P.O. Box 206  
Jordan, Minnesota 55352

Dear Mr. Vickmark:

We have received the final analysis on soils sampled for PCB's at your former Rosemount site. Based on the levels found we will not require excavation for specialized disposal. We would ask that you work with the University of Minnesota personnel in coming up with a final plan to rehabilitate the site to conditions acceptable to them.

Providing acceptable final cover over the area could be acceptable in removing the oil saturated soils and thin spreading the material on roads and providing backfill could be also utilized.

We appreciate your cooperation in this matter.

Yours very truly,

*David Miller*
