Title: Prostate Cancer Prevention: Do I need Finasteride?

Author: Jon Shelver, medical student

Date: 2009/10

Key words: Prostate Cancer; Benign Prostatic Hyperplasia; BPH; Finasteride; Proscar

Abstract: Despite reports, Finasteride is not yet recommended for routine prevention of prostate cancer. A recent study has raised new questions that are still being answered. In the mean time, the best approach is to continue an individualized monitoring plan developed between you and your doctor.

This document was created by a medical student enrolled in the Primary Care Clerkship at the University of Minnesota Medical School as part of the course project. The aim of the project is to present information on a medical topic in the format of a patient education handout. It does not necessarily reflect the views of the University of Minnesota Medical School physicians and faculty. These materials are provided for informational purposes only and are in no way intended to take the place of the advice and recommendations of your personal health care provider. The information provided may no longer be up to date since it has not been reviewed since the date of creation. The information provided should not be used to diagnose a health problem or disease, or as a means of determining treatment. In the event of a medical emergency, immediately contact a doctor or call 911.
