DULUTH--"Fallout--a World Concern" will be the topic of a talk at 8 p.m. Thursday (Feb.12) in the Duluth clinic auditorium by a University of Minnesota professor.

Cyrus P. Barnum, Jr., professor of physiological chemistry at the U of M medical school, will speak on research he has conducted which emphasizes need for increasing study of the problem.

The talk is being sponsored by the Lake Superior section, American Chemical society. It is open to all interested persons.

Using radioactive phosphorous as a tool in his studies, Professor Barnum has conducted research on the mechanism and control of cell division and the metabolism of nucleic acids.

His studies have provided direct evidence of radiation effects on cell activity.
