SPEAKING OF DRUGS

Last month we analyzed pipe resins and water from a waterpipe. Some doctors have recommended use of a waterpipe to users of Marijuana because the smoke is cooler and less irritating than that from a 'joint' or from a modified tobacco pipe.

The water contained no THC - it should not, as THC is not soluble in water which is acid or neutral, although it is soluble in alkaline solutions. As PCP is soluble even in slightly acid solutions, it is possible to smoke PCP-coated Marijuana in a waterpipe and not receive any of the effects of PCP.

Although the pipe scrapings contained some THC, they also are rumored to contain several carcinogens.
