member.

**NEUR 7124. Sleep Disorders.** (2 cr.; H-N only; Every Fall, Spring & Summer) Students will rotate with sleep medicine physicians at one of two sites.

**NEUR 7300. Interventional Neurology Elective.** (2-4 cr.; H-N only; Every Fall, Spring & Summer) Rotation with the interventional neurology team: observe procedures, see patients in clinic, participate in research projects. Prereq 7510.

**NEUR 7510. Neurology Externship.** (4 cr.; H-N only; Every Fall, Spring & Summer) This required 4-week clerkship offers students the opportunity to work directly with neurologists in inpatient and outpatient settings.

**NEUR 7520. Pediatric Neurology Elective.** (4 cr.; H-N only; Every Fall, Spring & Summer) Offers students a chance to interact with Child Neurologists with varying focuses of practice including developmental, neuromuscular, movement, epilepsy, and miscellaneous neuro-genetic and neuro-metabolic disorders. Students will be involved in both the inpatient and outpatient aspects concurrently. As ensuring completion of this step may be difficult given limited clerkship availability, requests will be considered if at least one of the prerequisites has been completed. Ait: Required: (NEUR 7510, "Externship in Clinical Neurology")

**NEUR 7542. Pediatric Neurology.** (4 cr.; H-N or Audit; Every Fall & Spring) Successful completion of this rotation satisfies the neurology requirement (Neur 7-510). Pediatric neurology patients have a variety of problems ranging from coma, muscular dystrophy, epilepsy to learning disabilities; from inborn errors of metabolism, metabolic neurologic dysfunction to behavior disorders. Patients are seen both on service and in consultation in the hospital and in the outpatient clinic which meets three times weekly. Students will function as part of the group of physicians who evaluate and suggest therapy for these children. There will be close supervision and tutorial sessions with the senior pediatric neurology fellows as well as scheduled rounds with pediatric neurology staff members at least three times weekly. There is no night call, routinely. A teaching conference is held weekly and students are encouraged to participate during the rotation.

**NEUR 7545. Neuromuscular Diseases.** (2-4 cr.; H-N or Audit; Every Fall, Spring & Summer)
Students participate in all aspects of diagnosis/management of patients with neuromuscular disease. Rotation includes neuromuscular and Muscular Dystrophy Association clinics, clinical electrophysiology laboratory evaluations of patients, nerve/muscle biopsy histological interpretation, and clinical electromyography conferences. Diseases seen include carpal tunnel syndrome, radiculopathies, polyneuropathies, muscular dystrophy, amyotrophic lateral sclerosis, myasthenia gravis. Molecular basis of inherited neuromuscular disease. Students may participate in clinical research projects.

NEUR 7565. Neurology Subspecialty Elective. (4 cr.; H-N only; Every Fall, Spring & Summer)
Students are exposed to various neurological subspecialty outpatient clinics.

NEUR 7599. Subinternship in Clinical Neurology. (4 cr.; H-N only; Every Fall, Spring & Summer)
This hospital-based course is designed for students with special interest in the clinical and basic neurosciences who desire additional experience in clinical neurology. prereq: 7510

NEUR 7600. Epilepsy Diagnosis and Treatment. (2 cr.; H-N only; Every Fall, Spring & Summer)
The student works with an epileptologist in inpatient/outpatient settings. Emphasis is on learning diagnosis, pharmacological and surgical treatment, and the social and psychological consequences to care for the needs of epilepsy patients.

NEUR 7910. Neurology Medical Residency. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Neurology medical residency.

NEUR 7930. Neurology Medical Fellowship. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)
Neurology medical fellowship.

NEUR 8201. Clinical Pediatric Neurology. (1-15 cr.; Student Option;)
Neuroscience (NSC)

NSC 5031W. Perception. (WI; 3 cr.; Student Option; Periodic Fall)
Cognitive, computational, and neuroscience perspectives on visual perception. Color vision, pattern vision, image formation in eye, object recognition, reading, impaired vision. Course is biennial: offered fall of odd years. prereq: Psy 3031 or Psy 3051 or instr consent

NSC 5040. Brain Networks: From Connectivity to Dynamics. (4 cr.; A-F or Audit; Fall Odd Year)
Brain networks. Application of emerging science of complex networks to studies of the brain. Network approaches that provide fundamental insights into the integrative nature of brain function and its relation to the brain structure. Organization of brain networks and dynamics at multiple spatial scales, ranging from the microscale of single neurons and synapses, to mesoscale of anatomical cell groupings and their projections, and to the macroscale of brain regions and pathways. Experimental studies, including electrophysiology, voltage-sensitive dye imaging, electroencephalography, magnetoencephalography, and functional magnetic resonance imaging, that allow mapping network elements and structural/functional connectivity between them at different temporal and spatial scales will be considered. Experimental/theoretical perspectives.

NSC 5202. Theoretical Neuroscience: Systems and Information Processing. (4 cr.; Student Option; Every Spring)

NSC 5203. Basic and Clinical Vision Science. (3 cr.; Student Option; Spring Even Year)
Basic and clinical vision science. prereq: instr consent

NSC 5461. Cellular and Molecular Neuroscience. (4 cr.; A-F or Audit; Every Fall)
Lectures by team of faculty, problem sets in important physiological concepts, discussion of original research papers. prereq: NSc grad student or instr consent

NSC 5462. Neuroscience Principles of Drug Abuse. (2 cr.; Student Option; Periodic Spring)
Current research on drugs of abuse, their mechanisms of action, characteristics shared by various agents, and neural systems affected by them. Offered biennially, spring semester of even-numbered years. prereq: instr consent

NSC 5540. Survey of Biomedical Neuroscience. (2 cr.; A-F or Audit; Every Summer)
Current topics in biomedical neuroscience, accompanied by supporting, fundamental concepts. Intensive, one week course. prereq: instr consent, intended for members of biomedical community or students with advanced scientific backgrounds

NSC 5551. Itasca Cell and Molecular Neurobiology Laboratory. (4 cr.; S-N or Audit; Every Summer)
Intensive lab introduction to cellular and molecular aspects of research techniques in contemporary neurobiology; held at Itasca Biological Station. Electrophysiological investigations of neuronal properties, neuropharmacological assays of transmitter action, and immunohistochecmical studies in experimental preparations. prereq: Neuroscience grad or instr consent

NSC 5561. Systems Neuroscience. (4 cr.; A-F or Audit; Every Fall)
Principles of organization of neural systems forming the basis for sensation/movement. Sensory-motor/neural-endocrine integration. Relationships between structure and function in nervous system. Team taught. Lecture, laboratory. prereq: NSc grad student or instr consent

NSC 5661W. Behavioral Neuroscience. (WI; 3 cr.; A-F or Audit; Every Spring)
Neural coding/representation of movement parameters. Neural mechanisms underlying higher order processes such as memorization, memory scanning, and mental rotation. Emphasizes experimental psychological studies in human subjects, single cell recording experiments in subhuman primates, and artificial neural network modeling. prereq: Grad NSc major or grad NSc minor or instr consent

NSC 5667. Neurobiology of Disease. (2-3 cr.; S-N or Audit; Fall Even Year)
Basic clinical/pathological features, pathogenic mechanisms. Weekly seminar course. prereq: instr consent

NSC 8014. Small RNA Biology. (2 cr.; A-F or Audit; Every Spring)
Small RNAs as major regulators of gene/protein expression. MicroRNAs and their potential use in diagnosis/prognosis of various disease conditions, including cancers. Small RNAs and their role in health and disease. prereq: BIOC 8002 or MICA 8004 or equiv or instr consent

NSC 8026. Neuro-Immune Interactions. (3 cr.; Student Option; Periodic Fall & Spring)
Regulatory systems (neuroendocrine, cytokine, and autonomic nervous systems) linking brain and immune systems in brain-immune axis. Functional effects of bidirectional brain-immune regulation. Course is offered fall of even-numbered years. prereq: 5561, MIB 4131

NSC 8041. Cognitive Neuroscience. (4 cr.; A-F only; Every Fall)

NSC 8111. Quantitative Neuroscience. (3 cr.; A-F or Audit; Every Fall)
Principles of experimental design and statistical analysis in neuroscience research. Includes an introduction to computer programming for data analysis using both classic and modern quantitative methods.

NSC 8207. Seminar: Psychopharmacology. (1-3 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
Faculty and postdoctoral fellows interested in psychotropic drugs and chemicals participate. Some seminars devoted to biomedical ethics.
Neurochemistry, pharmacology, and behavior as antecedent or consequential variables. prereq: instr consent

NSC 8208. Neuropsychopharmacology. (. 3 cr. ; A-F or Audit; Fall Even Year) Methodologies to study relationships between drugs and biochemical, behavioral, and neurophysiological consequences. Functional biogenic amine, peptidergic, other pathways. How manipulations alter neuronal function or behavior. Feedback mechanisms, induction, inhibition. Reinforcement of, tolerance to, or dependence on drugs of abuse: stimulants, hallucinogens, depressants, opiates. Student presentations. prereq: [5212, 6112, PSY 5021, PSY 5061] or instr consent

NSC 8211. Developmental Neurobiology. (. 3 cr.; A-F or Audit; Every Spring) How neuronal types develop. Emphasizes general mechanisms. Experimental data demonstrating mechanisms. prereq: Neuroscience grad student or instr consent

NSC 8216. Selected Topics in Autonomic and Neuroendocrine Regulation. (. 1 cr.; S-N or Audit; Every Fall & Spring) Advanced seminar. Course is offered fall and spring semesters. prereq: instr consent

NSC 8217. Systems and Computational Neuroscience. (. 2 cr.; S-N or Audit; Every Fall & Spring) Advanced seminar. prereq: 5561 or instr consent

NSC 8221. Neurobiology of Pain and Analgesia. (. 3 cr.; Student Option; Periodic Fall & Spring) Pain and analgesia. Course is triennial. prereq: instr consent

NSC 8222. Central Regulation of Autonomic Function. (. 3 cr.; A-F or Audit; Every Fall & Spring) Neural/hormonal sensory pathways affecting central autonomic nuclei involved in maintenance of homeostasis. Current research on physiological control systems at cellular, organ, and integrative levels. Course is offered fall of odd-numbered years. prereq: 5561

NSC 8248. Directed Readings in Auditory Physiology. (. 1-2 cr.; Student Option; Every Fall & Spring) Current research on biophysics and physiology of auditory system; topics selected for each student. Written reviews prepared and discussed.

NSC 8320. Readings in Neurobiology. (. 1-4 cr.; A-F or Audit; Every Fall & Spring) This course discusses the basic principles of cellular and molecular neurobiology and nervous systems. The main topics include: Organization of simple networks, neural systems and behavior; how the brain develops

NSC 8321. Career Skills and Understanding Responsibilities as a Neuroscientist. (. 0.5 cr.; S-N or Audit; Every Fall & Spring) Information that falls outside of core neuroscience academic curriculum. Areas of practical value for graduate school and career development. Career skills, writing skills, responsible conduct in research. prereq: Neuroscience grad major or instr consent

NSC 8333. FTE: Master's. (. 1 cr.; No Grade Associated; Every Fall & Summer) FTE: Master's prerequisite. prereq: Master's student, adviser approval

NSC 8334. Laboratory Neuroscience. (. 1-3 cr.; max 10 cr.; S-N or Audit; Every Fall & Spring) Guided research. prereq: Grad NSc major

NSC 8411. Teaching in Neuroscience. (. 1 cr.; max 4 cr.; S-N or Audit; Periodic Spring) Grad students serve as primary instructors in 4151 and work with fellow students and faculty mentors to design curriculum, classroom sessions, exams, and course evaluations. prereq: instr approval

NSC 8444. FTE: Doctoral. (. 1-4 cr.; No Grade Associated; Every Fall, Spring & Summer) No description prereq: Doctoral student, adviser and DGS consent

NSC 8481. Advanced Neuropharmaceutics. (. 4 cr.; A-F or Audit; Fall Even Year) Delivery of compounds to central nervous system (CNS) to activate proteins in specific brain regions for therapeutic benefit. Pharmaceutical/pharmacological issues specific to direct drug delivery to CNS. prereq: instr consent

NSC 8666. Doctoral Pre-Thesis Credits. (. 1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer) Doctoral Pre-Thesis Credits prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

NSC 8777. Thesis Credits: Master's. (. 1-18 cr.; max 50 cr.; No Grade Associated; Every Fall & Summer) Thesis Credits: Master's

NSC 8886. Thesis Credit: Doctoral. (. 1-24 cr.; max 100 cr.; No Grade Associated; Every Fall & Spring) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

NSCI 5101. Neurobiology I: Molecules, Cells, and Systems. (. 3 cr.; A-F or Audit; Every Fall & Spring) This course discusses the basic principles of cellular and molecular neurobiology and nervous systems. The main topics include: Organization of simple networks, neural systems and behavior; how the brain develops and the physiology and communication of neurons and glia; the molecular and genetic basis of cell organization; ion channel structure and function; the molecular basis of synaptic receptors; transduction mechanisms and second messengers; intracellular regulation of calcium; neurotransmitter systems, including excitation and inhibition, neuromodulation, system regulation and the cellular basis of learning, memory and cognition. The course is intended for students majoring in neuroscience, but is open to all students with the required prerequisites.

NSCI 5110. Dental Neuroscience for Graduate Students. (. 2 cr.; A-F or Audit; Every Spring) Structure/function of human nervous system. Lectures and reading assignments emphasize topics pertinent to dentistry. prereq: Credit will not be granted if credit has been received for: 6110; Biol 3021, Biol 4004, instr consent; intended for grad students who require a comprehensive grad-level neuroscience course

NSCI 5111. Medical Neuroscience for Graduate Students. (. 5 cr.; A-F or Audit; Every Spring) Survey of molecular, cellular, and systems neuroscience as related to medicine. Lecture/lab. prereq: Credit will not be granted if credit has been received for: 6111; BioC 3021, Biol 4004, instr consent; intended for grad students who require a comprehensive medically-oriented neuroscience course

NSCI 5300. Biological Microscopy & Digital Imaging. (3 cr.; Student Option; Every Spring) Optical microscopy is among the most powerful available to biologists. Course introduces graduate students and advanced undergraduates to its uses, to the principles that underlie its use and to the appropriate use of resulting digital images. Students will have access to a microscope in a research laboratory. Required Prerequisites: None. Recommended Prerequisites: PHYS 1101 or PHYS 1201 or PHYS 1301 or PHYS 1401

NSCI 5913. BrainU 101: Neuroscience in the Classroom. (. 3 cr.; A-F or Audit; Every Fall & Spring) Two-week summer workshop. Week one focuses on teaching strategies in neuroscience through lectures, activities, and discussion sessions. Week two focuses on designing inquiry-based classroom investigations based on neuroscience education given during week one. Follow-up activities held during the academic year include BrainU staff/faculty classroom presentations and use of training materials. prereq: [Elementary or middle school or high school or preschool] teacher, instr consent, application

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu. 265
NSU 6567. Neurobiology of Disease. (2-3 cr.; Student Option; Every Fall) Basic clinical/pathological features, pathogenic mechanisms. Weekly seminar.

NSU 7200. Surgical Specialty: Neurosurgery. (2 cr. [max 4 cr.]; P-N only; Every Fall, Spring & Summer) During the course, the student will evaluate patients in the outpatient clinic. Students will learn about basic disease processes and are encouraged to spend time in the operating room observing neurological procedures. Medical students will also participate in daily teaching rounds and should attend most regularly scheduled conferences held within the department.

NSU 7400. Surgical Specialty: Neurosurgery Elective, Duluth. (2-4 cr.; H-N or Audit; Periodic Fall & Spring) Students evaluate patients in outpatient clinic. Basic disease processes. Students spend time in operating room, observing neurosurgical procedures, and in emergency room, inpatient setting, pain clinic, inpatient setting, and office practice.

NSU 7500. Neurosurgery Externship. (4 cr.; H-N only; Every Fall, Spring & Summer) Student will be an integral part of the neurosurgical team, participating closely with the other house staff in patient care and decision-making processes. An important aspect of the externship will be the opportunity to see neurosurgical procedures in correlation with the patients for whom the student is caring.

NSU 7510. Externship at the VA Medical Center. (2-6 cr.; H-N or Audit; Every Fall, Spring & Summer) During this externship, the student attends daily ward rounds and participates in the evaluation and treatment in the outpatient department. Each student is expected to attend neurosurgical, neuroradiological and neuropathology weekly conferences.

NSU 7910. Neurosurgery Medical Residency. (6 cr. [max 150 cr.]; No Grade Associated; Every Fall, Spring & Summer) Develop skills for critically reading empirical literature within field of adolescent health.

NSU 7930. Neurosurgery Medical Fellowship. (6 cr. [max 150 cr.]; No Grade Associated; Every Fall, Spring & Summer) Neurosurgery medical fellowship.

NSU 8318. Neuroradiological Conference. (1 cr.; S-N or Audit; Every Fall, Spring & Summer) Neuroradiological conference.

NSU 8320. Neurosurgical Conference. (1 cr.; S-N or Audit; Every Fall, Spring & Summer) Neurosurgical conference.

Nursing (NURS)

NURS 5010. Foundations of Interprofessional Communication and Collaboration. (1 cr.; S-N only; Every Fall) Exploration of nature/need for interprofessional communication among health care professionals. Qualities of successful interprofessional teams/interactions. Introduction to professional identity, ethics, integrity, values. Strategies for communication/decision making, prereq: Nursing student

NURS 5011. Interprofessional Diabetes Experience. (2 cr.; A-F only; Every Spring) Explore diabetes mellitus through active, hands-on learning in an interprofessional environment. Week-long simulated experience of living with diabetes. Online learning activities focused on interprofessional teamwork for optimal care to patients with diabetes, prereq: 2nd or 3rd year in nursing curriculum, prereq: 2nd or 3rd year in nursing curriculum

NURS 5029. Introduction to Nursing Interventions. (4 cr.; A-F only; Every Fall) Evidence-based interventions for safe, culturally appropriate, and ethical nursing practice.

NURS 5030. Foundational Concepts of Professional Nursing. (3 cr.; A-F or Audit; Every Fall) Foundation of knowledge for culturally appropriate, ethical, evidence-based nursing practice across the life span. Research/theory that underlie the art/science of professional nursing. Concepts of person, environment, health, and nursing, prereq: Admission to master's in nursing program

NURS 5031. Human Response to Health and Illness: Adults and Elders. (4 cr.; A-F or Audit; Every Spring) Focus on individual responses to health and illness in the context of families and environments. The clinical component will emphasize the application of the nursing process in adult and older adult populations.

NURS 5032. Human Response to Health and Illness: Children and Childbearing Families. (5 cr.; A-F or Audit; Every Spring) Focus is on family responses to health and illness. Application of the nursing process in children and childbearing families is emphasized. The family as the unit of care is the focus of a seminar.

NURS 5033. Population-Focused Health in Public Health and Mental Health Nursing. (5 cr.; A-F or Audit; Every Summer) Focus on population-based public health and mental health nursing practice across the lifespan, with local to global perspectives. Emphasis on health equity, health promotion, and levels of disease prevention. Apply theory and research to examine interventions and outcomes.

NURS 5034. Transition to Professional Nursing Practice. (3 cr.; A-F or Audit; Every Fall) Critical analysis of issues affecting the transition to professional nursing practice including those related to the quality of healthcare, quality improvement, and the ability of nurses to improve patient outcomes across settings, prereq: NURS 5033, NURS 6200

NURS 5035. Practicum Nursing Care for Complex Health Conditions. (4 cr.; A-F or Audit; Every Fall) Clinical decision-making, comprehensive nursing care of clients with complex health problems. In collaboration with a clinical
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
NURS 5205. Clinical Seminar in Women's Health. (3 cr. ; A-F only; Every Fall)
Clinical seminar. Emphasis on integration of theoretical knowledge/skills related to caring for women/infants at risk for medical/psychosocial problems. Gain experience in management of selected high-risk perinatal conditions. Prereq: WHNP DNP student, NURS 5222, 5228, 5229, 5200, 6305, 6306, 6925, 6926 Nurse-Midwife DNP student, NURS 5222, 5228, 5229, 5200, 6305, 6306, 6925, 6210, 6211

NURS 6200. Science of Nursing Intervention. (3 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Examination/application of theories and conceptual frameworks to clinical practice problems. Prereq: Admission to RN or DNP program

NURS 6210. Midwifery Care of the Childbearing Family. (3 cr. ; A-F only; Every Summer)
Evidence-based models of midwifery practice for management/support of women/families during labor, birth, and immediate postpartum period. Care of newborn. Prereq: instr consent

NURS 6211. Midwifery Care of the Childbearing Family Practicum. (2 cr. ; S-N only; Every Summer)
Implement evidence-based models of midwifery practice in the management and support of women and families during labor, birth, the immediate postpartum period, and care of the newborn. Prereq: 6305, 6306, concurrent registration is required (or allowed) in 6212

NURS 6213. Reproductive Healthcare for Women at Risk. (2 cr. ; A-F only; Every Fall)
Evidence based, theoretical/epidemiologic basis for advanced practice nursing care of women with complex reproductive health problems requiring multidisciplinary interventions. Selected high-risk gynecologic/ perinatal conditions. Prereq: (NM and WHNP) N6305, N6306, 6501, (NM only) 6210/6211, 6212 (WHNP only) 6502, 7504, 7505, 6929

NURS 6214. Reproductive Healthcare for Women at Risk Practicum. (2 cr. ; S-N only; Every Fall)
Apply advanced assessment/management skills in care of women/infants at risk for medical/psychosocial problems. Gain experience in management of selected high-risk perinatal conditions. Prereq: WHNP DNP student, NURS 5222, 5228, 5229, 5200, 6305, 6306, 6925, 6926 Nurse-Midwife DNP student, NURS 5222, 5228, 5229, 5200, 6305, 6306, 6925, 6210, 6211

NURS 6305. Women's Reproductive Health Care. (2-3 cr. ; A-F only; Every Fall)
Application of knowledge/evidence to holistic practice in women's health. Prerequisites: PHI 2101, NURS 6210. Enrollment is based on theoretical knowledge/skills related to caring for women's health issues. Prereq: DNP student

NURS 6306. Women's Reproductive Health Practicum. (1 cr. ; S-N only; Every Fall)
Clinical experience in women's reproductive health setting to develop basic skills in providing holistic, safe, competent care, including history taking, physical examination, and patient education specific to women's reproductive health issues across lifespan. Prereq: [6305 or concurrent registration is required (or allowed) in 6305]

NURS 6307. Assessment and Management of Health for APNs Practicum III. (1 cr. ; S-N only; Every Summer)
Comprehensive advanced nursing assessment and management for acute and chronic health conditions of the adult primary care population across the life span. Synthesis and application of nursing theory and evidence-based implementation and evaluation of safe and effective therapeutic interventions to promote, maintain, and restore health.

NURS 6308. Women's Primary Care Practicum. (1-2 cr. ; S-N only; Every Spring)
Practicum in women's reproductive and primary health care settings to continue development of basic skills in providing holistic, safe, competent care, including history taking, physical examination, patient education specific to reproductive and primary healthcare issues across lifespan. Prereq: 5200, 5222, 5228, 5229, 6501, 6305, 6306

NURS 6405. Advanced Practice CNS Roles Across the Lifespan. (3 cr. ; A-F only; Every Fall)
Develop expertise and leadership in the clinical nurse specialist roles within the three spheres of influence (patient, nursing, organization), using current evidence. Prereq: 5200, 7103, 7900

NURS 6406. Advanced Practice CNS Roles Across the Lifespan: Practicum. (1 cr. ; S-N only; Every Fall)
Students analyze/evaluate roles of CNS within the three spheres of influence, using current practice standards/research. Prereq: 5200, 7103

NURS 6407. Advanced Nursing Care of Older Adults. (3 cr. ; A-F only; Every Fall)
Theory/research in promotion, maintenance, and restoration of the health of older adults within the context of their families and different care settings. Independent/collaborative roles of the advanced practice nurse in different settings. Prereq: [5200, 5222, 5224, 5228, 6500, 6501, 7504, 7505] or instr consent

NURS 6408. Advanced Nursing Care of Older Adults Practicum. (1-2 cr. ; S-N only; Every Fall)
Application of theory and evidence-based knowledge for advanced practice nursing students to develop skill in assessing and managing health issues commonly experienced by older adults in a variety of care settings. Prereq: [5200, 5222, 5224, 5228, 6500, 6501, 7504, 7505] or instr consent

NURS 6501. Assessment and Management of Health for Advanced Practice Nurses, I. (3 cr. ; A-F only; Every Fall)
Advanced practice nursing. Health promotion and data-based assessment/management of common acute and stable chronic conditions for the primary care populations. Role of the advanced practice nurse, process of clinical reasoning and decision-making, and independent and collaborative practice health care plans, utilizing evidence-based practice. Prereq: DNP student or instr consent

NURS 6502. Assessment and Management of Health for Advanced Practice Nurses, II. (2-3 cr. ; A-F only; Every Spring)

NURS 6504. Assessing, Managing Psychiatric Disorders in Adv Pract Psychiatric-Mental Health Nursing. (2 cr. ; A-F only; Every Spring)
Apply advanced concepts from nursing theory and research, social sciences, neuropsychology, and neuropsychopharmacology in the differentiation and explanation of psychiatric symptoms and disorders across the age continuum.

NURS 6505. PMH/APN Prac II:Assessing, Managing Psychiatric Disorders in Adv Pract Psychiatric-Mental Health Nurs. (2 cr. ; S-N only; Every Spring)
Diagnostic interviewing skills to conduct a comprehensive psychiatric assessment for patients across the lifespan. In collaboration with an interdisciplinary team and patient, students develop an initial evidence-based, integrative treatment plan. Prereq: 5200, 5222, 5224, 5228, 6604, 6605, CSH 5101, concurrent registration is required (or allowed) in 6404

NURS 6600. Health Systems and Care Models. (3 cr. ; A-F only; Every Spring)
Current/emerging care delivery systems and nursing models are analyzed as to how they meet dynamic, social, economic, technological, political trends. Impact of disruptive technologies, business models, value networks, designing better models.
NURS 6602. PMH Advanced Practice Nursing: Group as a Health Care Intervention. (2 cr.; A-F only; Every Fall) Theoretical concepts/research findings from areas of group theory, group dynamics, group therapy applied in development of model for utilizing group as intervention for various client populations. prereq: 6802, 6803, concurrent registration is required (or allowed) in 6803

NURS 6603. PMH APN Practicum IV: Group as a Health Care Intervention. (2 cr.; S-N only; Every Fall) Develop new competencies in conducting group therapy, Diagnostic interviewing/assessment skills. Evidence-based management plans with individuals/families at risk of psychiatric disorders/mental health problems. prereq: concurrent registration is required (or allowed) in 6602, 6802, 6803

NURS 6604. Foundations for Integrative Mental Health and Psychiatric Advanced Practice Nursing. (2 cr.; A-F only; Every Fall) Examine concepts, theories, and paradigms foundational to psychiatric and mental health nursing practice and inter-professional integrative mental health care. Develop clinical interviewing methods that elicit a client's health narrative and facilitate the therapeutic relationship. Promotes beginning skill in reflective clinical practice. prereq: concurrent registration is required (or allowed) in 6605, 5200, 5222, 5226, 5228, 5229, CSH 5101

NURS 6605. Psychiatric/Mental Health Advanced Nursing Practice Practicum I. (1 cr.; S-N only; Every Fall) First clinical course in advanced practice psychiatric/mental health nursing. Mental health promotion/mental illness risk reduction. Clinical interviewing, holistic health assessment, integrative mental health care management. prereq: concurrent registration is required (or allowed) in 6604, 5200, 5222, 5226, 5228, 5229, CSH 5101

NURS 6702. Nursing Leadership Seminar: Introduction to Innovation and Leadership. (3 cr.; A-F only; Every Fall) Leadership models and recommended competencies in context of current trends. Applying design thinking/insights from nursing leaders. Innovation and expansion of nursing leadership into new settings and roles.

NURS 6703. Nursing Leadership Seminar: Organizational Culture and Leadership. (2 cr.; A-F only; Every Fall) Evaluate the evidence base for nurse executive practices and the relationships between leadership and organizational culture and performance. prereq: Grad student or instr consent

NURS 6704. Nursing Leadership Practicum: Organizational Culture and Leadership. (1-2 cr.; S-N only; Every Spring) Implement evidence-based models through projects with preceptor in area of organizational environment and culture through experiential activities, including conferences, intensive clinical experiences, clinical conferences, and simulation. prereq: concurrent registration is required (or allowed) in 6703

NURS 6705. Nursing Leadership Seminar: Quality and Change Management. (2 cr.; A-F only; Every Fall) Comprehensive background in the science of patient safety, quality improvement, error management, and change implementation. prereq: [6702, 6703] or instr consent. concurrent registration is required (or allowed) in 6704

NURS 6706. Nursing Leadership Practicum: Quality and Change Management. (1-2 cr.; S-N only; Every Fall) Gain experience in implementing evidence-based model of change related to safety promotion, quality improvement, or error management in collaboration with preceptor or designee. prereq: 6705

NURS 6707. Health Care Design and Innovation Practicum. (2 cr.; S-N only; Every Fall & Spring) A health care design and innovation practicum experience to support integration of knowledge, skills and abilities related to human centered thinking and an experienced based design innovation: product, service, or system innovation delivery change. prereq: Students in Health Care Design and Innovation certificate program or DNP students who have completed, Nurs 7610, CSPIH 5711, HUMF 5874.

NURS 6802. Psychiatric/Mental Health Advance Practice Nursing: Psychotherapy with Individuals and Families. (2 cr.; A-F only; Every Summer) Evaluate selected theories/models, research, clinical evidence, therapeutic use of self for developing/implementing psychotherapeutic interventions used to promote mental health/assist individuals. prereq: 6102, 6604, 6605

NURS 6803. Psychiatric/Mental Health Adv Prac Nurs Practicum III: Psychotherapy With Individuals, Families. (1 cr.; S-N only; Every Summer) Theories, research, clinical evidence. Psychotherapeutic interventions/therapeutic use of self to promote mental health/advance treatment, management, recovery from bio/psycho/social sequelae of psychiatric illnesses. prereq: concurrent registration is required (or allowed) in 6802, 6102, 6504, 6505

NURS 6895. Adult Acute Care Holistic Health Assessment. (2 cr.; A-F only; Every Fall) Provides nurse anesthetists and other interested APRN students with the cognitive and psychomotor skills necessary to perform an advanced health assessment for acute care adult patients and/or those in need of a preoperative assessment. prereq: Nurse anesthesia DNP student or instr consent

NURS 6900. Introduction to Principles of Anesthesia. (6 cr.; A-F only; Every Spring) First in a series of four courses that introduces the nurse anesthesia student to the safe and effective principles of nurse anesthesia. prereq: Doctorate of nursing practice program

NURS 6901. Basic Nurse Anesthesia Principles. (3 cr.; A-F only; Every Fall) Examination/application of basic principles of anesthesia to formulate nurse anesthesia care plans for care of adults undergoing anesthesia. prereq: 6900, 6910, concurrent registration is required (or allowed) in 6911

NURS 6902. Nurse Anesthesia Care: Cardiothoracic Disease. (2 cr.; A-F only; Every Spring) Principles of nurse anesthesia used to deliver anesthesia to complex patients/populations. Anesthesia for patients undergoing cardiovascular and thoracic procedures. prereq: 5222, 5228, 6900, 6901, concurrent registration is required (or allowed) in 6912, PHSL 5115

NURS 6903. Nurse Anesthesia Care: Special Populations. (2 cr.; A-F only; Every Summer) Examine/apply principles used to deliver anesthesia by nurse anesthetists to special populations: pediatric, trauma, obstetric/gynecologic, and acute and chronic pain patients. prereq: 6900, 6901, 6902, concurrent registration is required (or allowed) in 6912, admission to BSN-DNP nurse anesthesia specialty

NURS 6910. Introduction to Nurse Anesthesia Practicum I. (1 cr.; S-N only; Every Summer) Basic skills in nurse anesthesia practice. Equipment safety checks, room set up, pre-operative assessment, basic airway skills, intravenous fluid replacement, positioning of patient/management of emergence. prereq: Grad Student in Doctorate of Nursing Practice Program, concurrent registration is required (or allowed) in 6900

NURS 6911. Basic Nurse Anesthesia Principles Practicum II. (2 cr.; S-N only; Every Summer) Develop proficiency in nurse anesthesia practice including basic equipment safety checks, room set up, pre-operative assessment, basic airway skills, intravenous fluid replacement, positioning of patient, management of emergence. prereq: N6910, concurrent registration is required (or allowed) in N6901. Grad student in Doctorate of Nursing Practice Program

NURS 6912. Nurse Anesthesia Care: Cardiothoracic Disease Practicum. (3 cr.; S-N only; Every Spring) Develop proficiency in nurse anesthesia practice. Basic equipment safety checks, room set up, pre-operative assessment, basic airway skills, intravenous fluid replacement, positioning of patient and managing emergence. prereq: concurrent registration is required (or allowed) in 6902, DNP-nurse anesthesia specialty student

NURS 6913. Nurse Anesthesia Care: Special Populations Practicum. (4 cr.; S-N only; Every Summer) Develop proficiency in nurse anesthesia practice for special populations, including pediatrics, obstetrics/gynecology, trauma, and patients with acute and chronic pain. prereq: Grad student in doctorate of nursing practice
program nurse anesthesia specialty; concurrent registration is required (or allowed) in 6903

NURS 6914. Basic Nurse Anesthesia Principles Practicum III. (3 cr.; S-N only; Every Fall)
Develop progressive proficiency in nurse anesthesia practice including basic equipment safety checks, room set up, pre-operative assessment, basic airway skills, intravenous fluid replacement, positioning of patient, management of emergency. prereq: N6910, concurrent registration is required (or allowed) in N6901

NURS 6920. Primary Care: Assessment of Health and Care of Well Children. (3 cr.; A-F only; Every Fall)
Age-specific, family-centered, assessment, prevention and health promotion services for infants through adolescents. Comprehensive health supervision. Critical thinking and advanced practice nursing interventions. prereq: 5200, 5222, 5229, concurrent registration is required (or allowed) in 6921, instr consent

NURS 6921. Assessment of Health and Care of Well Children: Primary Care Practicum. (; 1-2 cr.; S-N only; Every Spring)
Age-specific, family-centered nursing assessment and interventions to promote wellness for infants through adolescence. Compiling and evaluating advanced nursing interventions for disease prevention and health promotion. Models of primary prevention. prereq: 5200, 5222, 5229, concurrent registration is required (or allowed) in 6920, instr consent

NURS 6922. Primary Care: Assessment and Management of Common Conditions Affecting Children. (; 3 cr.; A-F only; Every Fall)
Research-based evaluation and management of common conditions affecting children from infancy through adolescence. Theories and models used to explain and predict physiologic and psychological adaptation of children and their families. prereq: 6920, 6921, concurrent registration is required (or allowed) in 6923, instr consent

NURS 6923. Primary Care Practicum: Assessment and Management of Common Conditions Affecting Children. (; 2 cr.; S-N only; Every Fall)
Age-specific, family-centered nursing assessment and intervention of acute and chronic conditions of children within the family context. Nursing intervention strategies including diagnostics, therapies, education, and follow-up evaluation of outcomes. prereq: 6920, 6921, concurrent registration is required (or allowed) in 6922, instr consent

NURS 6924. Assessment and Interventions for Children and Youth With Special Health Care Needs. (; 2 cr.; A-F only; Every Fall)
Children and youth with special health care needs. Growth and development, pathophysiology, and specific conditions within a holistic, family-centered, community based, culturally competent, coordinated approach to assessment and intervention. prereq: instr consent

NURS 6925. Advanced Concepts in Women’s Health Care I. (1-3 cr.; A-F only; Every Spring)
The course builds on foundational theoretical and evidence-based content to develop advanced assessment and care planning competencies in working with patients with complex gynecological and pregnancy-related conditions. prereq: 6305, 6306, 6501

NURS 6926. Advanced Concepts in Women’s Health for WHNP Practicum I. (; 1 cr. [max 2 cr.]; S-N only; Every Spring)
Develop advanced women’s health assessment/planning skills. Experience working with women who have complex gynecological/pregnancy-related conditions. prereq: WHNP DNP student, concurrent registration is required (or allowed) in 6925, 5222, 5228, 5229, 5200, 6305, 6306

NURS 6927. Advanced Concepts in Women’s Health II. (; 3 cr.; A-F only; Every Summer)
Advanced concepts in gender-specific health care over adult lifespan and common primary health care issues. Utilization of evidence based integrated therapies and inter-professional practice competencies to promote positive outcomes in women’s health populations. prereq: 6305, 6306, 6925, 6926, concurrent registration is required (or allowed) in 6928, CSPH 5101, current DNP WHNP student

NURS 6928. Adv Concepts in Women’s Health II WHNP Prac. (; 1 cr.; S-N only; Every Summer)
Expands on advanced assessment/management skills in women's health through individualized patient centered care that encompasses primary health issues utilizing integrative approaches/interprofessional practice to promote positive outcomes in women's health populations. prereq: 6305, 6306, 6925, 6926, concurrent registration is required (or allowed) in 6927, CSPH 5101, DNP WHNP student

NURS 6929. Advanced Nursing Care of Children with Acute Illness; Practicum for PCNS. (; 2 cr.; S-N only; Every Fall)
Synthesis and application of theory, research, and evidence-based practice to effectively implement pediatric clinical nurse specialist role. Focuses on comprehensive acute, complex case, role implementation, and contextual factors affecting health of children with special health needs and families. prereq: [6405, grad student in Nursing admitted to pediatric clinical nurse specialist area] or instr consent

NURS 6930. Foundations of Advanced Public Health Nursing Practice. (; 3 cr.; A-F or Audit; Every Fall)

NURS 6931. Health Equity and Social Justice. (1 cr.; A-F only; Every Fall)
Complex relationships among social determinants of health, health disparities, population health status. Analyze/criticize both evidence-based/untested strategies for reducing health disparities. prereq: 6930 or instr consent

NURS 6934. Population-focused Assessment & Prioritization. (; 1 cr.; A-F or Audit; Every Fall)
Principles of community-based participatory methods used to conduct population-focused assessments. Review literature/identify gaps in knowledge. prereq: 6930 or instr consent

NURS 6942. Health Equity and Social Justice Practicum. (2 cr.; S-N only; Every Fall)
Practicum experiences at community site serving populations with compromised health status related to health disparities. Collaborate with agency staff/community partners to identify health disparities relevant to populations served. Develop social justice conceptual framework/propose strategies to improve population health. prereq: instr consent

NURS 6944. Population-focused Assessment & Prioritization Practicum. (1 cr.; S-N only; Every Fall)
Population-focused assessment in collaboration with community partners. Identify key informants. Develop community partnerships. Use multiple approaches to data collection/analyses. Prioritize community assets, needs, contributing factors. prereq: 6930 or instr consent

NURS 7000. DNP Proseminal. (; 1 cr.; A-F only; Every Fall)
Historical, regulatory, and professional underpinnings of advanced specialty nursing practice within a clinical doctoral framework. prereq: Admission to Post-BSN Doctorate of Nursing Practice Program

NURS 7004. Nurse Anesthesia Practicum A. (; 5 cr.; S-N only; Every Fall)
First in a series of three clinical courses that focus on developing proficiency in nurse anesthesia practice, management. prereq: 5920

NURS 7005. Nurse Anesthesia Practicum B. (; 5 cr.; S-N only; Every Spring)
Second in a series of three clinical courses that develop proficiency in nurse anesthesia practice. prereq: 7004

NURS 7006. Nurse Anesthesia Practicum C. (; 5 cr.; S-N only; Every Summer)
Third in a series of three clinical courses that develop proficiency in nurse anesthesia practice. prereq: 7004, 7005

NURS 7100. Quality Improvement and Implementation Science in Health Care. (; 3 cr.; A-F only; Every Fall)
Study of improvement and implementation science with emphasis on integration of organizational change theory, quality improvement models, guidelines, and strategies to drive evidence-based change

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
and improve patient outcomes in the context of healthcare systems.

**NURS 7101. Integrating Change Theory and Quality Improvement.** (2 cr.; A-F only; Every Spring & Summer) Analysis and evaluation of change theories in relationship to quality improvement in health care in order to integrate change theory into the design and development of the student’s DNP project. prereq: 7100 or instr consent

**NURS 7102. Scholarly Dissemination and Advanced Professional Engagement.** (2 cr.; A-F only: Every Fall, Spring & Summer) Synthesis of DNP project components with emphasis on development and dissemination of scholarly manuscript. Recognition of advancement of professional opportunities and commitment.

**NURS 7105. Knowledge Representation and Interoperability.** (2 cr.; A-F only; Every Summer) Conceptual/operational aspects of knowledge representation structures in nursing, including standards and interoperability. Representation of clinical work in the electronic health record. Critical analysis of interoperability, ethical issues, and values. prereq: NURS 5115 or instr consent

**NURS 7106. Knowledge Representation and Interoperability Practicum.** (2 cr.; S-N only; Every Summer) Knowledge representation and interoperability principles/standards to improving knowledge in clinical or public health settings. Applied knowledge representation to nursing, prereq: NURS 5115 or instr consent; [NURS 7105 or concurrent registration is required (or allowed) in NURS 7105]

**NURS 7108. Population Health Informatics.** (2 cr.; A-F only; Every Fall) Standards, interoperability, and integration of information systems for population health are examined. Population health use cases are analyzed for potential benefits, legal, ethical, and practical issues related to the development of population health information systems. prereq: [S115 or [HINF 5430, HINF 5431]] or instr consent

**NURS 7109. Population Health Informatics Practicum.** (2 cr.; S-N only; Every Fall) Apply principles, theories, and standards to integration of data to solve a particular population health problem. prereq: [S115, [7108 or concurrent registration is required (or allowed) in 7108] or [HINF 5430, HINF 5431]] or instr consent

**NURS 7110. NURS 7110 DNP Project Practicum.** (1-3 cr. [max 12 cr.]; S-N only; Every Fall, Spring & Summer) Directed application of a quality improvement process, change theory, and inter-professional collaboration through the development, implementation, evaluation and dissemination of an evidence-based intervention (DNP Project) within the context of health, a health care system and/or healing environment.

**NURS 7111. DNP Project Direction II: Implementation.** (1 cr.; S-N only; Every Fall, Spring & Summer) Directed application of quality improvement process/change theory. Inter-professional collaboration through leadership/implementation of scholarly clinical leadership project. Health care system/healing environment.

**NURS 7112. DNP Project Direction III: Evaluation.** (1 cr.; S-N only; Every Fall, Spring & Summer) Directed application of program evaluation and analysis. Interpretation of project data, dissemination of findings during evaluation phase of DNP Leadership Project. Health care system and healing environment.

**NURS 7113. Clinical Decision Support: Theory.** (2 cr.; A-F only; Every Spring) Principles and concepts of knowledge management and decision making for support of clinical practice. Students design a clinical decision support intervention and examine the legal, ethical, and practical issues related to its implementation and maintenance of CDS interventions. prereq: 5115 or HINF 5430/5431 or instr consent

**NURS 7114. Clinical Decision Support Practicum.** (2 cr.; S-N only; Every Spring) Apply clinical decision support knowledge to the development and application of a clinical decision support intervention. prereq: [5115, [7113 or concurrent registration is required (or allowed) in 7113] or [HINF 5430, HINF 5431]] or instr consent

**NURS 7118. Human Factors and Human-Computer Interaction in Health Informatics.** (3 cr.; A-F or Audit; Every Spring) Principles of human factors and human-computer interaction to optimize research/practice in nursing and health informatics. Interactive system design that accommodates/enhances capabilities of user. prereq: Biostatistics or instr consent

**NURS 7200. Economics of Health Care.** (3 cr.; A-F or Audit; Every Spring & Summer) Economic theories of health care in relation to health disparities and global health. Financing strategies, payment systems, and their effect on doctor/nursing practice. prereq: Admission to DNP program

**NURS 7202. Moral and Ethical Positions and Actions in Nursing.** (2 cr.; A-F or Audit; Every Fall & Spring) Normative ethics and theoretical underpinnings for positions taken. Implications for subsequent action. Morally defensible positions on health-related issues, corresponding actions from perspective of nursing.

**NURS 7209. Integrative Health and Healing.** (1 cr.; A-F only; Every Spring) Foundational course for advanced nursing practice. Scholarship, research, and theory underlying integrative therapies and advanced holistic nursing practice. prereq: 5101, 5200, 5222, 6200, 7000, instr consent

**NURS 7210. Integrative Health and Healing Practicum I.** (1 cr.; S-N only; Every Spring) Foundational clinical course in advanced nursing practice for integrative health and healing. Development of clinical competencies in holistic health assessment, management, and evaluation. prereq: 5101, 5200, 5222, 6200, 7000, beginning level skill in one integrative therapy, instr consent

**NURS 7211. Integrative Health and Healing Practicum II.** (2 cr.; S-N only; Every Fall) Foundational course for advanced nursing practice. Scholarship, research, and theory underlying integrative therapies and advanced holistic nursing practice within the context of disease prevention, health promotion, and teaching/learning. prereq: 5101, 5200, 5222, 6200, 7000, 7209, 7210, [7211 or concurrent registration is required (or allowed) in 7211], 7900, CSH 5701, beginning level skill in two integrative therapies, instr consent

**NURS 7212. Integrative Health and Healing Practicum III.** (2 cr.; S-N only; Every Spring) Development of clinical competencies in holistic health assessment, teaching/learning, and understanding the role of other CAM providers. prereq: 5101, 5200, 5222, 6200, 7000, 7209, 7210, [7211 or concurrent registration is required (or allowed) in 7211], 7900, CSH 5701, beginning level skill in two integrative therapies, instr consent

**NURS 7213. Midwifery Clinical and Professional Integration.** (3 cr.; S-N only; Every Spring) Integration of clinical role of nurse midwife. Role in leadership, legislation, and policy. prereq: Nurse midwifery DNP student in final semester, no incomplete cr, instr consent

**NURS 7214. Integrative Health and Healing Practicum IV.** (1 cr.; A-F only; Every Spring) Programs of integrative therapies and healing practices in a variety of clinical/organizational settings. Creation of holistic nursing health care models, sustainable business plans, and the application of leadership skills. prereq: 7211 or instr consent

**NURS 7215. Integrative Health and Healing Practicum III.** (2 cr.; S-N only; Every Spring) Application of leadership competencies in developing, implementing, and evaluating integrative health and healing services and programs. prereq: 7212 or instr consent

**NURS 7300. Program Planning and Evaluation.** (3 cr.; A-F or Audit; Every Fall & Spring) A critical analysis of methods for practical program planning and evaluation for advanced nursing professionals in leadership roles; includes evaluation of approach and design, intervention processes including stakeholder issues, measurement issues, and strategies to evaluate outcomes achievement. prereq: Admission to DNP program or instr consent

**NURS 7310. WHNP Clinical and Professional Integration.** (2 cr.; S-N only; Every Spring) Integration of the clinical and professional role of the women’s health nurse practitioner, including understanding of the role of the WHNP in leadership, legislation, and policy. prereq: WHNP DNP student in final semester, passed all courses, no incomplete credits
NURS 7400. Health Policy Leadership. (3 cr.; A-F or Audit; Every Fall)
Acquisition of policy leadership and advocacy principles and skills and engagement in the process of continuous policy development and public policy development to transform health care delivery, promote equitable distribution of health care resources, address health disparities, and improve population health. prereq: Admission to DNP program

NURS 7401. Health Policy Leadership Practicum. (0.5-1 cr.; S-N only; Every Spring)
Translation of nursing, health, and political science and application of health policy advocacy knowledge and skills to improve health care delivery, address health disparities, or advance population health.

NURS 7406. Advanced Nursing Practicum in Adult-Gerontology Health. (2 cr.; S-N only; Every Spring)
Final clinical course developing proficiency in the advanced practice specialty role. Focus is on applying/evaluating evidence for clinical practice and achieving a level of competency as a clinical nurse specialist or nurse practitioner in adult-gerontology health. prereq: [5222, 5228, 5224, 5200, 6407, 6501, 7505, not [ANP or GNP]] or [5222, 5228, 5224, 5200, 6407, 6500, 6501, 7504, 7505, [ANP or GNP]] or instn consent

NURS 7500. Health Care of Children for the Family Nurse Practitioner. (3 cr.; A-F only; Every Fall)
Application of mid-range theories, models, concepts, and research in designing age-specific plans for the promotion, maintenance, and restoration of the health of infants, children, and adolescents within the context of their families and communities. prereq: 5200, 7503, 7504, concurrent registration is required (or allowed) in 6102, concurrent registration is required (or allowed) in 7501, concurrent registration is required (or allowed) in 7506, instn consent

NURS 7501. Health Care of Children for the Family Nurse Practitioner Practicum. (1 cr.; S-N only; Every Fall)
Nursing theory, research, and evidence-based practice standards in evaluating/implementing safe and effective interventions to promote health and prevent illness in infants, children, and adolescents. Evaluation of evidence-based outcomes. prereq: 5200, 5222, 5228, 5224, 6501, 7504, 7505, instn consent

NURS 7503. Reproductive Health Care of Women Practicum for Family Nurse Practitioners. (1 cr.; S-N only; Every Spring)
Application of holistic health histories and physical assessments of women. Synthesize/use knowledge and research in clinical decision making to formulate health care management plans related to women's reproductive and sexual health throughout the life cycle. prereq: 5200

NURS 7504. Assessment and Management of Health for Advanced Practice Nurses, Practicum I. (1-2 cr.; S-N only; Every Fall)
Application of holistic health histories and physical assessments by advanced practice nurses to formulate and implement individualized patient-centered health care management plans to support positive health outcomes in primary care populations experiencing acute and stable chronic conditions. prereq: 5200, 5222, 5224, 5229, 6501

NURS 7505. Assessment and Management of Health for Advanced Practice Nurses Practicum II. (1-2 cr.; S-N only; Every Spring)
Comprehensive advanced nursing assessment/management for acute and chronic health conditions of the primary care population across the life span. Synthesis/application of nursing theory and evidence-based implementation/evaluation of safe and effective therapeutic interventions to promote, maintain, and restore health. prereq: 5200, 5222, 5224, 5229, 6501 or concurrent registration is required (or allowed) in 6501, 6502 or concurrent registration is required (or allowed) in 6502

NURS 7506. Family Practice Practicum III: Assessment and Management of Health for the Family Nurse Practitioner. (1 cr.; S-N only; Every Fall)
Evaluation of theories and research to support the development of holistic nursing practice models and clinical decision-making for health promotion, disease prevention and intervention. Evaluation of patient outcomes using nursing standards and criteria. prereq: 5200, 5222, 5228, 5229, 6501, 7504, 7505, instn consent

NURS 7507. Assessment Management of Health Practicum IV: Community Health Leadership for Family Nurse Pract. (1 cr.; S-N only; Every Spring)
Application of principles of health policy and interdisciplinary collaboration while synthesizing and utilizing evidence and evidence-based research to formulate a proposal for organizational, institutional, community, or governmental arenas to address needs related to access, health disparities, or health promotion issues. prereq: 7400 or concurrent registration is required (or allowed) in 7400, 7506

NURS 7508. Health Care of the Elderly for the Family Nurse Practitioner. (1 cr.; S-N only; Every Summer)
Synthesis and application of nursing theory, research and evidence-based practice standards in the evaluation and implementation of safe, effective interventions to promote health and prevent illness in elderly patients from family- and patient-centered contexts. Evaluation of evidence-based outcomes. prereq: 7504, 7505

NURS 7509. Assessment and Management of Health Practicum VI: Primary Care for the Family Nurse Practitioner. (1 cr.; S-N only; Every Spring)
Managing health across the lifespan in primary care settings. Health promotion, disease prevention, intervention. Implementing holistic, culturally-sensitive comprehensive, collaborative nursing practice models. Theories, ethical principles, research. prereq: 5200, 5222, 5228, 5229, 6501, 7504, 7505, concurrent registration is required (or allowed) in 7507, concurrent registration is required (or allowed) in 7508

NURS 7515. Health Care of Children for the Family Nurse Practitioner: Well Child Care. (1 cr.; A-F or Audit; Every Summer)
Development of knowledge of mid-range theories, care models. Promotion/maintenance of health of newborns, infants, children, adolescents within context of families/communities. prereq: Admitted FNP DNP student

NURS 7516. Health Care of Children for the Family Nurse Practitioner: Acute and Chronic Management. (2 cr.; A-F only; Every Fall)
Identifying diagnostic criteria for common acute/chronic pediatric conditions. Apply mid-range theories, research, models of care to restore health of newborns, infants, children, adolescents. prereq: 5200, 7515, 7504, 7505

NURS 7518. Health Care of the Elder Patient for the Family Nurse Practitioner. (1 cr.; A-F only; Every Summer)
The application of mid-range theories, models, and concepts applicable to the promotion, maintenance, and restoration of the health of the elderly patients within the context of their families and communities. Current research is evaluated and used as the basis for designing age-specific interventions for elderly patients and their families. prereq: Nurs 6502

NURS 7600. Nursing Research and Evidence Based Practice. (2-4 cr.; A-F only; Every Fall & Spring)
Examination of evidence-based nursing research and evaluation including types and levels of evidence, research process, critique and synthesis of research studies. Science of implementation. prereq: Completion of or concurrent enrollment in a 3 credit inferential statistics course

NURS 7604. Executive Leadership Seminar: Boundary Spanning Leadership. (2 cr.; A-F only; Every Spring)
Boundary spanning leadership for solving problems, driving innovation, and transforming healthcare organizations to advance the common good and improve health care by employing strategies that engage people from outside the organization in collaborative teams. prereq: [6705, 6706] or instn consent

NURS 7605. Executive Leadership Practicum: Boundary Spanning Leadership. (1-2 cr.; S-N only; Every Spring)
Application of boundary spanning leadership in comparison to other leadership theories for solving problems, driving innovation, and transforming healthcare organizations to a specific healthcare setting/organization by implementing strategies that engage people from outside the organization in collaborative teams. prereq: [6704, 6706] or instn consent

NURS 7606. Relationship-Based Leadership and Management. (3 cr.; A-F only; Every Spring)
Concepts, theories, and practices that support relationship-based leadership
NURS 7608. Health Care Finance and Resource Management. (3 cr.; A-F or Audit; Every Fall)
Financial planning, budgeting, reimbursement and decision-making concepts and strategies are applied to health care and service organizations. Emphasis is on conceptualizing resources broadly, particularly nursing, and translating practice relevant concepts and priorities into actions valued by organizational decision makers. prereq: Grad student or instr consent

NURS 7610. System Leadership and Innovation. (3 cr.; A-F only; Every Fall & Spring)
Health innovation and leadership, integrating whole systems thinking, relevant theories and generative leadership to advance innovation and achieve sustainable change in contemporary health settings.

NURS 7612. Psychiatric/Mental Health Advanced Practice Nursing: Professional Seminar. (1 cr.; A-F only; Every Spring)
Psychiatric/mental health advanced practice nursing: professional seminar. prereq: 6802, 6803

NURS 7613. Psychiatric/Mental Health Advanced Practice Nursing: Practicum V. (2 cr.; S-N only; Every Spring)
Final course provides opportunities for refinement of PMH APN roles and integration of DNP activities into clinical experiences. Providing evidence-based nursing care to persons experiencing or at risk of experiencing psychiatric disorders to positively influence health care delivery. prereq: [6802, 6803] or instr consent

NURS 7705. The Adult and Gerontological Clinical Nurse Specialist in Acute Care. (2 cr.; A-F only; Every Summer)
Development of advanced clinical reasoning, assessment of clinical outcomes, quality improvement and research based care for adult and elder patients with acute illness. Use of theory and research in the role of the CNS. prereq: 5200, 5222, 5224, 5228, 6100, 6405, 7103, 7900

NURS 7706. Implementing the Role of the Clinical Nurse Specialist in Acute Care. (1 cr.; S-N only; Every Summer)
Development of clinical expertise of CNS in provision of advanced nursing care for adults/elders. Students will utilize theory/research to implement roles of CNS. prereq: N5222, N5228, N5224, N7103, N5200, N7900, N6100, 7705 (co-requisite)

NURS 7800. Advanced Topics in Professional Nursing. (1-6 cr. [max 36 cr.]; Student Option; Every Fall, Spring & Summer)
Methods, theory, or advanced topics, including supervised projects. prereq: instr consent

NURS 7900. Scholarly Teaching and Learning in Nursing. (3 cr.; A-F only; Every Spring & Summer)
Elements of effective teaching/learning. Designing teaching-learning models, creating educational experiences that facilitate achievement of desired learner outcomes.

NURS 7902. Advanced Scholarly Teaching and Learning in Nursing. (1 cr.; S-N only; Every Fall)
Exploration of teaching-learning theory and evidence as applied to the design, development, implementation, and evaluation of effective teaching in a variety of settings.

NURS 7904. Nursing Education Practicum. (2 cr.; Student Option No Audit; Every Fall)
Design, implementation, and evaluation of evidence-based, scholarly teaching and learning in various nursing education contexts. Analysis of select nursing program in relation to meeting standards for accreditation and various other expected outcomes of nursing programs. prereq: Graduate student in nursing or NURS 7900 or equivalent.

NURS 7925. Systems of Care for Children and Youth With Special Health Care Needs Practicum. (2 cr.; S-N only; Every Spring)
Research-based evaluation/management of psychologic and physiologic responses to chronic illness of children and youth. Developing theory-based systems of nursing care that are holistic, family-centered, community-based, culturally-competent, and coordinated. prereq: 6924 or instr consent

NURS 7926. Advanced Assessment, Intervention in Families of Children and Youth With Special Health Care Needs. (2 cr.; A-F only; Every Spring)
In-depth, systemic, and theory-based study of family health assessment methods/intervention models. Assess, intervene, and evaluate intervention models related to patterns of functioning in families of children with complex health care needs. prereq: [6102 or equiv family theory course, 6200, concurrent registration is required (or allowed) in 7925] or instr consent

NURS 7927. Adv Assessment, Intervention in Families of Children and Youth With Special Health Care Needs Pract. (1 cr.; S-N only; Every Spring)
Assess, intervene, and evaluate intervention models related to patterns of functioning in families of children with complex health care needs. Prepares nurses to become members of an interdisciplinary team, working with families with special health care needs from diverse cultural backgrounds. prereq: [6102 or equiv family theory course, 6200, concurrent registration is required (or allowed) in 7925, concurrent registration is required (or allowed) in 7926] or instr consent

NURS 7930. Public Health Nursing Leadership Practicum. (2 cr.; S-N only; Every Spring)
Synthesis of advanced public health nursing research. Theory/application to health policy leadership, management, administration within public health nursing leadership situations. prereq: 6930

NURS 7939. Public Health Nurse Leadership Role. (1 cr.; A-F only; Every Spring)
Analyzes issues challenging advanced practice public health nursing including policy/practice issues. Relationships with stakeholders/constituencies involved with public health issues. Public sector financing. prereq: [6930, DNP student] or instr consent

NURS 7940. Application of Behavior Change Theory to Population Health. (1 cr.; A-F only; Every Spring)
Review of selected theories of behavior change for individuals, groups, organizations, communities, systems. Synthesizes/apply theories appropriately/effectively to guide public health nursing practice. prereq: 6930, [PubH 6020 or instr consent]

NURS 7942. Application of Behavior Change Theory to Population Health Practicum. (2 cr.; S-N only; Every Spring)
Clinical application/synthesis of selected theories of health behavior change for individuals, groups, organizations, communities, systems in population-based setting. prereq: 6930, PubH 6020

NURS 8121. Health Behaviors and Illness Responses. (3 cr.; A-F or Audit; Periodic Fall & Spring)
Theories of health behaviors and responses to illness are analyzed/criticized. Multivariate research designs. Specification of testable, descriptive, dynamic models for health/illness that incorporate culture, biology, environment, and health systems for diverse individuals, families, communities, and populations. prereq: Doctoral student or instr consent

NURS 8124. Interventions and Outcomes Research. (3 cr.; A-F or Audit; Every Spring)
Design/evaluation of intervention/outcomes research. Use of advanced experimental design and multivariate statistical approaches to evaluate theory-based interventions with longitudinal outcomes in context. prereq: 8121, PhD student, instr consent

NURS 8152. Scholarship in Health Care Ethics. (3 cr.; A-F only; Every Fall)
Analyze the underlying values in the concepts and discourses of health/disease. Evaluate ethical frameworks regarding their capability to address issues in health care. Analyze/discuss issues related to the responsible and ethical conduct of research. prereq: Doctoral student or instr consent

NURS 8171. Qualitative Research Design and Methods. (3-4 cr.; Student Option; Every Spring)
Overview and comparative analysis of selected qualitative research methods and analytic strategies. Focuses on developing rigorous qualitative designs that contribute to development of nursing and health care knowledge for diverse populations. prereq: 8170 or equiv

NURS 8172. Theory and Theory Development for Research. (3 cr.; Student Option; Periodic Fall & Spring)
Paradigms in nursing/health, associated methods of scientific/scholarly inquiry. Inductive/deductive techniques for theory development Theory-testing using data
Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.

**NURS 8173. Principles and Methods of Implementing Research.** (3 cr.; Student Option; Every Spring)
Integrates scientific, statistical, and practical aspects of research. Inter-relationships among design, sample selections, subject access, human subjects requirements, instrument selection and calibration, data management, analyses plans, grant writing, and research career issues. Field experiences required. Prereq: 8114 or other 8xxx grad research methods course, 2 grad stat courses;

**NURS 8175. Quantitative Research Design and Methods.** (3 cr.; A-F or Audit; Every Fall)
Designs for quantitative description and quasi-experimental/experimental evaluation of scientific problems across domain of nursing. Evaluation of logic of design/attribute of causality from health and social science perspectives. Prereq: PhD student in nursing, advanced applied statistics or instr consent

**NURS 8177. Advanced Nursing Research Practicum.** (2 cr.; S-N or Audit; Every Fall, Spring & Summer)
Students collaborate with research team under supervision of faculty mentor in designing/conducting a health-related research project. Prereq: PhD nursing student, instr consent, adviser consent

**NURS 8179. Biophysiological Measurement and Instrumentation in Clinical Research.** (3 cr.; Student Option; Every Fall)
Critical issues in measurement and instrumentation for clinical research. Methodological issues and critical appraisal of instruments in the study of biophysiological phenomena. Field observation experiences. Prereq: [B173, B175 or equiv, advanced level stat or concurrent registration is required (or allowed) in advanced level stat] or instr consent

**NURS 8180. Doctoral Proseminar I: Scholarly Development.** (1 cr.; S-N or Audit; Periodic Fall & Spring)
Transition to doctoral study. Begins socialization process to role of nursing scholar/scientist. Career trajectories of nursing scholars who have pursued various roles. Prereq: Doctoral nursing student

**NURS 8185. Qualitative Data Analysis for Health Care Research.** (3-4 cr.; Student Option; Every Summer)
Techniques for descriptive, interpretive, and analytic data. Data preparation and management, and analysis. Transforming data from multiple texts to theoretical conceptualizations. Writing, dissemination of findings. Prereq: 8171 or grad course in qualitative research methods

**NURS 8190. Critical Review in Health Research.** (2 cr.; A-F or Audit; Every Spring)
Skills needed to critique a body of scientific literature in focused areas of nursing research and related fields. Construction of literature reviews for planning research projects and for research utilization. Prereq: Advanced statistics course, instr consent

**NURS 8193. Special Topics in Nursing Research.** (1-6 cr.; max 12 cr.; Student Option; Every Fall, Spring & Summer)
Seminar and/or individual study of research design, methodologies, or instruments. Prereq: instr consent

**NURS 8195. Mixed Methods in the Social, Behavioral, and Applied Health Sciences.** (3 cr.; A-F only; Every Spring)
Integrate qualitative strategies with quantitative approaches in research designs. Strengths/Challenges of using mixed-methodological frameworks when studying the etiology of phenomena or evaluating clinical interventions. Prereq: instr consent

**NURS 8360. Advanced Clinical Nursing.** (1-6 cr.; Student Option; Every Fall, Spring & Summer)
Independent study or faculty seminar on special clinical topic when interest exists. Prereq: Grad nurs major, instr consent

**NURS 8361. Special Topics in Nursing.** (1-4 cr.; Student Option; Every Fall, Spring & Summer)
Students select and study a topic of interest.

**NURS 8444. FTE: Doctoral.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) Prereq: Doctoral student, adviser and DGS consent

**NURS 8666. Doctoral Pre-Thesis Credits.** (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer)
Tbd prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

**NURS 8777. Thesis Credits: Master’s.** (1-16 cr.; max 50 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) Prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

**NURS 8888. Thesis Credit: Doctoral.** (1-24 cr.; max 100 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) Prereq: Max 18 cr per semester or summer; 24 cr required

**NUTR 5622. Vitamin and Mineral Biochemistry.** (3 cr.; Student Option; Every Spring)
Nutritional, biochemical, and physiological aspects of vitamins and essential minerals in human and experimental-animal models. Prereq: BioC 3021, Phsl 3051, FSCN 4612

**NUTR 5624. Nutrition and Genetics.** (2 cr.; Student Option; Every Fall)
Overview of gene-diet interactions and relevant technologies used to study such interactions. Nutrigenomics, epigenetics, transcriptomics, proteomics, metabolomics. Examples of gene-diet interactions, implications. Current issues. Prereq: Biochemistry

**NUTR 5625. Nutritional Biochemistry.** (3 cr.; Student Option; Every Fall)
Overview of biochemical molecules and pathways important in nutritional events. Prereq: BIOC 3021 or instr consent

**NUTR 5626. Nutritional Physiology.** (3 cr.; A-F or Audit; Every Spring)
Whole body macronutrient metabolism as it relates to etiology of metabolic diseases. Signaling between tissues to control homeostasis. How dysregulation of crosstalk can lead to metabolic diseases. How diet, exercise, or starvation impact metabolism. Regulation of food intake and energy expenditure. Designing/analyzing/interpreting research data. Prereq: NUTR 5625

**NUTR 5627. Nutritional and Food Toxicology.** (3 cr.; A-F only; Every Spring)
Toxic agents, organisms, and toxic effects that are important in the toxic events, with a focus on food toxicants and nutrient-toxicant interaction. Prereq: BIOC 3021; designed for students majoring in [nutrition or food science or toxicology]

**NUTR 5833. FTE: Master’s.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) Prereq: Master’s student, adviser and DGS consent

**NUTR 8444. FTE: Doctoral.** (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) Prereq: Doctoral student, adviser and DGS consent

**NUTR 8611. The Role of Nutrition in Cancer Causation and Prevention.** (2 cr.; A-F only; Every Fall)
This is a lecture and seminar based course that covers issues in nutrition and cancer, with an emphasis on the role of nutritional factors in the etiology and prevention of cancer and how nutrition research is translated into dietary recommendations for cancer prevention. During the seminars, students will discuss current epidemiological, clinical and laboratory evidences on modulation of cancer risk by dietary factors. Prereq: FScN 1112 (Principles of Nutrition), FScN 4612 (Advanced Human Nutrition), NUTR 5626 (Nutritional Physiology), Toxicology, Advanced Biology/Biochemistry/Genetics/Molecular Biology

**NUTR 8620. Advances in Nutrition.** (2 cr.; Student Option; Every Fall & Spring)
Recent research or special topics (e.g., obesity, vitamin biochemistry, nutrition education).

**NUTR 8621. Presentation Skills.** (1 cr.; S-N or Audit; Every Fall)
Orientation to nutrition graduate program. Presenting scientific seminars, using electronic presentation programs/equipment. Prereq: dept consent

**NUTR 8666. Doctoral Pre-Thesis Credits.** (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer)
OBST 7541. Advanced Ob/Gyn: Maternal-Fetal Medicine. (4 cr.; H-N only; Every Fall, Spring & Summer) Students will receive in-depth exposure to diagnosis and management of maternal and fetal complications of pregnancy.

OBST 7542. Advanced OB/Gyn: Urogynecology. (4 cr.; H-N only; Every Fall, Spring & Summer) Students will receive in-depth exposure to diagnosis and management of female pelvic floor disorders. Students will be under the guidance of the Urogynecology faculty. Students will be involved in both the inpatient and outpatient care of Urogynecology practice including the diagnosis and treatment of: urinary incontinence, pelvic organ prolapse, fecal incontinence, pelvic and bladder pain. Students will see urodynamics studies, office and surgical cystoscopy, complex surgical correction of pelvic floor disorders including sacral neuremodulation, midurethral slings, and sacralcolpopexy.

OBST 7550. Reproductive Health. (2 cr.; P-N only; Every Fall, Spring & Summer) This is a comprehensive course covering family planning methods, including abortion and contraception, their effectiveness, mechanism of action, advantages, disadvantages and management of complications. This course will look specifically at the etiology, prevention, diagnosis of and management plans for unplanned pregnancy.

OBST 7560. Research in Obstetrics and Gynecology. (4-8 cr.; H-N only; Every Fall, Spring & Summer) This is an individually designed course, with topics selected for each student. Most members of the ob-gyn staff are available for this one-to-one experience depending upon the establishment of joint interests with the student.

OBST 7575. Gynecological Pathology and Diagnostic Cytology. (3-6 cr.; H-N or Audit; Every Fall & Spring) The student participates in the diagnostic practice with the gynecologic pathology staff. Includes diagnostic cytology of pap smears encountered in actual practice and participation in working conferences. To be arranged in advance with the Ob/Gyn Education office. prereq: 7500.

OBST 7591. Women's Health Rotation. (2-6 cr.; H-N or Audit; Every Fall, Spring & Summer) Multidisciplinary exploration of women's health issues. Clinical experience/academic perspectives in gynecology/reproductive health, internal medicine, adolescent medicine, and psychology. Culture, economics, psycho-social status, and life span in women's health care delivery. prereq: 7500, Med 5500.

OBST 7910. Obstetrics and Gynecology Medical Residency. (6 cr.; H-N or Audit; Every Fall, Spring & Summer) Obstetrics and gynecology medical residency.

OBST 7930. Obstetrics and Gynecology Medical Fellowship. (6 cr. [max 120 cr.]) No Grade Associated; Every Fall, Spring & Summer) Obstetrics and gynecology medical fellowship.

OBST 8224. Gynecological Endocrinology I. (1-15 cr.; Student Option; Every Fall & Spring) N/A prereq: prereq 8223

OBST 8225. Gynecological Endocrinology II. (1-15 cr.; Student Option; Every Fall & Spring) N/A prereq: prereq 8224

OBST 8226. Obstetrical Physiology and Anesthesiology. (3 cr.; Student Option; Every Fall & Spring) N/A prereq: prereq 8225

OBST 8240. Human Gametes and Fertilization. (3 cr.; Student Option; Every Fall & Spring) N/A prereq: prereq 8241

OBST 8241. Human Gametes and Fertilization Laboratory. (2 cr.; Student Option; Every Fall & Spring) N/A prereq: prereq 8243

OBST 8243. Topics in Family Planning. (2-8 cr.; max 12 cr.) Student Option; Every Fall, Spring & Summer)

Occupational Therapy (OT)

OT 5122. Descriptive Neurology. (2 cr.; A-F or Audit; Every Fall) Relates neuroanatomical/neurophysiological principles to neurological conditions commonly seen in occupational/physical therapy practice. prereq: OT student or instr consent

OT 5161. Theory of Physical Medicine and Rehabilitation Applied to Medical Sciences. (2 cr.; A-F or Audit; Every Fall) Diagnostic procedures. Medical, surgical, and rehabilitation management of patient problems in orthopedics, surgery, pediatrics, dermatology, medicine, cancer, and speech. Correlation to current practice. Presentation of patients. prereq: OT student or instr consent

OT 5182. Functional Neuroanatomy and Neurophysiology. (4 cr.; A-F or Audit; Every Spring) Neuroanatomic structures as functional systems, basic neurophysiologic concepts. Emphasizes applications for understanding/treating physical dysfunctions. prereq: Registered occupational therapy student or instr consent
OT 5300. Concepts for Occupational Therapy Practice. (4 cr.; A-F or Audit; Every Fall)
Critical thinking, ethics, professional resources/organizations, patient-therapist relationship. Level I fieldwork experience. prereq: enrolled OT student or instr consent

OT 5313. Therapeutic Occupation. (4 cr.; A-F or Audit; Every Fall)
Therapeutic occupation philosophy, history, and frames of reference. Activity analysis applied to purposeful, therapeutic activities for individuals and groups. prereq: enrolled OT student or instr consent

OT 5341. Introduction: Evaluation and Intervention I. (4 cr.; A-F or Audit; Every Spring)
Assessment concepts/techniques. Application to patient populations with both mental health/physical disabilities. Treatment planning/documentation. prereq: 5393 or instr consent

OT 5342. Compensatory Rehabilitation: Evaluation and Intervention II. (4 cr.; A-F or Audit; Every Spring)
Assessment of daily living performance areas; adaptation techniques to compensate for performance deficits. Level I fieldwork experience. prereq: 5300, 5313 or instr consent

OT 5343. Specialty Topics: Evaluation and Intervention III. (4 cr.; A-F or Audit; Every Fall)
Applied critical thinking model to assessment/intervention of selected patient populations with mental/physical problems requiring specialized approaches. Focus on habilitation/rehabilitation of populations with multiple performance component deficits. Fieldwork. prereq: 5342 or instr consent

OT 5344. Neurorehabilitation: Evaluation and Intervention IV. (5 cr.; A-F or Audit; Every Fall)
Assessment/intervention related to perception, cognition, reflexes, sensory integration, and motor control. Application to individuals with multiple performance component deficits. prereq: 5343 or instr consent

OT 5360. Dynamics of Group Models. (2 cr.; A-F or Audit; Every Fall)
Application of group/team dynamics in diverse professional settings. prereq: 5313 or instr consent

OT 5370. Theory of Occupation. (1 cr.; A-F or Audit; Every Fall)
Occupational therapy frames of reference, role of activity, and historical development of profession. prereq: enrolled OT student or instr consent

OT 5375. Community Resources and Health-Care Issues. (2 cr.; A-F or Audit; Every Fall)
Analysis of community health-care systems, including cultural/family influences on individual health and decision making. Students identify current trends in health care and determine responses to them at social, political, or legislative level. prereq: 5300, 5342 or instr consent

OT 5376. Adult Education and Planning. (1 cr.; A-F or Audit; Every Spring)
Skills needed to plan, implement, and evaluate adult educational programs/materials for patient/family education, peer/professional education, and education of others in order to carry out therapeutic interventions. Student teaching unit, community based activity. prereq: 5313 or instr consent

OT 5380. Management of Occupational Therapy Services. (3 cr.; A-F or Audit; Every Spring)
Administration/management of occupational therapy services within managed care environment. Issues in Medicare, HMOs, TQM, consultation, human resources, promotion of profession. Emphasizes program development in current organizational structures. prereq: 5360, 5375, 5376 or instr consent

OT 5391. Occupation Across the Life Span. (3 cr.; A-F or Audit; Every Spring)
The well elderly, school therapy, work-related injuries/industrial rehabilitation. Fieldwork. prereq: 5375, 5376 or instr consent

OT 5392. Research in Occupational Therapy. (3 cr.; A-F or Audit; Every Spring)
Analysis of scientific literature, development of research proposals. prereq: 5313 or instr consent

OT 5393. Functional Anatomy and Kinesiology. (4 cr.; A-F or Audit; Every Fall)
Gross human anatomy emphasizing skeletal, muscular, circulatory, and peripheral nervous systems of the extremities and trunk. Includes cadaver lab prosections. Analyzing functional human movement from a biomechanical perspective. prereq: enrolled OT student or instr consent

OT 5394. Orthotics. (3 cr.; A-F or Audit; Every Fall)
Analysis, design, and construction of orthotic devices. prereq: 5341 or instr consent

OT 5395. Independent Study in Occupational Therapy. (1-4 cr.; A-F only; Every Fall)
Student Option; Every Fall, Spring & Summer
Independent Study in Occupational Therapy prereq: Enrolled OT student or instr consent

OT 6000. Foundations of Interprofessional Communication and Collaboration. (1 cr.; S-N only; Every Fall)
Foundations of Interprofessional Communication & Collaboration (FIPCC) is the first interprofessional course in Phase I of the 1 Health curriculum. More than 1,000 health and health care students from allied health, dentistry, dietetics, medicine, nursing, pharmacy, physical therapy, psychology, public health, social work, speech-language-hearing sciences, and veterinary medicine will be enrolled in this course. The course will be delivered to interprofessional groups of approximately 30-45 students in each room. This is a hybrid course with a blended format that involves trained facilitators leading face-to-face discussions which is supported by online resources and pre-work that addresses the following topics: ? Roles and responsibilities ? Health systems and interactions ? Teams and teamwork ? Wellbeing and resiliency ? Ethics and professionalism ? Leadership prereq: Enrolled OT student

OT 6100. Public and Professional Engagement I. (0.5 cr. [max 1 cr.]; S-N only; Every Fall & Spring)
Working with an academic adviser, students establish personal/professional goals and design a series of experiences in natural setting, including a broad base of contexts/practice settings/clients across the lifespan.

OT 6101. Foundations of Occupational Science and Occupational Therapy. (4 cr.; A-F only; Every Fall)

OT 6102. Professional Identity: Behaviors and Attitudes. (2 cr.; S-N only; Every Fall)

OT 6103. Occupational Therapy Process for Society. (3 cr.; A-F only; Every Fall)
Influence of society on health, occupational participation, and practice of occupational therapy. Students analyze health care system through global comparisons and apply key concepts. Written assignments, experiential learning activities.

OT 6111. Foundations: Occupations as Therapy. (3 cr.; A-F only; Every Fall)
Students apply Occupational Therapy Practice Framework in an analyzing of a series of craft-based activities and representative daily occupations. How to grade/adapt activities to enhance performance.

OT 6113. Occupational Therapy Process for Community. (3 cr.; A-F only; Every Fall)
Application of occupational therapy process to wellness and health promotion activities in the community. Knowledge, skills, and attitudes necessary to understand influence of community health on health of individuals. Health behavior theories, program development/evaluation. Applying theoretical models to community health.

OT 6200. Public and Professional Engagement II. (0.5 cr. [max 1.5 cr.]; S-N only; Every Fall, Spring & Summer)
Continuation of 6100. Students engage in professional/community activities that align with occupational therapy practice. prereq: 6100 or instr consent

OT 6201. Functional Anatomy and Kinesiology. (3 cr.; A-F only; Every Spring)
Gross human anatomy. Emphasizes skeletal, muscular, circulatory, and peripheral nervous systems of extremities, neck, and trunk. Online Anatomy TV, videotapes, cadaver lab prosections. Students analyze/evaluate human occupations tasks and activities from...
biomechanical perspective. prereq: OT student or instr consent

OT 6202. Occupational Therapy Process for Individuals: Occupation Through Compensation. (3 cr.; A-F only; Every Spring)
Compensatory approaches to enhance an individual's participation in occupations of daily living. OT practice framework applied to evaluation/intervention of individuals. Face-to-face labs, level I fieldwork. prereq: Registered OT student or instr consent

OT 6203. Occupational Therapy Process for Family. (2 cr.; A-F only; Every Spring)
Influence of family systems on health, well-being, and occupational participation of individual members. Family theories' influence on models of care. Non-standardized OT assessment in families of very young children and of elders with dementia. At-risk families. OT in home care settings. prereq: OT student or instr consent

OT 6213. Occupational Therapy Process for Individuals: Medical Contexts. (2 cr.; A-F only; Every Spring)
Overview of medical model systems/settings (e.g. inpatient acute, long-term care, partial hospitalization). Client assessment/intervention from medical model perspective. Reimbursement. Written/verbal communication. prereq: OT student or instr consent

OT 6301. Neuroscience. (5 cr.; A-F only; Every Summer)
Neuroanatomic structures, functional systems, neurophysiologic concepts. Applications to evaluate/ treat conditions in all areas of physical, psychosocial, and cognitive dysfunction. prereq: Registered OT student or instr consent

OT 6302. Occupational Therapy Process for Individuals: Occupation Through Remediation. (4 cr.; A-F only; Every Summer)
Biomechanical approach to evaluation/treatment of clients with clinical conditions with loss of strength, endurance, range of motions, sensibility, and soft tissue integrity. Cases on how to apply OT process to specific clients. prereq: Registered OT student or instr consent

OT 6312. Occupational Therapy Process for Individuals: Psychosocial Approaches. (3 cr.; A-F only; Every Summer)
This course emphasizes concepts of occupation as a tool for support and recovery of mental health across the lifespan. Theory based client conditions: client centered interventions; and appropriate safety and documentation practices for addressing both psychological and psychosocial aspects of occupational engagement and performance are emphasized. prereq: Registered OT student or instr consent

OT 6322. Occupational Therapy Process for Individuals: Work Contexts. (2 cr.; A-F only; Every Summer)
Knowledge, skills, and attitudes needed to apply occupational therapy process with individuals injured at work settings or to promote injury prevention programs in work settings. Unique role of rehab. Includes consultant. prereq: Registered OT student or instr consent

OT 6402. Occupational Therapy Process for Individuals: Occupation Through Neurorehabilitative Approaches. (4 cr.; A-F only; Every Fall)
Major theories of sensory systems, vision, motor control/learning, perception, cognition. Evaluation/intervention of central nervous system disorders. Theories for non-CNS issues in expanded populations. prereq: Registered OT student or instr consent

OT 6403. Management of Occupational Therapy Services. (1 cr.; A-F only; Every Fall)
Management/human resource knowledge/skills to create, maintain, and evaluate occupational therapy services. Health care systems, contexts, practice. Marketing, staffing, supervision, quality improvement. prereq: Registered OT student or instr consent

OT 6412. Occupational Therapy Process for Individuals: Orthotics and Prosthetics. (3 cr.; A-F only; Every Fall)
Occupational therapy process using prosth/orthotic devices to treat selected conditions in children, adults, and elders. Lab emphasizes practical skills, critical appraisal. Physical agent modalities, wound care. Fieldwork. prereq: Registered OT student or instr consent

OT 6422. Occupational Therapy Process: Group Context. (2 cr.; A-F only; Every Fall)
Hybrid course. Therapeutic intervention to facilitate change in individuals in a group setting. Students analyze group process, generate constructive feedback, evaluate group effectiveness. Application to mental health treatment. prereq: Registered OT student or instr consent

OT 6432. Occupational Therapy Process for Individuals: Educational Context. (2 cr.; A-F only; Every Fall)
Occupational therapy assessment/intervention in early intervention. K-12 settings. Models of services delivery. Legislation that governs school-based practice. Performance areas addressed by occupational therapists in these settings. prereq: Registered OT student or instr consent

OT 6433. Foundations of Occupational Science and Occupational Therapy. (4 cr.; A-F only; Every Fall)
Online/independent study. Science of human occupation, theory development, six occupation-based theories. Examine in depth a theory, model, or approach pertaining to a select topic area. Students work closely with their research adviser. prereq: Grad student, instr consent

OT 7101. Foundations of Occupational Science and Occupational Therapy. (4 cr.; A-F only; Every Fall)
How evidence-based practice is developed, disseminated, and utilized. Students in small groups write qualitative or quantitative scholarly proposal. Appraising literature. Assessment tools. Research design. Statistical analysis. prereq: OT student or instr consent

OT 7301. Neuroscience. (5 cr.; A-F only; Every Summer)
Neuroanatomic structures, functional systems, neurophysiologic concepts. Applications. Evaluation/intervention of central nervous system disorders. Theories for use with non-CNS issues for expanded populations. prereq: Registered OT student or instr consent

OT 7394. Scholarly Project in OT I. (2 cr.; S-N only; Every Summer)
Group or individual study of a question related to occupational therapy. Students plan, conduct, and evaluate mentored scholarly project, submit written description of project, and defend through poster presentation or orally. prereq: Registered OT student or instr consent

OT 7402. Occupational Therapy Process for Individuals: Occupation Through Neurorehabilitative Approaches. (4 cr.; A-F only; Every Fall)
Major theories to explain sensory systems, vision, motor control/learning, perception, and cognition. Evaluation/intervention of central nervous system disorders. Theories with evidence to use with non-CNS issues for expanded populations. prereq: Registered OT student or instr consent

OT 7596. Occupational Therapy Level II Fieldwork I. (6 cr.; S-N only; Every Fall, Spring & Summer)
Guided, supervised OT practice in affiliated medical, educational, or community institutions. Application of client-centered, culturally-effective care during active engagement as student develops professional role. prereq: Registered OT student or instr consent

OT 7696. Occupational Therapy Level II Fieldwork II. (6 cr.; S-N only; Every Fall, Spring & Summer)
Guided, supervised OT practice in affiliated medical, educational, or community institutions. Application of client-centered, culturally-effective care during active engagement as student develops professional role. prereq: Registered OT student or instr consent

OT 7796. Occupational Therapy Level II Fieldwork III: Optional. (1-6 cr.; S-N only; Every Fall, Spring & Summer)
Supervised practice in clinic or community agency with specialty focus. Sample topics: hand therapy, school therapy, clinical research. Students apply critical thinking through supervised application of theory/skills. prereq: Registered OT student or instr consent

OT 8300. Research Seminar in Occupational Therapy. (1 cr.; S-N or Audit; Every Fall & Spring)
Critical review of research literature in occupational therapy. Issues related to ethical/successful conduct/publication of research.
Development of Plan B project outline. prereq: 5392 or instr consent

OT 8310. Research Problems in Occupational Therapy. (1-6 cr.; S-N or Audit; Every Fall & Spring) Individual, concentrated study of a problem in occupational therapy. Completion of Plan B project. prereq: [5392, Plan B OT student] or instr consent

OT 8320. Fieldwork Education in Occupational Therapy I. (1-6 cr.; S-N or Audit; Every Fall, Spring & Summer) Supervised clinical practice in affiliated hospitals and community agencies. Students apply critical thinking through supervised application of theory/skills. prereq: Occupational therapy student or instr consent

OT 8321. Fieldwork Education in Occupational Therapy II. (1-6 cr.; S-N or Audit; Every Fall, Spring & Summer) Supervised clinical practice in affiliated hospitals and community agencies. Students apply critical thinking through supervised application of theory/skills. prereq: Occupational therapy student or instr consent

OT 8322. Fieldwork Education in Occupational Therapy III: Optional. (1-6 cr.; S-N or Audit; Every Fall, Spring & Summer) Optional fieldwork experience involving supervised practice in clinic or community agency with specialty focus. Sample topics: hand therapy, school therapy, clinical research. Students apply critical thinking through supervised application of theory/skills. prereq: Occupational therapy student or instr consent

OT 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Master's student, adviser and DGS consent

OT 8777. Thesis Credits: Master’s. (1-18 cr.; max 50 cr.) (No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

Ojibwe (OJIB)

OJIB 5106. Advanced Ojibwe Language I. (3 cr.; max 12 cr.) (A-F or Audit; Every Fall) Focuses on immersion method.

OJIB 5109. Advanced Ojibwe Language II. (3 cr.; max 12 cr.) (A-F or Audit; Every Spring) Focuses on immersion method.

OJIB 5202. Ojibwe Mastery I. (3 cr.; A-F or Audit; Every Fall) The purpose of the first three years of the Ojibwe language courses at the University is to introduce students to the most common Ojibwe grammatical and conjugational systems, and to help develop their fluency through immersion. In this course and in the subsequent course in the winter semester, students will work towards Ojibwe language mastery by learning less frequent, but crucial aspects of the Ojibwe language and further working towards a more sophisticated level of talking.

OJIB 5204W. Ojibwe Mastery II. (WI; 3 cr.; A-F or Audit; Every Spring) The purpose of the first three years of the Ojibwe language courses at the University is to introduce students to the most common Ojibwe grammatical and conjugational systems, and to help develop their fluency through immersion. In this semester, students will continue refining their Ojibwe language ability by studying verb conjugational systems, more complex mi-phrases, reduplication, more grammar pattern study, and more opportunities to use and apply their language skills.

Ophthalmology (OPH)

OPH 5501. Orthoptics I. (4 cr.; S-N only; Every Summer) First semester of Orthoptics Certificate program. prereq: Admission to Orthoptics Certificate program

OPH 5601. Orthoptics II. (5 cr.; S-N only; Every Fall) Second semester of Orthoptics training program. prereq: Enrollment in Orthoptics Certificate program

OPH 5701. Orthoptics III. (5 cr.; S-N only; Every Spring) Third semester of Orthoptics certificate program.

OPH 7180. Externship in Ophthalmology. (4 cr.; H-N only; Every Fall, Spring & Summer) A variety of lectures planned during the first part of the rotation. The remaining two and one-half weeks is spent at one of the three Twin Cities teaching hospitals.

OPH 7181. Neuro-ophthalmology. (4 cr.; H-N only; Every Fall, Spring & Summer) During the rigorous 4-week rotation, students will be in clinic evaluating patients 8-10 half days per week. Students will be expected to work-up new patients at the level of a first year resident and present them to the neuro-ophthalmology attending. After clinical, students should read about diagnoses encountered in clinic. In addition, there will be required reading. Comprehension of the reading will be assessed by scheduled quizzes which will then be reviewed with the student by a faculty member. Interested students will be encouraged to engage in a research project with one of the faculty members although this is not required for the rotation.

OPH 7190. Ophthalmology Research. (4-8 cr. [max 16 cr.]; H-N only; Every Fall, Spring & Summer) This course will introduce the student to some of the research problems in ophthalmology. It will be particularly valuable to someone who is headed for a career in ophthalmology.

OPH 7930. Ophthalmology medical fellowship. (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer) Ophthalmology Med Fellowship

Oral Biology (OBIO)

OBIO 5001. Methods in Research and Writing. (2 cr.; Student Option; Every Fall) Skills necessary to begin a research project, including literature review, hypothesis formulation, research design, and writing. Each student develops a research protocol.

OBIO 5030. Virology Research Presentations. (1 cr.; max 10 cr.); S-N only; Every Fall & Spring) This course is designed to enhance knowledge in virology through research presentations as well as the critical evaluation of presentations of other students and researchers. Presentation will includes current virology research, both individual research projects and critical reading, and presentation of current literature.

OBIO 5050. Evolution of Emerging Viruses. (2 cr.; A-F or Audit; Every Spring) This course is designed to provide graduate students and undergraduate students with junior or senior standing a knowledge base for understanding how HIV and other emerging viruses (e.g., Ebola, influenza, SARS, West Nile virus, hantavirus, hepatitis C) evolve and become public health threats. Topics for the course will focus on the biochemical, molecular, cellular, clinical, and epidemiological aspects of emerging viruses, with an emphasis on how each plays a role in virus evolution and emergence. This course will emphasize HIV as a key example of an emerging virus disease that has had a profound impact on human health.

OBIO 8012. Basic Concepts in Skeletal Biology. (2 cr.; A-F or Audit; Every Spring) Cells (osteoblasts, osteoclasts, chondrocytes) that make up skeleton. Transcription/signaling networks that regulate cell growth/differentiation. Mechanisms of bone remodeling. Regulation of bone by such agents such as hormones. Prereq Grad student or instr consent

OBIO 8018. Topics in Oral Pathobiology. (2 cr.; max 4 cr.); A-F or Audit; Every Fall) Clinical understanding of oral disease. Correlates with underlying basic mechanisms in microbiology, immunology, cancer biology, developmental biology, neuroscience. Dialog between clinic/bench to improve preventative/treatment modalities. prereq: All students must be degree-seeking graduate students or dental fellows and should hold a PhD or DDS. instr consent for 4th year dental students and PhD students. CDE available for practitioners.

OBIO 8021. Oral Microbiology. (2 cr.; Student Option; Fall Odd Year) Role of indigenous human oral microflora in health/disease. Colonization of oral cavity. Role of specific pathogens in development of dental caries and periodontal diseases. Infections of dental pulp and periapical tissues. Oral manifestations of viral/fungal infections. Microbial considerations in specialty areas of dental practice. prereq: Dental specialist or oral research trainee or instr consent
OBIO 8022. Oral Neurosciences. (2 cr.; Student Option; Spring Odd Year)
Background lectures and student presentations on current research topics to evaluate questions in general motor/sensory function related to oral/nasal structures. Taste, smell, and other chemical senses as they relate to those structures. prereq: Dental specialist or oral research trainee or instr consent

OBIO 8023. Physical Biology of the Oral Cavity. (2 cr.; A-F or Audit; Spring Even Year)
Structure/function of load-bearing components of human masticatory system from biophysical point of view. Mandibular form/movement. Infrastructure of hard tissues as related to occlusal wear and masticatory efficiency. Role of saliva and salivary pellicle in reduction of interocclusal friction. Computer simulation of jaw mechanics. prereq: Dental specialist or oral research trainee or instr consent

OBIO 8024. Genetics and Human Disease. (1 cr.; Student Option; Every Spring)
Principles of medical genetics. Emphasizes oral diseases. Twins, chromosomes, recombinant DNA, major gene traits, genes in populations, chromosomal abnormalities, complex traits, facial clefts, dental caries, periodontal diseases. prereq: Dental specialist or oral research trainee or instr consent

OBIO 8025. Topics in Cariology. (2 cr.; A-F or Audit; Spring Even Year)
Lectures, assigned readings, and discussions of basic epidemiological, biological, and chemical aspects of dental caries. Etiology, epidemiology, and pathogenesis of dental caries. Influence of dietary, salivary, plaque, and microbial factors on caries process. prereq: Dental specialist or oral research trainee or instr consent

OBIO 8026. Salivary Glands and Secretions. (2 cr.; A-F or Audit; Fall Even Year)
Salivary gland structure/development. Mechanisms/control of macromolecule/electrolyte secretion. Salivary protein structure/function, interactions with bacteria. Salivary pellicle, salivary gland disease. Clinical studies, readings, student presentations. Each student develops a research proposal. prereq: Dental specialist or oral research trainee or instr consent

OBIO 8027. Biomaterials in Regenerative Dentistry. (2 cr.; A-F or Audit; Fall Odd Year)
Describes most modern research strategies that are being developed by interdisciplinary groups to obtain revolutionary materials for its use in tissue engineering and regenerative medicine. The central role of biotechnology, nanotechnology, and biomimetics in these research strategies is highlighted. Focus on dental applications is provided. prereq: Dental specialist or oral research trainee or instr consent

OBIO 8028. Molecular Basis of Cellular and Microbial Adhesion. (2 cr.; A-F or Audit; Spring Odd Year)
Biochemical basis of adhesion phenomena. Cells of immune system, development of organs, tissue formation, bacterial colonization of the human. prereq: Dental specialist or oral research trainee or instr consent

OBIO 8030. Oral Biology Seminar. (1 cr.; [max 10 cr.]; S-N or Audit; Every Fall & Spring)
Semester-long apprenticeship with faculty members to familiarize students with faculty research interests. Individual study of selected topics. prereq: instr consent

OBIO 8089. Oral Hygiene. (1-2 cr.; S-N only; Every Fall & Spring)
S-N or Audit; Every Fall & Spring

OBIO 8093. Tutorial in Oral Biology. (1-2 cr.; S-N only; Every Fall & Spring)
Semester-long apprenticeship with faculty members to familiarize students with faculty research interests. Individual study of selected topics. prereq: instr consent

OBIO 8094. Directed Research. (1-10 cr.; S-N or Audit; Every Fall & Spring)
S-N or Audit; Every Fall & Spring

OBIO 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
FTE: Master's student, advisor and DGS consent

OBIO 8371. Mucosal Immunology. (3 cr.; A-F or Audit; Every Fall)
Host immune processes at body surfaces. Innate/adaptive immunity at mucosal surfaces. Interactions/responses of various mucosal tissues to pathogens. Approaches to target protective vaccination to mucosal tissues. Lectures, journal, research. prereq: MICA 8001 or equiv or instr consent

OBIO 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
FTE: Doctoral student, advisor and DGS consent

OBIO 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; Max 12 cr.; No Grade Associated; Every Fall, Spring & Summer)
S-N or Audit; Every Fall, Spring & Summer

OBIO 8777. Thesis Credits: Master's. (1-18 cr.; Max 50 cr.; No Grade Associated; Every Fall, Spring & Summer)
S-N or Audit; Every Fall, Spring & Summer

OBIO 8888. Thesis Credit: Doctoral. (1-24 cr.; Max 100 cr.; No Grade Associated; Every Fall, Spring & Summer)
S-N or Audit; Every Fall, Spring & Summer

OSUR 5257. Ambulatory General Anesthesia for the Oral and Maxillofacial Surgeon. (0-6 cr.; S-N only; Every Fall, Spring & Summer)
Clinical rotation involving experience in outpatient management and using intravenous sedation and general anesthesia. prereq: Participation in oral and maxillofacial surgery training program.

OSUR 5257. Medicine Rotation for the Oral and Maxillofacial Surgeon. (0-6 cr.; S-N only; Every Fall, Spring & Summer)
Clinical rotation at Fairview-University Medical Center under the direction of the Internal Medicine Department. Involves workup, admission, and daily management of patients on medical service, specifically cardiology and pulmonary. prereq: Participation in oral and maxillofacial surgery training program.

OSUR 5277. Physical Diagnosis for Oral Surgery Residents. (2 cr.; Max 6 cr.; S-N only; Every Summer)
Six-week didactic course coupled with evaluation of patients. prereq: Participation in oral and maxillofacial surgery training program.

OSUR 8250. Oral and Maxillofacial Surgery Rotation for the Oral and Maxillofacial Surgeon. (0-6 cr.; S-N only; Every Fall, Spring & Summer)
Rotations at assigned oral and maxillofacial surgery clinics and operating rooms at Fairview-University Medical Center, Hennepin County Medical Center, Veterans Administration Medical Center. prereq: Participation in oral and maxillofacial surgery training program

OSUR 8251. Oral and Maxillofacial Surgery Core Curriculum. (0-2 cr.; S-N only; Every Fall, Spring & Summer)
Standardized curriculum of fundamental concepts of surgery and medicine. Fourteen core curriculum topics covered in a two-year cycle. prereq: Participation in oral and maxillofacial surgery training program.

OSUR 8253. Case Presentations and Chief Conferences. (0-6 cr.; S-N only; Every Fall, Spring & Summer)
Topic-oriented journal reviews. Guest oral surgeons, specialists, or chief resident present topics in case-based format. prereq: Participation in oral and maxillofacial surgery training program

OSUR 8254. Oral and Maxillofacial Surgery Resident Presentations. (0-6 cr.; S-N only; Every Fall, Spring, Summer)
Contemporary subjects researched and presented by current residents. prereq: Participation in oral and maxillofacial surgery training program

OSUR 8255. General Surgery Rotation for the Oral and Maxillofacial Surgeon. (0-6 cr.; S-N only; Every Fall, Spring & Summer)
Clinical rotation on general surgery, neurosurgery, and surgical intensive care unit at Hennepin County Medical Center. Seminars, clinics, and operating room experience. prereq: Participation in oral and maxillofacial surgery training program

OSUR 8256. Contemporary Anesthesia Literature Review. (0-6 cr.; S-N only; Every Fall, Spring & Summer)
S-N or Audit; Every Fall, Spring & Summer

Courses listed in this catalog are current as of 2018-08-30. For up-to-date information, visit www.catalogs.umn.edu.
surgery patient, prereq: Participation in oral and maxillofacial surgery training program

OSUR 8260. Surgical Rounds for the Oral and Maxillofacial Surgeon. (0-6 cr.; S-N only; Every Fall, Spring & Summer) Pre- and post-operative case discussions of patients currently being managed for surgery at all affiliated institutions. As they relate to individual patients, discussions involve medical, anesthesia, surgical, and management of post-surgical and sequela complications. prereq: Participation in oral and maxillofacial surgery training program

OSUR 8262. Plastic Surgery Rotation for the Oral and Maxillofacial Surgeon. (0-6 cr.; S-N only; Every Fall, Spring & Summer) Clinical rotation at HealthPartners St. Paul Ramsey Medical Center under direction of plastic and reconstructive surgery faculty. Elective or trauma cosmetic and esthetic surgery experience. prereq: Participation in oral and maxillofacial surgery training program

OSUR 8267. Anesthesia Rotation for the Oral and Maxillofacial Surgeon. (0-6 cr.; S-N only; Every Fall, Spring & Summer) Clinical rotation at Fairview University Medical Center under direction of anesthesia faculty. After a suitable period of supervision determined by anesthesia faculty, residents are assigned their own anesthesia room and are given responsibility for pre-operative patient evaluation and inter-operative management of patient's general anesthetic. prereq: Participation in oral and maxillofacial surgery training program

OCPD Leadership, Policy & Dev (OLPD)

OLPD 5000. Cultures, Schools, and Communities (Human Relations). (1 cr.; A-F only; Every Fall) Addressing social/cultural dimensions of education. Challenges/dilemmas facing contemporary educators. Speakers, simulations, presentations, professional learning communities, field assignments.

OLPD 5001. Formal Organizations in Education. (3 cr.; Student Option; Every Fall, Spring & Summer) Classical/current theories of organizations. Applications to education and related fields.

OLPD 5002. Private Colleges as Formal Organizations. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Provide certificate students with introduction to contemporary thinking on organizations/administration. Primary focus on organizational theory. prereq: Bachelors degree must be completed before starting this course.

OLPD 5003. Borderland, Education Policy, Immigrant Experience. (3 cr.; Student Option; Every Spring) Borderland, Education Policy and Immigrant Student Experience brings to focus the history of individual, institutional (educational) and cultural forms of marginalization and discrimination of immigrant communities from US history. This class includes a Spring Break trip to Tucson and the Sonora Desert led by the non-profit Borderlinks (www.borderlinks.org) Service learning opportunities may include water drops in the desert, interpreting for newly arrived migrants and serving as a supportive witness for migrants at deportation court. Both in Minnesota and Tucson, participants will dialogue with local stakeholders, advocates and agents of change including migrants, activists, border patrol, ranchers, faith communities, lawyers and lawmakers. Students will also have the opportunity to compare and contrast US immigrant issues with those across the globe.

OLPD 5005. School and Society. (2 cr.; A-F or Audit; Every Fall, Spring & Summer) Readings in history, philosophy, social sciences, and law revealing diverse educational values in a pluralistic society. Multiple expectations of schools. Civil liberties, rights, community. Varying cultural backgrounds of students, family circumstances, exceptional needs. prereq: Jr or sr or MEd/initial licensure student or CLA music ed major or preteaching major or instr consent

OLPD 5009. Human Relations: Applied Skills for School and Society. (1 cr.; A-F or Audit; Every Fall, Spring & Summer) Issues of prejudice/discrimination in terms of history, power, social perception. Knowledge/skills acquisition in cooperative learning, multicultural education, group dynamics, social influence, leadership, judgment/decision making, prejudice reduction, conflict resolution, teaching in diverse educational settings. prereq: MEd/ini lic or CLA music ed or preteaching or instr consent

OLPD 5010. Cultures, Schools, and Communities (Human Relations). (2 cr.; A-F only; Every Fall) Addressing social/cultural dimensions of education. Challenges/dilemmas facing contemporary educators. Speakers, simulation, presentations, professional learning communities, field assignments. prereq: Enrolled in initial licensure program

OLPD 5011. Leading Organizational Change: Theory and Practice. (3 cr.; Student Option; Every Fall) How theory is incorporated, affects the change process/outcomes. Leadership/policy effects.

OLPD 5020. Cultures, Schools, and Communities (Human Relations). (1 cr.; A-F only; Every Spring) Addressing social/cultural dimensions of education. Challenges/dilemmas facing contemporary educators. Speakers, simulation, presentations, professional learning communities, field assignments. prereq: Enrolled in teacher initial licensure program

OLPD 5033. Foundations of Individual/Organizational Career Development. (3 cr.; Student Option; Every Spring) Introduction to individual and organizational career development theory and practice.

Examines critical issues in work patterns, work values, and workplaces in a changing global society, with implications for career planning, development, and transitions, emphasizing individual and organizational change. For nonmajors: serves students in adult ed, HRD, IR, college student advising, and other related fields.

OLPD 5041. Sociology of Education. (3 cr.; Student Option; Every Spring) Structures and processes within educational institutions; linkages between educational organizations and their social contexts, particularly related to educational change.

OLPD 5044. Introduction to the Economics of Education. (3 cr.; Student Option; Periodic Fall & Spring) Costs and economic benefits of education, with a focus on K-12; educational markets, prices, and production relationships; investment and cost-benefit analysis.

OLPD 5048. Cross-Cultural Perspectives on Leadership. (3 cr.; Student Option; Every Fall & Summer) Introduction to cultural variables of leadership that influence functioning of cross-cultural groups. Lectures, case studies, discussion, problem-solving, simulations. Intensive workshop.

OLPD 5056. Case Studies for Policy Research. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Qualitative case study research methods and their applications to educational policy and practice. Emphasis on designing studies that employ open-ended interviewing as primary data collection technique.

OLPD 5057. Research in International Education. (3 cr.; Student Option; Every Summer) Key skills/proficiencies for rigorous graduate research. Quantitative/qualitative/mixed methods. How to be a critical consumer of policy-related, comparative/intercultural research. Conducting cross-cultural/comparative research. Related ethical issues.

OLPD 5061. Ethnographic Research Methods. (3 cr.; Student Option; Every Fall & Spring) Practice in aspects of field methodology below the level of full field study; detailed reading; analysis of studies in anthropology and education for methodological content.

OLPD 5080. Special Topics: Organizational Leadership, Policy, & Development. (1-3 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer) Topical issues in organizational leadership, policy, development.

OLPD 5087. MA Research Seminar. (1-3 cr. [max 24 cr.]; S-N only; Every Fall, Spring & Summer) This research seminar is designed for students who are in their final year of completing Plan A theses or Plan B papers as part of their degree program requirements. During this seminar we will work towards the completion of your paper
by writing solid drafts of the first three chapters of your thesis.

OLPD 5095. Problems: Organizational Leadership, Policy, and Development. (1-3 cr. [max 24 cr.]; Student Option; Periodic Fall, Spring & Summer)
Course or independent study on specific topic within department program emphasis.

OLPD 5096. Internship: Organizational Leadership, Policy, and Development. (1-9 cr. [max 24 cr.]; Student Option; Every Fall & Spring)
Internship in elementary, secondary, general, postsecondary administration, or other approved field related setting.

OLPD 5103. Comparative Education. (3 cr.; Student Option; Every Fall)
Examination of systems and philosophies of education globally with emphasis upon African, Asian, European, and North American nations. Foundations of comparative study with selected case studies.

OLPD 5104. Strategies for International Development of Education Systems. (3 cr.; A-F or Audit; Periodic Fall)
Strategies for improving quality/efficiency of schooling in developing countries. Introduction to current research on what policy/programmatic interventions have proven most successful in increasing access, raising quality, and improving efficiency of education in developing countries. prereq: Grad student

OLPD 5107. Gender, Education, and International Development. (3 cr.; A-F or Audit; Every Fall)
Role of gender/gender relations in international development/education. Interdisciplinary body of literature from development studies, political science, economics, anthropology, cultural studies, gender/women's studies.

OLPD 5121. Educational Reform in International Context. (3 cr.; Student Option; Every Spring)
Critical policy analysis of educational innovation and reform in selected countries. Use theoretical perspectives and a variety of policy analysis approaches to examine actual educational reforms and their implementation.

OLPD 5124. Critical Issues in International Education and Educational Exchange. (3 cr.; Student Option; Every Spring)
Analysis of comprehensive policy-oriented frameworks for international education; practices of U.S. and other universities; conceptual development of international education and its practical application to programs, to employment choices, and to pedagogy.

OLPD 5128. Anthropology of Education. (3 cr.; Student Option; Periodic Spring)
Insights from educational anthropology for educators to address issues of culture, ethnicity, and power in schools.

OLPD 5132. Intercultural Education and Training: Theory and Application. (3 cr.; Student Option; Periodic Fall, Spring & Summer)
Examination of intercultural education; formal and nonformal education programs intended to teach about cultural diversity, promote intercultural communication and interaction skills, and teach students from diverse background more effectively.

OLPD 5201. Strategies for Teaching Adults. (3 cr.; A-F or Audit; Periodic Fall, Spring & Summer)
Psychological theories of adult learning; learning styles and personality types; teaching styles; group and team learning; moderating and study circles; teaching technologies and distance learning; gender, race, and cultural communication. Applications of strategies. prereq: Grad student only

OLPD 5202. Perspectives of Adult Learning and Development. (3 cr.; Student Option; Periodic Fall & Summer)
Emphasis on major adult development theorists, theories, and current applications. Transformative learning, self-directed learning, experiential learning, and cooperative learning provide theoretical framework for exploring physiological, psychological, sociological, and cultural aspects of adult development through the life span.

OLPD 5204. Designing the Adult Education Program. (3 cr.; A-F or Audit; Periodic Spring)
Designing and implementing educational programs for adults. Application of concepts, theories, and models in different adult learning situations.

OLPD 5211. Introduction to the Undereducated Adult. (1 cr.; A-F or Audit; Every Summer)
Definitions of literacy in workplace, community, and family. Issues: poverty/welfare, ethnicity, cultural diversity, social class, language/learning, immigrants.

OLPD 5212. Introduction to Adult Literacy in the Workplace. (1 cr.; A-F or Audit; Every Summer)
Review workplace literacy programs, funding, program planning, and needs assessment. Reaching/recruiting workers. Role of employers and the unions. Writing for low literacy employees. prereq: 5211 or ADED 5211

OLPD 5213. Introduction to Adult Literacy in the Community. (1 cr.; A-F or Audit; Every Summer)
Community programs in United States. Literacy building. Family literacy skills. Correctional education in reintegrating offenders back into community. Integrating people with disabilities through community literacy programs. Literacy/development in developing countries. Reaching/recruiting indigenous, migrant, immigrant groups. Social action approaches to literacy education. prereq: 5211 or ADED 5211

OLPD 5224. Formal Assessment of Adult Literacy. (1 cr.; A-F or Audit; Periodic Fall)
Assessment of adult English/literacy skills for work, family, community, and continuing education. Formal testing policy, techniques, standardized tests. Assumptions about testing, cultural bias, and interpretation of formal tests.

Test preparation programs. prereq: 5211 or ADED 5211

OLPD 5225. Informal Assessment of Adult Literacy. (1 cr.; A-F or Audit; Periodic Fall)
Informal assessment of adult English/literacy skills for work, family, community, and further education. Informal testing techniques, setting educational goals, formal versus informal assessment. prereq: 5211 or ADED 5211

OLPD 5226. Advanced Assessment of Adult Literacy. (1 cr.; A-F or Audit; Periodic Fall)
Applications/case studies. Educational planning for work, family, community. prereq: 5211 or ADED 5211

OLPD 5233. Methods of Teaching Beginning Adult Literacy. (1 cr.; A-F or Audit; Periodic Fall)
Learning English/literacy as an adult. Initial approaches to teaching reading, writing, and communications skills. Theories of learning/curriculum design. Technology as teaching tool. Teaching students with disabilities or with cultural/gender differences. prereq: 5211 or ADED 5211

OLPD 5234. Methods of Teaching Intermediate Adult Literacy. (1 cr.; A-F or Audit; Periodic Fall)
Learning English/literacy as an adult. Approaches to teaching reading, writing, and communications skills. Communication/comprehension in oral/written English. English reading/oral communication skills for workplace. Evaluating commercial materials/software. prereq: [5211 or ADED 5211], [5233 or ADED 5233]

OLPD 5235. Methods of Teaching Advanced Adult Literacy. (1 cr.; A-F or Audit; Periodic Fall)
Approaches to teaching reading, writing, study, communication skills. Preparing students for college/continuing education. English in workplace/on Internet. Problem solving, analytical thinking. Technology as teaching tool. Evaluating commercial material/software. prereq: 5211 or ADED 5211

OLPD 5296. Field Experience in Adult Education. (1-6 cr.; S-N or Audit; Every Fall, Spring & Summer)
Supervised fieldwork and practice. Presentations and evaluations of adult education practices.

OLPD 5321. The Principal as Leader of High-Performing Schools. (3 cr.; Student Option; Every Fall, Spring & Summer)
Role of principal: qualifications, duties, problems.

OLPD 5322. Leaders in the Superintendent and Central Office. (3 cr.; Student Option; Every Fall & Summer)
Role/responsibility of superintendent in school district. Real life experiences, leadership potential as CEO. Purposes, power, politics, practices of position. Interplay of internal school forces, community forces. Leadership in public, high-profile appointment.

OLPD 5323. Women in Leadership. (3 cr.; Student Option; Every Fall)
Women in leadership, in context of larger systems and their own lives. Supporting equity/equality across areas of difference. prereq: Technology access

OLPD 5324. Strategic Financial Planning and Policy for Educational Leaders. (3 cr.; Student Option; Periodic Fall, Spring & Summer)
State-local school finance systems, budgeting, governmental fund accounting. Interpretation of financial information. prereq: Grad student pursuing licensure as elementary-secondary [principal or superintendent]

OLPD 5332. Personal Leadership and the Private College. (3 cr.; A-F or Audit; Every Fall, Spring & Summer)
Recognize/develop leadership skills and competencies necessary for team work, consensus building, group leadership within private colleges. Blend practice/ theoretical perspectives to develop leadership competencies of students. prereq: Must have Bachelors degree awarded prior to taking this course.

OLPD 5344. School Law. (3 cr.; Student Option; Every Spring & Summer)
Legal foundations of elementary/secondary education. Statutory themes, relevant case law, emergent policy issues. Implications for educational organizations and for administrative practice.

OLPD 5346. Politics of Education. (3 cr.; A-F or Audit; Every Fall & Spring)
Political dimensions of policy formulation/ implementation in education. Use of power/ influence in shaping educational policies and in resolving conflicts over educational issues. Analysis of consequences/cross-impacts.

OLPD 5348. Leaders of Human Resources Administration. (3 cr.; Student Option; Every Spring & Summer)
Skills for administrator/leader. Human resources administration, employee recruitment, selection, orientation/support, supervision, performance appraisal of school district personnel. prereq: Designed for students working on licensure for [dir of community educ or superintendent or K-12 principal or dir of special educ]

OLPD 5356. Disability Policy and Services. (3 cr.; Student Option; Every Spring & Summer)
Policy, research, and current practices related to education, health, and social services that support children, youth, and adults with special needs, and that support their families. Federal, state, and local perspectives.

OLPD 5361. Project in Teacher Leadership. (3 cr.; Student Option No Audit; Every Fall, Spring & Summer)
Create, implement, evaluate, and present a leadership project designed to initiate positive change in educational environments. Review of related literature, proposal development, project development, implementation and evaluation, critical reflection, sharing learning outcomes. prereq: MEd student in Teacher Leadership Program

OLPD 5364. Context and Practice of Educational Leadership. (3 cr.; A-F or Audit; Every Fall & Summer)
Current research/practice on educational leadership. Focuses on creating school cultures conducive to continuous improvement/ change. Strategies for personal/organizational leadership in PK-12 settings.

OLPD 5368. Leadership for Special Education Services. (3 cr.; Student Option; Every Fall & Spring)
Legislative, procedural, executive, and judicial actions that affect services, families, and children with special needs at federal, state, and local levels. prereq: Administrator or supervisor or professional responsible for managing general or special or alternative education program.

OLPD 5374. Leadership for Professional Development. (4 cr.; Student Option; Every Fall) Designing, implementing, evaluating staff development in preK-12 settings. Research-based standards for effective staff development. Nickels for embedded time for collaborative learning, evaluating staff/student outcomes, prereq: Postbacalaureate, at least 3 yrs teaching experience.

OLPD 5385. Licensure Seminar: Program Policies and Inclusionary Leadership. (1 cr.; S-N or Audit; Every Fall, Spring & Summer) Preparation for licensure program. Program overview, preassessment, reflective practice, APA writing, exit panel review, administrative employment interview.

OLPD 5386. Leadership Portfolio Seminar. (1 cr.; S-N or Audit; Every Fall, Spring & Summer) Development of electronic administrative licensure portfolio to earn endorsement for license as school superintendent, K-12 principal, director of special education, or director of community education. prereq: 5385 or concurrent registration is required (or allowed) in 5385 or EDPA 5395

OLPD 5387. Leadership for Teaching and Learning. (3 cr.; Student Option; Periodic Fall, Spring & Summer) Multiple aspects of administrating teaching/ learning. Administration of teaching/learning as system in inclusive schools. Questions administrator must ask as leader of learning for students/adults.

OLPD 5388. Leadership for Master(ful) Scheduling. (2 cr.; Student Option; Every Fall & Summer) Work of high-performing professional learning communities. Implications for moving from building master schedule to leadership for master(ful) scheduling of time, space, motion, people. Hands-on work with infinite campus software/scheduling-building logic.

OLPD 5389. Community Education Leadership. (3 cr.; Student Option; Every Spring) Competencies of leadership, community relations, communication, community assessment, program development, program evaluation. Philosophy/administration of community/alternative education programs.

OLPD 5391. Special Education Law for Leaders. (1 cr.; Student Option; Every Fall & Summer) Competencies of leadership, policy, and political influence. Legal/regulatory applications focusing on special education law. prereq: Designed for students working on licensure in PK-12 administration.

OLPD 5392. Special Education Finance: Program Models, Policy, and Law. (2 cr.; Student Option; Every Spring) How special education revenue is a resource to accomplish student-related objectives. Revenue sources, compliance, budget monitoring. Key policy, case law, program models from perspective of director of special education. prereq: [5324 or concurrent registration is required (or allowed) in 5324 or EDPA 5324 or concurrent registration is required (or allowed) in EDPA 5324], knowledge of special education.

OLPD 5393. Leading School Finance Elections. (1 cr.; S-N or Audit; Every Spring) Comprehensive planning model for conducting school finance elections. Emphasizes systems, strategies, and campaign tactics.

OLPD 5394. Leadership in Community Education Finance and Law. (1 cr.; S-N or Audit; Every Summer) Interplay between finance and laws directly applicable to community education. MN Statute 124D, revenues/expenditures, and UFARS approached from revenue development. prereq: [5324 or EDPA 5324] recommended.

OLPD 5396. Field Experience in PK-12 Administration: Authentic Practice in Leadership. (3 cr.; max 12 cr.); S-N or Audit; Every Fall & Spring) Field experience or internship arranged for students seeking licensure as PK-12 principal/ superintendent. Content/credit depend on licensure requirements specified in individual field experience agreement. prereq: instr consent.

OLPD 5476. Field Based Projects in Business and Industry. (1-4 cr.; S-N or Audit; Every Fall, Spring & Summer) Curricular, instructional, developmental, or evaluative problems and projects applicable to local school or business and industry situations.

OLPD 5501. Principles and Methods of Evaluation. (3 cr.; Student Option; Every Fall, Spring & Summer) Introduction to program evaluation. Planning an evaluation study, collecting and analyzing information, reporting results; evaluation strategies; overview of the field of program evaluation.

OLPD 5502. Theory and Models of Evaluation. (3 cr.; Student Option; Every Fall & Summer) Evaluation theories/models currently available to practitioners. Communication with clients
about value/utility of program. Systems theory. prereq: [5501/EPsy 5243] or PA 5311 or PubH 6034 or another introductory evaluation course approved by instructor.

OLPD 5521. Cost and Economic Analysis in Educational Evaluation. (3 cr.; Student Option; Every Fall) Use and application of cost-effectiveness, cost-benefit, cost-utility, and cost-feasibility in evaluation of educational programs and programs.

OLPD 5524. Evaluation Colloquium. (1 cr. max 24 cr.; S-N or Audit; Every Fall & Spring) Informal seminar of faculty/students. Issues/problems of program evaluation. prereq: [5501 or EDP5A], [5501 or EPSY 5243]

OLPD 5528. Focus Group Interviewing Research Methods. (3-1 cr.; Student Option No Audit; Every Fall) Students get an overview of the critical features of designing and conducting focus group interviews. Students practice moderating skills and then develop questions for a focus group project.

OLPD 5601. Foundations of Human Resource Development. (1 cr.; Student Option; Every Fall, Spring & Summer) Introduction to human resource development as a field of study and practice.

OLPD 5604. Systems Foundation of Human Resource Development. (1 cr.; Student Option; Every Fall, Spring & Summer) Introduction to system theory as a core discipline supporting the theory and practice of human resource development. prereq: 5601

OLPD 5605. Strategic Planning through Human Resources. (3 cr.; A-F or Audit; Periodic Spring) Strategic nature of organizations. How HRD can align its goals with those of organization. Strategic planning, systems thinking. Ways HRD managers can become strategic players in organization. prereq: 5607 or 5615 or HRD 5201 or HRD 5301

OLPD 5607. Organization Development. (3 cr.; A-F or Audit; Periodic Fall, Spring & Summer) Introduction to major concepts, skills, and techniques for organization development/change. prereq: Grad student only

OLPD 5610. Survey of Research Methods and Emerging Research in Human Resource Development. (3 cr.; A-F or Audit; Periodic Spring) Role of research in HRD. Standards/criteria for evaluating research, critique of conference research papers, identification of emerging research themes. Offered in conjunction with the annual conference of Academy of HRD. prereq: [Registered, in attendance] at conference of Academy of HRD

OLPD 5611. Facilitation and Meeting Skills. (1 cr.; Student Option; Every Fall, Spring & Summer) Introduction to the disciplines of planning and running effective meetings. Tools and methods for meeting management and evaluation are presented within the context of organization development.

OLPD 5612. International Human Resource Development. (3 cr.; Student Option; Every Fall, Spring & Summer) Problems, practices, programs, theories, and methodologies in human resource development as practiced internationally. prereq: Grad students only; ugrad seniors with instr consent

OLPD 5615. Training and Development of Human Resources. (3 cr.; A-F or Audit; Periodic Spring & Summer) Training/development of human resources in organizations. Process phases of analysis, design, development, implementation, and evaluation. prereq: Grad student only

OLPD 5616. Training on the Internet. (3 cr.; Student Option; Every Spring & Summer) Major concepts, skills, and techniques for giving and receiving training on the Internet. prereq: Grad student only

OLPD 5619. Planning and Decision-Making Skills. (1 cr.; Student Option; Every Fall, Spring & Summer) Introduction to the disciplines of planning and decision making typically used in process improvement interventions. Tools and methods for facilitating group decisions and problem solving.

OLPD 5696. Internship: Human Resource Development. (1-10 cr.; S-N or Audit; Periodic Fall & Spring) Students apply/contract for human resource development positions. prereq: [[3901 or HRD 3601], [3896 or HRD 3196], [3620 or HRD 3201 or HRD 3301], [3202 or ADED 3101], undergrad] or [5607 or 5615 or HRD 5201 or HRD 5301], [5801 or WHRE 5001], grad student[], instr consent

OLPD 5697. International Field Study in Human Resource Development. (3 cr. max 6 cr.; A-F only; Every Spring & Summer) Engage in international travel/study for one week with an HRD faculty leader. Visit a variety of sites in business and industry to become aware of how HRD is practiced outside the United States. prereq: 5001

OLPD 5701. U.S. Higher Education. (3 cr.; Student Option; Every Fall & Summer) U.S. higher/postsecondary education in historical/contemporary perspective. Emphasizes structure, history, and purposes of system as a whole.

OLPD 5704. College Students Today. (3 cr.; Student Option; Every Spring & Summer) Issues involving population of students in colleges/universities. College student development theory, students' expectations/interests. How college affects student outcomes. Role of curricular/extracurricular activities. Student-faculty interaction.

OLPD 5712. Multicultural Theories of College Student Development Applied to Teaching and Learning. (3 cr.; A-F only; Every Fall, Spring & Summer) Multicultural student development theories/theorists. Implications for teaching/learning. Students reflect on The Student Personnel Point of View and Learning Reconsidered: Campus-wide Focus on the Student Experience and other collaborative efforts.

OLPD 5721. Race and Ethnicity in Higher Education. (3 cr.; Student Option; Every Fall, Spring & Summer) Review of research. Theoretical frameworks, methodological perspectives, and research strategies used to study students, staff, and faculty. Historical perspectives.

OLPD 5724. Leadership and Administration of Student Affairs. (2-3 cr.; Student Option; Periodic Fall & Spring) Scope, administration, coordination, and evaluation of programs in college and university student affairs.

OLPD 5732. The Law and Postsecondary Institutions. (3 cr.; Student Option; Periodic Fall & Spring) Analysis of court opinions and federal regulations affecting postsecondary educational institutions.

OLPD 5734. Institutional Research in Postsecondary Education. (2-3 cr.; A-F or Audit; Periodic Fall) Scope, role, administration, research strategies, and evaluation of institutional research in postsecondary institutions. Methodologies, disciplinary foundations of research. Use of institutional, state, and national databases in addressing institutional missions/functions. prereq: [5701, [EPSY 5231 or EPSY 8261], grad student] or instr consent

OLPD 5736. Public Engagement and Higher Education. (3 cr.; A-F only; Every Fall) Study/practice of public engagement in higher education. Civic roles of post-secondary education institutions.

OLPD 5795. Plan B Research Design. (3 cr. max 6 cr.; A-F or Audit; Periodic Fall) Foundation to design Plan B research project relevant to student's professional interests. Literature review strategies to establish conceptual framework for project. Relates research question to design alternatives and to associated qualitative/quantitative analysis techniques. Issues such as human subjects and APA guidelines for preparing research papers. prereq: Grad student

OLPD 5796. Supervised Practicum in Multicultural Postsecondary Teaching and Learning. (3 cr.; S-N only; Every Fall, Spring & Summer) Postsecondary teaching experience in supervised settings. Weekly group supervision session. Classroom experiences, learning centers, and other postsecondary teaching venues. prereq: Grad student in PsTL
OLPD 5801. Survey: Human Resource Development and Adult Education. (3 cr.; Student Option; Every Fall, Spring & Summer) Overview of fields of human resource development and adult education. Societal context, theories, processes, definitions, philosophies, goals, sponsoring agencies, professional roles, participants, and resources. Unique characteristics and ways fields overlap and enhance one another. Prereq: Grad student only

OLPD 5811. Education for Work. (3 cr.; Student Option; Periodic Spring) Examination of contextual bases underlying education for work; implications for practice.

OLPD 5812. Consulting Skills for Organization Change. (3 cr.; Student Option No Audit; Every Fall & Spring) This course is an introduction to major theories, concepts, skills, and techniques of consulting for industry, education, and government.

OLPD 5813. Enhancing Work-based Learning Through Collaboration. (2 cr.; Student Option; Every Summer) Interagency policy issues/practices relating to special populations for educational, business, and human service organizations. Focus on professional socialization, family members, and advocates.

OLPD 5816. Distance Learning in Adult Education and Training. (3 cr.; A-F or Audit; Every Fall & Spring) Distance learning concepts, theory, history, present practice, delivery systems, course design, major issues, future directions.

OLPD 5819. Evaluating and Using Research in Organizations and Education. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Role of educational research in professional practice. Problems of practice for research. Alternative modes of synthesis/application of results of research. Prereq: Grad student

OLPD 5823. Work-Based Learning Policies. (2 cr.; Student Option; Periodic Fall & Summer) Aims/purposes of federal, state, and local policies, related to work-based learning.

OLPD 5829. Course Development for Business and Industry. (2 cr.; A-F or Audit; Every Fall, Spring & Summer) Designing instructional programs/courses that help learners develop desired competence. Designing instruction for performance based training and vocational/technical education. Developing course syllabus components that clarify course expectations. Developing academic/community-based elements that complement course goals. Reflect on and compare performance-based instruction with other curriculum models for the field.

OLPD 5845. The Entrepreneurial Private College. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Financial management/entrepreneurial strategies for private college. Enrollment management, revenue generating strategies, branding/marketing, fundraising, developing/sustaining entrepreneurial institutions. Design strategies for private colleges. Prereq: Must have completed Bachelor's degree before taking this course.

OLPD 5861. Instructional Methods for Business and Industry. (2 cr.; Student Option; Every Spring) Theory/practice in instructional methods for career/technical education (CTE) instructors and human resources/development (HRD) professionals. How to select various teaching methods and plan for their delivery. Preparing an instructional methods plan to clarify course content, teaching methods selected, rationale for their selection, and how a student organization might facilitate student learning.

OLPD 5893. Directed Study in OLPD. (1-4 cr.; Student Option; Every Fall, Spring & Summer) Self-directed study, with faculty advice, in areas not covered by regular courses.

OLPD 5902. Leading Change in Private Colleges. (3 cr.; A-F or Audit; Every Fall, Spring & Summer) Theories of organizational change process/application for leading private colleges with unique cultures/distinctive missions. Factors impacting change process/implications for leading private colleges. Prereq: Must have Bachelor's degree awarded prior to taking this course.

OLPD 6402. Integrative Leadership Seminar. (3 cr.; A-F or Audit; Every Fall & Spring) Basic concepts, practices, people, and organizations associated with integrative leadership. Case material, related readings, presentations, interactive discussion.

OLPD 8002. Critical Issues in Contemporary Education. (3 cr.; Student Option; Every Fall & Spring) Meanings of difference from sociological, psychological, historical and philosophical perspectives as related to current and emerging critical issues in education. Participants help design, facilitate, and present the course. Prereq: EdD or PhD student

OLPD 8011. Doctoral Research Seminar I. (1 cr.; S-N or Audit; Every Fall & Summer) Introduction/planning for individual program development, preliminary examinations, and dissertation prospectus. Modes of inquiry used in current research in education, databases related to education, relevant writings on literature synthesis, key contributions to education literature. Prereq: EdPA or WHRE doctoral student

OLPD 8012. Doctoral Research Seminar II. (1 cr.; S-N or Audit; Every Fall & Spring) Introduction to quantitative/qualitative research approaches/methods. Nature of research, role of researcher, philosophical perspectives on research, ethical issues in conducting research. Prereq: EdPA doctoral student

OLPD 8013. Doctoral Research Seminar III. (1 cr.; S-N or Audit; Every Fall & Spring) Introduction to most important quantitative/qualitative approaches employed in educational policy research. Prereq: EdPA doctoral student

OLPD 8015. Inquiry strategies in educational and organizational research. (3 cr.; A-F only; Every Fall) Logic of research design, from research questions and audience considerations to selecting a design for collecting/analyzing quantitative, qualitative, and mixed-method data. Prereq: [8011 or EDPA 8011], OLPD PhD student

OLPD 8016. Research Design and Educational Policy. (3 cr.; max 6 cr.; Student Option; Every Fall) Logic of research design, from research questions to selecting a design for collecting/analyzing quantitative, qualitative, and mixed-method data. Writing proposals that build a reasoned statement of research problem. Prereq: [8015 or EDPA 8015], CEHD doctoral student, instr consent

OLPD 8020. Leadership: From Theory to Reflective Practice. (3 cr.; A-F or Audit; Periodic Fall) Leadership theory. Emphasizes seminal scholars' work from related social science disciplines. Implications of theory for practice of leadership. Knowledge, behaviors, values, and skills needed in educational and other public settings.

OLPD 8022. Education and Globalization: Anthropological Perspectives. (3 cr.; A-F or Audit; Every Spring) Anthropological/considerative perspectives used to understand educational processes in a globalized world. What can be gained by adopting translocal view of educational phenomena.

OLPD 8087. Seminar: Organizational Leadership, Policy, and Development. (1-3 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Topical issues.

OLPD 8095. Problems: Organizational Leadership, Policy, and Development. (1-3 cr. [max 24 cr.]; Student Option; Periodic Fall, Spring & Summer) Independent study on issues of educational policy/administration. Arranged with instructor.
OLPD 8096. Internship: Organizational Leadership, Policy, and Development. (1-9 cr. [max 24 cr.]; Student Option; Every Fall & Spring) 
Internship on issues of educational policy/administration. Arranged with instructor.

OLPD 8101. International Education and Development. (3 cr.; A-F or Audit; Every Fall) 
History of international development in post-World War II era. Theories of how education affects economic, political, social development. Case studies of contemporary international development/education issues. prereq: Doctoral student or instr consent

OLPD 8103. Comparative Education. (3 cr.; A-F or Audit; Every Fall) 
Doctoral-level course. History, methodologies, and major debates in the field of comparative education. Major research paper or extensive literature review.

OLPD 8104. Innovative Systems Thinking in Education and Culture. (3 cr.; Student Option; Every Fall) 
Critical aspects of historical/contemporary systems philosophy, thinking, and analysis. Development of concepts/skills applicable to understanding multiple dimensions of educational systems in diverse contexts. Implications for leadership and fostering organizational and systemic change.

OLPD 8121. Doctoral Seminar: Comparative and International Development Education. (1-6 cr.; S-N or Audit; Every Fall & Spring) 
Focuses on needs of students while writing the dissertation; general guidance in how to construct the thesis. prereq: EdPA PhD candidate

OLPD 8302. Educational Policy Perspectives. (3 cr.; Student Option; Every Spring) 

OLPD 8314. Data Analysis for Educational Management. (3 cr.; Student Option; Periodic Fall, Spring & Summer) 
Managers of educational organizations are faced with problems that require analysis of a wide range of information. Outlines a frame for data analysis and introduces a set of computer-based tools suited to the practice of educational administration.

OLPD 8333. FTE: Master’s. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) 
(No description) prereq: Master’s student, adviser and DGS consent

OLPD 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer) 
(No description) prereq: Doctoral student, adviser and DGS consent

OLPD 8502. Program Evaluation Theory and Models: Qualitative and Quantitative Alternatives. (3 cr.; Student Option; Every Spring) 
Concepts, approaches, models, and theoretical frameworks for program evaluation that have developed since the 1960s. prereq: 5501 or EDPA 5501 or EPSY 5243

OLPD 8595. Evaluation Problems. (1-6 cr. [max 24 cr.]; Student Option; Every Fall, Spring & Summer) 
Independent study of an issue in theory or practice of program evaluation. prereq: [5501 or EDPA 5501 or EPSY 5243], instr consent

OLPD 8596. Evaluation Internship. (1-9 cr. [max 24 cr.]; Student Option; Every Fall, Spring & Summer) 
Hands-on experience in conducting program evaluation in real-world setting under supervision of evaluation professional. prereq: [5501 or EDPA 5501 or EPSY 5243], instr consent

OLPD 8601. Advanced Training and Development of Human Resources. (3 cr.; A-F or Audit; Periodic Fall) 
Personnel training/development research. Critical review of selected/innovative practices. prereq: 5615 or HRD 5201

OLPD 8602. Advanced Organization Development. (3 cr.; A-F or Audit; Periodic Spring) 
Organization development research. Critical review of selected, innovative practices.

OLPD 8603. HRD Capstone Research Experience. (3 cr. [max 6 cr.]; A-F only; Every Fall & Spring) 
The goal of this course is to assist doctoral students in developing their ability to conduct research and theory building in human resource development (HRD). Designed as a capstone experience for students in their second year of doctoral studies, the course will not only strengthen their understanding of approaches to disciplined inquiry and knowledge of current theories and advanced scholarly work in HRD, but will also provide them with an opportunity to develop practical research skills, by developing proposals for research projects aimed at addressing real-life needs of various organizations, and conducting these projects. Through this course students will be able to: 1. Further develop their understanding of the philosophical foundations of theory and theory development 2. Understand and discuss current approaches to research and theory building, used in HRD and related fields 3. Examine different perspectives on research and theory building 4. Develop and demonstrate critical thinking skills necessary to understand, interpret, and evaluate research and theories in HRD 5. Identify, compare and critique examples of cutting-edge HRD research and theory building efforts 6. Become part of a community of scholars and contribute to the viability and productivity of this community 7. Understand issues of research ethics and apply ethics principles in their own scholarly work 8. Gain hands-on experience conducting HRD research in organizations 9. Learn how to write successful research proposals and practice developing proposals for dissertation research 10. Understand how to develop research reports for submission to industry clients and to academic publications, and practice writing and submitting papers to academic publications. This course will be offered over two semesters. During the fall semester sessions will consist of lectures and discussions, and during spring semester, in addition to regular class meetings, students will be working on their field research projects (on-site with client organizations). Students will be expected to make one presentation in each of the two semesters: present a proposal for a dissertation research project in fall, and present the results of the field project at the end of the spring semester.

OLPD 8666. Doctoral Pre-Thesis Credits. (1-6 cr. [max 12 cr.]; No Grade Associated; Every Fall, Spring & Summer) 
Pre-thesis credit prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations. up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

OLPD 8702. Administration and Leadership in Higher Education. (3 cr.; Student Option; Every Fall, Spring & Summer) 
Leadership, governance, and administration in higher education through theoretical perspectives and practical analysis. Planning, change, decision making, organizational culture, budgets, conflict. prereq: [5001 or EDPA 5001], [5701 or EDPA 5701]

OLPD 8703. Public Policy in Higher Education. (3 cr.; A-F or Audit; Every Fall) 
Theories, analytic methods, and critical issues in postsecondary education policy at national/state levels. Equality of educational opportunity, affirmative action, system governance/coordination, research funding, student financial aid, public accountability. prereq: [5001 or EDPA 5001], [5701 or EDPA 5701]

OLPD 8715. Plan B Capstone Seminar. (3 cr.; S-N only; Every Fall, Spring & Summer) 
Determining topic, creating timeline, and initiating project in conjunction with year 2 internship. prereq: 5206, grad student admitted to master’s program in multicultural college teaching/learning; if Plan B project includes research with human subjects, application to Institutional Review Board is required

OLPD 8721. Instruction and Learning in Higher Education. (2-3 cr.; Student Option; Every Spring) 

OLPD 8777. Thesis Credits: Master’s. (1-18 cr. [max 50 cr.]; No Grade Associated; Every Spring & Summer) 
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]
OLPD 8796. Supervised Internship in Postsecondary Teaching and Learning. (3-12 cr.; S-N only; Every Fall, Spring & Summer) Classroom-based or online group supervision. Weekly supervised experiences. Internship settings based on students’ interests/goals. prereq: 5196; [grad student admitted to Multicultural College Teaching and Learning MA or College Student Development and Counseling Psychology PhD]

OLPD 8800. Organizational Leadership, Policy, and Development Colloquium. (1-3 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Selected topics regarding work/human resource education professionals. Topics based on interest/demand.

OLPD 8801. Advanced Theory in Human Resource Development and Adult Education. (; 3 cr.; A-F or Audit; Periodic Fall) Theory of individuals/organizations as adaptive entities. Roles of human resource development and adult education in mediating complex demands. prereq: 5801 or ADED 5001 or WHRE 5001

OLPD 8812. Quantitative Research in Education. (3 cr.; Student Option; Every Fall) Assumptions, procedures for, considerations in planning/conducting quantitative research in education.

OLPD 8815. Ethics and Responsible Research. (; 1 cr.; A-F or Audit; Periodic Fall, Spring & Summer) Introduction to ethical/legal issues involved in practicing responsible educational research. Key issues, formal/informal codes of conduct, ethical reasoning.

OLPD 8841. Foundations of Organizational Leadership, Policy, and Development. (3 cr.; Student Option; Periodic Fall) Key historical/philosophical concepts in work, career, adult development. Individual/organizational change. Learning through experience.

OLPD 8842. Comparative Systems in Organizational Leadership, Policy, and Development. (3 cr.; Student Option; Periodic Spring) Looking critically across/within countries/regions at structures intended to deliver work/career-related education/training. prereq: 8141 or WHRE 8141

OLPD 8888. Thesis Credit: Doctoral. (; 1-24 cr. [max 100 cr.]; No Grade Associated; Every Fall, Spring & Summer) (No description) prereq: Max 18 cr per semester or summer; 24 cr required

OLPD 8890. Research Seminar. (1 cr.; S-N or Audit; Periodic Fall) Developing, reporting, and evaluating research. Participants make/react to presentations. prereq: [4811 or WHRE 8911] [8121 or WHRE 8912 or WHRE 8913 or WHRE 8914] or instr consent

OLPD 8896. Internship. (; 1-10 cr.; S-N or Audit; Every Fall, Spring & Summer) Student applies for position in professional practice; individual arrangements describe specific responsibilities during internship. Ed.D. program requirement.

Orthodontics (OTHO)

OTHO 7101. Growth & Development. (; 0-5 cr.; A-F or Audit; Every Summer) Head growth, development, osteology, and myology. Both normal and abnormal morphology and function, with emphasis on cephalometric methods. prereq: Admission to graduate orthodontic program.

OTHO 7102. Growth & Development. (; 0-5 cr.; A-F or Audit; Every Fall & Spring) Head growth, development, osteology, and myology. Both normal and abnormal morphology and function, with emphasis on cephalometric methods.

OTHO 7103. Growth & Development. (; 0-5 cr.; A-F or Audit; Every Spring) Head growth, development, osteology, and myology. Both normal and abnormal morphology and function, with emphasis on cephalometric methods.

OTHO 7110. Diagnosis & Treatment Planning. (; 0-5 cr.; A-F or Audit; Every Summer) Etiology, treatment and prognosis of clinical orthodontic patients. prereq: Admission to graduate orthodontic program.

OTHO 7112. Diagnosis & Treatment Planning. (; 0-5 cr.; A-F or Audit; Every Fall) Etiology, treatment and prognosis of clinical orthodontic patients. prereq: Admission to graduate orthodontic program.

OTHO 7113. Diagnosis & Treatment Planning. (; 0-5 cr.; A-F or Audit; Every Spring) Etiology, treatment and prognosis of clinical orthodontic patients. prereq: Admission to graduate orthodontic program.

OTHO 7201. Clinical Orthodontics. (; 0-5 cr.; A-F or Audit; Every Spring & Summer) Students assigned patients for complete management of orthodontic and orthodontically related occlusal problems under direct staff supervision. prereq: Admission to graduate orthodontic program.

OTHO 7202. Clinical Orthodontics. (; 0-5 cr.; A-F or Audit; Every Fall & Spring) Students assigned patients for complete management of orthodontic and orthodontically related occlusal problems under direct staff supervision. prereq: Admission to graduate orthodontic program.

OTHO 7203. Clinical Orthodontics. (; 0-5 cr.; A-F or Audit; Every Spring) Students assigned patients for complete management of orthodontic and orthodontically related occlusal problems under direct staff supervision. prereq: Admission to graduate orthodontic program.

OTHO 8121. Orthodontic Seminar. (; 0-5 cr.; A-F or Audit; Every Summer) Evaluating orthodontic literature, including preparation and presentation of literature reviews. prereq: Orthodontic grad student

OTHO 8122. Orthodontic Seminar. (; 0-5 cr.; A-F or Audit; Every Fall) Evaluating orthodontic literature, including preparation and presentation of literature reviews. prereq: Orthodontic grad student

OTHO 8123. Orthodontic Seminar. (; 0-5 cr.; A-F or Audit; Every Spring) Evaluating orthodontic literature, including preparation and presentation of literature reviews. prereq: Orthodontic grad student

OTHO 8131. Topics in Orthodontics. (; 0-5 cr.; A-F or Audit; Every Spring & Summer) Theoretical aspects of kinematics and biological reactions to orthodontic forces, risk management and jurisprudence, public health aspects of orthodontics, practice management. prereq: Orthodontic grad student

OTHO 8132. Topics in Orthodontics. (; 0-5 cr.; A-F or Audit; Every Fall & Spring) Theoretical aspects of kinematics and biological reactions to orthodontic forces, risk management and jurisprudence, public health aspects of orthodontics, practice management. prereq: Orthodontic grad student

OTHO 8133. Topics in Orthodontics. (; 0-5 cr.; A-F or Audit; Every Summer) Required for all degree candidates. Preparation, execution, and evaluation of all ongoing research projects and pertinent literature. prereq: Orthodontic grad student

OTHO 8142. Research in Orthodontics. (; 0-5 cr.; A-F or Audit; Every Fall & Spring) Required for all degree candidates. Preparation, execution, and evaluation of all ongoing research projects and pertinent literature. prereq: Orthodontic grad student

OTHO 8143. Research in Orthodontics. (; 0-5 cr.; A-F or Audit; Every Fall & Spring) Required for all degree candidates. Preparation, execution, and evaluation of all ongoing research projects and pertinent literature. prereq: Orthodontic grad student

Orthopaedic Surgery (ORSU)

ORSU 7180. Orthopaedics I. (; 3-6 cr.; H-N or Audit; Every Fall, Spring & Summer) A brief survey course with exposure to a large number of patients, rather than a didactic and highly structured course. Instruction is given by audiovisual technique, conference, and seminars, in addition to teaching primarily in the outpatient clinic. There are opportunities for participation in the inpatient service and in surgery for the student interested in this additional experience. To round out the somewhat limited experience inherent in
a three week rotation, independent study of the text, Disorders and Disease of the Musculoskeletal System, by Robert B. Salter, is strongly recommended.

**ORSU 7185. Externship in Orthopaedic Surgery.** (4-6 cr.; H-N only; Every Fall, Spring & Summer)

This course provides a more comprehensive, detailed exposure to orthopaedics for those students with a special interest in orthopaedics or another surgical specialty, or who desire more experience in preparation for a career in family practice.

**ORSU 7186. Orthopaedic Surgery Research.** (6-12 cr. [max 24 cr.]; H-N only; Every Fall, Spring & Summer)

Orthopaedic Surgery Research

**ORSU 7188. Pediatric Orthopaedics.** (4 cr.; H-N only; Every Fall, Spring & Summer)

This course provides an opportunity for students with a special interest in pediatric orthopaedics and the care of the multiply-handicapped child.

**ORSU 7190. General, Reconstructive and Geriatric Orthopaedics.** (4 cr.; H-N only; Every Fall & Spring)

This course consists of supervised clinical experience in the primary care of both adult inpatients and outpatients with an emphasis on reconstructive types of orthopaedic surgery. The student has a great deal of individual ward and surgical responsibility and is expected to present their cases. The student functions at the junior resident level. While the student does not take call individually, they may choose to take call with the resident to whom they are assigned. Recommended for the student interested in an orthopaedic surgery career and for the student choosing a non-orthopaedic surgery career. Primary text for externship: Salter RB: Textbook of Disorders and Injuries of the Musculoskeletal System, Baltimore, Williams & Wilkins.

**ORSU 7191. Orthopaedic Trauma Surgery.** (4 cr.; H-N only; Every Fall, Spring & Summer)

This course provides detailed exposure to orthopaedic reconstruction and trauma.

**ORSU 7192. Primary Care Orthopaedics.** (4 cr.; H-N only; Every Fall, Spring & Summer)

The students will be observing and assisting orthopaedic surgeons in a general orthopaedic practice. The student's interest and initiative will determine the level of responsibilities and the extent of participation in surgical procedures. Students are responsible for weekly case conference presentations.

**ORSU 7194. Orthopaedic Extremity-MC.** (3-6 cr.; H-N or Audit; Every Fall & Spring)

An introductory course to outpatient orthopaedic evaluation and treatment in a private office setting. The student observes and, under direct supervision, participates in efficient evaluation of pediatric and adult patients with musculoskeletal complaints. This includes obtaining pertinent history and doing a complete musculoskeletal exam appropriate to the patient's complaints. Emphasis is on physical diagnosis and evaluation of diagnostic data including x-rays and other imaging modalities. *(The student spends most of their time with Dr. Aadalen at his Edina office, but they also accompany him to Children's Health Care-Minneapolis, Fairview-University Medical Center (Riverside Campus) and Shriner's Hospital.)*

**ORSU 7195. Orthopaedics for the Generalist.** (4 cr.; H-N or Audit; Every Fall, Spring & Summer)

Provides the opportunity to recognize and treat common orthopaedic problems. The experience consists of emergency room, ambulatory setting, and operating room exposure with an emphasis on problems encountered in primary care. The student may also have an opportunity to work with a sports medicine physician in the office and travel to rural site visits for orthopaedic consultations. Text: Disorders and Disease of the Musculoskeletal System, Robert B. Salter. Texts are available (no charge) through the UMD Department of Family Medicine for students use while on this rotation. SPECIAL INSTRUCTIONS: To request the Duluth site, contact the UMD Department of Family Medicine, 10 University Drive, Duluth, MN 55812 (218-726-7916) at least one month prior to quarterly cancel/add deadline.

**ORSU 7200. Surgical Subspecialty Orthopaedics.** (4 cr.; max 8 cr.; P-N only; Every Fall, Spring & Summer)

The orthopaedic surgery selective consists of a 2 week rotation concentrating on the areas of general orthopaedics, sports medicine, and pediatrics.

**ORSU 7910. Orthopaedic Surgery Medical Residency.** (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)

Orthopaedic surgery medical residency.

**ORSU 7930. Orthopaedic Surgery Medical Fellowship.** (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)

Orthopaedic surgery medical fellowship.

**Tolaryngology (OTOL)**

**OTOL 5101. Introduction to the Basic Sciences in Otolaryngology I: Ear.** (2 cr.; A-F or Audit; Every Fall & Spring)

Multidisciplinary introduction to the basic sciences of the ear. Acoustics and psychoacoustics, temporal bone anatomy, external and middle ear mechanisms, cochlear physiology, auditory neurophysiology, ear embryology, ear biochemistry, immunology, fine structures, vestibular mechanisms and measurement. S-N grading option for nonmajors only. prerequisite: Otolaryngology major or instr consent

**OTOL 5102. Introduction to the Basic Sciences in Otolaryngology II: Head and Neck.** (2 cr.; A-F or Audit; Every Fall & Spring)

Multidisciplinary introduction to the basic sciences of the head and neck. Laryngeal anatomy and physiology, nasal anatomy and physiology, immune biology, embryology of head and neck. S-N grading option for nonmajors only. prerequisite: Otolaryngology major or instr consent

**OTOL 5993. Directed Studies.** (1-12 cr. [max 24 cr.]; Student Option; Every Fall, Spring & Summer)

Directed readings and preparation of reports on selected topics. prerequisite: instructor consent

**OTOL 7200. Introduction to Otolaryngology.** (2 cr. [max 4 cr.]; P-N only; Every Fall, Spring & Summer)

This elective is intended for early third-year students interested in exploring the specialty of ENT. This course will include clinical experiences in the specialty and interactive presentations emphasizing primary care problems related to the field.

**OTOL 7501. Otolaryngology Acting Internship.** (4 cr.; H-N only; Every Fall, Spring & Summer)

This advanced elective is designed for the late third-year or early fourth-year student wanting to be competitive for residency selection. Working closely with residents, the student will have increased responsibility in patient care and management.

**OTOL 7503. Otolaryngology Research.** (2-8 cr. [max 16 cr.]; H-N only; Every Fall, Spring & Summer)

Opportunities are provided to work with otolaryngology faculty and basic scientists within the Department of Otolaryngology. Additional opportunities for clinical otolaryngology are provided if relevant.

**OTOL 7910. Otolaryngology Medical Residency.** (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)

Otolaryngology medical residency.

**OTOL 7930. Otolaryngology Medical Fellowship.** (6 cr. [max 120 cr.]; No Grade Associated; Every Fall, Spring & Summer)

Otolaryngology medical fellowship.

**OTOL 8230. Clinical Otorhinolaryngology.** (4 cr.; A-F or Audit; Every Fall, Spring & Summer)

Diagnostic and management instruction and experience in all phases of clinical otorhinolaryngology. Both inpatient and outpatient services are provided at Fairview-University Medical Center, St. Paul Ramsey Medical Center, Veterans Administration Medical Center, and Hennepin County Medical Center. Clinical practice and weekly special group conferences. prerequisite: Grad otol major

**OTOL 8231. Surgery of the Ear, Nose, and Throat.** (3 cr.; A-F or Audit; Every Fall, Spring & Summer)

Surgical training and experience with broad scope of surgical problems encountered in otorhinolaryngology provided at Fairview-University Medical Center, St. Paul Ramsey Medical Center, Veterans Administration Medical Center, and Hennepin County Medical Center. Clinical practice and weekly special group conferences. prerequisite: Grad otol major

**OTOL 8232. Maxillofacial Surgery.** (1 cr.; A-F or Audit; Every Fall, Spring & Summer)
Basic science and management principles of maxillofacial diseases. Problems of maxillofacial trauma. Experience with these problems in the hospitals of the training program, especially the county hospitals. prereq: Grad otol major

OTOL 8233. Plastic and Reconstructive Surgery: Head and Neck. (1 cr.; A-F or Audit; Every Fall, Spring & Summer)
Otolaryngologic cosmetic surgery emphasizing rhinoplasty and otoplasty. prereq: Otol major

OTOL 8234. Anatomy of the Head and Neck and Temporal Bone Dissection. (2 cr.; Student Option; Every Fall, Spring & Summer)
Head and neck anatomy studied from cadaver through programmed learning. Temporal bones dissected to learn anatomy and to practice otologic surgical procedures. S/N for nonmajors only. prereq: Grad otol major or instr consent

OTOL 8235. Roentgenology of the Head and Neck. (1 cr.; max 12 cr.; A-F or Audit; Every Fall, Spring & Summer)
Principles and procedures in roentgenology for otolaryngologic and head and neck problems. prereq: Grad otol major

OTOL 8236. Pharmacology in Otolaryngology. (1 cr.; max 12 cr.; A-F or Audit; Every Fall, Spring & Summer)
Principles of pharmacology as they relate to otolaryngology. prereq: Grad otol major

OTOL 8237. Endoscopy. (1 cr.; max 12 cr.; A-F or Audit; Every Fall, Spring & Summer)
Didactic and practical instruction in laryngoscopy, esophagoscopy, bronchoscopy, and mediastinoscopy. General management principles emphasized. prereq: Grad otol major

OTOL 8238. Pathology of the Ear, Nose, and Throat. (1 cr.; max 12 cr.; A-F or Audit; Every Fall, Spring & Summer)
Gross pathology and histopathology of diseases of the ear, nose, throat, and related regions. prereq: Grad otol major

OTOL 8239. Otoneurology. (1-2 cr.; max 12 cr.; Student Option; Every Fall, Spring & Summer)
Instruction and experience in diagnosis and management of otoneurologic problems, including training in electronystagmographic analysis of vestibular function. prereq: Grad otol major or instr consent

OTOL 8240. Allergy. (1 cr.; max 12 cr.; A-F or Audit; Every Fall, Spring & Summer)
Concepts and management of otolaryngologic allergy. prereq: Grad otol major

OTOL 8241. Cancer of the Head and Neck. (1 cr.; max 12 cr.; A-F or Audit; Every Fall, Spring & Summer)
Clinical head and neck oncology; etiology, treatment (both surgical and nonsurgical), and other principles of management. prereq: Grad otol major

OTOL 8242. Audiology and Speech Pathology. (2 cr.; Student Option; Every Fall & Spring)
Clinical audiology and speech-language pathology, including diagnosis and treatment of conductive, sensorineural, and central hearing loss; voice disorders; swallowing disorders; velopharyngeal insufficiency related to cleft lip/palate and craniofacial anomalies; alaryngeal speech; and speech disorders related to head and neck cancer. prereq: Grad otol major or instr consent

OTOL 8243. Introduction to Research Methodology. (1 cr.; Student Option; Every Fall & Spring)
Statistical methods, experimental design, and execution of otolaryngologic research. Ethics of research with human and animal subjects. prereq: Grad otol major or instr consent

OTOL 8244. Seminar: Current Literature. (1 cr.; Student Option; Every Fall, Spring & Summer)
Presentation and discussion of selected articles. Required for all otolaryngology graduate students. prereq: Grad otol major or instr consent

OTOL 8247. Anatomy and Physiology of Hearing and Balance. (3 cr.; Student Option; Every Spring)
Structure and function of auditory and vestibular systems. Network analysis of middle and inner ear mechanics, hair cell biophysics, auditory nerve and CNS electrophysiology, information processing, neural mechanisms subserving balance and gaze, cellular morphology, and computer models. prereq: instr consent

OTOL 8248. Directed Readings in Auditory Physiology. (1-2 cr.; Student Option; Every Fall & Spring)
Current research on biophysics and physiology of auditory system; topics selected for each student. Written reviews prepared and discussed. prereq: instr consent

OTOL 8249. Current Topics in Cochlear Anatomy. (1 cr.; Student Option; Every Fall & Spring)
Review of current research papers concerning cochlear anatomy and pathology. prereq: instr consent

OTOL 8250. Advanced Biochemistry of the Auditory System. (1 cr.; Student Option; Every Fall, Spring & Summer)
Review of recent progress in biochemical aspects of auditory end organs. prereq: MdBc 6100, MdBc 6101 or equiv or instr consent

OTOL 8251. Molecular Carcinogenesis of Head and Neck Squamous Cell Carcinoma. (2 cr.; max 6 cr.; Student Option; Every Fall, Spring & Summer)
Current topics in molecular carcinogenesis of head and neck squamous cell carcinoma. prereq: MICA 8009 or concurrent registration is required (or allowed) in MICA 8009 or instr consent

OTOL 8252. Advanced Clinical Audiology. (2 cr.; Student Option; Every Fall, Spring & Summer)
Comprehensive reading and practicum in auditory evaluation of patients. Assumes basic knowledge of clinical audiology. Each session devoted to aspect of auditory evaluation or aural rehabilitation, including behavioral audiometry, electrophysiologic evaluation, hearing aid selection, and cochlear implants. prereq: Grad otol major, 8242 or instr consent

OTOL 8333. FTE: Master's. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Master's student, adviser and DGS consent

OTOL 8444. FTE: Doctoral. (1 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Doctoral student, adviser and DGS consent

OTOL 8666. Doctoral Pre-Thesis Credits. (1-6 cr.; max 12 cr.; No Grade Associated; Every Fall, Spring & Summer)
Doctoral Pre-Thesis Credits prereq: Doctoral student who has not passed prelim oral; no required consent for 1st/2nd registrations, up to 12 combined cr; dept consent for 3rd/4th registrations, up to 24 combined cr; doctoral student admitted before summer 2007 may register up to four times, up to 60 combined cr

OTOL 8777. Thesis Credits: Master's. (1-18 cr.; max 50 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 10 cr total required [Plan A only]

OTOL 8888. Thesis Credit: Doctoral. (1-24 cr.; max 100 cr.; No Grade Associated; Every Fall, Spring & Summer)
(No description) prereq: Max 18 cr per semester or summer; 24 cr required

Pathology (PATH)

PATH 7865. Departmental Seminar. (1 cr.; max 2 cr.; H-N or Audit; Every Fall, Spring & Summer)

Pediatric Dentistry (PDEN)

PDEN 7000. Directed Research in Pediatric Dentistry. (1 cr.; S-N or Audit; Every Fall, Spring & Summer)
Completion of senior project, prepare table clinic presentation, and prepare AAPD presentations through regular progress meetings with faculty.

PDEN 7010. Fundamentals of Pediatric Dentistry. (0-2 cr.; A-F only; Every Summer)
