### HEALTH BULLETIN

That there has been a decided decline in the influenza epidemic at the University may be seen from the following report for last week:

	New cases
Feb. 2 .....	21
Feb. 3 .....	9
Feb. 4 .....	6
Feb. 5 .....	4
Feb. 6 .....	4
Feb. 7 .....	4
Feb. 8 .....	3

No new cases were reported at the University Farm for the past two days. No deaths from pneumonia complicating influenza have occurred at the Health Services—University and University Farm—since Feb. 5. There are, however, several serious cases, both at the University and Farm.

While there is every indication that the epidemic is rapidly subsiding, students are urged to be cautious and report immediately. "Flaring up" of the epidemic is possible and it is to be expected that sporadic cases will occur for some time to come—perhaps throughout the month.

From the present situation the University Health Service feels that the "ban" on social gatherings on the campuses may be removed. This action, however, must not be taken as assurance that all danger has passed.

The disease is spread by means of human contact infection. It belongs to the group of diseases spread by discharges from mouth and nose. Therefore exposure should be reduced to the very minimum. Students with "colds," coughing, discharges from respiratory tract, should remain away from all public gatherings.

Dr. JOHN SUNDWALL
